MANUSCRIPTS.—The MSS. of Cicero are so numerous and so scattered over Europe as to preclude an exhaustive enumeration of them here. The Laurentian Library alone contains 188 codices, of which the oldest dates back to the tenth century. The Bibliothèque Nationale at Paris possesses 231, collected prior to the Revolution of 1789. Six of these date from the ninth century; 138 are of the fifteenth. The oldest collection of the letters *ad familiares* is the Codex Vercellensis (now the Codex Mediceus) of the ninth century. Petrarch, in 1345, discovered at Verona the letters to Brutus, Q. Cicero, and Atticus. The MS. found by Petrarch has again been lost, so that only a copy of it remains. Other important Ciceronian MSS. are as follows: of the fourteen Philippics, the Vatican-Basilican MS. of the ninth century; of the orations against Verres, the Vatican palimpsest of the fourth (?) century, and two Wolfenbüttel MSS. dependent upon a Paris codex of the ninth century; of the Catilinarian orations, the Ambrosian Codex of the tenth century, and the Munich MSS. of the eleventh century; of the oration for Archias, the Codex Bruxellensis (Brussels) of the eleventh century; of the oration on the Manilian law, the Codex Erfurtensis of the twelfth century; of the oration for Milo, the Munich MS. (18,787) and a palimpsest at Turin; of the treatises *De Oratore*, *Brutus*, and *Orator*, the Codex Laudensis (Lodi), or rather three copies of that codex made after 1422; of the *Partitiones Oratoriae*, a Paris MS. of the eleventh century (No. 7231); of the *Topica*, a codex at Leyden and two at St. Gall; of the treatise *De Optimo Genere Oratorum*, a MS. at St. Gall; of the philo-

sophical works, the Codices Leidenses (Vossiani, 84 saec. x., and 86 saec. xi.), the Codex Laurentianus S. Marci (257) of the tenth century, and the Codex Vindobonensis (Vienna) of the tenth century. A collection of 600 excerpts from Cicero's philosophical writings, made by a certain Hadoardus in the ninth century, is in the Vatican. For the treatise *De Legibus*, the best MSS. are the Leyden codices (Vossiani, 84 saec. x., and 86 saec. xi.); for the *Paradoxa*, the same; for the *De Finibus*, the Palatino-Vaticanus of the eleventh century; for the *Academica*, the Codices Leidenses already mentioned; for the *Tusculanae Disputationes*, a MS. at Paris dating from the tenth century, and one at Brussels of the twelfth century; for the *Timaeus*, the Codices Leidenses; for the *De Natura Deorum*, the same; for the *Cato Maior*, a Codex Leidensis (Voss. F. 12, saec. x.); for the *De Divinatione*, the Palatino-Vaticanus noted above; for the *De Fato*, a codex at Vienna (189); for the *Laelius*, a MS. at Munich of the tenth century; for the *De Officiis*, a MS. at Bern of the tenth century, and one of the same age at Paris (6601).

Editions.—The *editio princeps* of the entire works of Cicero was that by P. Victorius (Venice, 1534–37). A famous old edition is that of Lambinus (Paris, 1566); and those of Graevius, unfinished (Amsterdam, 1684), Ernesti (Leipzig, 1737, last ed. 1820), Orelli (Zürich, 1826–30), revised with Baiter and Halm (1845–62), Nobbe (Leipzig, 1850), are very often cited. More recent are the editions by Klotz, 11 vols. (Leipzig, 1863–71); revised by C. F. W. Müller, not yet completed (Leipzig, 1878–), and Baiter and Kayser, 11 vols. (Leipzig, 1861–69), with index.

Among special editions may be mentioned that of the orations with English notes by Long, 4 vols. (London, 1855–62); of the oration on the Manilian law by Wilkins (London, 1885); of the Second Philippic by J. E. B. Mayor (London, 1878), and by Gantrelle (Paris, 1882); of the Catilinarian orations by Halm (latest ed. Berlin, 1886); of the oration for Archias by J. S. Reid (Cambridge, 1884); of the oration for Balbus by Reid (Cambridge, 1879); of the oration for Plancius by Holden (London, 1881); of the oration for Milo by Purton (Cambridge, 1877). Special editions of the rhetorical works are those of the *De Oratore*, 3 vols., by Wilkins (London, 1893); of the *Orator* by Sandys (London, 1885); of the *Brutus* by Kellogg (Boston, 1889); and of the *Partitiones Oratoriae* by Piderit (Leipzig, 1867). A critical revision of Cicero's philosophical works is that of Schiche (Prague, 1884); and special editions of individual treatises are that of the *De Legibus* by Vahlen (Berlin, 1883); of the *De Finibus* by Reid (in preparation), and Langen (Münster, 1888); of the *Academica* by Reid (London, 1885); of the *Tusculanae* by Heine (Leipzig, 1881); of the *De Natura Deorum* by J. B. Mayor, 3 vols. (Cambridge, 1885); of the *Cato Maior* by Reid (Cambridge, 1883), revised by Kelsey (Boston, 1884); of the *De Officiis* by Holden (Cambridge, 1884), and by Stickney (N. Y. 1888). An excellent edition of the correspondence of Cicero, with notes and an introduction, is that by Tyrrell and Purser (London, 1886, foll.). Recent collections of the fragments of Cicero's writings are those of Baiter and Kayser (1868), and C. F. W. Müller (1879).

Special Works.—Orelli, *Onomasticum et Indices*, 3 vols. (1838); Ernesti, *Clavis Ciceroniana* (Halle, 1831); Schütz, *Lexicon Ciceronianum*, 4 vols. (1817); Nizolius, *Lexicon Ciceronianum*, 3 vols. (last ed. 1820); Merguet, *Lexikon zu Cicero's Reden* (1877–84); Suringar, *Ciceronis Annales*, 2 vols. (1854); Hirtzel, *Untersuchungen z. Cicero's philosoph. Schriften* (1877); Levin, *Lectures on the Philosophy of Cicero* (Cambridge, 1871); Davidson, *Life of Cicero* (1894); Middleton, *Life of Cicero* (1741); Brückner, *Leben Cicero's* (1852); Forsyth, *Life of Cicero* (1864); A. Trollope, *Life of Cicero* (1880); Boissier, *Cicéron et ses Amis* (4th ed. 1888). See also Mommsen, *History of Rome*, vol. iv., and against his well-known view, the defence of Cicero by Gerlach (Basel, 1864).

(2) Marcus, only son of the orator, and the person to whom the latter addressed his work *De Officiis*. He took part in the civil contest at an early age, and served under both Pompey and Brutus. After the battle of Philippi he retired to Sicily and joined the younger Pompey. Subsequently, however, he took advantage of the act of amnesty that was passed, and returned to Italy, where he lived for some time in a private capacity. Augustus, on attaining to sovereign power, made him his colleague in the consulship, and it was to Marcus Cicero, in his quality of consul, that he wrote an account of the victory at Actium and the conquest of Egypt. Marcus had the satisfaction of executing the decree which ordered all the statues and monuments that had been erected to Antony to be thrown down. After his consulship he was appointed governor of Syria, from which period history is silent respecting him. He died at an advanced age, and was notorious for dissipated and intemperate habits.

(3) Quintus, brother of the orator, and brother-in-law of Atticus. After having been praetor in B.C. 62, he obtained the government of Asia. He was subsequently a lieutenant of Caesar's in Britain, and only left that commander to accompany his brother, Marcus Tullius, as lieutenant, into Cilicia. After the battle of Pharsalia, in which he took part on the side of Pompey, he was proscribed by the triumvirate and put to death by the emissaries of Antony. He had a marked talent for poetry, and had planned a poem on the invasion of Britain by Caesar. He also composed several tragedies, imitated or else translated from the Greek, but which have not reached us. Eighteen lines of his are preserved in *Q. Ciceronis Reliquiae*, edited by Bücheler (Leipzig, 1869). He was perhaps the author of the piece *Commentariolum Petitionis*, usually printed along with Cicero's letters to him. It is addressed by Quintus to his brother when the latter was a candidate for the consulship, and gives advice with regard to the best means to acquire general popularity. There is an edition of this work by Eussner (Würzburg, 1872). On the authorship of the work see Hendrickson in the *Amer. Journal of Philology* for 1892, pp. 200–212.

Cicŏnes (Κίκονες). A Thracian people on the Hebrus, and near the coast of the Aegean.

Ciconia. (1) A word meaning literally "a stork," but also applied to a mimic gesture expressive of ridicule or contempt, produced by bending the forefinger into the form of a stork's neck, and pointing it towards the person ridiculed with a rapid motion of the two top joints up and down (Pers. i. 58, with the commentators; Hieron. *Epist.* 125, 18). (2) A contrivance employed by farmers to test a labourer's work in spade husbandry, and prove if all his trenches were dug to a uniform and

proper width and depth. It consisted of an upright, with a cross-bar affixed to it, at right angles, like the letter T inverted, so that the long branch measured the depth, and the two shorter arms the width and evenness of the trench (Colum. iii. 13, 11).

Cicynna (Κίκυννα). A deme of Attica.

Cidăris (*κίδαρις*). See TIARA.

Cilicia (Κιλικία). A district in the southeast of Asia Minor, bounded by the Mediterranean on the south, Mount Amanus on the east, and Mount Taurus on the north. The western part of Cilicia is intersected by the offshoots of the Taurus, while in its eastern part the mountain chains inclose much larger tracts of level country; and hence arose the division of the country into Cilicia Aspera or Trachea, and Cilicia Campestris—the latter being also called Cilicia Propria. The first inhabitants of the country are supposed to have been of the Syrian race. The mythical story derived their name from Cilix, the son of Agenor, who started with his brothers, Cadmus and Phoenix, for Europe, but stopped short on the coast of Asia Minor, and peopled with his followers the plain of Cilicia. The country remained independent till the time of the Persian Empire, under which it formed a satrapy, but it appears to have been still governed by its native princes. Alexander subdued it on his march into Upper Asia, and after the division of his empire it formed a part of the kingdom of the Seleucidae. Its plains were settled by Greeks, and the old inhabitants were for the most part driven back into the mountains of Cilicia Aspera, where they remained virtually independent, practicing robbery by land and piracy by sea, till Pompey drove them from the sea in his war against the pirates; and, having rescued the level country from the power of Tigranes, who had overrun it, he erected it into a Roman province, B.C. 67–66. The mountain country was not made a province till the reign of Vespasian. The Cilicians bore a low character among the Greeks and Romans; so that the Carians (*Κᾶρες*), Cappadocians (*Καππάδοκες*), and Cilicians (*Κίλικες*) were called the "three bad K's" (*τρία κάππα κάκιστα*).

Ciliciae Pylae (*αἱ Πύλαι τῆς Κιλικίας*) or **Portae**. The chief pass between Cappadocia and Cilicia, through the Taurus, on the road from Tyana to Tarsus.

Cilicium (*δέρρις*). A haircloth. The material of which the Greeks and Romans almost universally made this kind of cloth was the hair of goats. The Asiatics made it of camel's-hair. Goats were bred for this purpose in Cilicia; and from this country the Latin name of the cloth was derived. Lycia, Phrygia, Spain, and Libya also produced the same article. The cloth obtained by spinning and weaving goat's-hair was nearly black, and was used for the coarse dress which sailors and fishermen wore, as it was the least likely to be destroyed by being wet; also for horse-cloths, tents, sacks, and bags to hold workmen's tools (*fabrilia vasa*), and for the purpose of covering military engines, and the walls and towers of besieged cities, so as to deaden the force of the ram (see ARIES), and to preserve the woodwork from being set on fire.

Among the Orientals, sackcloth, which was with them always haircloth, was worn to express mortification and grief. After the decline of the Roman power, it passed from its other uses to be so employed in Europe also. Monks and anchorites almost universally adopted the cilicium as fit to be worn for the sake of humiliation, and they supposed their end to be more completely attained if this part of their raiment was never washed.

Cilicium Maré (*ἡ Κιλικία Θάλασσα*). The northeastern portion of the Mediterranean, between Cilicia and Cyprus, as far as the Gulf of Issus.

Cilix (Κίλιξ). See CILICIA.

Cilla (Κίλλα). A small town in the Troad, celebrated for its temple of Apollo, surnamed Cillaeus.

Cillĭba (*κιλλίβας*, *cillibantium*). (1) In Greece, a trestle or stand for anything, especially for a shield (Aristoph. *Ach.* 1122). (2) In Rome, a dining-table, at first square (Varr. *L. L.* v. 118), and then round.

Cilnii. A powerful Etruscan family in Arretium, driven out of their native town in B.C. 301, but restored by the Romans. The Cilnii were nobles or Lucumones in their State, and some of them in ancient times may have held even the kingly dignity. The name has been rendered chiefly memorable by C. Cilnius Maecenas. See MAECENAS.

Cimber, L. TILLIUS. A friend of Caesar, receiving from him the province of Bithynia, but subsequently one of his murderers, B.C. 44.

Cimbri (Κίμβροι). A Keltic people, probably of the same race as the Cymry. (See CELTAE.) They appear to have inhabited the peninsula which was called after them Chersonesus Cimbrica (Jutland). In conjunction with the Teutones and Ambrones, they migrated south, with their wives and children, towards the close of the second century B.C.; and the whole host is said to have contained 300,000 fighting men. They defeated several Roman armies, and caused the greatest alarm at Rome. In B.C. 113, they routed the consul Papirius Carbo near Noreia, and then crossed over into Gaul, which they ravaged in all directions. In 109, they defeated the consul Iunius Silanus; and in 107, the consul Cassius Longinus, who fell in the battle; and in 105, they gained their most brilliant victory, near the Rhone, over the united armies of the consul Cn. Mallius and the proconsul Servilius Caepio. Instead of crossing the Alps, the Cimbri, fortunately for Rome, marched into Spain, where they remained two or three years. The Romans, meantime, had been making preparations to resist their formidable foes, and had placed their troops under the command of Marius. The barbarians returned to Gaul in 102. In that year the Teutones were defeated and cut to pieces by Marius near Aquae Sextiae (Aix) in Gaul; and next year (101) the Cimbri and their allies were likewise destroyed by Marius and Catulus, in the decisive battle of the Campi Raudii, near Verona, in the north of Italy. See Pullmann, *Die Cimbern* (1870).

Cimĭnus or **Ciminius Mons**. A range of mountains in Etruria, thickly covered with wood (Saltus Ciminius, Silva Ciminia), near a lake of the same name, northwest of Tarquinii.

Cimmerii (Κιμμέριοι). The name of a mythical and of a historical people. The mythical Cimmerii, mentioned by Homer, dwelt in the farthest West on the ocean, enveloped in constant mists and darkness. Later writers sought to localize them, and accordingly placed them either in Italy, near the lake Avernus, or in Spain, or in the Tauric Cherso-

nesus. The historical Cimmerii dwelt on the Palus Maeotis (Sea of Azov), in the Tauric Chersonesus, and in Asiatic Sarmatia. Driven from their abodes by the Scythians, they passed into Asia Minor on the northeast, and penetrated west as far as Aeolis and Ionia. They took Sardis, B.C. 635, in the reign of Ardys, king of Lydia; but they were expelled from Asia by Alyattes, the grandson of Ardys, about B.C. 600.

Cimmerius Bospŏrus (Κιμμέριος Βόσπορος). See BOSPORUS.

Cimōlus (Κίμωλος). An island in the Aegean Sea, one of the Cyclades, between Siphnos and Melos, celebrated for its fine white earth, used by fullers for cleaning cloths. See CRETA; FULLO.

Cimon (Κίμων). (1) The son of Miltiades and of Hegesipylé, the daughter of Olorus, a Thracian prince. His education, according to Plutarch, was very much neglected, and he himself indulged, at first, in every species of excess. At his father's death he seems to have succeeded to a very scanty fortune, and he would perhaps have found it very difficult to pay the fine of fifty talents which had been imposed upon his parent, and which the son was bound to pay to the public treasury, had not Callias, one of the wealthiest men of Athens, struck by the charms of his half-sister Elpinicé, undertaken to discharge the sum as the price of her hand. (See ELPINICÉ.) Cimon, however, had attracted notice and gained reputation by the spirit which he displayed on the occasion of leaving the city on the approach of the Persians, when he was the foremost to hang up a bridle in the Acropolis, as a sign that he placed all his hopes in the fleet; and also by the valour with which he fought at Salamis. Aristides, in particular, saw in him a fit coadjutor to himself and antagonist to Themistocles, and exerted himself in his favour; and the readiness with which the allied Greeks, when disgusted by the arrogance of Pausanias, united themselves with Athens, was owing in a great measure to Cimon's mild temper and to his frank and gentle manners. The popularity of Themistocles was already declining, while Cimon, by a series of successful enterprises, was rapidly rising in public favour. He defeated the Persians in Thrace, on the banks of the Strymon, took Eion, and made himself master of the whole country. He conquered the island of Scyros, the inhabitants of which were addicted to piracy; and brought thence to Athens what were deemed the bones of the national hero Theseus. He next subdued all the cities on the coast of Asia Minor, and went against the Persian fleet which lay at the mouth of the Eurymedon. The Persians, although superior in number, did not dare to abide an engagement, but sailed up the river to place themselves under the protection of their land forces. Cimon, however, provoked them to a battle, and, having defeated and sunk or taken two hundred ships, landed his men, flushed with victory, and completely routed the Persian army. Returning to Athens after these two victories thus achieved in a single day, he employed the perquisites of his command, and the resources which he had acquired from his successes over the barbarians, in the embellishment of his native city and in relieving the wants of the indigent. He laid a part of the foundations of the Long Walls with magnificent solidity at his own cost, and the southern wall of the citadel was built with the treasures which he brought from Asia into the coffers of the State. He also set the example of adorning the public places of the city with trees; and, by introducing a stream of water, converted the Academy, a spot about two miles north of the city, from an arid waste into a delightful grove. (See ACADEMIA.) He threw down the fences of his fields and orchards, that all who wished might enter and partake of their fruits. He not only gave the usual entertainments expected from the rich to the members of his own borough, but kept a table constantly open for them. He never appeared in public without a number of persons attending him in good apparel, who, when they met with any elderly citizen scantily clothed, would insist on exchanging their warm mantles for his threadbare covering. It was the office of the same persons respectfully to approach any of the poorer citizens of good character whom they might see standing in the market-place, and silently to put some small pieces of money into their hands. This latter kind of expenditure was certainly of a mischievous tendency; and was not the less that of a demagogue because Cimon sought popularity not merely for his own sake, but for that of his order and his party.

About B.C. 466, Cimon was sent to the Thracian Chersonesus, of which the Persians still kept possession, and having driven them out, next reduced the island of Thasus, and took possession of the Thasian gold mines on the neighbouring continent. Scarcely, however, had he returned to Attica, when an accusation was preferred against him of having been corrupted by the king of Macedonia, because he had refrained, not, according to the common account, from attacking the Macedonians then at peace with Athens, but from striking a blow at the Thracian tribes on the frontier of that kingdom, who had recently cut off the Athenian settlers on the banks of the Strymon. (See AMPHIPOLIS.) From this accusation Cimon had a very narrow escape. Having been sent, however, after this, with a body of troops to aid the Spartans before Ithomé, and the latter having, after some interval, sent back their Athenian allies, whom they suspected of not lending them any effectual assistance, the irritation produced by this national insult fell principally upon Cimon, who was known to be an admirer of the Spartan character and constitution, and he was accordingly driven into exile. Subsequent events, however, made the Athenians feel the want of this able commander, and he was recalled and sent on an expedition against Egypt and Cyprus; but was carried off by illness, or the consequences of a wound, in the harbour of Citium, which place he was besieging (B.C. 449). His spirit, however, still animated his countrymen; for the fleet, when sailing home with his remains, gained a naval victory over a large squadron of Phœnician and Cilician galleys near the Cyprian Salamis, and followed up this victory by another which they gained on shore, either over the troops which had landed from the enemy's ships, or over a land force by which they were supported.

Cimon was, beyond dispute, the ablest and most successful general of his day; and his victories shed a lustre on the arms of Athens which almost dimmed the glories of Marathon and Salamis.

(2) A famous painter, a native of Cleonae, who flourished about B.C. 460. He is said to have been the first to paint in perspective. See PICTURA.

Cinaethon (Κιναίθων). One of the most prolific of the Cyclic poets. See CYCLICI POETAE; HOMERUS.

Cinăra (Κινάρα). A small island in the Aegean Sea, east of Naxos, celebrated for its artichokes (κινάραι).

Cincia Lex. See LEX.

Cincinnātus, L. QUINCTIUS. A Roman patrician, whose name belongs to the earlier history of the Republic, and has a well-known and spirit-stirring legend connected with it. His son, Caeso Quinctius, had been banished on account of his violent language towards the tribunes, and the father had retired to his own patrimony, aloof from popular tumults. The successes of the Aequi and Volsci in B.C. 458 rendered the appointment of a dictator necessary, and Cincinnatus was chosen to that high office. The delegates who were sent to announce this to him found the Roman noble ploughing his own fields, and from the plough he was transferred to the highest magistracy of his native State. The dictator laid aside his rural habiliments, assumed the ensigns of absolute power, levied a new army, marched all night to bring the necessary succour to the consul Minucius, who was surrounded by the enemy and blockaded in his camp, and before morning surrounded the enemy's army, and reduced it to a condition exactly similar to that in which the Romans had been placed. The baffled Aequi were glad to submit to the victor's terms; and Cincinnatus, thereupon returning in triumph to Rome, laid down his dictatorial power, after having held it only fourteen days, and returned to his farm. At an advanced age he was again appointed dictator, to restrain the power of Spurius Maelius (q. v.), and again proved himself the deliverer of his country (Val. Max. iv. 4, 7; Liv. iii. 26).

Cincinnus (ἔλιξ). A ringlet of hair. See COMA.

Cincius Alimentus. See ALIMENTUS.

Cinctus (διάζωμα, περίζωμα). A sort of kilt reaching to the knees, worn by men, instead of the tunic, while working (Varr. *L. L.* v. 114).

Cinctus Gabīnus. See TOGA.

Cineas (Κινέας). A Thessalian, a minister and friend of Pyrrhus, and employed by the latter on many embassies. He had been a pupil of Demosthenes, and possessed considerable talent as an orator. Having been sent by Pyrrhus to Rome with proposals of peace, he compared the Senate, on his return, to an assembly of kings, and a war with the Romans to a contest with another Lernaean hydra. He died about B.C. 276. See PYRRHUS.

Cinerarium. A niche in a tomb, adapted for the reception of a large cinerary urn, or a sarcophagus, as contradistinguished from *columbarium* (q. v.), which was of smaller dimensions, and only formed to receive a pair of jars (*ollae*) (Inscript. *ap.* Grut. 850, 10). The illustration, which represents one side of a sepulchral chamber, as it appeared when first excavated, presents an arrangement similar to that set forth by the preceding inscription, with two *columbaria* at the bottom, over which are the same number of cinerary niches for urns, and a larger one in the centre (*cinerarium medianum*), with its sarcophagus. See SEPULCRUM.

Cinerarium. (Rich.)

Cinerarius. See CALAMISTRUM.

Cinĕres. See FUNUS; SEPULCRUM.

Cinesias (Κινησίας). A dithyrambic poet of Athens who was ridiculed by Aristophanes and other writers of comedy, in revenge for which he succeeded in securing the abolition of the *choregia* for comedy. See CHOREGUS.

Cinga. The modern Cinca; a river in Hispania Tarraconensis, falling with the Sicoris into the Iberus.

Cingetŏrix. A Gaul, one of the first men in the city of the Treviri (Trèves, Trier), who attached himself to the Romans, though son-in-law to Indutiomarus (q. v.), the head of the independent party.

Cingŭlum. See BALTEUS; ZONA.

Cingŭlum. A town in Picenum on a rock, built by Labienus shortly before the breaking out of the Civil War, B.C. 49. It is now Cingolo.

Cinĭflo. A slave who aided in dressing a lady's hair. The name is given from the *cinis* or powder employed for tinting the hair a light auburn (Serv. *ad* Verg. *Aen.* xii. 611). See COMA.

Cinna. (1) L. CORNELIUS. An adherent of Marius, who played a conspicuous part in the civil war between that leader and Sulla. Having attained to the consulship, after the proscription of Marius by his opponent, he began to exert himself for the recall of the former, and accused Sulla, who was just going as proconsul to Asia, of maladministration. That commander, however, took no notice of the complaint. After the departure of Sulla, he brought forward once more the law of Sulpicius, which admitted the Italians into all the thirty-five tribes without distinction. A savage riot ensued, numbers were slain, and Cinna, with his chief partisans, was driven from the city by his colleague Octavius. The Italian towns, regarding the cause of Cinna as their own, received him with the utmost cordiality. He collected thirty legions, called the proscribed to his support, and, with Marius, Sertorius, and Carbo, marched upon and took possession of Rome. A scene of bloodshed and lawless rapine now ensued, which has perhaps no parallel in ancient or modern times, and has deservedly procured for those who were the actors in it the unmitigated abhorrence of posterity. Cinna and Marius, by their own authority, now declared themselves consuls for the ensuing year; but Marius dying, after having held that office for only seventeen days, Cinna remained in effect the absolute master of Rome. During the space of three years after this victory of his, he continued to hold possession of the government at home, a period during which, as Cicero remarks, the Republic was without laws and without dignity. At length, however, Sulla, after terminating the war with Mithridates, prepared to march home with his army and punish his opponents. Cinna, with his colleague Carbo, resolved thereupon to cross the Adriatic, and anticipate Sulla by attacking him in Greece; but a mutiny of their troops ensued, in which Cinna was slain, B.C. 77. Haughty, violent, always eager for vengeance, addicted to

debauchery, precipitate in his plans, but always displaying courage in their execution, Cinna attained to a power little less absolute than that afterwards held by Sulla or Caesar; and it is somewhat remarkable that he should be so little known that scarcely a single personal anecdote of him is to be found on record. (2) One of the conspirators against Caesar (Plut. *Caes.*). (3) GAIUS HELVIUS. A Roman poet, intimate with Caesar, and tribune of the people at the time when the latter was assassinated. According to Plutarch, he went to attend the obsequies of Caesar, but being mistaken by the populace for Cinna the conspirator, was torn to pieces by them. Helvius composed a poem entitled *Smyrna* (or *Zmyrna*), on which he was employed nine or ten years. Four fragments of it have reached us. It appears to have been characterized by considerable obscurity of meaning until the grammarian Crassicius wrote an able commentary upon it (Suet. *Gram.* 18). Some other fragments have also reached us of other productions of this poet. They may be found in L. Müller's edition of Catullus (1870).

Cinnămus, IOANNES (Ἰωάννης Κίνναμος). One of the best known of the Byzantine historians who flourished about A.D. 1150. He wrote the life of the emperor Manuel Comnenus and of his father in six books, still extant. Ed. by Meineke (Bonn, 1836).

Cinyps (Κίνυψ). The modern Wad-Khakan or Kinifo; a small river on the northern coast of Africa, between the Syrtes, and forming the eastern boundary of the proper territory of the African Tripolis. The district about it was called by the same name, and was famous for its fine-haired goats. The Roman poets use the adjective Cinyphius in the general sense of Libycus or Africus.

Cinўras (Κινύρας). Supposed, in the Greek mythology, to have been king of Cyprus, the oldest priest of Aphrodité in Paphos, the founder of that city, and the ancestor of the priestly family of the Cinyradae. His wealth and long life, bestowed upon him by Aphrodité, were proverbial; and from Apollo, who was said to be his father, he received the gift of song. He was accounted the founder of the ancient hymns sung at the services of the Paphian Aphrodité and of Adonis. Consequently he was reckoned among the oldest singers and musicians, his name, perhaps, being Phœnician, derived from *kinnor*, "a harp." The story added that he was the father of Adonis (q. v.) by his own daughter Myrrha, and that, when made aware of the sin, he took away his own life.

Cippus. (1) Originally the trunk of a tree with its branches lopped off, left standing in the ground as a stump, or else stuck in the ground. The cippus was sometimes sharpened to a point, and thus used in fortification as a sort of *chevaux-de-frise* (Caes. *B. G.* vii. 73). (2) A low column of stone, sometimes round, but oftener rectangular, and used (*a*) as a mark of the division of land by the *agrimensores* (q. v.); and (*b*) as a sepulchral monument, many of these having been exhumed. The illustration here given shows a cippus contained in the Townley collection in the British Museum, and erected to the memory of one Viria Primitiva.

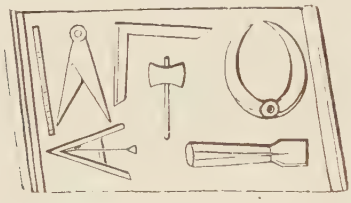
Sepulchral Cippus. (British Museum.)

On several cippi are found the letters S. T. T. L.; that is, *Sit tibi terra levis*, whence Persius says, *Non levior cippus nunc imprimit ossa* (*Sat.* i. 37).

It was also usual to place at one corner of the burying-ground a cippus, on which the extent of the burying-ground was marked, along the road (*in fronte*), and backward to the fields (*in agrum*) (Hor. *Sat.* i. 8, 12, 13). See SEPULCRUM.

Cippus or **Cipus**, GENUCIUS. A Roman praetor, on whose head horns suddenly sprouted as he was leaving the city. The haruspices declared this portent to indicate that if he re-entered Rome he would be made king, to avert which he imposed perpetual exile on himself (Ovid, *Met.* xv. 565; Val. Max. v. 6, 3).

Circé (Κίρκη). The sister of Aeëtes, king of Colchis, and daughter of the Sun and Persé, or Perseïs, one of the ocean-nymphs. Circé is celebrated for her skill in magic arts, and for her knowledge of subtle poisons. According to Homer (*Od.* x. 135 foll.), she dwelt in an island (Aeaea), attended by four nymphs, and all persons who approached her dwelling were first feasted, and then, on tasting the contents of her magic cup, converted into beasts. When Odysseus had been thrown on her shores, he deputed some of his companions to explore the country; these, incautiously partaking of the banquet set before them, were, by the effect of the enchanted potion, transformed into swine. When Odysseus himself, on hearing of their misfortune from Eurylochus, set out to release them or share their fate, he was met by Hermes, who gave him a plant named *moly* (μῶλυ), potent against her magic, and directed him how to act. Accordingly when she handed him the medicated cup, he drank of it freely; and Circé, thinking it had produced its usual effect, striking him with her wand, bade him go join his comrades in their sty. But Odysseus, drawing his sword, threatened to slay her; and the terrified goddess bound herself by a solemn oath to do him no injury. She afterwards, at his desire, restored his companions to their pristine form, and they all abode in her dwelling for an entire year. Circé is said to have had by Odysseus a son named Telegonus (q. v.), who afterwards unwittingly slew his own father in Ithaca, whither he had wandered in search of him. See ODYSSEUS.



Later writers took great liberties with the narratives of Homer and Hesiod. Thus, for example, Dionysius, the Cyclic poet, makes Circé the daughter of Aeëtes by Hecaté, the daughter of his brother Perses. He goes on to say that she was

married to the king of the Sarmatians, whom she poisoned and seized his kingdom; but, governing tyrannically, she was expelled, and then fled to a desert isle of the ocean, or, as some said, to the headland named from her in Italy. (See CIRCEII.) The Latin writers thence took occasion to connect Circé with their own scanty mythology. See Cic. *N. D.* iii. 19, 48; and the article SCYLLA.

Circeii. An ancient town of Latium on the promontory Circeum (Κιρκεῖον), said by the Roman poets to have been the abode of Circé (q. v.). Its oysters were highly esteemed by the Romans (Juv. iv. 140).

Circesium (Κιρκήσιον). A city of Mesopotamia on the east bank of the Euphrates, at the mouth of the Aborrhas. It marked the extreme eastern limit of the Roman Empire.

Circĭnus (*καρκίνος*, *διαβήτης*). A compass. The compass used by statuaries, architects, masons, and carpenters is often represented on the tombs of such artificers, together with the other instruments of their profession or trade. The annexed illustration exhibits two kinds of compasses, viz., the common kind used for drawing circles and

Circini. (Gruter, *Corp. Inscript.*)

measuring distances, and one with curved legs, probably intended to measure the thickness of columns, cylindrical pieces of wood, or similar objects. The common kind is described by the scholiast on Aristophanes, who compares its form with that of the letter A. The mythologists supposed this instrument to have been invented by Perdix, who was the nephew of Daedalus, and, through envy, thrown by him over the precipice of the Athenian Acropolis (Ovid, *Met.* viii. 251). Compasses of various forms were discovered in a statuary's house at Pompeii.

Circitōres, Circuitōres (*περίπολοι*). Horsemen who made the rounds in the Roman camp, and inspected the sentry posts. Four of these inspectors, who were selected for this duty every day, according to a regular cycle, received from the tribune written instructions as to the time when they were to visit each post, and the number of posts to be visited. After receiving their orders, they went and posted themselves by the first maniple of the *triarii*, the centurion of which was required to see that the hours of the watch were properly given by the sound of the trumpet; then, when the time came, the *circuitor* of the first watch proceeded on his rounds to all the posts; if he found the guards awake and on duty, he took their tablets; if he found them asleep, or any one absent from his post, he called upon the friends who accompanied him to witness the fact, and so passed on to the next post. The same was done by the *circuitores* of the other watches. The next morning, all the inspectors appeared before the tribunes, and presented the tablets they had received; any guard whose tablet was not produced was required to account for it. If the fault lay with the *circuitor*, he was liable to a stoning, which was generally fatal. See CASTRA.

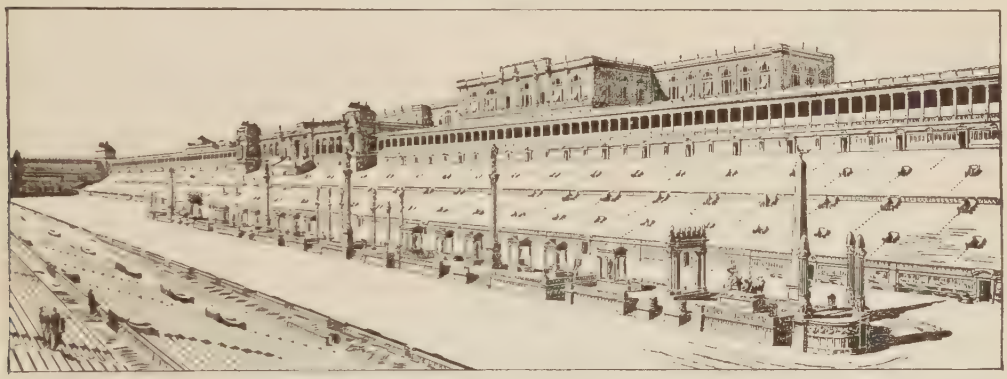
Circius. A strong wind blowing in the southern part of Gaul from the northwest. See Aul. Gell. ii. 22.

Circulātor. The Roman name for any strolling juggler or mountebank who made his living by feats of magic or by the exhibition of trained animals (Petron. 68).

Circulator. (From a Terra-cotta Lamp.)

Circumlitio. See PICTURA.

Circumluvio. Alluvial land.



Circus (*κίρκος*). A building used by the Romans for chariot races and other amusements, the general form of which was borrowed from the *ἱππόδρομος* of the Greeks. (See HIPPODROMUS.) Its name is derived from the circuit made by the racing chariots (Varr. *L. L.* v. 153).

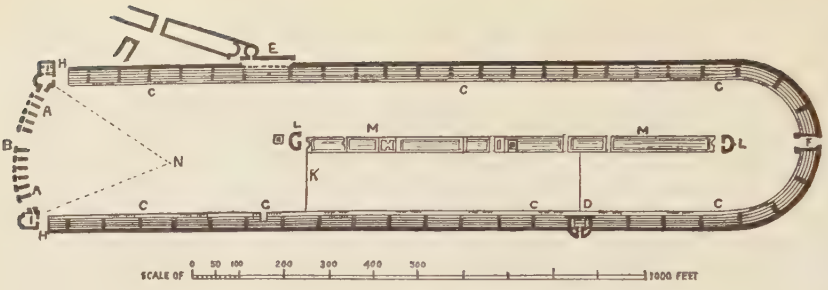
The Circus Maximus in Rome was for a long time the only building of the kind, and appears to have been the model from which all later *circi* were copied. Vitruvius does not mention the circus in his treatise on Roman architecture. According to the legend, Romulus held the Consualia, or games in honour of the Latin deity Consus (see CONSUALIA), in the Vallis Murcia, a long, narrow depression between the Palatine and Aventine hills. It was during the celebration of these games that the rape of the Sabine women is said to have taken place (Val. Max. ii. 4). The long, level bottom and sloping sides of the Vallis Murcia made it a naturally convenient place for races to be held and seen by a crowd of spectators, who probably stood or sat on the grassy slopes of the two hills long before any architectural structure was erected. See Ovid, *A. A.* i. 107.

Wooden seats (*fori*) for the people are said to have been first constructed by Tarquinius Priscus (Liv. i. 35), and these were frequently burnt and rebuilt in the same material: restorations in B.C. 327 and B.C. 174 are mentioned by Livy (viii. 20, and xli. 27). In the time of Iulius Caesar some of the seats were for the first time constructed of stone, but even then and many years later the upper tiers and galleries were still of wood. Very serious accidents are recorded to have happened under many of the emperors, owing to the failure of the wooden seats when crowded with people. No less than 1000 persons are said to have been killed in this way during the reign of Antoninus Pius. Dionysius (iii. 68), who describes the Circus Maximus as it was after Iulius Caesar's improvements, says that it then held 150,000 people. A destructive fire in B.C. 31 was followed by important restorations, and Augustus added a magnificent marble *pulvinar* or imperial box, and placed in the centre of the *spina* the Egyptian obelisk which now stands in the Piazza del Popolo (Suet. *Aug.* 43–45). In A.D. 36, another fire destroyed the upper tiers of seats on the Aventine side, and a great part of the Circus was soon restored and enlarged

by Claudius, who rebuilt in white marble the *carceres*, which were then of tufa, and replaced the old wooden *metae* by new ones of gilt bronze (Suet. *Claud.* 21). After this restoration the Circus contained seats, partly of marble and partly of wood, for 250,000 spectators, showing that it had been much enlarged since the rebuilding of Iulius Caesar (Plin. *H. N.* xxxvi. § 102). In the reign of Domitian the marble seats were carried still higher, and thenceforth the danger of fire was much diminished, though wooden galleries (*maeniana*) appear to have existed at the top of the *cavea* for many years later.

Great additional splendour was given to the Circus Maximus by Trajan, as is recorded on the reverse of some of his first brasses; and from his time the building must have been among the most magnificent structures of the Roman world. The whole *cavea* with its tiers of seats, the *carceres*, the emperor's *pulvinar*, and the central *spina* were then of gleaming white marble, decorated with gold and colours, studded with jewel-like glass mosaics, and adorned with long lines of columns made of richly-tinted Oriental marbles and rows of large statues in marble and gilt bronze, together with costly metal screens and richly

Circus Maximus. (Restoration by Benvenuti.)



sculptured thrones for officials of rank (Plin. *Paneg.* 51). Still further accommodation was added by Constantine; and Constantius set on the *spina* a second obelisk, which his father had transported from Thebes (Aurel. Vict. *Caes.* 40), and which now stands in the piazza of the Lateran. After this final enlargement the Circus held, according to the *Notitia*, the almost incredible number of 385,000 people. The best MS. of the *Notitia* gives 485,000 as the number of possible spectators in the Circus, which probably includes the crowds of people outside the Circus on the upper slopes of the two hills, who would have a distinct though distant view of the whole arena. It is impossible to discover with absolute accuracy what the size of the Circus Maximus was when complete; it cannot, however, have been less than 2000 feet long, by more than 600 feet wide, measuring outside.

In spite of its enormous size very little now remains of the Circus Maximus; but the excavations of recent years have brought to light some very interesting portions of the substructures; and these, with the help of some drawings made in the sixteenth century, when a considerable portion of the Circus was still very complete, enable us to form a fairly accurate notion of its plan and general construction. Additional help is given by the well-preserved remains of the Circus of Maxentius, of which a plan is given on the following page. Though quite different in ground-plan, yet in the arrangement of the seats and in its external façade the Circus once closely resembled the Colosseum (q. v.), except that the general effect must have been much more splendid, since in the Circus nothing but marble and gilt bronze was visible. Part of the exterior façade of the Circus is fortunately shown in the great oil-painting in the museum at Mantua, giving a bird's-eye view of Rome as it was in the fifteenth century. A fac-simile of this is shown in De Rossi's *Piante di Roma anteriori al XVI^mo Secolo* (Rome, 1879). See also Middleton, *Anc. Rome in 1885*, p. 287, and fig. 10 on p. 83; id. *Remains of Anc. Rome* (London, 1892), vol. ii. pp. 40–60; and the article Roma. There is an interesting etching of the sixteenth century which shows a large portion (now destroyed) of the concrete vaults which supported the long line of the *cavea* seats. Excavations made a few years ago at the foot of the southwestern slope of the Palatine have exposed a long series of chambers, which formed part of the immense substructures of the Circus. These chambers were used for brothels (Juv. iii. 65), for refreshment stalls (Dionys. vii. 72), and other purposes. They open upon a road, paved with flint blocks, which appears to have run at the foot of the Palatine along the whole northeastern side of the Circus, and led from the Forum Boarium to the Porta Capena.

Owing to their lofty positions, the palace of Augustus and the other imperial buildings on the Palatine must have commanded a very complete view of the races in the Circus; and some of the emperors built special additions to their palaces to enable them to see the games without leaving their residences (Suet. *Calig.* 18). See Palatium.

Arrangements of the Circus.—The drawing of the Circus of Maxentius given on the next page will serve to give an idea of the arrangements of the Circus Maximus, from which it was copied.

According to Livy, the Roman senators from a very early period had the privilege of special seats at the Circus. Augustus arranged a complete classification of the spectators. He reserved the *podium* for the Senate and persons of high rank, and allotted special seats to soldiers, married plebeians, boys and their *paedagogi*, women, etc. (See Suet. *Aug.* 44; *Nero*, 11; and the *Mon. Ancyranum*, ed. Mommsen, Berlin, 1883.) Until

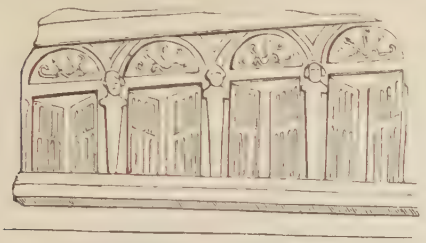
this classification, the fact that men and women sat together in the Circus had been one of its peculiarities as a place of amusement—a fact often alluded to by Ovid. Cushions (*pulvini*) were used, especially by ladies, on the hard marble seats, and footstools (*scabella*) were sometimes introduced, though each *gradus* was so low—only thirteen to fourteen inches high—that these can have been of but little use. See Ovid, *A. A.* i. 160–162.

A large number of interesting inscriptions have been found at different times, which throw much light on the way in which the seats were apportioned in the *circi* and amphitheatres of Rome. (See Lanciani, *Inscriz. d. Anfit. Flav.*, Rome, 1884.) The *cavea* was divided into bands called *maeniana* by the horizontal passages, *ambulacra* or *praecinctiones;* there were probably three of these divisions or *maeniana* in the Circus Maximus, without counting the gallery at the top. The lowest of these divisions was called *maenianum primum*, and the highest was called *summum;* each of these bands of seats was also divided by flights of steps into *cunei*, which were numbered; each line of seats (*gradus*) in each *cuneus* was also numbered; and as there were no divisions to separate one place from the next, each *gradus* was measured, and allotment was made to various classes of a fixed number of feet measured from one end. Thus, for example, the space allotted to a *collegium* of priests might be described as follows: "In the first *maenianum*, in the twelfth *cuneus*, nine feet of *gradi* 4 and 5."

In addition to the *cavea* proper and its *podium*, various state boxes were constructed of marble, with columns and arches to support the entablature and roof of each. One series of these (*cubicula* or *suggestus*) was over the *carceres*, and appears to have been occupied by the giver of the games (*editor spectaculorum*) and his friends. Another elevated box (the *tribunal iudicum*, D) was placed at one side for the umpires, who decided which chariot first crossed the line chalked on the arena in front of them. See Henzen, *Acta Fratrum Arval*, p. 37 (Berlin, 1874).

A separate *pulvinar* or state box (E) for the imperial family, of great size and magnificence, was erected on the Palatine side of the Circus Maximus (Suet. *Claud.* 4). An interesting relief of the third century A.D., found at Foligno, represents the presiding magistrate or *editor* of the games seated in his box over the *carceres;* he holds in his hand a bag of money, which he is about to give to the winning charioteer, who has driven up and is saluting him from below. A similar scene is represented on several of the ivory consular diptychs of the fourth and fifth centuries. (See Gori, *Thesaur. Vet. Dipt.*, Florence, 1759). The chief of these is the celebrated leaf of a fourth century diptych in the Museo Quirinaiano at Brescia. On this the presiding consul sits in his *pulvinar;* in the arena below four *quadrigae* are racing round the *spina*, which, like that on the Lyons mosaic, is a long tank of water. The way in which the reins were looped round the body of the driver (*auriga*) is clearly shown; each holds in his hand what seems to be a combination of whip and goad; and they all wear *fasciae* round their legs and bodies. The horses' legs are also closely bound about with thongs. See Fröhner, *La Verrerie Antique* (Paris, 1879).



On the ivories the consul, or other president of the games, is usually represented in the *pulvinar*, magnificently robed in the *toga picta* and *pallium*, and in some cases holding in his hand the *mappa* or napkin with which he gave the signal for the start.

The starting end of the Circus was formed by a row of small vaulted chambers (*carceres*, A A), each large enough for one chariot and its horses. Of these *carceres* there were at the most twelve. Each had two doors—one behind, by which the chariot entered, and one in front, opening into the arena. This latter doorway was closed by folding doors, with open work (*cancelli*) in the panels. These doors were thrown open at the start by slaves (*tentores*), two to each doorway (as in the accompanying illustration), who flung them open simultaneously at the signal. In early times the races appear to have begun at the *carceres;* but later, the actual start took place at a line marked on the arena with white chalk or lime (*alba linea*), and hence sometimes called *creta* or *calx* (K). A similar white line for the finish was drawn opposite the judge's box (D), at a point unequally distant

Doors of Carceres opened by Slaves. (Museo Borgiano, Velletri.)

from the two *metae*. The starting-line was drawn opposite the *metae* that were nearest the *carceres*. The *carceres* received no light except what came

Doors of Carceres. (British Museum.)

through the grating. Their narrow openings are called *fauces*. The lofty state-boxes above the *carceres*, with their colonnades and arches, towered to an imposing height, and the whole structure was known as the *oppidum*, from its resemblance to the gate and towers of a city (Varr. *L. L.* v. 153).

A brass of Caracalla shows the external façade of the *oppidum*, and a sort of bird's-eye view beyond of the interior of the Circus, with its *spina*, central obelisk, and *aediculae*, and statues in *quadrigae* set at the top of the wall surrounding the *cavea*. It will be seen from the typical plan given above that the *carceres* (A A) are slightly curved on plan, and are constructed on a segmental line, the centre of which is struck from a point midway (N) between the line of the *spina* and the side of the *cavea*. This plan was adopted in order that the chariots in all the *carceres* might have as nearly as possible a position of equal advantage at the start. The special *carcer* occupied by each chariot was fixed on by drawing lots.

The *spina* (back-bone) was a long, low wall, or rather platform, of marble (M M), set in the middle of the arena to separate the going and returning course of the racers. The line of the *spina* is not parallel to that of the *cavea*, but is slightly inclined so as to leave a wider space at K than that near the semicircular end. The object of this seems to have been that the chariots might have more space where they were crowded together at the start than at other points where some would have begun to tail off.

Various mosaics and reliefs show the *spina* (M M) covered with a series of statues and ornamental structures, such as obelisks, small *aediculae* or shrines, columns surmounted by statues, altars, trophies, and fountains. In addition to these were two sets of seven marble eggs (*ova*) at each end of the *spina*—each set mounted on a small *aedicula*, to which access was given by a ladder. One of these eggs was removed after each lap (*curriculum*) was run (Varr. *Re Rust.* i. 2, 11), there being usually seven laps to each race (*missus*). According to Livy (xli. 27), these *ova* were first set on the *spina* by the censors in B.C. 174; but Dio Cassius attributes their introduction to Agrippa, in the reign of Augustus. He is, however, probably confusing them with another series of ornaments—seven dolphins, which were set on a similar *aedicula* and served a similar purpose (Juv. vi. 590). These dolphins must have been too heavy to take down, and were probably merely moved in some way to indicate the number of laps.

In some ancient representations, as in a mosaic found at Lyons and figured on page 355, the dolphins form fountains—water spouting from the mouth of each fish. This shows that they could not have been wholly removed. The eggs had some sacred connection with the Dioscuri, and the dolphins with Neptune (or Consus)—deities who were the patrons of horses and racing (Tertull. *De Spect.* 8). The Lyons mosaic, which no doubt represents the local circus, has what appears to have been a common form of *spina*, consisting of a long tank of water instead of the marble *podium;* statues and other ornaments stand on pedestals in the water. Two sarcophagi in the Sala della Biga in the Vatican have reliefs which represent a chariot-race of Cupids in the Circus Maximus, and show clearly the *spina* and its ornaments, among which are statues of Apollo Helios, Cybelé, Victory, a quadriga, and an obelisk, as well as the eggs and dolphins. The *metae* are shown at each end; a similar relief is given in the illustration above.

Metae. (Relief in the British Museum.)

The *metae* (L L), the goals, were three tall, conical objects (Ovid, *Met.* x. 106; Hor. *Carm.* i. 1, 5) set on a semicircular plinth, at a short distance from each end of the *spina*. From the time of Claudius, they were of gilt bronze decorated with bands in relief, as is shown in the above illustration from a relief in the British Museum. These formed the turning-points for the chariots. The *primae metae* are not, as might be expected, the ones nearest to the start, but those near the semicircular end of the Circus, round which the

Race in the Circus, showing the Spina, with the Dolphins, Obelisk, and Ova. (Ancient relief in the Vatican.)

chariots made their *first* turn. Tertullian (*De Spect.* v. 8) mentions that the ancient altar of Consus in the Circus Maximus was *ad primas metas;* it appears to have been in the *spina*, and was only exposed to view during the progress of the games.

Remains of the *spina*, stripped of all its rich marble decorations, exist in the Circus of Maxentius, at Vienne in France (*Bull. Inst.* 1861, p. 143), and in the circus of Carthage (Falbe, *L'Emplacement de Carthage*, p. 40).

The arena, or sandy floor of the Circus, like that of the Colosseum, was on some occasions strewn with glittering particles of mica, red lead, or perfumes, by the ostentatious extravagance of the emperors (Suet. *Cal.* 18). That part of the arena which formed the course for the chariots was known as the *spatium* (Juv. vi. 582). The space near the *carceres* was known as the *circus primus*, while that on each side of the *spina* was the *circus interior* (Varr. *L. L.* v. 154).

Before the construction of amphitheatres in Rome, the Circus Maximus was used for gladiatorial fights with wild beasts and other scenes of butchery. The Ancyraean inscription records that Augustus had no less than 3500 wild beasts slaughtered in the Circus, Forum, and amphitheatre, in twenty-six exhibitions.

In order to keep the beasts from reaching the spectators on the *cavea*, Iulius Caesar constructed a canal (*euripus*) ten feet wide and ten feet deep all round the arena; this was supplied by a stream which still runs through the site of the Circus, near the modern Via de' Cerchi (Suet. *Iul.* 39). After the erection of the amphitheatre of Statilius Taurus in the reign of Augustus, the Circus Maximus appears to have been no longer used for fights with beasts, and the *euripus* was therefore filled up by Nero (Plin. *H. N.* viii. § 21). It was, however, again introduced in later times (Lamprid. *Heliog.* 23).

Other Circi at Rome.—Few remains of other *circi* exist to-day above ground at Rome. The important edifices of this sort were as follows:

(1) The Circus Flaminius which gave its name to the Campus Flaminius, an important part of the Campus Martius (q. v.). It was founded in honour of the censor C. Flaminius Nepos, killed at the battle of Lake Trasimenus, B.C. 217.

(2) The Circus of Caligula and Nero in the Horti Agrippinae, at the foot of the Vatican Hill (Suet. *Claud.* 21). No traces of this circus are visible at the present time.

(3) The Circus of Hadrian in the Campus Vaticanus, near the emperor's Mausoleum. No traces of it now remain.

(4) The Circus of Maxentius on the Via Appia, two miles from the walls of Rome, is sufficiently well preserved to show its original form, though it is completely stripped of its marble seats, columns, and other rich decorations. Till 1825 it was thought to be a circus built by Caracalla, but three inscriptions which were then found showed that it was dedicated in A.D. 311 to the memory of Romulus, who died in A.D. 309, by his father Maxentius. The plan of this circus is shown on page 352; the greater part of the external wall is still standing, but the concrete vaults which supported the seats have mostly fallen in.

(5) The Circus of Sallust, called after the historian.

The Circus Games.—The games in the circus (*Ludi Circenses*) opened with a grand procession (*pompa*), which gathered on the Capitoline Hill, passed down the Clivus Capitolinus into the Forum, along the Via Sacra, then branched off along the Vicus Tuscus, and so through the Velabrum into the Forum Boarium, where was the entrance into the Circus at the Porta Pompae. It then passed once round the *spina*, pausing to offer sacrifices and to salute the imperial *pulvinar*. The gorgeous procession which opens a modern bull-fight in Spain bears much resemblance to the Roman *pompa circensis:* it winds round the arena, and then pauses to salute the presiding official, who gives the signal to begin by throwing a key to the chief *espada*. The Roman procession was headed by the presiding magistrate, or in some cases by the emperor himself, in a *biga* or *quadriga*, wearing the dress and insignia of a triumphant general; probably a survival from the time when the *ludi circenses* were celebrated in honour of victorious generals. A gold wreath was held over his head by a slave (Liv. v. 14; Juv. x. 35–46; Dionys. vii. 72). Next came a crowd of noble citizens on foot and on horseback; then the chariots and horsemen who were to take part in the games, accompanied by musicians. Next in order were priests, grouped in their various *collegia;* bearers of holy water, incense, and sacrificial implements; and statues of deities in chariots (*tensae*) drawn by horses, mules, or elephants, or else borne in litters (*fercula*) on men's shoulders, and attended by noble Roman youths (Dionys. vii. 72). Statues in litters and in a car drawn by four elephants are shown in an ancient sarcophagus relief figured in the *Ann. Inst.* 1839, tav. o. The games mainly consisted of chariot-races; the cars (*currus*) being drawn by various numbers of horses, from two up to ten, and called *bigae*, *trigae*, *quadrigae*, *seiuges*, *septemiuges*, and so on according to the number attached to each car. In early times *bigae* and *quadrigae* were mostly used; but under the later Empire wonderful skill was displayed by some of the drivers in managing a large number of horses. In a *biga* both horses were under a yoke (*iugum*), and were called *equi iugales;* in chariots with four or more horses, only the two in the middle were yoked; those at the sides were merely attached by traces (*funes*), and were therefore called *equi funales*.

The chariots were light structures of wood bound with bronze, high in front and open behind. The Sala della Biga in the Vatican is so named from an ancient (restored) marble chariot, possibly a votive offering for victory in the Circus. See Currus.

Aurigae.—The drivers (*aurigae* or *agitatores*) were usually slaves or men of low class. They wore a short tunic laced round the body with leathern thongs (*fasciae*); other thongs bound their thighs. The accompanying illustration shows the statue of an *auriga*, no doubt some distinguished winner; it is now in the Vatican by the marble *biga;* the arms and legs have been restored, as well as the head. That shown in the cut does not belong to it. The *aurigae* wore a low, close-fitting cap—not a bronze helmet. Though belonging to a despised class, the favourite *aurigae* in the degraded times of the Empire were much honoured and fêted, and their society was sought after by the dissolute Roman youth. Very great

skill, courage, and coolness were required to guide a chariot successfully round the sharp turns of the *metae*, among a jostling crowd of other horses and chariots, especially as each driver tried to upset his rivals. Constant accidents must have happened, for almost every ancient representation of a circus race shows one or more chariots overturned; and this was especially dangerous, as the *auriga* drove with the reins looped round his waist. That he might have a chance of cutting himself free in case of accident, he wore a curved knife (*falx*) stuck in his waist-bands; this is shown in the Vatican statue here given. No doubt one of the chief attractions of the Circus to the brutal Romans must have been the sight of the crushed limbs of an unfortunate driver among the struggling hoofs of his fallen horses, or under the wheels of a luckier rival. In spite of these dangers some drivers lived to win an enormous number of victories. The monument of the *auriga* Diocles (*circ.* A.D. 150) records that he defeated Scorpus, the winner of 2048 races; Pomp. Musclosus, the winner of 3559; and Pomp. Epaphroditus, who had won 1467 times. Diocles himself, when he retired from his profession at the age of forty-two, had won 3000 races of *bigae*, and 1462 with more than two horses. The victorious *auriga* received a prize of money; or in some cases, if a slave, he won his freedom. The prize was sometimes called the *brabeum* or *bravium* (βραβεῖον, Prud. *Peristeph.* v. 538; cf. St. Paul, 1 Cor. ix. 24), and the giver of the prize was known as the *brabeuta* (Suet. *Nero*, 53). The winners of important races, on which there was heavy betting, sometimes received enormous sums of money from patrons who had backed them (Juv. vii. 113, 243; Suet. *Claud.* 21; Capitol. *Ver.* 6). Martial (x. 74, 5) mentions one named Scorpus, who, in the reign of Domitian, won no less than fifty purses of gold in one hour's racing. M. Renan in November, 1878, read before the Société des Inscriptions in Paris a paper on an interesting inscription found in Rome, which recorded that a Moorish *auriga* named Crescens had during ten years (A.D. 115–124) won 1,556,346 sesterces with four horses called Circus, Acceptus, Delicatus, and Cotynus. Under the Empire, wealthy Roman citizens were not ashamed to act the part of *aurigae*, especially after Caligula and Nero had set the example.

Statue of an Auriga. (Vatican.)

Race-horses.—The horses used for racing purposes were mostly bred in Spain, Sicily, Mauritania, northern Greece, and, in late times, in Cappadocia. No expense or trouble was spared in their training, and the Romans were careful not to spoil the horse (in the way the modern English racer is ruined) by using it too soon. As a rule the Roman racer was not broken in till the age of three, nor allowed to run in a race till five. Consequently some of the horses won a surprising number of victories. A horse which had won 100 races was called *centenarius;* in the inscription of Diocles a horse called Tuscus is mentioned as the winner of 429 races; a horse belonging to Diocles himself was a *ducenarius*. Like the modern Romans, the ancients seem to have disfigured their horses by branding on the flank the initial or badge of the owner; which is shown on several mosaic pavements. Stallions were used, and apparently but few mares were trained for races. Almost all the names of race-horses which exist in mosaic pictures or in inscriptions are those of males. See Friedländer, *De Nominibus Equorum Circensium* (Königsberg, 1875).

The public training-stables of Rome consisted of six or more groups of buildings in Regio IX in the Campus Martius, and near the Circus Flaminius (see Jordan, *Topogr. der Stadt Rom*, ii. 554). In 1878, in the village of Oued-Atmenia in Algeria, some elaborate mosaic pavements were found in the villa of Pompeianus, proconsul of Africa under Honorius, who appears to have been a great breeder of Moorish horses for the Circus. Perspective views of the training-stables are represented on these mosaics, and other pictures show the racers in their stalls, carefully clothed from head to foot. The name of each horse is placed by it—e. g. Altus, Pullentianus, Delicatus, Polydoxus, etc., and an *auriga* named Cresconius is also depicted. Large coloured drawings of these by M. Martin were exhibited in Paris, in 1878, and afterwards published

Circus Games. (Lyons Mosaic.)

by the Soc. Archéol. de Constantine, in 1879. The training-stables seem to have been centres of intrigue and villainy of all kinds: bribes were given, and horses were often "hocussed." Caligula, who spent much of his time in the stables of his favourite *factio*, is said to have poisoned the cleverest drivers of his rivals' horses. See Dio Cass. lix. 5 and 14.

Large sums of money were lost and won on the races (*sponsio*, "betting," Juv. xi. 202, with Mayor's note; Mart. *Ep.* xi. 1, 15). Race-cards (*libelli*) were sold with lists of the horses and names of the drivers; and these were also given in the advertisements of the games, which were painted in large letters on conspicuous walls: examples of these have been found at Pompeii. In addition to the chariots and their drivers, men on horseback appear to have galloped with the racers, exciting them with shouts; after the race these *iubilatores*, as they were called, seem to have called out the name of the winner. In some cases these attendants were on foot (*cursores*).

In early times only four chariots ran in each race (*missus*), one for each colour (see below); in later times eight or even ten chariots started together. The starting signal was given by the presiding magistrate, who waved a *mappa* (Liv. viii. 40, 2; xlv. 1, 6; Mart. xii. 29, 9); and hence Juvenal (xi. 193) calls the circus games *spectacula mappae*. Seven laps or circuits (*curricula*) of the *spina* appear to have been the usual length of each *missus*. (See Varro, quoted by Aul. Gell. iii. 10.) On one occasion Domitian reduced the number of laps to five, in order to get 100 *missus* into one day. In early times very few races were run in a day; even in the time of Iulius Caesar they did not usually exceed ten or twelve. Caligula increased the number to twenty, or on very grand occasions twenty-four; but in later times a long succession of races was run throughout the whole day from sunrise to sunset.

Intervals between sets of races were filled up by exhibitions of rope-dancing, tumbling, and feats of horsemanship, very like those of a modern circus. See Desultor.

In addition to these races and games, the young Romans sometimes held reviews and assaults of arms (*armaturae*) in the Circus Maximus; these were sometimes on foot (*armaturae pedestres*) and sometimes on horseback (*equestres*). One variety of this was called the *Ludus Troiae* (Tac. *Ann.* xi. 11; Suet. *Aug.* 43, and *Nero*, 7). Various other entertainments, such as feasts, were sometimes given in the Circus (Stat. *Silv.* i. 6, 28); or money was flung among a crowd in the arena. On one occasion Probus planted and stocked an artificial forest with wild animals and birds in the Circus Maximus, and finally let in the people to kill and carry off what they could (Vop. *Prob.* 19).

The *factiones* were companies or organizations of contractors who provided horses, drivers, and all other requisites for the games. The *factio* system was not developed till the time of the Empire; under the Republic a few citizens of knightly rank provided all the requisites. The giver of the entertainment (*editor spectaculorum*) only found the money, the whole business being managed by the *factiones*. Each *factio* was distinguished by a colour, which was worn by the *aurigae* and other performers in the *ludi*. At first there were only two *factiones*, distinguished by the colours red and white, *russata* and *albata*; next blue (*veneta*) was added, probably in the time of Augustus; and a fourth, green (*prasina*), came in soon after (Juv. xi. 196; and Tertull. *De Spect.* 9). Lastly, Domitian added purple and gold—*purpureus et auratus pannus* (Suet. *Dom.* 7). Under the later Empire each *factio* consisted of a sort of *collegium*, carefully organized and ranked in classes of every kind, such as the methodical and bureaucratic Romans delighted in. At the head of each was a *factionis dominus*, and under him were employés, slaves, and artisans of every sort required for the whole management of the *ludi*. The number and classes of a *familia quadrigaria* (a division of a *factio*) are given in an ancient inscription published by Gruter, 336–339. The *familia* consists of twenty-five *decuriones*—that is, at least 250 people, who are classified as follows: *aurigae*, *agitatores*, and *quadrigarii*, drivers of four-horse chariots; *conditores* and *succonditores*, grooms and helpers; *sellarii*, saddlers; *sutores*, cobblers; *sarcinatores*, tailors; *margaritarii*, pearl-embroiderers; *medici*, surgeons; *magistri* and *doctores*, perhaps trainers and instructors; *viatores*, messengers; *vilici*, farm-servants to supply fodder; *tentores*, probably the men who pulled the ropes to open the doors of the *carceres*; *sparsores*, water-men: these probably watered the dry arena to prevent clouds of dust from rising, and also brought water to refresh the men and horses.

The rivalry between the different colours of the factions and the heavy betting on the races often led to scenes of riot and bloodshed. (See Factio.) Even in Rome, faction fights frequently took place towards the declining period of the Empire, but it was not till after the transference of the Roman capital to Constantinople that these disturbances reached their highest pitch. In the sixth century, the great circus at Constantinople was frequently the scene of the most hideous slaughter, and on one occasion in the reign of Justinian the tumult was not suppressed till about 30,000 of the rioters had been killed (see Gibbon, *Decline and Fall*, cap. xl.). A great part of this circus is still well preserved, though stripped of all its rich marble linings and columns.

For the various festivals that were celebrated by circus games, see the separate articles on the Cerealia, Consualia, Equiria, Floralia, and under Ludi.

For further information the reader should consult Tertullian, *De Spectaculis*; Panvinius, *De Ludis Circensibus* (Venice, 1600); Bulengerus, *De Circo Romano*, printed by Graevius, *Thesaur. Ant. Rom.* ix. (Lyons, 1694); Bianconi, *Descrizione dei Cerchi* (Rome, 1789); Bianchini, *Circi Max. Iconographia* (Rome, 1828); Canina, *Roma Antica*, vol. i. (Rome, 1830); Nibby, *Circo detto di Caracalla* (Rome, 1825); Magnin, *Origines du Théâtre* (Paris, 1838); Hodgkin, *Letters of Cassiodorus* (London, 1886); and articles in the *Ann. Inst. Arch. Rom.* for 1839, 1863, and 1870.

Ciris. A poem falsely ascribed to Vergil, and sometimes printed with his works. It consists of 541 hexameter lines, giving an account of the treacherous conduct of the Megarian princess Scylla towards her father, Nisus, and her transformation into the bird Ciris. It is dedicated to the son of Messalla, and draws largely upon Vergil's verse, eleven lines being copied outright, and eight with the change of only one word. Other portions suggest Catullus and occasionally Lucre-

tius. The metrical treatment is less careful than Vergil's own, while the style is more lively. See Kreunen, *Prolegomena in Cirin* (Utrecht, 1882); Walz, *De Carmine Ciris* (Paris, 1881); Siecke, *De Niso et Scylla in Aves Mutatis* (Berlin, 1884); and R. Ellis in the *American Journal of Philology*, vol. viii. p. 399.

Cirrha (Κίρρα). See CRISSAEUS SINUS.

Cirrus. See COMA.

Cirta (Κίρτα), later CONSTANTĪNA. Now Constantine; a city of the Massylii in Numidia, fifty Roman miles from the sea; the capital of Syphax, and of Masinissa and his successors. Its position on a height, surrounded by the river Ampsagas, made it almost impregnable, as the Romans found in the Jugurthine, and the French in the Algerian wars. It was restored by Constantine the Great, in honour of whom it received its later name. A Roman bridge and the remains of a Roman aqueduct still interest the archæologist, and in 1858 a fine statuette of a Wingless Victory was discovered here.

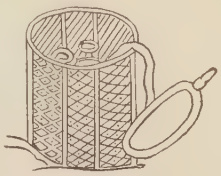
Cisalpīna Gallia. See GALLIA.

Cisium. A light, open carriage with two wheels, like a gig, adapted for two persons. Its form is sculptured on the monumental column at Igel, near Treves (see illustration). It had a box or case, probably under the seat. The *cisia* were quickly drawn by mules (*cisia volantia*). Cicero mentions the case of a messenger who travelled fifty-six miles in ten hours in such vehicles, which were kept for hire at the stations along the great roads—a proof that the ancients considered six Roman miles per hour as an extraordinary speed. The conductors of these hired gigs were called *cisiarii*, and were subject to penalties for careless or dangerous driving See Cic. *Pro Rosc. Amerin.* 7; Ulpian, xiii.

Cisium.

Cispadāna Gallia. See GALLIA.

Cisseus (Κισσεύς). A king in Thrace, and father of Theano, or, according to others (Eurip. *Hec.* 3), of Hecuba (q. v.), who is hence called Cisseïs (Κισσηΐς).



Cissia (Κισσία). A very fertile district of Susiana, on the Choaspes. The inhabitants, Cissii, were a wild, free people, resembling the Persians in their manners (Herod. iii. 91).

Cissus (Κισσός). A town of Macedonia, in the vicinity of Thessalonica, which contributed to the aggrandizement of that city.

Cissybium (κισσύβιον). A large rustic cup of wood with one or two handles and sometimes adorned with carving. (See Theocr. i. 27.) The name is derived from κισσός, and probably means "made of ivy-wood."

Cista, Cistella (κίστη, κιστίς). (1) Originally a wicker basket used for holding vegetables and other produce (Plin. *H. N.* xv. 60), and of either square or cylindrical shape. (2) A ballot-box, into which the voters cast their *tabellae*, and of which the form and general appearance are shown in the annexed illustration taken from a coin of the gens Cassia. It is to be carefully distinguished from the *sitella*, the urn from which the names of the tribes or centuries were drawn by lot. (See COMITIA.) (3) Any box or casket, usually of small size, and intended for almost any purpose—e. g. a book-box (= *capsa*), a jewel-case, a toilet-box. Of the last-named variety of *cista*, a great many very beautiful specimens have been found of basket-work. They appear to have been used largely for holding hair-pins, sponges, small mirrors, and scent-bottles. Most of them have been discovered in the southern part of Italy (Magna Graecia); fewer in Greece proper and in Etruria. The metal *cistae* (bronze or silver), on the other hand, come almost exclusively from Praenesté, where they were produced on a large scale. The most beautiful of these and the first to be discovered (about the year 1737) is the celebrated Ficoroni *cista*, now in the Museo Kircheriano at Rome. In 1866, Schoene described seventy *cistae* from Praenesté alone. In 1882, Fernique reported the number as having reached one hundred. (4) The name *cistae* was also given to the small boxes carried in the processions at the Greek festivals of Demeter and Dionysus, and containing the sacred things connected with the worship of the deities. (See Catull. lxiv. 259.) The shape was sometimes oblong; oftener cylindrical. To distinguish these from the common *cistae*, they are generally called *cistae mysticae*. See CISTOPHORUS; MYSTERIA.

Cista, voting-basket.

Cista, toilet-basket.

Cista Castellaniāna. An Etruscan casket discovered by Signor Castellani, a Roman jeweller, and now in the British Museum.

Cista Ficoroniāna. The most celebrated of the *cistae*, or jewel-caskets, found in Italy. It was discovered by an Italian scholar, Ficoroni, in 1745,

Cista Ficoroniana.

at Lugano, about five miles from Palestrina. An Englishman offered him a large sum for it, but he preferred to present it to the Museo Kircheriano of the Jesuit College in Rome, where it is still preserved. It is cylindrical in shape, about fifty centimetres high and forty-two in diameter, and bears upon its somewhat convex side representations of scenes from the story of the Argonauts. The finish of the drawing and the freshness and spirit of the composition make the work exceedingly attractive. An inscription upon it gives the name of the owner and the artist:

DINDIA . MACOLNIA FILEAI . DEDIT
NOVIOS . PLAUTIOS . MED . ROMAI . FECID.

See O. Jahn, *Die Ficoronische Cista* (1852).

Cistellaria. A play of Plautus, of which only about one half has been preserved. The prologue contains an allusion to the Second Punic War as being still in progress. A good separate edition is that of Benoist (Lyons, 1863).

Cistellātrix. A lady's maid (Plaut. *Trin.* 253).

Cisterna. See PUTEUS.

Cisthēné (Κισθήνη). (1) A mythical plain mentioned in the *Prometheus Vinctus* of Aeschylus (v. 799) as the abode of the Gorgons. (2) A town on the coast of Mysia. (3) A town on the coast of Lycia.

Cistophŏrus (κιστοφόρος). One who carried the *cista* in religious processions.

Cistophŏrus (κιστοφόρος). A term applied to certain silver coins issued in Asia Minor, in consequence of the type with which they were impressed—a Dionysiac *cista*, out of which a serpent glides. The other side of the coin bears the name or monogram of the city of issue. According to Dr. Imhoof, this coin originated in Ephesus shortly before B.C. 200, and its use rapidly extended throughout the dominions of Attalus I. of Pergamus. Henceforth the cistophorus became a sort of Pan-Asiatic coin, and was issued in vast quantities from many Asiatic mints. See *Numismatic Chronicle* (1883), p. 196.

Cistophorus. (Head.)

Citadel. See ACROPOLIS; ARX; CASTELLUM.

Cithaeron (Κιθαιρών). (1) A king of Plataea in Boeotia, remarkable for his wisdom. By his advice, Zeus pretended to be contracting a second marriage when Heré had quarrelled with and left him. The scheme succeeded, and the goddess became reconciled to her spouse (Pausan. ix. 3). This monarch is said to have given name to the well-known mountain-range in Boeotia. (2) A lofty range of mountains, separating Boeotia from Megaris and Attica. It was sacred to Dionysus and the Muses, and was celebrated for the death of Pentheus (q. v.) and Actaeon (q. v.). Here was celebrated the festival called Daedala (q. v.).

Cithăra (κιθάρα), **Citharista** (κιθαριστής). See LYRA.

Citharoeda. See LYRA.

Citharoedus (κιθαρῳδός). See LYRA.

Citium (Κίτιον). (1) A town in Cyprus, 200 stadia from Salamis, near the mouth of the Tetius; here Cimon, the celebrated Athenian, died, and Zeno, the founder of the Stoic school, was born. It is now Larnaca. (2) A town in Macedonia, northwest of Beroea.

City Editions of Homer. A name given by Homeric scholars to the "official" copies of the Homeric poems preserved by authority, and from which private copies were made. An edition means a single copy, and there were seven so-called "city" or "civic" editions—the Massaliotic, Sinopic, Chian, Cyprian, Argive, Cretan, and Lesbian (Aeolic). Of these the first four were Ionic, and the last three Aeolic. They are said by some to have been copied from the recension of the poems made by the commission of Pisistratus appointed to rearrange and edit them. See Mahaffy, *Hist. of Class. Greek Literature* (1880), vol. i. pp. 28, 29, and 35; and the article HOMERUS.

Cius (Κίος). An ancient city in Bithynia, on a bay of the Propontis called Cianus Sinus, was colonized by the Milesians. It was destroyed by Philip III., king of Macedonia; but was rebuilt by Prusias, king of Bithynia, from whom it was called Prusias (Polyb. xvi. 21).

Civic Editions of Homer. See CITY EDITIONS.

Civīlé Ius. See IUS CIVILE.

Civīlis, IULIUS. A powerful Batavian, who raised a sedition against the Roman State (A.D. 69–70) during the controversy for empire between Vitellius and Vespasian, but who was finally defeated by Petilius Cerealis. His end is not known. Tacitus, in his *Historiae* (bks. iv. and v.), has furnished us with interesting and copious details of this long-protracted conflict.

Civīlis Actio. See ACTIO.

Civis. A citizen. See CIVITAS.

Civĭtas. The technical Latin word for the right of citizenship. This was originally possessed, at Rome, by the patricians only. The plebeians were not admitted to share it at all until the time of Servius Tullius, and not to full civic rights until B.C. 337. In its fullest comprehension the *civitas* included: (1) the *ius suffragii*, or right of voting for magistrates; (2) the *ius honorum*, or right of being elected to a magistracy; (3) the *ius provocationis*, or right of appeal to the people, and in later times to the emperor, against the sentences passed by magistrates affecting life or property; (4) the *ius connubii*, or right to contract a legal marriage; (5) the *ius commercii*, or right to hold property in the Roman community. The *civitas* was obtained either by birth from Roman parents, or by manumission (see MANUMISSIO), or by presentation. The right of presentation belonged originally to the kings, afterwards to the popular assemblies, and particularly to the *comitia tributa*, and last of all to the emperors. The *civitas* could be lost by *deminutio capitis*. (See DEMINUTIO CAPITIS.) The *aerarii*, so called, had an imperfect *civitas*, without the *ius suffragii* and *ius honorum*. Outside the circle of the *civitas* stood the slaves and the foreigners, or *peregrini*. (See PEREGRINI.) The latter included: (1) strangers who stood in no international relations with Rome; (2) the allies, or *socii*, among whom the *Latini* (q. v.) held a privileged place; (3) the *deditīcii*, or those who belonged to nations conquered in war. See IUS.

Though the Roman citizenship was conferred upon all the free inhabitants of the Empire in A.D.

212 by the emperor Caracalla, the grades of it were not all equalized, nor was it until the time of Justinian that *civitas* and *libertas* became convertible terms. See POLITEIA.

Clabulāris or **Clavulāris.** The *cursus clabularis* in the Theodosian Code and in Ammianus Marcellinus (xx. 4) denotes the system of military transport by means of carriages and vehicles. Iohannes Lydus derives the word from *clavus* (*De Mensibus*, i. 9). If we may trust the text of Cod. Theod. vi. 29, 2, § 2, *clabulare* is the name of a wagon, the word here also being used in connection with the transport service. Hence it has been derived from *clavulae* in the sense of rails.

Clabulare. (Pompeian Painting.)

Clampetia or **Lampetia.** A town in Bruttium, deserted in Pliny's time.

Clandestina Possessio. See INTERDICTUM.

Clanis. (1) A river of Etruria, now the Chiano, forming two small lakes near Clusium, and flowing into the Tiber east of Vulsinii. (2) The more ancient name of the river Liris (q. v.).

Clanius. See LITERNUS.

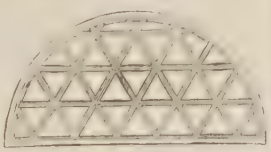
Clarigatio. See FETIALES.

Clarus (Κλάρος). A small town on the Ionian coast, near Colophon, with a celebrated temple and oracle of Apollo, surnamed Clarius.

Clasp. See FIBULA.

Classes. See COMITIA.

Classiarii (ἐπιβάται). Marines. See EXERCITUS.



Classical Philology. See PHILOLOGY.

Classĭcum. The signal given by the *bucina* or horn for the meeting of the Comitia Centuriata at Rome, and for the meeting of the soldiers in camp, especially before they marched out to battle. See CORNU.

Classĭcus, Iulius. A Trevirian prefect in the army of Vitellius (A.D. 69), who subsequently joined the Batavian Civilis in his resistance to the Romans. See CIVILIS.

Clastidium. A fortified town of the Ananes, in Gallia Cispadana, not far from the Padus (Po).

Clatri. A trellis or lattice-work used to protect and partially cover any aperture, as a window or door (Hor. *A. P.* 473).

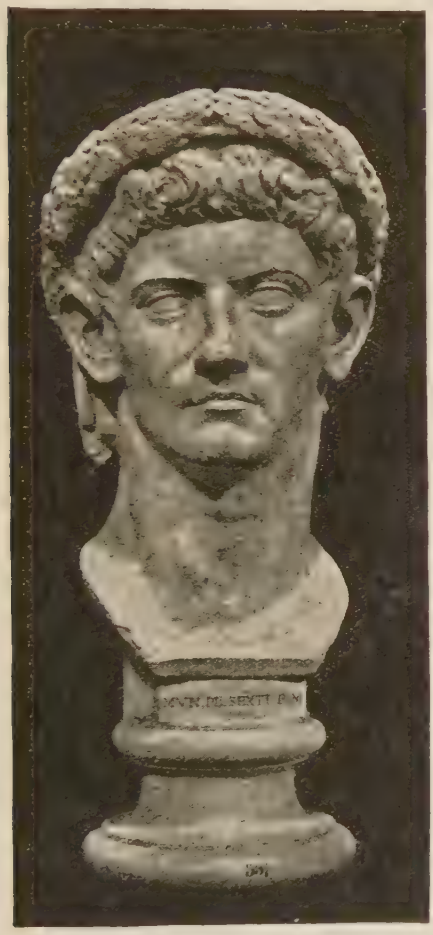
Clathri. (Circus of Caracalla.)

Claudia. See CLODIA.

Claudia Gens, both patrician and plebeian. The patrician Claudii were of Sabine origin, and came to Rome in B.C. 504, when they were received among the patricians. (See CLAUDIUS [1]). They were noted for their pride and haughtiness, their disdain for the laws, and their hatred of the plebeians. They bore various surnames, which are given under CLAUDIUS, with the exception of those with the cognomen Nero, who are better known under the latter name. The plebeian Claudii (Clodii) were divided into several families, of which the most celebrated was that of Marcellus.

Claudia Quinta. A Roman matron, and not a Vestal Virgin as is frequently stated. When the vessel conveying the image of Cybelé from Pessinus (B.C. 204) to Rome had stuck fast in a shallow at the mouth of the Tiber, the soothsayer announced that only a chaste woman could move it. Claudia, who had been accused of incontinency, took hold of the rope, and the vessel forthwith followed her. See Ovid, *Fast.* iv. 305–330.

Claudiānus, CLAUDIUS. A Latin poet, born at Alexandria in the second half of the fourth century A.D. In A.D. 395, he came to Rome. Here he won the favour of the powerful Vandal, Stilicho, and on the proposal of the Senate was honoured with a statue by the emperors Arcadius and Honorius. The inscription on this statue is still in existence (Mommsen, *Inscriptiones Regni Neapolitani*, No. 6794). His patron Stilicho fell in 408, and Claudian, apparently, did not survive him. We have express evidence that the poet was not a Christian. He was familiar with Greek and Latin literature, and had considerable poetical gifts, including a mastery of both language and metre. These gifts raise him far above the crowd of the later Latin poets, although the effect of his writing is marred by tasteless rhetorical ornament and exaggerated flattery of great men. His political poems, in spite of their laudatory colouring, have considerable historical value. Most of them are written in praise of Honorius and of Stilicho, for whom he had a veneration as sincere as was his hatred of Rufinus and Eutropius. Against the latter he launched a number of invectives. Besides the *Raptus Proserpinae*, or *Rape of Proserpine*, an unfinished epic in three books, in which his descriptive power is very brilliantly displayed, his most important poems are: (1) *De III. IV. VI. Consulatu Honorii;* (2) *De Nuptiis Honorii Fescennina;* (3) *Epithalamium de Nuptiis Honorii et Mariae;* (4) *De Bello Gildonico;* (5) *De Consulatu Stilichonis;* (6) *De Bello Pollentino;* (7) *Laus Serenae*, Serena being Stilicho's wife; (8) *Eidyllia*, seven in number; (9) *Epigrammata;* *Gigantomachia*, a fragment. He also wrote epistles in verse, a series of minor pieces, narrative and descriptive, and letters to Serena, and miscellaneous poems, including one on the magnet (*Magnes*).



The *Raptus Proserpinae* has come down in separate MSS., of which the best are two Codices Laurentiani, preserved in the Laurentine Library at Florence. These are of the twelfth and thirteenth centuries respectively. Others are at Leyden. Of the remaining poems there are excerpts (Excerpta Lucensia) from a lost MS., now at Florence; and others (Excerpta Gyraldina) from the lost Codex Gyraldinus, now at Leyden. Good MSS. are also in the Vatican at Rome and in the Ambrosian Library at Milan. Editions of Claudianus have been published by Pulmann (Antwerp, 1571), J. Scaliger (Leyden, 1603), Heinsius (Leyden, 1650), Gesner, with good notes (Leipzig, 1759), Burmann (Amsterdam, 1760), König (Göttingen, 1808), and a critical ed. of the text by Jeep (Leipzig, 1876). See Hodgkin, *Claudianus, the Last of the Roman Poets* (Newcastle, 1875).

Claudiopŏlis (Κλαυδιόπολις). (1) A city of Bithynia, previously called Bithynium. It was situated above Tium, in a district named Saloné, celebrated for its excellent pastures and a cheese much esteemed at Rome. Under Theodosius it was made the capital of the province Honorias. Many years after, we

learn from Anna Comnena (p. 967) and Leo Diaconus (iv. 9), who describe it as the most wealthy and flourishing city of Galatia, that it was almost totally destroyed by an earthquake, attended with vast loss of life. (2) A city of Cilicia Trachea, but assigned by Ammianus and Hierocles to Isauria. It was founded by Claudius, the Roman emperor, and was situated in a plain between two summits of Mount Taurus.

Claudius. See CLAUDIA GENS. (1) APPIUS CLAUDIUS SABĪNUS REGILLENSIS. A Sabine, a native of Regillum, and in his own country called Attus Clausus. He belonged to the pro-Roman party among his people, and when his advice was disregarded and war broke out between the two nations, he led a large number of seceders to Rome (B.C. 504), where he was enrolled among the patricians and received a large grant of land beyond the Anio. He was the founder of the great gens Claudia, one of the noblest in Roman history. He was a typical aristocrat, and his conduct towards the plebeians was marked by so much intolerance and severity during his consulship (B.C. 495) as to lead to the famous secession to the Mons Sacer in the following year. (2) APPIUS CLAUDIUS SABĪNUS REGILLENSIS. A son of the preceding, consul in B.C. 471. He was famed for the severity of his military discipline, which he pushed to such extremes that his soldiers deserted him. Having on this account been impeached by the tribunes, he committed suicide. (3) GAIUS CLAUDIUS SABĪNUS REGILLENSIS. A brother of the preceding, and one of the more moderate of the patricians. He defended his brother (?), the decemvir, when the latter was impeached. (4) APPIUS CLAUDIUS CRASSUS SABĪNUS REGILLENSIS, usually called the son of No. 2, but possibly the same person. He was consul in B.C. 451, and in the same year became one of the decemvirs appointed to revise the laws. (See DECEMVIRI.) In the following year he was reappointed, but his tyrannous conduct towards the plebeians, and especially his relation to the affair of Virginia, led to the downfall of the decemvirate. (See VIRGINIA.) Being impeached by Virginius, he either committed suicide or was killed in prison before his trial. (5) APPIUS CLAUDIUS CAECUS. A famous Roman, censor in B.C. 312. During his term of office he commenced the Via Appia and built the great Appian aqueduct. He retained the censorship for four years beyond the time allowed by law, and was twice consul (B.C. 307 and 296), and in the latter year carried on war against the Samnites and Etruscans. As an old man, Appius induced the Senate to reject the proposals for peace made by Cineas on behalf of Pyrrhus. (See PYRRHUS.) He was the first Roman writer of prose and verse of whom we have any record, being the author of a poem (subject unknown), and of a legal treatise *De Usurpationibus*. With Cn. Flavius, he published also a calendar of the religious festivals, and *legis actiones*. According to Quintilian (ii. 16, 7), he was the first to distinguish the two sounds R and S in writing. (See RHOTACISM.) Martianus Capella says that he set the fashion of omitting the use of the character Z. (See ALPHABET.) See Mommsen, *Hist. of Rome*, i. p. 432; id. *Römische Forschungen*, vol. i. (Berlin, 1864); and the treatise of Siebert (Cassel, 1863). In his old age he became blind, as the name Caecus implies. In Roman constitutional history, Appius is famous as having abolished the limitation of the full right of citizenship to land-owners. (6) APPIUS CLAUDIUS CAUDEX. A brother of the preceding, who was consul in B.C. 264, and took part in the First Punic War, conducting a campaign against the Carthaginians in Sicily. (7) PULCHER, a Roman consul in the First Punic War. When, previous to a naval engagement with the Carthaginians, the person who had charge of the sacred fowls told him that they would not eat, which was esteemed a bad omen, he ordered them to be thrown into the sea, exclaiming, "Then let them drink." After this, joining battle with the foe, he was defeated with the loss of his fleet. Having been recalled by the Senate, he gave another specimen of the haughty temper of the Claudian race, for, on being directed to nominate a dictator, he purposely named his own *viator*, an individual of the lowest rank (Cic. *N. D.* ii. 3). (8) NERO, a Roman consul in the Second Punic War, who, in conjunction with his colleague Livius Salinator, defeated Hasdrubal in Umbria, on the banks of the Metaurus (q. v.). (9) APPIUS CLAUDIUS PULCHER. A consul in B.C. 143, when he defeated the Salassi, an Alpine tribe. On his return, the Senate refused to give him a triumph, and when one of the tribunes tried to drag him from his chariot, he and his daughter Claudia, a Vestal, walked together to the Capitol. He was father-in-law to Tib. Gracchus, and acted as triumvir for the division of the public lands. He died soon after the death of Gracchus. (10) TIBERIUS NERO, father of the emperor Tiberius. He was distinguished for his naval skill in the Alexandrine War, under Iulius Caesar. At a subsequent period he incited a sedition in Campania by promising to restore the property of those who had suffered in the Civil Wars. This tumult, however, was soon quelled by the arrival of Octavianus; and Tiberius, together with his wife Livia, took refuge in Sicily and Achaia until the establishment of the Second Triumvirate made it safe for him to return to Rome. Livia having after this engaged the affections of Octavianus, Tiberius transferred to him the name and privileges of a husband (Tac. *Ann.* v. 1). (11) TIBERIUS NERO CAESAR GERMANĪCUS, the successor of Augustus, and son of the preceding. (See TIBERIUS.) (12) TIBERIUS CLAUDIUS DRUSUS NERO CAESAR GERMANĪCUS, more commonly known by his historical name of Claudius, succeeded to the Roman Empire on the death of Caligula. He was the second son of Drusus and Antonia, and consequently grand-nephew to Augustus. When the assassination of Caligula was made known, the first impulse of the court party and of the foreign guards was to massacre all who had participated in the murder. Several persons of distinction, who imprudently exposed themselves, became, in consequence, the victims of their fury. This violence subsided, however, upon their discovering Claudius, who had concealed himself in an obscure corner of the palace, and who, being dragged from his hiding-place, threw himself at their feet in the utmost terror and besought them to spare his life. The soldiers in the palace immediately saluted him emperor, and Claudius, in return, set the first example of paying the army for the imperial dignity by a largess from the public treasury. It is difficult to assign any other motive for the choice which the army made of Claudius than that which they themselves professed, "his relationship to the whole family of the Caesars." Claudius, who was now

fifty years old, had never done anything to gain popularity, or to display those qualities which secure the attachment of the soldiery. He had been a rickety child, and the development of his faculties was retarded by his bodily infirmities; and although he outgrew his complaints, and became distinguished as a polite scholar and an eloquent writer, his spirits never recovered from the effects of disease and of severe treatment, and he retained much of the timidity and indolence of his childhood. During the reign of Tiberius he gave himself up to gross sensuality, and consoled himself under this degradation by the security which it brought with it. Under Caligula also he found

The Emperor Claudius. (Bust in the Vatican.)

his safety consist in maintaining his reputation for incapacity, and he suffered himself to become the butt of court parasites and the subject of their practical jokes. The excitement of novelty, on his first accession to the throne, produced efforts of sagacity and prudence of which none who had previously known him believed him capable; and during the whole of his reign, too, we find judicious and useful enactments occasionally made, which would seem to show that he was not in reality so foolish and incompetent as historians have generally represented him. It is most probable, therefore, that the fatuity which characterizes some parts of his conduct was the result, not of natural imbecility, but of the early and unlimited indulgence of sensuality.

Coin of Claudius.

Claudius embellished Rome with many magnificent works; he made Mauritania a Roman province; his armies fought successfully against the Germans; and he himself triumphed magnificently in victories over the Britons, and obtained, together with his infant son, the surname of Britannicus. But in other respects he was wholly governed by worthless favourites, and especially by his empress, the profligate and abandoned Messalina (q. v.), whose cruelty and rapacity were as unbounded as her licentiousness. At her instigation it was but too common for the emperor to put to death, on false charges of conspiracy, some of the wealthiest of the nobles, and to confiscate their estates, with the money arising from which she openly pampered her numerous paramours. When the career of this guilty woman was terminated, Claudius was governed for a time by his freedman, Narcissus, and Pallas, another manumitted slave, until he took to wife his own niece, Agrippina, daughter of Germanicus, a woman of strong natural abilities, but of insatiable avarice, extreme ambition, and remorseless cruelty. Her influence over the feeble emperor was boundless. She prevailed on him at last to set aside his own son Britannicus, and to adopt her son, Domitius Ahenobarbus, by her former husband, giving him the name by which he is best known, Nero, and constituting him heir to the imperial throne. Claudius having afterwards shown a disposition to change the succession and restore it to Britannicus, fell a victim to the ambition of Agrippina, who caused him to be poisoned. A dish of mushrooms was prepared for the purpose, a kind of food of which the emperor was known to be especially fond, and the effects of the poison were hastened by the pretended remedies administered by Xenophon, the physician of the palace. It was given out that Claudius had suffered from indigestion, which his habitual gluttony rendered so frequent that it excited no surprise; and his death was concealed till Domitius Nero had secured the guards, and had quietly taken possession of the imperial authority. Claudius died in the sixty-fourth year of his age and the fourteenth of his reign, A.D. 54. His biography is to be found in the *Lives* of Suetonius. See Baring-Gould, *The Tragedy of the Caesars*, vol. i. (London, 1892). (13) Marcus Aurelius Claudius Gothĭcus. A Roman emperor, who reigned from A.D. 268 to 270. He was of an obscure Illyrian family, but won distinction by his brilliant military service under Decius, Valerian, and Gallienus, so that on the death of the last he succeeded to the imperial office. As emperor he won two great victories, defeating the Alemanni in the north of Italy, and in the next year (A.D. 269) the Goths in Dardania at Naïsus. He died at Sirmium in the year 270.

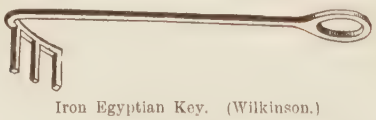
Claudius. See Clodius.

Claudius Quadrigarius. See Quadrigarius.

Claustrum. A fastening. See IANUA.

Clava (*ῥόπαλον, κορύνη*). A club or mace. The shape of the club is seen in works of art relating to Heracles, who is usually represented with a club, and therefore called *Claviger* (Ovid, *Met.* xv. 22, 284). Hence the expression *Herculi clavam subtrahere* of an impossible undertaking (Macrob. *Sat.* v. 3, § 16). The club was sometimes carried, instead of the walking-stick, by certain philosophers as a mark of affectation. In Homeric times the club, shod with iron or made of bronze, was used as a mace in fighting (*Il.* ix. 141); and in the army of Xerxes the Assyrians carried wooden clubs knotted with iron (Herod. vii. 63). Pisistratus had a body-guard of club-bearers (*κορυνηφόροι*), as less invidious in a free State than *δορυφόροι*, or men armed with spears (Herod. i. 59). Though the club or mace was not usual in the Greek army, it was used occasionally; and we thus read of Arcadian hoplites carrying clubs (Xen. *Hell.* vii. 5, § 20). On the Column of Trajan the club appears as the weapon of some auxiliary barbarians.

Heracles and the Nemean Lion. (From a Roman Lamp.)



Among the Romans the recruits were taught to fight with a club instead of a sword, against a dummy or stake (*palus*) set in the ground (Cic. *Sen.* 16 and 58).

Clavarium. See CLAVUS ad fin.

Clavātor. A sutler or soldier's servant. See CALO.

Clavĭger (1) (*Κορυνήτης*). "Club-bearing." An epithet of Heracles, who is represented with a club. (2) (*Κλειδοῦχος*). "Key-bearing." An epithet given by the Romans to Ianus as the god of doors; and by the Greeks to Eros (Cupid) as holding the key to hearts, and to Hecaté as the keeper of the keys of Hades.

Clavis (*κλείς*, dim. *κλειδίον*). A key. In Homer the *κλείς* is not a key in the modern meaning of the word, but rather a hook (having a leathern thong) which passed through the door from the outside and caught the bolts (*ὀχῆες*), so as to shoot

Iron Egyptian Key. (Wilkinson.)

them home or draw them back as required (*Od.* xxi. 6, 46–50). In some passages of Homer the word signifies simply a bolt (*Od.* i. 442; xxi. 241; L. and S. s. v.). In course of time locks and keys were made, much like those of modern times. Locks were used in Egypt at an early period, and were originally of wood, probably like those now used there, which are opened by a key furnished with several fixed pins, answering to a similar number that fall down into the movable tongue, into which the key is introduced, when they fasten or open the lock. At a later time we find iron keys in Egypt, consisting of a long straight shank, with three or more projecting teeth, like the one figured in preceding column. The earliest mention of a key, like our own, which could be taken out of the lock, is in the Book of Judges (iii. 23, 25).

Schliemann found keys of copper and bronze in the remains of the cities in the Troad. The accompanying cut represents a copper key, found close by the so-called Treasury of Priam in the ruins at Hissarlik.

Copper Key found at Hissarlik. (Schliemann.)

The cut below represents a curious bronze key, with a ring for suspension, found in the ruins of Novum Ilium. "It has the shape of the so-called quadrangular images of Hermes, with an altar-like base forming one piece with the body, to which a quadrangular projection is fixed on the back, with a hole corresponding to the lock-bolt" (Schliemann, *Ilios*, pp. 620, 621).

Pliny (*H. N.* vii. § 198) ascribes the invention of keys to Theodorus of Samos; and the ancient writers speak of Carian, and especially of Laconian keys, because originally made by the Lacedaemonians. We learn from Aristophanes that the Laconian key had three teeth (*τρεῖς γομφίους*), probably like the Egyptian key figured above. Keys are mentioned by Aeschylus and Euripides; and Lysias, in his speech on the murder of Eratosthenes, speaks of the wife shutting the door and taking the key with her (*τὴν κλεῖν ἐφέλκετια*, c. 4), so that the husband was shut up in his chamber. In this case the door must have been locked from the outside.

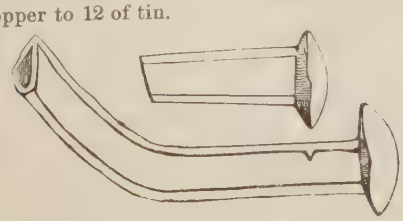
Bronze Key found at Novum Ilium. (Schliemann.)

Many Roman keys have been found much like our own, the larger ones usually of iron and the smaller of bronze; but there were also keys made of wood and gold in use in later times. Besides these there was the *βαλανάγρα*, a key or hook, which was passed through a hole in the door-post, and raised the *βάλανοι* or bolts of the lock, as in the Egyptian locks described above (Herod. iii. 155). It must have been a lock of this kind which the robber in Apuleius (*Met.* iv. 10) opens, by passing his hand through the hole, *qua clavi immittendae foramen patebat.* Roman keys, both of bronze and iron, have been found which were never intended to turn, the stems being square, and the webs, consisting of from one to five or six teeth, rising from a bar bent at an acute angle to the stem; which teeth would serve the purpose of elevating pegs, as in the Egyptian locks.

The street-door was usually fastened inside by bolts (*pessuli*) and a bar (*sera*), but it also had a key which the *ianitor* of the house kept. The cut given below represents a key found at Pompeii, and now in the Museum of Naples, the size of which indicates that it was used as a door-key. The tongue with an eye in it, which projects from the extremity of the handle, served to suspend it from the wrist of the *ianitor*. The rooms of the

Door-key found at Pompeii.

house were also opened inside with keys. The doors often had locks both inside and outside. This is evident from Plaut. *Most.* ii. 1, 57, where a Laconian key is mentioned for locking the door from the outside, compared with verse 78—



"Clavim cedo atque abi intro atque obclude ostium.
Et ego hinc [i. e. foris] obcludam."

When a Roman woman first entered her husband's house, the keys of the store-rooms were handed to her. Hence the form of divorce, in the Twelve Tables, was that the husband took away the keys (*claves ademit, exegit,* Cic. *Phil.* ii. 28, 69); and the wife, when she separated from the husband, sent him back the keys (*claves remisit,* Ambros. *Ep.* 65). But the keys of the wine-cellar were not intrusted to the wife, and Fabius Pictor related a story of a married woman having been starved to death by her relatives because she picked the lock of the closet in which the keys of the wine-cellar were kept (Plin. *H. N.* xiv. § 89).

A skeleton key was known as *claris adultera* (Sall. *Iug.* 12).

Clavis trochi (ἐλατήρ). A crooked stick used by Greek and Roman children in trundling hoops (Propert. iii. 14, 6). See TROCHUS.

Clavus (ἧλος, γόμφος). A nail. In the subterranean chamber at Mycenae (q. v.), supposed to be the treasury of Atreus, a view of which is given in Sir W. Gell's *Itinerary of Greece* (plate vi.), the stones of which the cylindrical dome is constructed are perforated by regular series of bronze nails, running in perpendicular rows, and at equal distances, from the top to the bottom of the vault. It is supposed that they served to attach thin plates of the same metal to the masonry, as a coating for the interior of the chamber; and hence it is that these subterranean works, which served for prisons as well as treasuries, like the one in which Danaé is said to have been confined, were called by the poets "brazen chambers." Two of these nails are represented in the annexed illustration, of two thirds the real size; they consist of 88 parts of copper to 12 of tin.

Bronze Nails (Greek).

Nails of this description were termed *trabales* and *tabulares* by the Romans, because they were used, in building, to join the larger beams (*trabes*) together. Hence Horace arms Necessitas with a nail of the same kind, or of adamant, wherewith to rivet, as it were, irrevocably the decrees of Fortune. Thus, too, Atropos is represented in the following illustration, taken from a cup found at

Atropos driving a Nail.

Perugia, upon which the story of Meleager and Atalanta is embodied, with a hammer in her right hand, driving a nail which she holds against the wall with her left.

The next cut represents a nail of Roman workmanship, which is highly ornamented and very curious. Two of its faces are given, but the pattern varies on each of the four.

Ornamental Nails. (Roman.)

It is difficult to say to what use this nail was applied. The ornamented head shows that it was never intended to be driven by the hammer; nor would any part but the mere point, which alone is plain and round, have been inserted into any extraneous material. It might possibly have been used for the hair, in the manner represented in the illustration under ACUS.

Bronze nails were used in ship-building, and to ornament doors, as exhibited in those of the Pantheon at Rome; in which case the head of the nail was called *bulla,* and richly ornamented. See BULLA.

The soles of the shoes worn by the Roman soldier were also studded with nails, thence called *clavi caligarii.* (See CALIGA.) These do not appear to have been hobnails for the purpose of making the sole durable, but sharp-pointed ones, in order to give the wearer a firmer footing on the ground. The men received a donative for the purpose of providing themselves with these necessaries, which was thence called *claviarum.*

Clavus Annālis. At Volsinii, in Etruria, a nail was driven every year in the Temple of Nortia,

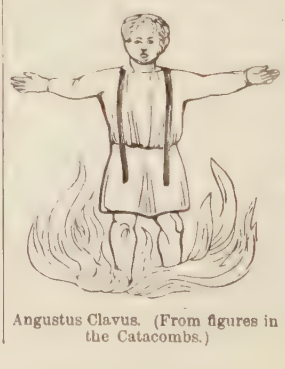
the Fortuna of Etruscan mythology, in order to keep a reckoning of the years (Liv. vii. 3). This custom was introduced into Rome from Etruria, probably by the Tarquins, when they founded the Temple of Iupiter Optimus Maximus. An ancient law enacted that a nail should be driven each year by the chief magistrate on the Ides of September into the side of the *cella* of Iupiter on the Capitol. As the Romans thus kept a reckoning of their years, when letters were yet scarcely in use, this nail was called *clavus annalis*. (Liv. l. c.; Fest. p. 56, M.). This practice fell into disuse, but was afterwards revived, not for the purpose of marking the year, but from a superstitious feeling that any great calamity, such as a pestilence, would be averted if this ceremony was performed by the supreme magistrate. Hence we read of a dictator being appointed, more than once, for the sole purpose of driving in the nail (*clavi figendi causa*, Liv. l. c.).

Clavus Gubernăculi. The handle or tiller of a rudder. See GUBERNACULUM; NAVIS.

Clavus Latus—Clavus Angustus. The *clavus* was a stripe of purple colour, worn by the Romans as a badge of distinction, and either sewn to the stuff or woven into it.

The LATUS CLAVUS (broad stripe) was, according to tradition, introduced by Tullus Hostilius from the Etruscans (Plin. *H. N.* ix. § 136). It was the distinctive badge of the senatorial order (Hor. *Sat.* i. 6, 28), and hence it is used to signify the senatorial dignity. In distinction to the *angustus clavus* it is called *purpura maior* (Juv. i. 106), and the garment it decorated, *tunica potens* (Stat. *Silv.* v. 2, 29). Pliny speaks of this distinctive use as late (*H. N.* xxxiii. § 29); yet its assumption by a *praeco*, the father of L. Aelius Stilo Praeconinus (whose official dress may have included the *angustus clavus*), was, as he admits, remarkable, as was also its use by Horace's praetor of Fundi (*Sat.* i. 5, 36). But there were relaxations of the restriction: thus Augustus wore the *tunica lati clavi* before he assumed the *toga virilis*, and it was afterward his custom to permit the sons of senators to wear it and attend the discussions of the Senate in order to train them in public affairs. If they were entering on a military career, he also made them military tribunes and prefects. These youths were called *laticlavii* (Suet. *Aug.* 38, 94); on the contrary, *tribunus angusticlavius* (Suet. *Otho*, 10). Wearing the *latus clavus* was also granted by the emperor as a favour to the sons of knights, as a preliminary step to their entering the Senate; if they relinquished or were disappointed in their hopes, they assumed the *angustus clavus* (Suet. *Vesp.* 2), but might again assume the *latus clavus*, like Priscus in Horace (*Sat.* ii. 7, 10). In the later Empire the *equites* appear to have encroached on the rights of the Senate in this respect, and Alexander Severus was only able to insist that knights should be distinguished from senators by the quality of the purple employed (Lamprid. *Alex. Sev.* 27). The Senate laid aside the *latus clavus* at times of mourning (Liv. ix. 7) and assumed the *angustus clavus* (Dio Cass. xxxviii. 14).

The ANGUSTUS CLAVUS (narrow stripe) was a badge of the equestrian order (Vell. Paterc. ii. 88, 2), but less distinctively so than the golden ring (Plin. *H. N.* xxxiii. § 29); for, as we shall see from the extant works of art, it was also worn by *camilli*, *lanistae*, and others not of equestrian rank, as a part of their ceremonial dress.

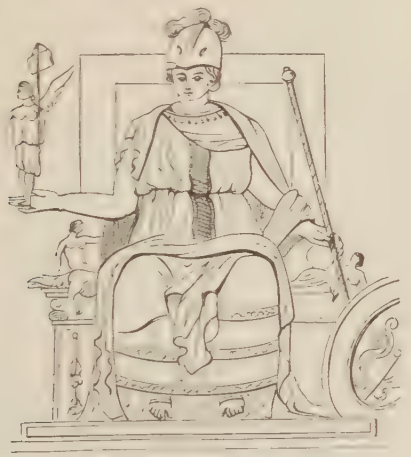


FORM.—It is agreed that the *clavi* were purple stripes woven in the fabric (Quint. viii. 5, 28) or sewn on it (*Dig.* 34, 2, 23, § 1); that they were employed to ornament the tunic, and no other garment; that the *angustus clavus* consisted of two narrow vertical stripes falling from each shoulder, down the front, and, as appears from frescoes, also down the back. But there has been great discussion concerning the form of the *latus clavus*, some contending that it was a single stripe running down the centre of the bosom of the *tunica*, some that there were two stripes, only differing from the *angustus clavus* in breadth, and, like it,

Angustus Clavus. (Niccolini, *Case e Monumenti di Pompeii*. III. Anfiteatro, tav. iii.)

running down the back (as Marquardt maintains). The latter view is now generally held, although it is impossible to conclude the discussion by appealing to any representation of a senator displaying this *ornamentum*, as it was not the custom of ancient sculptors to indicate a distinction of colour by a conventional system of lines.

It must be observed that *latus clavus*, *angustus clavus*, are often abbreviated expressions for *tunica lati* or *angusti clavi*. Thus Iulius Caesar is said to have worn a *latus clavus ad manus fimbriatus* (Suet. *Iul.* 45). That the *angustus clavus* consisted of two stripes is proved by Quintilian, xi. 3, 138: *Cui lati clavi ius non erit, ita cingatur, ut tunicae prioribus oris infra genua paulum, posterioribus ad medios poplites usque perveniant . . . ut purpuriae recte descendant, levis cura est.* Though we cannot point to the representation of an *eques* wearing this garb, we find it frequently shown in Pompeian paintings of persons of inferior rank who are in ceremonial dress, especially *camilli* and other attendants on religious rites, and of *lanistae*. In a wall-painting at Pompeii belonging to the worship of the goddess Epona, the two *camilli* and a man leading mules wear the *angustus clavus*. The latter may be a muleteer especially adorned for a festival of the goddess, or a person of higher rank performing



Angustus Clavus. (From figures in the Catacombs.)

some rite of her worship (*Annali dell' Inst. Arch.* 1872, pl. D).

The *angustus clavus* probably survives in the *clavi* on the dalmatic, which was recognized as an ecclesiastical garb in the earlier part of the fourth century (*Vita Sylvestri I.*, p. 266, Combéfis), though down to A.D. 640 the *clavi* are always represented as black, according to Marriott (*Vestiarium Christianum*, p. lv.).

Some writers maintain that the drawing below, representing Rome personified, clothed in a robe called *cyclus* (q. v.), shows the *latus clavus* falling in a broad purple stripe down the breast.

It is true that the singular (*latus clavus*) is generally used, but this is also true of the *angustus clavus*, which confessedly consisted of two stripes; while the employment of the plural, *latis clavis*, is striking in a passage of Varro, which also insists on the resemblance of the two garments, by using as an illustration of an analogy a tunic, in which of the two pieces (front and back) one has the *lati*, the other the *angusti*, *clavi*. (*Non, si quis tunicam in usu ita* [E. Schulze, *inusitate*] *consuit, ut altera plagula sit angustis clavis, altera latis, utraque pars in suo genere caret, analogia* [*L. L.* ix. 79]. Cf. for the use of the plural, Festus, p. 209 a, 23: *tunica autem palmata a latitudine clavorum dicebatur, quae nunc a genere picturae appellatur.*) Again, Augustus, among other affectations of simplicity, *usus est . . . clavo nec lato nec angusto* (Suet. *Aug.* 73), which is quite intelligible if the two ornaments differed only in breadth, but inexplicable on the other hypothesis; while Herodian (v. 5, 9) speaks of the

Supposed Latus Clavus. (From a painting of Rome personified.)

stripe down the centre of the tunic worn by the priests of the Sun, instituted by Elagabalus, as a Phœnician custom.

As the tunic was composed of a front piece and a back piece sewn together, the passage quoted above from Varro goes to show that the *lati clavi* were worn down the back as well as down the front. In support of this may be cited Varro, *Sat. Menipp.* 313, Bücheler: *quorum vitreae togae ostentant tunicae clavos*, which refers to togas made of such diaphanous material that the *clavi* could be seen through them at the back. With the same intent of displaying this mark of distinction, the wearer of the *tunica laticlavia* is to gird himself so that it may fall low (Quint. xi. 3, 139). Pliny observes that in his time it was becoming a fashion to weave the *tunica lati clavi* of a stuff resembling *gausapa* (*H. N.* viii. § 193). The false derivation quoted from Festus above for *palmata* as applied to *tunica* may possibly indicate that the breadth of the *latus clavus* was about a palm.

The equivalents used in the Greek writers are: *clavus*, σημεῖον: *tunica laticlavia*, ἡ πλατύσημος: *tunica angusticlavia*, ἡ στενόσημος: *tunica asema* (Lamprid. *Alex. Sev.* 33, 4), ἡ ἄσημος: *tunica clavata*, ἡ σημειωτός. See TUNICA.

The chief authorities for the subject are Ferrarius, *De Re Vestiaria* (Padua, 1654); Rubenius, *De Re Vestiaria Veterum Praecipue de Lato Clavo Libri Duo* (Antwerp, 1665); Ferrarius, *Analecta de Re Vestiaria* (Padua, 1690); Marquardt, *Röm. Privatleben* (1886), pp. 544 foll.; id. *Historia Equitum Rom.* pp. 77, 80; E. Schulze, in *Rhein. Mus.* (1875), pp. 120 foll. See also Hope, *The Costume of the Ancients* (2d ed. 1875); Racinet, *Le Costume Historique*, vol. ii. (1887).

Clay. See CRETA; FICTILÉ.

Clazomĕnae (Κλαζομεναί). An important city of Asia Minor, and one of the twelve Ionian cities, on the north coast of the Ionian peninsula, upon the Gulf of Smyrna. It was the birthplace of Anaxagoras, and was also celebrated for its temples of Apollo, Artemis, and Cybelé.

Cleander (Κλέανδρος). (1) A tyrant of Gela, who reigned B.C. 504–498 and was succeeded by his brother Hippocrates, whom Gelon deposed in B.C. 491. (2) A Phrygian slave, the favourite of the emperor Commodus (q. v.), and torn in pieces by the Roman mob during a bread-riot.

Cleanthes (Κλεάνθης). (1) A Greek philosopher, a native of Assos in Asia Minor. He was originally a boxer (Diog. Laërt. vii. 168), and while attending at Athens the lectures of Zeno, the founder of the Stoic philosophy, gained a livelihood at night by carrying water. He was Zeno's disciple for nineteen years, and in B.C. 263 succeeded him as head of the Stoic school. He died in his eighty-first year by voluntary starvation. A beautiful *Hymn to Zeus* is the only one of his writings that has come down to us, of which a good edition is that of Pearson (London, 1891). The titles of the others are given by Diogenes Laërtius (vii. 4). (2) A painter of Corinth.

Clearchus (Κλέαρχος). A Spartan, who distinguished himself in several important commands during the latter part of the Peloponnesian War, and at the close of it persuaded the Spartans to send him as a general to Thrace, to protect the Greeks in that quarter against the Thracians. But having been recalled by the ephors, and refusing to obey their orders, he was condemned to death. He thereupon crossed over to Cyrus, collected for him a large force of Greek mercenaries, and marched with him into Upper Asia, in B.C. 401, in order to dethrone his brother Artaxerxes, being the only Greek who was aware of the prince's real object. After the battle of Cunaxa and the death of Cyrus, Clearchus and the other Greek generals were made prisoners by the treachery of Tissaphernes, and were put to death. See Xenophon's *Anabasis*, bks. i. and ii.

Clemens (Κλήμης). (1) Called ROMĀNUS, to distinguish him from Clemens of Alexandria. One of the early Christians, said by Origen to

have been the friend and fellow-traveller of St. Paul, and afterwards bishop of Rome, to which station he was chosen A.D. 67, or, according to some, A.D. 91. He was the author of an epistle to the church of Corinth. Of this work, the only manuscript extant was in the British Museum until 1875, when Bryennios published a complete MS. of 1056 found at Constantinople; and in 1876, Cambridge University got possession of a Syriac MS. of the year 1170. Archbishop Wake printed a translation in 1705. The best edition of the original is that of Lightfoot (1869; appendix 1877). See Cotterill, *Modern Criticism* (Edinb. 1884). Clemens is supposed to have died at Rome about the close of the first century, though a legend of the ninth century makes him to have been martyred in the Crimea in A.D. 102. Besides the epistle mentioned above, there have been ascribed to Clemens two Syriac epistles on Virginity, the so-called *Clementinae* ("Recognitions" and "Homilies"), and several letters; but these may all be regarded as spurious. (2) T. FLAVIUS, a Father of the Church, who flourished between A.D. 190 and 217, and is commonly called ALEXANDRĪNUS, to distinguish him from Clemens of Rome. He is supposed by some to have been a native of Athens, and by others of Alexandria, but of his real origin very little is known. He early devoted himself to study in the schools of the latter city, and had many preceptors. His Hebrew preceptor, whom he calls "the Sicilian bee," was unquestionably Pantaenus, a Jew by birth, but of Sicilian extraction, who united Grecian with sacred learning, and was attached to the Stoic philosophy. Clemens so far adopted the ideas of this preceptor as to espouse the moral doctrine of the Stoics. In other respects he followed the Eclectic method of philosophizing. While the pagan philosophers pillaged the Christian stores to enrich the Eclectic system, this Christian father, on the contrary, transferred the Platonic, Stoic, and Oriental dogmas to the Christian creed, as relics of ancient tradition originating in Divine revelation. His most distinguished follower was Origen.

In the hope of recommending Christianity to his catechumens, Clemens made a large collection of ancient wisdom, under the name of *Stromata* (Στρωματεῖς, "patchwork"), and intended to denote the miscellaneous nature of the philosophical and religious topics of which the work treats. He assigned as a reason for the undertaking, that much truth is mixed with the dogmas of philosophers, or, rather, covered and concealed in their writings, like the kernel within its shell. This work is of great value, as it contains many quotations and relates many facts not elsewhere preserved. Besides the *Stromata*, we have the following works of Clemens remaining: (*a*) *Protrepticon* (Λόγος Προτρεπτικός), or an exhortation to the Pagans; (*b*) *Paedagogus* (Παιδαγωγός), or the instructor; (*c*) the fragments of a treatise on the use of riches, entitled, "What rich man shall be saved?" The works of Clemens were first printed in Greek only, at Florence, in 1550. Of the various editions with Latin versions, the best is that of Archbishop Potter, 2 vols. (Oxford, 1715). A later edition is that of Klotz (Leipzig, 1834). A translation will be found in Clark's *Ante-Nicene Library* (1877–79). See Merk, *Clemens von Alexandria* (Leipzig, 1879); and Bigg, *Christian Platonists* (Bampton Lect. 1886).

Clementīnae. See CLEMENS (1).

Cleŏbis (Κλέοβις). See BITON.

Cleobūlus (Κλεόβουλος). One of the Seven Sages, of Lindus in Rhodes, son of Evagoras, lived about B.C. 580. He and his daughter, Cleobuliné or Cleobulé, were celebrated for their skill in riddles. To the latter is ascribed a well-known one on the subject of the year: "A father has twelve children, and each of these thirty daughters, on one side white, and on the other side black, and, though immortal, they all die." See AENIGMA; SEVEN SAGES.

Cleombrŏtus (Κλεόμβροτος). (1) A king of Sparta, who succeeded his brother Agesipolis I. He was defeated by Epaminondas in the battle of Leuctra, and lost his life on that occasion. (2) A son-in-law of Leonidas II., king of Sparta, who usurped the kingdom after the expulsion of that monarch, but was soon after expelled in turn and sent into banishment.

Cleomēdes (Κλεομήδης). A Greek writer, supposed to have been the author of the work which has reached us entitled Κυκλικῆς Θεωρίας Μετεώρων Βίβλια δύο, or Circular Theory of the Stars. He flourished in the second century A.D. Ed. by Schmidt (Leipzig, 1832).

Cleoměnes (Κλεομένης). (1) King of Sparta, ascended the throne B.C. 519. At the beginning of his reign he undertook an expedition against the Argives, defeated them, and destroyed a large number who had taken refuge in a sacred grove. He afterwards drove out the Pisistratidae from Athens. This is the same Cleomenes whom Aristagoras endeavoured, but in vain, to involve in a war with the Persians. He afterwards managed, by undue influence, to procure an oracular response from Delphi, pronouncing his colleague Demaratus illegitimate, and thus obtained his deposition. Becoming alarmed, subsequently, lest the fraud should be discovered, Cleomenes fled secretly to Thessaly, and from thence passing into Arcadia, he began to stir up the people of this latter country against Sparta. The Lacedaemonians, fearing his intrigues, recalled him, but he died soon after his return, in a fit of insanity, by his own hand (Herod. v. 64; v. 49 foll.; v. 65, etc.). (2) Cleomenes II., succeeded his brother Agesipolis II. on the throne of Sparta, B.C. 371. The power of his country was then on the decline, and he possessed not the requisite talents to restore it to its former state. He reigned sixty years and ten months without having done anything worthy the notice of posterity (Pausan. iii. 6). (3) Cleomenes III., son of Leonidas II., ascended the Spartan throne B.C. 236. Dissatisfied at the prevailing manners of Sparta, he resolved to bring about a reform, and to restore the institutions of Lycurgus, after the example of Agis, who had lost his life in a similar attempt. Thinking that war would furnish the best opportunity for the execution of his design, he led his forces against the Achaeans, who were commanded by Aratus, and greatly distinguished himself. Returning after this to Sparta, with a portion of his army, he put to death the Ephori, made a new division of the lands, and introduced again the old Spartan system of education. He also took his brother Eucleidas as his colleague on the throne, and thus for the first and only time the Spartans had two kings of the same family. After a long, and in many respects successful, series of operations against the Achaeans and Macedonians, the latter of whom

had been called in by Aratus as allies, Cleomenes was defeated by Antigonus in the battle of Sellasia (B.C. 222), and immediately after fled to Ptolemy Euergetes in Egypt. This monarch treated him with some degree of generosity, but his successor, Ptolemy Philopator, a weak and suspicious prince, soon began to look upon him with an evil eye, and at last kept him in confinement. The Spartan monarch, in a fit of despair, and taking advantage of the temporary absence of Ptolemy from his capital, broke forth from the place where he had been kept in custody, along with thirteen of his friends, and endeavoured to arouse the inhabitants in the cause of freedom. But, finding their efforts fruitless, they fell by their own hands (B.C. 220). (4) An Athenian sculptor, who probably flourished in the Augustan Age. The celebrated Venus de' Medici, now at Florence, is perhaps his. He is described on the pedestal as son of Apollodorus. The "Germanicus" of the Louvre was the work of his son, who bore the same name.

Venus de' Medici of Cleomenes. (Uffizi Gallery, Florence.)

Cleon (Κλέων). An Athenian, the son of a tanner, and said himself to have exercised that trade. Of extraordinary impudence and little courage, slow in the field, but forward and noisy in the assembly, corrupt, but boastful of integrity, and supported by a coarse but ready eloquence, he gained such consideration by flattering the lower orders that he became the head of a party. By an extraordinary train of circumstances he came off victorious in the affair of Sphacteria (q. v.), the Athenian populace having chosen him one of their generals. Elated upon this with the idea that he possessed military talents, he caused himself to be appointed commander of an expedition into Thrace. He was slain in a battle at Amphipolis against Brasidas, the Spartan general, B.C. 422.

It is probably unfortunate in the interest of historical truth that the accounts we have of Cleon's personality exist only in the writings of Thucydides and a partisan play, *The Knights*, of Aristophanes, both of whom were violently prejudiced against Cleon, the former personally and the latter politically. For some remarks on this head, see the history of Grote.

Cleōnae (Κλεωναί). An ancient town in Argolis, on the road from Corinth to Argos, on a river of the same name flowing into the Corinthian Gulf. In its neighbourhood was Nemea, where Heracles killed the lion, which is accordingly called Cleonaeus Leo by the poets.

Cleopātra (Κλεοπάτρα and Κλειοπάτρα; the penult is scanned long in Juv. ii. 109; Luc. ix. 1071.) (1) A daughter of Idas and Marpessa, and the wife of Meleager (Hom. *Il.* ix. 557). (2) The wife of Philip of Macedon, whom that monarch married after he had repudiated Olympias. After the death of Philip, Olympias compelled her to destroy herself (Just. ix. 7). (3) A daughter of Philip and Olympias, and sister to Alexander the Great. She married Alexander of Epirus, who fell in Italy (Just. ix. 6, 1). After the death of Alexander of Macedon, her hand was sought by Perdiccas and others of his generals, but she was put to death by Antigonus. (4) A daughter of Mithridates, and the wife of Tigranes (Just. xxxviii. 3). (5) A daughter of Antiochus III. of Syria. She married Ptolemy V., king of Egypt, and was left guardian of her infant son Ptolemy VI., but she died soon after her husband, to the great regret of her subjects. (6) A daughter of Ptolemy Philometor, was the wife of three kings of Syria, and the mother of four—namely, of Antiochus Dionysius, by her first husband, Alexander Balas; of Seleucus V. and Antiochus VIII., by Demetrius Nicator; and, lastly, of Antiochus IX., surnamed Cyzicenus, by Antiochus Euergetes or Sidetes. She was compelled by her son, Antiochus VIII., to drink the poison which she had prepared for him, B.C. 120. (7) The most famous of the name was the daughter of Ptolemy Auletes, and remarkable for her beauty and personal accomplishments. According to the usage of the Alexandrian court, she married her young brother, Ptolemy XII., and began to reign with him in her seventeenth year. Both she and her husband, being minors, were placed by the will of their father under the guardianship of Rome, an office which the Senate assigned to Pompey. An insurrection breaking out in the Egyptian capital soon after the commencement of this reign, Cleopatra was compelled to yield to the tide of popular fury, and to flee into Syria, where she sought protection in temporary exile. The flight of this princess, though mainly arising from the tumult just mentioned, was unquestionably accelerated by the designs of the young king and his ambitious ministers. Their object became manifest when Cleopatra, after a few months' residence in Syria, returned towards her native country to resume her seat on the throne. Ptolemy prepared to oppose her by force of arms, and a civil war would inevitably have ensued, had not Caesar at that very juncture sailed to the coast of Egypt in pursuit of Pompey. A curious interview soon took place between Cleopatra and the Roman general. She placed herself on board a small skiff,

Cleopatra. (From a Composite Photograph of the Heads on four Egyptian Coins. Reproduced by permission from Gorringe's *Egyptian Obelisks*.)

under the protection of Apollodorus, a Sicilian Greek, set sail from the coast of Syria, reached the harbour of Alexandria in safety, and had herself conveyed naked into the chamber of the Roman commander in the form of a large package of goods. The stratagem proved completely successful. Cleopatra was now in her twentieth year, distinguished by extraordinary personal charms, and surrounded with all the graces which give to those charms their greatest power. Her voice was extremely sweet, and she spoke a variety of languages with propriety and ease. She could, it is said, assume all characters at will, which all alike became her, and the impression that was made by her beauty was confirmed by the fascinating brilliancy of her conversation. The day after this singular meeting, Caesar summoned before him the king, as well as the citizens of Alexandria, and made arrangements for the restoration of peace, procuring Cleopatra, at the same time, her share of the throne. Pothinus, however, one of Ptolemy's ministers, in whose intriguing spirit all the dissensions of the court had originated, soon stirred up a second revolt, upon which the Alexandrian War commenced, in which Ptolemy was defeated and lost his life by drowning. Caesar now proclaimed Cleopatra queen of Egypt; but she was compelled to take her brother, the younger Ptolemy, who was only eleven years old, as her husband and colleague on the throne. The Roman general continued for some time at her court, and she bore him a son, called, from the name of his putative father, Caesarion. During the six years which immediately followed these events, the reign of Cleopatra seems not to have been disturbed by insurrection, nor to have been assailed by foreign war. When her brother, at the age of fourteen, demanded his share in the government, Cleopatra poisoned him, and remained sole possessor of the regal authority. The dissensions among the rival leaders who divided the power of Caesar had no doubt nearly involved her in a contest with both parties; but the decisive issue of the battle of Philippi relieved her from the hesitation under which some of her measures appear to have been adopted, and determined her inclinations, as well as her interests, in favour of the conquerors. To afford her an opportunity of explaining her conduct, Antony summoned her to attend him in Cilicia, and the meeting which she gave him on the river Cydnus has employed the pen, not only of the historian, but of the prince of English dramatists.

The artifices of this fascinating princess, now in her twenty-seventh year, so far gained upon Antony as not only to divert his thoughts from his original purpose of subjecting her kingdom to the payment of tribute, but entirely to lull his ambition to sleep, and make him sacrifice his great stake as a candidate for the empire of the world. After a fruitless attack upon the territory of Palmyra, he hastened to forget his disgrace in the society of the Egyptian queen, passing several months at Alexandria in the wildest and most delirious dissipation. The death of his wife, and his subsequent marriage with Octavia, delayed for a time the crisis which his ungoverned passions were preparing for him. But, though he had thus extricated himself from the snares of Alexandria, his inclinations too soon returned to that unlucky city; for we find that when he left Rome to proceed against the Parthians, he despatched in advance his friend Fonteius Capito to conduct Cleopatra into Syria.

Cleopatra.

On his return from this disgraceful campaign, he incurred still deeper dishonour by once more willingly submitting to that bondage which had rendered him contemptible in the eyes of most of his followers.

Passing over events which have been alluded to in the article AUGUSTUS CAESAR, we come to the period that followed the battle of Actium, at which the desertion of Cleopatra with her galleys and the pursuit of her by the infatuated Antony changed the destiny of the Roman Empire (B.C. 30). When Octavianus advanced against Egypt, and Antony had been a second time defeated under the walls of Alexandria, Cleopatra shut herself up with a few at-

tendants and the most valuable part of her treasures in a strong building which appears to have been intended for a royal sepulchre. To prevent intrusion by friend or enemy she caused a report to be circulated that she had retired into the monument to put herself to death. Antony resolved to follow her example, and threw himself upon his sword; but being informed, before he expired, that Cleopatra was still living, he caused himself to be carried into her presence, and breathed his last in her arms. Octavianus, after this, succeeded in getting Cleopatra into his power, and the queen at first hoped to subdue him by her attractions; but finding at last that her efforts were unavailing, and suspecting that her life was spared only that she might grace the conqueror's triumph, she ended her days, if the common account is to be credited, by the bite of an asp; though some ascribed her death to poison administered internally. A small puncture in the arm was the only mark of violence which could be detected on the body of Cleopatra, and it was therefore believed that she had procured death either by the bite of a venomous reptile or by the use of a poisoned bodkin. She died in her thirty-ninth year, having reigned twenty-two years from the death of her father. Octavianus, it is said, though deprived by this act of suicide of the greatest ornament of his approaching triumph, gave orders that she should have a magnificent funeral, and that her body, as she desired, should be laid by that of Antony. Her two children by Antony were reared by the neglected wife Octavia.

The name of Cleopatra has been linked by romance and poetry with those of the most fascinating women the world has seen—Helen of Troy, Mary Stuart, and Ninon de Lenclos—and has always exercised a powerful influence upon the imagination of men. In English literature the genius of Shakespeare and of Dryden has made her story the theme of dramas; while the resources of art have been exhausted to produce types that should satisfy the eye and the mind of the critic.

Cleopatris (Κλεοπατρίς). A city of Egypt, at the head of the Sinus Arabicus and in the immediate vicinity of Arsinoë. See ARSINOË.

Cleostrătus (Κλεόστρατος). An astronomer of Tenedos, who is said to have introduced the familiar Zodiac signs. He flourished about the year B.C. 500.

Clepsȳdra (*κλεψύδρα*). A water-clock. See HOROLOGIUM.

Clerk. See SCRIBA.

Clerūchi (*κληροῦχοι*). See CLERUCHIA.

Cleruchia (*κληρουχία*). A kind of Greek colony, which differed from the ordinary colonial settlement in the fact that the settlers remained in close connection with their mother-city. The Athenian *cleruchiae* are the only ones of which we have any detailed knowledge. A conquered territory was divided into lots of land, which were assigned to the poorer citizens as *cleruchi* or "holders of lots." The original inhabitants would be differently treated according to circumstances. In many cases they were compelled to emigrate; sometimes the men were killed and the women and children enslaved; but ordinarily the old inhabitants would have become the tenants of the settlers, and take, generally, a less privileged position. The settlers formed a separate community, elected their own officials, and managed their local affairs; but they continued to be Athenian citizens, with all the rights and duties of their position. They remained under the authority of Athens, and were obliged to repair to the Athenian courts for justice in all important matters. See COLONIA.

Clerus (*κλῆρος*). See HERES.

Cleta (Κλήτα). See CHARITES.

Cletēres (*κλητῆρες*) or **Cletŏres** (*κλήτορες*). Summoners; persons who at Athens were witnesses to the prosecutor of a suit, that he had served the defendant with a notice of the action brought against him and of the day on which it would be necessary for him to appear for the first examination of the case. They were not, therefore, court officials, but only agents of the prosecutor, and their names were subscribed to his declaration. See Meier, *Att. Process*, pp. 212, 576.

Clibanarii. The same as *cataphracti* (q. v.).

Clibănus (*κλίβανος*). A covered vessel pierced round with small holes and used for baking bread, being enveloped in hot ashes whose warmth penetrated the holes (Petron. 35).

Clientēla. See CLIENTES.

Clientes. The name originally applied to such inhabitants of Rome as had lost or given up the citizenship of their own cities, and had settled in Roman territory. Here, having no legal rights, they were compelled, in order to secure their personal freedom, to seek the protection of some Roman citizen, a term which, in ancient times, could mean only a patrician. The relation thus set on foot was called *clientela*, and was inherited by the descendants of both parties. Accordingly the client entered into the family of his patron (*patronus*), took his gentile name, and was admitted to take part in the family sacrifices. The patron made over to him a piece of land as a means of support, protected him from violence, represented him at law, and buried him after his death. The client, on his part, accompanied his patron abroad and on military service, gave his advice in legal and domestic matters, and made a contribution from his property if his patron were endowing a daughter, or had to be ransomed in war or to pay a fine. The relation between patron and client is also illustrated by the fact that neither party could bring an action against the other in a court of law, or bear witness against him, or vote against him, or appear against him as advocate. A man's duty to his client was more binding than his duty to his blood relations, and any violation of it was regarded as a capital offence.

When Servius Tullius extended the rights of citizenship to the clients as well as to the plebeians, the bond between patron and client still continued in force, although it gradually relaxed with the course of time. At the end of the republican age the *status* of client, in the proper sense of the word, had ceased to exist. Under the Empire the *clientela* was a mere external relation between the rich and the poor, the great and the obscure. It involved no moral obligation on either side, but was based merely on the vanity of the one party and the necessity of the other. It was no unusual thing to find persons who had no settled means of subsistence trying, by flattery and servile behaviour, to win the favour of the great. Even philosophers and poets, like Statius and

Martial, are found in this position. The client performed certain services, called on his patron in the morning, accompanied him on public occasions, and was in turn invited to his table, received presents from him, and (if he could get it) a settled provision. Instead of inviting their numerous clients, the rich would often present them with a small sum of money called *sportula*. The relation was entirely a free one, and could be dissolved at pleasure by either party.

In the republican age whole communities, and even provinces, when they had submitted to the Roman yoke, would sometimes become clients of a single *patronus*. In this case the *patronus* would usually be the conquering general. Marcellus, for instance, the conqueror of Syracuse, and his descendants, were patrons of Sicily. The practical advantages which were secured to a foreign community by this permanent representation at Rome are obvious. Accordingly we find that, under the Empire, even cities which stood to Rome in no relation of dependence, such as colonies and *municipia*, sometimes selected a *patronus*. The *patronus* was, in such cases, always chosen from among the senators or *equites*. See Mommsen, *Abhandlung über das römische Gastrecht und die römische Clientel* (in *Römische Forschungen*) (Berlin, 1864–79); McLennan, *The Patriarchal Theory* (London, 1885); and Morey, *Outlines of Roman Law* (New York, 1889).

Clima (κλίμα). Literally "a slope" or "inclination"; a term used in the mathematical geography of the Greeks with reference to the inclination of various parts of the earth's surface to the plane of the equator. Before the globular figure of the earth was known, it was supposed that there was a general slope of its surface from south to north, and this was called κλίμα. But as the science of mathematical geography advanced, the word was applied to different belts of the earth's surface, which were determined by the different lengths of the longest day at their lines of demarcation. This division into climates was applied only to the northern hemisphere, as the geographers had no practical knowledge of the earth south of the equator. The term κλίμα was afterwards applied to the temperature of these belts; hence the meaning of the modern word *climate*.

Hipparchus (about B.C. 160) seems to have been the first who made use of this division; his system is explained at length by Strabo (ii. p. 132).

The word *clima* is found only in the later Latin, the pure Latin term being *inclinatio*, *declinatio*, or *devergentia*.

Climax (κλῖμαξ). (1) A ladder or staircase. (See Domus; Scalae.) (2) An instrument of torture. See Tormentum.

Climax (Κλῖμαξ). The name applied to the western termination of the Taurus range, which extends along the western coast of the Pamphylian Gulf, north of Phaselis in Lycia. Alexander made a road between it and the sea.

Climberrum. The capital of the Ausci (q. v.).

Clinias (Κλεινίας). (1) A Pythagorean philosopher and musician, 400 years before the Christian era. (2) An Athenian, said by Herodotus (viii. 17) to have been the bravest of his countrymen in the battle fought against the Persian fleet at Artemisium; and the Athenians are said by the same writer to have conducted themselves on that occasion with the greatest valour of any of the Greeks. This Clinias was the father of the celebrated Alcibiades (q. v.). He married Dinomaché, the daughter of Megacles, grandson to Agaristé, the daughter of Clisthenes, tyrant of Sicyon. He fell at the battle of Coronea.

Clinĭcus (κλινικός). (1) A visiting physician who attended his patient at the bedside (Mart. ix. 27). (See Medicus.) (2) An undertaker (Mart. i. 31). See Vespillo.

Clinŏpus (κλινόπους). The foot of a bedstead. See Lectus.

Clinton, Henry Fynes. A remarkable English classical scholar, born at Gamston (Nottinghamshire) in 1781. Educated at Westminster School and at Christ Church, Oxford (1803), he showed an unusual aptitude for the study of classical literature and history, which he pursued with little interruption all his life, though he served as member of Parliament for Aldborough from 1806 to 1826.

His life-work was the elucidation of Greek and Roman chronology, and his two great productions stand upon a basis of such remarkably profound and enduring scholarship that they are unlikely ever to be superseded or disused. These are the *Fasti Hellenici: a Civil and Literary Chronology of Greece*, 4 vols. (1824–34), and the *Fasti Romani: a Civil and Literary Chronology of Rome and Constantinople from the Death of Augustus to the Death of Heraclius*, 2 vols. (1845–51). Of the former work, an epitome was published in 1850; and of the second, in 1854. Mr. Clinton died at Welwyn, October 24th, 1852. His literary remains were edited and published by Mr. C. F. J. Clinton in 1854.

Clĭo (Κλειώ). The Muse who presided over history, and generally represented as holding a half-opened roll. The invention of the cithara was ascribed to her. Having drawn on herself the anger of Aphrodité, by taunting her with her passion for Adonis, Clio was inspired by the goddess with love for Pierus, the son of Magnes, and bore him a son named Hyacinthus (Apollod. i. 3, 2 foll.). Her name is derived from κλεῖος (Ionic for κλέος), "glory," "renown," etc., because she celebrates the glorious actions of the good and the brave.

Clio, the Muse of History. (From a Statue now in Sweden.)

Clipeus and **Clipeum** (ἀσπίς, σάκος). (1) The large shield used by the Greeks and the Romans, originally of circular shape, said to have been first used by Proetus and Acrisius of Argos (Pausan. ii. 25, § 6); and therefore called *clipeus Argolicus* According to other accounts, however, it was derived from the Egyptians (Herod. iv. 180).

One of the earliest extant representations of Greek shields is to be found in the engraving on a sword-blade found at Mycenae, representing a

combat between men and lions (Helbig, *Homerische Epos*, p. 232). It will be seen that some of the men carry shields resembling a *scutum*, others shields which recall the shape of the Boeotian shield, and that each form covers about three quarters of the person, and is partly supported by a strap passing round the shoulders.

Early Representation of Greek Shields. (Helbig.)

The heroes of the *Iliad* carry a shield which is round (iii. 347) and large enough to cover the whole man (*ἀμφιβρότη, ποδηνεκής*). It is composed by sewing together circular pieces of untanned ox-hide, varying in number. These are strengthened on both sides by plates of bronze, the outer hides and plates being of smaller diameter, so that on the edge of the shield both hide and metal are thinnest (*Il.* xx. 275).

Sarpedon's shield is forged of plates of bronze, to which ox-hides are attached on the inside by golden rods or bolts (*ῥάβδοι*) running all round the circle. Ten circles of bronze run round Agamemnon's shield. Achilles' shield is composed entirely of metal in five plates—two of bronze, two of tin, and a central one of gold. The structure is bound together by a metal rim (*ἄντυξ*), which in Achilles' shield is triple. At the centre of the shield is a metal boss (*ὀμφαλός*). Agamemnon's shield is studded with twenty bosses of tin and a central one of *cyanus* (*Il.* xi. 34).

When not in use the shield was suspended by the *τελαμών*, which passed around the breast, the shield hanging at the back. (See BALTEUS.) The practice of decorating the shield had commenced in the Homeric Age (*Il.* xi. 36).

In later times the shields were smaller, usually covering the warrior from the neck to the knees only. Besides the circular or Argive shield, we frequently find mentioned one of an oval shape with a strong rim and apertures in the middle of each side (Eurip. *Phoeniss.* 1386). This is known as the Boeotian shield.

Greek Shield. (Tischbein.)

The shield was at last formed entirely of brass (*πάγχαλκος*), and a sort of apron, probably of leather or some thick material, was sometimes attached to it, especially when one did not wear greaves to protect his legs. The simplest arrangement to hold the shield consisted of two metal handles, one to pass the arm through and one to grasp with the hand; but the more elaborate arrangement is shown in the illustration from a terra-cotta vase published by Tischbein (iv. tab. 20). In it the broad band that runs across the shield like the diameter of a circle is of metal, the thong about the edge of the rim of leather (*πόρπαξ*).

At the close of a war it was customary for the Greeks to suspend their shields in the temples, when the *πόρπακες* were taken off, in order to render them unserviceable in case of any sudden or popular outbreak. Sometimes shields were kept in a case (*σάγμα*), (Aristoph. *Ach.* 574).

The *ἀσπίς* was the characteristic defensive weapon (*ὅπλον*) of the heavy-armed infantry (*ὁπλῖται*) during the historical times of Greece, and is opposed to the lighter *πέλτη* and *γέρρον*; hence we find the word *ἀσπίς* used to signify a body of *ὁπλῖται* (Xen. *Anab.* i. 7, § 10). It was distinctively a Greek shield, and thus none of the Eastern peoples who served under Xerxes (Herod. vii. 61 foll.) were armed with it.

The Roman *clipeus* is seen in the accompanying illustration from the Column of Trajan. According to Livy (i. 43), when the census was instituted by Servius Tullius, the first class only used the clipeus, and the second were armed with the *scutum* (q. v.); but after the Roman soldier received pay, the clipeus was discontinued altogether for the Sabine *scutum* (Liv. viii. 8; cf. ix. 19; Plut. *Rom.* 21; Diod. *Eclog.* xxiii. 3, who asserts that the original form of the Roman shield was square, and that it was subsequently changed for that of the Tyrrhenians, which was round).

Clipeus, Roman Shield. (Column of Trajan.)

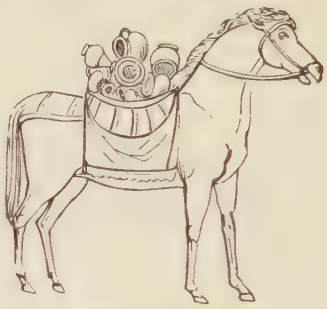
The emblazoning of shields with devices (*σήματα, σημεῖα*) was said to be derived from the Carians (Herod. i. 171). The bearings on the shields of the heroes before Thebes, as described by Aeschylus in the *Seven against Thebes*, exhibit the development of devices in post-Homeric times. Some shields, like Agamemnon's, bear subjects designed to strike terror; to that of Tydeus bronze bells are attached with the same object. Other subjects are purely mythological or indicate the owner's ancestry. This custom of emblazoning shields is illustrated on a very beautiful gem from the antique, in which the figure of Victory is represented inscribing upon a clipeus the name or merits of some deceased hero.

From the historians we find that while an individual sometimes attracted attention by an un-

usual device, cities made use of some common symbol for their shields which might be easily recognizable by their friends: thus the Lacedaemonians used Λ, the Sicyonians Σ, the Thebans Heracles's club—a practice of which the enemy sometimes took a treacherous advantage (Xen. *Hell.* iv. 4, 10; vii. 50; Pausan. iv. 58, 5).

Each Roman soldier also had his own name and a mark indicating his cohort inscribed upon his shield, in order that he might readily find his own when the order was given to unpile arms (Veget. ii. 17), and sometimes the name of the commander under whom he fought (Hirt. *Bell. Alex.* 58).

Victorious armies sometimes dedicated their own shields or an engraved shield of gold as an offering in a temple (Herod. i. 92). For decorative purposes, shields in metal or marble were often suspended from the roofs of porticoes or in the *atria* of private houses. See M. Albert in the *Revue Archéologique* (1881).



(2) CLIPEUS is also the name of a contrivance for regulating the temperature of the vapour-bath. See BALNEAE.

Clisthĕnes (Κλεισθένης). (1) A tyrant of Sicyon, who in B.C. 595 aided the Amphictyons in the Sacred War against Cirra, which ended in the destruction of that city. He was a resolute enemy of the Dorians, and in that spirit waged war on Argos. (See Herod. v. 67; vi. 125; Thuc. i. 18). (2) An Athenian, the son of Megacles and Agarista. He was the head of the Alcmaeonid family, and was opposed by Isagoras and the nobles; but by the support of the people reformed the constitution of the State upon a democratic basis. His changes were (1) the establishment of ten instead of four tribes, and the division into demes (see DEMUS); (2) the introduction of ostracism (see OSTRACISMUS); (3) the revival of election by lot; (4) the weakening of the power of the Heliastic court (see DICASTES). In spite of the interference of the Spartans under Cleomenes, these changes were finally established (B.C. 508). Of the later years of the life of Clisthenes, nothing definite is known. (Herod. v. 63–73; and vi. 131; Arist. Ἀθ. Πολ. 20, 21, 41.)

Clitarchus (Κλείταρχος). A Greek historian, son of the historian Dinon. He flourished about B.C. 300, and was the author of a great work, in at least twelve books, upon Alexander the Great. He was notoriously untrustworthy, and inclined to believe in the marvellous; his style was turgid and highly rhetorical; but his narrative was so interesting that he was the most popular of all the writers on Alexander. The Romans were very fond of his book, which was indeed the main authority for the narratives of Diodorus, Trogus Pompeius, and Q. Curtius. A number of fragments of it still survive.

Clitellae (*κανθήλια*). A pair of panniers, and therefore only used in the plural number. In Italy they were commonly used with mules or asses, but in other countries they were also applied to horses, of which an instance is given in the following illustration from the Column of Trajan; and Plautus figuratively describes a man upon whose shoulders a load of any kind, either moral or physical, is charged as *homo clitellarius*.

A particular spot in the city of Rome, and certain parts of the Via Flaminia, which, from their undulations in hill and valley, were thought to resemble the flowing line of a pair of panniers, were also termed Clitellae.

Clitellae. (Column of Trajan.)

Cliternum and **Cliternia**. A town of the Frentani in the territory of Larinum.

Clitomăchus (Κλειτόμαχος). A native of Carthage. In his early years he acquired a fondness for learning, which induced him to visit Greece for the purpose of attending the schools of the philosophers. From the time of his first arrival in Athens he attached himself to Carneades (q. v.), and continued his disciple until his death, when he became his successor in the academic chair. He studied with great industry and made himself master of the systems of the other schools, but professed the doctrine of suspension of assent, as it had been taught by his master. Cicero relates that he wrote four hundred books upon philosophical subjects. At an advanced age he was seized with a lethargy. Recovering in some measure the use of his faculties, he said, "The love of life shall deceive me no longer," and laid violent hands upon himself. He entered, as we have said, upon the office of preceptor in the Academy immediately after the death of Carneades, and held it thirty years. According to Cicero, he taught that there is no certain criterion by which to judge of the truth of those reports which we receive from the senses, and that, therefore, a wise man will either wholly suspend his assent, or decline giving a peremptory opinion; but that, nevertheless, men are strongly impelled by nature to follow probability. His moral doctrine established a natural alliance between pleasure and virtue. He was a professed enemy to rhetoric, and thought that no place should be allowed in society to so dangerous an art.

Clitor (Κλείτωρ) or **Clitorium**. A town in the north of Arcadia on a river of the same name, a tributary of the Aroanius. There was a fountain in the neighbourhood, the waters of which are said to have given to persons who drank of them a dislike for wine (Pausan. viii. 4, 21).

Clitumnus. A small river in Umbria, springing from a beautiful rock in a grove of cypress-trees where was a sanctuary of the god Clitumnus, and falling into the Tinia, a tributary of the Tiber.

Clitus (Κλεῖτος). A familiar friend and foster-brother of Alexander, who had saved the king's life in battle. Alexander killed him with a javelin in a fit of inebriety, because, at a feast, he preferred the actions of Philip to those of his son. See Plut. *Alex.* 16, 50–52.

Cloāca (*ὑπόνομος*). A sewer, or drain. Drains for the removal of a city's sewage are of very great

antiquity, since at Nineveh excavations show a very complete system of sewers; while the same is true of Athens, where the remains of the ancient drains have been carefully described by Ziller (*Mittheil. des deutsch. Inst. in Athen* (1877), pp. 117–119).

The sewers of ancient Rome were much admired in ancient times, and were classed by Dionysius of Halicarnassus with the aqueducts and roads as the best proof of the greatness and magnificence of the Roman Empire (iii. 67) Many of the Roman cities in northern Italy and in Gaul still show remains of similar cloacae.

The chief of the ancient Roman sewers still existing is the famous Cloaca Maxima, running from the valley of the Subura at the foot of the Carinae, across the Forum under the south end of the Basilica Iulia, where it is exposed to view, and entering the river Tiber, near the Temple of Hercules in the Forum Boarium, by an arch of peperino shown in the illustration. The original dimensions of

Present Condition of the Cloaca Maxima.

the arch were 12 ft. 4 in. in height, and 10 ft. 8 in. in width, but one-third of its height is now choked up by mud.

Another sewer, which like the Cloaca Maxima is still in use, enters the Tiber opposite to the Insula Tiberina. Its antiquity is very great, and it is constructed of large blocks of peperino uncemented. In the quay wall not far from the mouth of the Cloaca Maxima may be seen two smaller arched openings, one of which is now dry, the other discharges the waters of the Aqua Crabra.

M. Agrippa, during his aedileship, in B.C. 36, showed great zeal in the supervision of the cloacae, traversing them in a boat and cleansing them at his own expense (Dio Cass. xlix 43). He constructed a cloaca to drain the Campus Martius, which was connected with the Thermae of Agrippa and the Aqua Virgo. This was discovered under Urban VIII., and is at present in use under the name of the Chiavica della Rotonda.

The discoveries made at various times show that the network of smaller drains communicating with these main cloacae still exists, though in great part choked up. Brick is largely used in their construction; sometimes they are covered in with a barrel vault, sometimes by two tiles leaning against each other, sometimes by a single flagstone, but in some cases we find a primitive arrangement of projecting courses of stone which was observed in the drains of Athens.

The expense of cleansing and repairing these cloacae was, of course, very great, and was defrayed partly by the treasury and partly by an assessment called *cloacarium*. Under the Republic the administration of the sewers was intrusted to the censors and aediles; but under the Empire particular officers were appointed for that purpose, *cloacarum curatores*, mention of whom is found in inscriptions. Under the Empire condemned criminals were employed in cleansing the cloacae. (Plin. *Ep.* x. 44 [41].) Theodoric appointed an official to repair the drains, a striking instance of the esteem in which the barbarians held Roman civilization.

On the legal obligations relating to the cloacae at Rome, see Schmidt, *Interdicta de cloacis*, in *Zeitschrift f. gesch. Rechtswiss.* xv. 1, pp. 51 foll.; and for further details as to the Roman sewers, see Burn, *Rome and the Campagna*; Middleton, *Rome in 1885* (1885); id. *Remains of Ancient Rome* (London, 1892).

Cloacarium. See CLOACA

Cloacīna. A Roman divinity who presided over sewers (*cloacae*). More properly, however, the word should be written Cluacina (from *cluo* = *purgo*, Plin. xv. 29, 36), being so called because at the end of the war with the Sabines the Romans purified themselves in the vicinity of the statue of Venus with myrtle boughs (Pliny, l. c.). Later, the similarity of spelling caused a confusion with *cloaca, cloacina*. See Lactant. i 20.

Cloak. See ABOLLA; AMICTUS; LACERNA; PAENULA, PALLIUM; SAGUM.

Cloanthus. One of the companions of Aeneas, from whom the family of the Cluentii at Rome claimed descent (Verg. *Aen.* v. 122).

Clocks. See HOROLOGIUM.

Clodia. (1) A sister of Clodius (q. v.) the tribune, and a woman of the most abandoned character. She married Q. Metellus Celer, and was suspected of having poisoned him. She is supposed to have been the Lesbia to whom Catullus wrote so many of his love poems. (See CATULLUS, and on the identity, the ingenious conjecture of Dr. A. Gudeman, on Plut. *Cicero*, 29, in the *Amer. Jour. of Philol.* vol. xi. no. 3.) (2) The younger sister of the preceding, and equally infamous in character. She married Lucullus, but was repudiated by him for her scandalous conduct.

Clodia Lex. See LEX.

Clodius Albīnus. See ALBINUS.

Clodius Pulcher, PUBLIUS. A noted Roman demagogue, the enemy of Cicero. He first appears in history as an officer of Lucullus in Asia (B.C. 70). In the following year he accused Catiline of extortion in Africa, but was bribed to abandon the prosecution. In B.C. 62, he was alleged to have had an intrigue with Pompeia, the wife of Iulius Cae-

sar, to meet whom he profaned the rites of the Bona Dea by entering the house of Caesar where they were being held; but was detected by Caesar's mother, and subsequently tried for sacrilege, but escaped conviction by lavish bribery. It was because of this affair that Caesar divorced his wife, with the famous remark that those of his household must be above suspicion (Suet. *Iul.* 74). At the trial Clodius had attempted to prove an alibi, but Cicero's evidence showed that Clodius was with him in Rome only three hours before he pretended to have been at Interamna. In order to revenge himself upon Cicero, Clodius caused himself to be adopted into a plebeian family, that he might obtain the formidable power of a tribune of the plebs. As tribune in 58, supported by the triumvirs Caesar, Pompey, and Crassus, he drove Cicero into exile; but, notwithstanding all his efforts, he was unable to prevent the recall of Cicero in the following year. In 56, Clodius was aedile, and attempted to bring his enemy, T. Annius Milo, to trial. Each had gladiators in his pay, and frequent fights took place in the streets of Rome between the two parties. At the time when Clodius was a candidate for the praetorship and Milo for the consulship, on the 20th of January, B.C. 52, on the Via Appia, near Bovillae, an affray ensued between their followers, in which Clodius was killed. The mob was infuriated at the death of its favourite; and such tumults followed at the burial of Clodius that Pompey was appointed sole consul (*consul sine collega*), in order to restore order to the State. See CICERO; MILO; POMPEIUS.

Cloelia. A Roman virgin, given as a hostage to Porsenna. According to the old Roman legend, when Porsenna and the Romans made a peace after the affair of Mucius Scaevola (q. v.), the latter people gave hostages to the king—ten youths and ten maidens, children of noble parents—as a pledge that they would truly keep the peace which had been proclaimed. It happened, as the camp of the Etrurians was near the Tiber, that Cloelia, one of the maidens, escaped with her companions and fled to the brink of the river; and, as the Etrurians pursued them, they all rushed into the water and swam in safety across the stream. But the Romans, jealous of their reputation for good faith, sent them all back to the camp of Porsenna. Not to be outdone in generosity, the monarch gave her and her female companions their freedom, and permitted her to take with her half of the youths; whereupon, with the delicacy of a Roman maiden, she selected those only who were of tender years. The Romans raised an equestrian statue in her honour on the highest part of the Via Sacra (Liv. ii. 13). There is another story, that Tarquinius fell upon the hostages as they were conducted into the Etrurian camp, and with the exception of Valeria, who fled back to the city, massacred them all (Plin. xxxiv. 13).

Klopes Dikē or **Klopes Graphē** (*κλοπῆς δίκη* or *γραφή*). The action for theft at Athens might be either private or public, and in the former case either before a diaetetes or a court, probably that of the thesmothetae (Meier, *Att. Process*, p. 66, with Lipsius's note 101). The various modes of procedure are enumerated by Demosthenes (*c. Androt.* p. 601, §§ 26, 27).

Closet. See CUBICULUM.

Clota Aestuarium. The modern Frith of Clyde on the western coast of Scotland.

Clothing. See for (1) Outer garments, ABOLLA, ALICULA, AMICTUS, BIRRUS, BRACAE, CALIPTRA, CASTULA, CENTO, CHLAMYS, COA VESTIS, CUCULLUS, CYCLAS, DIPLOIS, ENDROMIS, EXOMIS, FLAMMEUM, LACERNA, LACINIA, NEBRIS, PALLA, PALLIUM, PALUDAMENTUM, PEPLUM, RICA, SAGUM, SINUS, SUFFIBULUM, SYNTHESIS, TEGILLUM, TOGA, TRECHEDIPNUM, TUNICA, UMBO; (2) Under-garments, CHIRODOTA, CINGILLUM, COLOBIUM, DALMATICA, EXPAPILLATUS, INDUSIUM, INTERULA, PAENULA, RECTA, SUBUCULA, SUPPARUM, TUNICA; (3) Head-coverings, ALBOGALERUS, APEX, CALANTICA, CALIENDRUM, CAUSIA, CIDARIS, GALERUS, MITELLA, MITRA, OFFENDIX, PETASUS, PILLEUM, REDIMICULUM, THERISTRUM, TIARA, TUTULUS, VESICA; (4) Coverings for the Feet, BAXEAE, CALCEUS, CALIGA, COTHURNUS, CREPIDA, DIABATHRUM, ENDROMIS, FULMENTA, GALLICAE, LIGULA, MULLEUS, OBSTRAGULUM, PERO, PHAECASIUM, SANDALIUM, SOCCUS, SOLEA, TALARIA, ZANCHA; (5) Throat-covering, FOCALE; (6) Coverings for the Arms and Hands, DIGITALIA, MANICA.

Clotho (Κλωθώ). One of the Fates; the spinner of the thread of destiny. See MOERAE.

Clouds OF ARISTOPHANES. See NEPHELAE.

Clown. See BALATRO; SCURRA.

Club. See CLAVA.

Cluentius Habĭtus, AULUS. A Roman successfully defended by Cicero (B.C. 66) in an extant oration against a charge of poisoning. (Cf. Quint. ii. 17, 21).

Clupea (called by the Greek writers ASPIS). A town of Africa Propria, twenty-two miles east of Carthage. It was built upon a promontory which was shaped like a shield. Agathocles (q. v.) seized upon this place when he landed in Africa, fortified it, and gave it, from the shape of the promontory, the name of Aspis ("a shield" in Greek, same as *clupeus* in Latin).

Clusium. Now Chiusi; a town of Etruria, on the banks of the Clanis. Its more ancient name was Camers. The Gauls under Brennus besieged it, but marched to Rome without taking it. It was at Clusium that Porsenna held his court; and near this city he erected for himself the splendid mausoleum or labyrinth of which Pliny has transmitted to us a description on the authority of Varro. See LABYRINTHUS.

Clusius. A surname of Ianus, whose temple was closed (*clusum*) in peace.

Clymĕné (Κλυμένη). (1) A daughter of Oceanus and Tethys, who married Iapetus, by whom she had Atlas, Prometheus, Menoetius, and Epimetheus. (2) The mother of Phaëthon. (3) A female servant of Helen, who accompanied her in her flight with Paris.

Clymenēĭdes. A patronymic given to Phaëthon's sisters, who were daughters of Clymené.

Clytaemnestra (Κλυταιμνήστρα). A daughter of Tyndarus, king of Sparta, by Leda. She was born, together with her brother Castor, from one of the eggs which her mother brought forth after her amour with Zeus under the form of a swan. She married Agamemnon, king of Mycenae, and when this monarch went to the Trojan War, he left his wife and family, and all his affairs, to the care of his relation Aegisthus. But the latter proved unfaithful to his trust, corrupted Clytaemnestra, and

usurped the throne. Agamemnon, on his return home, was murdered by his guilty wife, who was herself afterwards slain, along with Aegisthus, by Orestes, son of the deceased monarch. For a more detailed account, see the articles AGAMEMNON and ORESTES.

Clytia (Κλυτία). In Greek mythology an ocean nymph, beloved by the Sun-god, who deserted her. She was changed into the heliotrope, a flower which is supposed always to turn its head in the direction of the sun's movement.

Cneph (Κνήφ) or **Cnuphis** (Κνοῦφις). An Egyptian deity regarded as the creator of the world, and represented in the form of a serpent.

Cnidus (Κνίδος). A town and promontory of Doris in Caria, at the extremity of a promontory called Triopium. The founder of the place is said to have been Triopas. From him it received at first the name of Triopium, which at a later period was confined merely to the promontory on which it stood (Herod. i. 174). Aphrodité was the chief deity of the place, and had three temples erected to her, under the several surnames of Doritis, Acraea, and Euploea. In the last of these stood a celebrated statue of the goddess, the work of Praxiteles (Pausan. i. 1; Plin. xxxvi. 5). Nicomedes of Bithynia wished to purchase this admirable production of the chisel, and actually offered to liquidate the debt of Cnidus, which was very considerable, if the citizens would cede it to him; but they refused to part with what they esteemed the glory of their city (Plin. l. c.). Off Cnidus took place in B.C. 394 a famous sea-fight between the Athenians, under Conon, and the Spartans, under Pisander, in which the former were victorious. The shores of Cnidus furnished in ancient times, as they do now, a great abundance of fish. The wines were famous, and Theophrastus speaks of the Cnidian onions as of a particular species, being very mild and not occasioning tears. Cnidus was the birthplace of the famous mathematician and astronomer Eudoxus; of Agatharchidas, Theopompus, and Ctesias. Excavations made at Cnidus in 1857–58 led to the discovery of many fine marbles, some of which may now be seen in the British Museum.

Cnōsus (Κνωσός, more correct than CNOSSUS, Κνωσσός, if we follow the language of coins; also GNŌSUS). The royal city of Crete, on the northern coast, at a small distance from the sea. Its earlier name was Caeratus, which appellation was given also to the inconsiderable stream that flowed beneath its walls. It was indebted to Minos for all its importance and splendour. That monarch is said to have divided the island into three portions, in each of which he founded a large city; and fixing his residence at Cnosus, it became the capital of the kingdom. It was here that Daedalus (q. v.) cultivated his art and planned the celebrated labyrinth.

Coa Vestis, also **Coa** (n. pl.). The Coan cloth or garments, mentioned by various authors, but most frequently by the Latin poets of the Augustan Age (e. g. Tibull. ii. 3, 53; 4, 29; Propert. i. 2, 2; ii. 1; v. (iv.) 2, 23; Hor. *Carm.* iv. 13, 13; *Sat.* i. 2, 101). From their expressions we learn that it had a great degree of transparency, that it was remarkably fine, that it was chiefly worn by women of loose reputation, and that it was sometimes dyed purple (Hor. *Carm.* l. c.) and enriched with stripes of gold. It has been supposed to have been made of silk, because in Cos silk was spun and woven at an early period, so as to obtain a high celebrity. See SERICUM.

Coa Vestis. (*Mus. Borbon.* viii. 5.)

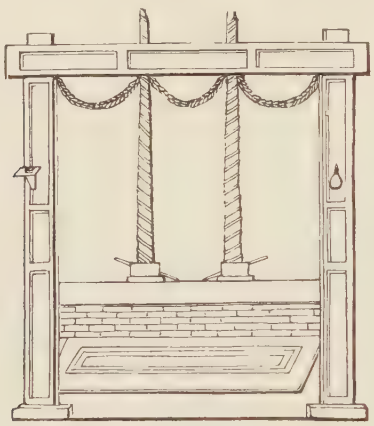
Coactor. A name applied to collectors of various sorts—e. g. to the servants of the publicani or farmers of the taxes, who collected the revenues for them (Cic. *Pro Rab. Post.* 11, § 30); also to those who collected the money from the purchasers of things sold at a public auction (id. *Pro Cluent.* 64, § 180). The father of Horace was a *coactor*, but there are no means of determining to which class he belonged (Hor. *Sat.* i. 6, 86; Suet. *Vit. Hor.*).

Cobet, CAREL GABRIEL, one of the most acute of modern text-critics and a Hellenist of great learning, was born at Paris, November 28th, 1813. He studied at The Hague and at the University of Leyden (1831–40), and showed so much ability as a philologist and student of classical antiquity that in 1840 the Dutch government sent him to Italy to pursue certain archæological investigations. In 1844 he was admitted to the doctorate at Leyden, and in 1846 became professor. He died October 26th, 1889. His publications are numerous and of great value, especially in the line of textual criticism, for which he showed great originality, sagacity, and insight. They are as follows: *Observationes Criticae in Platonis Comici Reliquias* (Amsterdam, 1840); *Oratio de Arte Interpretandi Grammatices et Critices*—his inaugural address—(1847); *Praefatio Lectionum de Historia Vetere* (1853); *Variae Lectiones quibus Continentur Observationes Criticae in Scriptores Graecos* (1854; 2d ed. 1873); an edition of Hyperides (1858); of Lysias (Amsterdam, 1863); of Xenophon's *Hellenica* (1862); of Diogenes Laërtius, in the Didot collection (Paris, 1850; 2d ed. 1862); *Miscellanea Philologica et Critica* (1873); *Miscellanea Critica* (1876); *Observationes Criticae in Dionysii Halicarnassensis Antiquitates Romanas* (1877); and *Collectanea Critica* (1878). He also edited for many years the philological journal *Mnemosyne* (Bibliotheca Philologica Batava), published at Leyden. See Hartmann, in the *Bibliogr. Jahrbuch*, xii. pp. 53 foll. (Berlin, 1889); id. *De Carolo Gabriele Cobet* (Berlin, 1890).

Cocălus (Κώκαλος). A mythical king of Sicily, who kindly received Daedalus (q. v.) on his flight from Crete, and with the assistance of his daughters put Minos to death, when the latter came in pursuit of Daedalus.

Cocceius Nerva. See NERVA.

Coccygius (τὸ Κοκκύγιον ὄρος). "Cuckoo-Mountain." A mountain of Argolis, between Halicé and Hermioné. Its previous name was Thornax, but it received the appellation of Coccygius from the circumstance that Zeus was metamorphosed there into the bird called Coccyx (Κόκκυξ) by the Greeks. On its summit was a temple sacred to that god, and another of Apollo at the base (Pausan. ii. 36).



Coché (Κωχή). A city on the Tigris, near Ctesiphon.

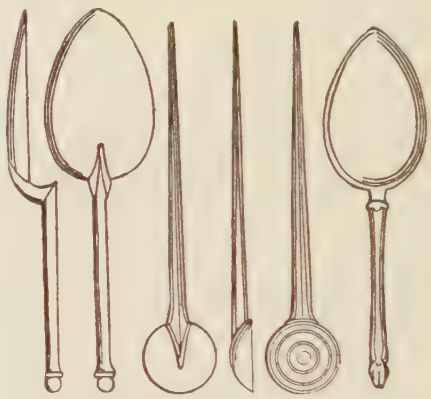
Cocintum Promontorium. A promontory of Bruttium in Lower Italy, below the Sinus Scylacius. The modern name is Cape Stilo. It marked the separation between the Ionian and Sicilian seas.

Cock-fighting. See GALLUS; VENATIONES.

Coclea or **Cochlea** (κοχλίας), which properly means a snail, was also used to signify other things of a spiral form.

(1) A screw, one of the mechanical powers, so named from its spiral form, which resembles the worming of a shell. The annexed illustration represents a clothes-press, from a painting on the wall of the Chalcidicum of Eumachia at Pompeii, which

Coclea, or Clothes-press. (Pompeian Painting.)



is worked by two upright screws (*cocleae*) precisely in the same manner as our own linen-presses. A screw of the same description was also used in oil and wine presses. The thread of the screw, for which the Latin language has no appropriate term, is called περικόχλιον in Greek.

(2) A spiral pump for raising water, invented by Archimedes, from whom it has ever since been called the Archimedean screw. It is described at length by Vitruvius (x. 11). A pump of this kind was used for discharging the bilge-water in the ship of Hiero, which was built under the directions of Archimedes.

(3) A peculiar kind of door, through which the wild beasts passed from their dens into the arena of the amphitheatre. It consisted of a circular cage, open on one side like a lantern, which worked upon a pivot and within a shell, like the machines used in the convents and foundling hospitals of Italy, termed *rote*, so that any particular beast could be removed from its den into the arena merely by turning it round, and without the possibility of more than one escaping at the same time; and therefore it is recommended by Varro as peculiarly adapted for an aviary, so that a person could go in and out without affording the birds an opportunity of flying away. Schneider, however, maintains that the *coclea* in question was nothing more than a portcullis (*cataphracta*) raised by a screw, which interpretation does not appear so probable as the one given above. See Varro, *R. R.* iii. 5, 3.

Coclear (κοχλιάριον λίστριον). A kind of spoon which appears to have terminated with a point at one end, and at the other was broad and hollow like our own spoons. The pointed end was used for drawing snails (*cocleae*) out of their shells and eating them, whence it derived its name; and the broader part for eating eggs, etc. Martial mentions both these uses of the coclear (xiv. 121):

Sum cocleis habilis nec sum minus utilis ovis.

Cochlearia, spoons. (*Museo Borbonico.*)

Coclear was also the name given to a small measure like our spoonful. According to Rhemnius Fannius, it was $\frac{1}{24}$ of the *cyathus*. See Isid. *Orig.* xvi. 26, 3; and the article LIGULA.

Coclearium and **Cochlearium.** A place where snails were fattened for the tables of Roman gourmands.

Cocles, PUBLIUS HORATIUS (given by Niebuhr as Marcus Horatius). A Roman who, at first with Sp. Lartius and Titus Herminius, and then alone, opposed the whole army of Porsenna at the head of the Sublician bridge, while his companions behind him were cutting off the communication with the other shore. When the bridge was destroyed, Cocles, after addressing a short prayer to the god of the Tiber, leaped into the stream, and swam across in safety with his arms. As a mark of gratitude, every inhabitant, while famine was raging within the city, brought him all the provisions he could stint himself of; and the State afterwards raised a statue to him and gave him as much land as he could plough round in a day (Liv. ii. 10). As Polybius relates the story, Horatius defended the bridge alone from the first and then perished in the river. Macaulay's spirited ballad on the subject is familiar to all.

Cocossātes. A people in Aquitania in Gaul, mentioned along with the Tarbelli.

Cocylium (Κοκύλιον). An Aeolian city in Mysia, whose inhabitants are mentioned by Xenophon.

Cocȳtus (Κωκυτός, "River of Wailing"). A river in Epirus, a tributary of the Acheron. Like the Acheron, the Cocytus was supposed to be connected

with the lower world, and hence came to be described as a river in the lower world. See HADES.

Codānus Sinus. One of the ancient names of the Baltic. Mela (iii. 3, 6) represents it as full of large and small islands, the largest of which he calls Scandinavia; so also Pliny (iv. 13).

Codex, dim. **Codicillus** (the older form being *caudex:* Cato, *ap.* Front. *Epist. ad M. Anton.* i. 2). A word originally signifying the trunk or stem of a tree (Verg. *Georg.* ii. 30), and hence used to designate anything composed of pieces of wood.

(1) A log of wood, attached as a punishment to the feet of slaves, which they dragged with them, and on which they also sat sometimes (Plaut. *Poen.* v. 3, 39).

(2) Boats on the Tiber, which may originally have been like the Indian canoes, or were constructed of several roughly hewn planks nailed together in a rude and simple manner, were called *naves caudicariae,* or *codicariae,* or *caudiceae* (Fest. p. 46 M.; Varr., Sall. *ap.* Non. p. 535, 13; Sen. *Brev. Vit.* 13, 4). The surname of Caudex given to Appius Claudius must be traced to this signification. In later times the name was given to ships employed in transporting the corn from Ostia to Rome; and the sailors engaged in this traffic, called *caudicarii* or *codicarii,* formed a corporation.

(3) The name of *codex* was given to wooden tablets bound together and lined with a coat of wax, for the purpose of writing upon them; and when, at a later age, parchment or paper or other materials were substituted for wood, and put together in the shape of a book, the name of *codex* was often used as synonymous with *liber,* or book (Cic. *Verr.* i. 46, § 119). It was the name more particularly given to an account-book or ledger, *codex accepti et expensi* (q. v.). In the time of Cicero we find it also applied to the tablet on which a bill was written. At a still later period, during the time of the emperors, the word was used to express any collection of laws or constitutions of the emperors, whether made by private individuals or by public authority. See CODEX GREGORIANUS; CODEX IUSTINIANEUS; CODEX THEODOSIANUS.

The word *codex* is largely used by scholars of the MS. editions of the classics that are preserved in the libraries of Europe, and date some from the fifth to the tenth centuries A.D., but the greater number from the thirteenth to the fifteenth. They are of parchment (folio or quarto size), usually with marginal notes written by other hands than those of the original copyist of the codex. (See LIBER; PALÆOGRAPHY; TEXTUAL CRITICISM.) They are named (1) after persons who once owned them, as the Codex Petavinus of Ovid, named after one Petavius, and the Codex Vossianus of the same classic, after Voss; and (2) more commonly after the places where they are kept. Thus there are in ENGLAND, Codices Britannici or Londinenses (British Museum), Codices Cantabrigienses (Cambridge), and Codices Oxonienses (Oxford). These last are also often noted as Codices Bodleiani (from the Bodleian Library). In FRANCE, one finds Codices Parisini (Paris), Codices Bliandifontani (Fontainebleau), Codices Sangermanenses (St. Germain), Codices Montepessulani (Montpellier), etc. In HOLLAND, there are Codices Amstelodamienses (Amsterdam) and Codices Leidenses (Leyden); in BELGIUM, Codices Bruxellenses (Brussels) and Codices Blandiniani (Blankenberg); in DENMARK, Codices Haunienses (Copenhagen); in SWITZERLAND, Codices Bernenses (Berne), Codices Basilienses (Bâle), Codices Einsidlenses (Einsiedeln), Codices Sangallenses (St. Gallen), and Turicenses (Zürich); in GERMANY, Codices Argentoratenses (Strassburg), Codices Berolinenses (Berlin), Codices Colonienses (Cologne), Codices Palatini (Heidelberg), Codices Fuldenses (Fulda), Codices Carolinuhenses (Carlsruhe), Codices Regiomontani (Königsberg), Codices Guelferbytani (Wolfenbüttel), Codices Monacenses (Munich), Codices Lipsienses (Leipzig), and Codices Vratislavienses (Breslau), etc.; in AUSTRIA, Codices Vindobonenses (Vienna) and Codices Budenses (Buda); in RUSSIA, Codices Petropolitani (St. Petersburg); in SPAIN, Codices Matritenses (Madrid) and Codices Toletani (Toledo). In ITALY, the terminology is varied. The great collections are at (1) Florence, in the Bibliotheca Laurentiana of the Church of San Lorenzo, comprising MSS. from the Public Library of San Marco founded by Cosimo de' Medici, and from the collection of Peter Leopold. Hence Florentine codices are styled variously, Florentini, Laurentiani, S. Marci, Medicei, and Leopoldini Laurentiani; (2) Milan, where the codices are called either Mediolanenses, from the name of the city, or Ambrosiani, from the Ambrosian Library; (3) Venice, where they are called Veneti, or (from the Library of St. Mark) Veneti Marciani, or simply Marciani; (4) Turin, Codices Taurinenses; (5) Verona, Codices Veronenses; (6) Rome, where the great storehouse is the Vatican Library (Bibliotheca Vaticana), enriched by MSS. from many sources—e. g. from Fulvius Orsini, from Heidelberg, from the Library of Urbino, etc. Hence the Codices Vaticani often receive names to specify more particularly their original sources, as Codices Ursiniani, Codices Palatini, Codices Urbinates, etc. (7) Naples, where the codices are called Neapolitani, or (from the old Bourbon Library) Borbonici. A complete list of Latin MSS. down to the seventh century is given by Prof. Hübner, in his *Grundriss z. Geschichte u. Encycl. der Klass. Philologie* (Berlin, 1876).

The diminutive *codicillus* was used in much the same way as *codex.* Respecting its meaning in connection with a person's will, see TESTAMENTUM.

Codex Accepti et Expensi. A book in which the memoranda of income and outgo hastily jotted down in the *adversaria,* or day-book, were carefully posted once a month. It undoubtedly consisted of a series of double pages (Plin. *H. N.* ii. § 22)—one debit (*acceptum*), the other credit (*expensum*); hence the book is sometimes called *codices.* The entries were made in a certain *ordo,* which is much insisted on as being of the essence of the codex, as opposed to the *adversaria* (Cic. *pro Rosc. Com.* ii. 6, 7). Now this *ordo* was no doubt chronological, the date by year and day being given, but if it was only this, it could be regarded as little else than a fair copy of the *adversaria.* So we must suppose that the codex was somewhat like the journal of modern book-keepers.

The codex was sufficient for the ordinary householder; but of course those who had extensive business transactions—such as the State, municipalities, companies, bankers—had to keep ledgers (*rationes, libri rationum*), each personal or nominal account being called *ratio.* Private individuals too, who had large property, had often to keep separate books for different heads of their business

—e. g. the *calendaria*, which were accounts of investments made and dividends received.

For other points, such as the relation of *transcripticia nomina* to the codex, and the importance of the latter in establishing a literal obligation, see LITTERARUM OBLIGATIO and the literature cited under that head.

Codex Gregoriānus. A collection of imperial Roman constitutions or enactments made by one Gregorianus, of whom nothing else is known; its date is not earlier than A.D. 295, as it contained an *exemplum edicti Diocletiani et Maximiani* of that year (*Coll. Leg. Mos. et Rom.* vi. 4). It comprised enactments of the emperors between Septimius Severus (A.D. 195–211) and Diocletian and Maximian (A.D. 285–305), and possibly even some as far back as Hadrian (A.D. 117–138). It was divided into at least thirty books—the books being subdivided into "titles" and "rubrics," the topics being arranged after the order of the Perpetual Edict of Salvius Iulianus.

Codex Iustinianēus. The motives by which the emperor Justinian was induced to codify the enactments of himself and earlier emperors were the scarcity of copies of the Code of Theodosius, and the consequent divergence between the law there laid down and that actually applied in the courts (*Cod.* i. 17, 2, 17). Accordingly, in February, A.D. 528, he appointed a commission of codification of ten persons, among them being Tribonianus, who played so important a part in the legislative work of the next few years, and who perhaps suggested to his master his whole scheme of legal reform. Their instructions were to compile a single code out of those of Gregorianus, Hermogenianus, and Theodosius II., and the imperial constitutions issued since the enactment of the last, whether by Justinian himself or his predecessors. They were authorized to omit all that was unnecessary or superfluous (e. g. preambles), to reconcile such enactments as were inconsistent with one another, and, where convenience required, to combine several into one, or to make any alterations in individual constitutions which they should deem necessary. The separate laws, whether technically *edicta*, *rescripta*, or *decreta*, were to be arranged in chronological order under generic titles; and each, so far as was possible, identified by date and the name of the prince to whom it owed its enactment. The work was completed in April, A.D. 529, and was published under the name Codex Iustinianeus, with force of law from the 16th of that month. The older codices and constitutions were at the same time deprived of all validity, and it was even forbidden to appeal to any *leges* cited in the writings of the jurists if they had been incorporated, even in a modified form, in the new code.

In the interval of four years and a half between this date and the completion of the Institutes (November, A.D. 533), Justinian had issued a large number of new constitutions of his own. This seemed to him to necessitate a revision of the Codex. Accordingly in the next year he appointed a new commission, consisting of Tribonianus, Dorotheus, professor at Berytus, and three others, for this purpose. Within a few months (November, A.D. 534) the original code and the constitutions issued after its enactment were deprived of all authority and withdrawn from circulation, their place being taken by the *Codex Repetitae Praelectionis*, or Codex which has come down to us. In this Justinian's own constitutions were incorporated, as well as many others which the earlier code had not contained. The *Codex Repetitae Praelectionis* consists of twelve books, each of which is divided into "titles" and "rubrics"; the single constitutions are arranged under their several titles in the order of time and with the names of the emperors by whom they were respectively made, and their dates.

The enactments in this code do not go further back than those of Hadrian, and those of his immediate successors are few in number. The arrangement corresponds tolerably closely with that of the Digest, the seven parts into which the fifty books of the latter are distributed answering to books i.–ix. of the code; but the matter of the last three books of the code is hardly treated of in the Digest. See INSTITUTIONES.

Codex Rescriptus. See PALIMPSEST.

Codex Theodosiānus. In A.D. 429, Theodosius II., whose capital was Constantinople, communicated to the Senate his resolution to form a compilation of the general constitutions issued from the time of Constantine (A.D. 306–337) to his own day, after the model of the Codices Gregorianus and Hermogenianus; and appointed a commission of a lawyer and eight State officials to execute the scheme. Nothing, however, was done for six years. In A.D. 435, a new commission was appointed, presided over, like the earlier one, by Antiochus, and the imperial instructions were repeated. The result of their labours, known as the Theodosian Code, was published in February, A.D. 438, with statutory force from January 1 in the following year.

The constitutions are arranged in chronological order, under "titles" and "rubrics," in sixteen books. The first five, which contain most of the enactments relating to private law, are in form modelled on the commentaries on the Edict. The sixth to the eighth books consist principally of administrative and constitutional ordinances; the ninth is criminal law; the tenth and eleventh relate to the financial system, and in part to procedure; the twelfth to the fifteenth, to the constitution and administration of towns and other corporations; and the sixteenth contains the constitutions which deal with the Church and the ecclesiastical system in general.

Our knowledge of this code is derived partly from incomplete MSS., partly from the code of Justinian, and partly from an epitome of its contents in the *Breviarium* (q. v.). The valuable edition of J. Gothofredus (6 vols. Leyden, 1665, re-edited by Ritter, Leipzig, 1736–45) contained the code in its complete form, except the first five books, for which it was necessary to use the epitome just referred to. This is also the case with the edition of this code contained in the *Ius Cirile Anteiustinianeum* of Berlin (1815). But the discovery of a MS. of the *Breviarium* at Milan in 1820 by Clossius, and of a palimpsest of the Theodosian Code at Turin by Peyron, has contributed largely both to the critical knowledge of the other parts of this code, and has added numerous genuine constitutions to the first five books, especially Book i. Haenel's discoveries have added also to our knowledge of the later books, and his edition of the Theodosian Code (1842–44) is the latest and the best.

Codicarii. See CODEX.

Codicillus. See CODEX.

Codomannus. See DARIUS.

Codon (*κώδων*). A bell. See TINTINNABULUM.

Codrus (Κόδρος). The last king of Athens. He received the sceptre from his father Melanthus, and was far advanced in years when some of the Dorian States united their forces for the invasion of Attica. The Dorian army marched to Athens and lay encamped under its walls; and the oracle at Delphi had assured them of success, provided they spared the life of the Athenian king. A friendly Delphian, named Cleomantis, disclosed the answer of the oracle to the Athenians, and Codrus resolved to devote himself for his country in a manner not unlike that which immortalized among the Romans, at a later date, the name of the Decii. He went out at the gate disguised in a woodman's garb, and falling in with two Dorians, killed one with his bill, and was killed by the other. The Athenians thereupon sent a herald to claim the body of their king, and the Dorian chiefs, deeming the war hopeless, withdrew their forces from Attica. After the death of Codrus, the nobles, taking advantage, perhaps, of the opportunity afforded by a dispute between his sons, are said to have abolished the title of King, and to have substituted for it that of Archon. This new office was to be held for life, and then transmitted to the son of the deceased. The first of these hereditary archons was Medon, son of Codrus, from whom the thirteen following archons were called Medontidae, as being his lineal descendants. See ARCHON.

Coela (*τὰ κοῖλα τῆς Εὐβοίας*, "the Hollows of Euboea"). The western coast of Euboea, between the promontories Caphareus and Chersonesus, very dangerous to ships; here a part of the Persian fleet was wrecked B.C. 480 (Herod. viii. 113).

Coelé (Κοίλη). An Attic deme a little beyond the Militian Gate at Athens. Cimon and Thucydides were buried here.

Coelesyria (Κοίλη Συρία, "Hollow Syria"). The name given to the great valley between the two ranges of Mount Lebanon (Libanus and Anti-Libanus), in the south of Syria, bordering upon Phœnicia on the west and Palestine on the south. In the wars between the Ptolemies and the Seleucidae, the name was applied to the whole of the southern portion of Syria, which became subject for some time to the kings of Egypt.

Coelia Lex. See LEX.

Coelius. See CAELIUS.

Coelossa (Κοίλωσσα). A mountain in Sicyon near Phlius.

Coelus. In Roman mythology, the spouse of Terra. He is identified with the Greek Uranus (q. v.).

Coelus (Κοιλὸς λίμην). See CYNOSSEMA.

Coëmptio. Properly "a joint taking," so "a joint purchase." One of the three forms of marriage among the Romans. It was so called from the fiction of a purchase supposed to take place on the occasion. In the presence of five witnesses and a *libripens*, or holder of the balance, the bridegroom struck the balance with a bronze coin, which he handed to the father or guardian of the bride. At the same time he asked her whether she would be his wife, and she, in turn, asked him whether he would be her husband. See MATRIMONIUM.

Coena. See CENA.

Coenus (Κοῖνος). A son-in-law of Parmenio, and one of the ablest generals of Alexander the Great. He died on the Hyphasis, B.C. 327.

Coës (Κώης). An inhabitant of Mitylené who dissuaded Darius Hystaspis, in his Scythian expedition, from breaking up his bridge of boats over the Danube. Darius made him tyrant of Mitylené. On the outbreak of the Ionian revolt against the Persians (B.C. 501), he was stoned to death by the people of Mitylené. See DARIUS.

Coeus (Κοῖος). One of the Titans, son of Uranus and Gaea. (See TITANES.) He was the father of Leto by Phoebé.

Cognāti. See COGNATIO.

Cognatio. The Latin word for relationship. Cognatio included relationship on both the father's and mother's side, while *agnatio* implied relationship on the father's side only. (See FAMILIA.) *Agnatio* involved legal duties and rights, while cognatio, originally at least, brought with it only moral obligations. *Cognati* to the sixth degree had the right of kissing each other (*ius osculi*), and also the right of refusing to appear as witnesses against each other in a court of law. On the other hand, *cognati* were forbidden by custom, at least in the earlier times, to intermarry, or to appear in court against each other as accusers. When a man died, his *cognati* were expected to put on mourning for him. In course of time the *cognati* gradually acquired the rights proper to *agnati*. But natural relationship did not win full recognition until the time of Justinian, by whose legislation the rights of *agnati* were abolished.

Cognĭtor. One who appeared in the Roman courts of law to conduct an *actio* (q. v.) on behalf of another. He was also called *procurator*.

Cognōmen. See NOMEN.

Cohēres. See HERES.

Cohors. A division of the Roman army. (See EXERCITUS). In the republican age the word was especially applied to the divisions contributed by the Italian allies. Down to B.C. 89, when the Italians obtained the Roman citizenship, they were bound to supply an infantry contingent to each of the two consular armies, which consisted of two legions apiece. This contingent numbered in all 10,000 infantry, divided into: (*a*) 20 *cohortes* of 420 men each, called *cohortes alares*, because in time of battle they formed the wings (*alae*) of the two combined legions; (*b*) four *cohortes extraordinariae*, or select cohorts of 400 men each.

From about the beginning of the first century B.C., the Roman legion, averaging 4000 men, was also divided into ten *cohortes*, each containing three *manipuli* or six *centuriae*. In the imperial times, the auxiliary troops assigned to the legions stationed in the provinces were also divided into cohorts (*cohortes auxiliariae*). These cohorts contained either 500 men (=5 *centuriae*), or 1000 men (=10 *centuriae*). They consisted either entirely of infantry, or partly of cavalry (380 infantry+120 cavalry; 760 infantry+240 cavalry). For the commanders of these cohorts, see PRAEFECTUS. The troops stationed in Rome were also numbered according to *cohorts*. (1) The *cohortes praetoriae*, originally nine, but afterwards ten in number, which formed the imperial body-guard. Each cohort con-

sisted of 1000 men, including infantry and cavalry. (See PRAETORIANI.) The institution of a body-guard was due to Augustus, and was a development of the *cohors praetoria*, or body-guard of the republican generals. Its title shows that it was as old as the time when the consuls bore the name of *praetores*. This *cohors praetoria* was originally formed exclusively of cavalry, mainly of equestrian rank. But towards the end of the republican age, when every independent commander had his own *cohors praetoria*, it was made up partly of infantry, who were mainly veterans, partly of picked cavalry of the allies, and partly of Roman *equites*, who usually served their *tirocinium*, or first year, in this way. (2) Three, and in later times four, *cohortes urbanae*, consisting each of 1000 men, were placed under the command of the *praefectus urbi*. They had separate barracks, but ranked below the body-guard and above the legionaries. (3) Seven *cohortes vigilum*, of 1000 men each, were under the command of the *praefectus vigilum*. These formed the night police and fire brigade, and were distributed throughout the city, one to every two of the fourteen *regiones*. See VIGILES.

Coinage. See MONETA; NUMISMATICS.

Colacrĕtae (Κωλάκρεται). A financial board at Athens, whose duty it was to administer the fund accruing from the fines taken in the courts of justice. It was this fund from which the cost of the public meals in the Prytaneum and the salary of the Heliastae were defrayed. The name properly means "collectors of hams," and perhaps points to the fact that the hams of the victims sacrificed on certain occasions were given to the Colacretae as contributions to the meals in question.

Colăpis. A river of Pannonia.

Colchis (Κολχίς). A country of Asia, having Iberia on the east, the Euxine on the west, Caucasus on the north, and Armenia on the south. It is famous in poetic legends as having been the land to which the Argonautic expedition was directed in quest of the golden fleece. (See ARGONAUTAE.) It corresponds at the present day to what is called Mingrelia. The linen manufactured here was in high repute, and was made, according to Herodotus (ii. 105), after the manner of Egypt. This species of manufacture, together with the dark complexion and crisped locks of the natives, were so many arguments with the ancients to prove them of Egyptian origin, independently of other proofs drawn, according to Herodotus, from their language and mode of life (ii. 104).

Colias (Κωλίας). A promontory on the west coast of Attica, twenty stadia south of Phalerum, with a temple of Aphroditê, where some of the Persian ships were cast after the battle of Salamis.

Colisēum. See AMPHITHEATRUM.

Collāre (δέραιον, κλοιός). A band or chain attached to the neck (*collum*); a collar. Dogs with collars are frequently seen in ancient monuments, and a mosaic at Pompeii represents a watch-dog with his collar and chain attached. Varro says that farm-dogs should have collars with pointed nails attached to them, to protect them against the attacks of wolves and other beasts. Xenophon recommends that the collars (δέραια) of hunting-dogs should be soft and wide, so as not to rub the hair. Large wooden collars (κλοιοί) were sometimes put on mischievous dogs (Aristoph. *Vesp.* 897). Plates of bronze have been found, pierced with a hole to be suspended to the collar, containing the names of owners of dogs. See the illustration under CATENARIUS.

Iron or bronze collars were placed round the necks of slaves who had attempted to run away (Plaut. *Capt.* ii. 2, 107). Sometimes a plate was attached to the collar, containing the name and address of the master and offering a reward for the runaway slave. See SERVUS.

Collatia. A Sabine town in Latium, near the right bank of the Anio, taken by Tarquinius Priscus.

Collatīnus, L. TARQUINIUS. Grandson of Aruns, elder brother of Tarquinius Priscus. He derived his surname from Collatia, where he resided, and with the principality of which he was invested. Collatinus was the husband of the celebrated Lucretia (q. v.), and after the expulsion of the Tarquins, he and Brutus were elected the first consuls. His relationship, however, to the Tarquin family excited distrust, and when a law was passed banishing the whole Tarquinian house he was forced to lay down his office and depart from Rome. He ended his days at Lavinium (Liv. i. 60).

Collatio Bonōrum. See BONORUM COLLATIO.

Collectarii. See TRAPEZITAE.

Collegium. The general term in Latin for an association. The word was applied in a different sense to express the mutual relation of such magistrates as were *collegae*. Besides the *collegia* of the great priesthoods, and of the magistrates' attendants (see APPARITORES), there were numerous associations, which, although not united by any specifically religious objects, had a religious centre in the worship of some deity or other. Such were the numerous *collegia* of artisans (*opificum* or *artificum*), and the societies existing among the poor for providing funerals, which first appear under the Empire. The political clubs (*collegia sodalicia*) were associated in the worship of the Lares Compitales (q. v.), and were, indeed, properly speaking, *collegia compitalicia*, or "societies of the cross-ways." The religious societies were, in some instances, established by the State for the performance of certain public religious services; in other cases they were formed by private individuals, who made it their business to keep up the shrines of particular deities, often foreign, at their own expense. See SODALITAS; UNIVERSITAS.

Colliciae or **Colliquiae.** (1) Gutters made with concave tiles for carrying water from the roof (Vitruv. vi. 3). (2) Drains in the fields for draining water into the ditches (Colum. ii. 8 § 3).

Collīna Porta. (1) One of the gates of Rome, on the Mons Quirinalis. To this gate Hannibal rode up and threw a spear within the city (Ovid, *Fast.* iv. 871). (2) The name of one of the four *regiones* or wards into which Rome was divided by Servius Tullius. The other three were Palatina, Suburrana, and Esquilina (Liv. v. 41).

Collybistes (κολλυβιστής). See COLLYBUS.

Collўbus (κόλλυβος). The smallest copper coin at Athens; the fourth of the *chalcus* (q. v.). Collybus seems to have been a common name for small money, since it signified generally "changing money," "the rate of exchange," and κολλυβιστής, "a money-changer." See TRAPEZITAE.

Collyrium (κολλύριον, diminutive of κολλύρα, "a roll"). (1) In medical language, a tent, pessary, or suppository, made of medicinal substances and inserted into the orifices of the body, such as the nostrils or the anus, or into an ulcer (Cels. v. 28). (2) A liquid eye-salve (Hor. *Sat.* i. 5, 30). Many instructions for the composition of these medicaments may be found in Marcell. Empir. 8.

Collȳtus (Κολλυτός). A deme of Attica belonging to the tribe Aegeis, and forming one of the districts into which the city of Athens was divided. It was the deme of Plato the philosopher.

Colobium. See TUNICA.

Colon (κῶλον). "A limb." A name given by the rhetoricians to the divisions or members of a composition. Much has been written by modern critics of the alleged "colometry," or arrangement into periods (κῶλα), of the orations of Demosthenes, in which they profess to see a rhythmical rule that produces an harmonious effect, as in the odes of Pindar; though the determination of each κῶλον is very arbitrary. See Blass in the *Rheinisches Museum* for 1869, p. 524, and his *Attische Beredsamkeit*, on Demosthenes, pp. 105 foll. Also Mahaffy's *Hist. of Class. Greek Lit.* vol. i. pp. 343–346 (1880).

Colōnae (Κολωναί). A small town in the Troad.

Colonia. (1) GREEK. In Greece, colonies were sometimes founded by vanquished peoples, who left their homes to escape subjection at the hand of a foreign enemy; sometimes as a sequel to civil disorders; sometimes to get rid of surplus population, and thereby to avoid internal convulsions. But in most cases the object was to establish and facilitate relations of trade with foreign countries. If a Greek city was sending out a colony, an oracle (before all others that of Delphi) was almost invariably consulted. Sometimes certain classes of citizens were called upon to take part in the enterprises; sometimes one son was chosen by lot from every house where there were several sons; and strangers expressing a desire to join were admitted. A person of distinction was selected to guide the emigrants and make the necessary arrangements. It was usual to honour these founders of colonies, after their death, as heroes. Some of the sacred fire was taken from the public hearth in the Prytaneum, and the fire on the public hearth of the new city was kindled thereat. And, just as each individual had his private shrines, so the new community maintained the worship of its chief domestic deities, the colony sending embassies and votive gifts to their principal festivals.

The relation between colony and mother-city was viewed as one of mutual affection. Any differences that arose were made up, if possible, by peaceful means, war being deemed excusable only in cases of extreme necessity. The charter of foundation contained general provisions for the arrangement of the affairs of the colony, and also some special enactments. The constitution of the mother-city was usually adopted by the colony, but the new city remained politically independent. If the colony sent out a fresh colony on its own account, the mother-city was generally consulted, or was at least requested to furnish a leader. The κληροῦχοι formed a special class of Greek colonists. (See CLERUCHIA.) The trade factories set up in foreign countries (in Egypt, for instance) were somewhat different from the ordinary colonies, the members retaining the right of domicile in their own fatherland.

(2) ROMAN. It was an old custom in Italy to send out colonies for the purpose of securing new conquests. The Romans, accordingly, having no standing army, used to plant bodies of their own citizens in conquered towns as a kind of garrison. These bodies would consist partly of Roman citizens, usually to the number of three hundred; partly of members of the Latin confederacy, in larger numbers. The third part of the conquered territory was handed over to the settlers. The *coloniae civium Romanorum* (colonies of Roman citizens) were specially intended to secure the two sea-coasts of Italy, and were hence called *coloniae maritimae*. The *coloniae Latinae*, of which there was a far greater number, served the same purpose for the mainland.

The duty of leading the colonists and founding the settlement was intrusted to a commission usually consisting of three members, and elected by the people. These men continued to stand in the relation of patrons (*patroni*) to the colony after its foundation. The colonists entered the conquered city in military array, preceded by banners, and the foundation was celebrated with special solemnities. The *coloniae* were free from taxes, and had their own constitution, a copy of the Roman, electing from their own body their Senate and other officers of State. To this constitution the original inhabitants had to submit. The *coloniae civium Romanorum* retained the Roman citizenship, and were free from military service, their position as outposts being regarded as an equivalent. The members of the *coloniae Latinae* served among the *socii*, and possessed the so-called *ius Latinum*. (See LATINITAS.) This secured to them the right of acquiring property (*commercium*) and settlement in Rome, and under certain conditions the power of becoming Roman citizens; though in course of time these rights underwent many limitations.

From the time of the Gracchi the colonies lost their military character. Colonization came to be regarded as a means of providing for the poorest class of the Roman populace. After the time of Sulla it was adopted as a way of granting land to veteran soldiers. The right of founding colonies was taken away from the people by Caesar, and passed into the hands of the emperors, who used it (mainly in the provinces) for the exclusive purpose of establishing military settlements, partly with the old idea of securing conquered territory. It was only in exceptional cases that the provincial colonies enjoyed the immunity from taxation which was granted to those in Italy.

See W. Roscher, *Kolonien, Kolonialpolitik, und Auswanderung* (1885); Grote, *Hist. of Greece*, chapters xxii.–xxvii.; the article "Colonia" by Caillemer in Daremberg and Saglio's *Dictionnaire des Antiquités*; Zumpt, *Ueber den Unterschied der Benennungen, Municipium, Colonia, Praefectura* (1840); Mommsen, *Die Stadtrechte von Malaca und Salpensa* (1855); Marquardt, *Handbuch*, vol. iv. (1873).

Colonia Agrippīna, or simply AGRIPPĪNA. The modern Cologne (Köln); a town on the left bank of the Rhine. There are medals of Colonia Agrippinensis, and the name is found in inscriptions. The place was originally called Oppidum Ubiorum (Tac. *Ann.* i. 36), and was the chief town of the Ubii; but afterwards Agrippina, the wife of Clau-

dius and daughter of Germanicus, who was born at Oppidum Ubiorum while her father was in command there, prevailed on Claudius in A.D. 51 to send a colony of veterans thither. From that time the place was called after her name. Vitellius was at Cologne when the soldiers proclaimed him emperor (Suet. *Vitell.* 8).

Colonnade. See PORTICUS.

Colōnus (Κολωνός). A deme of Attica, ten stadia, or a little more than a mile, northwest of Athens, near the Academy; celebrated for a temple of Poseidon, a grove of the Eumenides, the shrine of Oedipus, and as the birthplace of Sophocles, who describes it in his *Oedipus Coloneus.*

Colŏphon (Κολοφών). A city of Ionia, northwest of Ephesus. It was founded by Andraemon, son of Codrus, and was situated about two miles from the coast, its harbour, called Notium, being connected with the city by means of long walls. Colophon was destroyed by Lysimachus, together with Lebedus, in order to swell the population of the new town he had founded at Ephesus (Pausan. i. 9). The Colophonians are stigmatized by several ancient writers as very effeminate and luxurious, and yet Strabo says that, at one period, this place possessed a flourishing navy, and that its cavalry was in such repute that victory followed wherever they were employed. Hence arose the proverb Κολοφῶνα ἐπιτίθεναι, "to add a Colophonian"—i. e. to put the finishing hand to an affair. The scholiast on Plato, however, gives another explanation of the saying, which appears somewhat more probable, though its authority is not so good. He states that the Colophonians had the right of a double vote in the general assembly of the Ionians, on account of the service they had rendered the confederacy by inducing the city of Smyrna to join it. Hence they were frequently enabled to decide points left undetermined from a parity of suffrages. It arose from this old saying that, in the early periods of the art of printing, the account which the printer gave of the place and date of the edition, being the last thing printed at the end of the book, was called the *colophon.* This city was one of the places which contended for the birth of Homer, and was unquestionably the native place of Mimnermus and Hermesianax.

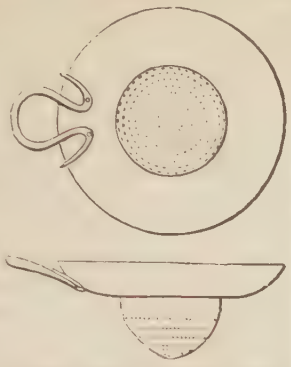
Colōres. See PICTURA.

Colossae (Κολοσσαί). Once an important city of Great Phrygia, on the river Lycus, but so reduced subsequently that it might have been forgotten but for the epistle written to its inhabitants by the Apostle Paul.

Colossēum. See AMPHITHEATRUM.

Colossus (κολοσσός). A word of rare occurrence in the Attic writers, but used by both Greeks and Romans to signify a statue larger than life (Aesch. *Agam.* 406), and thence a person of extraordinary stature and beauty is termed *colosseros* by Suetonius (*Calig.* 35). In like manner the architectural ornaments in the upper stories of lofty buildings, which require to be of large dimensions in consequence of their remoteness, are termed *colossicotera* (κολοσσικώτερα, Vitruv. iii. 3).

Among the colossal statues of Greece the most celebrated, according to Pliny, was the bronze colossus at Rhodes by Chares (q. v.) of Lindus, a pupil of Lysippus, who gave twelve years (B.C. 292–280) to casting the statue. Its height is variously given as 90 and 120 feet. Fifty-six years after its erection it was thrown down by an earthquake and lay in ruins until A.D. 653, when the Arabs sold the pieces to a Jew of Edessa for old metal. In this one island there were more than 100 colossi. Pliny mentions another Greek colossus of Apollo, the work of Calamis, which cost 500 talents, and was thirty cubits high, in the city of Apollonia, whence it was transferred to the Capitol by M. Lucullus; and also those of Zeus and Heracles, at Tarentum, by Lysippus. To the list of Pliny must be added the more important colossal statues of Phidias, the most beautiful of which were his chryselephantine statues of Zeus, at Olympia (more than forty feet high, seated), and of Athené, in the Parthenon at Athens; the largest (more than seventy feet high, including the base) was his bronze statue commonly called Athené Promachos, on the Acropolis. See ATHENÉ; and the illustration in the article ATHENAE, p. 155.



Among the works of this description made expressly by or for the Romans, those most frequently alluded to are the following: (1) A statue of Iupiter upon the Capitol, made by order of Sp. Carvilius, from the armour of the Samnites, which was so large that it could be seen from the Alban Mount. (2) A bronze statue of Apollo at the Palatine Library, to which the bronze head now preserved in the Capitol probably belonged. (3) A bronze statue of Augustus in the Forum, which bore his name. (4) The colossus of Nero, which was executed by Zenodorus, and which is quoted by Pliny as a proof that the taste for bronze statues was lost, for this was adorned with gold and silver. Its height was 110 or 120 feet (Suet. *Nero,* 31). It was originally placed in the vestibule of the Domus Aurea, but was afterwards removed by Vespasian to the Via Sacra, and Hadrian again moved it to a position to the north of the Colosseum, where the basement upon which it stood is still to be seen; from it the contiguous amphitheatre is supposed to have gained the name of "Colosseum." Vespasian had converted it into a statue of the Sun. Twenty-four elephants were employed by Hadrian to remove it, when he was about to build the Temple of Venus at Rome (Spart. *Hadr.* 19). (5) An equestrian statue of Domitian, of bronze gilt, which was placed in the centre of the Forum (Stat. *Silv.* i. 1. 1). See Lesbazeilles, *Les Colosses Anciens et Modernes* (1876); Torr, *Rhodes in Ancient and Modern Times* (1887); and the articles CIRCUS, p. 351, and SEVEN WONDERS.

Colōtes (Κολώτης). (1) An Epicurean of Lampsacus, against whom Plutarch wrote two tracts. (2) A sculptor of Paros, who flourished about B.C. 444 and assisted Phidias in making the colossal figure of Zeus at Olympia.

Colours. See PICTURA.

Colum (ἠθμός, ἠθάνιον). A strainer or colander, used for straining wine, milk, olive-oil, drugs, perfumes, and other liquids. Such cola were made of hair, broom, or rushes (Verg. *Georg.* ii. 242, *Ecl.* x. 71; Colum. *R. R.* ix. 15, xii. 17, 19, 38). The cola employed for such domestic purposes, as straining wine, were sometimes made of linen, but frequently of some metal, such as bronze or silver. Such strainers are often represented in Greek vase-paintings; and several examples of elegant silver strain-

ers of Greek workmanship have been found in the Crimea.

Colum, strainer. (*Museo Borbon.*)

The Romans filled the strainer with ice or snow (*colum nivarium*) in order to cool and dilute the wine at the same time that it was cleared. Several Etruscan vases have been discovered, in which the spout consists of a strainer, so that the liquid is clarified as it is poured out.

Ausonius (*Ep.* iv. 57) uses the word *colum* to denote the *nassa*, or weel for snaring fish. See NASSA.

Columbar. A kind of pillory, in which the head passed through a hole, like the holes in a pigeon-house, whence the name (Plaut. *Rud.* iii. 6. 49).

Columbarium (περιστερεών, περιστεροτροφεῖον). A dove-cote or pigeon-house.

The word is also used to denote the following objects, which derive their name from their resemblance to a dove-cote:

(1) A sepulchral chamber. The word was metaphorically applied to a subterranean vault provided with rows of small niches, lying one above the other, and intended for the reception of the urns containing the ashes of the dead. These large burial-places were built by rich people whose freedmen were too numerous to be interred in the family burial-place. They were also erected by the Caesars for their slaves and freedmen. Several of these still exist—for instance, that of Livia, the consort of Augustus, who built one for her freedmen on the Appian Way. Common burial-places, in which a niche could be bespoken beforehand, were sometimes constructed by private individuals on speculation for people who were too poor to have a grave of their own. Columbaria were usually built by religious or mercantile societies, or by burial clubs for their own members. In such cases the members contributed a single capital payment and yearly subscriptions, which gave them the right to a decent burial and a niche in the vault. The names of the dead were inscribed on marble tablets over each niche. See Lanciani, *Ancient Rome in the Light of Recent Discoveries*, pp. 129–133 (Boston, 1888).

Columbarium. (Villa Rufini.)

Each of the niches contained a pair of urns, with the names of the persons whose ashes they contained inscribed over them. The use of the word, and mode of occupation, is testified in the following inscription:

L. ABUCIUS HERMES IN HOC
ORDINE AB IMO AD SUMMUM
COLUMBARIA IX. OLLAE XVIII.
SIBI POSTERISQUE SUIS.

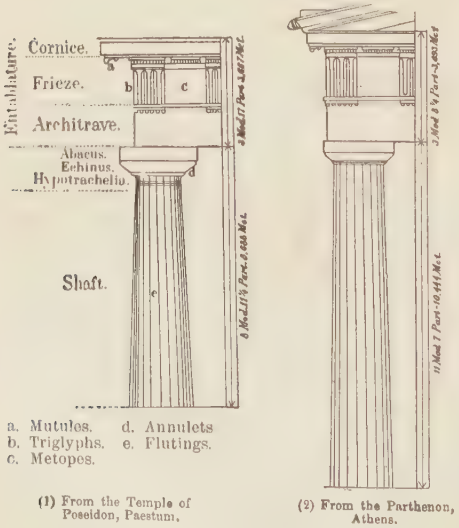
(2) A machine used to raise water for the purpose of irrigation. As described by Vitruvius, the vents through which the water was conveyed into the receiving trough were termed columbaria. (See ANTLIA.) The difference between that representation and the machine now under consideration consisted in the following points: The wheel of the latter is a solid one (*tympanum*) instead of radiated (*rota*), and was worked as a treadmill by men who stood upon platforms projecting from the flat sides instead of being turned by a stream. Between the intervals of each platform a series of grooves or channels (*columbaria*) were formed in the sides of the tympanum, through which the water taken up by a number of scoops placed on the outer margin of the wheel, like the jars in the cut referred to, was conducted into a wooden trough below.

(3) The cavities into which the extreme ends of the beams upon which a roof is supported (*tignorum cubilia*), and which are represented by triglyphs in the Doric order, were termed columbaria by the Roman architects; that is, while they remained empty, and until filled up by the head of the beam.

(4) The apertures in the sides of a vessel, through which the oars passed (Fest. p. 169, Müll.).

Columella, L. IUNIUS MODERĀTUS. A Roman writer, born at Gades, in the reign of Augustus or Tiberius, and a contemporary, according to his own account, of Seneca and Celsus. The elder Pliny also frequently makes mention of him. His father, Marcus Columella, had possessions in the province of Baetica. The son betook himself at an early period to Rome, where he passed his life, with the exception of a few journeys to Syria and Cilicia. Two works of his remain: one, entitled *De Re Rustica*, in twelve books; the other, *De Arboribus*. This last made, very probably, part of a work on agriculture, in four books, which Columella had published as the first edition of that which we now have in twelve books. On this supposition, Cassiodorus was correct in saying that Columella had written a work in sixteen books on rural economy. This author appears to have been but little read. Among the ancients, Pliny, Servius, Cassiodorus, and Isidorus are the only ones who cite him. He fell into almost complete neglect after Palladius had made an abridgment of his work. (See PALLADIUS.) The style of Columella is pure and elegant; if any reproach can be made against him, it is that of being too studied in his language for the subject of which he treats.

The tenth book, which he originally intended to be the conclusion, is in verse (dactylic hexameters), and is a sort of supplement to the *Georgics* of Vergil, whose style Columella imitates with considerable success. It treats of gardening. The eleventh and twelfth books were subsequently added by the author, as not having exhausted his subject. The best MS. of Columella is the Codex Sangermanensis of the ninth century, now in St. Petersburg. The *Res Rustica* is contained in the collec-



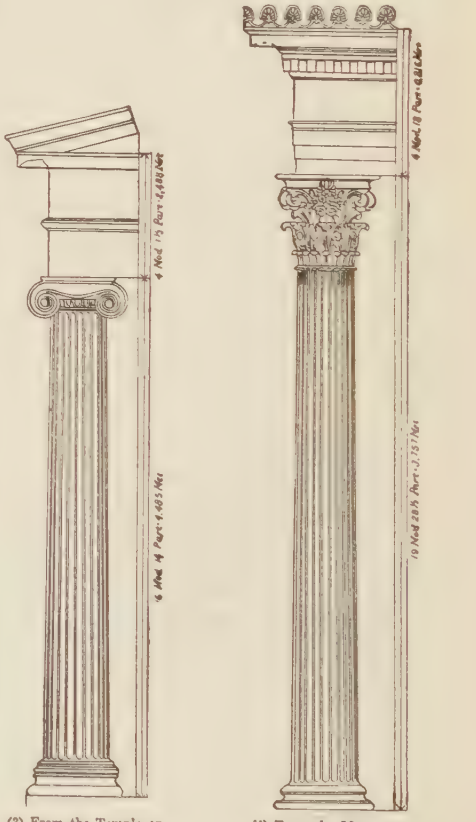
tions of the *Scriptores Rei Rusticae*, and has been separately edited by Ress (Flensburg, 1795), and bk. x. in Wernsdorf's *Poetae Latini Minores*. (See Barberet, *De Columellae Vita et Scriptis* (Nancy, 1888).

Colŭmen (later CULMEN). The roof of a building, or more particularly the beam in the highest part of the slope of a roof.

Columna (*κίων*, *στύλος*). A column, employed in architecture to support the entablature and roof of an edifice. It is composed of three principal parts: the capital (*capitulum*), the shaft (*scapus*), and the base (*spira*). The column was, moreover, constructed in three principal styles or orders, each possessing characteristic forms and proportions of its own, distinctive of the order, but by unprofessional persons most readily distinguished by the difference in the capitals. (1) DORĬCA, the Doric; the oldest, most substantial, and heaviest of all, which has no base, and a very simple capital. (See CAPITULUM.) (2) IONĬCA, the Ionic; the next in lightness, which is furnished with a base and has its capital decorated with volutes. (See CAPITULUM.) (3) CORINTHIA, the Corinthian; the lightest of all, which has a base and a plinth below it, and a deep capital ornamented with foliage. (See CAPITULUM.) To these are often added: (4) TUSCANĬCA, the Tuscan; only known from the account of Vitruvius, and which nearly resembled the Roman Doric; and (5) COMPOSĪTA, the Composite; a mixed order, formed by combining the volutes of the Ionic with the foliage of the Corinthian.

Figs. 1 and 2 give instances of the Doric style from the temple at Paestum and the Parthenon at Athens. The Doric column consists (A) of the shaft, which increases in diameter almost invisibly up to about one-quarter of its height, and diminishes slightly after that point. It has no base, but rests immediately on the stylobate. It is surrounded with semicircular flutings, meeting each other at a sharp angle. These were chiselled with a cedar-wood tool after the separate drums had been put together. (B) The capital. This consists of three parts—(*a*) the *hypotrachelion*, or neck of the column, a continuation of the shaft, but separated by an indentation from the other drums. It is wider at the top than at the bottom, and is generally ornamented with several parallel and horizontal rings. (*b*) The *echinus*, a circular moulding or cushion, which widens greatly towards the top. (*c*) The *abax* or *abacus*, a square slab supporting the architrave or epistylion. The height of the shaft is usually 5½ times, the distance between the columns 1½ times, the diameter of the base of the column. The architrave is a quadrangular beam of stone, reaching from pillar to pillar. On this again rests the frieze (*zophoros*), so called from the metopes which are adorned with sculptures in relief. These metopes are square spaces between the triglyphs; the triglyphs are surfaces cut into three concave grooves, two whole grooves in the centre, and two half grooves at the sides. One is placed over each pillar, and one between each pair of pillars. The entablature is completed by a projecting cornice, a slab crowned with a simple heading-course, the lower surface of which is ornamented with sloping corbels (*στάγονες*, *mutuli*).

An instance is given in Fig. 3 from the temple on the Ilissus at Athens. These are loftier than the Doric, their height being 8⅓–9½ times the diameter of the lower part. The enlargement of the lower part is also less than in the Doric columns, the distance between each column greater (2 diameters), the flutings (generally 24 in number) deeper, and separated by small flat surfaces. The Ionic column has a base, consisting of a square slab



a. Mutules. d. Annulets
b. Triglyphs. e. Flutings.
c. Metopes.

Doric Order.

(3) From the Temple on the Ilissus, Athens.

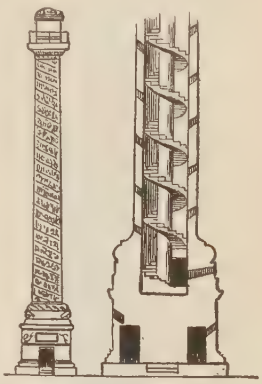
Ionic Order.

(4) From the Monument of Lysicrates, Athens.

Corinthian Order.

(πλίνθος), and several cushion-like supports separated by grooves. The capital, again, is more artistically developed. The neck, instead of flutings, has five leaves worked in relief. The echinus is very small and ornamented with an egg pattern. Over it, instead of the *abacus*, is a four-cornered cushion ending before and behind in spiral volutes, supporting a narrow square slab, which is also adorned with an egg pattern. The architrave is divided into three bands, projecting one above the other, and upon it rises, in an uninterrupted surface, the frieze, adorned with reliefs continuously along its whole length. Finally, the cornice is composed of different parts.

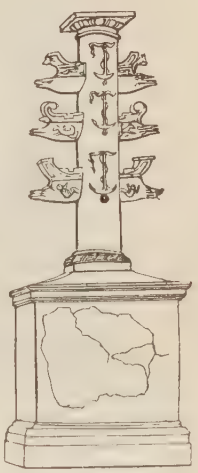
The CORINTHIAN column is shown in Fig. 4, from the monument of Lysicrates at Athens. The base and shaft are identical with the Ionic, but the capital takes the form of an open calix formed of acanthus leaves. Above this is another set of leaves, from between which grow stalks with small leaves, rounded into the form of volutes. On this rests a small abacus widening towards the top, and on this, again, the entablature, which is borrowed from the Ionic order. On the human figures employed instead of columns to support the entablature, see ATLAS; CANEPHORI; CARYAE.



The Romans adopted the Greek styles of column, but not always in their pure form. They were fondest of the Corinthian, which they laboured to enrich with new and often excessive ornamentation. For instance, they crowned the Corinthian capital with the Ionic, thus forming what is called the Roman or composite capital. The style known as TUSCAN is a degenerate form of the Doric. The Tuscan column has a smooth shaft, in height 7 diameters of the lower part, and tapering up to three-quarters of its lower dimensions. Its base consists of two parts—a circular plinth and a cushion of equal height. The capital is formed of three parts of equal height.

In other styles, too, the Romans sometimes adopted the smooth instead of the fluted shaft, as, for instance, in the Pantheon (q. v.).

This most beautiful of all architectural supports originated from the simplest beginnings. A few strong poles, or the straight trunks of trees, stuck into the ground, in order to support a cross-piece for a thatch of boughs or straw to rest upon, formed the first shaft (*scapus*) of a column. When a tile or slab of wood was placed under the bottom of the trunk to form a foundation and prevent the shaft from sinking too deeply into the ground, the first notion of a base (*spira*) was attained; and a similar one, placed on its top, to afford a broader surface for the cross-beam or architrave to rest upon, furnished the first capital. Thus these simple elements, elaborated by the genius and industry of succeeding ages, produced the several distinctive properties of the architectural orders.



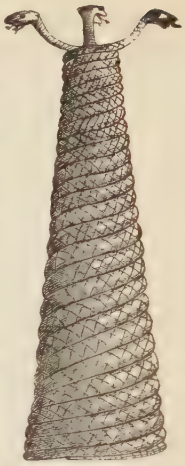
One point, however, is to be constantly borne in mind—that the column of ancient architecture always implies a real, and not a fictitious, support; for neither the Greeks nor the Romans, until the arts had declined, ever made use of columns as the moderns do, in their buildings, as a superfluous ornament, or mere accessory to the edifice, but as a main and essentially constituent portion of the fabric, which would immediately fall to pieces if they were removed; and that the abusive application of coupled, clustered, incastrated, imbedded columns, etc., was never admitted in Greek architecture; for the chief beauty of the column consists in its isolation, by means of which it presents an endless variety of views and changes of scene, with every movement of the spectator, whether seen in rank or in file. See Mauch, *Die Architekt. Ordn. der Griech., Römer, und Neueren Meister* (5th ed. Berlin, 1862); Reber, *Geschichte der Baukunst im Alterthum* (Leipzig, 1866); Fergusson, *Hist. of Architecture*, vol. i. (2d ed. Boston, 1883); Lübke, *Hist. of Art*, 2 vols. (Eng. trans., N. Y. 1877).

Columna Cochlis. A column with a spiral staircase running through the centre so as to furnish a means of ascent to the top (Victor, *De Reg. Urb. Rom.* 8 and 9). These were usually *columnae triumphales*, surmounted by the statue of the person in whose honour the column was erected. Two still remain at Rome: (1) the Column of Trajan (shown in the illustration), erected by Apollodorus, A.D. 104; and (2) the Column of M. Aurelius Antoninus.

Columna Cochlis. (Column of Trajan.)

Columna Rostrāta. A column adorned with the beaks (*rostra*) of captured ships, originally set up in the Roman Forum to commemorate the naval victory of Duilius (q. v.) over the Carthaginians (B.C. 260). This monument was destroyed by lightning during the interval between the Second and Third Punic Wars. A new column was erected by the emperor Claudius and an inscription placed upon it. Mommsen (*Corp. Inscript. Lat.* i. 40) holds that either the original column had no inscription at all, or else a short and simple one. At any rate, the inscription on the column of Claudius, part of which was excavated in 1566 in the Forum, is not a copy of the first one, as many of the verbal forms contained in it are too antique, while others are too modern, for the age in which it professes to have been written. Thus, the form C is used for G; -ET for IT; ablatives in -D, elsewhere unknown (*dictatored, navaled*)—all of which are too archaic; while, on the other hand, S and M at the end of words are never omitted in it, and IN or EN is used for ENDO. A portion of the Columna Rostrata is now in the Palazzo dei Conservatori on the Capitol at Rome. See Wordsworth, *Fragments and Specimens of Early Latin*, pp. 170, 412–414; Ritschl, *Inscriptio quae fertur Columnae Rostratae Duilianae* (Berlin, 1852); Mommsen, *Corp. Inscript. Lat.* i. 195, pp. 37–40; and Allen, *Remnants of Early Latin*, pp. 67–68.

Columna Rostrata. (Restoration by Canina.)



Columna Triumphālis. Single columns were erected from the earliest times to commemorate persons or events. Early Roman examples are those in honour of C. Maenius and P. Minucius, mentioned by Pliny (*H. N.* xxxiv. § 21). Of a later date is the marble monolith to Iulius Caesar, set up in the Forum after his death (Suet. *Iul.* 85).

More important, as well on account of their imposing size as of their value to the archæologist, are the lofty and elaborate columns erected in imperial times. The finest of these monuments is that figured in the article COLUMNA COCHLIS, and which was voted by the Senate in honour of Trajan, and executed by Apollodorus in A.D. 104. The column itself is apparently of the Tuscan order, and is composed of huge drums of white marble, pierced within so as to form a spiral staircase, to which there is an entrance in the pedestal. A bas-relief of the chief episodes in the Dacian campaigns winds round the shaft. Including the bronze statue of the emperor, the total height was not less than 130 feet. It still stands in the Foro Traiano at Rome.

Column of M. Aurelius Antoninus.

The same mode of construction is found in the Antonine Column, erected in honour of Marcus Aurelius and illustrating his victories over the Marcomanni, still to be seen in the Piazza della Colonna. Much less admirable, artistically, was the column erected by Constantine in the Forum of Constantinople. It was erected on a pillar of white marble, 20 feet in height, and was composed of ten pieces of porphyry. On its summit, 120 feet from the earth, was a colossal bronze statue of Apollo, supposed to be the work of Phidias. A fragment of this structure survives at Constantinople under the name of "the Burnt Pillar." Of the time of the same emperor was the curious Serpentine Column of brass, formed of the twisted bodies of three brazen snakes, whose triple heads had once supported the golden tripod which the victors at Salamis had consecrated at Delphi in commemoration of the defeat of Xerxes. This pillar stood in the Hippodrome.

Serpentine Column of Constantine.

Latest of all was the Column of Theodosius II., figured below, whose base still exists at Constantinople.

Columnae Hercŭlis. "The Pillars of Hercules"; a name often given to Calpé and Abyla, or the heights on either side of the Straits of Gibraltar. The tradition was that the Mediterranean had no outlet in this quarter until Hercules broke through the mountain barrier, and thus formed the present straits. The rocky height on either side of the opening was fabled to have been placed there by him as a memorial of his achievement, and as marking the limits of his wanderings towards the west. See ABYLA; CALPÉ; MEDITERRANEUM MARE.

The name Columnae Herculis was also often applied to the two large pyramidal columns set up by the Phœnicians in their voyages as landmarks

Column of Theodosius II.

by which to recognize particular coasts on subsequent visits. These pillars were respectively dedicated to the Phœnician Hercules and to Astarté, as personifying the sun and the moon. (See Tac. *Germ.* 34.) The accompanying illustration is taken from a Tyrian coin.

Phœnician Pillars of Hercules.

Columnarium. A tax imposed in the time of Iulius Caesar upon the pillars (*columnae*) that supported a house. See Cic. *ad Att.* xiii. 6.

Colus. A distaff. See Fusus.

Colūthus (Κόλουθος) and **Colluthus** (Κόλλουθος). A native of Lycopolis in Egypt, supposed to have lived about the beginning of the sixth century. He wrote a poem in six cantos, entitled *Calydonica* (Καλυδωνικά), as well as other pieces that are now lost. He is believed also, though without any great degree of certainty, to have been the author of a poem, in 392 verses, which bears the title of *The Rape of Helen* (Ἑλένης Ἁρπαγή). This poem commences with the nuptials of Peleus and Thetis, and the poet goes on to recount the judgment of Paris, the voyage of that prince to Sparta, and the abduction of Helen, which takes place after the first interview. This poem of Coluthus was discovered by Cardinal Bessarion along with that of Quintus Smyrnaeus, and can be found in the Didot collection edited by Lehrs and Dübner.

Coma (κόμη). The hair of the head. Besides this general term, there are various other words, both in Greek and Latin, signifying the hair, each of which acquires its distinctive meaning from some physical property of the hair itself or from some peculiarity in the mode of arranging it, the principal of which are as follows: (1) Ἔθειρα, a head of hair when carefully dressed. (2) Χαίτη, properly the mane of a horse or lion, is used to signify long, flowing hair. (3) Φόβη, when accurately used, implies the hair of the head in a state of disorder incident to a person under a sense of fear. (4) Ηοκάς, from πείκω or πέκω, the hair when combed and dressed. (5) Θρίξ, a general term for hair, from the plural of which the Romans perhaps borrowed their word *tricae*—τρίχωσις and τρίχωμα are used in the same sense. (6) Κόρση (Att. κόρρη), from the old word κόρ, "the head," signifies properly the hair on the top of the head; and hence a particular fashion of arranging the hair among the Greek women was termed κόρυμβος; or, when worn in the same style by the men, it was designated by another derivative from the same word, κρώβυλος. To produce this effect the hair was drawn up all round the head from the front and back, and fastened in a bow on the top, as exemplified in the two preceding busts—one of the Apollo Belvedere, the other of Artemis—from the British Museum.

Apollo Belvedere. Artemis. (British Museum.)

Instead of a band, the people of Athens fastened the bow with an ornamental clasp, fashioned like a grasshopper, to show that they were aborigines. Κρώβυλος is also used for a cap of network. (See Calantica.) (7) Μαλλός, which properly means wool, was also used for the short, round, curly hair, which resembles the fleece of a lamb, such as is seen in some of the early Greek sculptures, particularly in the heads of Heracles, one of which is subjoined from a specimen in the British Museum.

Heracles. (British Museum.)

(8) Κέρας was a Greek term used when the hair was combed up from the temples on each side, so as to give it the appearance of two horns, as is seen in the heads of fauns and satyrs, and in the bust of Zeus on the following page. (9) Κίκινος, πλοχμός, χλιδαί, the hair which falls in ringlets, either natural or artificial, which was sometimes called βόστρυχος and πλόκαμος. All these terms, when strictly appropriated, seem to designate that singular style of coiffure which is observable in Etruscan and early Greek works, and common to both sexes, as is seen in the casts from the temple of Athené at Aegina in the British Museum.

Besides the generic *coma*, the Romans made use of the following terms, expressive of some peculiar qualities in the hair, or particular mode of arrangement: (1) *Capillus*, according to the old etymologists, *quasi capitis pilus*. (2) *Crinis*, the hair when carefully dressed. (3) *Caesaries*, which is said, though without much probability, to be connected with *caedo*, the hair of the male sex, because they wore it short, whereas the women did not. (4) *Cincinnus*, κίκιννος, the hair when platted and dressed in circles, like the head on page 17 (s.v. Acus), as it is still worn by the women of Mola di Gaieta (Formiae). Martial terms these circles *anuli*, and Claudian *orbes*. (5) *Cirrus*, a lock of curly hair. The locks which fell over the forehead were termed *capronae* (προκόμιον), the modern "bang" or "fringe"; those which fell from the temples over the ears, *antiae*. Both the *antiae* and *capronae* are accurately traced in the figure of Cupid bending his bow, in the British Museum, from which the accompanying illustration is taken.

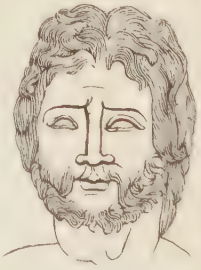
Cupid. (British Museum.)

All the Greek divinities are distinguished by a characteristic coiffure, modified in some respects as the arts progressed, but never altered in character from the original model; so that any person

tolerably conversant with the works of Greek art may almost invariably recognize the deity represented from the disposition of the hair. We proceed to specify some of the principal ones.

Lion's Head. (British Museum.)

Zeus. (Vatican.)



The head of the lion is the type upon which that of Zeus is formed, particularly in the disposition of the hair, which rises from the forehead and falls back in loose curls down the sides of the face, until it forms a junction with the beard. This is made clear by the two preceding illustrations, one of which is from a statue of Zeus in the Vatican, supposed to be a copy of the Phidian Zeus; and the other is a lion's head from the British Museum. The same disposition of the hair is likewise preserved in all the real or pretended descendants from Zeus, such as Aesculapius, Alexander, etc.

Serapis. (British Museum.)

Pluto or Serapis has the hair longer, straighter, and lower over the forehead, in order to give severity to the aspect, and with the modius on his head, as represented in the above drawing from the British Museum. The modius is decorated with an olive branch, for oil was used instead of wine in sacrifices to Pluto.

The hair of Poseidon is cut finer and sharper than that of Zeus. It rises from the forehead, and then falls down in flakes, as if wet, in the manner represented in the accompanying head from the British Museum.

Poseidon. (British Museum.)

Apollo is usually represented with the *κρώβυλος*; but when the hair is not tied up on the top of the head it is always long and flowing over the neck and shoulders, as represented in the annexed illustration from a very beautiful and early Greek sculpture in the British Museum. Hence he is called *intonsus* and *ἀκερσεκόμης*.

Apollo. (British Museum.)

Dionysus also wears his hair unshorn; for he, as well as Apollo, is typical of perpetual youth.

In the mature age of Greek art, Hermes has short curly hair, as represented by the head on the left hand in the illustration below, from a statue in the Vatican, which was for a long time falsely ascribed to Antinoüs; but in very early Greek works he is represented with braided hair, in the Etruscan style, and a sharp-pointed beard (see the right-hand illustration, from an altar in the Museum of the Capitol at Rome), whence he is termed *σφηνοπώγων*.

Hermes. (Vatican.)

Etruscan Hermes. (Cap. Mus.)

Hercules has short, crisp hair, like the curls between the horns of a bull, the head of which animal formed the model for his, as is exemplified in the subjoined drawings, one being the head of the Farnese Hercules, the other that of a bull, from a bas-relief at Rome, in which all the characteristics of Hercules, the small head, thick neck, and particular form of the hair, are strongly preserved.

Farnese Hercules. Head of Bull.

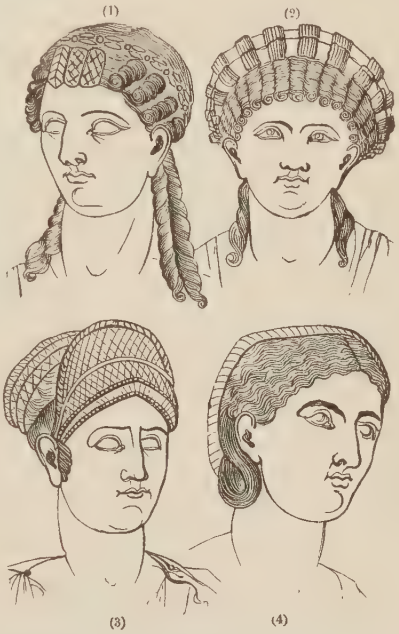
The hair of Heré or Juno is parted in the front, and on the top of the head is a kind of diadem, called in Latin *corona*, and in Greek *σφενδόνη*, from its resemblance to a sling, the broad part of which is placed above the forehead, while the two lashes act as bands to confine the hair on the sides of the head and fasten it behind, in the manner represented in the annexed illustration from the British Museum.

Heré with *σφενδόνη*. (British Museum.)

Pallas is rarely seen without her helmet; but when portrayed with her head uncovered the hair is tied up in a knot at some distance from the head, and then falls from the band in long parallel curls.

Aphrodité and Artemis are sometimes adorned with the κόρυμβος; but both these divinities are more frequently represented with their hair dressed in the simple style of the young Greek girls, whose hair is parted in front, and conducted round to the back, so as to conceal the upper part of the ears. It is then tied in a plain knot at the nape of the neck, or, at other times, though less frequently, at the top of the head; both of which fashions are represented in the two illustrations subjoined; one, that on the right, Niobé, and the other from a bas-relief at Rome.

From a bas-relief at Rome. Niobé.



False hair, or wigs, φενάκη, πηνίκη, κόμαι προσθέται, τριχὲς προσθέται, *galerus*, *corymbium*, *caliendrum*, *capillamentum*, were also worn by the people of both countries (Mart. v. 68; xii. 23), and much esteemed by them.

Several passages of Latin literature show the fondness of the Roman women for blond hair, quantities of which were imported from Germany to be made up into wigs. (See Juv. vi. 120; Ovid. *A. A.* iii. 163.) Hence, in some of the statues, the hair was gilt, remains of which are discernible in the Venus dei Medici and in the Apollo of the Capitol; and both sexes dyed their hair when it grew gray (Plin. *H. N.* xxvi. § 164).

Ancient Wig. (Museum at Ghizeh.)

In very early times the Romans wore their hair long, as was represented in the oldest statues during the age of Varro, and hence the Romans of the Augustan Age designated their ancestors *intonsi* and *capillati*. But this fashion did not last after the year B.C. 300, as appears by the remaining works of art. The women, too, dressed their hair with simplicity, at least until the time of the emperors, and probably much in the same style as those of Greece; but at the Augustan period a variety of different head-dresses came into fashion, many of which are described by Ovid. Four specimens of different periods are given below. The first head on the left represents Octavia, the niece of Augustus, from the Museum in the Capitol at Rome; the next, Messalina, fifth wife of the emperor Claudius; the one below, on the left, Sabina, the wife of Hadrian; and the next, Plautilla, the wife of Caracalla, which last three are from the British Museum.

(1) Octavia. (Capitol. Mus.) (2) Messalina, wife of Claudius. (3) Sabina, wife of Hadrian. (4) Plautilla, wife of Caracalla. [The last three from the British Museum.]

Both countries had some peculiar customs connected with the growth of their hair and illustrative of their moral or physical conditions. The Spartans combed and dressed their heads with especial care when about to encounter any great danger, in which act Leonidas and his followers were discovered by the spies of Xerxes before the battle of Thermopylae. The sailors of both nations shaved off their hair after an escape from shipwreck or other heavy calamity and dedicated it to the gods. In the earlier ages, the Greeks of both sexes cut their hair close in mourning; but subsequently this practice was more exclusively confined to the women, the men leaving theirs long and neglected, as was the custom among the Romans.

In childhood—that is, up to the age of puberty—the hair of the males was suffered to grow long among both nations, when it was clipped and dedicated to some river or deity, from thence called κουροτρόφος by the poets, and therefore to cut off the hair means to take the *toga virilis*. At Athens this ceremony was performed on the third day of the festival Apaturia, which is therefore termed κουρεῶτις.

In both countries the slaves were shaved as a mark of servitude. On barbers, see TONSOR.

The Vestal Virgins also cut their hair short upon taking their vows; which rite still remains in the Roman Church, in which all women have their hair

cut close upon taking the veil. The hair was fastened up with hair-pins (*acus crinales*) and combs (*pectines*), which we find made of boxwood, ivory, and tortoise-shell. The hair was also at times fastened with bands (*diademata*) of gold set with jewels, like the Greek στεφάνη. As to nets, the women used to wear *reticula*, sometimes made of gold threads. The *mitra* (Juv. iii. 66) has been explained elsewhere, and the *calautica*, or *calantica*, or *calvatica* was a cap with lappets covering the ears and with two strings for tying under the chin. Nonius says it was worn by women only. For other matters relating to the modes of dressing the hair, etc., see Acus; Diadema; Mitra; Pecten; Reticulum.

Comāna (Κόμανα). (1) A city of Pontus, surnamed Pontica, to distinguish it from the Cappadocian city of the same name. It was situated to the north-east of Zela, and not far from the source of the Iris. This place was celebrated for the worship of the goddess Mâ, supposed to answer to the Bellona of the West. She was likewise revered with equal honours in the Cappadocian Comana. The priesthood attached to the temple was an office of the highest emolument and dignity, and was sought after by kings and princes. The city itself was large and populous. The festivals of the goddess, which were held twice a year, drew thither an immense concourse. There were no less than 6000 slaves attached to the service of the temple, and most of these were courtesans. Hence it was remarked that the citizens were generally addicted to pleasure, and the town itself was styled by some "Little Corinth." (2) A city of Cappadocia, celebrated for its temple of Artemis Taurica.

Comes. Originally a fellow-traveller; hence it is applied to the members of the retinue of a magistrate or high official sent into the provinces (cf. Cic. *Verr.* ii. 10, 27), and under the emperors the term is used especially of those accompanying the emperor or members of his family. From this it was a natural transition to apply the term to the courtiers generally, even when not on a journey; and in later Latin we find it used of the holders of the various State-offices. About the time of Constantine it became a regular honorary title, whence the modern *count* (French *comte*), including various grades, answering to the *comites ordinis primi, secundi, tertii*.

The names of the following officers explain themselves: Comes Orientis (of whom there seem to have been two, one the superior of the other), comes Aegypti, comes Britanniae, comes Africae, comes rei militaris, comes portuum, comes stabuli, comes domesticorum equitum, comes clibanarius, comes linteae vestis or vestiarii (master of the robes). In fact the emperor had as many *comites* as he had functions.

Comic Art. See Graffiti; Pictura; Sculptura.

Comissatio (from κῶμος or κωμάζω, *comissari*). A drinking-bout following the *cena* (q. v.), and frequently prolonged into the night. Food was partaken of during the *comissatio*, but only as a relish for the wine. Cf. Plaut. *Most.* i. 4; Petron. 65; Suet. *Tit.* 7.

Combrēa (Κώμβρεια). A town in the Macedonian district of Crossaea.

Cominium. A town in Samnium, destroyed by the Romans in the Samnite wars (Livy, x. 44).

Comitia. The popular assemblies of the Romans, summoned and presided over by a *magistratus*. In the comitia the Roman people appeared as distributed into its political sections, for the purpose of deciding, in the exercise of its sovereign rights, upon the business brought before it by the presiding magistrate. The comitia must be distinguished from the *contiones*. The *contiones* were also summoned and presided over by a magistrate, but they did not assemble in their divisions, and they had nothing to do but to receive the communications of the magistrate. In all its assemblies at Rome the people remained standing. The original place of meeting was the Comitium, a part of the Forum. There were three kinds of comitia, viz.:

(1) The Comitia Curiāta. This was the assembly of the patricians in their thirty *curiae*, who, until the change of the constitution under Servius Tullius, constituted the whole *populus Romanus*. During the regal period they were summoned by the *rex* or *interrex*, who brought before them questions to be decided Aye or No. The voting was taken first in each curia by heads, and then according to curiae, in an order determined by lot. The business within the competence of this assembly was: (*a*) to elect a king proposed by the *interrex*; (*b*) to confer upon the king the *imperium*, by virtue of the *lex curiata de imperio*; (*c*) to decide on declarations of war, appeals, *arrogationes* (see Adoptio), and the reception of foreign families into the body of the patricians. The Servian constitution transferred the right of declaring aggressive war and the right of deciding appeals to the Comitia Centuriata, which, from this time onward, represented the people, now composed of both patricians and plebeians. After the establishment of the Republic, the Comitia Curiata retained the right (*a*) of conferring, on the proposal of the Senate, the imperium on the magistrates elected by the Comitia Centuriata, and on the dictator elected by the consuls; (*b*) of confirming, likewise on the proposal of the Senate, the alterations in the constitution decided upon by the Comitia Centuriata, and Tributa.

The extinction of the political difference between patricians and plebeians destroyed the political position of the Comitia Curiata, and the mere shadow of their rights survived. The assembly itself became an unreality, so much so that, in the end, the presence of the thirty *lictores curiati* and three augurs was sufficient to enable legal resolutions to be passed. (See Lictors.) But the Comitia Curiata retained the powers affecting the reception of a non-patrician into the patrician order, and the powers affecting the proceeding of *arrogatio*, especially in cases where the transition of a patrician into a plebeian family was concerned. Evidence of the exercise of these functions on their part may be traced down to the imperial period.

(2) The Comitia Calāta were also an assembly of the patrician curiae. They were so called because publicly summoned (*calare*). The pontifices presided, and the functions of the assembly were: (*a*) to inaugurate the flamines, the rex sacrorum, and indeed the king himself during the regal period. (*b*) The *detestatio sacrorum*, previous to an act of *arrogatio*. This was the formal release of a person passing by adoption into another family from the *sacra* of his former family. (See Adoptio.) (*c*) The ratification of wills twice a year;

but this applies only to an early period. (*d*) The announcement of the calendar of festivals on the first day of every month.

(3) Comitia Centuriata. The assembly of the whole people, patrician as well as plebeian, arranged according to the *centuriae* established by Servius Tullius. The original founder of the Comitia Centuriata transferred to them certain political rights which had previously been exercised by the Comitia Curiata. It was not, however, until the foundation of the Republic, when the sovereign power in the State was transferred to the body of citizens, that they attained their real political importance. They then became the assembly in which the people, collectively, expressed its will. The right of summoning the Comitia Centuriata originally belonged to the king. During the republican period it belonged, in its full extent, to the consuls and the dictator alone. The other magistrates possessed it only within certain limits. The *interrex*, for instance, could, in case of there being no consuls, summon the Comitia Centuriata to hold an election, but he could summon them for this purpose only. The censors could call them together only for the holding of the *census* and the *lustrum;* the praetors, it may be conjectured, only in the case of capital trials. In all other instances the consent of the consuls, or their authorization, was indispensable.

The duties of the Comitia Centuriata during the republican period were as follows: (*a*) To elect the higher magistrates: consuls, censors, and praetors. (*b*) To give judgment in all the capital trials in which appeal to the people was permitted from the sentence of the magistrate sitting in judgment. This popular jurisdiction was gradually limited to political trials, common offences being dealt with by the ordinary commissions. And in the later republican age the judicial assemblies of the Comitia Centuriata became, in general, rarer, especially after the formation of special standing commissions (*quaestiones perpetuae*) for the trial of a number of offences regarded as political. (*c*) To decide on declaring a war of aggression; this on the proposal of the consuls, with the approval of the Senate. (*d*) To pass laws proposed by the higher magistrates, with the approval of the Senate. This right lost much of its value after B.C. 287, when the legislative powers of the Comitia Tributa were made equal to those of the Comitia Centuriata. After this time the legislative activity of the latter assembly gradually diminished.

The Comitia Centuriata were originally a military assembly, and the citizens accordingly, in ancient times, attended them in arms. On the night before the meeting, the magistrate summoning the assembly took the auspices on the place of meeting, the Campus Martius. If the auspices were favourable, signals were given, before daybreak, from the walls and the citadel by the blowing of horns, summoning the citizens to a *contio*. The presiding magistrate offered a sacrifice and repeated a solemn prayer, and the assembly proceeded to consider the business which required its decision. Private individuals were not allowed to speak, except with the consent of the presiding magistrate. At his command the armed people divided themselves into their *centuriae*, and marched in this order to the Campus Martius, preceded by banners and headed by the cavalry. Arrived at the Campus, they proceeded to the voting, the president having again put the proposal to the people in the form of a question, *Velitis iubeatis Quirites?* ("Do you wish?" "Do you command?"). While the voting was going on, a red flag stood on the Ianiculum. The *equites*, who in ancient times used to begin the battles in war, opened the voting, and their 18 centuries were therefore called *praerogativae*. The result of their vote was immediately published, and, being taken as an omen for the voters who were to follow, was usually decisive. Then came the 175 centuries of the five *classes* of infantry in their order. Each century counted as casting one vote; this vote was decided by a previous voting within the century, which was at first open, but in later times was taken by ballot. If the 18 centuries of equites and the 80 centuries of the first class, with whom went the 2 centuries of mechanics (*centuriae fabrum*), were unanimous, the question was decided, as there would be a majority of 100 centuries to 93. If not, the voting went on until one side secured the votes of at least 97 centuries. The lower *classes* only voted in the rare cases where the votes of the higher *classes* were not united. The proceedings concluded with a formal announcement of the result on the part of the presiding magistrate, and the dismissal of the host. If no result was arrived at by sunset, or if unfavourable omens appeared during the proceedings, or while the voting was going on, the assembly was adjourned until the next convenient occasion.

This form of voting gave the wealthier citizens a decided advantage over the poorer, and lent an aristocratic character to the Comitia Centuriata. In the third century B.C. a change was introduced in the interest of the lower *classes*. Each of the thirty-five *tribus*, or districts, into which the Roman territory was divided, included two *centuriae* of *iuniores* and *seniores* respectively. (For the five *classes*, see Exercitus.) Thus each of the five *classes* included 70 centuries, making 350 centuries in all. To this number add the 18 centuries equitum, and the 5 centuries not included in the propertied classes — namely, 2 of *fabri* (mechanics), 2 of *tubicines* (musicians), and 1 of *proletarii* and *liberti* (the very poor and the freedmen), and the whole number of centuries amounts to 373. The centuries, it must be remembered, had by this time quite lost their military character. Under this arrangement the 88 votes of the *equites* and the first *classis* were confronted with the 285 votes of the rest. Besides this, the right of voting first was taken from the equites and given to the *centuria praerogativa* chosen by lot from the first *classis*. The voting, it is true, was still taken in the order of the *classes*, but the *classes* were seldom unanimous as in former times; for the interests of the tribus, which were represented in each *classis* by two centuries respectively, were generally divergent, and the centuries voted in the sense of their tribe. The consequence was that it was often necessary—indeed, perhaps that it became the rule, at least at elections—to take the votes of all the *classes*.

In early times the military arrangement was sufficient to secure the maintenance of order. But after its disappearance the *classes* were separated and the centuriae kept apart by wooden barriers (*saepta*), from which the centuries passed over bridges into an open inner space called *ovile* (sheepfold). On the position of the Comitia Centuriata during the imperial age, see below.

(4) Comitia Tribūta. This was the collective assembly of the people arranged according to the local distribution of tribes. (See Tribus.) When the tribuneship of the *plebs* was established (B.C. 494) the tribunes were allowed the right of summoning assemblies of the *plebs* in its tribes to consider questions affecting its interests. Out of these councils of the *plebs* (*concilia plebis*) were afterwards (B.C. 449) formed the Comitia Tributa, in which the patricians were represented as well as the plebeians; but the plebeians had the preponderance, as they were the more numerous, and as the voting qualification was exactly equal. By a law passed in B.C. 449, and finally ratified in 286, the *plebi scita*, or resolutions of the Comitia Tributa, were declared binding upon the whole *populus*. The consequence was that this assembly, side by side with the Comitia Centuriata, became the representative of the popular supremacy, and, indeed, its proper and constitutional organ. This was specially the case in regard to legislation, the more so as it was far simpler to summon the people by tribes than by centuries.

The right of summoning the Comitia Tributa lay chiefly, though not exclusively, with the *tribuni*. Their consent was regarded as an indispensable condition, if another magistrate wished to summon or preside over the Comitia Tributa. Until the latter years of the Republic, the assembly usually met upon the Capitol, and afterwards on the Campus Martius. The functions of the Comitia Tributa, gradually acquired, were as follows: (*a*) The election of all the lower magistrates, ordinary (as the *tribuni plebis, tribuni militum, aediles plebis, aediles curules*) and extraordinary, under the presidency partly of the tribunes, partly of the consuls or praetors. (*b*) The nomination of the *pontifex maximus*, and of the coöpted members of the religious *collegia* of the *pontifices*, *augures*, and *decemviri sacrorum*. This nomination was carried out by a committee of seventeen tribes chosen by lot. (*c*) To give judicial decisions in all suits instituted by the tribunes and aediles of the *plebs*, for offences against the *plebs* or its representatives. In later times these suits were mostly instituted on the ground of bad or illegal administration. The tribunes and aediles had, in these cases, the power of inflicting pecuniary fines ranging up to a large amount. (*d*) To pass resolutions on proposals made by the tribunes of the *plebs* and the higher magistrates on foreign and domestic affairs —on the conclusion of peace, for instance, or the making of treaties. Their power was almost unlimited, and the more important because, strictly speaking, it was only the higher magistrates who required the authorization of the Senate. Nor had the Senate more than the right of quashing a measure passed without due formalities.

The Comitia Tributa were summoned, at least seventeen days before the meeting, by the simple proclamation of a herald (*praeco*). As in the case of the Comitia Centuriata, business could neither be begun nor continued in the face of adverse auspices. Like the Comitia Centuriata, too, the tribal assembly met at daybreak and could not sit beyond sunset. If summoned by the tribunes, the Comitia Tributa could only meet in the city, or within the radius of a mile from it. The usual place of assembly was the Forum or the Comitium (q. v.). If summoned by other authorities, the assembly met outside the city, most commonly in the Campus Martius. The proceedings opened with a prayer, unaccompanied by sacrifice. The business in hand was then discussed in a *contio* (see above, p. 391 *a*); and the proposal having been read out, the meeting was requested to arrange itself according to its thirty-five tribes in the *saepta*, or wooden fences. Lots were drawn to decide which tribe should vote first. The tribe on which this duty fell was called *principium*. The result of this first vote was proclaimed, and the other tribes then proceeded to vote simultaneously, not successively. The votes given by each tribe were then announced in an order determined by lot. Finally, the general result of the voting was made known.

The proposer of a measure was bound to put his proposal into due form and publish it beforehand. When a measure came to the vote, it was accepted or rejected as a whole. It became law when the presiding magistrate announced that it had been accepted. The character of the comitia had begun to decline even in the later period of the Republic. Even the citizens of Rome took but little part in them, and this is still more true of the population of Italy, who had received the Roman citizenship in B.C. 89. The Comitia Tributa, in particular, sank gradually into a mere gathering of the city mob, strengthened on all sides by the influx of corrupt elements. The results of the voting came more and more to represent, not the public interest, but the effects of direct or indirect corruption. Under the Empire the Comitia Centuriata and Tributa continued to exist—in a shadowy form, it is true—down to the third century A.D. Iulius Caesar had deprived them of the right of deciding on war and peace. Under Augustus they lost the power of jurisdiction, and, practically, the power of legislation. The imperial measures were, indeed, laid before the Comitia Tributa for ratification, but this was all; and under the successors of Augustus even this proceeding became rarer. Since the time of Vespasian, the emperors, at their accession, received their legislative and other powers from the Comitia Tributa; but this, like the rest, was a mere formality. The power of election was that which, in appearance at least, survived longest. Augustus, like Iulius Caesar, allowed the Comitia Centuriata to confirm the nomination of two candidates for the consulship. He also left to the Comitia Centuriata and Tributa the power of free election to half the other magistracies—the other half being filled by nominees of his own. Tiberius transferred the last remnant of free elective power to the Senate, whose proposals, originating under imperial influence, were laid before the Comitia for ratification. The formalities, the auspices, prayer, sacrifice, and proclamation, were now the important things, and the measures proposed were carried, not by regular voting, but by acclamation. See Mommsen, *Römische Forschungen*, vol. i.; Becker and Marquardt, *Röm. Alterthümer*, vol. ii., pt. i., pp. 353–394, and pt. iii., pp. 1–196; Lange, *Röm. Alterthümer*, i. 341–355, 391–491; ii. 418–682; and the articles Tabellariae Leges; Lex; Pons.

Comitiālis Dies. See Dies.

Comitium. The name of a small space in Rome, bounded on the north by the Senate House (see Curia), and on the south by the Rostra (q. v.). Down to the second century B.C. it was used for the meetings of the assemblies and of the courts

of law. After the removal of the rostra it became part of the Forum. See FORUM.

Commagēné (Κομμαγηνή). The northeasternmost district of Syria, lying between the Taurus and the Euphrates. It formed a part of the kingdom of Syria, after the fall of which it maintained its independence under a race of kings, the family of the Seleucidae, and was not united to the Roman Empire until the reign of Vespasian.

Commentarii. (1) Roman collections of historical documents, such as treaties, decrees, and short notices of important events. These became the sources from which many of the Roman historians drew their materials in treating of the early period. Of these collections may be noted (*a*) the COMMENTARII REGUM, professing to be the work of the kings themselves, and in reality containing very ancient records; (*b*) the COMMENTARII AUGŬRUM, kept by the college of augurs; (*c*) the COMMENTARII PONTIFĪCUM, also called ANNĀLES MAXĪMI, containing the names of the magistrates for each year and a record of all memorable events from the days of the kings down to the pontificate of P. Mucius Scaevola (B.C. 133); (*d*) the COMMENTARII MAGISTRATUUM (i.e. *consulum, quaestorum, censorum*, etc.), records of the transactions of individual magistrates. The greatest part of these records perished when Rome was destroyed by the Gauls (B.C. 388), though in some cases copies of them remained. See ANNALES; FASTI; LIBRI LINTEI. (2) The title of a number of historical and legal works by various Roman writers, the best known being those of Cicero (written in Greek with the title *ὑπομνήματα*), now lost, but largely used by Plutarch in his life of Cicero; the *Commentarii de Bello Gallico* and the *Commentarii de Bello Civili* of Iulius Caesar (q. v.); and the *Commentarii de Iure Civili* of the jurist Gaius (q. v.).

Commentarius, Commentarii (*ὑπομνήματα*). Properly notes or note-books. Hence the word acquires a variety of meanings, of which the most important are the following:

(1) *Commentarii domestici*, or family memorials, the records of events interesting to the members of particular families.

(2) The "memoirs" drawn up by public men as to events in which they had taken part. See above.

(3) Memoranda kept by different departments of the public service, the officials in charge of them being known as *a commentariis*.

(4) In towns a register kept of the official acts of the municipal authorities. We have interesting extracts from the *commentarii* of Caeré in an inscription in the Museum at Naples (Wilmanns, 2083).

(5) The unofficial record of recent events at Rome, sent by Caelius to Cicero in Cilicia, is called by him *commentarii rerum urbanarum* (Cic. *Ad Fam.* viii. 2, 2).

(6) The record of the daily occurrences at court kept in *commentarii diurni* (Suet. *Aug.* 64), a kind of private diary, which must be distinguished from the formal *acta* and also from

(7) *Commentarii principis*, the register of the emperor's official decisions (Plin. *Ep.* x. 106) and of accusations brought before him (Suet. *Calig.* 15).

(8) Tacitus once (*Ann.* xv. 74) speaks of *commentarii senatus*, by which he can hardly mean anything but the *acta senatus*. See ACTA.

Commentātor Cruquiānus. See CRUQUIUS.

Commerce. (1) GREEK. In the Homeric poems the Greeks are not represented as a people with a spontaneous inclination to commerce. Indeed, the position of the oldest Greek cities, far away from the sea, sufficiently shows that their founders can have had no idea of trade as a means of getting wealth. Greek navigation in ancient times was almost exclusively subservient to war and piracy, to which latter, for a long time, no stigma was attached in public opinion. And the trade carried on with Greece by the Asiatics, especially the Phœnicians, who then ruled the Greek seas, can hardly have been very active. The Greeks, having no agricultural or industrial produce to offer, could not have tempted many foreigners to deal with them. But in the centuries succeeding the Homeric Age the commerce of Greece was revolutionized.

The islands, especially Aegina and Euboea, were foremost in commercial undertakings; the only continental town which was at all successful in this way being Corinth, which was favoured by its incomparable position. It was the foundation of the Hellenic colonies in Asia Minor that first occasioned the free development of Greek trade. The exertions of the Ionians were mainly instrumental in creating two things indispensable to its success —namely, commercial activity, excited by contact with the ancient industries of the East, and a maritime power in the proper sense, which made it possible to oust the Phœnicians from the naval supremacy which they had so long maintained. This new commercial activity necessitated a larger use of the precious metals and the establishment of a gold and silver coinage, which the Ionians were the first among the Greeks to adopt. This proved a powerful stimulus to the development of commerce, or rather it was the very condition of its existence. Miletus took the first place among the trading colonies. The influence of these cities upon their mother country was so strong that even the Dorians gradually lost their national and characteristic dislike of trade and commerce, and threw themselves actively into their pursuit. Down to the sixth century B.C. Greek commerce had extended itself to the coasts of the Mediterranean and the inland seas connected with it, especially towards the East. It was not until a later time that Athens joined the circle of commercial cities. Even in Solon's time the Athenians had lived mainly by agriculture and cattle-breeding, and it was only with the growth of the democratic constitution that their commercial intercourse with the other cities became at all considerable. The Persian Wars, however, and her position as head of the naval confederacy, raised Athens to the position of the first maritime power in Greece. Under the administration of Pericles she became the centre of all Hellenic activity, not only in art and science, but in trade. It was only Corinth and Corcyra whose western trade enabled them to maintain a prominent position by the side of Athens. The Greeks of Asia Minor completely lost their commercial position after their conquest by the Persians. The naval supremacy of Athens, and with it its commerce, were completely annihilated by the Peloponnesian War. It was a long time before the Athenians succeeded in breaking down the maritime power of Sparta which that war had established. Having done so, they recovered, but only for a short time, a position of prominence not at all equal

to their former supremacy by sea. The victory of the Macedonian power entirely destroyed the political and commercial importance of Athens, whose trade now fell behind that of other cities. The place of Athens, as the first maritime and commercial power, was taken by the city of Rhodes, founded in B.C. 408. By the second half of the fourth century B.C. the trade of Rhodes had extended itself over the whole known world, and its maritime law was universally observed until a much later period. After the destruction of Corinth, in the middle of the second century B.C., the island of Delos enjoyed a brief but brilliant period of prosperity. Among the commercial cities of the Graeco-Macedonian Empire, Alexandria in Egypt took the first place, and rose indeed to be the centre of European and Eastern trade. It was mainly through Alexandria that intercourse was kept up between Greece and the Eastern countries opened up by the campaigns of Alexander the Great.

One of the most important routes followed by Grecian traffic was that leading to the Black Sea, the coasts of which were fringed with Greek colonies. Besides Byzantium and Sinopé, the chief commercial centres in this region were Olbia, Panticapaeum, Phanagoria, and Phasis, from which trade-routes penetrated far into the barbarian countries of the interior. Other main routes led by Chios and Lesbos to the coasts of Asia Minor and by the Cyclades to that part of the Asiatic coast where lay the great cities of Samos, Ephesus, and Miletus. Hence they continued to Egypt and Cyrené, by Rhodes and Cyprus and the coast of Phœnicia. But in travelling to these parts from the Peloponnesus, men generally sailed by way of Crete, which had been long celebrated for its maritime enterprise. Round the promontory of Malea, the southernmost point of the Peloponnesus, and by Corcyra, they sailed northward to the coasts of the Adriatic, or westward to Italy and Sicily. Regular traffic beyond Sicily was rendered impossible by the jealousy of the Carthaginians and Etruscans, who were masters of the commerce in this region, and whose place was afterwards taken there by the Romans. A considerable land-traffic was carried on by the colonies with barbarians of the interior. But in Greece Proper the mountainous nature of the country and the absence of navigable rivers were unfavourable to communication by land, and the land-traffic accordingly was entirely thrown into the shade by the maritime trade. The only opportunity for commerce by land on a large scale was afforded by the great national festivals, which brought together great crowds of people from every part of Greece, and secured them a safe conduct. (See EKECHEIRIA.) In this way these festivals exactly corresponded to the trade fairs of modern Europe.

The exports of Greece consisted mainly of wine, oil, and manufactured goods, especially pottery and metal wares. The imports included the necessaries of life, of which Greece itself, with its dense population, artificially increased by slavery, did not produce a sufficient quantity. The staple was wheat, which was imported in large quantities from the coasts of the Black Sea, Egypt, and Sicily. Next came wood for houses and for ships, and raw materials of all kind for manufacture. The foreign manufactures imported were mostly objects of luxury. Finally we should mention the large number of imported slaves.

Comparing the circumstances of the ancient Greek maritime commerce with those of modern trade, we may observe that the ancients were much hampered by having no commission agencies and no system of exchange. The proprietor of the cargo sailed with it, or sent a representative with full powers. No transaction was carried on without payment in ready money, which was often rendered difficult by the existence of different systems of coinage. With uncivilized tribes, notably those on the Black Sea, a system of barter long maintained itself. As no goods could be bought without cash payments, and men of property generally preferred to lend out their capital to borrowers at high interest, a system of bottomry was extensively developed in Greek maritime trade. The creditor usually took care, in lending the capital necessary for loading the ship, to secure a lien on the ship or the cargo—or both. With this he undertook the risks of the business, charging interest at a very high rate, generally twenty to thirty per cent. The written contract contained other specifications as to the ship and the rate of interest, for the breach of which certain customary penalties were fixed. These had reference to the destination of the ship and, generally speaking, to the route and the time to be occupied; to the character and value of the wares, and to the repayment of the loan—the latter to determine whether it should be made on the ship's arriving at its destination or on its return home. In the first case the creditor would often sail with the ship, if he had no representative on the spot or at the port for which she was bound.

At Athens, and no doubt in other cities, the interests of the creditor were protected by a strict code of laws. Fraudulent appropriation of a deposit was punishable with death; dilatoriness in payment with imprisonment. The creditor was allowed to seize not only the security, but the whole property of the debtor. In other respects Athenian legislation secured several advantages to traders. Commercial cases came before the law courts in winter only, when navigation was impossible, and they had to be decided within a month. In ordinary cases of debt, the creditor could only seize on the debtor's property; but in commercial cases he was liable to be imprisoned if condemned to payment. In other matters aliens had to be represented in court by a citizen; in commercial cases they could appear in person. It was the duty of the Thesmothetae to see to the preparation of these cases. The trial was carried on and the verdict given by a special tribunal, the *ναυτοδίκαι* (q. v.). Merchants could easily obtain the considerable privilege of exemption from military service, though they were not legally entitled to it.

In general, it may be said that the Greek States, in consideration of the importance of trade, went very far in providing for its interests. They did their best to secure its safety and independence by force of arms, and concluded treaties with the same end in view. This is especially true of those agreements which regulated the legal relations of the citizens of any two States in their intercourse with each other, and prescribed the forms to be observed by the citizens of one State when bring-

ing suits against those of another. The institution of *πρόξενοι*, corresponding to that of the modern consuls, was of immense benefit to the trading community. The Greek governments did a great deal in the way of constructing harbours, warehouses, and buildings for exchange in the neighbourhood of the harbours. The superintendence of the harbour traffic, like that of the market traffic, was intrusted to special government officials; in Athens, for instance, to the ten overseers of the Ἐμπόριον. (See AGORANOMI.) The Athenians had also a special board, called *μετρονόμοι*, to see that the weights and measures were correct. It was only in exceptional cases that the freedom of trade was interfered with by monopolies, nor was it usual to lay prohibitions upon imports. Prohibitions of exportation were, however, much commoner. In many States, as e. g. in Macedonia, it was forbidden to export building materials, especially wood for ship-building: and no grain might be exported from Attica. Again, no Athenian merchant was permitted to carry corn to any harbour but that of Athens: no citizen or resident alien could lend money on the security of ships carrying corn to any place but Athens. Even foreigners who came with corn into the harbour of Athens were compelled to deposit two-thirds of it for sale there. To prevent excessive profits being realized in the corn trade, it was made a capital offence for any private citizen to buy up more than fifty bushels at a time, or sell it at a profit of more than an obolus a bushel. The corn trade was under the superintendence of a board called *σιτοφύλακες*. In the prevailing activity of commerce, the tolls on exports and imports were a plentiful source of revenue to the government. See PORTORIUM.

In Greek society, petty trading was thought a vulgar and sordid pursuit, and was left to the poorer citizens and resident aliens (*μέτοικοι*). In Athens the class of resident aliens included a great number of the larger dealers; for the wealthier and more respectable citizens liked lending their capital to others engaged in trade better than engaging in trade themselves.

(2) ROMAN. In Italy an active commerce was early carried on at sea by the Etruscans, the other Italian peoples taking only a passive part in it. But Rome, from a very early time, became the commercial centre of Central Italy. It was situated on a river deep enough to admit large vessels, the upper course and tributaries of which were also navigable. Its position was much improved by the harbour at the colony of Ostia, said to have been constructed under Ancus Marcius. So long as the Etruscans and Carthaginians and (as in later times) the Greek cities of southern Italy and Sicily, like Tarentum and Syracuse, ruled the sea, the maritime power and commerce of Rome were restricted within very narrow limits. Even as late as the middle of the fourth century B.C. the traffic of Rome was confined to Sardinia, Sicily, and Africa. But with the extension of the Roman power, Roman commerce assumed wider dimensions. At the end of the republican period Roman ships were on every sea, and there was a flourishing interior trade in Italy and all the provinces. Wherever there was a navigable river it was used for communication, with the happiest results. After the Second Punic War, Rome gradually acquired the character of a great commercial city, where the products of the whole world, natural and industrial, found a market. The most considerable import was corn, and this at all periods of Roman history. (See ANNONA.) The chief exports of Italy were wine and oil, to which we must add, after the development of Italian industry, manufactured goods. The trading-harbour of Rome was Puteoli (Pozzuoli), on the Bay of Naples, while Ostia was used mainly by corn-ships. Petty dealing was regarded unfavourably by the Romans, as by the Greeks; but trade on a large scale was thought quite respectable, though in older times members of the Senate were not allowed to engage in it. Most of the larger undertakings at Rome were in the hands of joint-stock companies (see PUBLICANI), the existence of which made it possible for small capitalists to share in the profits and risks of commerce. It was indeed an old maxim of business men at Rome that it was better to have small shares in a number of speculations than to speculate independently. The corn trade, in particular, was in the hands of these companies. The government allowed them to transport corn from Sardinia, Sicily, Spain, Africa, and Egypt to Rome; whole fleets of vessels, constructed for the purpose, being appointed to this service. Foreign trade was subjected to a number of restrictions. The exportation of certain products was absolutely prohibited—for instance, iron, whether unwrought or manufactured, arms, coin, salt, and gold—and duties were levied on all imports. There were also numerous restrictions on trade in the interior, as each province formed a unit of taxation, in which toll had to be paid on entering or leaving it. Among the State monopolies, the most important was that of salt.

For more minute details regarding ancient commerce, see Reinaud, *Relations Politiques et Commercielles de l'Empire Romain avec l'Asie Orientale* (Paris, 1863); Lindsay, *A Hist. of Merchant Shipping and Ancient Commerce*, 4 vols. (2d ed. London, 1882); and Lanciani, *Ancient Rome in the Light of Recent Discoveries*, chap. ix. (Boston, 1888).

Commercium. A legal relation existing between two Italian States, according to which the citizens of each had the same right of acquiring property, especially landed property, in the territory of the other. Commercium also included the powers of inheriting legacies and contracting obligations. See CIVITAS.

Commissoria Lex. A term met with in the law of pledge and in the law of sale. In the former it meant the agreement between pledger and pledgee that the property pledged should be vested absolutely in the latter unless the debt which it secured was punctually discharged by the day fixed for payment. See PIGNUS.

In the law of sale, *lex commissoria* denotes an agreement between vendor and purchaser that the former shall be at liberty to rescind the contract if the latter does not perform his obligations under it in due manner and at the proper time (*Dig.* 18, 3, 1). This was not the same thing as a conditional sale; for in the latter, if the property were damaged or destroyed, the loss would fall on the vendor, whereas in our case, if the property was lost, damaged, or destroyed, the loss fell on the purchaser.

Commissum. One sense of this word is that of "forfeited," which is derived from the sense of

the verb *committere*, "to attach legal effect to," "to make operative." Hence property forfeited by the coming into effect of a condition was said to be *commissum*, as when a *lex commissoria* (q. v.) was attached to a mortgage (*pignus*). *Commissa hereditas* is an inheritance forfeited as a penalty (Cic. *Verr.* i. 10, § 27).

Commius. A king of the Atrebates, who was advanced to that dignity by Caesar. He was sent by Caesar to Britain, but was cast into chains by the natives, and not released till they had been defeated by Caesar. In B.C. 52, he joined the other Gauls in their great revolt against the Romans, and continued in arms even after the capture of Alesia (Pseud. Caes. *B. G.* viii. 7–23).

Commixtio. See CONFUSIO.

Commodātum. A gratuitous loan in which the borrower (*commodatarius*) is bound to return the very thing lent, and not an equivalent. It thus differs from *mutuum* (q. v.).

Commodiānus. A Christian Latin poet, who flourished in the third century A.D., when he wrote two poems (*Instructiones* in acrostic and telestic verse, and the *Carmen Apologeticum*), showing a prosody based partly on accent and partly on syllabic quantity, and intended to be regarded as hexameters. Rhyme is also occasionally employed. Both poems are aimed against the heathen and the Jews. Edition by Dombart (Vienna, 1888).

Commŏdus, L. Aurelius Antonīnus. The son and successor of M. Aurelius Antoninus, who ascended the imperial throne A.D. 180. The reign of this prince is a scene of guilt and misery, which the historian is glad to dismiss with brevity. He appears, indeed, to have inherited all the vices of his mother, Faustina; and his father, in selecting him for his successor, allowed the feelings of the parent to triumph over the wisdom of the magistrate. He had accompanied his father on the expedition against the Marcomanni and the Quadi, but no sooner was Aurelius dead than his son became anxious to proceed to Rome, and soon concluded a hasty and disgraceful peace with the barbarians whom his father had been on the point of completely subjugating when he was cut off by disease. Notwithstanding the care which Aurelius had bestowed on his education, Commodus was ignorant to an extreme degree, having neither abilities nor inclination for profiting by the paternal example and instruction. On his return to Rome he speedily showed the bias of his natural disposition, giving himself up to unrestrained indulgence in the grossest vices. That he might do so without impediment, he intrusted all power to Perennis, praefect of the Praetorian Guard, a man of stern and cruel temper, who was at last slain by the soldiers for his severity.

A conspiracy against the life of Commodus having failed, it was followed by a long succession of judicial murders to gratify the vengeance of the cowardly and vindictive tyrant. He was next threatened by a new danger: disaffection had spread over the legions; and an attempt of Maternus, a private soldier, who headed a band of deserters and projected the assassination of Commodus during the celebration of the festival of Cybelé, was so ably conceived that it must have been successful but for the treachery of an accomplice. But neither duty nor danger could draw Commodus from the sports of gladiators or the pleasures of debauchery. Cleander, a Phrygian slave, soon succeeded to the place and influence of Perennis, and for three years the Empire groaned beneath his cruelty and rapacity. At length a new insurrection burst forth, which nothing could allay, the praetorian cavalry being defeated in the streets by the populace, until the unworthy favourite was, by the emperor's command, delivered to the insurgents. In the meantime, Commodus was indulging his base tastes and appetites, not only by gross sensuality, but by attempting to rival the gladiators. Being a very skilful archer and of great personal strength, he delighted in killing wild beasts in the amphitheatre, and thus pretending to rival the prowess of Hercules. In the gladiatorial contests, he publicly engaged so often that he was the conqueror in 735 combats. Though luxurious in his dress, frequently resorting to the baths eight times in the day, scattering gold dust in his hair, and, from the fear of admitting the approach of a razor in the hand of another, singeing off his beard, he was especially proud of exhibitions of personal strength, and frequently, in the garb of a priest, butchered victims with his own hands. Among the flatteries of the obsequious Senate none pleased him more than the vote which styled him the "Hercules of Rome," not even that which decreed to him the titles of Pius and Felix, or which offered to abolish the name of the Eternal City and substitute for it the title Colonia Commodiana. After thirteen years of unmitigated oppression, his favourite, Marcia, ultimately became the instrument by which the Roman world was delivered from its odious master. She discovered, from some private notes of Commodus, that herself, Laetus the praetorian praefect, and Eclectus the chamberlain, were on the list devoted to death. A conspiracy was immediately formed, Marcia administered poison to the emperor, and, lest the measure should not prove effectual, the deed was completed by suffocation, in A.D. 192. The life of Commodus has come down to us, written by Lampridius, in the *Historia Augusta*.

Commodus. (Bust in the Capitoline Museum, Rome.)

Comnēna, Anna, daughter of the Byzantine emperor Alexius I. (Comnenus), and author of one of the most valuable of the Byzantine histories. She was born December 1st, 1083, and received a liberal education, showing at an early age a great fondness for literary pursuits, combined with an intriguing disposition, which found much to gratify it in the court of Constantinople. Failing to induce her father on his death-bed to leave the imperial crown to her, she set on foot a conspiracy to destroy the life of her brother Iohannes, the lawful heir (1118), but her husband, Nicephorus Bryennius, a nobleman of the court, refused his aid. Her brother spared her life and only temporarily deprived her of her property; but she retired from the court and, after spending some time in historical composition, entered a convent, where she died in 1148. Her life of her father, in eighteen books, is elaborately rhetorical and always eulogistic, yet

it is of much value to the historian of the later Empire. Sir Walter Scott introduces her in a memorable chapter of his novel, *Count Robert of Paris*. The best edition of her history is that of Schopen and Reifferscheid, 2 vols. (1839–78). On her life and career, see Oster's work, *Anna Comnena*, 3 vols. (1868–71).

Comoedia (*κωμῳδία*). (1) GREEK. The Greek comedy, like the Greek tragedy and satyric drama, had its origin in the festivals of Dionysus. As its name, *κωμῳδία*, or the song of the *κῶμος*, implies, it arose from the unrestrained singing and jesting common in the *κῶμος*, or merry procession of Dionysus. According to the tradition, it was the Doric inhabitants of Megara, well known for their love of fun, who first worked up these jokes into a kind of farce. The inhabitants of Megara accordingly boasted that they were the founders of Greek comedy. From Megara, it was supposed, the popular farce found its way to the other Dorian communities, and one Susarion was said to have transplanted it to the Attic deme of Icaria about B.C. 580. No further information is in existence as to the nature of the Megarian or Dorian popular comedy. The local Doric farce was developed into literary form in Sicily by Epicharmus of Cos (about B.C. 540–450). This writer gave a comic treatment not only to mythology, but to subjects taken from real life. The contemporary of Epicharmus, Phormus or Phormis, and his pupil Dinolochus, may also be named as representatives of the Dorian comedy.

The beginnings of the Attic comedy, like those of the Attic tragedy, are associated with the deme of Icaria, known to have been the chief seat of the worship of Dionysus in Attica. Not only Thespis, the father of tragedy, but also Chionides and Magnes (about B.C. 550), who, if the story may be trusted, first gave a more artistic form to the Megarian comedy, introduced by Susarion, were natives of Icaria. Comedy did not become, in the proper sense, a part of literature until it had found welcome and consideration at Athens in the time of the Persian Wars; until its form had been moulded on the finished outlines of tragedy; and until, finally, it had received from the State the same recognition as tragedy. See TRAGOEDIA.

The OLD COMEDY, as it was called, had its origin in personal abuse. It was Crates who first gave it its peculiar political character, and his younger contemporary, Cratinus, who turned it mainly or exclusively in this direction. The masters of the Old Comedy are usually held to be Cratinus and his younger contemporaries, Eupolis and Aristophanes. It attained its youth in the time of Pericles and the Peloponnesian War—the period when the Athenian democracy had reached its highest development. These three masters had many rivals—who fell, however, on the whole beneath their level—among others Pherecrates, Hermippus, Teleclides, Phrynichus, Ameipsias, Plato, and Theopompus.

A good idea of the characteristics of the Old Comedy may be formed from the eleven surviving plays of Aristophanes (q. v.). The Greek tragedy has a meaning for all time; but the Old Comedy, the most brilliant and striking production of all Athenian literature, has its roots in Athenian life, and addressed the Athenian public only.

Dealing from the very first with the grotesque and absurd side of things, it was the scourge of all vice, folly, and weakness. The social life of Athens, so restless and yet so open, offered an inexhaustible store of material; and the comedian was always sure of a witty, laughter-loving public, on whom no allusion was lost. The first aim of the Athenian comedy was, no doubt, to make men laugh, but this was not all. Beneath it there lay a serious and patriotic motive. The poet, who was secured by the license of the stage, wished to bring to light and turn to ridicule the abuses and degeneracy of his time. The Attic comedians are all admirers of the good old times, and accordingly the declared enemies of the social innovations which were beginning to make their way—the signs in many cases, no doubt, of approaching decline. It was not, however, the actual phenomena of life which were sketched in the Old Comedy. The latter is really a grotesque and fantastic caricature; the colours are laid on thick, and propriety, as we moderns understand it, is thrown to the winds. These plays abound in coarseness and obscenity of the broadest kind, the natural survival of the rude license allowed at the Dionysiac festival. The choice and treatment of the subjects show the same tendency to the grotesque and fantastic. Fancy and caprice revel at their will, unchecked by any regard either for the laws of poetical probability or for adequacy of occasion. The action is generally quite simple, sketched out in a few broad strokes, and carried out in a motley series of loosely connected scenes. The language is always choice and fine, never leaving the forms of the purest Atticism. The metres admit a greater freedom and movement than those of the tragedy.

A comedy, like a tragedy, consisted of the dramatic dialogue, written mostly in iambic senarii, and the lyrical chorus. The division of the dialogue into *πρόλογος*, *ἐπεισόδιον*, and *ἔξοδος*, and of the chorus into *πάροδος* and *στάσιμα*, are the same as in tragedy. But, while the tragic chorus consisted of fifteen singers, there were twenty-four in the comic. A peculiarity of the comic chorus is the *παράβασις*, a series of lines entirely unconnected with the plot, in which the poet, through the mouth of the chorus, addresses the public directly about his own concerns or upon burning questions of the day. (See PARABASIS.) Like the tragedies, the comedies were performed at the great festivals of Dionysus, the Dionysia (q. v.) and the Lenaea (q. v.). On each occasion five poets competed for the prize, each with one play.

For a short time, but a short time only, a limitation had been put upon the absolute freedom with which the poets of the Old Comedy lashed the shortcomings of the government and its chief men. The downfall of the democracy, however, deprived them of this liberty. The disastrous issue of the Peloponnesian War had, moreover, ruined the Athenian finances, and made it necessary to give up the expensive chorus and with it the *παράβασις*. Thus deprived of the means of existence, the Old Comedy was doomed to extinction. In its place came what was called the MIDDLE COMEDY, from about B.C. 400 to 338. This was a modification of the Old Comedy, with a character corresponding to the altered circumstance of the time. The Middle Comedy was in no sense political; it avoided all open attack on individuals, and confined itself to treating the typical faults and weaknesses of mankind. Its main line was burlesque and parody, of which the objects

were the tragedies and the mythology in general. It was also severe upon the lives of the philosophers. It dealt in typical characters, such as bullies, parasites, and courtesans. The writers of the Middle Comedy were very prolific, more than eight hundred of their plays having survived as late as the second century A.D. The most celebrated of them were Antiphanes of Athens and Alexis of Thurii; next to these came Eubulus, and Anaxandrides of Rhodes.

A new departure is signalized by the dramas of what is called the NEW COMEDY. In these, as in the modern society drama, life was represented in its minutest details. The New Comedy offered a play regularly constructed like that of tragedy, characterized by fine humour, and but seldom touching on public life. The language was that of ordinary society, and the plot was worked out in a connected form from the beginning to the dénouement. The chief art of the poets of the New Comedy lay in the development of the plot and the faithful portraiture of character. The stock subjects are illicit love affairs; for honest women lived in retirement, and stories of honourable love, therefore, were practically excluded from the stage. The ordinary characters are young men in love, fathers of the good-natured or the scolding type, cunning slaves, panders, parasites, and bragging officers. Besides the dialogue proper, we find traces of parts written in lyric metres for the higher style of singing. These were, in all probability, like the dialogue, performed by the actors.

The fate of the New resembles that of the Middle Comedy, only a few fragments of its numerous pieces having survived. Of some of them, however, we have Latin adaptations by Plautus and Terence. Its greatest master was Menander, besides whom should be mentioned Diphilus, Philemon, Philippides, Posidippus, and Apollodorus of Carystus. The New Comedy flourished from B.C. 330 till far into the third century A.D.

In about B.C. 300, the old Dorian farce was revived in a literary form in Southern Italy by Rhinthon, the creator of the *Hilarotragoedia* (Ἱλαροτραγῳδία). The *Hilarotragoedia* was for the most part a parody of the tragic stories. It is also called, from its creator, *fabula Rhinthonica*.

(2) ROMAN. Like the Greeks, the Italian people had their popular dramatic pieces—the *versus Fescennini*, for instance, which were at first introduced, in B.C. 390, from Etruria, in consequence of a plague, to appease the wrath of heaven. (See FESCENNINI VERSUS.) From this combination sprang the *satura*, a performance consisting of flute-playing, mimic dance, songs, and dialogue. The *Atellanae Fabulae* (q. v.) were a second species of popular Italian comedy, distinguished from others by having certain fixed or stock characters. The creator of the regular Italian comedy and tragedy was a Greek named Livius Andronicus, about B.C. 240. Like the Italian tragedy, the Italian comedy was, in form and contents, an imitation, executed with more or less freedom, of the Greek. It was the New Greek Comedy which the Romans took as their model. This comedy, which represents scenes from Greek life, was called *palliata*, after the Greek *pallium*, or cloak. The dramatic *satura* and the *Atellana*, which afterwards supplanted the *satura* as a concluding farce, continued to exist side by side. The Latin comedy was brought to perfection by Plautus and Terence, the only Roman dramatists from whose hands we still possess complete plays. We should also mention Naevius and Ennius (both of whom wrote tragedies as well as comedies), Caecilius, and Turpilius, with whom, towards the end of the third century B.C., this style of composition died out.

About the middle of the second century B.C., a new kind of comedy, the *fabula togata* (from *toga*), made its appearance. The form of it was still Greek, but the life and the characters Italian. The *togata* was represented by Titinius, Atta, and Afranius, who were accounted masters in this kind of writing. At the beginning of the first century B.C., the *Atellana* assumed an artistic form in the hands of Pomponius and Novius; and some fifty years later the *mimus*, also an old form of popular farce, was similarly handled by Laberius and Publilius Syrus. The *mimus* drove all the other varieties of comedy from the field, and held its ground until late in the imperial period. See FABULA; MIMUS; PANTOMIMUS; SATIRA.

The Roman comedy, like its model, the New Comedy of the Greeks, had no regular chorus, the intervals being filled up by performances on the flute. (See CHORUS.) The play consisted, like the Roman tragedy, partly of passages of spoken dialogue (*diverbia*) in iambic trimeters, partly of musical scenes called *cantica*. See CANTICUM.

For the details of comic acting and a bibliography, see DRAMA; THEATRUM.

Compensatio. A legal term corresponding to the English "set-off" or "counterclaim." See Gaius, iv. 64.

Comperendinatio. The technical term in Roman law for the postponement of a trial for a definite time by consent of both parties, each being bound to appear. It is to be distinguished from *ampliatio*, which seems to have meant an indefinite postponement, in consequence of uncertainty on the part of the jury.

Compes (πέδη). (1) A fetter or shackle for the ankles, and sometimes so constructed as to deprive the prisoner almost wholly of the power of walking. (2) An ornamental anklet worn by women. See PERISCELIS.

Competītor. See AMBITUS.

Compĭta. See COMPITALIA.

Compitalia, also called **Ludi Compitalicii.** A festival celebrated once a year in honour of the two Lares Compitales, to whom sacrifices were offered at the places where two or more ways met (*compita*). Dionysius (iv. 14) similarly ascribes its origin to Servius Tullius, and describes the festival as it was celebrated in his time. He relates that the sacrifices consisted of honey-cakes (πέλανοι), which were presented by the inhabitants of each house, and that the persons who assisted as ministering servants at the festival were not freemen, but slaves, because the Lares took pleasure in the service of slaves. He further adds that the Compitalia were celebrated a few days after the Saturnalia with great splendour, and that the slaves on this occasion had full liberty given them to do what they pleased. We are told by Macrobius (*Saturn.* i. 7, 34) that the celebration of the Compitalia was restored by Tarquinius Superbus, who sacrificed boys to Mania, the mother of the Lares; but this practice was changed after the expulsion of the Tarquins, and the heads of garlic and poppies were offered instead of human heads.

The persons who presided over the festival were the *magistri vicorum*. Public games were added at some time during the republican period to this festival, but were suppressed by command of the Senate in B.C. 64. Yet that the festival itself still continued to be observed, though the games were abolished, is evident from Cicero (*ad Att.* iii. 3). When Iulius Caesar dissolved most of the *collegia*, the Compitalia necessarily fell into disuse. Augustus restored the festival on an entirely new basis, not reviving the *collegia*, but assigning the charge of it to a newly constituted set of *magistri vicorum*. To the two Lares Compitales was now added the *genius Augusti* (Ovid, *Fast.* v. 145), and the festival was observed twice in the year, on May 1 and August 1. At an earlier time the Compitalia belonged to the *feriae conceptivae;* that is, festivals which were celebrated on days appointed annually by the magistrates or priests. The day on which this festival was celebrated appears to have been always in the winter.

Compluvium. See DOMUS, p. 544.

Compromissum. See IUDEX; ACTIO.

Compsa. A town of the Hirpini, in Samnium, near the sources of the Aufidus.

Comum. The modern Como; a town in Gallia Cisalpina, at the southern extremity of the west branch of the Lacus Larius (Lago di Como). It was originally a town of the Insubrian Gauls, and subsequently a Roman colony. It was the birthplace of the younger Pliny (Pliny, *Epist.* i. 3).

Comus (*κῶμος*). See CHORUS; COMOEDIA.

Comus (*Κῶμος*). The god of festive mirth and joy, represented as a winged youth, mentioned only in the later times of antiquity.

Concaedes. A barricade made of trees and placed across the road to hinder the approach of a hostile force (Tac. *Ann.* i. 50).

Concha (*κόγχη, κόγχος*). Literally, a sea-shell, and applied to a vessel made in the form of such a shell, and used for various purposes—e. g. as saltcellars, for oils, perfumes, unguents, colours for painters, etc. A liquid measure was also called *concha*, and was of two capacities: one = .0412 pts. Eng.; the other, .1238 pts.

Conciliarii. See ASSESSOR.

Concilium. An assembly in general, sometimes used in a loose way to designate the comitia of the centuries (Liv. ii. 28), or any *contio*. For the *concilium plebis*, see COMITIA. The word also denotes the assemblies or meetings of confederate towns or nations, at which either their deputies alone, or any of the citizens who had time and inclination, met, and thus formed a representative assembly (Liv. i. 50). We find frequent traces of this, not only among the Italian nations, but also in the Greek States (*τὸ κοινόν*). (See ACHAEAN LEAGUE.) As the Romans conquered the neighbouring States of Italy, it was a regular part of their policy to break up the union of the vanquished tribes by forbidding the existence of such *concilia* (Liv. viii. 14, 10). But Augustus not merely allowed the *concilia* to continue where they had previously been held, but instituted them also in other provinces; and this representative character was recognized. In theory, they were associations formed for the worship of the imperial house. The president was the *ἀρχιερεύς*, or *sacerdos provinciae*, an official elected annually by the deputies (*legati*) from the most important towns. This dignitary was usually one of the most eminent and wealthy of the provincials, and had the immediate direction of the finances of the temple and its festivals; at a later time he had a certain power of control over all the priests of the province. After the concilium had taken part in the religious festival, it met again for the conduct of business. Its first duty was to pass the accounts of the expenditure connected with the provincial temple to Augustus, and to provide for the maintenance of the worship for the coming year; but then it was entitled to criticise the conduct of the governor, and either vote thanks to him or lay a complaint before the emperor (cf. the Inscription of Torigny, edited by Mommsen), which was frequently followed by his accusation (Plin. *Epist.* vii. 6). In this manner some control was exercised over the governor, and there was some approach to the creation of a representative body. See Marquardt, *Röm. Staatsverw.* i. 503–516, and his important essay in the *Ephem. Epigr.* (1872), pp. 200–214.

Concio. See CONTIO.

Conclāvé. A separate room in a house; or a suite of rooms that could be locked with the same key. See Fest. p. 38. 9, Müll.

Concordia. The Latin personification of concord or harmony, especially among Roman citizens. Shrines were repeatedly erected to Concordia during the republican period after the cessation of civil dissensions. The earliest was dedicated by Camillus in B.C. 367. The goddess Concordia was also invoked, together with Ianus, Salus, and Pax, at the family festival of the *Caristia*, on the 30th of March, and, with Venus and Fortuna, by married women on the 1st of April. (See MANES.) During the imperial period Concordia Augusta was worshipped as the protectress of harmony, especially of matrimonial agreement, in the emperor's household.

Concubīna (*παλλακή, παλλακίς*). A concubine. (1) GREEK. The *παλλακή* or *παλλακίς* occupied at Athens a kind of middle rank between the wife and the harlot (*ἑταίρα*). Demosthenes defines the position of each by saying that the harlot ministers to pleasure only, the concubine serves, while the wife is for the purpose of bearing children and acting as the faithful steward of her husband's goods (*c. Neaer.* § 122, p. 1386). Thus Antiphon speaks of the *παλλακή* of Philoneos as following him to the sacrifice, and also waiting upon him and his guest at table. If her person were violated by force, the same penalty was exigible from the ravisher as if the offence had been committed upon an Attic matron; and a man surprised by the quasi-husband in the act of criminal intercourse with his *παλλακή*, might be slain by him on the spot, as in the parallel case. (See ADULTERIUM.) It does not, however, appear very clearly from what political classes concubines were chiefly selected, as cohabitation with a foreign (*ξένη*) woman was strictly forbidden by law, and the provisions made by the State for virgins of Attic families must, in most cases, have prevented their sinking to this condition. Sometimes, certainly, where there were several destitute female orphans, this might take place, as the next of kin was not obliged to provide for more than one; and we may also conceive the same to have occurred with respect to the

MARSHALL HIGH SCHOOL LIBRARY MINNEAPOLIS

daughters of families so poor as to be unable to supply a dowry. The dowry, in fact, seems to have been a decisive criterion as to whether the connection between a male and a female Athenian, in a state of cohabitation, amounted to a marriage. If no dowry had been given, the child of such union would be illegitimate; if, on the contrary, a dowry had been given, or a proper instrument executed in acknowledgment of its receipt, the woman was fully entitled to all conjugal rights. It does not appear that the slave who was taken to her master's bed acquired any political rights in consequence; the concubine mentioned by Antiphon is treated as a slave by her master, and after his death undergoes a servile punishment.

(2) ROMAN. According to an old definition, an unmarried woman who cohabited with a man was originally called *pellex* or *paelex* (Gell. iv. 3), but afterwards by the more decent appellation of *concubina* (*Dig.* 50, 16, 144). *Concubinatus* is cohabitation other than marriage between free persons who were both unmarried, or between an unmarried free man and an *ancilla*. In the older times this was viewed as an offence deserving punishment (Liv. x. 31; xxv. 2); but when the possibility of a lasting affection between persons who had not *conubium* came to be recognized, the cohabitation of an unmarried man with his *liberta* or *ancilla* (Plaut. *Epid.* iii. 4, 29, 30) was regarded without censure. In Cicero's time (*De Orat.* i. 40, § 183) the name of *concubina* would have applied to a woman who cohabited with a man who had not divorced his wife; but this was not considered lawful concubinage in after-times. The Lex Iulia de Adulteriis of Augustus imposed severe penalties on *adulterium*, *incestus*, and *stuprum* (q. v.); but by the Lex Iulia and Papia Poppaea *concubinatus* was legalized and exempted from the penal provisions of the earlier statute (*Dig.* 25, 7, 3, 1), though an *honesta femina* who wished to become a *concubina* was not dispensed from them unless she made an express declaration of her intention or *testatio* (*Dig.* ib. 3, pr.). But a man who already had an *uxor* could not have a *concubina* at the same time (*Dig.* 50, 16, 144), nor apparently could a man have more than one *concubina* at a time; and widowers who already had children, and did not wish to contract another legal marriage, took a *concubina*, as we see in the case of Vespasian (Suet. *Vesp.* 3), Antoninus Pius, and M. Aurelius.

Concubinatus differed from lawful marriage in three especial respects. (1) In the relation of the parties, there being no *affectio maritalis* (Paul. *Sent. Rec.* ii. 20). (2) In the loss of reputation to the woman if *honesta*. Yet there is an inscription in Fabretti (p. 337) to the memory of Paullianus by Aemilia Prima, *concubina eius et heres*, which seems to show that the term *concubina* was not one that a woman need be ashamed of. (3) In its legal effects: it was not a marriage, and therefore the rules as to *dos*, *donatio propter nuptias*, *donatio inter virum et uxorem*, had no application; nor were the children in *patria potestas*, though their paternity was recognized; they could be legitimated, and under the emperors were entitled to maintenance, even from the legitimate children after the father's death (*Nov.* 89, 12, 6); also, they had some rights of succession on the father's dying intestate.

By later emperors *concubinatus* was discouraged, but it was not made generally unlawful until the ninth century, by Leo the Philosopher.

Cohabitation between two slaves was called *contubernium*, a name also applied to that between a slave and a free person (Paul. ii. 19, 6).

Condalium. A finger-ring worn on the first joint (κόνδυλος) of the forefinger (Fest. s. v. *condylus*; Plaut. *Trin.* iv. 3, 7, and 15).

Condemnatio. See ACTIO; IUDEX; JUDICIAL PROCEDURE.

Condictio. See ACTIO.

Conditorium. See FUNUS; SEPULCRUM.

Condrūsi. A German people in Gallia Belgica, the dependants of the Treviri, dwelling between the Eburones and the Treviri.

Conductio. See LOCATIO.

Condy (κόνδυ). An Asiatic drinking-vessel, sometimes used by the Greeks, made of silver or gold. According to some authorities it was of Persian (Athen. xi. 478 a), according to others of Cappadocian origin (Pollux, vi. 96).

Confarreatio. The form of marriage used by the patricians. See MATRIMONIUM.

Confectionery. See DULCIA.

Confiscatio. See PROSCRIPTIO.

Confluentes. The modern Coblentz; a town in Germany, at the confluence of the Mosella and the Rhenus. There was probably no Roman town here, however, but only a posting-station *ad confluentes* on the great Roman road; and the place was not made a *castrum* or fortress until the fifth century A.D. Of about that date are the remains of a Roman bridge of piles discovered in 1864, when the Moselle was unusually low.

Confusio. Properly the mixing of liquids, or the fusing of metals into one mass. If things of the same or of different kind were confused, either by the consent of both owners or by accident, the compound was the property of both. If the *confusio* was caused by one without the consent of the other, the compound was only joint property in case the things were of the same kind and perhaps of the same quality—as, for instance, wines of the same quality. If the things were different, so that the compound was a new thing, this was a case of what, by modern writers, is called *specificatio*, which the Roman writers expressed by the term *novam speciem facere*, as if a man made *mulsum* out of his own wine and his neighbour's honey. In such a case the person who caused the *confusio* became the owner of the compound, but he was bound to make good to the other the value of his property.

Commixtio applies to cases such as mixing together two heaps of corn; but this is not an instance in which either party acquires property by the *commixtio*. For if the mixture takes place, either accidentally or with mutual consent, or by the act of one alone, in all these cases the property of each person continues as before, for in all these cases it is capable of separation. A case of *commixtio* arises when a man's money is paid without his knowledge and consent, and the money, when paid, is so mixed with other money that it cannot be recognized; otherwise it remains the property of the person to whom it belonged.

Two things, the property of two persons, might become so united as not to be separable without injury to one or both; in this case, the owner of the principal thing became the owner of the ac-

cessory. Thus, in the case of a man building on another man's ground, the building belonged to the owner of the ground (*superficies solo cedit*); or in the case of a tree planted, or seed sown on another man's ground, the rule was the same. If a man wrote, even in letters of gold, on another man's parchment or paper, the whole belonged to the owner of the parchment or paper; in the case of a picture painted on another man's canvas, the canvas became the property of the owner of the picture.

But in all these cases the losing party was entitled to compensation, with some exceptions as to cases of *mala fides*.

Congiarium (sc. *vas;* from *congius*). (1) A vessel containing a *congius* (q. v.).

(2) In the early times of the Roman Republic, the *congius* was the usual measure of oil or wine which was, on certain occasions, distributed among the people; and thus *congiarium*, as Quintilian says, became a name for the gift as well as for the measure (*congiarium commune liberalitatis atque mensurae*, vi. 3, § 52). It does not follow that all the citizens or even heads of families received a *congius* apiece. The earliest mention of a distribution of oil is in B.C. 213, when two Cornelii Scipiones, afterwards called Africanus and Cethegus, in their aedileship gave a certain number of *congii* (the numeral has dropped out) to the inhabitants of each street (Livy, xxv. 2, with Madvig's note). Lucullus on returning from his Eastern victories distributed more than 100,000 casks of wine to the people (Plin. *H. N.* xiv. § 96). The name *congiarium* was also applied, less accurately, to presents of corn or other provisions.

Under the Empire the tranquillity of the capital was insured by a gigantic system of outdoor relief (see FRUMENTARIAE LEGES), supplemented by frequent doles. The general term for these imperial presents is *largitio*, sometimes (especially on coins) *liberalitas*. Distributions to the soldiers were called *donativa*, to the people *congiaria;* but sometimes the former also are called *congiaria* (Cic. *Ad Att.* xvi. 8). The sums thus spent were enormous. Hadrian's congiarium was three *aurei* per head on his proclamation as emperor, and double that amount on his arrival in Rome; Commodus gave 725 *denarii* to each citizen. Marquardt has computed the imperial congiaria at an average of $450,000 a year from Iulius Caesar to Claudius, $1,500,000 a year from Nero to Septimius Severus; it must have been, however, a periodical emptying of the treasury rather than a continuous drain.

Congiarium was, moreover, used to designate presents or pensions given by men of rank to their friends, clients, or dependants. See Suet. *Iul.* 27; Sen. *De Brev. Vit.* 8. § 2.

Congius. A Roman liquid measure containing six sextarii (*Carm. de Pond.* 72), or the eighth part of the amphora. It was equal to the χοῦς of the Greeks, about 5.76 pints.

There is a congius in existence, known as the Farnese congius, but now at Dresden, bearing an inscription which states that it was made in the year A.D. 75, according to the standard measure in the Capitol, and that it contained, by weight, ten pounds. This congius is one of the means by which the attempt has been made to fix the weight of the Roman pound. See LIBRA.

Congius. (Dresden Collection.)

Cato tells us that he was wont to give to each of his slaves a congius of wine at the Saturnalia and the Compitalia. Pliny relates, among other examples of hard drinking, that Novellius Torquatus of Mediolanum obtained a cognomen (*tricongius*, "a nine-bottle man") by drinking three congii of wine at one sitting (*H. N.* xiv. § 144).

Conimbrĭca. A town of Lusitania, near the sea-coast, on the river Munda, now Coimbra in Portugal.

Conisălus (Κονίσαλος). A deity worshipped at Athens with Priapus (q. v.)

Connubium. See CONUBIUM.

Conon (Κόνων). (1) A distinguished Athenian commander, and one of the generals who succeeded Alcibiades in the command of the fleet during the Peloponnesian War. Having engaged Callicratidas, the Spartan admiral, he lost thirty vessels, and was compelled to take shelter in the harbour of Mytilené, where he was blockaded by his opponent. The victory gained by the Athenians at the Arginusae released him at length from his situation. Being subsequently appointed, with five others, to the command of a powerful fleet, he proceeded to the Hellespont, where Lysander had charge of the Lacedaemonian squadron. The negligence of his fellow-commanders, the result of overweening confidence in their own strength, led to the fatal defeat at Aegos Potamos, and the whole Athenian fleet was taken, except nine vessels of Conon's division, with eight of which, thinking that the war was now desperate, he sailed to Salamis in the island of Cyprus. The ninth vessel was sent to Athens with the tidings of the defeat. In Cyprus, Conon remained at the court of Evagoras, watching for an opportunity to prove of service to his country. Such a state of affairs soon presented itself. The Lacedaemonians, having no more rivals in Greece, sent Agesilaüs with an army into Asia to make war upon the Persian king. Conon immediately repaired to Pharnabazus, the satrap of Lydia and Ionia, aided him with his counsels, and suggested to him the idea of exciting the Thebans and other Grecian communities against Sparta, so as to compel that State to recall Agesilaüs from the East. The plan was approved of by the king of Persia, and Conon, at the head of a Persian fleet, B.C. 394, attacked the Spartan admiral, Pisander, near Cnidus, and defeated him, with the loss of the greater part of his ships. Lacedaemon immediately lost the control of the sea, and her power in Asia Minor ceased. Conon thereupon, after ravaging the coasts of Laconia, returned to Attica, rebuilt the city walls as well as those of the Piraeus, with means which had been furnished by Pharnabazus, and gave on this occasion a public entertainment to all the Athenians. The Lacedaemonians, dispirited by the success of Conon, and alarmed at the re-establishment of the Athenian fortifications, sent Antalcidas to Tiribazus, one of the Persian generals, to negotiate a peace. The Athenians, on their part, deputed Conon and some others to oppose this attempt; but Tiribazus being favourably inclined towards Sparta, and in all probability jealous of

Pharnabazus, imprisoned Conon, under the pretext that he was endeavouring to excite an insurrection in Aeolis and Ionia. The Persian king, however, disapproved of the conduct of the satrap, and Conon was released. The latter thereupon returned to the island of Cyprus, where he fell sick and died, about B.C. 390. His remains were conveyed to Athens (Corn. Nep. *Conon;* Xen. *Hist. Gr.* i. 4, 10; id. ib. ii. 1, 21, etc.). (2) A native of Samos, distinguished as an astronomer and geometrician. None of his works have reached us; he is mentioned, however, by Archimedes, Vergil, Seneca, and others. Conon lived between about 300 and 260 years before our era. Apollonius, in the fourth book of his *Conic Sections*, thinks that many of Conon's demonstrations might be rendered more concise. He is mentioned as an astronomer by one of the commentators on Ptolemy, and Seneca (*Quaest. Nat.* vii. 3) informs us that he had made out a list of the eclipses of the sun that had been visible in Egypt. He is mentioned also by Vergil (*Eclog.* iii. 40), and by Catullus in his translation of the Greek poem of Callimachus, on the tresses of Berenicé. (3) A grammarian epitomized by Photius (q. v.).

Conopēum (*κωνωπεῖον*, from *κώνωψ*, "a mosquito"). A mosquito-curtain—i. e. a covering made to be expanded over beds and couches to keep away gnats and other flying insects. These curtains were much used in Egypt (Isid. *Orig.* xix. 5, 5), and by Roman ladies as early as Varro's time. (See Varro, *R. R.* ii. 10.) The *conopeum* (whence the English word "canopy") was also known in Latin as *cubiculare*.

Conquisitōres. Recruiting sergeants who were employed to go about the country, enlisting or impressing soldiers for the Roman army. See Liv. xxi. 11, 113; Cic. *Pro Mil.* 25, 67.

Consanguinei. See COGNATIO.

Conscripti. See SENATUS.

Consecratio. See APOTHEOSIS; INAUGURATIO.

Consensus. See OBLIGATIONES.

Consentes Dii. The name which the Romans gave to the twelve superior deities, or Dii Maiorum Gentium. The best derivation of the name is that which traces it to the participle of the obsolete verb *conso*, "to advise" or "counsel," the Dii Consentes (*quasi Consentientes*) being they who formed the council of the sky. Ennius has given their names in the two following lines:

> Iuno, Vesta, Ceres, Diana, Minerva, Venus, Mars,
> Mercurius, Iovi', Neptunus, Vulcanus, Apollo.

The conception is, however, originally Etruscan (Müller, *Etrusk.* ii. p. 81 foll.). The Romans also called them Dii Complices. See Arnob. iii. 123; and Corssen, *Nachricht.* 281.

Consentia. The chief town of the Bruttii, on the river Crathis; here Alaric died. It is now Cosenza.

Consentius, PUBLIUS. A Roman grammatical writer, who flourished in the fifth century A.D. and wrote two grammatical works: (1) *Ars Consentii de Duabus Partibus Orationis, Nomine et Verbo;* and (2) *Ars Consentii de Barbarismis et Metaplasmis.* Osann regards Consentius as a Gaul, from the internal evidence of these works. The only complete MS. of Consentius is one at Munich of the tenth century. The text is given by Keil in his *Grammatici Latini*, v. 386.

Considius Longus. See LONGUS.

Consilium. A council, or body of advisers. Such councils were called in, according to ancient Roman custom, by the presiding magistrate in civil and criminal cases. Even in the family tribunals, which decided cases affecting the members of the *gens*, a consilium of kinsfolk was thought necessary. The custom was that the presiding judge bound himself by the decision of his freely chosen *consilium*, but took the responsibility himself. The expression *consilium* was afterwards transferred to the regular juries of the courts which decided civil and criminal cases. (See CENTUMVIRI; IUDICES.) The emperors, too, made a practice of inviting a consilium of friends to assist them in their judicial decisions. After the time of Hadrian, the members of the imperial consilium or *consistorium* appear as regularly appointed and salaried officers, the Consiliarii Augusti. These were generally, though not exclusively, selected from the body of professional jurists. See CONSISTORIUM.

Consistorium. The Roman emperors, following an ancient practice of Roman magistrates, consulted their friends and followers (*amici, familiares, comites*) before giving judicial decisions in cases of importance. The *consilium principis*, or judicial council thus instituted, became a standing body in the time of Hadrian (Spart. *Hadr.* 8, 18).

The council was composed of persons of the greatest eminence; both senators of the highest rank and members of the order of *equites* sat in it.

The term *auditorium principis* is used as equivalent to *consilium*. It was not a general council for State affairs, and is not to be confused with the political council we find certain emperors convening. Its functions were generally confined to legal business. The emperor not only took its advice respecting his judgments, but also in all matters connected with legal administration. It was strictly consultative in character, the emperor not being bound in any way by its opinion. Changes were made in its constitution by Diocletian and his successors. The ordinary members of the reconstituted body, which is known as the *consistorium principis*, were called *comites consistoriani;* they were divided into the two classes of (1) *illustres*, (2) *spectabiles*. The *illustres* consisted of four great officers of the palace: viz., the *quaestor sacri palatii*, the *magister officiorum*, the *comes sacrarum largitionum*, and the *comes rei privatae*. The class of *spectabiles* was a larger one; its members are generally named simply *comites consistoriani*. Besides these two classes of ordinary and active members of the consistorium, there was a class of extraordinary members, called *vacantes*. There was also a class of purely honorary members. The functions of the consistorium seem to have been wider than those of the earlier *consilium*, since it acted as a council for advising the emperor in general matters of State.

Consolatio. The title of several works in Roman literature. (1) A treatise of Cicero, now lost, written after the death of his daughter Tullia (B.C. 45) and based upon Crantor's treatise *περὶ πένθους*. (See *Tusc. Disp.* i. 65; *ad Att.* xii. 14, 3.) The fragments of this work are to be found in Baiter and Kayser's text, xi. 71. See Schulz, *De Ciceronis Consolatione* (Greifswald, 1860). Cicero is supposed by some to have transcribed a portion at least of the

Consolatio in the first and third books of the *Tusculanae Disputationes*. (2) A probably spurious work called *Consolatio ad Liviam Augustam de Morte Drusi Neronis* and ascribed by Scaliger to Pedo Albinovanus, but by others to Ovid. There exists no early MS. of it, and it first appears in the *editio princeps* of Ovid, A.D. 1471. Hence it is believed to be the work of some Italian scholar of the fifteenth century. See Haupt, *Epicedion Drusi cum Commentariis* (Leipzig, 1849); and a paper by Nettleship in the *Transact. of the Oxford Phil. Soc.* (1885–86). (3) *Ad Marciam*, a treatise of the younger Seneca (q. v.), written by him to Marcia, the daughter of Cremutius Cordus, on the death of her son. See Schinnerer, *Seneca's Schrift an Marcia* (Hof. 1889). (4) A treatise written in prison by Boëthius (q. v.) about the year A.D. 524, and entitled *De Consolatione Philosophiae*. It is partly in the form of a dialogue, and is interspersed with metrical pieces after the fashion of a Menippean satire.

Constans. The youngest of the three sons of Constantine the Great and Fausta. After his father's death he received (A.D. 337) as his share of the Empire, Illyricum, Italy, and Africa. His territory was invaded by his brother Constantine, who was defeated and slain in the invasion (340). Constans became supreme over the whole Western Empire, but the weakness and profligacy of his character made him despised and disliked so that in 350 he was slain by the troops of the usurper Magnentius (q. v.).

Constantia. The name of several cities: (1) in Cyprus; (2) in Phœnicia; (3) in Palestine; (4) in Mesopotamia; (5) in Rhaetia, now Constanz.

Constantĭna. (1) A Roman princess, daughter of Constantine the Great and wife of the emperor Gallus. (2) See CIRTA.

Constantinopŏlis (Κωνσταντίνου Πόλις). See BYZANTIUM.

Constantīnus. (1) GAIUS FLAVIUS VALERIUS AURELIUS CLAUDIUS, known as The Great, son of the emperor Constantius Chlorus and Helena (q. v.), was born A.D. 272, at Naïsus, a city of Dacia Mediterranea. When Constantine's father was associated in the government by Diocletian, the son was retained at court as a kind of hostage, but was treated with great kindness at first, and was allowed several opportunities of distinguishing himself. After the abdication of Diocletian, Constantius and Galerius were elevated to the rank of Augusti, while two new Caesars, Severus and Maximin, were appointed to second them. Constantine was not called to the succession. Diocletian, partial to Galerius, his son-in-law, had left the nomination of the two new Caesars to the latter; and the son of Constantius, whose popularity and talents had excited the jealousy of Galerius, and whose departure, although earnestly solicited by his father, was delayed from time to time under the most frivolous pretences, with difficulty at length obtained permission to join his parent in the West, and only escaped the machinations of the emperor by travelling with his utmost speed until he reached the western coast of Gaul. He came just in time to join the Roman legions, which were about to sail under his father's command to Britain, in order to make war upon the Caledonians. Having subdued the northern barbarians, Constantius returned to York (Eboracum), where he died in the month of July, in the year 306. Galerius, sure of the support of his two creatures, the Caesars, had waited impatiently for the death of his colleague, to unite the whole Roman Empire under his individual sway. But the moderation and justice of Constantius had rendered him the more dear to his soldiers from the contrast of these qualities with the ferocity of his rival. At the moment of his death, the legions stationed at York, as a tribute of gratitude and affection to his memory, and, according to some, at his dying request, saluted his son Constantine with the title of Caesar and decorated him with the purple. Whatever resentment Galerius felt at this, he soon perceived the danger of engaging in a civil war. As the eldest of the emperors, and the representative of Diocletian, he recognized the authority of the colleague imposed upon him by the legions. He assigned to him the administration of Gaul and Britain, but gave him only the fourth rank among the rulers of the Empire with the title of Caesar.

Under this official appellation Constantine administered the prefecture of Gaul for six years (A.D. 306–312), perhaps the most glorious, and certainly the most virtuous, period of his life. The title and rank of Augustus, which his soldiers had conferred upon Constantine, but which Galerius had not allowed him to retain, the latter gave to Severus, one of his own Caesars. This dignity had been expected by Maxentius, son of the abdicated emperor Maximian, the former colleague of Diocletian. Indignant at his disappointment, Maxentius caused himself to be proclaimed emperor by his army; and, to strengthen his usurpation, he induced his father to leave his retreat and resume the imperial title. A scene of contention followed, scarcely paralleled in the annals of Rome. Severus marched against the two usurpers; but was abandoned by his own troops, surrendered, and was slain. Galerius levied a great army, and marched into Italy against Maximian and Maxentius, who, dreading his power, retired to Gaul and endeavoured to procure the support of Constantine. This politic chief did not consider it expedient to provoke a war at that time and for no better cause; and, Galerius having withdrawn from Italy and returned to the East, Maximian and Maxentius returned to Rome. To aid him in the struggle, Galerius conferred the title of emperor on his friend Licinius; and thus there were at once six pretenders to the sovereignty of the Empire—namely, Galerius and Licinius; Maximian and his son Maxentius; Maximin, who had been nominated Caesar by Galerius; and Constantine, the son and successor of Constantius. Among these rivals Constantine possessed a decided superiority in prudence and abilities, both military and political. The harsh temper of Maximian soon led to a quarrel between him and his son Maxentius. Leaving Rome, he went to Gaul, to Constantine, who had become his son-in-law when he and his son were endeavouring to make head against Galerius. Here also Maximian found himself disappointed of that power which he so greatly longed to possess; and having plotted against Constantine, was detected and put to death. Galerius died not long after (311), leaving his power to be divided between his Caesars, Maximin and Licinius; so that there were now four competitors for the Empire: Constantine, Maxentius, Maximin, and Licinius. Maxentius speedily provoked open

hostilities with Constantine, who marched at the head of a powerful army towards Rome.

It was while Constantine was proceeding on this momentous expedition that he made an open and public declaration in favour of Christianity. Before that time, the persecuting edicts of Diocletian had been much mitigated by the forbearance and leniency of Constantius; and Constantine not only followed his father's example in being merciful to the persecuted Christians, but even showed them some marks of positive favour. Very considerable numbers of them, in consequence, flocked to his standard and swelled the ranks of his army.

Constantine and Fausta.

Their peaceful, orderly, and faithful conduct, contrasting most favourably with the turbulent and dissolute behaviour of those who formed the mass of common armies, won his entire confidence. To what extent this led Constantine to form a favourable opinion of Christianity, or inclined him to view with esteem and respect the tenets which had produced such results, cannot be ascertained. How far, also, his avowed reception of Christianity was influenced by the prudence of the politician, how far by the conviction of the convert, it is impossible to determine. The accounts of his dream and his vision (see LABARUM), which united to enforce his trust in Christianity, bear too much the aspect of fiction, or of having been the illusive consequences of mental anxiety, brooding intensely on the possible results of a great religious revolution, to be woven into the narrative of sober history. The story goes, however, that on his march to Rome, either at Autun in Gaul, or near the Rhine, or at Verona in Italy, Constantine beheld in the sky a brilliant cross with the inscription Ἐν τούτῳ νίκα, "By this conquer!" and that on the night before his decisive battle with Maxentius a vision appeared to him in his sleep, bidding him inscribe the shields of his soldiers with the sacred monogram of the name of Christ. This, at least, is certain, that Constantine caused the Cross to be employed as the imperial standard, and advanced with it to promised victory. After the armies of Maxentius, led by his generals, had sustained two successive defeats, that emperor himself, awakening from his sensual and inactive life at Rome, advanced against his formidable assailant, and met him near the little river Cremera, about nine miles from the city. Maxentius lost the day, after a bloody conflict, and, in endeavouring to enter the city by the Milvian bridge, was precipitated into the Tiber, where he perished (October 27th, 312).

Constantine was received at Rome with acclamations; Africa acknowledged him, as well as Italy; and an edict of religious toleration, issued at Milan, extended the advantages, hitherto enjoyed by Gaul alone, to this prefecture also. After a brief stay at Rome, during which he restored to the Senate their authority, disbanded the Praetorian Guard, and destroyed their fortified camp, from which they had so long awed the city and given rulers to the Empire, Constantine proceeded to Illyricum to meet Licinius, with whom he had formed a secret league before marching against Maxentius. The two emperors met at Milan, where their alliance was ratified by the marriage of Licinius to Constantine's sister. During this calm interview, Constantine prevailed upon Licinius to repeal the persecuting edicts of Diocletian, and to issue a new one, by which Christianity was encouraged, its teachers were honoured, and its adherents advanced to places of trust and influence in the State. After the overthrow of Maximin by Licinius, and his death at Nicomedia, Constantine and his brother-in-law were now the only two that remained of the six competitors for the Empire; and the peace between them, which had seemed to be established on so firm a basis, was soon interrupted by a strife for sole supremacy. In the first war (A.D. 315) Constantine wrested Illyricum from his competitor. After an interval of eight years the contest was renewed. Licinius was beaten before Adrianople, the 3d of July, 323, and Constantine the Great was recognized as sole master of the Roman world.

The seat of empire was now transferred to Byzantium (q. v.), which took from him the name of Constantinople. Several edicts were issued for the suppression of idolatry; and the churches and property restored to the Christians, of which they had been deprived during the last persecution. A reconstruction of the Empire was effected upon a plan entirely new, and this renovated Empire was pervaded by the worship and the institutions of Christianity. That much of the policy of the statesman was mixed up with this patronage of the new religion can easily be imagined. But still, it would be wrong to make him, as some have done, a mere hypocrite and dissembler. The state of his religious knowledge, so far as we have any means of judging, was certainly very inadequate and imperfect; but he was well aware of the characters of the two conflicting religions, Christianity and Paganism, and the purity of the former could not but have made some impression upon his mind.

The private character of Constantine has suffered, in the eyes of posterity, from his stern treatment of Crispus, his son by his first wife, whom he had made the partner of his Empire and the commander of his armies. Crispus was at the head of the administration in Gaul, where he gained the hearts of the people. In the wars against Licinius he had displayed singular talents, and had secured victory to the arms of his father. But from that moment a strong and unnatural jealousy stifled every paternal feeling in the bosom of the monarch. He detained Crispus in his palace, surrounded him with spies and

informers, and at length, in the month of July, 324, ordered him to be arrested in the midst of a grand festival, to be carried off to Pola in Istria, and there put to death. A cousin of Crispus, the son of Licinius and Constantine's sister, was at the same time sent, without trial, without even an accusation, to the block. His mother implored in vain, and died of grief. It is fair, however, to say that Niebuhr found evidence to support the view that Crispus aimed at supplanting his father. Fausta, the daughter of Maximian, the wife of Constantine, and the mother of the three princes who succeeded him, was shortly after stifled in the bath by order of her husband for infidelity.

In the following year the celebrated Council of Nicaea was held, at which he opposed the Arians, probably on political grounds only, as being the weaker party; for just before his death he received baptism from an Arian bishop, Eusebius of Nicomedia.

Constantine died at the age of sixty-three, at Nicomedia, July 22d, 337, after a reign of thirty-one years from the death of his father, and of fourteen from the conquest of the Empire. He left three sons, Constantine, Constans, and Constantius, among whom he divided his Empire. The first, who had Gaul, Spain, and Britain for his portion, was conquered by the armies of his brother Constans, and killed in the twenty-fifth year of his age, A.D. 340. Magnentius, the governor of the provinces of Rhaetia, murdered Constans in his bed, after a reign of thirteen years; and Constantius, the only surviving brother, now become the sole emperor, A.D. 353, punished his brother's murderer, and gave way to cruelty and oppression. He visited Rome, where he enjoyed a triumph, and died (361) in his march against Julian, who had been proclaimed emperor by his soldiers at Paris.

See the works of Eusebius (*De Vita Constantini*), Zosimus (Bk. II.), Eutropius, Aurelius Victor, and the *Panegyrici Veteres* (vi. 10); also Manso's *Leben Constantins des Grossen;* Burckhardt, *Die Zeit Constantins des Grossen;* and Broglie, *L'Église et l'Empire Romain.*

(2) The son of the preceding. See above. (3) A usurper who had himself proclaimed emperor in Britain during the reign of Honorius and Arcadius, in A.D. 407, reigning for four years and securing possession of Gaul and Spain, until defeated in 411 by Constantius, the able general of Honorius. By him Constantine was taken prisoner, carried to Ravenna, and there put to death. (4) The name of several emperors of the Eastern Empire. See BYZANTINUM IMPERIUM.

Constantius. (1) CHLORUS, son of Eutropius, and father of Constantine the Great, received at Paris the title of Caesar, which he obtained by his victories in Britain and Germany. He became the colleague of Galerius on the abdication of Diocletian; and, after bearing the character of a humane and benevolent prince, he died at York, and had his son for his successor, A.D. 306. (2) The third son of Constantine the Great. See CONSTANTINUS. (3) The father of Julian and Gallus, was son of Constantius by Theodora, and died A.D. 337. (4) A Roman general, who married Placidia, the sister of Honorius, and was proclaimed emperor, an honour he enjoyed only seven months. He died, universally regretted, A.D. 421, and was succeeded by his son Valentinian in the West.

Constitutiōnes. Enactments of the Roman emperors, in the exercise of their legislative authority, which had statutory force. They comprise the following varieties:

(1) *Orationes*, by which, in the earlier imperial period, the emperor submitted a "bill" to the Senate (*Inst.* ii. 17, 7). They were regarded as law apart from the senatus consulta, by which, in theory, they received the character of "acts," and are often cited as such in preference to the latter.

(2) *Edicta* or *edictales constitutiones*, general rules of law made by the emperor after the analogy of the edicts of the republican magistrates.

(3) *Mandata*, by which the emperor delegated his authority to other magistrates, such as *legati*, *praesides*, and *praefecti*.

(4) *Decreta* and *rescripta*, issued by the emperor in his capacity as praetor, judge, or supreme jurisconsult. Up to the time of Constantine they were by far the commonest kind of constitutio. *Decreta* were determinations of suits by the emperor either as sitting in a court of first instance or on appeal (Suet. *Aug.* 33); *rescripta* (Tac. *Ann.* vi. 9) were provisional decisions on the *legal* point at issue (as to which he had been consulted by a magistrate or a private individual), the facts being left to be inquired into, and a final judgment given, by another magistrate or *iudex*. Technically *rescripta* were of two kinds: *epistolae* and *subscriptiones* or *adnotationes*. The first are independent replies on consultation (*Dig.* 1, 4, 1, 1; *Inst.* iii. 20, 4), many issued by Hadrian, Severus, and Caracalla being extant in the Digest. The second are brief opinions on cases submitted to the emperor by petition, and written at the foot of the latter; this form being most commonly employed in answering private persons (*Dig.* 1, 4, 1, 1; *Cod.* 1, 23, 6).

In the Eastern Empire a peculiar kind of rescripts acquired the name of "pragmatic sanctions." They were drawn up in a peculiar and solemn form, and were more highly taxed than others. Zeno restricted their use to petitions preferred by corporations.

In framing constitutions of any kind the emperor was assisted by the council called *consistorium* (q. v.).

Constrātum. In general, any flooring made of planks. Thus *constratum navis*, "the deck of a ship" (Petron. 100); *constratum pontis*, "a bridgeway" (Livy, xxx. 10), etc.

Consualia. See CONSUS.

Consulāris. A term which, throughout the time of the Roman Republic, signifies a person who has been invested with the consulship; but under the Empire a mere title for the higher class of officers, who thereby obtained permission to have the insignia of a consul, without ever having actually been consuls. Hence the title was almost equivalent to that of an "honorary consul" (*consul honorarius;* Cod. Theod. vi. tit. 19, s. 1). The title was given especially to generals, as formerly persons after their consulship had usually undertaken the command of an army in the provinces. *Consularis* gradually became the established name for those intrusted with the administration of imperial provinces. During the second century A.D., the title *consularis* always denotes a governor who had actually held the office of consul or had received the title from the emperor; but by the fourth century it had become a mere title of a particular class of

provincial governors. The emperor Hadrian divided Italy into four districts, and over each he placed an officer who likewise bore the title of *consularis*. At Constantinople the title was given to the superintendents of the aqueducts (*consulares aquarum*), who seem to have been analogous to the *curatores aquarum* of Rome.

Consŭles (originally PRAETŌRES, *ὕπατοι*). The Roman magistrates to whom the supreme authority was transferred from the kings, after the expulsion of the latter in B.C. 510. The consuls gave their name to the year. They were elected by the Comitia Centuriata, and down to B.C. 366 from the patricians only. The legal age at which a man might be elected was, in the time of Cicero, forty-three. The time of entering on the office varied in the early periods: in B.C. 222, it was fixed to March 15th; in 153, to the 1st of January. The accession of the new consuls was attended with the performance of certain ceremonies, among which may be mentioned a procession of the consuls to the Capitol, with the Senate, *equites*, and other citizens of position, as escort; an offering of white bulls to Iupiter, and the utterance of solemn vows.

The consuls were the representatives of the royal authority, and consequently all other magistrates were bound to obey them, with the exception of the tribunes of the *plebs* and the dictator. During a dictatorship their powers fell into abeyance. In the city their authority was limited by the right of appeal to the people and the veto of the tribunes. But in the army, and over their subordinates, they had full power of life and death. Some of their original functions passed from them in course of time. Thus in B.C. 444, the business of the census was made over to the censors; in 366, the civil jurisdiction within the city, so far as it included the right of performing the acts of adoption, emancipation, and liberation of slaves, was transferred to the praetors. In the field, however, having the criminal jurisdiction in their hands, they had also the right of deciding in civil cases affecting the soldiers. In the general administration of public business the consuls, although formally recognized as the supreme authority, gradually became, in practice, dependent upon the Senate and the Comitia, as they had only the power of preparing the resolutions proposed and carrying them out if accepted. Within the city their powers were virtually confined to summoning the Senate and the Comitia and presiding over their meetings. They also nominated the dictators, and conducted the elections and legislation in the Comitia and the levies of soldiers. After the office of dictator fell into abeyance, the power of the consuls was, in cases of great danger, increased to dictatorial authority by a special decree of the Senate. See COMITIA.

An essential characteristic of the consular office was that it was collegial, and therefore if one consul died another (called *consul suffectus*) was immediately elected. This *consul suffectus* had absolutely the same authority as his colleague, but he had to lay down his office with him at the end of the year for which the two had been originally elected.

The power of the two consuls being equal, the business was divided between them. In the administration of the city they changed duties every month, the senior taking the initiative. With regard to their insignia—namely, the *toga praetexta*, *sella curulis*, and twelve lictors — the original arrangement was that the lictors walked in front of the officiating consul, while the other was only attended by an *accensus*. In later times the custom was for the lictors to walk before the officiating consul and behind the other.

In the field each consul commanded two legions with their allied troops; if they were in the same locality, the command changed from day to day. The question of the administration of the provinces they either settled by consent, or left it to be decided by lot. With the extension of the Empire the consuls became unable to undertake the whole burden of warfare, and the praetors were called in to assist. The provinces were then divided into consular and praetorian; the business of assignment being left to the Senate, which, after the year 122, was bound to make it before the elections. In the first century B.C., a law of Sulla deprived the consuls of an essential element of their authority, the military *imperium;* for it enacted that the consuls should spend their year of office in Rome, and only repair to the provinces and assume the *imperium* after its conclusion.

In the Civil Wars the consular office completely lost its old position, and though it continued to exist under the Empire, it became, practically, no more than an empty title. The emperors, who often held the office themselves, like Caesar, for several years in succession, had the right of nominating the candidates, and therefore, in practice, had the election in their own hands. It became usual to nominate several pairs of consuls for one year, so as to confer the distinction on as many persons as possible. In such cases, the consuls who came in on January 1, after whom the year was named, were called *consules ordinarii*, the *consules suffecti* counting as *minores*. Until the middle of the first century A.D., it was a special distinction to hold the consulship for a whole year; but after that no cases of this tenure occur. In time the insignia (*ornamenta consularia*), or honorary distinctions of the office, were given, in certain degrees, even to men who had not been consuls at all. The chief duties of the consuls now were to preside in the Senate and to conduct the criminal trials in which it had to give judgment. But, besides this, certain functions of civil jurisdiction were in their hands, notably the liberation of slaves, the provision for the costly games which occurred during their term of office, the festal celebrations in honour of the emperor, and the like. After the seat of empire was transferred to Constantinople, the consulate was, towards the end of the fourth century, divided between the two capital cities. The consulate of the Western capital came to an end in A.D. 534, that of the Eastern in 541. From that time the emperor of the East bore the title of *consul perpetuus*.

Consus. A Roman deity, the god of counsel, as his name denotes. His altar was in the Circus Maximus, and was always covered, except on his festival-day, the 18th of August, called Consualia. Horse and chariot races were celebrated on this occasion; and the working-horses, mules, and asses were crowned with flowers and allowed to rest. Hence Consus has probably been confounded with Neptunus Equestris. It was at the Consualia that the Sabine maidens were carried off by the Romans. See CIRCUS.

Contaminatio. A technical term for the combination of the plots of several Greek plays in a single Roman drama. This was done with considerable ingenuity by both Plautus and Terence. Thus, the *Epidicus* of Plautus is undoubtedly a specimen of dramatic contamination (Ladewig, in the *Zeitschrift für die Alterthumswissenschaft* [1841]); and the *Andria* and *Eunuchus* of Terence are excellent examples—the former combining the plots of Menander's Ἀνδρία and Περινθία, and the latter the plots of the same poet's Εὐνοῦχος and Κόλαξ. See Ihne, *Quaestiones Terentianae* (Bonn, 1843); and Kampe, *Lustspiele d. Ter. und ihre Originale* (Halberstadt, 1884); also the prologue to the *Andria*. The only instance of a play made up of the plays of two different authors is found in the *Adelphoe* of Terence, which is based upon the Ἀδελφοί of Menander and the Συναποθνήσκοντες of Diphilus.

Contarii and **Contāti** (κοντόφοροι). Soldiers armed with the long pike called *contus* (Veget. *Mil.* iii. 6).

Contio (erroneously spelt Concio). A contraction for *conventio;* that is, a meeting, or *conventus*. In a loose mode of speaking it denotes any popular assembly, even among non-Romans, and any speech or harangue addressed to such an assembly; hence the common phrase *contionem habere* means indifferently "to hold a meeting" and "to make a speech." Written speeches are also sometimes called *contiones*. In the technical sense, however, a contio was an assembly of the Roman people convened regularly (*per praeconem*) by a magistrate or a *sacerdos publicus*. A general in the field by virtue of his *imperium* could summon his troops as often as he pleased to hear what he had to say to them (*adlocutio*), and what he said before the assembled army was *pro contione* (Sall. *Iug.* 8).

Military Contio. (Roman coin.)

Contorniāti. This Italian word (French and English *contorniates*) has been usually employed by numismatists to denote a particular class of circular metallic objects bearing various devices and legends, which were issued, though not for circulation as currency, under the Roman Empire. The ancient appellation of these objects is not known; their modern name has been derived from the circle (in Italian *contorno*) which marks both of their sides, in incuse. The metal of which contorniates are composed is copper, with a certain amount of alloy; in size they are, as a rule, somewhat larger than the "first brass" coins (*sestertii*) of the early Empire, but they are much thinner and are characterized by the circular depression already referred to. The greater number of them present on both sides a device in relief, which is generally obtained, not by striking from a die (as in the case of the medallions), but by process of casting from a mould.

The first issue of the contorniates, which are all of Western origin, is assigned by Eckhel to the time of Constantine (A.D. 306–337), and this date has been practically accepted by the most recent authorities on the subject. Their fabrication, according to Sabatier, ceased under Anthemius (A.D. 464–472).

The types or devices of the contorniates, though offering considerable varieties, may be considered to have reference to the public games and spectacles in the Circus, the Odeum, the Stadium, and the Amphitheatre. The legends are nearly always descriptive of the types. See Robert, *Étude sur les Médaillons Contorniates* (Brussels, 1882); and the article Numismatics.

Contractus. See Obligationes.

Contrebia. One of the chief towns of the Celtiberi, in Hispania Tarraconensis, southeast of Saragossa.

Controversia. See Iudex.

Controversiae. A series of compositions on legal subjects by the elder Seneca, originally in ten books. The questions treated are hypothetical cases, and are discussed by way of practice for actual cases. With the ten books of *controversiae* is one book of *suasoriae* (see Declamatio), the whole collection bearing the title *Oratorum et Rhetorum Sententiae, Divisiones, Colores*. The work is a very valuable source of information regarding the history of rhetoric under the early Empire. Of the original ten books of the *controversiae*, only five (I., II., VII., IX., X.) have been preserved. The Gronovii published an edition, with notes in Latin (Amsterdam, 1672). Recent critical editions are those of Kiessling (Leipzig, 1872) and H. J. Müller (Prague, 1887). See Rhetorica.

Contubernāles (σύσκηνοι). Originally, men who served in the same army and lived in the same tent. It is derived from *taberna* (afterwards *tabernaculum*), "a military tent." Each tent was occupied by ten soldiers (*contubernales*), with a subordinate officer at their head, who was called *decanus*, and in later times *caput contubernii*.

Young Romans of illustrious families used to accompany a distinguished general on his expeditions or to his province, for the purpose of gaining under his superintendence a practical training in the art of war or in the administration of public affairs, and were, like soldiers living in the same tent, called his *contubernales* (Cic. *Pro Cael.* 30, 73).

In a still wider sense, the name *contubernales* was applied to persons connected by ties of intimate friendship and living under the same roof (Cic. *Ad Fam.* ix. 2); and hence when a free man and a slave, or two slaves, who were not allowed to contract a legal marriage, lived together as husband and wife, they were called *contubernales*, and their connection, as well as their place of residence, *contubernium* (Petron. 57, 6).

Contubernium (συσκηνία). See Concubina; Contubernales.

Contumacia. The Latin term for disobedience to the commands of a magistrate or judge; especially, absence from a trial without sufficient excuse. If the accuser were absent, he was considered as dropping his charge (see Tergiversatio), which he was not allowed to renew. The absence of the accused was taken as an admission of guilt. In a civil trial the consequence was immediate condemnation; and the like was the case in criminal trials if the accused failed to appear at the appointed time or on the last day of the trial. If the accused saw that his condemnation was certain, it was quite common for him to retire, and in

capital cases to go into voluntary exile—a proceeding which in no way influenced the further course of the proceedings.

Contus (*κοντός*). (1) A pole with a pointed iron at the end, used as a punt-pole by boatmen. (2) A huge pike such as those carried by barbarian soldiers (Tac. *Hist.* i. 44).

Contus. (Mosaic at Praeneste.)

Conubium. The contracting of a *matrimonium iustum*, or valid marriage, with all its legal consequences. As such a marriage could only take place between persons of equal status, the patricians and the plebeians had each for a long time a separate *conubium*, until B.C. 445, when the two orders were equalized in this respect. See MATRIMONIUM.

Convĕnae. A people in Aquitania, near the Pyrenees, and on both sides of the Garumna; a mixed race, which had served under Sertorius, and were settled in Aquitania by Pompey. Near their chief town, Lugdunum, were the warm baths called Aquae Convenarum (Bagnères).

Conventiōnes. See OBLIGATIONES.

Conventus. See PROVINCIA.

Convivium (*σύνδειπνον*). See CENA; SYMPOSIUM.

Cooks and Cookery. See CENA; CULINA; DIAETETICA.

Coöptatio. The election of a new member by the members of a corporation (*collegium*) to supply a vacant place. Among corporations which long filled their vacancies in this way may be mentioned the college of pontifices and augurs. The election was preceded by the nomination of a proper candidate by one of the members, and followed by his inauguration. See COLLEGIUM.

Copa. A short poem of thirty-eight lines in elegiac verse, ascribed to Vergil by Charisius. In it the writer invites his friend to spend the heated hours of the day in a rustic arbour, where wine, fruit, and pleasant company await him under the care of mine hostess (*copa*), who is described as dancing to the castanets (*crotala*). The style resembles Vergil's, though the tone is much more sprightly. See Ilgen, *Animadversationes in Virgilii Copam* (Halle, 1820); Birt, *Historia Hexam. Lat.* (Bonn, 1876); Egli, *Pseudo-Vergil. Gedichte* (Leipzig, 1886); and Leo's edition (Berlin, 1891).

Copae (*Κῶπαι*). An ancient town in Boeotia, on the north side of the lake Copaïs, which derived its name from this place.

Copaïs (*Κωπαΐς λίμνη*). A lake in Boeotia, formed chiefly by the river Cephissus, whose waters were connected with the Euboean Sea by several subterranean channels, called by the modern Greeks *katavóthra*, which were not, however, sufficient to carry off the waters, especially in the spring when the Copaic plain was flooded by the rains. In the time of Alexander the Great an enormous tunnel was cut through the rock for the discharge of the water. (See EMISSARIUM.) This proved effective until it fell into ruins, when the district again became unwholesome and marshy. In 1886, however, it was once more properly drained by a French company. The modern name of the lake is Topolias; its Homeric name, Cephisis (*Λίμνη Κηφισίς*, *Il.* v. 709). Its eels were much prized in antiquity.

Cophen (*Κωφήν*) or **Cophes** (*Κωφής*). The modern Cabul; the only grand tributary river which flows into the Indus from the west. Its own principal tributary is the Choaspes.

Cophĭnus (*κόφινος*). A large wicker basket, made of willow branches. From Aristophanes (*Av.* 1310) it would seem that it was used by the Greeks as a basket or cage for birds. The Romans used it for agricultural purposes; and Columella, in describing a method of procuring early cucumbers, says that they should be sown in well-manured soil, kept in a cophinus, so that in this case we have to consider it as a kind of portable hot-bed. Juvenal (iii. 14), when speaking of the Jews, uses the expression *cophinus et foenum* (a truss of hay), figuratively to designate their high degree of poverty. See CORBIS.

Copia. The goddess of plenty among the Romans, represented as bearing a horn filled with fruits, etc. See CORNU COPIAE.

Copia. (Naples.)

Copis (*κοπίς*). (1) A sword or scimetar, curved like a sickle and used by the Thessalians and in the East (Eurip. *Electra*, 837; Xen. *Cyrop.* ii. 1). (2) A knife used in cutting the flesh of animals in sacrifices or in the kitchen (Plut. *Lyc.* 2).

Copper. See AES.

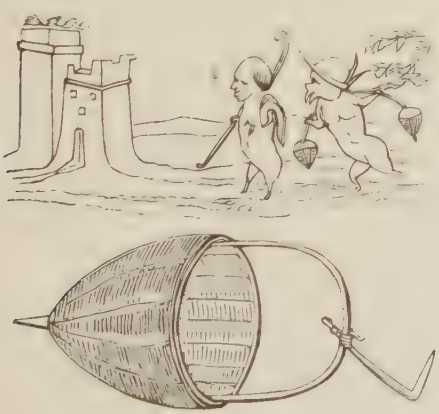
Coptos (*Κοπτός*). A city of the Thebaïs or Upper Egypt, lying a little to the east of the Nile, some distance below Thebes. Under the Ptolemies it occupied an important commercial position. In 1894 excavations conducted on its site by Mr. Petrie brought to light many valuable remains of the earliest Egyptian art.

Coquus. A cook. See CENA; CULINA.

Cora. An ancient town in Latium, in the Volscian Mountains, southeast of Velitrae. It is now called Cori, and contains an ancient temple and massive polygonal walls. See p. 409.

Coracesium (*Κορακήσιον*). A very strong city of Cilicia Aspera, on the borders of Pamphylia, standing upon a steep rock, and possessing a good harbour. It was the only place in Cilicia that offered a successful resistance to Alexander the Great.

Coralli. A savage people of Sarmatia Europea, who inhabited the shores of the Euxine, near the mouth of the Danube (Ovid, *Pont.* iv. 2, 37).



Corassiae (*Κορασσίαι*). A group of small islands in the Icarian Sea, southwest of Icaria. They must not be confounded, as they often are, with the islands Corseae or Corsiae, off the Ionian coast, and opposite the promontory Ampelos, in Samos (Pliny, *H. N.* iv. 12. 23).

Temple at Cora (Cori).

Corax (Κόραξ). A Sicilian rhetorician, who flourished about B.C. 467, and wrote the earliest work on the art of rhetoric. It was entitled Τέχνη (Cic. *De Orat.* i. 20).

Corbis, Corbŭla, Corbicŭla. A basket of very peculiar form and common use among the Romans, both for agricultural and other purposes. It was made of osiers twisted together, and was of a conical or pyramidal shape (Varr. *L. L.* v. 139). A basket answering precisely to this description, both in form and material, is still to be seen in every-day use among the Campanian peasantry, which is called in the language of the country *la corbella*, a representation of which is introduced in the lower portion of the annexed illustration. The hook attached to it by a string

Corbis. (The upper specimen from a drawing at Herculaneum; the lower a basket used by Campanian peasantry.)

is for the purpose of suspending it to a branch of the tree into which the man climbs to pick his oranges, lemons, olives, or figs. The upper portion of the illustration (*Antichità di Ercolano*, tom. iii. tav. 29) represents a Roman farm, in which a farming man, in the shape of a dwarfish satyr, is seen with a pole (ἄσιλλα) across his shoulder, to each end of which is suspended a basket resembling in every respect the Campanian *corbella*. Like the *calathus*, which it somewhat resembles in shape, it is sometimes employed as a distinguishing emblem of Ceres.

Corbĭtae. Merchantmen of the larger class, so called because they hung out a *corbis* at the masthead for a sign (Festus; Nonius, s. v.). They were also termed *onerariae;* and hence Plautus, in order to designate the voracious appetites of some women, says *corbitam cibi comesse possunt* (*Cas.* iv. 1, 20). The modern *corvette* gets its name from the corbita.

Corbŭlo, Cn. Domitius. A general who distinguished himself by his campaigns against the Germans and the Parthians in the reigns of Claudius and Nero. To avoid the death destined for him by the orders of the jealous Nero, he committed suicide at Cenchreae, A.D. 67.

Corcȳra (Κέρκυρα, later Κόρκυρα). An island in the Ionian Sea, off the coast of Epirus, in which Homer is thought to have placed the fabled gardens of Alcinoüs. (See Scheria.) It is said to have been first known under the name of Drepané, perhaps from its similarity of shape to a scythe. To this name succeeded that of Scheria, always used by Homer, and by which it was possibly known in his time. From the *Odyssey* we learn that this island was then inhabited by Phaeacians, a people who, even at that early period, had acquired considerable skill in nautical affairs and possessed extensive commercial relations, since they traded with the Phœnicians, and also with Euboea and other countries (*Odyss.* vi. vii.).

Corcyra was in after-days the principal city of the island, and was situated precisely where the modern town of Corfu stands. Scylax speaks of

three harbours, one of which is depicted as beautiful. In the Middle Ages, the citadel obtained the name of Κορυφώ, from its two conical hills or crests, which appellation was, in process of time, applied to the whole town and finally to the island itself. Hence the modern name of Corfu, which is but a corruption of the former. The following is a sketch of the history of this island. Its earlier periods are enveloped in the mist of uncertainty and conjecture. A colony of Colchians is said to have settled there about 1349 years before our era. In process of time, Corcyra, enriched and aggrandized by its maritime superiority, became one of the most powerful nations in Greece (Thuc. i. 1). The Corinthians, under Chersicrates, formed a settlement here in B.C. 753, and 415 years afterwards it was captured by Agathocles of Syracuse, who gave it to his daughter Lanessa upon her marriage with Pyrrhus of Epirus. It was occupied by the troops of the Illyrian queen Teuta, about fifty-eight years after its seizure by Agathocles, but was soon after taken from her by the Romans, under the consul Cn. Flavius; and, although it had the privileges of a free city, it remained under the Romans for many centuries. In the time of Strabo it was reduced to extreme misery. See Schmidt's treatise *Korkyräische Studien* (Leipzig, 1890). (2) An island in the Adriatic, on the coast of Illyricum, termed NIGRA, "Black" (in Greek Μέλαινα), to distinguish it from the more celebrated island of the same name. It is now Curzola. Apollonius accounts for the epithet just mentioned from the dark masses of wood with which it was crowned.

Cordax (*κόρδαξ*). An extremely indecent dance peculiar to the comic chorus. (See CHORUS; COMOEDIA.) The gestures, and, indeed, the costumes, of the choreutae were such that even the Athenians considered it justifiable only at the festival of Dionysus, when every one was allowed to be drunk in honour of the god; for if an Athenian citizen danced the cordax sober and unmasked, he was looked upon as the most shameless of men and forfeited altogether his character for respectability (Theophr. *Charact.* 6). Aristophanes himself, who did not much scruple at violating common decency, claims some merit for his omission of the cordax in the *Clouds*, and for the more modest attire of his chorus in that play. According to Athenaeus, the cordax was a sort of *ὑπόρχημα*, or imitative dance, in which the choreutae expressed the words of the song by comic gesticulations. Such a dance was the hyporcheme of the Spartan *δεικελίκται*—buffoons, whose peculiar mimic gestures seem to have formed the basis of the Dorian comedy, which prevailed in Megaris, and which probably was the parent stock, not only of the Attic, but also of the Sicilian and Italian comedy. The chief features of the cordax are probably preserved in the Neapolitan *tarantella*.

Cordŭba. The modern Cordova; one of the largest cities in Spain, and the capital of Baetica, on the right bank of the Baetis. It became a Roman colony B.C. 152, and was the birthplace of the two Senecas and of Lucan.

Corduēné. See GORDYENÉ.

Cordus, AULUS CREMUTIUS. A Roman writer of history who, under Tiberius, in A.D. 25, was accused of treason for having praised Brutus, the slayer of Caesar, and for styling Cassius "the last of the Romans" (Tac. *Ann.* iv. 34), though the real cause of his prosecution is to be found in some expressions that gave offence to Seianus, the emperor's powerful minister (Sen. *ad Marc.* xxii. 4). Besides his history he appears to have written a work on prodigies (*Admiranda*), and was favorably known as a pleader. See Held, *De Vita Scriptisque A. Cremutii Cordi* (Schweidnitz, 1841), and Rathlef, *De A. Cremutio Cordo* (Dorpat, 1860).

Koré (Κόρη). "The Maiden"; a name by which Persephoné is often called. See PERSEPHONÉ.

Coressus (Κόρεσσος). (1) A lofty mountain in Ionia, four miles from Ephesus, with a place of the same name at its foot. (2) A town in the island of Ceos.

Corfinium. The chief town of the Paeligni in Samnium, strongly fortified, and memorable as the place which the Italians in the Social War destined to be the new capital of Italy in place of Rome, on which account it was called Italica.

Coriarius (*βυρσεύς, δερματομαλάκτης*). A tanner. The tanners formed a guild at Rome distinct from the shoemakers. See Plut. *Numa*, 17.

Corinna (Κόριννα). A poetess of Thebes (fl. B.C. 490), or, according to others, of Tanagra, distinguished for her skill in lyric verse, and remarkable for her personal attractions. She was the rival of Pindar, while the latter was still a young man; and, according to Aelian, she gained the victory over him no less than five times. Pausanias, in his travels, saw at Tanagra a picture, in which Corinna was represented as binding her head with a fillet of victory, which she had gained in a contest with Pindar. He supposes that she was less indebted for this victory to the excellence of her poetry than to her Boeotian dialect, which was more familiar to the ears of the judges at the games, and also to her extraordinary beauty. Corinna afterwards assisted the young poet with her advice. It is related of her that she recommended him to ornament his poems with mythical narrations; but that when he had composed a hymn, in the first six verses of which (still extant) almost the whole of the Theban mythology was introduced, she smiled and said, "We should sow with the hand, not with the whole sack" (Pausan. ix. 22; Plut. *De Glor. Ath.*). She was surnamed "the Fly" (Μυῖα), as Erinna had been styled "the Bee." The poems of Corinna were all in the Boeotian or Aeolic dialect. Too little of her poetry, however, has been preserved to allow of our forming a safe judgment of her style of composition. The extant fragments refer mostly to mythological subjects, particularly to heroines of the Boeotian legends. These remains are given by Bergk in his *Poetae Lyrici Graeci* (4th ed. 1878).

Corinthĭacus Isthmus (Ἰσθμὸς Κορίνθου). An isthmus between the Saronicus Sinus and Corinthiacus Sinus, and uniting the Peloponnesus to the northern parts of Greece. Its breadth, in the narrowest part, was less than six miles (or not quite five miles). It has lately (1893) been cut by a canal. Ships were drawn, by means of machinery, from one sea to the other, near the town of Schoenus, over the narrowest part of the isthmus, which was called Διόλκος. This could only be accomplished, however, with the vessels usually employed in commerce, or with

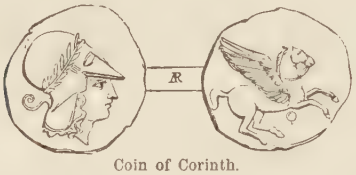
λέμβοι, which were light ships of war, chiefly used by the Illyrians and Macedonians. The tediousness and expense attending this process, and still more probably the difficulty of circumnavigating the Peloponnesus, led to frequent attempts, at various periods, for effecting a junction between the two seas; but all proved equally unsuccessful. Demetrius Poliorcetes abandoned the enterprise, because it was found that the two gulfs were not on the same level. We read of the attempt having been made before his time by Periander and Alexander, and, subsequently to Demetrius, by Iulius Caesar, Caligula, Nero, and Herodes Atticus. Dio Cassius tells nearly the same story about digging through the isthmus as that which is related to travellers at this day. He says that blood issued from the ground; that groans and lamentations were heard, and terrible apparitions seen. In order to stimulate the perseverance of the people, Nero took a spade and dug himself (Dio Cass. lxiii. 16; and cf. Suet. *Ner.* 19). Lucian informs us, that Nero was said to have been deterred from proceeding, by a representation made to him, similar to that which Demetrius received respecting the unequal levels of the two seas (Plut. *De Cleom.*). The Isthmus of Corinth derived great celebrity from the games which were celebrated there every five years in honour of Palaemon or Melicerta, and subsequently of Poseidon (Pausan. i. 44). These continued in vogue when the other gymnastic exercises of Greece had fallen into neglect and disuse; and it was during their solemnization that the independence of Greece was proclaimed, after the victory of Cynoscephalae, by order of the Roman Senate and people (Polyb. xviii. 29; Liv. xxxiii. 32). After the destruction of Corinth, the superintendence of the Isthmian Games was committed to the Sicyonians by the Romans; on its restoration, however, by Iulius Caesar, the presidency of the games again reverted to the Corinthian settlers (Pausan. ii. 2). See ISTHMIA.

Corinthiăcus Sinus (Κορινθιακὸς κόλπος). The modern Gulf of Lepanto, an arm of the sea running in between the coast of Achaia and Sicyonia to the south, and that of Phocis, Locris, and Aetolia to the north. The gulf had the general appellation of Corinthian as far as the Isthmus, but it was divided into smaller bays, the names of which were sometimes poetically used for the entire gulf. Its different names were the Crissaean, Cirrhaean, Delphic, Calydonian, Rhian, and Halcyonian.

Corinthian Brass. See AES.

Corinthian Order of Architecture. See ARCHITECTURA; CAPITULUM; COLUMNA.

Corinthus (Κόρινθος). A famous city of Greece, situated on the isthmus of the same name. Commanding by its position the Ionian and the Aegean seas, and holding, as it were, the keys of the Peloponnesus, Corinth, from the pre-eminent advantages of its situation, was already the seat of opulence and the arts, while the rest of Greece was sunk in comparative obscurity and barbarism. Its origin is, of course, obscure; but we are assured that it already existed under the name of Ἐφύρη before the siege of Troy. According to the assertions of the Corinthians themselves, their city received its name from Corinthus, the son of Zeus; but Pausanias does not credit this popular tradition, and cites the poet Eumelus to show that the appellation was really derived from Corinthus, the son of Marathon (ii. 1). Homer certainly employs both names indiscriminately (*Il.* ii. 570; xiii. 663). Pausanias reports that the descendants of Sisyphus reigned at Corinth until the invasion of their territory by the Dorians and the Heraclidae, when Doridas and Hyanthidas, the last princes of this race, abdicated the crown in favour of Aletes, a descendant of Heracles, whose lineal successors remained in possession of the throne of Corinth during five generations, when the crown passed into the family of the Bacchiadae, so named from Bacchis, the son of Prumnis, who retained it for five other generations. After this the sovereign power was transferred to annual magistrates, still chosen, however, from the line of the Bacchiadae, with the title of πρυτάνεις.



The oligarchy so long established by this rich and powerful family was at length overthrown, about B.C. 629, by Cypselus, who banished many of the Corinthians, depriving others of their possessions, and putting others to death (Herod. v. 92). Among those who fled from his persecution was Demaratus, of the family of the Bacchiadae, who settled at Tarquinii in Etruria, and whose descendants became sovereigns of Rome. The reign of Cypselus was prosperous, and the system of colonization, which had previously succeeded so well in the settlements of Corcyra and Syracuse, was actively pursued by that prince, who added Ambracia, Anactorium, and Leucas to the maritime dependencies of the Corinthians.

Corinth and its Ports.

Cypselus was succeeded by his son Periander. On the death of this latter (B.C. 585), after a reign of forty-four years, according to Aristotle, his nephew Psammetichus came to the throne, but lived only

three years. At his decease Corinth regained its independence, when a moderate aristocracy was established, under which the Republic enjoyed a state of tranquillity and prosperity unequalled by any other city of Greece. We are told by Thucydides that the Corinthians were the first to build war-galleys or triremes; and the earliest naval engagement, according to the same historian, was fought by their fleet and that of the Corcyreans, who had been alienated from their mother-State by the cruelty and impolicy of Periander. The city is believed to have had at this time a population of 300,000 souls.

Coin of Corinth.

The arts of painting and sculpture, more especially that of casting in bronze, attained to the highest perfection at Corinth, and rendered this city the ornament of Greece, until it was stripped by the rapacity of a Roman general. Such was the beauty of its vases, that the tombs in which they had been deposited were ransacked by the Roman colonists whom Iulius Caesar had established there after the destruction of the city; and these, being transported to Rome, were purchased at enormous prices. See AES.

When the Achaean League (q.v.) became involved in a destructive war with the Romans, Corinth was the last hold of their tottering Republic; and had its citizens wisely submitted to the offers proposed by the victorious Metellus, it might have been preserved; but the deputation of that general having been treated with scorn and even insult, the city became exposed to all the vengeance of the Romans (Polyb. xl. 4. 1). L. Mummius, the consul, appeared before its walls with a numerous army, and after defeating the Achaeans in a general engagement, entered the town, now left without defence and deserted by the greater part of the inhabitants. It was then given up to plunder and finally set on fire; the walls also were razed to the ground, so that scarcely a vestige of this once great and noble city remained (B.C. 146). Polybius, who saw its destruction, affirmed that he had seen the finest paintings strewed on the ground, and the Roman soldiers using them as boards for dice or draughts. Pausanias reports (vii. 16) that all the men were put to the sword, the women and children sold, and the most valuable statues and paintings removed to Rome. (See MUMMIUS.) Strabo observes that the finest works of art which adorned that capital in his time had come from Corinth. He likewise states that Corinth remained for many years deserted and in ruins. Iulius Caesar, however, not long before his death, sent a numerous colony thither, by means of which Corinth was once more raised from its state of ruin, and renamed Colonia Iulia Corinthus. It was already a large and populous city and the capital of Achaia, when St. Paul preached the Gospel there for a year and six months (Acts, xviii. 11). It is also evident that when visited by Pausanias it was thickly adorned by public buildings and enriched with numerous works of art, and as late as the time of Hierocles we find it styled the metropolis of Greece. In a later age the Venetians received the place from a Greek emperor; Mohammed II. took it from them in 1458; the Venetians recovered it in 1699, and fortified the Acrocorinthus again; but the Turks took it anew in 1715, and retained it until driven from the Peloponnesus in 1822. In 1858, it was wholly destroyed by an earth-

Ancient Corinth. (Restoration.)

quake, since which time it has been rebuilt upon a site three miles to the northeast.

An important feature of the scenery around Corinth was the Acrocorinthus, a mention of which has been made in a previous article. (See ACROCORINTHUS.) On the summit of this hill was erected a temple of Aphroditê, to whom the whole of the Acrocorinthus, in fact, was sacred. In the times of Corinthian opulence and prosperity, it is said that the shrine of the goddess was attended by no less than one thousand female slaves, dedicated to her service as courtesans. These priestesses of Aphroditê contributed not a little to the wealth and luxury of the city, whence arose the well-known expression, *οὐ παντὸς ἀνδρὸς εἰς Κόρινθον ἔστ' ὁ πλοῦς*, or, as Horace expresses it (*Epist.* i. 17, 36), "*Non cuivis homini contingit adire Corinthum*," in allusion to its expensive pleasures.

Corinth was famed for its three harbours—Lechaeum, on the Corinthian Gulf, and Cenchreae and Schoenus, on the Saronic. Near this last was the *Δίολκος*, where vessels were transported over the isthmus by machinery. The city was the birthplace of the painters Ardices, Cleophantus, and Cleanthes; of the statesmen Periander, Phidon, Philolaüs, and Timoleon; and of Arion, who invented the dithyramb.

See Wagner, *Rerum Corinthiacarum Specimen* (Darmstadt, 1824); Barth, *Corinthiorum Commercii et Mercaturae Historiae Particula* (Berlin, 1844); and E. Curtius, *Peloponnesos*, vol. ii. p. 514 foll.

Coriolānus, GAIUS MARCIUS. A distinguished Roman of patrician rank, whose story forms a brilliant legend in the early history of Rome. His name at first was Gaius Marcius, but having contributed, mainly by his great personal valour, to the capture of Corioli, and the defeat of a Volscian army, assembled for its aid, on the same day, he received for this gallant exploit the surname of Coriolanus. Not long after this, however, during a scarcity at Rome, he opposed the distribution of a supply of provisions, in part sent by Gelon of Sicily, and advised the patricians to make this a means of recovering the power which had been wrested from them by the commons. For this and other conduct of a similar nature, he was tried in the Comitia Tributa and condemned to perpetual banishment. To gratify his vindictive spirit, Coriolanus presented himself as a suppliant to Tullius Aufidius, the leading man among the Volsci; was well received by him and the whole nation; and, war being declared, was invested, along with Aufidius, with the command of the Volscian forces. By his military skill and renown Coriolanus at once defeated and appalled the Romans, till, having taken almost all their subject-cities, he advanced at the head of the Volscian army against Rome itself and encamped only five miles from it, at the Fossae Cluiliae. All was terror and confusion in the Roman capital. Embassy after embassy was sent to Coriolanus, to entreat him to spare his country, but he remained inexorable, and would grant peace only on condition that the Romans restored all the cities and lands which they had taken from the Volsci and gave to the latter the freedom of Rome, as had been done in the case of the Latins. After all other means of conciliation had failed, a number of Roman matrons, headed by the mother (Veturia) and the wife (Volumnia) of Coriolanus, proceeded to his tent, where their lofty remonstrances were more powerful than the arms of Rome had proved; and the son, after a brief struggle with his feelings, yielded to their request, exclaiming at the same time, "Oh, mother, thou hast saved Rome, but destroyed thy son!" The Volscian forces were then withdrawn, and Rome was thus saved, by feminine influence alone, from certain capture. On returning to the Volsci with his army, Coriolanus, according to one account, was summoned to trial for his conduct, and was slain in a tumult during the hearing of the cause, a faction having been excited against him by Tullius Aufidius, who was jealous of his renown (Dion. Hal. *Ant. Rom.* viii. 59). According to another statement, he lived to an advanced age among the Volscian people, often towards the close of his life exclaiming, "How miserable is the state of an old man in banishment!" (Plut. *Coriol.*; Liv. ii. 33 foll.). Niebuhr, who writes the name Gnaeus Marcius, on what he considers good authority, indulges in some acute speculations on the legend of Coriolanus. He thinks that poetical invention has here most thoroughly stifled the historical tradition. He regards the name Coriolanus as of the same kind merely with such appellations as Camerinus, Collatinus, Mugillanus, Vibulanus, etc., which, when taken from an independent town, were assumed by its *πρόξενος*, when from a dependent one, by its *patronus*. The capture of Corioli belongs merely, in his opinion, to an heroic poem. As for Coriolanus himself, he thinks that he merely attended the Volscian standard as leader of a band of Roman exiles. The story of Coriolanus has received a brilliant setting from the genius of Shakespeare.

Coriŏli. A town in Latium, capital of the Volsci, from the capture of which, in B.C. 492, Gaius Marcius obtained the surname of Coriolanus. See CORIOLANUS.

Corippus, FLAVIUS CRESCONIUS. An African scholar, who in the second half of the sixth century A.D. composed two historical epics—one in seven books (or eight), in celebration of the Libyan war of Iohannes Patricius (*Iohannis, sive de Bellis Libycis*); and the other on the exploits of Iustinus (A.D. 565–578), in four books (*De Laudibus Iustini*). The latter is in the worst manner of Byzantine flattery, but is written in a flowing style and in imitation of good models, such as Vergil and Claudian. His works have been edited by I. Bekker, with those of Merobaudes (q. v.), in the *Corp. Scriptorum Byzant.* (Bonn, 1836). The most recent text is that of Petschenig (Berlin, 1886). On the style of Corippus, see the monograph by Amann, *De Corippo Priorum Poetarum Lat. Imitatore* (Oldenb. 1885).

Cormăsa (*Κόρμασα*). An inland town of Pamphylia, or of Pisidia, taken by the consul Manlius.

Corn Laws. See FRUMENTARIAE LEGES.

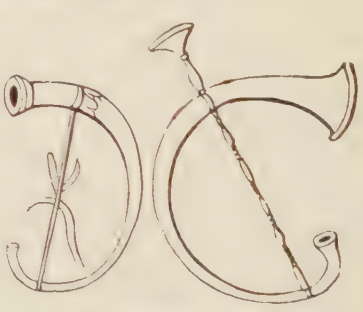
Cornelia. (1) A daughter of Scipio Africanus Maior, and mother of Tiberius and Gaius Gracchus. Cornelia occupies a high rank for the purity and excellence of her private character, as well as for her masculine tone of mind. She was married to Sempronius Gracchus, and was left on his death with a family of twelve children, the care of whom devolved entirely upon herself. After the loss of her husband, her hand was sought by Ptolemy Philometor, king of Egypt, but the offer was declined. Plutarch speaks in high terms of her conduct during widowhood. Having lost all her children but three—one daughter, who was married to Scipio Africanus the younger, and two sons, Tiberius and Gaius—she

devoted her whole time to the education of these. Valerius Maximus relates an anecdote of Cornelia, which has often been cited. A Campanian lady, who was at the time on a visit to her, having displayed to Cornelia some very beautiful ornaments which she possessed, desired the latter, in return, to exhibit her own. The Roman mother purposely detained her in conversation until her children returned from school, when, pointing to them, she exclaimed, "These are my ornaments!" (*Haec ornamenta mea sunt*, Val. Max. 4 init.). Plutarch informs us that some persons blamed Cornelia for the rash conduct of her sons in after-life, she having been accustomed to reproach them that she was still called the mother-in-law of Scipio, not the mother of the Gracchi (Plut. *T. Gracch.* 8). She bore the untimely death of her sons with great self-control, and a statue was afterwards erected in honour of her by the Roman people, bearing for an inscription the words "Cornelia, mother of the Gracchi" (Plut. *C. Gracch.* 4). (2) Daughter of Metellus Scipio, married to Pompey after the death of her first husband, Publius Crassus. She was remarkable for the variety of her accomplishments and the excellence of her private character. Plutarch makes her to have been versed, not only in the musical art, but in polite literature, in geometry, and in the precepts of philosophy (Plut. *Pomp.* 55). After the battle of Pharsalus, when Pompey joined her at Mitylené, Cornelia, with tears, ascribed all his misfortunes to her union with him, alluding at the same time to the unhappy end of her first husband, Crassus, in his expedition against the Parthians. (Cf. Lucan, viii. 88.) She was also a witness, from her galley, of the murder of her husband on the shores of Egypt (Plut. *Pomp.* 79). (3) A daughter of Cinna. She was Iulius Caesar's second wife, and mother of Iulia, the wife of Pompey. She died young. Plutarch says it had been the custom at Rome for the aged women to have funeral panegyrics, but not the young. Caesar first broke through this custom by pronouncing one upon Cornelia (Plut. *Caes.* 5).

Cornelia Gens. The most distinguished of all the Roman gentes. All its great families belonged to the patrician order. The names of its most distinguished patrician families are Cethegus, Cinna, Cossus, Dolabella, Lentulus, Scipio, and Sulla. The names of the plebeian families are Balbus and Gallus.

Cornelia Orestilla. See ORESTILLA.

Cornelius Nepos. See NEPOS.



Cornĭcen. A horn-blower in the Roman army who gave the signal for the attack, on an ox-horn mounted in silver. See CORNU.

Cornicŭlum. A town in Latium in the mountains north of Tibur, celebrated as the residence of the parents of Servius Tullius.

Cornificius. (1) QUINTUS, a contemporary of Cicero, distinguished for talents and literary acquirements, who attained to some of the highest offices in the State. Catullus and Ovid both speak of his poetic abilities, and he appears to have been the friend of both. Cornificius distinguished himself as propraetor in the Illyrian War, and also as governor of Syria and afterwards of Africa. In this latter province he espoused the cause of the Senate after Caesar's death, and received and gave protection to those who had been proscribed by the Second Triumvirate. He lost his life, however, while contending in that country against Sextius, who had been sent against him by Octavianus. Some scholars make this Cornificius to have been the author of the rhetorical treatise to Herennius commonly ascribed to Cicero. (See Quint. iii. 1. 21.) He is said also to have been an enemy of Vergil's, but this supposition violates chronology, since the poet only became eminent subsequent to the date when Cornificius died. (2) LUCIUS, a partisan of Octavianus, by whom he was appointed to accuse Brutus, before the public tribunal at Rome, of the assassination of Caesar (Plut. *Brut.* 27). He afterwards distinguished himself, as one of Octavianus's lieutenants, by a masterly retreat in Sicily during the war with Sextus Pompeius. He was consul, B.C. 35.

Cornĭger. "Horn-bearing." A surname of Bacchus (Ovid, *Fast.* iii. 481), and of Iupiter Ammon, who was worshipped in the form of a ram.

Cornu. A wind instrument, anciently made of horn, but afterwards of brass (Varr. *L. L.* v. 117). According to Athenaeus, it was an invention of the Etruscans. Like the *tuba*, it differed from the *tibia* in being a larger and more powerful instrument, and from the *tuba* itself in being curved nearly in the shape of a C, with a crosspiece to steady the instrument for the convenience of the performer. In Greek it is called *στρογγύλη σάλπιγξ*. It had no stopples or plugs to adjust the scale to any particular mode; the entire series of notes was produced without keys or holes, by the modification of the breath and of the lips at the mouthpiece. Probably, from the description given of it in the poets, it was, like our own horn, an octave lower than the trumpet. The *classicum*, which originally meant a signal, rather than the musical instrument which gave the signal, was usually sounded with the cornu.

Cornua. (Bartholini.)

Cornu also signifies the end of the sailyards (see NAVIS), a part of the helmet in which the crest was fixed (see GALEA), the end of the stick on which books were rolled (see LIBER), a part of a bow, a part of the lyre, and the wing of an army. See EXERCITUS.

Cornu Copiae, or as one word, **Cornucopiae**, later **Cornucopia** (Ammian. Marcell. xxii. 9, § 1; xxv. 2, § 3). The horn of fruitfulness and abundance, used as the symbol of plenty. In mythology there are two different tales explaining the origin of this horn. One traces it to the horn of the goat Amalthea, which suckled Zeus. The horn was broken off and filled with fruits and flowers, and was afterwards placed by Zeus, together with the goat, among the stars. (See AMALTHEA.) Another legend re-

lates that it was the horn of the river-god Acheloüs (q. v.), which was wrenched off by Heracles, and which became forthwith a horn of plenty. Later mythologists combined the two tales, and tried to explain how the horn of Amalthea became the horn of Acheloüs (Apollod. ii. 7, § 5). The origin of this symbol may perhaps be traced in the use of the horns of oxen or goats as drinking-cups; hence the *ῥυτόν*, or drinking-horn, which is frequently confounded with the horn of abundance (Athen. xi. 468 d, 497 c).

The cornucopia constantly appears in works of art, especially of the Roman period, as the symbol of abundance associated with various deities, as Fortuna, Ceres, etc. See COPIA.

Cornus (Κόρνος). A town in the western part of Sardinia (Livy, xxiii. 40, 41).

Cornūtus, L. Annaeus. A Greek philosopher, born at Leptis in Africa, who lived and taught at Rome during the reign of Nero. The appellation L. Annaeus appears to indicate a client or freedman of the Seneca family. His tenets were those of the Stoic sect, and his name was not without distinction in that school of philosophy. He excelled in criticism and poetry; but his principal studies were of a philosophical character. His merit as a teacher of the Stoic doctrine sufficiently appears from his having been the preceptor of the satirist Persius. Persius, dying before his master, left him his library, with a considerable sum of money; but Cornutus accepted only the books, and gave the money to the sisters of his pupil. The poet Lucan was also one of his students. Under Nero, Cornutus was driven into exile (A.D. 68) for his freedom of speech. The emperor having written several books in verse on the affairs of Rome, and his flatterers advising him to continue the poem, the honest Stoic had the courage to remark that he doubted whether so large a work would be read; and when it was urged that Chrysippus had written as much, he replied, "His writings were useful to mankind." After so unpardonable an offence against imperial vanity, the only wonder is that Cornutus escaped with his life. He composed some tragedies, and a large number of other works, the only one of which that has come down to us is the "Theory concerning the Nature of the Gods" (*Θεωρία περὶ τῆς τῶν Θεῶν Φύσεως*); or, as it is entitled in one of the MSS., "Concerning Allegories" (*Περὶ Ἀλληγοριῶν*). Cornutus, in fact, in this production seeks to explain the Greek mythology on allegorical and physical principles. It has been edited by Lang (Leipzig, 1881). See Jahn's prolegomena to his Persius, p. viii.

Coroebus (Κόροιβος). (1) A Phrygian, the son of Mygdon. He loved Cassandra, and for that reason fought on the side of the Trojans. (2) An Elean, who gained the victory in the stadium at the Olympic Games, B.C. 776, from which time the Olympiads begin to be reckoned. See CALENDARIUM.

Corolla. See CORONA.

Corollarium. A present consisting of a garland of gold or silver leaves, given to successful actors and performers in addition to other *honoraria*. It thus became a term for any free gift whatever.

Corōna (*στέφανος*). A crown; that is, a circular ornament of metal, leaves, or flowers, worn by the ancients round the head or neck, and used as a festive as well as funeral decoration, and as a reward of talent, military or naval prowess, and civic worth. It includes the synonyms, for which it is often used absolutely, *στεφάνη, στέφος, στεφάνωμα, corolla, sertum*, "a garland or wreath."

The use of crowns on public and private occasions was so general in antiquity that there was a special literature on the subject, of which we have remains in Theophrastus (*Hist. Pl.* vi. 6), Athenaeus (lib. xv.), Pliny (*H. N.* xxi. §§ 1–70, xxii. §§ 4–13), and Pollux (vi. 106–107). At Rome Claudius Saturninus wrote a book *De Coronis* (Tertull. *De Cor. Mil.* 7, 10, 12).

Crowns originally consisted of wool or the foliage of trees, especially myrtle-twigs or ivy, with which flowers of various kinds were subsequently interwoven. The makers and sellers of these garlands or crowns formed a distinct trade, and were called in Greece *στεφανηπλόκοι* or *στεφανοποιοί*, and in Rome *coronarii* (Plin. xxi. §§ 54, 177).

The flowers used in making crowns were called in Greek *στεφανώματα*, in Latin *coronamenta*.

The foliage and flowers were sometimes fastened together by the inner bark of the linden-tree, such garlands being known as *coronae sutiles*, also *nexae* and *sertae*. At Athens, the flower-market was called *αἱ μυρρίναι*, because myrtle (*μύρτος*) was the material most commonly used in making them. Many of the flower-girls were celebrated in antiquity, especially Glycera the mistress of Pausias (Plin. *H. N.* xxi. § 4; xxxv. § 125).

At Rome, the temple of the Lares, at the head of the Via Sacra, was most frequented by the venders of garlands. The crowns among the Romans were often made of the leaves of plants, especially ivy, myrtle, and parsley. At Athens, the violet was very popular, but both the Greeks and Romans preferred the rose to any other flower, calling it "the king of flowers" and "the rose of the loves." (See Achill. Tat. ii. 1; Anacr. 5.) They were especially used for convivial crowns; and garlands of them were in request at Rome even in the winter, so that they were grown under glass (Mart. iv. 22, 5; xiii. 127), and were also imported from Egypt (Mart. vi. 80). As luxury increased, the leaves of the *nardus* or spikenard were brought from India for crowns (Mart. xiii. 51; Plin. *H. N.* xxi. § 11). Garlands were also made of dried flowers, especially of amaranth, which, when moistened, had the appearance of fresh flowers, so that garlands of it were called *coronae hibernae*. The same name was given to crowns of artificial flowers (Plin. xxi. § 5). Sometimes they were made of a thin layer of metal covered with gold or silver, and called *corollae* or *corollaria inaurata* or *inargentata*.

The *corona Etrusca* was made of pure gold in the form of leaves, sometimes set with gems, and terminating in ribbons (*lemnisci*) of the same metal. It was held by a slave over the head of a general when he entered Rome in triumph (Plin. xxxiii. § 11).

Crowns adorned with such pendent ribbons were called *coronae lemniscatae* (Serv. *ad* Verg. *Aen.* v. 269, vi. 772). The lemnisci (*λημνίσκοι*) were first made of wool, adorned with ribbons (from *λῆνος*, "wool," Fest. p. 155, M.), afterwards of linden-bast, and subsequently of gold. Crowns so adorned were the highest rewards of victors, whence Cicero speaks of *palma lemniscata*, where *palma* means

a victory or the highest reward (*Rosc. Am.* 35, 100).

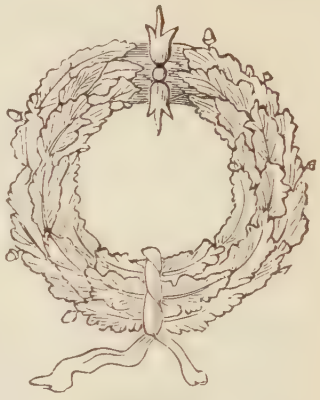
Coronae longae resembled what we call festoons, and were employed to decorate the doors of houses, temples, amphitheatres, etc. (Ovid, *Fast.* iv. 738).

The *corona pactilis*, probably the same as the *corona plectilis* of Plautus (*Bacch.* i. 1, 37), *corona torta* (Propert. iii. 20, 18), *plexa* (Lucret. v. 1399), and as the στέφανοι πλεκτοί and κυλιστὸς στέφανος of the Greeks, was made of flowers, shrubs, grass, ivy, wool, or any flexible material twined or twisted together, and therefore opposed to the *corona sutilis* described above.

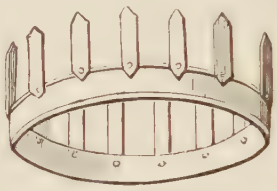
Corona Radiata.

Corona radiata was one assigned to the gods or to deified heroes, and hence was assumed by the later emperors in token of their divinity. They may be seen on many of the imperial coins.

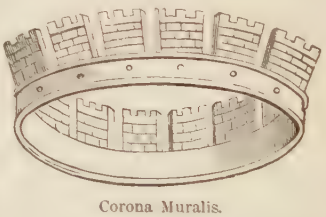
Coronae tonsae were made of leaves only, closely cut, as for instance of the olive (Verg. *Aen.* v. 556).



Crowns were also among the Romans the highest distinction awarded for service in war. The most coveted were the *corona triumphalis* or laurel crown of a general in triumph; and the *corona obsidionalis*, presented to a general by the army which he had saved from a siege, or from a shameful capitulation. This was woven of grass growing on the spot, and called *corona graminea*. The *corona myrtea*, or *ovalis*, was the crown of bay worn by the general who celebrated the lesser triumph (*ovatio*).

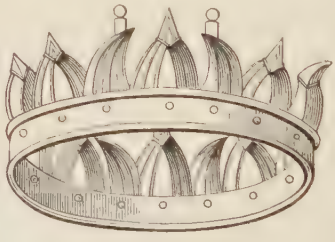


Corona Triumphalis. (Medallion of Ventidius.)



Corona Obsidionalis.

The *corona civica* was of oak leaves, and was awarded for saving a citizen's life in battle. This secured for its possessor certain privileges, as freedom from taxes for himself, his father, and paternal grandfather. The golden *corona muralis*, with embattled ornaments, was given for the storming of a wall; the *corona castrensis* or *vallaris*, also of gold, and ornamented in imitation of palisades, to the soldier who first climbed the wall of the enemy's camp; the *corona navalis*, with ornaments representing the beak of a ship, to the man who first boarded a ship. Under the Empire, the garland of bay was reserved exclusively for the emperor, and thus came to be regarded as a crown.



Corona Civica.

Corona Castrensis.

The rayed crown, the *insigne* of the deified emperors, was not worn by the emperors of the first and second century A.D. Golden crowns were originally the free offerings of provincials and allies to victorious generals for the celebration of their triumphs. But from this custom there arose, even in republican times, the habit of compelling a contribution of money (*aurum coronarium*) to the governor of the province. During the imperial age this contribution was on exceptional occasions offered as a present to the emperors, but it was often also made compulsory.

Corona Muralis.

Among the Greeks, a crown (στέφανος) was often an emblem of office. At Athens, for instance, a crown of bay was worn by the archons in office, the senators (βουλευταί), and the orators while speaking. It was also the emblem of victory at the games, and a token of distinction for citizens of merit. (See THEATRUM.) Such crowns of honour were made originally of olive branches, but later of gold. The honour of a crown could be conferred by the people or the Senate, or by corporations

Corona Navalis.

and foreign States. The latter would often present a crown to the whole commonwealth. If the people or Senate presented the crown, the presentation took place in the great assembly or in the Senate-house, but not in the theatre except by special decree. See Garcke, *De Horatii Corollis* (Altenburg, 1860); and Daremberg and Saglio, *Dictionnaire des Antiquités*, s. v. "Corona"; and on funeral crowns the article FUNUS.

Coronāti Quattuor. The name given to four Christian martyrs (Carpophorus, Severus, Severianus, Victorinus), killed, according to the tradition, by having crowns with sharp nails pressed down into their heads (A.D. 304). The Catholic Church commemorates their martyrdom on November 8. See Erbes, in the *Zeitschrift für Kirchengeschichte*, v. 466 (1882).

Corōné (Κορώνη). A town in Messenia on the west side of the Messenian Gulf, founded B.C. 371 by the Messenians, after their return to their native country, with the assistance of the Thebans.

Coronēa (Κορώνεια). A town in Boeotia, southwest of Lake Copaïs, and a member of the Boeotian League. (See BOEOTARCHES; BOEOTIA.) Here in B.C. 447, the Boeotians defeated the Athenians; and in B.C. 394, the allied Greeks were defeated by Agesilaüs (q. v.).

Corōnis (Κορωνίς). (1) Daughter of Phlegyas, and mother by Apollo of Aesculapius, who is hence called Coronides. See AESCULAPIUS. (2) Daughter of Phoroneus, king of Phocis, metamorphosed by Athenè into a crow when pursued by Poseidon.

Corōnis (*κορωνίς*). The cornice of an entablature. The pure Latin word is *corona* or *coronix* (Vitruv. v. 2, 3).

Corpus Inscriptiōnum. See EPIGRAPHY.

Corpus Iuris Civĭlis. The name given since the sixteenth century to the great collection of authorities on Roman law, made by the lawyer Tribonianus, of Sidé in Pamphylia, at the instance of the Eastern emperor Justinian (A.D. 527–565). To this collection we owe the preservation of the treasures of the ancient jurisprudence, which must certainly otherwise have been lost. The *Corpus Iuris* consists of four parts:

(1) CODEX IUSTINIANĒUS, called *repetitae praelectionis*, as being the revised edition of a code now lost, but which had appeared in 529. This was published in 534, and contains in twelve books the imperial law (*ius principale*), or the *constitutiones* of the emperors since Hadrian.

(2) PANDECTAE, or DIGESTA. The law of the jurists (*ius vetus*). These, published A.D. 533, are extracts from the works of thirty-nine ancient jurists, arranged in fifty books, according to subjects.

(3) INSTITUTIŌNES. A handbook of jurisprudence, founded mostly upon Gaius, and published in the same year.

(4) NOVELLAE (*constitutiones*), or supplementary ordinances of Justinian, mostly in Greek. These are preserved only in private collections of various compass, one of which, the *Authenticum* or *Liber Authenticorum*, was recognized as the authorized text, and gives the Greek rescripts in a Latin version. The best modern edition of the *Corpus Iuris Civilis* is that by Mommsen, Schöll, and Krüger (Berlin, 4th ed. 1886–88).

Correus. One indicted jointly with another person. See OBLIGATIONES; REUS.

Corrigia. (1) A shoe-string, sometimes made of dog-skin (Plin. *H. N.* xxx. § 35). (2) A whip-lash or rein (Edict. Dioclet. p. 26).

Corsi (Κύρνιοι). (1) The inhabitants of Corsica. (2) The inhabitants of part of northern Sardinia, who came originally from Corsica.

Corsĭca. An island of the Mediterranean, called by the Greeks Κύρνος. Its inhabitants were styled by the same people Κύρνιοι; by the Romans, Corsi. In later times the island took also the name of Corsis (ἡ Κορσίς). The inhabitants were a rude race of mountaineers, indebted for their subsistence more to the produce of their flocks than to the cultivation of the soil. Seneca, who was banished to this quarter in the reign of Claudius, draws a very unfavourable picture of the island and its inhabitants; describing the former as rocky, unproductive, and unhealthy, and the latter as the worst of barbarians (Sen. *De Consol. ad Helv.* c. 6, 8). His lines upon the character of the Corsicans are still remembered by them with resentment, and are as follows:

> Prima est ulcisci lex, altera vivere raptu,
> Tertia mentiri, quarta negare deos.

The Corsi appear to have derived their origin from Ligurian and Iberian (called by Seneca Spanish) tribes. Eustathius says that a Ligurian woman, named Corsa, having pursued in a small boat a bull which had taken to the water, accidentally discovered the island, which her countrymen named after her. The Romans took the island from Carthage in B.C. 231, and subsequently two colonies were sent to it—one by Marius, which founded Mariana, and another by Sulla, which settled on the site of Aleria. Mantinorum Oppidum, in the same island, is now Bastia; and Urciuium, Ajaccio. See Jacobi, *Histoire Générale de la Corse* (Paris, 1835); and Gregorovius, *Corsica* (Stuttgart, 1854; Eng. trans. Philadelphia, 1855).

Corslet. See ARMA; LORICA; THORAX.

Corsōté (Κορσωτή). A city of Mesopotamia on the Euphrates, which Xenophon found already deserted.

Corssen, WILHELM PAUL, a great classical philologist, was born at Bremen January 20th, 1820. From 1839 to 1843 he studied philology at Berlin, where he published (1844) *Origines Poesis Romanae*. He then taught for two years in Stettin, and in 1846 became an adjunct, and, later, full professor at Pforta. In 1866, he resigned the post and lived at Lichterfelde, near Berlin, devoting himself exclusively to his studies until his death in 1875. His chief works are: *Ueber Aussprache, Vokalismus, und Betonung der lateinischen Sprache*, 2 vols. (Leipzig, 1858–59; 2d ed. 1868–70); *Kritische Beiträge zur lateinischen Formenlehre* (Leipzig, 1863); *Kritische Nachträge zur lateinischen Formenlehre* (Leipzig, 1866); *Beiträge zur italischen Sprachkunde* (Leipzig, 1876); besides a number of treatises on old Italian dialects in Kuhn's *Zeitschrift für vergleichende Sprachforschung;* the treatise *De Volscorum Lingua* (Leipzig, 1858); and *Ueber die Sprache der Etrusker* (2 vols. Leipzig, 1874–75). Among the results of his stay at Pforta was *Alterthümer und Kunstdenkmäler des Cistercienser Klosters St. Marien und der Landesschule Pforta* (Halle, 1868).

Dr. Corssen's great work is his *Aussprache*, than which no more memorable publication in the field of Latin scholarship has ever appeared. Its mass-

ing of facts is a monument of scholarly research; while the acuteness of criticism, and the mastery of detail shown in the use to which the facts are put, rank Corssen with the greatest scholars of all time. Not equally successful was his attempt to solve the problems of Etruscan ethnology and language. So great was Dr. Corssen's authority on the dialects of Italy that when the first volume of his *Sprache der Etrusker* appeared, it was enthusiastically accepted as definitely clearing up the mystery that even Müller had failed to illuminate; and the author was hailed as "the Oedipus of the Etruscan Sphinx." But the sober second judgment of scholars did not confirm this verdict, and the second volume (which appeared soon after Corssen's death) was read in a far different spirit. In fact, though the work is laboriously learned, and bears everywhere the marks of immense research, its theories fail to commend themselves, and the volumes are now only historically interesting. See ETRURIA.

Cortex (*φελλός*). A cork used by fishermen to float their nets (Aesch. *Choëph.* 506).

Cortīna. (1) A caldron used for boiling. (2) The lid or covering over the Delphic tripod (see ORACULUM; TRIPUS), on which the priestess sat in giving responses (Verg. *Aen.* vi. 347). (3) An altar in the form of a tripod.

Delphic Cortina.

Cortōna. One of the twelve cities of Etruria, and very ancient. It lies northwest of Lake Trasimenus, over which it looks from an elevation of some 2000 feet. It has mighty walls of Pelasgic origin, among the most remarkable in Italy, one fragment composed of enormous blocks being 120 feet in length. The city is said to have been founded by the Umbri (q. v.), from whom it was wrested by the Etruscans. After becoming a Roman possession it sank into insignificance. A vast number of most interesting Etruscan remains have been found here, and are carefully preserved in the local museum. Roman tradition made Corythus, the father of Dardanus, the founder of the town, and Corythus is sometimes given as its early name.

Coruncanius, TIBERIUS. Consul B.C. 280, with P. Valerius Laevinus, and the first plebeian who was created Pontifex Maximus, as well as the first person at Rome who gave regular instruction in law. See Schrader, in the *Civilist. Magazin*, v. 187.

Corvīnus. (1) A name given to M. Valerius, from his having been assisted by a raven (*corvus*) while engaged in combat with a Gaul. (See VALERIUS.) (2) MESSĀLA, a distinguished Roman in the Augustan Age. See MESSALA.

Corvus (*κόραξ*). A sort of crane, used by Gaius Duilius (q. v.) against the Carthaginian fleet in the battle fought off Mylae in Sicily (B.C. 260). The Romans, we are told, being unused to the sea, saw that their only chance of victory was by bringing a sea-fight to resemble one on land. For this purpose they invented a machine, of which Polybius (i. 22) has left a minute description. In the fore part of the ship a round pole was fixed perpendicularly, twenty-four feet in height and about nine inches in diameter; at the top of this was a pivot, upon which a ladder was set, thirty-six feet in length and four in breadth. The ladder was guarded by crossbeams, fastened to the upright pole by a ring of wood, which turned with the pivot above. Along the ladder a rope was passed, one end of which took hold of the *corvus* by means of a ring. The *corvus* itself was a strong piece of iron, with a spike at the end, which was raised or lowered by drawing in or letting out the rope. When an enemy's ship drew near, the machine was turned outward, by means of the pivot, in the direction of the assailant. Another part of the machine, which Polybius has not clearly described, is a breastwork, let down (as it would seem) from the ladder, and serving as a bridge on which to board the enemy's vessel. By means of these cranes, the Carthaginian ships were either broken or closely locked with the Roman, and Duilius gained a complete victory. See Polyb. i. 22.

The word *corvus* is also applied to various kinds of grappling-hooks, such as the *corvus demolitor*, mentioned by Vitruvius for pulling down walls, or the terrible engine spoken of by Tacitus, which, being fixed on the walls of a fortified place, and suddenly let down, carried off one of the besieging party, and then, by a turn of the machine, put him down within the walls. The word is used by Celsus for a scalpel. It is hardly necessary to remark that all these meanings have their origin in the supposed resemblance of the various instruments to the beak of a raven.

Corybantes (*Κορύβαντες*). The ministers or priests of Rhea (q. v.), or Cybelé, the great mother of the gods, who was worshipped in Phrygia. In their solemn festivals they displayed the most extravagant fury in their dances in armour, as well as in the accompanying music of flutes, cymbals, and drums. Hence *κορυβαντισμός* was the name given to an imaginary disease, in which persons felt as if some great noise were rattling in their ears. The Corybantes are often identified with the Idaean Dactyli, and are thus said to have been

Corybantes and Cybelé, with Infant Zeus.

the nurses of Zeus when he was suckled by the goat Amalthea in Crete. See CURETES; DACTYLI; GALLI; ZEUS.

Corybantĭca (*Κορυβαντικά*). A festival and mysteries celebrated at Cnossus in Crete, in commemoration of one Corybas, who, in common with the Curetes (q. v.), brought up Zeus, and concealed him

from his father Cronus (q. v.) in that island. Other accounts say that the Corybantes, nine in number, independent of the Curetes, saved and educated Zeus. A third legend states that Corybas was the father of the Cretan Apollo who disputed the sovereignty of the island with Zeus. But to which of these three traditions the festival of the Corybantica owed its origin is uncertain, although the first, which was current in Crete itself, seems to be best entitled to the honour. All that we know of the Corybantica is, that the person to be initiated was seated on a throne, and that those who initiated him formed a circle and danced around him. This part of the solemnity was called *θρόνωσις* or *θρονισμός*.

Corȳbas (*Κορύβας*). The son of Iasion and Cybelé, who introduced the rites of the mother of the gods into Phrygia from the island of Samothrace. See CORYBANTICA; RHEA.

Corycia (*Κωρυκία*). A nymph, who became by Apollo the mother of Lycorus, or Lycoreus, and from whom the Corycian cave on Mount Parnassus was believed to have derived its name. (See Pausan. x. 6, 5.) The Muses are sometimes called by the poets Corycides Nymphae.

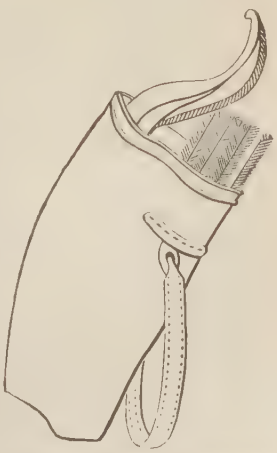
Corycĭdes. A name applied to the nymphs who were supposed to inhabit the Corycian cave on Mount Parnassus. They were the daughters of the river-god Plistus (Ovid, *Met.* i. 320; Apoll. Rh. ii. 711). The same name is also given to the Muses. See CORYCIA.

Corȳcus (*Κώρυκος*). (1) A promontory of Ionia, southeast of the southern extremity of Chios. The high and rugged coast in this quarter harboured at one time a wild and daring population, greatly addicted to piracy; and who, by disguising themselves and frequenting the harbours in their vicinity, obtained private information of the course and freight of any merchant vessel, and concerted measures for the purpose of intercepting it. The secrecy with which their intelligence was procured gave rise to the proverb, *Τοῦ δ' ἄρ' ὁ Κωρυκαῖος ἠκροάζετο*, "This, then, the Corycean overheard," a saying that was used in cases where any carefully guarded secret had been discovered. The ancient appellation is still preserved in that of Kourko, which belongs to a bold headland forming the extreme point of the Erythrean peninsula towards Samos. Pliny (*H. N.* v. § 31) calls it Coryceum Promontorium. (2) A small town of Cilicia Trachea, near the confines of Cilicia Campestris, on the sea-coast, and to the east of Seleucia Trachea. It appears to have been a fortress of great strength, and a mole of vast unhewn rocks is carried across the bay for about a hundred yards. It served at one time as the harbour of Seleucia, and was then a place of considerable importance. About twenty stadia inland was the Corycian cave (*Κωρύκιον ἄντρον*), celebrated in mythology as the fabled abode of the giant Typhoeus. In fact, many writers, as Strabo reports, placed Arima or Arimi, the scene of Typhoeus's torments, alluded to by Homer, in Cilicia, while others sought it in Lydia, and others in Campania. (3) A naval station on the coast of Lycia, about thirty stadia to the north of Olympus.

Corȳcus (*κώρυκος*). A large leathern sack, filled with flour, fig-grains, or sand, hung up in the gymnasium, for the athletes to swing to and fro by striking it, whence the exercise is called *κωρυκομαχία* or *κωρυκοβολία* (Hesych. s. v.). The game is alluded to by Plautus (*Rud.* iii. 4, 16). From this game came the proverbial expression, *πρὸς κώρυκον γυμνάζεσθαι* (Diog. vii. 54), of labour in vain.

Corycus. (From the Cista Ficoroniana.)

Corymbus (*κόρυμβος*). A particular mode of wearing the hair among the Greek women, which is explained in the article COMA. The following illustration, taken from Millingen, represents a woman whose hair is dressed in this manner. The name literally means a bunch of ivy-berries, and was first applied to a form of garland.



Corymbus. (Millingen, *Peintures Antiques*, pl. 40.)

Coryphasium (*Κορυφάσιον*). A promontory in Messenia, enclosing the harbour of Pylos on the north, with a town of the same name upon it.

Corȳthus (*Κόρυθος*). An Italian hero, son of Iupiter, husband of Electra, and father of Dardanus, is said to have founded Corythus, afterwards called Cortona (q. v.).

Corȳtus (*κωρυτός*, *γωρυτός*). A bow-case. It was worn suspended by a belt over the right shoulder, and frequently held the arrows as well as the bow (Sil. Ital. xv. 773). On this account, it is often confounded with the *pharetra* or quiver.

Corytus. (Museo Pio Clementino.)

It is generally carried by the armed Persians who are represented on the Persepolitan bas-reliefs; and in this, as in many other respects, we observe the agreement between them and the European nations situated to the north of the Euxine Sea.

Cos (Κῶς). An island of the Aegean, one of the Sporades, west of the promontory of Doris. Its more ancient names were Cea, Staphylus, Nymphaea, and Meropis, of which the last was the most common. The colonizing of this island must have taken place at a very early date, since Homer makes mention of it as a populous settlement (*Il.* ii. 184). The inhabitants were of Dorian origin, and closely connected with the Doric colonies on the mainland. Its chief city was Cos, anciently called Astypalaea. Strabo remarks that the city of Cos was not large, but very populous, and seen to great advantage by those who came thither by sea. Without the walls was a celebrated temple of Aesculapius, enriched with many admirable works of art, and among others, two famous paintings of Apelles, the Antigonus and Aphroditē Anadyomenē. The latter painting was so much admired that Augustus removed it to Rome and consecrated it to Iulius Caesar; and in consideration of the loss thus inflicted on the Coans, he is said to have remitted a tribute of one hundred talents which had been laid on them. Besides the great painter just mentioned, Cos could boast of ranking among her sons the first physician of antiquity, Hippocrates. The soil of the island was very productive, especially in wine, which vied with those of Chios and Lesbos. It was also celebrated for its purple dye, and for its manufacture of a species of transparent silk stuff. See Coa Vestis.

Coins of Cos.

Cos (ἀκόνη). A whetstone or grindstone, the latter being shown in the accompanying illustration from an engraved gem, representing Cupid sharpening his arrows.

Cos.

Cosa, Cossa, or **Cosae.** (1) Now Ansedonia; an ancient city of Etruria near the sea, with a good harbour, called Herculis Portus, and after the fall of Falerii one of the twelve Etruscan cities. The ancient towers and polygonal walls, 1600 yards in circumference, are still admirably preserved. (2) A town in Lucania near Thurii.

Cosmas (Κοσμᾶς). An Egyptian priest, often called Indopleustes (Ἰνδοπλευστής) from his voyages, who lived about A.D. 535. In his youth he was engaged in foreign trade and visited many countries, of which he wrote an account in twelve books, most of which are extant. The work was styled Τοπογραφία Χριστιανεκή. In it China is first undeniably mentioned, being styled *Tzinista*—the Persian *Chinistan*. Edition by Gallandi (1776).

Cosmētae (κοσμηταί). A class of slaves among the Romans, whose duty it was to dress and adorn ladies (Juv. vi. 476). Some writers on antiquities have supposed that the cosmetae were female slaves, but the passage of Juvenal is alone sufficient to refute this opinion; for it was not customary for female slaves to take off their tunics when a punishment was to be inflicted upon them. There was, indeed, a class of female slaves who were employed for the same purposes as the cosmetae; but they were called *cosmetriae*, a name which Naevius chose as the title for one of his comedies.

Cosmētes (κοσμητής). An officer in the Athenian gymnasia in the time of the Romans. See Gymnasium.

Cosmetics. See Cerussa; Fucus.

Cosmi (κόσμοι). The chief magistrates of Crete. See Gerusia.

Cossaea (Κοσσαία). A district on the confines of Media and Persia, inhabited by a rude, warlike, predatory people, the Cossaei, whom the Persian kings never subdued. They were conquered by Alexander (B.C. 325–324), but after his death they soon regained their independence.

Cossus, Aulus Cornelius. A Roman consul (B.C. 428) who killed in single combat Lar Tolumnius, king of Veii, and dedicated his spoils to Jupiter Feretrius, this being the second of the three instances in which the *spolia opima* were won (Liv. iv. 19 and 20). See Spolia Opima.

Cossutius. A Roman architect who rebuilt, at the expense of Antiochus Epiphanes, the temple of the Olympian Zeus at Athens, about B.C. 168. See Reber, *Hist. of Ancient Art*, p. 249 (Eng. trans., N. Y. 1882).

Costume. See Clothing.

Cosȳra or **Cossyra.** Now Pantellaria; a small island in the Mediterranean near Malta.

Cothon (Κώθων). The artificial inner harbour of Carthago. See Carthago.

Cothurnus, or more correctly Coturnus (κόθορνος). The Greek name for a high shoe or buskin with several soles. It covered the whole foot, and rose as high as the middle of the leg. It was made so as to fit either foot, and was generally fastened in front with red straps. The cothurnus was properly a hunting-boot, but Aeschylus made it part of the costume of his tragic actors to give them a stature above the average. At the same time the hair was dressed high in order to maintain the proportion of the figure. The cothurnus was also used in the Roman tragedy. (See Soccus.) It must be remembered that though the name κόθορνος is Greek, the

Cothurni. (Daremberg and Saglio.)

Greeks do not use it of the tragic boot, which they call *ὀκρίβας*, or more usually *ἐμβάτης*.

Cotĭso. A king of the Dacians, who was conquered in the reign of Augustus by Lentulus.

Cotta, Aurelius. (1) Gaius, consul B.C. 75 with L. Octavius, was one of the most distinguished orators of his time, and is introduced by Cicero as one of the speakers in the treatises *De Oratore* and *De Natura Deorum*. (2) Lucius, praetor in B.C. 70, when he carried the celebrated law (*lex Aurelia iudiciaria*), which intrusted the *iudicia* to the senators, equites, and tribuni aerarii.

Cotta, L. Aurunculēius. One of Caesar's legates in Gaul, who perished with Sabinus in the attack made upon them by Ambiorix, B.C. 54. See Ambiorix.

Cottăbus (*κότταβος*). A Greek game very popular at drinking-bouts. The player lay on a couch, and in that position tried to throw a few drops of wine, in as high a curve as possible, at a mark, without spilling any of the wine. The mark was called *κοτταβεῖον*, and was a bronze goblet or saucer (*πλάστιγξ*) on the end of an upright rod (*ῥάβδος*); and it was a point to make a noise when hitting it. On the *κοτταβεῖον* was fastened a little image or a bust of Hermes, which was called *μάνης*, and which the player had to hit first with the wine. The wine was supposed to make a sound (*λάταξ*) both in hitting the figure and in falling afterwards into the saucer. This, of course, greatly increased the difficulty of the game.

Cottabus. (Vase from Corneto.)

There was another form of the game, in which the point was to make the wine hit the saucer while floating in a large vessel of water and sink it. The game was played in a chamber made for the purpose. The form of the room was circular, to give every player an equal chance of hitting the mark, which was placed in the centre. The victor generally received a prize agreed upon beforehand. The players also used the game to discover their chances of success in love. They uttered the name of their beloved while throwing the wine. A successful throw gave a good omen, an unsuccessful one a bad omen. A good player leaned upon his left elbow, remained quite quiet, and used only his right hand to throw with. The game came originally from Sicily, but became popular through the whole of Greece, and especially at Athens, where to play well was a mark of good breeding. It did not go out of fashion until the fourth century after Christ.

Vase-paintings representing the first form of the game exist in considerable numbers, one of them being reproduced in the preceding illustration. An apparatus for playing the cottabus was found some years ago in an Etruscan tomb at Perugia, where it is now preserved in the local museum. See Helbig, in the *Mittheil. des Kaiserl. Deutsch. Archäol. Inst., Römische Abth.*, for 1886, i. pp. 222 foll. and 234 foll. Also Becker-Göll, *Charikles*, ii. p. 366, and the *Annali dell' Inst.*, for 1868, pp. 217 foll.

Cottiae Alpes. The modern Mont St. Genèvre, generally, though erroneously, supposed to be the place where Hannibal crossed into Italy. (See Alpes.) They took their name from Cottius, a king of several Ligurian tribes in the Cottian Alps, which also derived their name from him. He submitted to Augustus, who granted him the sovereignty over twelve of these tribes, with the title of praefectus. Cottius thereupon made roads over the Alps, and erected (B.C. 8) at Segusio (Susa) a triumphal arch in honour of Augustus, extant at the present day. It is 44 feet in height and 39 in width, with projecting Corinthian columns at the corners and sacrificial scenes on the friezes.

Cottius. See Cottiae Alpes.

Cotton. See Carbasus; Gossypium.

Cottus. A giant with 100 hands, son of Uranus (Heaven) and Gaea (Earth). See Gigantes.

Cotyaēum (*Κοτυάειον*). A town of Phrygia, south of Dorylaeum, on the Thymbris, a branch of the Sangarius. Suidas says that, according to some accounts, it was the birthplace of Aesop the fabulist. Alexander, a grammarian of great learning and a voluminous writer, was also a native of Cotyaeum. Late Byzantine writers term it the metropolis of Phrygia.

Cotўla or **Cotўlus** (*κοτύλη, κότυλος*). A kind of cup, with regard to whose shape and capacity little has been satisfactorily determined (Hom. *Od.* xv. 312).

Cotyōra (*Κοτύωρα*). A colony of Sinopé on the coast of Pontus Polemoniacus, celebrated as the place where the 10,000 Greeks embarked for Sinopé. See Xen. *Anab.* v. 5. 4.

Cotys (*Κότυς*). The name of several kings of Thrace. Ovid, during his exile at Tomi, addressed an epistle to one of them. (*Ex Pont.* ii. 9.)

Cotyttia or **Cottytes** (*Κοτύττια, Κόττυτες*). A festival which was originally celebrated by the Edonians of Thrace, in honour of a goddess called Cotys or Cotytto (Strab. x. 470). It was held at night, and, according to Strabo, resembled the festivals of the Cabeiri (q. v.) and the Phrygian Cybelé. But the worship of Cotys, together with the festival of the Cotyttia, was adopted by several Greek States, chiefly those which were induced by their commercial interest to maintain friendly relations with Thrace. The priests of the goddess were formerly supposed to have borne the name of *baptae;* but Buttmann has shown that this opinion is probably groundless. Her festivals were notorious among the ancients for the dissolute manner and the debaucheries with which they were celebrated (Suidas, s. v. *Κότυς*; Hor. *Epod.* xvii. 56; Theocr. vi. 40). Another festival of the same name was celebrated in Sicily (Plut. *Proverb.*),

where boughs hung with cakes and fruit were carried about, which any person had a right to pluck off if he chose; but we have no mention that this festival was polluted with any of the licentious practices which disgraced those of Thrace and Greece, unless we refer the allusion made by Theocritus to the Cotyttia, to the Sicilian festival. Cf. Buttmann's essay, "Ueber die Kotyttia und die Baptae," in his *Mythologus*, vol. ii. p. 159.

Cotytto or **Cotys** (Κοτυττώ or Κότυς). A goddess worshipped by the Thracians, and apparently identical with the Phrygian Cybelé. Her worship was introduced at Athens and Corinth, where it was celebrated, in private, with great indecency and licentiousness. See Juv. ii. 92; and the article COTYTTIA.

Couch. See LECTUS.

Covinarii. See COVINUS.

Covīnus or **Covīnnus** (Keltic, *kowain*). A kind of car, the spokes of which were armed with long sickles, and which was used as a scythe-chariot chiefly by the ancient Belgians and Britons. The Romans designated by the name of *covinus* a kind of travelling-carriage, which seems to have been covered on all sides with the exception of the front. It had no seat for a driver, but was conducted by the traveller himself, who sat inside (Mart. xii. 24). There must have been a great similarity between the Belgian scythe-chariot and the Roman travelling-carriage, as the name of the one was transferred to the other; and we may reasonably conclude that the Belgian car was likewise covered on all sides except the front, and that it was occupied by one man, the *covinarius* only, who was, by the structure of his car, sufficiently protected. The *covinarii* (the word occurs only in Tacitus) seem to have constituted a regular and distinct part of a British army (Tac. *Agric.* 35, 36). See ESSEDUM.

Cradle. See CUNAE.

Cragus (Κράγος). A mountain consisting of eight summits, being a continuation of Taurus to the west, and forming at its extremity the south-western promontory of Lycia. At its foot was a town of the same name on the sea-shore, between Pydna and Patara. Parallel to it, north of the river Glaucus, was the chain of Anticragus.

Cranaë (Κρανάη). The island to which Paris first carried Helen from Peloponnesus. Its locality is uncertain, but some identify it with Cythera.

Cranăus (Κραναός). King of Attica, the son-in-law and successor of Cecrops.

Cranii (Κράνιοι). A town of Cephallenia on the south coast.

Cranon (Κρανών) or **Crannon** (Κραννών). A city of Thessaly on the river Onchestus, southeast of Pharsalus. Near it was a fountain, the water of which was fabled to warm wine when mixed with it, so that the heat remained for two or three days.

Crantor (Κράντωρ). A philosopher of Soli, among the pupils of Xenocrates, B.C. 300. He was the first who wrote commentaries on the works of Plato. Crantor was highly celebrated for the purity of his moral doctrine, as may be inferred from the praises bestowed by the ancients upon him. From one of his works, Περὶ Πένθους, Cicero drew largely in writing the third book of the *Tusculanae*, and the lost treatise *De Consolatione* on the death of his daughter Tullia. Cf. Cic. *Acad.* ii. 44.

Crassĭpes, FURIUS. Cicero's son-in-law, husband to Tullia, from whom he was divorced shortly after their marriage in B.C. 56.

Crassus. (1) LUCIUS LICINIUS, a Roman orator and man of consular rank. In B.C. 119, being only twenty-one years of age, he made his debut in the Forum, in a prosecution against C. Carbo. Cicero says that he was remarkable, even at this early period, for his candour and his great love of justice. Crassus was but twenty-seven years old when his eloquence obtained the acquittal of his relation, the Vestal Licinia. Being elevated to the consulship in 95, he was the author of a law by which numbers of the allies, who passed for Roman citizens, were sent back to their respective cities. This law alienated from him the affections of the principal Italians, so that he was regarded by some as the primary cause of the Social War, which broke out three years after. Having Hither Gaul for his province, Crassus freed the country from the robbers that infested it, and for this service had the weakness to claim a triumph. The Senate were favourable to his application; but Scaevola, the other consul, opposed it, on the ground that he had not conquered foes worthy of the Roman people. Crassus conducted himself, in other respects, with great wisdom in his government, and not only did not remove from around him the son of Carbo, who had come as a spy on his conduct, but even placed him by his side on the tribunal, and did nothing of which the other was not a witness. Being appointed censor in 92, he caused the school of the Latin rhetoricians to be closed, regarding them as dangerous innovators for the young. Crassus left hardly any orations behind him, and he died while Cicero was yet in his boyhood; but still that author, having collected the opinions of those who had heard him, speaks with a minute and apparently perfect intelligence of his style of oratory. He was what may be called the most ornamental speaker that had hitherto appeared in the Forum. Though not without force, gravity, and dignity, these were happily blended with the most insinuating politeness, urbanity, ease, and gayety. He was master of the most pure and accurate language and of perfect elegance of expression, without any affectation or unpleasant appearance of previous study. Great clearness of language distinguished all his harangues; and, while descanting on topics of law or equity, he possessed an inexhaustible fund of argument and illustration. Some persons considered Crassus as only equal to Antonius, his great contemporary; others preferred him as the more perfect and accomplished orator. The most splendid of all the efforts of Crassus was the immediate cause of his death, which happened in B.C. 91, a short while before the commencement of the civil wars of Marius and Sulla, and a few days after the time in which he is supposed to have borne his part in the dialogue *De Oratore*. The consul Philippus had declared, in one of the assemblies of the people, that some other advice must be resorted to, since, with such a Senate as then existed, he could no longer direct the affairs of the government. A full Senate being immediately summoned, Crassus arraigned, in terms of the most glowing eloquence, the conduct of the consul, who, instead of acting as the political parent and guardian of the Senate, sought to deprive its members of their ancient inheritance of respect and dignity. Being further

irritated by an attempt on the part of Philippus to force him into compliance with his designs, he exerted, on this occasion, the utmost effort of his genius and strength; but he returned home with a pleuritic fever, of which he died seven days after. This oration of Crassus, followed, as it was, by his almost immediate death, made a deep impression on his countrymen; who, long afterwards, were wont to repair to the Senate-house for the purpose of viewing the spot where he had last stood, and where he fell, as it may be said, in defence of the privileges of his order. (2) MARCUS, who was praetor B.C. 105. He was surnamed by his friends Agelastus (Ἀγέλαστος), because, according to Pliny (vii. 19), he never laughed during the whole course of his life; or because, according to Lucilius, he laughed but once (Cic. *De Fin.* v. 30). (3) MARCUS LICINIUS, called the Rich (*Dives*), the son of the preceding, and the most opulent Roman of his day, was of a patrician family, and the son of a man of consular rank. His father and brother perished in the proscriptions of Marius and Cinna while he was still quite young, and, to avoid a similar fate, he took refuge in Spain until the death of Cinna, when he returned to Italy and served under Sulla. Crassus proved very serviceable to this commander in the decisive battle (B.C. 83) that was fought near Rome; but afterwards, making the most unjust and rapacious use of Sulla's proscriptions, that leader, according to Plutarch, gave him up and never employed him again in any public affair. The glory which was then beginning to attend upon Pompey, though still young and only a simple member of the equestrian order, excited the jealousy of Crassus, and, despairing of rising to an equality with him in warlike operations, he betook himself to public affairs at home, and, by paying court to the people, defending the impeached, lending money, and aiding those who were candidates for office, he attained to an influence almost equal to that which Pompey had acquired by his military achievements. It was at the bar, in particular, that Crassus rendered himself extremely popular. He was not, it would seem, a very eloquent speaker, yet by care and application he eventually exceeded those whom nature had more highly favoured. When Pompey, or Caesar, or Cicero declined speaking in behalf of any individual, he often arose and advocated the cause of the accused. Besides this promptness to aid the unfortunate, his courteous and conciliating deportment acquired for him many friends, and made him very popular with the lower orders. There was not a Roman, however humble, whom he did not salute, or whose salutation he did not return by name.

The great defect, however, in the character of Crassus was his inordinate fondness for wealth; and, although he could not strictly be called an avaricious man, since he is said to have lent money to his friends without demanding interest, yet he allowed the love of riches to exercise a paramount sway over his actions, and it proved at last the cause of his unhappy end. Plutarch informs us that his estate at first did not exceed three hundred talents, but that afterwards it amounted to the enormous sum of seven thousand one hundred talents (nearly $8,500,000). The means by which he attained to this are enumerated by the same writer, and some of them are singular enough. Observing, says Plutarch, how liable the city was to fires, he made it his business to buy houses that were on fire and others that joined upon them; and he commonly got them at a low price, on account of the fear and distress of the owners about the result. A band of his slaves thereupon, regularly organized for the purpose, exerted themselves to extinguish the flames, and, after this was done, rebuilt what had been destroyed, and in this way Crassus gradually became the owner of a large portion of Rome. He gained large sums also by educating and then selling slaves. Plutarch, in fact, regards this as his principal source of revenue. With all this eager grasping after wealth, however, Crassus appears to have been no mean soldier, even though he displayed so few of the qualities of a commander in his Parthian campaign. Created praetor in B.C. 71, he was sent to terminate the war with Spartacus. He accordingly met, defeated him in several encounters, and at last, bringing him to a decisive action, ended the war by a single blow, Spartacus and forty thousand of his followers being left on the field. Not venturing to demand a triumph for a victory over gladiators and slaves, he contented himself with an ovation.

In 70, Crassus obtained the consulship, having Pompey for his colleague. At a subsequent period we find him implicated by an informer in the conspiracy of Catiline, but acquitted by acclamation the moment the charge was heard by the Senate. We now come to the closing scene in the career of Crassus. When Caesar, on returning from his government to solicit the consulship, found Pompey and Crassus at variance (which had been the case also during almost all the time that they were colleagues in the consular office), and perceived that, for the furtherance of his own ambitious views, the aid of these two individuals would be needed by him for opposing the influence of the Senate, as well as that of Cicero, Cato, and Catulus, he managed to reconcile them, and soon, in conjunction with both of them, formed the well-known league usually styled the First Triumvirate (B.C. 60), which proved so fatal to the liberties of the Roman people. By the terms of this compact Crassus obtained the government of Syria. In the law that was passed relative to this government of Crassus, no mention was indeed made of any war in its neighbourhood; still every one knew that he had connected with it an immediate invasion of Parthia (B.C. 55). Plutarch even states that he had fixed upon neither Syria nor Parthia as the limits of his expected good fortune, but intended to penetrate even to Bactria, India, and the shores of the Eastern Ocean. The only motive to this memorable and unfortunate undertaking was the rapacious love of wealth.

It was not, however, without considerable opposition from the people and the tribunes that Crassus was allowed to proceed on this expedition. All the influence of Pompey was necessary to prevent an expression of popular wrath, for no good was expected to result from hostilities against a people who had done the Romans no injury, and who were, in fact, their allies. When Crassus, moreover, had reached the gate of the city, the tribune Ateius attempted to stop him by force; but, failing in this, he immediately proceeded to perform a religious ceremony of the most appalling nature, by which he devoted the commander himself and all who should follow

him on that service to the wrath of the infernal gods and a speedy destruction. Undismayed, however, by either denunciations or omens (Cic. *Div.* ii. 40), Crassus, embarking at Brundisium, proceeded into Asia by Macedonia and the Hellespont. As the enemy were not prepared for this unprovoked invasion, the Romans met with no resistance. At first Crassus overran the greater part of Mesopotamia; and, had he taken advantage of the consternation into which his sudden appearance had thrown the Parthians, he might, with the greatest ease, have extended his conquest to Babylonia itself. But, the season being far advanced, he did not think it expedient to proceed. On the contrary, having left in the different towns and strongholds a detachment of 7000 foot and 1000 horse, he returned into Syria and took up his winter quarters in that province. This retrograde movement was a fatal error. His occupations, too, during the winter were highly censurable, having more of the trader in them than the general. Instead of improving the discipline of the soldiers, and keeping them in proper exercise, he spent his time in making inquiry relative to the revenues of the cities, and in weighing the treasures which he found in the temple of Hierapolis. In the spring the Roman commander took the field, on the frontiers of Syria, with seven legions, four thousand horse, and an equal number of light or irregular troops. With this force he again passed the Euphrates, when he was joined by an Arabian chief, whom Plutarch calls Ariamnes, but who is elsewhere named Acbarus or Abgarus; and in this barbarian, owing to his knowledge of the country and his warm and frequent expressions of attachment to the Romans, Crassus unfortunately placed the utmost confidence. The result may easily be foreseen. Crassus intended to have followed the course of the Euphrates till he should reach the point where it approaches nearest to Seleucia and Ctesiphon, the capital of the Parthian Empire; but being dissuaded from this by his crafty guide, and directing his march across the plains, he was led at last into a sandy desert, where his army was attacked by the Parthian forces under Surenas. An unequal conflict ensued. The son of Crassus, sent with a detachment of Gallic horse to repel the Parthian cavalry, lost his life after the most heroic exertions; and his loss was first made known to his father by the barbarians carrying his head on a spear. Crassus himself, not long after, being compelled by his own troops to meet Surenas in a conference, was treacherously slain by the barbarians, and his head and right hand sent to the Parthian king, Orodes, who is said to have poured molten gold down the dead man's throat, saying, in allusion to his avarice, "Sate thyself now with that of which in life thou wert so greedy!" The whole loss of the Romans in this disastrous campaign was 20,000 killed and 10,000 taken prisoners. See Plut. *Crass.*; Dio Cass. xl. 13 foll.; and the article PARTHIA.

Crater (*κρατήρ*; Ionic *κρητήρ*; Lat. *crater* or *cratera*, from *κεράννυμι*, "to mix"). A vessel in which the wine, according to the custom of the ancients, who very seldom drank it undiluted, was mixed with water, and from which the cups were filled. In the Homeric Age the mixture was always made in the dining-room by heralds or young men (*κοῦροι*). The use of the vessel is sufficiently clear from the expressions so frequent in the poems of Homer: *κρητῆρα κεράσασθαι*—i. e. *οἶνον καὶ ὕδωρ ἐν κρητῆρι μίσγειν*: *πίνειν κρητῆρα*, "to empty the crater"; *κρητῆρα στήσασθαι* (*cratera statuere*), "to place the filled crater near the table"; *κρητῆρας ἐπιστέφεσθαι ποτοῖο*, "to fill the craters to the brim." The crater, in the Homeric Age, was generally of silver, sometimes with a gold edge, and sometimes all gold or gilt. It stood upon a tripod, and its ordinary place in the *μέγαρον* was in the most honourable part of the room, at the farthest end from the entrance, and near the seat of the most distinguished among the guests. The size of the crater seems to have varied according to the number of guests, for where their number is increased a larger crater is asked for. It would seem, at least at a later period (for in the Homeric poems we find no traces of the custom), that three craters were filled at every feast after the tables were removed. According to Suidas, the first was dedicated to Hermes, the second to Charisius, and the third to Zeus Soter; but others called them by different names; thus the first, or, according to others, the last, was also designated the *κρατὴρ ἀγαθοῦ δαίμονος*, "the crater of the good genius," *κρατὴρ ὑγιείας* and *μεταυιπτρίς* or *μετάνιπτρον*, because it was the crater from which the cups were filled after the washing of the hands. There were special craters named from places, e. g. Lesbian, Laconian, Argive (Herod. iv. 152).

Crater. (Dennis, *Etruria*, i. p. cxi.)

Craters were among the first things on the embellishment of which the ancient artists exercised their skill. Homer mentions, among the prizes proposed by Achilles, a beautifully wrought silver crater, the work of the ingenious Sidonians, which, by the elegance of its workmanship, excelled all others on the whole earth. In the reign of Croesus, king of Lydia, the Lacedaemonians sent to that king a brazen crater, the border of which was all over ornamented with figures (*ζώδια*), and which was of such an enormous size that it contained 300 amphorae. Croesus himself dedicated to the Delphic god two huge craters, which the Delphians believed to be the work of Theodorus of Samos, and Herodotus was induced, by the beauty of their workmanship, to think the same. It was

Crater. (Dennis, *Etruria*, i. p. cxii.)

about Ol. 35 that the Samians dedicated six talents (the tenth of the profits made by Colaeus on his voyage to Tartessus) to Heré, in the shape of an immense brazen crater, the border of which

was adorned with projecting heads of griffins. This crater, which Herodotus calls Argive (from which we must infer that the Argive artists were celebrated for their craters), was supported by three colossal brazen statues, seven yards high, with their knees closed together.

The number of craters dedicated in temples seems everywhere to have been very great. Livius Andronicus, in his *Equus Troianus*, represented Agamemnon returning from Troy with no less than 3000 craters, and Cicero says that Verres carried away from Syracuse the most beautiful brazen craters, which most probably belonged to the various temples of that city. But craters were not only dedicated to the gods as *anathemata*, but were used on various solemn occasions in their service. In sacrifices the libation was always taken from a crater; and sailors, before they set out on their journey, used to take the libation with cups from a crater and pour it into the sea. The name crater was also sometimes used as synonymous with *σιτλίον*, *situla*, a pail in which water was carried.

Bronze Crater from Pompeii. (Overbeck.)

The Romans used their *crater* or *cratera* for the same purposes for which it was used in Greece; but the most elegant specimens were, like most works of art, made by Greeks. See CAELATURA.

Cratĕrus (Κρατερός). (1) A distinguished general of Alexander the Great, on whose death (B.C. 323) he received, in common with Antipater, the government of Macedonia and Greece. He fell in a battle against Eumenes, in 321. (2) A Greek physician, who attended the family of Atticus.

Crates (Κράτης). (1) A celebrated Athenian poet of the Old Comedy, who began to flourish B.C. 449. (2) Of Thebes, a pupil of the Cynic Diogenes, and one of the most distinguished of the Cynic philosophers, flourished about B.C. 320. (See CYNICI.) (3) Of Mallus in Cilicia, a celebrated grammarian, who founded the school of grammar at Pergamus, and wrote a commentary on the Homeric poems (Διορθωτικά) in opposition to Aristarchus. In B.C. 157, he was sent by Attalus to Rome as an ambassador, where he was the first to introduce the study of grammar. Besides his Homeric studies, Crates wrote commentaries on Euripides and Aristophanes and a treatise on the Attic dialect (Περὶ Ἀττικῆς Διαλέκτου). See Wachsmuth, *De Cratete Mallota* (Leipzig, 1860); Susemihl, *Geschichte d. griech. Litt. in der Alexandr. Zeit*, ii. pp. 4–12 and 703; Conze, in the *Berl. Acad. Sitzungsber.* (1884); and Consbruch, in the *Comment. in Honorem Studemundi* (Strassburg, 1889). Also the articles GRAMMATICA; PHILOLOGY.

Crates (*ταρσός, γέρρον*). A hurdle, used by the ancients in many different ways—especially, as among ourselves, for agricultural purposes. Thus *textae crates* are the wattled hurdles of which sheep-folds are made (Hor. *Epod.* ii. 45); *vimineae crates* are bush-harrows (Verg. *Georg.* i. 95, 104). The name was also applied to any wooden frame composed of bars with interstices — our "crate," "grate"; and the interstices might be filled up with mats of straw, rushes, or fern (Colum. xii. 15). The following special senses may be noticed:

(1) *Crates* were used by the country people upon which to dry figs, grapes, etc., in the rays of the sun; or to screen growing fruit from the weather (Colum. xii. 16); or for spreading manure (Cat. *R. R.* 10). (2) A rack for provisions. (3) Among military terms we find *crates* used in forming the roadway of Caesar's bridge over the Rhine (Caes. *B. G.* iv. 17); for parapets or breastworks; as fascines for crossing ditches; and as mantlets or wooden screens for sheltering the advance of troops under cover (Ammian. Marcell. xxi. 12). From the *plutei*, which were employed in the same way, they differed only in being without the covering of raw hides. (4) By the besieged they were used joined together so as to form what Vegetius calls a *metella*, and filled with stones; these were then poised between two of the battlements, and as the storming-party approached upon the ladders, overturned on their heads (Veget. *Mil.* iv. 6). (5) In poetry, the wicker-work of shields is so called (Verg. *Aen.* vii. 633).

(6) A capital punishment was called by this name, whence the phrase *sub crate necari*. The criminal was either thrown into a pond or well and drowned under a hurdle (Tac. *Germ.* 12), or crushed by the weight of stones heaped upon it (Liv. iv. 50).

Crathis (Κρᾶθις). (1) A river in Achaia, falling into the sea near Aegae. (2) A river in Lower Italy, falling into the sea near Sybaris. Its waters were fabled to dye the hair blond (Eurip. *Troad.* 228).

Craticŭla (*ταρρίον*). A gridiron, several specimens of which have been found in Pompeii. In Petronius (31 and 70) the *craticula* is of silver and brought to the table by the slaves — an anticipation of the modern "silver grill."

Bronze Craticula from Paestum (Handle restored).

Craticŭlum (*κρατευτήριον*). An andiron. See Poll. vi. 89.

Cratīnus (Κρατῖνος). (1) An Athenian comic poet, born in B.C. 519. It was not till late in life that he directed his attention to comic compositions. The first piece of his on record is the Ἀρχίλοχοι, which was represented about B.C. 448, at which time he was in his seventy-first year. In this play, according to Plutarch (*Cimon*), he makes mention of the celebrated Cimon, who had died the preceding year, B.C. 449; and from the language employed by the poet it may be inferred that he was on terms of close intimacy with the Athenian general. Soon after this, comedy became so licentious and virulent in its personalities that the magistracy were obliged to interfere. A decree was passed, B.C. 440, prohibiting the exhibitions of comedy; which law continued in force only during that year and the two following, being repealed in the archonship of Euthymenes. Three victories of Cratinus stand recorded after the recommencement of comic performances. With the Χειμαζόμενοι he was second, B.C. 425 (*Argum.*

Acharn.), when the Ἀχαρνεῖς of Aristophanes won the prize, and the third place was adjudged to the Νουμηνίαι of Eupolis. In the succeeding year he was again second with the Σάτυροι, and Aristophanes again first with the Ἱππεῖς (*Argum. Equit.*). In a parabasis of this play that young rival makes mention of Cratinus; where, having noticed his former successes, he insinuates, under the cloak of an equivocal piety, that the veteran was becoming doting and superannuated. The old man, now in his ninety-fifth year, indignant at this insidious attack, exerted his remaining vigour, and composed, against the contests of the approaching season, a comedy entitled Πυτίνη, or *The Flagon*, which turned upon the accusations brought against him by Aristophanes. The aged dramatist had a complete triumph (*Argum. Nub.*). He was first; while his humbled antagonist was vanquished also by Ameipsias with the Κόννος, though the play of Aristophanes was the favourite *Nubes*. Notwithstanding his notorious intemperance, Cratinus lived to an extreme old age, dying B.C. 422, in his ninety-seventh year. Aristophanes alludes to the excesses of Cratinus in a passage of the *Equites* (v. 526 foll.). In the *Pax*, he humorously ascribes the jovial old poet's death to a shock on seeing a cask of wine staved and lost. Cratinus himself made no scruple of acknowledging his failing (Schol. *in Pac.* 703). Horace, also, opens one of his Epistles (i. 19) with a maxim of the comedian's, in due accordance with his practice. The titles of thirty-eight of the comedies of Cratinus have been collected. His style was bold and animated (Pers. i. 123), and like his younger brethren, Eupolis and Aristophanes, he fearlessly and unsparingly directed his satire against the iniquitous public officer and the profligate of private life. The fragments of Cratinus may be found in Meineke, *Fragmenta Comicorum Graecorum* (Berlin, 1840). (2) There was also a younger Cratinus, a poet of the New Comedy and contemporary of Plato.

Cratippus (Κράτιππος). A Peripatetic philosopher of Mitylené, accompanied Pompey in his flight after the battle of Pharsalia, B.C. 48. He afterwards settled at Athens, where the young M. Cicero was his pupil in B.C. 44. By the elder Cicero's influence, Cratippus received the gift of Roman citizenship from Caesar.

Cratȳlus (Κρατύλος). A Greek philosopher, and disciple of Heraclitus. According to Aristotle (*Metaph.* i. 6), Plato attended his lectures in his youth. Cratylus is one of the interlocutors in the dialogue of Plato called after his name.

Cremĕra. A small river in Etruria, which falls into the Tiber a little above Rome; memorable for the death of the 300 Fabii in B.C. 477. Here also Constantine defeated Maxentius in A.D. 312. See FABII.

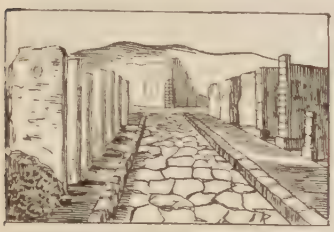
Cremna (Κρῆμνα). A strong place in the interior of Pisidia, lying, according to Ptolemy, on the declivity of Taurus, nearly six miles north of Selga. This fortress was considered by the Romans to be of so much consequence that they established a colony here.

Cremōna. A city of Cisalpine Gaul, northeast of Placentia and a little north of the Po. Cremona and Placentia were both settled by Roman colonies, B.C. 219 (Polyb. iii. 40). After the defeat on the Trebia, we find the consul P. Scipio retiring to Cremona (Liv. xxi. 56), and it appears that the Romans retained the place throughout the whole of the Second Punic War, though it suffered so much during its continuance, and afterwards from the attacks of the Gauls, that it was found necessary to recruit its population by a fresh supply of colonists. The colony, being thus renewed, continued to prosper for nearly a hundred and fifty years; when the Civil Wars, which ensued after the death of Caesar, materially affected its interests. Cremona, unfortunately, espoused the cause of Brutus, and thus incurred the vengeance of the victorious party. The loss of its territory, which was divided among the veteran soldiers of Augustus, is well known from the line of Vergil (*Eclog.* ix. 28), which is nearly repeated by Martial (viii. 55). The effect of this calamity would seem, however, to have been but temporary; and, in fact, we learn from Strabo that Cremona was accounted in his time one of the most considerable towns in the north of Italy. The civil wars which arose during the time of Otho and Vitellius were the source of much severer affliction to this city than any former evil, as the fate of the Empire was more than once decided between large contending armies in its immediate vicinity. After the defeat of Vitellius's party by the troops of Vespasian, it was entered by the latter (A.D. 69) and exposed to all the horrors that fire, the sword, and a licentious soldiery can inflict upon a city taken by storm. The conflagration of the place lasted four days. The indignation which this event excited throughout Italy seems to have been such that Vespasian, afraid of the odium it might attach to his party, used every effort to raise Cremona from its ruins by recalling the scattered inhabitants, reconstructing the public edifices, and granting the city fresh privileges.

Cremōnis Iugum. See ALPES.

Cremutius Cordus. See CORDUS.

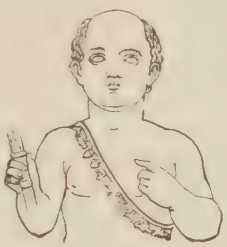
Creon (Κρέων). (1) King of Corinth, and father of Creüsa or Glaucé, the wife of Iason. (See CREÜSA; MEDEA.) (2) The brother of Iocasté, mother and wife of Oedipus. (See OEDIPUS.) He ascended the throne of Thebes after Eteocles and Polynices had fallen in mutual combat, and gave orders that the body of the latter should be deprived of funeral rites, on which circumstance is founded the plot of the *Antigone* of Sophocles. See ANTIGONÉ; ETEOCLES; POLYNICES; SEVEN AGAINST THEBES.



Creophȳlus (Κρεώφυλος) of Chios. One of the earliest epic poets, and said to have been the friend or son-in-law of Homer (Plat. *Repub.* 600 C; Plut. *Lyc.*). An epic poem has been ascribed to him, entitled Οἰχαλίας ἅλωσις or Οἰχαλία, relating the contest of Heracles with Eurytus for the sake of Iolé, and the capture of Oechalia.

Crepĭda (κρηπίς), also called **Crepidŭla** (Plaut. *Pers.* iv. 2, 3). A kind of shoe of the nature of sandals, and to be considered as occupying a middle position between a closed boot and plain sandals. Originally it appears to have been worn by peasants, having a high and strong sole, often studded with nails (cf. Plin. *H. N.* xxxvi. § 127), sometimes fitted with leaden or brazen plates called Χῖαι κρηπῖδες (Hippocr. *ap.*

Crepida. (Foot of Hermes.)



Galen, xviii. A. p. 678, ed. Kuhn); and we are told that Haguon, one of the followers of Alexander, had gold or silver nails in his *crepidae* (Athen. xii. 539 c). It sometimes had a low upper, with eyes (*ansae*) through which straps (*obstragula, ἱμάντες*), which were at times adorned with jewels or dyed with purple, were passed, fastening it over the instep; often it was closed at the back; but generally the upper consisted of a series of large loops (also called *ansae*), through which the fastening thong or thongs were passed. This kind of open network covering the instep explains the epithet *πολυσχιδές* (Lucian, *Rhet. Praecept.* 15). (See CALCEUS.) The name *crepida* is also given to a raised sidewalk or causeway for foot-passengers on the side of a street, as in the above illustration.

Crepida in Pompeian Street. (Rich.)

Crepitacŭlum. See SISTRUM.

Crepundia (*τὰ σπάργανα*). A generic term for children's playthings, such as rattles, dolls, toy hatchets, swords, etc. The name is also given to objects of a similar description tied about the necks of children, either as amulets or for purposes of identification (Plaut. *Mil. Glor.* v. 6; *Cist.* iv. 1, 13; *Rud.* iv. 4; Soph. *Oed. Tyr.* 1035). Specimens of these are represented as worn on the neck of a child in a statue of the Museo Pio-Clementino, copied in the accompanying engraving —viz., a half-moon (*lunula*) on the top of the right shoulder; then a double axe (*securicula ancipes*); next a bucket (*situla argenteola*); a sort of flower, not mentioned; a little sword (*ensiculus aureolus*); a little hand (*manicula*); then another half-moon; a dolphin (*delphin*), etc. See AMULETUM.

Child with Crepundia. (Museo Pio-Clementino.)

Cresphontes (Κρεσφόντης). A son of Aristomachus, who, with his brothers Temenus and Aristodemus, conquered the Peloponnesus. This was the famous conquest achieved by the Heraclidae. He and his two sons were subsequently slain by the Messenians. See ARISTODEMUS; HERACLIDAE.

Cressa. "The Cretan woman"; a term used by Ovid of Ariadné (*Am.* i. 7, 16) and of Aeropé (*A. A.* i. 327).

Crestonia (Κρηστωνία). A district in Macedonia between the Axius and the Strymon, near Mount Cerciné, inhabited by the Crestonaei, a Thracian people; their chief town was Creston or Crestoné, founded by the Pelasgians.

Creta (Κρήτη; in Italian, Candia; in Turkish, Kirit). One of the largest islands of the Mediterranean Sea, at the south of all the Cyclades. Its name is derived by some from the Curetes, who are said to have been its first inhabitants; by others, from the nymph Creté, daughter of Hesperus; and by others, from Cres, a son of Zeus and the nymph Idaea. It is also designated among the poets and mythological writers by the several appellations of Aeria, Doliché, Idaea, and Telchinia. According to Herodotus (bk. i.), this great island remained in the possession of various barbarous nations till the time of Minos (q. v.), son of Europa, who, having expelled his brother Sarpedon, became the sole sovereign of the country. These early inhabitants are generally supposed to be the Eteocretes of Homer (*Od.* xix. 172), who clearly distinguishes them from the Grecian colonists subsequently settled there.

Minos, according to the concurrent testimony of antiquity, first gave laws to the Cretans, and, having conquered the pirates who infested the Aegean Sea, established a powerful navy. In the Trojan War, Idomeneus, sovereign of Crete, led its forces to the war in eighty vessels, a number little inferior to that commanded by Agamemnon himself. According to the traditions which Vergil has followed, Idomeneus was afterwards driven from his throne by faction, and compelled to sail to Iapygia, where he founded the town of Salernum. At this period the island appears to have been inhabited by a mixed population of Greeks and barbarians. Homer enumerates the former under the names of Achaei, Dorians, surnamed Trichaïces, and Pelasgi. The latter, who were the most ancient, are said to have come from Thessaly, under the conduct of Teutamus, posterior to the great Pelasgic emigration into Italy. The Dorians are reported to have established themselves in Crete, under the command of Althemenes of Argos, after the death of Codrus and the foundation of Megara. In Crete was the famous labyrinth whose construction was ascribed to Daedalus, and about which so many legends cluster. See ARIADNÉ; DAEDALUS; ICARUS; LABYRINTHUS; MINOS; MINOTAURUS; PASIPHAÉ; THESEUS.

After the Trojan War and the expulsion of Idomeneus, the principal cities of Crete formed themselves into several republics, for the most part independent, while others were connected by federal ties. These, though not exempted from the dissensions which so universally distracted the Grecian States, maintained for a long time a considerable degree of prosperity, owing to the good system of laws and education which had been so early instituted throughout the island by the decrees of Minos. The Cretan code was supposed by many of the best-informed writers of antiquity to have furnished Lycurgus with the model of his most salutary regulations. It was founded, according to Ephorus, cited by Strabo, on the just basis of liberty and an equality of rights; and its great aim was to promote social harmony and peace by enforcing temperance and frugality. On this principle, the Cretan youths were divided into classes called Agelae, and all met at the Andreia, or public meals. Like the Spartans, they were early trained to the use of arms, and inured to sustain the extremes of heat and cold, and undergo the severest exercise; they were also compelled to learn their letters and certain pieces of music. The chief magistrates, called Cosmi (*κόσμοι*), were ten in number and elected annually. The Gerontes constituted the council of the nation, and were selected from those who were thought worthy of holding the office of Cosmus. There was also an equestrian order, who were bound to keep horses

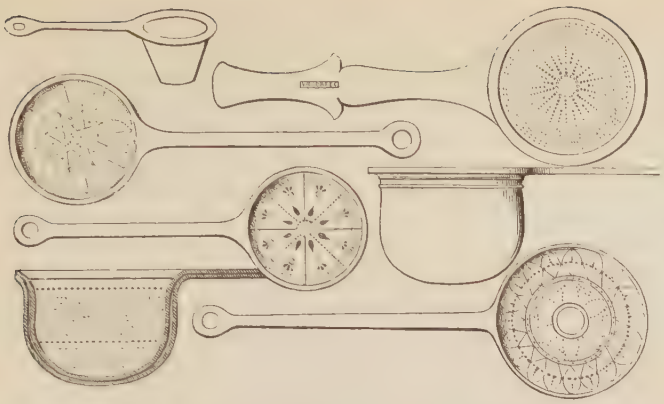
at their own expense. But though the Cretan laws resembled the Spartan institutions in so many important points, there were some striking features which distinguished the legislative enactments of the two countries. One of these was that the Lacedaemonians were subject to a strict agrarian law, whereas the Cretans were under no restraint as to the accumulation of moneyed or landed property; another, that the Cretan republics were for the most part democratic, whereas the Spartan was decidedly aristocratic. Herodotus informs us that the Cretans were deterred by the unfavourable response of the Pythian oracle from contributing forces to the Grecian armament assembled to resist the Persians (vii. 169). In the Peloponnesian War incidental mention is made of some Cretan cities as allied with Athens or Sparta, but the island does not appear to have espoused collectively the cause of either of the belligerent parties. The Cretan soldiers were held in great estimation as light troops and archers, and readily offered their services for hire to such States, whether Greek or barbarian, as needed them. In the time of Polybius the Cretans had much degenerated from their ancient character, for he charges them repeatedly with the grossest immorality and the most hateful vices. We know also with what severity they are reproved by St. Paul, in the words of one of their own poets, Epimenides (Ep. Tit. i. 12), Κρῆτες ἀεὶ ψεῦσται, κακὰ θηρία, γαστέρες ἀργαί.

The chief cities of Crete were Cnossus, Cydonia, Gortyna, and Lyctus, all of which see.

The Romans did not interfere with the affairs of Crete before the war with Antiochus, when Q. Fabius Labeo crossed over into the island from Asia Minor, under pretence of claiming certain Roman captives who were detained there. Several years after, the island was invaded by a Roman army commanded by M. Antonius, under the pretence that the Cretans had secretly favoured the cause of Mithridates; but Florus more candidly avows that the desire of conquest was the real motive which led to this attack. The enterprise, however, having failed, the subjugation of the island was not effected till some years later by Metellus, who, from his success, obtained the agnomen of Creticus. It was then (B.C. 67) annexed to the Roman Empire, and formed, together with Cyrenaïca, one of its numerous provinces, being governed by the same proconsul.

Crete forms an irregular parallelogram, of which the western side faces Sicily, while the eastern looks towards Cyprus; on the north it is washed by the Mare Creticum, and on the south by the Libyan Sea, which intervenes between the island and the opposite coast of Cyrené. Mount Ida, which surpasses all the other summits in elevation, rises in the centre of the island; its base occupies a circumference of nearly 600 stadia. To the west it is connected with another chain, called the White Mountains (Λευκὰ ὄρη), and to the east its prolongation forms the ridge anciently known by the name of Dicté. See Höck, *Kreta* (Göttingen, 1829); Pashley, *Travels in Crete* (London, 1837); Spratt, *Researches in Crete*, 2 vols. (London, 1865); Edwardes, *Letters from Crete* (London, 1887); and the article GORTYN.

Creta (sc. *terra*). Chalk or clay; so called from its abundance in the island of Crete (Creta), and so in Greek Κρητικὴ γῆ. The creta proper was simply chalk; *creta Eretria* was a species of earth found near Eretria in Euboea and used in medicine as an astringent; *creta Sarda* was fuller's earth, used in cleaning garments (see FULLO); *creta Cimolia* was a better kind of the same; and *creta Selinusia* (from Selinus in Sicily) furnished women with one of their numerous face-powders. (See CERUSSA; FUCUS.) Of some species of creta, vessels were made, on which see FICTILÉ. From the whiteness of chalk, it was spoken of tropically as denoting luck, contrasted with *carbo* (Pers. v. 108 with the commentators). The feet of slaves exposed for sale were chalked (Juv. i. 111), possibly to aid in tracking them if they escaped; hence *gypsati pedes* in Tibull. ii. 3, 60. The word *cretati* is sometimes applied to candidates for office, from the white robes they wore = *candidati*. See AMBITUS.



Creteus (Κρητεύς) or **Catreus** (Κατρεύς). The son of Minos by Pasiphaë or Creté, and father of Althemenes.

Cretheus (Κρηθεύς). Son of Aeolus and Enareté, husband of Tyro, and father of Aeson, Pheres, Amythaon, and Hippolyté. He was the founder of Iolcus.

Creūsa (Κρέουσα). (1) A daughter of Creon, king of Corinth, and wife of Iason. She received from Medea, as bridal presents, a diadem and a robe, both of which had been prepared with magic art and saturated with deadly poisons. On arraying herself in these, flames burst forth and destroyed her. Creon, the father of the princess, perished in a similar way, having thrown himself upon the body of his dying daughter, and being afterwards unable to extricate himself from the embrace of the corpse (Eurip. *Med.* 781 foll., 1156 foll.). According to the scholiast, she was also called Glaucé. (2) Daughter of Priam and Hecuba, and wife of Aeneas. When Troy was surprised by the Greeks, she fled in the night with her husband, but they were separated during the confusion, nor was her absence observed until the other fugitives arrived at the spot appointed for assembling. Aeneas a second time entered the burning city in quest of his wife; but while he was seeking for her through every quarter of Troy, Creüsa appeared to him as a deified personage, and appeased his alarm by informing him that she had been adopted by Cybelé among her own attendant nymphs; and she then urged him to pursue his course to Italy, with an intimation of the good fortune that awaited him in that land (Verg. *Aen.* ii. 562 foll.).

Cribrum (κόσκινον). A sieve; made of parchment perforated with holes, or of horse-hair, thread, papyrus, or rushes interwoven so as to leave interstices between each plat. The Romans sifted their flour through two kinds of sieves, called respectively *excussoria* and *pollinaria*, the latter of which gave the finest flour, termed *pollen*. Sieves of horse-hair were first made by the Gauls; those of linen by the Spaniards; and of papyrus and rushes by the Egyptians (Plin. *H. N.* xviii. 28; Cato, *R. R.* 76, 3; Pers. iii. 112). See p. 429.

Crimen. A legal term having two meanings in ordinary use: (*a*) a punishable offence; and (*b*) the accusation brought against the person by whom the offence is committed. In the first of these senses crimina were, in the oldest period of Roman history, regarded as wrongs against religion and the gods, and their punishment as an expiation offered to heaven (Serv. *ad* Verg. *Aen.* i. 632). In the Twelve Tables this implication of penal law

Bronze Cribra or Sieves from Pompeii. (Overbeck.)

with religion and religious sanctions has become less prominent, and we find a distinction between offences which are punished by a solemn legislative act of the State and offences atoned for by a fine paid to the injured person in satisfaction of his resentment, as to the amount of which the parties might come to terms (Fest. s. v. *talio*). From this distinction arose another, of more scientific value, between *delicta privata* and *crimina publica* (*Dig.* 21, 1, 17, 18), which is adhered to with tolerable consistency in the writings of the jurists and the later law. *Delicta privata*, or *delicta* simply, are civil offences, or what we call "torts"; *crimina publica* are what we call "crimes," offences against the State or community, the subject of prosecution before a criminal tribunal. But occasionally a delict is spoken of as a crimen (e. g. *extra furti crimen rideri*, Gaius, iii. 197; *Inst.* iv. 1, 7), and in other passages (e. g. *Dig.* 48, 19, 1) a person who commits a crime is said *delinquere*. Crimes punishable by death, loss of *libertas*, by *interdictio aquae et ignis*, or *deportatio* were called *capitalia*.

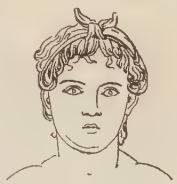
Crimīsus (Κριμισός) or **Crimissus** (Κριμισσός). A river in the west of Sicily falling into the Hypsa; on its banks Timoleon defeated the Carthaginians, B.C. 339.

Crinagŏras (Κριναγόρας). A resident of Mitylené who flourished during the Augustan Age. He is the author of some fifty epigrams of the Greek Anthology. (Jacobs, *Anth. Graec.* pp. 876–878).

Crispus, Flavius Iulius. The eldest son of the emperor Constantine the Great, and named by him as Caesar in A.D. 317. He is thought to have aspired to the throne, for in 324 his father caused him to be put to death. See Constantinus, p. 404.

Crissaeus Sinus (Κρισσαῖος κόλπος). An arm of the Sinus Corinthiacus on the northern shore. It extends into the country of Phocis, and had at its head the town of Crissa, whence it took its name. Its modern name is the Gulf of Salona, from the modern city of Salona, the ancient Amphissa, which was the chief town of the Locri Ozolae and lay to the northeast of Delphi.

Crista. See Galea.



Critae (κριταί). Judges; a name applied by the Greeks to any person who did not judge of a thing as δικαστής—i. e. according to positive law—but rather according to his own personal sense of justice and equity (Herod. iii. 160). Specifically, the name was applied at Athens to a number of judges chosen by ballot from a body of selected candidates at the time of the Dionysia (q. v.). Their office was to judge of the merit of the different choruses and dramatic poems, and to award the prizes to the victors. It is supposed that there were in all ten κριταί—five for comedy and five for tragedy. See Drama.

Crithēis (Κριθηΐς). The reputed mother of Homer. See Homerus.

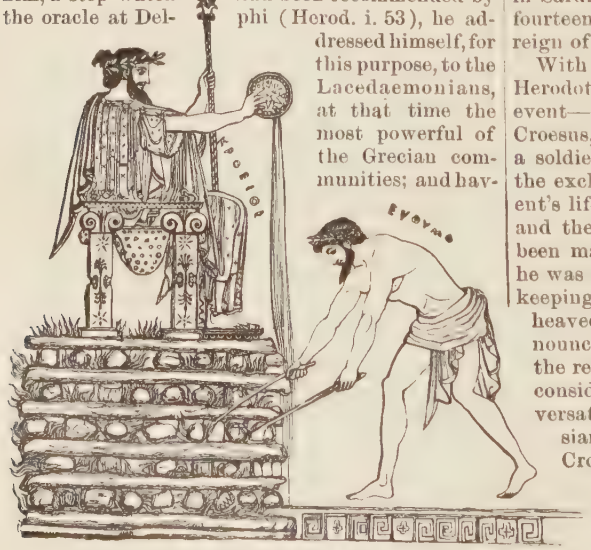
Critias (Κριτίας). An Athenian, a disciple of Socrates and Gorgias of Leontini. He was one of the most accomplished men of his time, and was distinguished as a poet and an orator. But he is best known as the chief of the Thirty Tyrants (q. v.), in defence of whose cause against the Liberators he fell in B.C. 403. He was the author of several tragedies. Some fragments of his poems have survived, the longest being from his political elegies. He seems to have had the gift of expression, but to have written in a harsh style.

Criton (Κρίτων). A rich citizen of Athens and a friend and disciple of Socrates. He made arrangements to enable Socrates to escape from prison just before his death, but the firmness of the philosopher, who refused to fly, foiled the plan. He was the author of seventeen philosophical dialogues, now lost; and a dialogue of Plato bears his name.

Crobȳlus (κρωβύλος). A fashion of wearing the hair drawn up into a knot (Thuc. i. 6), as shown in the accompanying illustration. See Coma.

Crobylus. (Rich.)

Crocodilopŏlis (Κροκοδείλων Πόλις). The name of several Egyptian cities, so named from the local worship of the crocodile. See Pliny, *H. N.* v. 9; and the second article Arsinoé.



Crocōta, dim. **Crocotŭla** (sc. *vestis*). A light, showy garment named from its saffron (*crocus*) colour. It was affected chiefly by women and by men of an effeminate character, and was probably worn between the under and upper garments.

Crocus (Κρόκος). A youth who, being unable to obtain the object of his affections, the nymph Smilax, pined away, and was changed into the crocus, or saffron. Smilax herself was metamorphosed into the smilax, or bindweed (Ovid, *Met.* iv. 283).

Croesus (Κροῖσος). The son of Alyattes, king of Lydia, and born about B.C. 590. He was the fifth and last of the Mermnadae, a family which began to reign with Gyges, who dethroned Candaules (q. v.). According to the account of Herodotus, Croesus was the son of Alyattes by a Carian mother, and had a half-brother, named Pantaleon, the offspring of an Ionian woman. An attempt was made by a private foe of Croesus to hinder his accession to the throne and to place the kingdom in the hands of Pantaleon; but the plot failed (Herod. i. 92), although Stobaeus informs us that Croesus, on coming to the throne, divided the kingdom with his brother. Plutarch states that the second

wife of Alyattes, wishing to remove Croesus, gave one of the cooks in the royal household a dose of poison to put into the bread she made for Croesus. The woman informed Croesus, and gave the poisoned bread to the queen's children; and the prince, out of gratitude, consecrated at Delphi a golden image of this cook three cubits high. Croesus ascended the throne on the death of his father, B.C. 560, and immediately undertook the subjugation of the Greek communities of Asia Minor (the Aeolians, Ionians, and Dorians), whose disunited state and almost continual wars with one another rendered his task an easy one. He contented himself, however, after reducing them beneath his sway, with merely imposing an annual tribute, and left their forms of government unaltered. When this conquest was effected, he turned his thoughts to the construction of a fleet, intending to attack the islands, but was dissuaded from his purpose by Bias of Priené (Herod. i. 27). Turning his arms, upon this, against the nations of Asia Minor, he subjected all the country lying west of the river Halys, except Cilicia and Lycia; and then applied himself to the arts of peace, and to the patronage of the sciences and of literature. He became famed for his riches and munificence. Poets and philosophers were invited to his court, and, among others, Solon, the Athenian, is said to have visited his capital, Sardis. Herodotus relates the conversation which took place between the latter and Croesus on the subject of human felicity, in which the Athenian offended the Lydian monarch by the little value which he attached to riches as a means of happiness (Herod. i. 30), and by his saying that no man should be called happy until his death.

Not long after this, Croesus had the misfortune to lose his son Atys, who was accidentally killed by Adrastus (q. v.), leaving him with only a dumb child as his heir; but the deep affliction into which this loss plunged him was dispelled in some degree, after two years of mourning, by a feeling of disquiet relative to the movements of Cyrus and the increasing power of the Persians. Wishing to form an alliance with the Greeks of Europe against the danger which threatened him, a step which had been recommended by the oracle at Delphi (Herod. i. 53), he addressed himself, for this purpose, to the Lacedaemonians, at that time the most powerful of the Grecian communities; and having succeeded in his object, and made magnificent presents to the Delphic shrine, he resolved on open hostilities with the Persians. The art of the crafty priesthood who managed the machinery of the oracle at Delphi is nowhere more clearly shown than in the history of their royal dupe, the monarch of Lydia. He had lavished upon their temple the most splendid gifts — so splendid, in fact, that we should be tempted to suspect Herodotus of exaggeration if his account were not confirmed by other writers—and the recipients of this bounty, in their turn, put him off with an answer of the most studied ambiguity when he consulted their far-famed oracle on the subject of a war with the Persians. The response of Apollo was, that if Croesus made war upon this people "he would destroy a great Empire"; and the answer of Amphiaraüs (for his oracle, too, was consulted by the Lydian king) tended to the same effect (Herod. i. 53). The verse itself, containing the response of the oracle, is given by Diodorus (*Excerpt.* vii. § 28), and is as follows: Κροῖσος, Ἅλυν διαβάς, μεγάλην ἀρχὴν καταλύσει, "Croesus, on having crossed the Halys, will destroy a great empire" — the river Halys being, as already remarked, the boundary of his dominions to the east. Croesus thought that the empire thus referred to was that of Cyrus; the issue, however, proved it to be his own.

Croesus on the Pyre.

Having assembled a numerous army, the Lydian monarch crossed the Halys, invaded the territory of Cyrus, and a battle took place in the district of Pteria, but without any decisive result. Croesus, upon this, thinking his forces not sufficiently numerous, marched back to Sardis, disbanded his army, consisting entirely of mercenaries, and sent for succour to Amasis of Egypt and also to the Lacedaemonians, determining to attack the Persians again in the beginning of the next spring. But Cyrus did not allow him time to effect this. Having discovered that it was the intention of the Lydian king to break up his present army, he marched with all speed into Lydia, before a new mercenary force could be assembled, defeated Croesus (who had no force at his command but his Lydian cavalry) in the battle of Thymbra, shut him up in Sardis, and took the city itself after a siege of fourteen days and in the fourteenth year of the reign of the son of Alyattes.

With Croesus fell the Empire of the Lydians. Herodotus relates two stories connected with this event—one having reference to the dumb son of Croesus, who spoke for the first time when he saw a soldier in the act of killing his father, and, by the exclamation which he uttered, saved his parent's life, the soldier being ignorant of his rank; and the other being as follows: Croesus having been made prisoner, a pile was erected, on which he was placed in order to be burned alive. After keeping silence for a long time, the royal captive heaved a deep sigh, and with a groan thrice pronounced the name of Solon. Cyrus sent to know the reason of this exclamation, and Croesus, after considerable delay, acquainted him with the conversation between himself and Solon. The Persian king, relenting upon this, gave orders for Croesus to be released. But the flames had already begun to ascend on every side of the pile, and all human aid proved ineffectual. In this emergency Croesus prayed earnestly to Apollo, the god on

whom he had lavished so many splendid offerings. That deity heard his prayer, and a sudden and heavy fall of rain extinguished the flames (Herod. i. 86 foll.). Croesus, after this, is said to have stood high in the favour of Cyrus, who profited by his advice on several important occasions; and Ctesias declares that the Persian monarch assigned him for his residence a city near Ecbatana, and that in his last moments he recommended Croesus to the care of his son and successor Cambyses; and entreated the Lydian, on the other hand, to be an adviser to his son. Croesus discharged this duty with so much fidelity as to give offence to the new monarch, who ordered him to be put to death. Happily for him, those who were charged with this order hesitated to carry it into execution; and Cambyses, soon after, having regretted his precipitation, Croesus was again brought into his presence and restored to his former favour. The rest of his history is unknown. As he was advanced in years, he could not have long survived Cambyses (Herod. iii. 36 foll.). The wealth of Croesus has passed into a proverb in all languages. See LYDIA.

Crommyon (Κρομμυών) or **Cromyon** (Κρομυών). A town in Megaris, on the Saronic Gulf, which afterwards belonged to Corinth. It is celebrated in mythology on account of its wild sow, which was slain by Theseus (q. v.).

Cronia (τὰ Κρόνια). A festival celebrated in Athens, and also at Rhodes, in honour of Cronus (q. v.). Greek writers apply the same name to the Roman Saturnalia (q. v.), which the Cronia seems to have resembled.

Cronius Mons (Κρόνιον ὄρος). A mountain in Elis near Olympia, with a temple of Cronus.

Cronus (Κρόνος). In Greek mythology, the youngest son of Uranus and Gaea, who mutilated and overthrew his father, and, with the assistance of the Titans, made himself sovereign of the world. He took his sister Rhea to wife, and became by her father of Hestia, Demeter, Heré, Hades, Poseidon, and Zeus. But his mother prophesied that one of his children would overthrow him. He accordingly swallowed them all except Zeus, whom Rhea saved by a stratagem. (See ZEUS.) Zeus, when grown up, obtained the assistance of the Ocean-nymph Thetis in making Cronus disgorge his children, and then, with the help of his kinsfolk, overpowered Cronus and the Titans. According to one version of the fable, Cronus was imprisoned in Tartarus with the Titans; according to another, he was reconciled with Zeus, and reigned with Rhadamanthus on the Islands of the Blessed. Cronus seems originally to have been a god of the harvest; whence it happens that in many parts of Greece the harvest month was called Cronion. His name being easily confused with that of Chronos (Χρόνος, "Time"), he was afterwards erroneously regarded as the god of time. In works of art he was represented as an old man, with a mantle drawn over the back of his head and holding a sickle in his hand. The Romans identified him with Saturnus, their god of sowing. See SATURNUS.

Cronus. (Pompeian Painting.)

Crophi (Κρῶφι). A mountain of Egypt, between Elephantiné and Syené. Between this mountain and another called Mophi were the sources of the Nile, according to a statement made to Herodotus by an Egyptian priest at Saïs (ii. 28).

Cropīa (Κρωπεία). An Attic deme belonging to the tribe Leontis.

Crotălum (κρόταλον). A kind of castanet or rattle used by dancers, and distinct from the *cymbalum* (q. v.) and the *sistrum* (q. v.). It was used by the Egyptians, and specimens of all these instruments have been found in the tombs or depicted on the monuments. The simplest form was a couple of shells or potsherds, pierced with holes and strung together; but brass and wood are also mentioned as materials (Eurip. *Cycl.* 204; Mart. xi. 16). Women who danced to the crotalum were called *crotalistriae* (Propert. v. 8, 39).

Crotalistria. (Spon.)

Crotōna or **Croton** (Κρότων). The modern Cotrone. A powerful city of Italy, in the Bruttiorum Ager, on the coast of the Sinus Tarentinus. Its foundation is ascribed to Myscellus, an Achaean leader, soon after Sybaris had been colonized by a party of the same nation, which was about B.C. 710. According to some traditions the origin of Crotona was much more ancient, and it is said to derive its name from the hero Croton. The residence of Pythagoras (q. v.) and his most distinguished followers in this city, together with the overthrow of Sybaris which it accomplished, and the exploits of Milo (q. v.) and of several other Crotonian victors in the Olympic Games, contributed in a high degree to raise its fame; and, in consequence, it was commonly said that the last athlete of Crotona was the first of the other Greeks. This city was also celebrated for its school of medicine, and was the birthplace of Democedes, who long enjoyed the reputation of being the first physician of Greece. About B.C. 510, Crotona sent an army of 100,000 men, commanded by the athlete Milo, against its powerful rival, Sybaris (q. v.), by which the latter city was destroyed. The removal of its rival, however, produced an enervating effect upon Crotona. As a proof of the remarkable change which took place in the warlike spirit of this people, it is said that, on their being subsequently engaged in

hostilities with the Locrians, an army of 130,000 Crotoniatae were routed by 10,000 of the enemy on the banks of the Sagras. Such was, indeed, the loss they experienced in this battle that, according to Strabo, their city henceforth rapidly declined, and could no longer maintain the rank it had long held among the Italian republics. Dionysius the Elder, who was then aiming at the subversion of all the States of Magna Graecia, having surprised the citadel, gained possession of the town, which, however, he did not long retain. Crotona was finally able to assert its independence against his designs, as well as the attacks of the Bruttii; and when Pyrrhus invaded Italy it was still a considerable city. But the consequences of the war which ensued with that king proved so ruinous to its prosperity that above one half of its extent became deserted. Crotona was then occupied by the Bruttii, with the exception of the citadel, in which the chief inhabitants had taken refuge; these, being unable to defend the place against a Carthaginian force, soon after surrendered, and were allowed to withdraw to Locri. Crotona eventually fell into the hands of the Romans, in B.C. 193, and a colony was established there.

Crucifixion. See CRUX.

Crucis Inventio. See HELENA.

Crumēna (*βαλάντιον* or *βαλλάντιον*). A leathern bag slung round the neck and used as a purse. It usually hung down behind; hence we find a master walking *behind* the slave who carries the purse, so that he may keep an eye on it (Plaut. *Pseud.* i. 2, 37).

Cruppellarii (Keltic). A word used by the Gauls to designate a class of gladiators who fought in complete armour (Lamprid. *Alex. Sev.* 56). See CATAPHRACTI.

Cruquius (JACQUES DE CRUSQUE). A Flemish scholar, born at Messines, near Ypres, about the middle of the sixteenth century, and for many years professor of the classical languages at Bruges. He is best remembered by his elaborate commentary on Horace, which first appeared at Antwerp in 1578. A second and improved edition was issued in 1611. The value of this edition lies chiefly in the fact that it gives readings from four MSS., known as the Codices Blandinii, that were then preserved in the Benedictine monastery of Blankenberg (Mons Blandinius), and that were subsequently destroyed, possibly in the sack of the monastery by a mob in 1566 (Palmer). The importance of one of these MSS., known to Cruquius as *vetustissimus*, and now styled V, is very great, and the same thing is true of the marginal comments which it contained written by some unknown scholar, who is usually cited (from Cruquius) as the Commentator Cruquianus. Besides this edition of Horace, Cruquius published an edition of Cicero's *Oratio pro Milone* (Antwerp, 1582), an *Encomium Urbis Brugensis*, and some miscellaneous Latin verse. See André, *Bibliotheca Belgica*, s. v. "Cruquius"; Jordan, *De Commentatore Cruquiano* (Königsberg, 1883); and Palmer, *Satires of Horace* (Introduction), pp. xxix.–xxxi. (1883).

Crusta. A figure in low relief as distinguished from one in high relief, which was called *emblema* (Cic. *Verr.* ii. 4, 23). See CAELATURA; EMBLEMA.

Crustumerium or **Crustumium.** A town of the Sabines in the vicinity of Fidenae, and, like Fidenae, founded by a colony from Alba. Its great antiquity is attested by Vergil (*Aen.* vii. 629) and by Silius Italicus (viii. 367). From Pliny we learn that the Crustumini were vanquished by Romulus, and that a settlement was formed in their territory. Their city, however, was not finally conquered till the reign of the elder Tarquin (Liv. i. 38). The name of Crustumini Colles appears to have been given to the ridge of which the Mons Sacer formed a part. The tribe called Crustumina evidently derived its name from this ancient city (Liv. xlii. 34).

Crux (*σταυρός, σκόλοψ*). The cross; an instrument of capital punishment used from a very early period in the East.

The words *σταυρόω* and *σκολοπίζω* (more usually *ἀνασταυρόω, ἀνασκολοπίζω*) are applied to modes of execution which were certainly common among the Persians; and it is probable that impalement, as well as actual crucifixion, was thus denoted. It has been doubted whether the later or Roman method of crucifixion was practised by the Persians; but the case of Artayctes (Herod. ix. 120) seems to prove that nailing to a tree or plank was not unknown to them. It was the usual punishment of rebels—at least of those who headed revolt. Darius in the Behistun inscription boasts that he had "crucified" the leader of every rebellion that he had put down, giving their names (Rawlinson's *Herodotus*, vol. ii. Appendix); and it was inflicted on Inaros, the champion of Egyptian liberty (Thuc. i. 110). For the sake of ignominy, the bodies of those who had been otherwise executed were sometimes exposed on a cross after death, not always from humanity. Oroetes, after putting Polycrates to death in some horrible way which Herodotus refuses to describe, crucified the corpse (Herod. iii. 125). We find Xerxes thus treating the body of Leonidas, no doubt as a rebel (Herod. vii. 238); and at a later period Ptolemy Philopator does the same to Cleomenes after his suicide (Plut. *Cleom.* 38). According to a strange story in Pliny, Tarquinius Priscus adopted this form of posthumous disgrace to check the frequency of suicide among the citizens, driven to despair by the forced labour with which his gigantic building operations were carried on (*H. N.* xxxvi. § 107).

Among ancient nations, the Carthaginians were conspicuous for their cruelty, and crucifixion was horribly frequent among them; it was probably through their example that it was subsequently introduced into Sicily and Italy. It was the usual punishment of rebels, and, as is well known, was commonly inflicted on unsuccessful generals (Polyb. i. 11, 24, 79, etc.). In the war with their mercenaries and African subjects which followed immediately upon the conclusion of the First Punic War, the atrocities on both sides, ghastly enough in the narrative of Polybius, have been sensationally exaggerated in Flaubert's novel *Salammbô*.

The GREEKS were honourably distinguished in the ancient world for their aversion to torture and mutilation in every shape; indeed, it is only in quite recent times that Christian Europe has attained the same standard of refinement. In some ways they could be cruel enough, and the frequency of capital punishments showed a singular disregard of human life. The rage of faction led to massacres like that of Corcyra, on which Thucydides moralizes in a well-known passage (iii. 81 foll.). Prisoners of war were put to death in cold blood—the Plataeans by the Spartans (Thuc.

iii. 68); the Athenian prisoners after Aegospotami to the number of 3000 (Plut. *Alcib.* 37; *Lysand.* 13). The Athenians ordered a massacre of all the adult males in Mitylené, probably as many as 6000 (Thuc. iii. 36).

With all this, however, the Greeks habitually abstained from aggravating their executions, whether of criminals or prisoners of war, by insult and torture; and they especially abhorred outrages on women and children. This side of the Greek character is well brought out in Mahaffy's *Social Life in Greece;* see especially pp. 238, 262 foll., 3d ed. It was so from the earliest historical times. The tyrants of the seventh and sixth centuries are not charged with any atrocities like those of the Visconti and other mediæval despots in Italy; even the bull of Phalaris (q. v.) is now explained as an instrument of Phœnician Moloch-worship. A few isolated acts of vengeance are recorded of this period, only however in the outlying parts of the Grecian world, and therefore probably due to the contagion of barbarian example. During the struggles at Miletus between the wealthy citizens and the commonalty, the latter (who were called Γέργιθες) when victorious collected the children of the rich upon threshing-floors and had them trampled to death by oxen; the rich, having in turn gained the upper hand, burnt in pitch (κατεπίττωσαν: cf. the *tunica molesta* of Juvenal, viii. 235; Mart. x. 25) all whom they got into their power, along with their children (Heracl. Pont. *ap.* Ath. xii. 524 a). This story belongs probably to the "two generations" of civil strife at Miletus recorded by Herodotus; but no such horrors are mentioned in Greece proper, where even Helots and serfs ranked as Hellenes. Pisistratus and his sons governed according to the laws of Solon, and even the proceedings which arose out of the murder of Hipparchus fall short of the cruelties inflicted on regicides in quite recent times. There is, in fact, no evidence that crucifixion, impalement, and burning alive were regarded as Greek punishments, at least where, as in Hellas itself, there was no contact with less civilized races. It was the same with mutilations of all kinds, such as the blinding prescribed by the laws of Locri in Italy (Demosth. *c. Timocr.* p. 744, § 140) or the cutting off of hands and feet as practised by the Persians (Xen. *Anab.* i. 9, § 13). The cruelties alluded to in Aesch. *Eum.* 186–190, including impalement, are those not of Greeks, but of barbarians, and the distinction is pointedly drawn. The Greeks distinguished between reverence for the human body, for which they had a passionate admiration as shown in their athletic exercises and their works of art, and reverence for human life, which they held cheap enough. This feeling continued unimpaired as long as Greece retained her freedom.

In the Macedonian period Greece no longer enjoyed this happy immunity; as a mere province in a larger Hellenism, it was influenced by lower and less humane races. Alexander himself is not free from the stain of cruelty, as is shown by his treatment of real or supposed conspiracies against his person in the cases of Philotas and Hermolaüs. He is said to have either hanged or crucified 2000 Tyrians; he certainly crucified Musicanus, the Indian rajah who had rebelled after being reinstated in his dominions (Arrian, *Anab.* vi. 17). His successors improved upon his example: a year after his death Perdiccas and Eumenes crucified the aged Ariarathes of Cappadocia after other tortures (Diod. xviii. 16); Lysimachus threatened to crucify the Cyrenaic philosopher Theodorus, though an ambassador, but did not carry out his threat (Cic. *Tusc.* i. 43, § 102). Nicocreon of Cyprus, contemporary with Alexander, actually pounded the philosopher Anaxarchus to death in a mortar (Cic. *Tusc.* ii. 22, § 52). A similar story is told of an older philosopher, Zeno the Eleatic, and a tyrant of his native city (Cic. l. c.); but the accounts are contradictory. Nabis, the tyrant of Sparta, used as an engine of torture a figure studded with nails resembling the *Eiserne Jungfrau* of some German cities (Polyb. xiii. 7). It is not necessary to pursue the records of this period any further. The general aversion of the Greeks to degrading punishments was not understood by grammarians who lived under the law of the later Roman Empire, nor by scholars like Lipsius (*De Cruce*, 1592), in whose time even worse horrors were perpetrated.

The Romans were naturally a hard-hearted people, and Livy shows considerable audacity in saying that the dismembering of Mettius Fufetius was the only example in their history of a disregard of the laws of humanity; adding that they might boast that no nation had employed milder punishments (i. 28). From the language of Cicero (*Pro Rab. Perd.* 4, § 13) it has been inferred that crucifixion was in use in the regal period. But the words of the old law point rather to simple hanging (*infelici arbori reste suspendito*, Liv. i. 26), though the cross was no doubt called *arbor infelix* in later times. Cicero, who is arguing against the revival of the obsolete law of *perduellio* and the capital punishment of citizens in any shape, is speaking rhetorically throughout: he quotes the formula without the word *reste*, a misleading and doubtless intentional omission, and talks vaguely of the cross (§§ 10, 11, 16) and of the detested Tarquin (§ 13). No historical conclusions can be drawn from a speech so obviously designed to confuse the questions at issue. It is highly probable that the Romans derived this punishment from the Carthaginians; at least no mention of it appears to occur before the Second Punic War. First we find Hannibal crucifying a guide who had misled him (Liv. xxii. 13); then the Romans practise it on slaves and deserters (Liv. xxii. 33; xxx. 43, § 13; xxxiii. 36). This last passage describes a revolt among the slaves in Etruria, B.C. 196; the ringleaders are scourged and crucified, the rest given up to their masters to be dealt with at discretion. The enormous increase in the numbers of slaves under the later Republic heightened the dread of a rising among them, and the Roman system became more and more one of undisguised terrorism. Two desperate rebellions broke out in Sicily, and were only put down by regular armies—the first in B.C. 134–133, the second lasting four years, 102–99. After the pacification

Arbor Infelix. (Daremb. and Saglio.)

by the praetor M'. Aquillius in B.C. 99, a regulation was made, and strictly enforced by successive governors of the island, that no slave should be allowed to carry a weapon. A few years later, the praetor L. Domitius received a boar of remarkable size as a present; he inquired who had killed it, and finding that it was a slave employed as a shepherd, he summoned the man before him and asked him how he had contrived to destroy it. The shepherd, who expected a reward, replied that he had killed it with a boar-spear (*venabulo*); upon which Domitius at once ordered him to be crucified. Cicero tells this story with only faint disapproval, while he dwells complacently on the fact that there were no more revolts of the slaves in Sicily (Cic. *in Verr.* v. 3, 4, §§ 7, 8). When the servile war of Spartacus was at last put down by Crassus, the prisoners, to the number of 6000, were crucified all along the Appian Way, between Capua and Rome (App. *B. C.* i. 120). The power of masters over their slaves was at this period, and for some time later, absolute; even the good-natured Horace treats as a joke the possibility of their being crucified for slight offences (*Sat.* i. 3, 80 foll.). The first measure passed in their favour was the Lex Petronia (q. v.); Hadrian forbade them to be executed without the sentence of a magistrate; Antoninus Pius ordered that the murder of a slave by his master should be punished as homicide. Besides slaves, the provincials were liable to crucifixion for the greater crimes, such as murder, piracy (Suet. *Iul.* 4), brigandage, and especially for revolts and conspiracies. The obstinacy of the Jews was particularly exasperating to the Romans, and their repeated rebellions were followed by the wholesale infliction of this punishment; thus Varus (the same who perished in Germany) crucified 2000 at once (Joseph. *Ant.* xvii. 10, § 10); Gessius Florus several hundreds, including Roman citizens of Jewish birth (id. *B. I.* ii. 14, § 9); Titus so many that "room was wanting for the crosses, and crosses for the bodies" (id. ib. vi. 28); and Hadrian, after the final revolt, 500 a day for some time. Under the Empire the right of the *civis Romanus* was no longer respected; the first instance, probably, of the crucifixion of a citizen in Rome itself is that, under Galba, of a guardian who poisoned his ward (Suet. *Galb.* 9). Afterwards the odious distinction between the *honestiores* and *humiliores* was introduced, and this and other tortures were freely inflicted upon the latter, especially for *maiestas* or crimes against the State or the person of the emperor (Paul. *Sent.* v. 23, 1; *Dig.* 48, 19, tit. *de poenis*).

The mode of punishment is too well known to need much description. Scourging, as with Roman capital punishments in general, usually preceded it. Three kinds of crosses were in common use: the *crux commissa*, or T shape; the *crux immissa*, with a projection at the top, to which was affixed the *titulus*, setting forth the crime of the sufferer (this was the most common); and the *crux decussata*, in the shape of an X (St. Andrew's cross). The word *crux* is also applied to the single stake used in impalement; the latter process is alluded to by Seneca in two passages, but, as he is speaking of death by torture in general, it may be doubted, in the absence of direct evidence, whether this was a Roman custom (*Cons. ad Marciam*, 20, § 3, where crucifixion with the head downward is mentioned). The upright post is called *stipes*, the transverse beam *patibulum;* and it was this, rather than the entire instrument, which the criminal carried to the place of execution (Plaut. *Mostell.* i. 1, 53, and *ap.* Non. s. v. *patibulum*). It was impossible that the whole weight of the body should rest upon the nails; hence there was a piece of wood projecting from the *stipes* on which the sufferer sat, or rather rode (Tertull. *adv. Nat.* i. 12; cf. Iren. *adv. Haer.* i. 12). The expression *acuta si sedeam cruce*, in the famous lines of Maecenas *ap.* Sen. *Ep.* 101, probably refers to this support, and not, as Lipsius thought, to impalement. When it was wanting, the body was probably sustained by ropes; the combination of ropes with nails is mentioned by Pliny as charms (*H. N.* xxviii. § 46). See Eculeus.

Patibulum. (Daremberg and Saglio.)

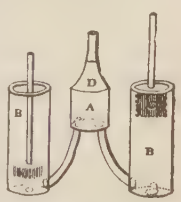
The martyrologies contain accounts of sufferers bound to the cross without the use of nails, and left to die of hunger and exhaustion; when it is added that in some instances they survived nine days, we must be allowed to disbelieve. The criminal was stripped of his clothes—the cloth around the loins, as to which the Christian tradition is constant, seems to have been exceptional—and usually hoisted on to the cross after it had been set up. Sometimes he was stretched upon it on the ground, and then lifted with it; but the former method was the commoner, and hence the phrases *cruci suffigere, in crucem agere* or *tollere*, occur oftener than *cruci affigere*. The well-known breaking of the legs to hasten death is alluded to by Plautus (*Poen.* iv. 2, 64) and Cicero (*Phil.* xiii. 12, § 27). The dead body was generally left hanging on the cross, to be devoured by birds and beasts; the feet were but little raised above the ground (not as in most pictures), and it was not out of the reach of the latter (Hor. *Ep.* i. 16, 48; Juv. xiv. 77). Sepulture was therefore forbidden, and a soldier set to watch the corpse (Petron. 111, 112). The place for these executions was always outside the walls of cities; at Rome it was the Campus Esquilinus, to the east of the city, part of which was afterwards occupied by the gardens of Maecenas.

With the establishment of Christianity the associations connected with the Cross led to its abolition, though not from humanity, as other cruel punishments were retained. Constantine at the beginning of his reign had sanctioned it in the case of slaves and freedmen, but later he abolished it.

See the article "Kreuz" in Kraus, *Realencyclopädie d. Christlichen Alterthums* (1886), where a list of the various forms of the cross is given; also Mortillet, *Le Signe de la Croix avant le Christianisme* (1866); Fulda, *Das Kreuz und die Kreuzigung* (Breslau, 1878); and Huschke, *Die Multa* (Leipzig, 1882).

Crypta (κρύπτη). Any long, narrow vault, either dark or dimly lighted. It is used in three specific senses: (1) A tunnel for draining purposes. (2) A dark vaulted passage in any building, as under

the *cavea* in the amphitheatre or behind the *scena* of a theatre. (3) A covered corridor above ground, dimly lighted in summer for the sake of coolness, and very commonly attached to the sides of an open colonnade (*porticus*). This was probably the species of crypta known as *cryptoporticus*. See PORTICUS.



Cryptīa (κρυπτεία, κρυπτία, or κρυπτή). A system of secret police adopted by the Spartans in order to maintain their control over the Helots; perhaps, as Grote thinks, over the Perioeci also. As to the main features of this system there is no doubt. We learn that a number of active young Spartans were despatched every year by the Ephors, immediately upon their entry into office, to the different parts of the country. They were to post themselves as secretly as possible in convenient places from which to explore the neighbourhood and to make observations. If they found anything suspicious, they were either to report it or to suppress it themselves on the spot (Schömann, *Antiq.* i. 195, Eng. trans.). The institution served not merely to break up organization and to check the possibility of an outbreak among their oppressed subjects, but as a useful military training in habits of endurance suited to a dominant race. On the latter ground it is proposed by Plato for his ideal Cretan colony in the *Laws*, and his way of expressing himself shows that he is referring to a Spartan custom really existing (i. 633 B; vi. 763 B; cf. Grote, ii. 144 n.). The *cryptia* may thus be considered as to a certain extent a species of armed police force, and the young men who were ordered to undertake it appear also to have formed a special corps in the army; at least we read of a commander of the *cryptia* in the battle of Sellasia (Plut. *Cleom.* 28). To these undoubted facts later authors added some curious statements, which have been much criticised in recent times. According to Plutarch, who quotes Aristotle as his authority, the Ephors every year declared war formally against the Helots, in order that they might be killed without scruple; and they further, not every year as sometimes stated, but at intervals (διὰ χρόνου), sent young Spartans armed with daggers to assassinate such of the Helots as were thought formidable (Plut. *Lycurg.* 28). The language of Plutarch is somewhat loose. In one sentence he states that the young men went out into the roads by night and slew all whom they caught (τοὺς ἁλισκομένους), implying that the Helots lived under a sort of "curfew" law, which confined them to their houses at night to prevent conspiracies; in the next sentence that they often ranged over the fields, and despatched the strongest and bravest of them. The latter phrase, however, agrees with the account of Heraclides Ponticus that they killed ὅσους ἂν ἐπιτήδειον ᾖ (*Fragm.* ii. 4 *ap.* C. Müller, ii. 210). Otfried Müller, whose criticism habitually tends to soften the harsher features of the Spartan institutions, combats the notion that the Helots were annually hunted down and destroyed (*Dorians*, iii. 3, § 4); and Schömann calls it "an exaggeration which is really too absurd to deserve serious confutation" (*Antiq.* l. c.). Grote, no friend to Sparta, rejects the annual or periodical massacre of the Helots and the formal declaration of war against them, which, he justly observes, "would provoke the reaction of despair rather than enforce tranquillity"; and even suggests a doubt as to the fact of Aristotle's having really made the statement ascribed to him by Plutarch, on the ground that he does not mention the subject in his *Politics*, where he speaks at some length both of the Spartan constitution and of the Helots. See HELOTAE.

Cryptoportĭcus. See CRYPTA.

Ctesias (Κτησίας). A Greek historian, born in Cnidus in Caria, and a contemporary of Xenophon. He belonged to the family of the Asclepiadae at Cnidus. In B.C. 416, he went to the Persian court, and became private physician to King Artaxerxes Mnemon. In this capacity he accompanied the king on his expedition against his brother Cyrus, and cured him of the wound which he received in the battle of Cunaxa, B.C. 401. In 399, he returned to his native city, and worked up the valuable material which he had collected during his residence in Persia, partly from his own observation and partly from his study of the royal archives, into a History of Persia (Περσικά), in twenty-three books. The work was written in the Ionic dialect. The first six books treated the history of Assyria, the remaining ones that of Persia from the earliest times to events within his own experience. Ctesias's work was much used by the ancient historians, though he was censured as untrustworthy and indifferent to truth—a charge which may be due to the fact that he followed Persian authorities, and thus often differed, to the disadvantage of the Greeks, from the version of facts current among his countrymen. Only fragments and extracts of the book survive, and part of an abridgment in Photius (*Cod.* 72). The same is true of his Ἰνδικά, or notices of the researches which he had made in Persia on the geography and productions of India. See Blum, *Herodot und Ctesias* (Heidelberg, 1836); and Gilmore, *The Fragments of the Persica of Ctesias* (1888).

Ctesibĭca Machĭna. An hydraulic engine named after its inventor, Ctesibius (q. v.) of Alexandria. In the language of modern hydraulics it is a double-action forcing pump. Vitruvius, in his description (x. 10 [7]), speaks of it as designed to raise water, while Ctesibius's pupil, Hero (*Pneumat.* p. 180), describes, under the name of σίφων, a machine identical in principle, but of improved construction, and says that it was used as a fire-engine (εἰς τοὺς ἐμπρησμούς). Indeed, the same principle has been employed in modern fire-engines. The remains of such a σίφων were discovered at Castrum Novum, near Cività Vecchia, in 1795, having probably served to supply the public baths with water.

The following cut illustrates the construction of Ctesibius's invention as described by Vitruvius. Two cylinders (*modioli*), B B, are connected by pipes with a receiver (*catinus*), A, which is closed by a cowl (*paenula*), D. In each cylinder a piston (*embolus masculus*), C, is worked by means of its rod (*regula*). In the bottom of each cylinder, and at the opening of each pipe into the receiver, is a movable lid or valve (*assis*), which only opens upwards. The bottoms of the cylinders are inserted into a reservoir, or connected with it by pipes. When one of the pistons is raised, a vacuum is produced in the cylinder, and the atmospheric pressure forces a stream

Ctesibica Machina. (Rich.)

of water past the raised valve into the cylinder. When this stream ceases, the valve falls; and if the piston is forced down, the water is driven out of the cylinder into the pipe, and past the valve into the receiver, and retained there by the closing of the valve. If the two pistons are worked alternately, so that one descends as the other rises, a continuous stream of water is forced out of the top of the *paenula*.

Ctesibĭus (Κτησίβιος). A native of Ascra and contemporary of Archimedes, who flourished during the reigns of Ptolemy II. and Ptolemy III., or between B.C. 260 and 240. He was the son of a barber, and for some time exercised at Alexandria the calling of his parent. His mechanical genius, however, soon caused him to emerge from obscurity, and he became known as the inventor of several very ingenious contrivances for raising water, etc. The invention of *clepsydrae*, or water clocks, is also ascribed to him. (Cf. Vitruvius, ix. 9.) He wrote a book on hydraulic machines, which is now lost. See CLEPSYDRA; CTESIBICA MACHINA; HOROLOGIUM.

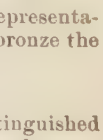
Ctesĭphon (Κτησιφῶν). (1) A city of Assyria on the east bank of the Tigris, three Roman miles from Seleucia on the west bank. It first became an important place under the Parthians, whose kings used it for some time as a winter residence. (2) See AESCHINES; DEMOSTHENES.

Cuba, Cunīna, and Rumīna. Three Roman divinities worshipped as the protectors of children in the cradle (*cunae*). Libations of milk were made in their honour. See August. *De Civ. Dei*, iv. 10; Lactant. i. 20, 36.

Cubicularii. Slaves who had charge of the sleeping and dwelling rooms. They were commonly divided into watches (*stationes*) for day and night, and also into decuries (Orelli, 4663; Suet. *Domit.* 17). Under the later emperors the cubicularii of the palace were called *praepositi sacro cubiculo*, and were persons of high rank.

Cubicŭlum usually means a sleeping and dwelling room in a Roman house, but is also applied to the pavilion or box in which the Roman emperors were accustomed to witness the public games (Suet. *Ner.* 12; Plin. *Paneg.* 51). See CIRCUS.

Cubĭtus (πῆχυς). A measure of length used by the Greeks, Romans, and other nations, was originally the length of the human arm from the elbow to the wrist, or to the tip of the middle finger; the latter was its signification among the Greeks and Romans. It was equal to a foot and a half; and therefore the Roman cubit was a little less, and the Greek cubit a little more, than a foot and a half English—the respective lengths of the foot being, in millimetres, Greek 308.3, English 304.7, Roman 295.7. The Greek cubit was, millimetres 462.4, the Roman 443.6. The cubit was divided by the Greeks into 2 spans (σπιθαμαί), 6 handbreadths (παλαισταί), and 24 finger-breadths (δάκτυλοι); and by the Romans into 1½ feet, 6 breadths (*palmi*), and 24 thumb-breadths (*pollices*). See Hultsch, *Metrol.* pp. 29, 62, and tables.



Cubus (κύβος). A die, cube. (See TESSERA.) A cubic foot of water was the *amphora* or *quadrantal*, the principal liquid measure. See QUADRANTAL.

Cucullus. (1) A funnel-shaped roll of paper used by the Roman shop-keepers to wrap powders, drugs, etc.—the English "screw" (Mart. iii. 2). Hence (2) a cowl, intended to be used in the open air, and to be drawn over the head to protect it from the injuries of the weather, instead of a hat or cap. It was worn by travellers, shepherds, husbandmen, and hunters; and by soldiers on service in cold climates, as is seen on Trajan's Column; and also in city life, even by persons of distinction who wished to go abroad without being recognized (Juv. vi. 330). The cowl was sometimes a separate garment (Mart. xiv. 132). Occasionally it formed part of the *lacerna* or *paenula* or other cloak, which was then said to be *cucullatus* (Isid. *Orig.* xix. 24, 17). This is shown in the figure annexed, from a relief representing a traveller leaving his inn (*Bullet. Napol.* 1848, 1). In either case the hood might be worn over the head or thrown back on the shoulder. The use of the cowl and also of the cape, which served the same purpose, was allowed to slaves by a law in the Codex Theodosianus. Cowls were imported into Italy from Saintonge in France (*Santonico cucullo*, Juv. viii. 145), and from the country of the Bardaei in Illyria. Those from the latter locality were probably of a peculiar fashion, which gave origin to the term *bardocucullus*.

Cucullus. (Figure from Aesernia.)

Cudo or **Cudon.** A helmet of very simple form, fitting close like a skull-cap, made of leather or the skins of wild animals (Sil. Ital. viii. 493). It is probably to be identified with the Homeric καταίτυξ or helmet of Diomedes (*Il.* x. 258), described as ἄφαλον, "without knobs or projections," and ἄλοφον, "without plume or horse-hair crest"; known also by Greek representations of that hero, from one of which in bronze the annexed example is taken.

Cudo. (Rich.)

Cuirass. See LORICA; THORAX.

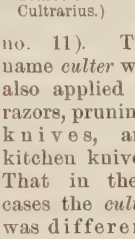
Cujacius (JACQUES DE CUJAS). A distinguished expounder of the Roman law. He was born at Toulouse in 1522, the son of a tanner, and after being educated in the law, lectured at Cahors in 1554, becoming in the following year professor in the University of Bourges. From this seat of learning he was called to Valence in 1557, returning to Bourges in 1576. He died October 4th, 1590. Cujacius won a remarkable reputation by his study of the MSS. of the Roman juristic writings, and by his brilliant emendations that served to remove much of the obscurity that had enveloped the nicer questions of Roman law. These emendations were published in part in the work entitled *Observationum et Emendationum Libri XVIII*—a treatise that contemporary writers styled *opus incomparabile*. He also published editions of the Institutes, Pandects, etc., of Justinian, a part of the Theodosian Code, a Greek version of the Justinian laws, besides commentaries on the *Consuetudines Feudorum*, and on several books of the Decretals. His *Observationes* included a wide range of classical reading and criticism, so that he is frequently cited by philologists and students of the ancient literatures as well as by jurists.

The first complete collection of the writings of Cujacius was the edition of Fabrot, 10 vols. (Paris, 1658), reprinted at Naples (1757); and at Venice and Modena in 11 vols. (1758–82). See Spangen-

berg, *Cujacius und seine Zeitgenossen* (Leipzig, 1822).

Culcĭta. See LECTUS.

Culex. "The Gnat." A poem often ascribed to Vergil, who is, in fact, known to have composed in his youth a poem with that title (Stat. *Silvae*, ii. 7, 73; Suet. *Vit. Lucani.* p. 50, Reiff.). The internal evidence is, however, against the view that the one now extant is the original, though some scholars (as Heyne and Hildebrandt) have supposed it to be the same with later interpolations. The *Culex* is a short epic of 414 hexameter lines, whose subject may be considered as partly pastoral and partly mock-heroic. A goatherd leads out his flocks to feed upon the pastures near Mount Cithaeron. Having fallen asleep, he is suddenly roused from his slumbers by the bite of a gnat; and, while awakening, he crushes to death the insect which had inflicted the wound. He then perceives a huge serpent approaching, which, if his sleep had not been broken, would inevitably have destroyed him. The shade of the gnat appears to the goatherd on the following night, and reproaches him with having occasioned its death at the moment when it had saved his life. The insect describes all that it had seen in the infernal regions during its wanderings, having as yet obtained no fixed habitation. Next day the goatherd prepares a tomb, in order to procure repose for the ghost of his benefactor, and celebrates in due form its obsequies. See Birt, *Hist. Hexam. Lat.* (Bonn, 1876); R. Ellis, in the *Jour. of Philology*, vol. xvi. p. 153; and Hildebrandt, *Studien auf d. Geb. d. röm. Poesie und Metrik* (Leipzig, 1887). The text is included in Ribbeck's edition of the works of Vergil, and edited by Leo (Berlin, 1891).



Culīna (ὀπτάνιον). A kitchen. The illustration represents a kitchen stove in the house of Pansa at Pompeii, with some cooking utensils upon it, as discovered when first excavated—viz., a strainer (*colum*), a kitchen knife (*culter coquinaris*), and an implement for dressing eggs (supposed *apalare*). See DOMUS, p. 546.

Kitchen Stove. (House of Pansa, Pompeii.)

Culpa. See article in the Appendix.

Culter, dim. CULTELLUS (*μάχαιρα, κοπίς, σφαγίς*). A knife with only one edge, which formed a straight line, the blade being pointed and its back curved. It was used chiefly for killing animals, either in hunting, in the slaughter-house, or at the altar. The *minister*, or attendant on the priest, is called *cultrarius*, since he and not the priest did the actual killing. The accompanying illustration is taken from Gruter (*Inscript.* vol. ii. p. 640, no. 11). The name *culter* was also applied to razors, pruning-knives, and kitchen knives. That in these cases the *culter* was different from those above represented, and most probably smaller, is certain; since, whenever it was

Cultri. (From Tombstone of a Cultrarius.)

Cultrarius. (Bas-relief from Pompeii.)

Kitchen Utensils from Pompeii. (Overbeck.)

used for shaving or domestic purposes, it was always distinguished from the common culter by some epithet, as *culter tonsorius, culter coquinaris.*

Cultrarius. See CULTER.

Culullus. A *calix* or cup of earthenware used by the *pontifices* for sacrificial purposes.

Cumae. See article in the Appendix.

Cunae, Cunabŭla (λίκνον, σκάφη). A cradle. It has been thought that cradles were little used by the Greeks, at least in early times; since Plato, in a passage on the putting of infants to sleep, mentions only singing the lullaby and rocking in the arms (*Leg.* vii. 790 D). But various substitutes are mentioned. Heracles, according to tradition, was cradled in his father's shield (Theocr. xxiv. 4); Dionysus in a winnowing-fan (λίκνον, *vannus*), which accordingly was borne in his processions; other deities in the same manner. The ark or cradle in which children were exposed is *alveus*, σκάφη; but it is only in quite late authors that we find σκάφην διασείειν, "to rock the cradle" (Ael. *H. A.* xi. 14).

Cradle. (Museum at Beaune.)

In the Roman period cradles were regularly used (Plaut. *Truc.* v. 13 and elsewhere), and were made to rock. We find a female slave called *cunaria* (Grut. *Inscript.* 311, 7); and a male slave, who perhaps in time became the child's *paedagogus* (*cunarum motor*, Mart. xi. 39, 1).

Cunaxa (Κούναξα). A small town in Babylonia, on the Euphrates, famous for the battle fought here between the younger Cyrus and his brother Artaxerxes Mnemon, in which the former was killed (B.C. 401). See ANABASIS; ARTAXERXES; CYRUS; XENOPHON.

Cunctātor. "The delayer." A nickname given to Q. Fabius Maximus (q. v.) because of his policy of delay in the Second Punic War.

Cuneiform. A name given to the form of writing whose characters resemble a wedge (*cuneus*). The French equivalent is *tête-à-clou;* the German, *keilformig;* and in English, the terms "cuneatic" and "arrow-headed" are sometimes used as synonyms. This species of writing was employed by the ancient Akkadians, Babylonians, Assyrians, Armenians, Elamites, and Persians, who have left us specimens of it upon clay, stone, metal, and glass, either moulded (as in the clay) or cut and chiselled (as upon the other substances). The use of the cuneiform characters dates from a period not later than B.C. 3800, and was continued until a century or so after the beginning of the Christian era. The oldest specimen now known to exist is an inscription upon a bit of porphyry assigned to the time of Sargon of Agadé. The latest example is preserved at Munich, and is as late as A.D. 80.

It is only in the present century that scholars have been able to decipher the cuneatic characters, and to interpret satisfactorily the inscriptions that contain them. It was, in fact, many years before any one conceived the notion that the curious arrow-headed marks on the vast ruins of Persepolis and other parts of Persia had anything to do with language at all. It was in 1618 that an inkling of the truth first entered the mind of Garcia de Silva Figuëroa, an ambassador of Philip III. of Spain. In that year he visited Persepolis, and, becoming imbued with a belief that the arrow-heads were some form of writing, had a portion of one inscription copied. This he carried back to Europe, where it attracted the attention of other savants. In 1674, the French traveller Chardin, after visiting Persepolis, published copies of three sets of inscriptions, with an account of the curious characters as observed by him, pronouncing them to be writing and not hieroglyphs, but expressing his conviction that no one would ever be able to decipher them. More than a century later (in 1782), a French botanist named Michaux sent to Paris a stone which he had found at Bagdad covered with cuneiforms. By this time the curiosity of the learned had become awakened, and the mystery surrounding these inscriptions excited the interest of the ablest scholars of Europe, who gradually accumulated a large number of specimens of the cuneiform, as other travellers brought back from the East valuable materials for study. It was long, however, before anything beyond mere conjecture was attained; and many varied and conflicting theories were put forward. The characters were said to be only fanciful designs of the Oriental architects and devoid of meaning. Again, they were explained (by Witte of Rostock) as due to the work of many generations of worms. Others explained them as the writing of the Guebres. Still others viewed them as charms, cabalistic signs, or astrological formulæ. Lichtenstein thought that he had found in them certain passages from the Korân written in Kufic. Kaempfer hesitated whether to explain them as Chinese or as modifications of the Hebrew. Other scholars pronounced them Runes, Oghams, Old Greek, or Samaritan.

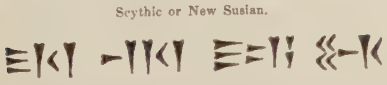
The first light on this apparently insoluble problem was due to the acute researches of Karsten Niebuhr, who, without professing to read or interpret the inscriptions, proved the existence in them of three distinct varieties of cuneiform alphabet, instead of the single one that had been assumed before his time. The threefold inscriptions at Persepolis he then rightly explained as transcriptions of the same matter in the three alphabets. This brilliant discovery was developed by Tychsen of Rostock (1798) and Münter of Copenhagen (1800), whose labours cleared the way for the magnificent success of Georg Friedrich Grotefend (q. v.), who, on September 7th, 1802, presented to the Academy of Göttingen the first cuneiform alphabet with its phonetic equivalents. It may be observed that this date and meeting are doubly important in the history of language-study, for then was also presented the first reading of the Egyptian hieroglyphs by Heyne. Twenty years later, St. Martin demonstrated a part of the flexional system; and Burnouf, Lassen, Westergaard, Beer, Jacques, and finally Sir Henry Rawlinson followed, each with his contributions towards a more perfect understanding of the characters and of the language which they embodied. Rawlinson, it may be remarked, was the first to read and publish the 1000 or more lines of the great Behistun inscription. (See the *Journal of the Asiatic Society* for 1846.)

Inscriptions in the Persian cuneiform are usually in three parallel columns, being the same text translated into three languages and alphabets: Persian, Median (also called Scythic and New Susian), and Babylonian — these being the three great peoples under the dominion of the Achae-

Black Obelisk with Cuneiform Inscriptions. (British Museum.)

menian kings, who thus promulgated their decrees in three languages.

(1) Babylonian. This is the most ancient and most important of the three varieties of cuneiform. With it are inscribed tablets and cylinders, giving a vast amount of information on history, archæology, law, government, and mythology.



(2) Scythic. The Scythic cuneiform is never found alone (with one exception), and represents an alphabet of some 100 characters. The language which they embody is an Ugro-Finnic dialect, of which little as yet is known.

(3) Persian. The Persian cuneiform, which always stands first in the trilingual inscriptions, is the most recent of the three, and consists of some 44 characters. It is characterized by an oblique stroke which divides its words, and the wedges of which it is composed never cross one another. The language of the Persian cuneiform is cognate with the Avestan, and is the parent tongue of the modern Persian. This character was used in the period from B.C. 570–370. In it is written the great inscription of Darius Hystaspis at Behistun, containing a genealogical record, a description of the extent of his dominions, a list of the great events of his reign, with prayers to Ormuzd and the spirits. Most of these inscriptions have been found at Persepolis (q. v.), Behistun, Naksh-i-Rustam, and Hamadan.

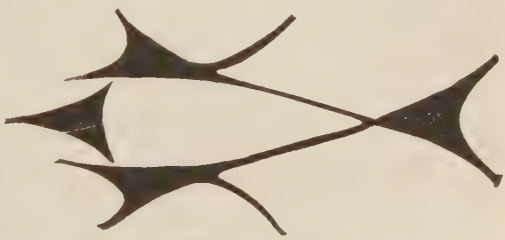
Scythic or New Susian.



Babylonian.

The Name Darius (Dâryavas) in Cuneiform Characters.

The cuneiform characters were originally pictures of the objects which they stood for (ideographs), like the Egyptian hieroglyphics and the earlier characters in Chinese; but as time went on the forms were modified and simplified so as to lose their pictorial character, though a few still suggest the primitive design.

At first they were drawn in outline on a vegetable substance (*likhusi*), but a little later on clay, to the difficulties of which are due the first modification in the original shapes of the letters. The subsequent use of stone and metal carried this modification still further. An archaic revival, however, set in during the age of Assurbani-pal, when it became customary to use once more the most ancient characters. The signs, originally ideographic, became subsequently phonetic, denoting each a syllable. The cuneiform syllabary contains in all some 2000 signs—ideographic, syllabic, or purely phonetic—being sometimes used in one way and sometimes in another.

The characters were inscribed upon stone, glass, and metal with a chisel; and upon clay with a sharp-pointed stylus having three unequal faces—the largest for the outer and thickest wedges of the letters, the medium-sized for the medium

Archaic Cuneiform Character for "Fish."

strokes, and the smallest for the finer lines. The Babylonian clay tablets or "bricks" are in size from one inch upward, pillow-shaped, and covered with characters often so minute as to be difficult to read without a magnifying glass. (See illustration on page 179.) After the inscriptions had been made, the tablet was dried in the sun and then enclosed in a case on which the inscription was duplicated. These are styled "case-tablets." Tablets were also used by the Assyrians, especially by the literary classes; but the records of this people were very often carved upon the stone panels of their palaces and on colossal human-headed bulls. Cuneiforms have been found, likewise, on amethyst, jasper, and onyx.

BIBLIOGRAPHY.—The bibliography of the subject is very extensive. The following standard works are selected out of a great number: Lassen and Westergaard, *Ueber die Keilinschriften* (1845); Hincks, *On the First and Second Kinds of Persepolitan Writing*, in the *Trans. of the Royal Iranian Society* (1846); Rawlinson, *Commentary on the Cuneiform Inscriptions of Babylon and Assyria* (1850); Grotefend, *Die Keilinschriften aus Behistun* (1854); Ménant, *Inscriptions Assyriennes* (1859); id. *Les Écritures Cunéiformes* (1864); Oppert, *La Grande Inscription de Khorsabad* (1866); De Gobineau, *Traité des Écritures Cunéiformes* (1864); Spiegel, *Die Altpersischen Keilinschriften* (2d ed. 1881); Ewald, *Geschichtliche Folge der semitischen Sprachen* (1871); Schrader, *Die Assyrisch-Babylonischen Keilinschriften* (1872); G. Smith, *Phonetic Values of Cuneiform Characters* (1871); Sayce, *Assyrian Grammar* (1872); Norris, *Assyrian Dictionary* (1871); Botta, *Mémoire sur l'Ecriture Cunéiforme Assyrienne* (1848); Oppert, *Les Inscriptions Assyriennes* (1862); Manant, *Recueil d'Alphabets* (1860); Delattre, *Les Inscriptions Historiques de Ninive et de Babylone* (1879); Taylor, *The Alphabet* (1883); Amiaud and Scheil, *Les Inscriptions de Salmanasar II.* (1890); Brunnon, *Classified List of Compound Cuneiform Ideographs* (1889); Bezold, *The Tell-el-Amarna Tables* (with autotype facsimiles) (1892); and the *Assyriologische Bibliothek*, edited by Delitzsch and Paul Haupt.

Cuneus (*σφήν*). A wedge. For its metaphorical uses, see EXERCITUS; THEATRUM.

Cunicŭlus (*ὑπόνομος, ὑπόρυγμα*). A mine or subterranean passage, so called from its resemblance to the burrowing of a rabbit.

The word is applied to natural passages underground; to sulphur mines; to the flues of furnaces; to sewers; and to the underground channels of aqueducts. But it is most commonly used as a military technical term, denoting either the "mines" of besiegers or the "countermines" of defenders. The earliest military writer, Aeneas Tacticus, gives full details as to the art of mining, including that of countermines; and most of the later writers have copied or abridged his account. Among the curious particulars given by him are the introduction of wasps, bees, and smoke into the mine, and the sounding for mines by laying the ear to the ground with a bronze shield between (*Poliorc.* 37). Another remarkable stratagem in countermining is described by Livy (xxxviii. 7) at the siege of Ambracia by the Romans, when the Ambraciots introduced into the besiegers' mine a "stink-pot" of burning feathers.

Cup. See CALATHUS; CALIX; CARCHESIUM; CULULLUS; CYATHUS; CYMBIUM; PATERA; PHIALA; POCULUM; SCAPHIUM; SCYPHUS.

Cupa. (1) A wooden cask, butt, or barrel, used like the largest earthen vessel, the *dolium*, to receive the fresh must from the wine-press (*torcular*) and to contain it during the process of fermentation. The cupa was always of wood; the *dolium*, like the *amphora*, always of earthenware. Hence of the derivatives, Fr. *cuve*, *cuvier*, Eng. *cooper*, follow the original meaning; while in It. *coppa*, Fr. *coupe*, Eng. *cup*, it is modified. The inferior wines were drawn for drinking from the cupa, without being bottled in *amphorae*; whence *vinum de cupa* is equivalent to our expression "from the wood." (2) Part of an olive-press. See TRAPETUM.

Cupēdo or **Cuppēdo.** A dainty, tid-bit, or delicacy of any kind. The Roman dealers in choice food were called *cupedinarii* and had their stalls in the Forum Cupedinis (Varr. *L. L.* v. 146).

Cupīdo. The god of love. See EROS.

Cura. The personification of care. See Hyginus, *Fab.* 220.

Cura, Curatēla, Curatio. See CURATOR; CURATORES.

Curātor. Curators were persons appointed either by law or by the magistrate to look after the property of certain classes of people, and to prevent its being squandered, because they were unfit or unable to properly take charge of it themselves. Those classes are mainly four: minors or *adulescentes* (i. e. persons who were *sui iuris* and between the age of puberty—twelve or fourteen [Gaius, i. 196; *Inst.* i. 22, pr.]—and twenty-five years); lunatics; interdicted prodigals; and a miscellaneous class, the *cura* of which was considerably later in origin.

The *cura* of minors is to be attributed to the fact that when a young person who was *sui iuris* reached puberty, and escaped from the supervision of his guardian (see TUTELA), he was regarded as having attained his full stature, intellectual no less than physical; he might marry and become a paterfamilias; he was liable to military service, entitled to vote in the comitia, and competent to hold public office; and he had the complete management of his own affairs. But it was felt to be a matter of necessity to give him some legal protection against designing and unscrupulous persons, for it became clear that his indiscretion and ignorance of business would frequently lead to his being overreached; and this was done, without interfering with the principle that full legal capacity was attained with puberty, by the Lex Plaetoria, passed certainly before B.C. 183, for it is mentioned by Plautus (*Pseud.* i. 3, 69), who died in that year. This statute (which appears to have first established the distinction between minority and full age) protected minors by subjecting any one who fraudulently overreached them to a *iudicium publicum* or prosecution (Cic. *de Off.* iii. 15, § 61), entailing a pecuniary fine and infamia on conviction; and after the introduction of *exceptiones* by the praetor, a minor who was fraudulently induced to enter into a contract could protect himself against action brought thereon by pleading the *exceptio legis Plaetoriae*. It being unlikely that in the face of this stringent procedure any one would have any dealings with minors whatever, the statute (Capitol. *Macr.* 10) apparently went on to provide that minors who wished to contract or deal with other persons, especially in the way of stipulation (Priscian, viii. 4; xviii. 9) and loan, should be compellable to receive a curator on their application, by whose assent to the transaction the penal consequences of the law should be avoided.

The principle of the Lex Plaetoria was carried still further by the praetor, who by means of *in integrum restitutio* protected minors generally against indiscretion causing them proprietary loss (*laesio*); he would set aside transactions into which they had entered, not only on the ground of fraud, but on a consideration of all the circumstances of the case, provided application were made to him within a year after the attainment of majority.

The Emperor Marcus Aurelius (Gaius, *Epit.* 1, 8) seems to have extended the scope of the *cura* of minors by providing that a minor might, on application to the proper magistrate, obtain a permanent curator to look generally after his property and aid him with advice. The principle was that he could not be compelled to have a general curator unless he pleased, except where he was involved in litigation; when a person who owed him money wished to discharge his debt and obtain a release (*Dig.* iv. 4, 7, 2); and possibly where he had disregarded the advice given to him by his guardian, on reaching puberty, to get one appointed for him. But apparently most minors were induced by the convenience of the system to have general curators to assist and advise them (Ulpian, *Reg.* 12, 4; Dio Cass. lii. 20).

The curators of minors were always appointed by the magistrate; a testamentary appointment in itself was void, though the magistrate would usually confirm it by nominating the same person (*Inst.* i. 23, 1; cf. Dio Cassius, xliv. 35); and, according to rule, the minor had to apply for a curator himself. The *munus* was a public one, and could not be declined except on specific grounds, carefully enumerated in the authorities (*Inst.* i. tit. 25); many curators had to give security that they would diligently look after the interests intrusted to them; and if suspected of malversation or negligence, they could be removed by the magistrate, and in cases of fraud were liable to the *suspecti crimen*, a quasi-criminal prosecution (*Inst.* i. tit. 26).

A minor was fully competent to perform legal acts, such as the conveyance of property or the making of contracts; but whether such legal acts had their full usual effect or not depended on whether they were sanctioned by the curator. Both alienations and contracts were *primâ facie* binding on him; but against both, if they were seriously prejudicial, or the curator's consensus had not been given, he could get himself *in integrum restitutus* by the magistrate (*Cod.* ii. 22, 3); and if the curator had not assented to a contract, he could not be compelled to disburse anything from the minor's property in discharge of it, or to pay costs or damages of actions brought in respect thereof by the other party. But a series of imperial enactments (*Cod.* v. 71, 16; v. 37, 22) placed him under very stringent regulations in respect of alienation of the ward's property, which as a general rule was not allowed without permission from a magistrate. If a minor wished to give himself in adrogation the curator's consent was necessary.

The cura of *furiosi* (lunatics and idiots) and interdicted prodigals or spendthrifts originated with the Twelve Tables, which placed *furiosi* under the cura of their nearest agnates, or, if there were no agnates, of their gentiles. Similarly the near relations of a *prodigus* might petition the magistrate for his interdiction from the management of his own affairs, and his subjection to the cura of his nearest agnates, though only if his property had come to him by the intestacy of his own father. In default of these *legitimi curatores*, one would be appointed for such persons by the magistrate (*Inst.* i. 23, 3).

In the time of Justinian other classes of persons were able to get a general curator by application to the magistrate, especially those suffering from weak health, impaired mental faculties, or bodily infirmity—e. g. the deaf and dumb (*Inst.* i. 23, 4). Similarly it would sometimes happen that an *impubes* would have a curator as well as a guardian—e. g. if there was litigation between himself and the latter (*Inst.* i. 21, 3), or if the latter was unfit or temporarily unable to discharge his duties (ib. 23, 5).

It will appear from what has been said that between a guardian and a curator an essential distinction lies in this, that the latter was especially intended to look after the ward's proprietary interests, whereas the former was *personae, non rei datus*.

The word *cura* has also other legal applications: (1) *cura bonorum*, as in the case of the goods of an insolvent debtor, which are secured for the benefit of his creditors; (2) *cura bonorum et ventris*, in the case of a woman being pregnant at the death of her husband; (3) *cura hereditatis*, where there is a dispute as to who is the *heres* of a person, and his supposed child is under puberty; (4) *cura hereditatis iacentis*, the charge of an inheritance of which the apparent heir has not yet declared his acceptance; (5) *cura bonorum absentis*, in the case of property of an absent person who had appointed no manager of it.

Curatōres. Public officers of various kinds under the Roman Empire, several of whom were first established by Augustus (Suet. *Aug.* 37). The most important of them were as follows:

(1) Curatōres Alvei et Ripārum et Cloacārum, who had the charge of the navigation of the Tiber.

(2) Curatōres Annōnae, who purchased corn and oil for the State, and sold it again at a small price among the poorer citizens. They were also called *curatores emendi frumenti et olei*, and σιτῶναι and ἐλαιῶναι. Their office belonged to the *personalia munera;* that is, it did not require any expenditure of a person's private property, but the curatores received from the State a sufficient sum of money to purchase the required amount (*Dig.* 50, tit. 8, s. 9, § 5).

(3) Curatōres Aquārum. (See Aquae Ductus.)

(4) Curatōres Calendarii, who had the care in municipal towns of the *calendaria;* that is, the books which contained the names of the persons to whom public money, which was not wanted for the ordinary expenses of the town, was lent on interest. The office belonged to the *personalia munera.*

(5) Curatōres Ludōrum, who had the care of the public games as special commissioners. Persons of rank appear to have been usually appointed to this office (Tac. *Ann.* xi. 35; xiii. 22; Suet. *Calig.* 27).

(6) Curatores Opĕrum Publicorum, who had the care of all public buildings, such as the theatres, baths, aqueducts, etc., and agreed with the contractors for all necessary repairs to them. Their duties under the Republic were discharged by the aediles and the censors.

(7) Curatōres Regiōnum, who had the care of the fourteen districts into which Rome was divided, and whose duty it was to prevent all disorder and extortion in their respective districts. This office was first instituted by Augustus (Suet. *Aug.* 30). There were usually two officers of this kind for each district. Alexander Severus, however, appears to have appointed only one for each; but these were persons of consular rank, who were to

have jurisdiction in conjunction with the *praefectus urbi* (Lamprid. *Alex. Sev.* 33).

(8) CURATŌRES REIPUBLĬCAE (with the name of the community added), also called *logistae*, who administered the landed property of municipia. These were appointed by the emperors. Ulpian wrote a separate work, *De Officio Curatoris Reipublicae.*

(9) CURATŌRES TABULĀRUM PUBLICĀRUM, three magistrates appointed by Tiberius in A.D. 16, to assist in keeping the public records.

(10) CURATŌRES VIĀRUM. See VIAE.

Curculio. "The Guzzler"; a comedy of Plautus with a slender plot, and written to ridicule the ways of parasites. It was composed later than B.C. 193. It is noticeable as having a sort of parabasis (q. v.) in the fourth act (sc. i.). An edition in Latin and German is that of Geppert (Berlin, 1845).

Cures. An ancient town of the Sabines, celebrated as the birthplace of T. Tatius and Numa Pompilius; from this town the Romans are said to have derived the name of Quirites (q. v.).

Curētes (Κουρῆτες). In Cretan mythology the Curetes were demigods armed with weapons of brass, to whom the new-born child Zeus was committed by his mother Rhea for protection against his father Cronus. They drowned the cries of the child by striking their spears against their shields. They gave their name to the priests of the Cretan goddess Rhea and of the Idaean Zeus, who performed noisy war-dances at the festivals of those deities. See CORYBANTES; RHEA; ZEUS.

Curētis. (1) A name given to Crete, as being the residence of the Curetes (Ovid, *Met.* viii. 136). See CURETES. (2) The earlier name of Aetolia.

Curia. A word which signifies both a division of the Roman people and the place of assembly for such a division.

(1) Each of the three ancient Romulian tribes, the Ramnes, Tities, and Luceres, was subdivided into ten curiae, so that the whole body of the populus was divided into thirty curiae (Liv. i. 13). It has commonly been asserted that the plebeians had no connection whatever with the curiae, and that the clients of the patricians were members of the curiae only in a passive sense. But Mommsen has adduced strong reasons for denying the purely patrician character of the curiae (*Röm. Forsch.* i. 140–150), and accepting the view of Dionysius (iv. 12, 20) that plebeians were admitted. In B.C. 209, we find a plebeian elected as Curio Maximus, and, according to all analogy, plebeians must have been admitted to the curiae long before one of them could be found holding the highest post of dignity. Plebeians also are represented as existing and voting side by side with patricians before the institution of any other than the Comitia Curiata. The extinction of the functions of the curiae is nowhere mentioned as a result of the decay of the patriciate. Again, the thirty lictors who represented the curiae, and therefore must have had the right of voting there, were plebeians. There is no reason whatever to believe that the right of making wills and adoptions before the curiae was limited to patricians, and we have one positive instance of a plebeian adopting before the curiae in the case of Clodius. Hence the common theory of the purely patrician character of the curiae must be abandoned. There is no historical evidence to show when the plebeians became members of them, but it is a reasonable conjecture that they were admitted at the time of the expulsion of the kings, when the Comitia Curiata lost their political power by the development of the Comitia Centuriata (Mommsen, *Hist.* i. 264). All the members of the different gentes belonging to one curia were called, in respect of one another, *curiales.* Each curia as a corporation had its peculiar *sacra* (Fest. pp. 174, 245), and besides the gods of the State they worshipped other divinities and with peculiar rites and ceremonies. For such religious purposes each curia had its own place of worship, called *curia*, which at first may have contained nothing but an altar, afterwards a *sacellum*, and finally a building in which the curiales assembled for the purpose of discussing political, financial, religious, and other matters (Paul. Diac. pp. 62, 64; Dionys. ii. 50). The religious affairs of each curia were taken care of by a priest, *curio*, who was assisted by another called Flamen Curialis. (See CURIO.) The thirty curiae had their own distinct names, which are said to have been derived from the names of the Sabine women who had been carried off by the Romans, though it is evident that some derived their names from certain districts or from ancient eponymous heroes. Few of these names only are known, such as curia Titia, Faucia, Calabra, Foriensis, Rapta, Veliensis, Tifata (Paul. Diac. pp. 49, 366; Fest. p. 174; Liv. i. 13). O. Gilbert has lately (*Gesch. und Topogr. der Stadt Rom im Alterthum*, 2 vols. 1883, 1885) advocated, with much ingenuity and learning, a theory that the curiae were based originally upon the gradual occupation of the seven hills of the Septimontium by tribes of different origin, and their ultimate federation.

(2) CURIA (βουλευτήριον) is also used to designate the place in which the Senate held its meetings. From this there gradually arose the custom of calling the Senate itself *curia* in the coloniae and municipia, but never the Senate of Rome. (See DECURIO). The official residence of the Salii, which was dedicated to Mars, was likewise styled *curia* (Cic. *De Div.* i. 17; Dionys. xiv. 5; Plut. *Camill.* 32).

The history and site of the Senate-house at Rome have been much discussed. Built by Tullus Hostilius (Varr. *L. L.* v. 155–156), the Curia Hostilia was burned at the funeral of Clodius (B.C. 52). Successive restorations by a son of Sulla and by Augustus are recorded in the names C. Cornelia and C. Iulia. Under Domitian the C. Iulia was again rebuilt. A still later building, ascribed to Diocletian, has been identified with the present church of S. Adriano on the northeast of the Forum. It is of brick, ornamented with stucco and marble. See Middleton, *Ancient Rome in 1888*; id. *Remains of Ancient Rome*, i. pp. 237, 385; ii. 139.

Curiāles. See CURIA.

Curiāta Comitia. See COMITIA.

Curiatii. A celebrated Alban family. Three brothers of this family fought with three Roman brothers, the Horatii, and were conquered by the latter. In consequence of their defeat Alba became subject to Rome. See HORATIUS, p. 843.

Curio. The person who stood at the head of a *curia* and had to manage its affairs, especially those of a religious nature. In their administration he was assisted by another priest, called Flamen Curialis. As there were thirty *curiae*, the number

of curiones was likewise thirty, and they formed a college of priests, which was headed by one of them bearing the title of *curio maximus*. In later times he was elected by the people, but originally probably by co-optation.

Curio. (1) GAIUS, praetor B.C. 121, but did not attain to the consulship. Cicero speaks with praise of his oratory, an opinion founded, not on personal knowledge, but on the speeches he had left. (2) C. SCRIBONIUS, consul with Gnaeus Octavius, B.C. 76. On returning from the province of Macedonia, he triumphed over the Dardani, as proconsul, B.C. 72. Cicero often mentions him, and in his *Brutus* (cap. 49) enumerates him among the Roman orators, along with Cotta and others. (3) C. SCRIBONIUS, son of the preceding, a turbulent and unprincipled man, and an active partisan of Iulius Caesar's. Being deeply involved in debt when tribune of the plebs, Caesar gained him over by paying for him what he owed (Plut. *Pomp.* 58), and Curio immediately exerted himself with great vigour in his behalf. Caesar, it seems, was under obligations to him before this, since Curio is said to have saved his life when he was leaving the Senate-house after the debate about Catiline's accomplices, his personal safety being endangered by the young men who stood in arms around the building (Plut. *Caes.* 8). Plutarch ascribes Antony's early initiation into licentious habits to his acquaintance with Curio. On the breaking out of the Civil War, Caesar, after having possessed himself of Rome, sent Curio to take charge of Sicily. The latter subsequently crossed over from this island into Africa, with an armed force, against Iuba and the followers of Pompey, but was defeated and slain.

Curiosolites. A people of Gaul, forming part of the Armoric tribes. Their territory lay to the northeast of the Veneti, and answers to what is now the territory of St. Malo, between Dinant and Lamballe, in the department Côtes-du-Nord.

Curītis. A name given to Iuno and said to be derived from the Sabine *curis*, "a spear" (Macrob. *Saturn.* i. 9). See QUIRITES.

Curium (Κούριον). A city of Cyprus, on the southern coast, or rather, according to the ancients, at the commencement of the western shore, at a small distance from which, to the southeast, there is a cape which bears the name of Curias. Curium is said to have been founded by an Argive colony, and it was one of the nine royal cities of Cyprus. See CYPRUS.

Curius Dentātus, MANIUS. A Roman, celebrated for his warlike achievements, and also for the primitive simplicity of his manners. In his first consulship (B.C. 290) he triumphed twice, once over the Samnites and then over the Sabines, and in this same year also he obtained an ovation for his successes against the Lucanians. He afterwards (B.C. 275), in his third consulship, triumphed over Pyrrhus and the Samnites. It was on this occasion that the Roman people first saw elephants led along in triumph (Flor. i. 18; Plin. *H. N.* viii. 6; Eutrop. ii. 14), and it was this victory that drove Pyrrhus from Italy. The simple manners of this distinguished man are often referred to by the Roman writers. When the ambassadors of the Samnites visited his cottage, they found him, according to one account, sitting on a bench by the fireside, and eating out of a wooden bowl (Val. Max. iv. 3, 5), and, according to Plutarch, boiling turnips. On their attempting to bribe him with a large sum of gold, he at once rejected their offer, exclaiming that a man who could be content to live as they saw him living had no need whatever of gold, and that he thought it more glorious to conquer the possessors of it than to possess it himself. His scanty farm and humble cottage, moreover, were in full accordance with the idea which Curius had formed of private wealth; for, after so many achievements and honours, he declared that citizen a pernicious one who did not find seven acres (*iugera*) sufficient for his subsistence (Plin. xviii. 3). According to Pliny, Dentatus was so named because born with teeth (*cum dentibus*) (*H. N.* vii. 15).

Curotrŏphos (κουροτρόφος). "Nurse of children." The title of several Greek goddesses—for instance, Gaea—who were regarded as protectresses of youth. Cf. Hesiod, *Theog.* 450; Macrob. *Saturn.* i. 10, 19, 20.

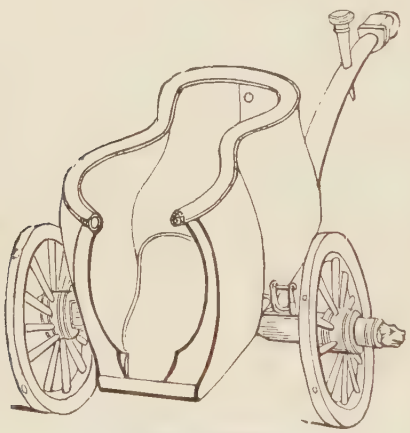
Currus, dim. **Curriculum** (ἅρμα). A chariot, a car. These terms appear to have denoted those two-wheeled vehicles for the carriage of persons which were open overhead, thus differing from the *carpentum* (q. v.), and closed in front, in which they differed from the *cisium* (q. v.). One of the most essential parts in the construction of the currus was the ἄντυξ, or rim; and it is accordingly seen in all the chariots which are represented in this article. Another indispensable part was the axle, made of oak (φήγινος ἄξων), and sometimes also of ilex, ash, or elm. The cars of Heré and Poseidon have metallic axles. One method of making a chariot less liable to be overturned was to lengthen its axle, and thus to widen the base on which it stood. The axle was firmly fixed under the body of the chariot, which, in reference to this circumstance, was called ὑπερτερία, and which was often made of wicker-work, enclosed by the ἄντυξ. Fat (λίπος) and pressed olives (*amurca*) were used to grease the axle.

The wheels (κύκλα, τροχοί, *rotae*) revolved upon the axle, as in modern carriages; and they were prevented from coming off by the insertion of pins (ἔμβολοι) into the extremities of the axle (ἀκραξονία). Pelops obtained his celebrated victory over Oenomaüs through the artifice of Hippodamia, who, wishing to marry Pelops, persuaded Myrtilus, the charioteer of his adversary, to omit inserting one of the linchpins in the axle of his car, or to insert one of wax. She thus caused the overthrow and death of her father, Oenomaüs, and then married the conqueror in the race.

Sir W. Gell describes, in the following terms, the wheels of three cars which were found at Pompeii: "The wheels light, and dished much like the modern, 4 feet 3 inches diameter, 10 spokes, a little thicker at each end." These cars were probably intended for the purposes of common life. From Xenophon we learn that the wheels were made stronger when they were intended for the field of battle. After each excursion the wheels were taken off the chariot, which was laid on a shelf or reared against a wall, and they were put on again whenever it was wanted for use.

The parts of the wheel were as follows:

(*a*) The nave or hub, called πλήμνη, χοινικίς, *modiolus*. The last two terms are founded on the resemblance of the nave to a modius or bushel.



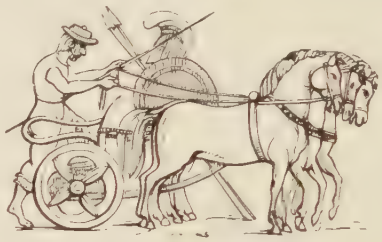
The nave was strengthened by being bound with an iron ring, called πλημνόδετον.

(*b*) The spokes, κνῆμαι (literally, "the legs"), *radii*. We have seen that the spokes were sometimes ten in number. In other instances they were eight (κύκλα ὀκτάκνημα), six, or four. Instead of being of wood, the spokes of the chariot of the Sun, constructed by Hephaestus, were of silver (*radiorum argenteus ordo*).

(*c*) The felly, ἴτυς. This was commonly made of some flexible and elastic wood, such as poplar or the wild fig, which was also used for the rim of the chariot; heat was applied to assist in producing the requisite curvature. The felly was, however, composed of separate pieces, called arcs (ἀψῖδες). Hence the observation of Plutarch that, as a "wheel revolves, first one *apsis* is at the highest point, and then another." Hesiod evidently intended to recommend that a wheel should consist of four pieces.

(*d*) The tire, ἐπίσωτρον, *canthus*. Homer describes the chariot of Heré as having a tire of bronze upon a golden felly, thus placing the harder metal in a position to resist friction and to protect the softer. The tire was commonly of iron.

All the parts now enumerated are seen in an ancient chariot preserved in the Vatican, a representation of which is given in the following illustration.



Currus. (Vatican.)

This chariot, which is in some parts restored, also shows the pole (ῥυμός, *temo*). It was firmly fixed at its lower extremity to the axle, whence the destruction of Phaëthon's chariot is represented by the circumstance of the pole and axle being torn asunder (*temone revulsus axis*). At the other end (ἀκρορρύμιον) the pole was attached to the yoke, either by a pin (ἔμβολος), as shown in the chariot above engraved, or by the use of ropes and bands. See IUGUM.

Carriages with two, or even three, poles were used by the Lydians. The Greeks and Romans, on the other hand, appear never to have used more than one pole and one yoke, and the currus thus constructed was commonly drawn by two horses, which were attached to it by their necks, and therefore called δίζυγες ἵπποι, συνωρίς, *gemini iugales, equi biiuges*.

If a third horse was added, as was not unfrequently the case, it was fastened by traces. It may have been intended to take the place of either of the yoke-horses (ζύγιοι ἵπποι) which might happen to be disabled. The horse so attached was called παρήορος. When Patroclus returned to battle in the chariot of Achilles, two immortal horses, Xanthus and Balius, were placed under the yoke; a third, called Pedasus, and mortal, was added on the right hand; and, having been slain, caused confusion, until the driver cut the harness by which this third horse was fastened to the chariot.

Currus with Three Horses. (Ginzrot.)

Ginzrot has published two drawings of chariots with three horses from Etruscan vases in the collection at Vienna. The ἵππος παρήορος is placed on the right of the two yoke-horses. We also observe traces passing between the two ἄντυγες, and proceeding from the front of the chariot on each side of the middle horse. These probably assisted in attaching the third or extra horse.

The Latin name for a chariot and pair was *biga*. (See BIGA.) When a third horse was added, it was called *triga;* and, by the same analogy, a chariot and four was called *quadriga;* in Greek, τετραορία or τέθριππος.

The horses were commonly harnessed in a quadriga after the manner already represented, the two strongest horses being placed under the yoke, and the two others fastened on each side by means of ropes. This is implied in the use of the epithets σειραῖος or σειραφόρος, and *funalis* or *funarius*, for a horse so attached. The two exterior horses were further distinguished from one another as the right and the left trace-horse. In a chariot-race described by Sophocles, the driver, aiming to pass the goal, which is on his left hand, restrains the nearest horse, and gives the reins to that which was farthest from it—viz., the horse in traces on the right hand (δεξιὸν δ' ἀνεὶς σειραῖον ἵππον). In the splendid triumph of Augustus after the battle of Actium, the trace-horses of his car were ridden by two of his young relations. Tiberius rode, as Suetonius relates, *sinisteriore funali equo*, and Marcellus *dexteriore funali equo*. As the works of ancient art, especially fictile vases, abound in representations of quadrigae, numerous instances may be observed in which the two middle horses (ὁ μέσος δεξιὸς καὶ ὁ μέσος ἀριστερός) are yoked together as in a biga; and, as the two lateral ones have collars (λέπαδνα) equally with the yoke-horses, we may presume that from the top of these proceeded the ropes which were tied to the rim of the car, and by which the trace-horses assisted to draw it. The first figure in the following illustration is the chariot of Aurora, as painted on a vase found at Canosa. The reins of the two middle horses pass through rings at the extremities of the yoke. All the particulars which have been mentioned are still more distinctly seen in the second figure, taken from a terra-cotta at Vienna. It represents a chariot overthrown in passing the goal at the circus.

The charioteer having fallen backwards, the pole and yoke are thrown upwards into the air; the two trace-horses have fallen on their knees, and the two yoke-horses are prancing on their hind-legs.

If we may rely on the evidence of numerous works of art, the currus was sometimes drawn by four horses without either yoke or pole; for we

Currus with Four Horses.

see two of them diverging to the right hand and two to the left, as in the beautiful cameo given below, which represents Apollo surrounded by the signs of the zodiac. If the ancients really drove the quadriga thus harnessed, we can only suppose the charioteer to have checked its speed by pulling up the horses and leaning with his whole body backwards, so as to make the bottom of the car at its hindermost border scrape the ground—an act and an attitude which seem not unfrequently to be intended in antique representations.

The currus, like the *cisium*, was adapted to carry two persons, and on this account was called in Greek *δίφρος*. One of the two was, of course, the driver. He was called *ἡνίοχος*, because he held the reins, and his companion *παραιβάτης*, from going by his side or near him. Though in all respects superior, the *παραιβάτης* was often obliged to place himself *behind* the *ἡνίοχος*. He is so represented in the *biga* at page 92, and in the *Iliad* Achilles himself stands behind his charioteer Automedon.

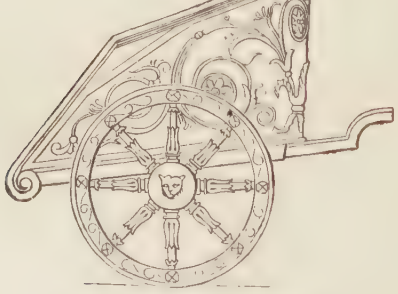
Four-horse Chariots on Gems. (Berlin Museum.)

On the other hand, a personage of the highest rank may drive his own carriage, and then an inferior may be his *παραιβάτης*, as when Nestor conveys Machaon (*πάρ' δὲ Μαχάων βαΐνε*), and Heré, holding the reins and whip, conveys Athené, who is in full armour. In such cases a kindness, or even a compliment, was conferred by the driver upon him whom he conveyed, as when Dionysius, tyrant of Sicily, "himself holding the reins, made Plato his *παραιβάτης*." In the contest which has been already referred to, and which was so celebrated in Greek mythology, Oenomaüs intrusts the reins to the unfaithful Myrtilus, and assumes the place of his *παραιβάτης*, while Pelops himself drives with Hippodamia as his *παραιβάτις*, thus honouring her in return for the service she had bestowed.

The Persepolitan sculptures, and the innumerable paintings discovered in Egyptian tombs, concur with the historical writings of the Old Testament, and with the testimony of other ancient authors, in showing how commonly chariots were employed on the field of battle by the Egyptians, the Persians, and other Asiatic nations. The Greek poetry of the Heroic Ages proves with equal certainty the early prevalence of the same custom in Greece. The *ἀριστῆες*—i. e. the nobility, or men of rank—who wore complete suits of armour, all took their chariots with them, and in an engagement placed themselves in front. Such were the *ἱππεῖς*, or cavalry of the Homeric period—the precursors of those who, after some centuries, adopted the less expensive and ostentatious practice of riding on horseback, but who, nevertheless, in consideration of their wealth and station, still maintained their own horses, rather to aid and exhibit themselves individually on the field than to act as members of a compact body. In Homer's battles we find that the horseman—who, for the purpose of using his weapons and in consequence of the weight of his armour, is under the necessity of taking the place of *παραιβάτης*—often assails or challenges a distant foe from the chariot; but that, when he encounters his adversary in close combat, they both dismount, "springing from their chariots to the ground," and leaving them to the care of the *ἡνίοχοι*. So likewise Turnus is described by Vergil, *Desiluit Turnus biiugis; pedes apparat ire Comminus*. As soon as the hero had finished the trial of his strength with his opponent, he returned to his chariot, one of the chief uses of which was to rescue him from danger. When Automedon prepares to encounter both Hector and Aeneas, justly fearing the result, he directs his charioteer, Alcimedon, instead of driving the horses to any distance, to keep them "breathing on his back," and thus to enable him to effect his escape in case of need.

These chariots, as represented on bas-reliefs and fictile vases, were exceedingly light, the body often consisting of little besides a rim fastened to the bottom and to the axle. Unless such had been really their construction, it would be difficult to imagine how so great a multitude of chariots could have been transported across the Aegean Sea. The light and simple construction of war-chariots is also supposed by Vergil, when he represents them as suspended with all kinds of armour on the entrance to the temple of the Laurentian Picus.

We have already seen that it was not unusual in the Homeric battles to drive three horses, one being a *παρήορος*; in a single instance, that of Hector, four are driven together. In the games, the use of this number of horses was, perhaps, even more common than the use of two. The form of the chariot was the same, except that it was more elegantly decorated. But the highest style of ornament was reserved to be displayed in the quad-



rigae in which the Roman generals and emperors rode when they triumphed. The body of the triumphal car was cylindrical, as we often see it represented on medals. It was enriched with gold (*aureus currus*) and ivory. The utmost skill of the painter and the sculptor was employed to enhance its beauty and splendour. More particularly the extremities of the axle, of the pole, and of the yoke were highly wrought in the form of animals' heads. Wreaths of laurel were sometimes hung round it (*currus lauriger*), and were also fixed to the heads of the four snow-white horses. The car was elevated so that he who triumphed might be the most conspicuous person in the procession, and, for the same reason, he was obliged to stand erect (*in curru stantis eburno*). A friend, more especially a son, was sometimes carried in the same chariot by his side. When Germanicus celebrated his triumph, the car was "loaded" with five of his children in addition to himself. The triumphal car had, in general, no pole, the horses being led by men who were stationed at their heads.

The chariot was an attribute not only of the gods, but of various imaginary beings, such as Victory, often so represented on coins, vases, and sculptures; Night; and Aurora, whom Vergil represents as driving either two horses or four, in this agreeing with the figure in the illustrations on p. 445. In general, the poets are more specific as to the number of horses in the chariots of the deities, and it rarely exceeded two. Iupiter, as the father of the gods, drives four white horses when he goes armed with his thunderbolt to resist the giants; Pluto is drawn by four black horses.

The chariots of Iupiter and of the Sun are, moreover, painted on ancient vases with wings proceeding from the extremities of the axle (*πτηνὸν ἅρμα*; *volucrem currum*).

These supernatural chariots were drawn not only by horses, but by a great variety of brute or imaginary beings. Thus Medea received from the Sun a car with winged dragons. Iuno is drawn by peacocks, Diana by stags, Venus by doves or swans, Minerva by owls, Mercury by rams, and Apollo by griffins. To the car of Bacchus, and consequently of Ariadné, are yoked centaurs, tigers, and lynxes.

Chariots executed in terra-cotta (*quadrigae fictiles*), in bronze, or in marble, an example of which last is shown in the annexed illustration from an

Biga. (Sala della Biga, Vatican.)

ancient chariot in the Vatican, were among the most beautiful ornaments of temples and other public edifices.

No pains were spared in their decoration, and Pliny informs us that some of the most eminent artists were employed upon them. In numerous instances they were designed to perpetuate the fame of those who had conquered in the chariot-race. As the emblem of victory, the *quadriga* was sometimes adopted by the Romans to grace the triumphal arch by being placed on its summit; and even in the private houses of great families, chariots were displayed as the indications of rank or the memorials of conquest and of triumph.

Cursive Writing. See ALPHABET; PALAEOGRAPHY.

Cursor, L. PAPIRIUS. See PAPIRIUS.

Cursōres. (1) Slaves whose duty it was to run before the carriages of their masters, for the same purpose as modern outriders. They were not used during the times of the Republic, but appear to have first come into fashion in the middle of the first century of the Christian era. The word *cursores* was also applied to all slaves whom their masters employed in carrying letters, messages, etc. (See CURSUS PUBLICUS.) (2) Runners in the foot-race, or competitors in the chariot race. See CURSUS.

Cursus (*δρόμος*, *τρόχος*). Foot-racing. In historic times, at the national festivals of Greece, several species of it had come into vogue. We may distinguish four sorts: (*a*) the *στάδιον* (or simply *δρόμος*); (*b*) the *δίαυλος*; (*c*) the *ἐφίππιος* or *ἵππιος δρόμος*; (*d*) the *δολιχὸς δρόμος* (or *δόλιχος*, proparox). A strange feature in these races was that they were not run on hard and firm ground (Lucian, *Anachars.* 27), but over a deeply sanded surface.

(*a*) The *στάδιον* was a race in which the runners (*σταδιοδρόμοι*) traversed the arena in a direct line (whence it was called *εὐθύς*, *ἄκαμπτος*) from one extremity to the other. This distance, as measured by the Olympic stadium, which became the general standard, was about 600 feet. The *στάδιον* corresponds to our "sprint," in which the runner does the whole run at his highest speed.

(*b*) The *δίαυλος*, or double course (properly = double pipe), required that the runners (*διαυλοδρόμοι*) should, after traversing the arena as in the *στάδιον*, turn round a post (*καμπτήρ*) and run back to their starting-point. Hence it was called *δρόμος κάμπειος* (from *καμπή* = *flexus*).

(*c*) The *ἐφίππιος* or *ἵππιος* did not, as might seem from its name, signify a horse-race, but a race of sufficient length to try the power of a horse. (See Hermann - Blümner, *Privatalt.* p. 346.) It was a test therefore of endurance as well as speed, being four stadia in length; that is, twice the *δίαυλος*.

(*d*) The true test of staying power, however, was the *δόλιχος* or long race, added to the Olympic Games (according to Philostratus, *Gymn.* 12) in Olymp. 15. The length of this race has been variously described as seven, twelve, twenty, or twenty-four stadia. We may suppose that it differed on different occasions.

Competition in foot-racing was open to runners of all ages, whether boys (*παῖδες*), striplings (*ἀγένειοι*), or grown men (*ἄνδρες*). Only those who belonged to the same class, as regards age (*ἡλικιῶται*), were permitted to compete with one another; seniors, of course, not being allowed to enter against their juniors. In Sparta even girls ran.

The competitors, being too numerous to contend all together, were entered in successive groups (*τάξεις*); those who should form each group, as

well as the order in which the groups should run, being determined by lot (*συνταχθῆναι ὑπὸ τοῦ κλήρου*). When all the *τάξεις* in turn had run, the victors in each were formed into one group, which ran a final heat for the prize.

It is doubtless owing to their want of instruments for accurately measuring small portions of time that the Greeks have left us scarcely any means of computing the speed which foot-racers attained in the various kinds of running.

For some special forms of the foot-race, see LAMPADEDROMIA and STAPHYLODROMIA.

We have very meagre information regarding foot-racing as practised by the Romans. According to Dionysius of Halicarnassus (vii. 71, 73), it formed part of the Ludi Magni from the time of their institution. He, too, tells us that the runners wore the *subligaculum* round their loins. In the Capitoline Games (Dio Cass. lxvii. 8) young women, after the Spartan fashion, took part in the competition. Beyond these scanty notices and vague references to running for healthful exercise in the Campus Martius, very little has been handed down to us. This running in the Campus was not always competitive. That it was sometimes so, however, is plain from Martial, iv. 19. For chariot-racing, see CIRCUS and HIPPODROMUS.

Cursus Publĭcus. The postal-service of the Roman Empire.

Persia under Darius, son of Hystaspes, affords the earliest instance of a national postal-service. Mention is indeed made (*Liberat. Brev.* 23) of a class called *symmaci* as existing in the most ancient times among the Egyptians for the conveyance of letters by land, but we have no grounds for thinking that a postal-system was established in Egypt as a branch of the administration. In the Persian dominions, however, as we learn from Herodotus (iii. 28; vi. 105; viii. 98), horsemen, stationed at intervals and relieving one another, conveyed the imperial will in all directions from Susa, Ecbatana, or Babylon. The service was called *ἀγγαρήϊον*, and the couriers, *ἄγγαροι*. Messages of lesser urgency were carried by *ἡμεροδρόμοι*. In Greece there are no evidences of any such service, at least upon a similar scale, for the *hemerodromi* mentioned by Corn. Nepos (*Milt.* iv. 3) can scarcely have been a permanent institution. This was probably due to the geographical smallness of Greece; still more, however, to the utter absence of political unity among the Greeks, and the want of facilities for land traffic, in contrast with the easy communications by sea. But the vast extent of the Roman dominions, and the centralization of imperial functions in a single hand, again furnished the conditions of a postal-service, which accordingly arose and became a most important instrument of State administration. The practical wisdom of the Romans had from the beginning of their conquests taught them to make roads throughout the territories which they subdued, whence resulted a system of highways connecting the remotest parts of the Empire with Rome. These not only facilitated the marching of troops, but served the general purposes of transport and the conveyance of intelligence, forming, as they did, the material *condicio sine qua non* of the future *cursus publicus*. Within the last century of the Republic, also, certain practices had already been established, by which the development of the postal-service was largely conditioned. We now proceed to give some account of these.

Under the Republic, after the conquest of Italy, government officials despatched from Rome on public business were empowered to impose arbitrary requisitions on the subject Italians (*deditícii*) to supply them with necessaries for travelling. Among the Italian allies such functionaries usually obtained food, lodging, and means of transport from their guest-friends or from the principal personages in the friendly States which they visited. But when the Roman dominions included extra-Italian provinces, the fine distinction made in Italy between subjects and allies (*socii*) was in the provinces neglected, and the provincial allies were as summarily requisitioned by a *legatus* as were the provincial subjects. Senators or citizens employed on a public mission abroad received from the Senate a mandate (*diploma*) requiring subjects and allies alike to supply them with means of transport and other necessaries at all the successive stages of their journey. This in the natural course of things led to grave hardships, and complaints frequently arose. Restrictive enactments became necessary; and we read that Cato the Elder, when praetor in Sardinia, diminished or removed the expenses entailed upon the people of that island by the entertainment of the praetors officiating among them (Liv. xxxii. 27). It is doubtful, however, whether Cato issued a formal edict, or whether his good example alone operated towards the relief of the sufferers.

Among the various embassies which thus became grounds of hardship to the provincials there was one which deserves especial notice. This was called *libera legatio*, being a sort of mission from which all State employment was absent, granted as a favour sometimes to distinguished men, lasting for several years, and carrying with it all the previously mentioned liabilities on the part of the provincials. The *libera legatio*, owing to the indefiniteness of the privileges it conveyed, became a fearful cause of oppression. A law was carried in B.C. 63 by Cicero (Cic. *De Leg.* iii. 8, 18) restricting abuses of the *libera legatio* and limiting its duration to one year; but the reform thus effected was short-lived, for Iulius Caesar (Cic. *Ad Att.* xv. 11) again extended the term of a *libera legatio* to a possible five years.

During the last period of the Republic the Senate had frequent occasions for communicating in despatches with their generals or provincial governors, as well as with allied kings and States. For the conveyance of such despatches the authorities employed freedmen, slaves, or a certain class of couriers called *stratores* (*sternere*, "to saddle"). A class of messengers also existed called *tabellarii*. For pressing messages a general usually employed mounted men detached from his own staff. The *publicani*, as especially interested in transmitting and receiving intelligence to and from Rome, had a special class of *tabellarii*, whose services, however, were often borrowed by the magistrates, or by the *negotiatores*, speculators in corn or money, who were in constant relations with the provincial governors and with the *publicani*. The ships of the allies also were employed for the use of magistrates engaged abroad on public business. Thus for the purposes of transport and the conveyance of intelligence the dealings of the home government with the provincials were regulated

mainly by the principle that the incidental labour and expenses should be borne as far as possible by the latter, while the interests to be served were those of the government alone.

It only remained for the Empire to organize and develop the system which had been established under the republican *régime*. The immense advantages of such an organization as a portion of the imperial administration were sufficiently obvious. Augustus accordingly appointed mounted couriers (*stratores* or *speculatores*) to be employed along the principal roads (Suet. *Aug.* 49). This implies the institution of stations (*mutationes*), at which they should relieve one another. But as this arrangement provided only for the conveyance of intelligence, it required to be supplemented by a transport system for the conveyance of money or other valuables of considerable weight. The necessity of constructing postal-stations ensued. The stations were called *mansiones*, which, being intended for lodgings, as their name indicates, were furnished not only with a supply for the immediate wants of man and beast, but also with the accommodation suitable for travellers. The *mansiones* were not so numerous along a road as the *mutationes*, or changing-stages. In accordance with republican precedent the expenses of the transport and postal system generally continued to fall upon the communities through whose territories the lines of stations lay. They accordingly had to provide conductors, guards, drivers, together with beasts of burden and rolling-stock, on receipt of the emperor's order (*diploma*), or that of the head of the postal system (a functionary designated in Trajan's time as *ab vehiculis*), who was generally a freedman of the emperor. Such warrants for the use of the post were issued occasionally by the consul, by the praefect of the praetorians, or by the governor of a province, but in all cases only with the emperor's special authority. While the document entitling to the use of the *cursus*, by virtue of being stamped with the emperor's seal, was called *diploma* (and other names which will hereafter be referred to), the right of issuing postal-warrants was, at least until a late period, called *evectio*. The expenses, moreover, of constructing stations and stocking them with necessaries had to be borne by the neighbouring communities. Along the line of one day's journey there were six or eight sets of stables, each of which had to maintain a total of forty beasts, including horses, mules, asses, etc. The communities also were bound to furnish and maintain the teams and to keep the stables in repair; they had further to secure the services of muleteers (*muliones*), mule-doctors (*mulomedici*), wheelwrights (*carpentarii*), grooms (*hippocomi*), and conductors or guards (*vehicularii*). From these heavy burdens Nerva relieved the people of Italy, and to commemorate his act a medal was struck bearing the inscription *vehiculatione Italiae remissa* (where *vehiculatio* = *cursus publicus*). Trajan, however, re-authorized (Plin. *Ep.* x. 121) the issue of postal-warrants in Italy, but restricted them to cases in which he had been personally consulted. We read (Spart. *Hadr.* 7) that Hadrian *statum cursum fiscalem instituit, ne magistratus hoc onere gravarentur*. According to Hirschfeld, in his note to these words, *cursus fiscalis* is in Spartianus equivalent to *cursus vehicularius*, and the emphasis lies upon the word *statum*. According to his view, therefore, the meaning of the whole sentence is that Hadrian made the postal-service throughout the Empire a department of the State administration, and appointed fixed stations, superintended by government officials, in order to relieve the *municipal* magistrates of all responsibility for them. Despite, however, these and other efforts in this direction, it was not until the time of Septimius Severus (Spart. *Sever.* 14) that the expenses of the post generally were made chargeable to the imperial treasury. But, even when this had been done, the subjects still continued to suffer, nor did any subsequent legislation materially alleviate the burden with which the *cursus* pressed upon them. Differences of opinion exist as to the exact nature of the reforms or changes attributed respectively to Nerva, Trajan, and the others above mentioned. Humbert says we must at least suppose, as Hudemann does, that Nerva entirely remitted, though only to Italy, the expenses of the service, so that the salaries of officials engaged in it, as well as the material cost, became alike chargeable to the treasury; that Trajan contented himself with merely checking the abuse of *evectio*; while Hadrian, besides extending the organization of the post through the whole Empire, must apparently have imposed the charges of it upon the *fiscus;* that Antoninus Pius again, like Trajan, making a step backwards, confined the contemplated reform to a mere restriction of expenses and of the right of issuing post-warrants; that Septimius Severus completely reorganized the *vehicularium munus*, and imposed the charges of it, in Italy and the rest of the Empire alike, upon the *fiscus* alone; but that the last and radical reform was incapable of maintaining itself, owing to the burdens it entailed upon the treasury. Diocletian, Constantine, and their successors all strove to perfect the organization of the post, and to define exactly what the liabilities of the cities in regard to it should be, together with determining the question who should have the *evectio*, or right of granting postal permits, and under what circumstances they might be justly granted.

In the later times of the Roman Empire the post became an ever-increasing burden to the cities; and as it injured them, in the same degree it prepared the way for its own ruin. Nevertheless a treaty ratified between Rome and Persia in A.D. 565 (Menander, *Prot.* p. 360, ed. Bonn) assured to the natives of the frontier provinces of the two empires the uses of the postal-service to and fro between them. See A. de Rothschild, *Hist. de la Poste aux Lettres depuis ses Origines* (Paris, 1873).

Curtius, GEORG. One of the most distinguished classicists and philologists of the present century, born at Lübeck, April 16th, 1820. He pursued his studies at Bonn and Berlin, teaching for a time at the latter place and at Dresden. In 1849, he was made Professor Extraordinarius of Classical Philology at Prague, becoming in 1851 Professor Ordinarius. From Prague he was called in 1854 to a like chair at Kiel, and in 1862 to Leipzig. He died August 12th, 1885.

Curtius was the last and one of the greatest of the "old school" of classical philologists, and formulated in their final expression their etymological views. He was also profoundly learned in Greek, and in this department wrote a number of standard works: the *Griechische Schulgrammatik* (1852), which reached its fifteenth (German) edition in 1882, and

has been translated into English in Dr. W. Smith's series in England, and forms the basis of Prof. Hadley's *Greek Grammar* in this country; also his *Erläuterungen* to the foregoing (1863, 3d ed. 1875) Eng. trans. (1870); the *Grundzüge der Griechischen Etymologie* (1858; 5th ed. in collaboration with Windisch, 1879), translated into English by Wilkins and England (1875–76); and *Das Verbum der Griechischen Sprache* (1873–76)—a very elaborate piece of work—translated by Wilkins and England (1880). Besides these important publications, he also put forth a treatise *De Nominum Graecorum Formatione* (1842); *Die Sprachvergleichung in ihrem Verhältniss zur klassischen Philologie* (1845); *Sprachvergleichende Beiträge zur griechischen und lateinischen Grammatik* (1846); *Philologie und Sprachwissenschaft* (1862); *Zur Chronologie der indo-germanischen Sprachforschung* (1867; 2d ed. 1873); *Zur Kritik der neuesten Sprachforschung* (1885); and in conjunction with Brugmann, G. Meyer, Fick, Windisch, and others, *Studien zur griech. und lat. Grammatik*, 10 vols. (1868–77). The ninth volume of this series contains Brugmann's famous paper on the nasal sonant, with which began the aggressive propaganda of the new school against the theories of Curtius and his predecessors. The new theories form the subject of a vigorous attack by Curtius himself in the *Kritik* mentioned above, in which he maintains the principle of "sporadic change" in addition to invariable phonetic law and the influence of analogy. (See PHILOLOGIA.) In 1878, Prof. Curtius founded with Lange, Ribbeck, and Lipsius the *Leipziger Studien zur klassischen Philologie*.

Curtius, METTUS. A Roman youth, who devoted himself, for his country, to the Manes, B.C. 362. According to the account given by Livy (vii. 6), the ground near the middle of the Forum, in consequence either of an earthquake or some other violent cause, sank down to an immense depth, forming a vast aperture; nor could the gulf be filled up by all the earth which could be thrown into it. At last the soothsayers declared that, if the Romans wished the commonwealth to be everlasting, they must devote to this chasm what constituted the principal strength of the Roman people. Curtius, on hearing the answer, demanded of his countrymen whether they possessed anything so valuable as their arms and courage. They yielded a silent assent to the question put them; whereupon, having arrayed himself in full armour and mounted his horse, Curtius plunged into the chasm, and the people threw after him their offerings and quantities of the fruits of the earth. Valerius Maximus (v. 6, 2) states that the earth closed immediately over him. Livy, however, speaks of a lake occupying the spot, called Lacus Curtius. In another part of his history (i. 13), he mentions this same lake as existing in the time of Romulus, and as having derived its name from Mettus Curtius, a Sabine in the army of Titus Tatius. In all probability it was of volcanic origin, since the early accounts speak of its great depth, and was not produced merely by the inundations of the Tiber. Tarquinius Priscus is said to have filled up this lake at the time that he drained the whole of this district and constructed the Cloaca Maxima. Possibly he may have been aided in this by a natural tunnel gradually formed through the basin of the lake itself.

Curtius Rufus, QUINTUS. A Roman historian who flourished in the first century of the Christian era. No particulars of his life are known, and no mention is to be found in the Roman writers that can be positively referred to him, though Suetonius mentions a Q. Curtius Rufus in his list of rhetoricians, and a Curtius Rufus is named by Tacitus (*Ann.* xi. 21) and by the younger Pliny (*Epist.* vii. 27). The ten books (*Historiarum Alexandri Magni Libri Decem*) that he wrote are believed to have been composed during the reign of Claudius on the strength of a passage in the work itself (x. 9, 3–6), which seems to refer to the outbreak at Rome on the death of Caligula, to which the accession of Claudius put an end. (See Schultess, *De Senecae Quaestt. Nat.* [Bonn, 1872]; and Berger, *De Curtii Aetate* [Heidelberg, 1860]).

The history of Alexander the Great is treated in a rhetorical fashion with little historical insight, introducing a number of picturesque details which are grouped effectively; and the career of the great Macedonian is regarded as a series of brilliant and romantic adventures. There are a number of carefully finished speeches worked into the narrative and much sententious reflection. The style is evidently formed on that of Livy. The chief source of the *Historiae* is Clitarchus (q. v.). Of the original ten books, the first two are lost, and there are lacunae in the others. The work was read during the Middle Ages, and there are numerous MSS., the oldest being of the ninth century. The *Historiae* was edited by Erasmus (1518), and the first complete edition is that of Snakenburg (Delft, 1724). Later editions, with notes, are those of Schmieder (Göttingen, 1803), Mützell (Berlin, 1841), Zumpt (Brunswick, 1849), Vogel (3d ed. Leipzig, 1885), Schmidt (Prague, 1886), Dosson (Paris, 1887); bks. viii. and ix., with English notes, by Heitland and Raven (Cambridge, 1879). There is a lexicon to Curtius by Eichert (2d ed. Hanover, 1880). On the style, see the dissertations by Krah (Insterb. 1886), Eger (Giessen, 1885), Rauch (Meiningen, 1889); and for a general account, Dosson, *Étude sur Q. Curce, sa Vie, et son Œuvre* (Paris, 1887).

Curūlis Magistrātus. The name given to a class of magistracies which conferred the privilege of using the *sella curulis*, or chair of state. This was anciently made of ivory, or, at least, adorned with it. The magistrates who enjoyed this privilege were the dictator, consuls, praetor, censors, and curule aediles. They sat on this chair in their tribunals on all solemn occasions. Those commanders who triumphed had it with them in their chariots. Persons whose ancestors, or themselves, had borne any curule office, were called *nobiles* and had the *ius imaginum*. They who were the first of the family that had raised themselves to any curule office were called *homines novi*, "new men." As regards the origin of the term *curulis*, Festus deduces it from *currus*, "a chariot," and says that "curule magistrates" were so called because borne along in chariots; but see QUIRITES.

Custōdes, Custodiae. The soldiers who guarded the gates of a camp. See CASTRA; VIGILIAE.

Custodia. A watching, guard, or care of anything; hence the word comes to mean (1) custody, confinement, or restraint of a person; (2) persons set as a guard or watch; (3) the place where a guard is kept; (4) a prison, or place where a person is guarded; (5) persons in confinement or subject to any restraint.

Custodia rei is a technical term for the charge which a person undertakes of a thing intrusted to him by another, on account of which he is liable for any loss due to his *dolus* or *culpa*. See CULPA.

Customs Duties. See PORTORIUM.

Custos Urbis. See PRAEFECTUS URBIS.

Cutiliae Aquae. See AQUAE (1).

Cyăné (Κυανή). A Sicilian nymph and playmate of Persephoné, changed into a fountain through grief at the loss of the goddess.

Cyaneae (Κυάνεαι, sc. *νῆσοι*). Two small rugged islands at the entrance of the Euxine Sea, and forty stadia from the mouth of the Thracian Bosporus. According to Strabo, one was near the European the other near the Asiatic side, and the space between them was about twenty stadia. There was an ancient fable relative to these islands, that they floated about, and united to crush to pieces vessels which attempted to pass through the straits (Pomp. Mela, ii. 7). Pliny gives the same fable, but assigns, at the same time, the true cause of the legend. It arose from their appearing, like all other objects, to move towards or from each other when seen from a vessel in motion itself. The Argo, we are told by Apollonius Rhodius (ii. 601), had a narrow escape in passing through, and lost the extremity of her stern. Pindar says that they were alive and moved to and fro more swiftly than the blasts, until the expedition of the Argonauts brought death upon them (Pyth. iv. 371 foll.). On which passage the scholiast remarks in explanation that it was decreed by the Fates they should become "rooted to the deep" whenever a vessel succeeded in passing through them—a prediction accomplished by the Argo. Phineus had directed Iason and his companions to let fly a pigeon when they were near these islands, telling them that if the bird came safely through the Argo might venture to follow her. They obeyed the directions of the prophet-prince; the pigeon passed through safely with the loss of its tail; and then the Argonauts, watching the recession of the rocks and aided by Heré and Athené, rowed vigorously on and passed through with the loss of a part of the rudder of their vessel. See ARGONAUTAE.

The term "Cyaneae" (Κυάνεαι), i. e. "dark blue" or "azure," is referred by the scholiasts on Euripides (*Med.* 2) to the colour of these rocks. In the description of Homer, however, as will be seen presently, a more poetic turn is given to the appellation. To the name Cyaneae is frequently joined that of "Symplegades" (Συμπληγάδες), i. e. "the Dashers," in allusion to their supposed collision when vessels attempted to pass through. Homer (*Od.* xii. 61) calls them Πλαγκταί, "Wanderers."

Cyanĕé (Κυανέη). Daughter of Maeander, mother of Caunus and of Byblis.

Cyănus (*κύανος*). A dark-blue substance supposed to be blue steel, mentioned by Homer and Hesiod as forming a part of works of metal—e. g. on Agamemnon's breastplate (*Il.* xi. 24) and on the shield of Heracles (*Sc. Her.* 143). The house of Alcinoüs had a cornice or frieze of *κύανος* (*Od.* vii. 87). In Theophrastus it is lapis lazuli (*Lapid.* 31). See Merriam's note on *Od.* vii. 87, in his *Phaeacians of Homer* (N. Y. 1880).

Cyăthus (*κύαθος*). A Greek and Roman liquid measure, containing one twelfth of the sextarius or .0825 of a pint English. It was, in later times at least, the measure of the common drinking-glass among the Romans, who borrowed it from the Greeks. The form of the cyathus used at banquets was that of a small ladle, by means of which the wine was conveyed into the drinking-cups from the large vessel (*κρατήρ*) in which it was mixed.

Cyathi. (*Museo Borbonico.*)

The cyathus was the *uncia*, considered with reference to the sextarius as the unit; hence we have *sextans* used for a vessel containing the sixth of the sextarius, or two cyathi, *quadrans* for one containing three cyathi, *triens* for four cyathi, *quincunx* for five cyathi, and so on.

Cyaxăres (Κυαξάρης). (1) A king of the Medes, grandson of Deioces, son of Phraortes, and father of Astyages. He was a prince of violent character, and this trait displayed itself in his treatment of the Scythians, a body of whom had taken refuge in his territories in consequence of a sedition. He received them kindly, allowed them settlements, and even went so far as to intrust some children to their care, in order to have them taught the Scythian language and a knowledge of archery. After some time had elapsed, the Scythians, accustomed to go forth to the chase, and to bring back to the king some of the game obtained by the hunt, returned one day with empty hands. Cyaxares gave vent to his temper by punishing them severely. The Scythians, indignant at this treatment, which they knew to be unmerited, resolved to slay one of the children confided to their care, and, after preparing the flesh like the game they had been accustomed to bring, to serve it up before Cyaxares, and betake themselves immediately to Alyattes at Sardis (Herod. i. 73, 74). This cruel revenge succeeded but too well. Cyaxares demanded the fugitives from King Alyattes, and on his refusal a war ensued. This war lasted for five years; in the sixth, an eclipse of the sun, which had been predicted by Thales, separated the contending armies (B.C. 610). Peace was soon restored through the mediation of Labynetus, king of Babylon, and Syennesis, king of Cilicia (Herod. i. 73 foll.). Herodotus also informs us (i. 103) that Cyaxares was the first who regularly trained the Asiatics to military service; dividing the troops, which had been imbodied promiscuously before his time, into distinct companies of lancers, archers, and cavalry. The historian then adds parenthetically, "this was he who waged war with the Lydians; when, during a battle, the day became night." This parenthetical remark evidently refers to the foregoing account of the eclipse. We are next informed that, having subdued all Asia above the river Halys, he marched with all that were under his command against Nineveh, resolving to avenge the death of his father by the destruction of that city. After he had defeated the Assyrians he laid siege to the city, but was forced to raise it by a sudden invasion of his territories. For a numerous army of Scythians, headed by Madyas, made an irruption into Media, defeated him in a pitched battle, and brought both him and all Upper Asia under

subjection to them for eight-and-twenty years (Herod. i. 103 foll.). Then, in revenge for their galling impositions and exactions, he slew their chieftains, when intoxicated, at a banquet to which he had invited them; and, expelling the rest, recovered his former power and possessions. After this, the Medes took Nineveh and subdued the Assyrian provinces, all except the Babylonians, their confederates in the war. Cyaxares died after having reigned forty years (B.C. 634–594), including twenty-eight years of the Scythian dominion. (2) Son of Astyages, succeeding his father at the age of forty-nine years. Being naturally of an easy, indolent disposition and fond of his amusements, he left the burden of military affairs and the care of the government to Cyrus, his nephew and son-in-law, who married his only daughter, and was, therefore, doubly entitled to succeed him.

Cybaea. A merchant-ship or transport, mentioned only in Cicero's orations against Verres (iv. 8, § 17). It is properly an adjective, as Cicero speaks of *navis cybaea*, and describes it as most beautiful and richly adorned like a trireme (v. 17, § 44). The word perhaps comes from the Greek *κύπη*, a kind of ship mentioned by Hesychius.

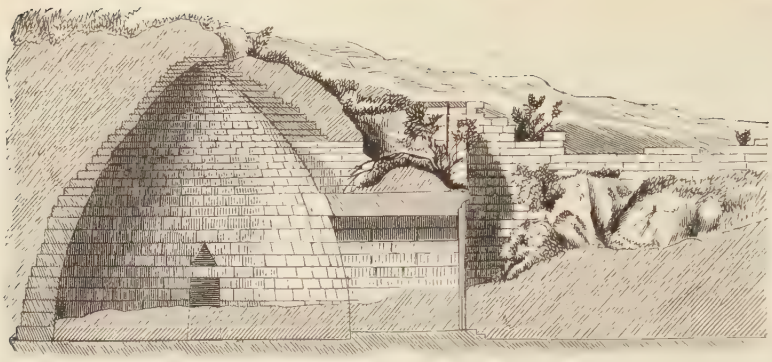
Cybēbē (Κυβήβη). A name of Cybelé, used by the poets when a long penult is required. The form Cybellé is sometimes, though with less propriety, employed for a similar purpose. See RHEA.

Cybĕlé (Κυβέλη). See RHEA.

Cybistra (*τὰ Κύβιστρα*). An ancient city of Asia Minor, lying at the foot of Mount Taurus, in the part of Cappadocia bordering on Cilicia.

Cyclădes (Κυκλάδες). A name applied by the ancient Greeks to that cluster (*κύκλος*) of islands which encircled Delos. Strabo says that the Cyclades were at first only twelve in number, but were afterwards increased to fifteen. These, as we learn from Artemidorus, were Ceos, Cythnos, Seriphos, Melos, Siphnos, Cimolos, Prepesinthos, Olearos, Paros, Naxos, Syros, Myconos, Tenos, Andros, and Gyaros, which last, however, Strabo himself was desirous of excluding, from its being a mere rock, as also Prepesinthos and Olearos.

It appears from the Greek historians that the Cyclades were first inhabited by the Phœnicians, Carians, and Leleges, whose piratical habits rendered them formidable to the cities on the continent till they were conquered and finally extirpated by Minos (Thuc. i. 4; Herod. i. 171). These islands were subsequently occupied for a short time by Polycrates, tyrant of Samos, and the Persians; but after the battle of Mycalé (B.C. 479) they became dependent on the Athenians.



Cyclas (*κυκλάς*). A luxurious robe, of a circular form, worn by Roman women, to the bottom of which a border was affixed, inlaid with gold (Propert. iv. [v.] 7, 40). It was made of some thin material, perhaps muslin. Alexander Severus, in his various attempts to restrain the luxury of his age, enacted that women should possess only one cyclas each, and that it should not be adorned with more than six *unciae* of gold (Lamprid. *Alex. Sev.* 41). It continued to be a dress of ceremony in the fifth century, and was not used exclusively by women. It is related, among other instances of Caligula's effeminacy, that he sometimes appeared in public in a garment of this description (*cycladatus*, Suet. *Calig.* 52).

Cyclic Poets (CYCLĬCI POĔTAE). A name given by the ancient grammarians to a class of minor poets, who selected, for the subjects of their productions, events occurring as well during the Trojan War as before and after, and who, in treating of these subjects, confined themselves within a certain round or cycle (*κύκλος, circulus*) of fable. In order to understand the subject more fully, we must observe that there was both a Mythic and a Trojan cycle. The former of these embraced the whole series of fable, from the genealogies of the gods down to the time of the Trojan War; the latter comprised the fables that had reference to, or were in any way connected with, the Trojan War. Of the first class were Theogonies, Cosmogonies, Titanomachies, and the like; of the second, the poems of Arctinus, Lesches, Agias, Eugammon, Stasinus, and others. (See HOMERIC QUESTION.) At a later period the term *cyclic* was applied, as a mark of contempt, to two species of poems—one, where the poet confined himself to a trite and hackneyed *round* (*κύκλος*) of particulars (cf. Horace, *Ars Poet.* 132); the other, where, from an ignorance of the true nature of epic poetry, he indulged in an inordinate and tiresome amount of detail, going back to the remotest beginnings of a subject. The most celebrated of the Cyclic poems were the *Cypria* (q. v.), the *Aethiopis* (q. v.) of Arctinus, the *Little Iliad* (*Ἰλιὰς Μικρά*) of Pausanias, the *Nostoi* (q. v.) of Agias, the *Telegonia* of Eugammon, the *Batrachomyomachia* (q. v.), and the *Margites* (q. v.) of Pigres. See HOMERUS.

All that remains of the Cyclic poets is some sixty lines, which can be found in the appendix to Welcker's *Epischer Cyclus* (Bonn, 1835), and Düntzer, *Frag. d. Ep. Poësie* (Cologne, 1840). The chief ancient authority is the *Chrestomatheia* of Proclus (q. v.). See Mahaffy, *Hist. of Class. Gk. Lit.* vol. i. ch. vi. (1880), and the article EPOS in this Dictionary. On the meaning of the word *κυκλικός*, see D. B. Munro in the *Journal of Hellenic Studies* for 1883.

Cyclopean Walls. See CYCLOPES.

Cyclōpes (Κύκλωπες). A fabulous race, of gigantic size, having but one eye, large and round, placed in the centre of their forehead, whence, according to the common account, their name was derived—from *κύκλος*, "a circular opening," and *ὤψ*, "an eye." Homer makes Odysseus, after having left the country of the Lotus-eaters (Lotophagi), to have sailed on westward, and to have come to that of the Cyclopes, who are described by him as a rude and lawless race, who neither planted nor sowed, but whose land was so fertile as to produce of itself wheat, barley, and vines. They had no social institutions, neither assemblies nor laws, but dwelt separately, each in his cave, on the tops of lofty mountains, and each, without regard to others, governed his own wife and children. The adventure of Odysseus with Polyphemus, one of this race, will be found under the latter title. Nothing is said by Homer respecting the size of the Cyclopes in general, but every effort is made to give an exaggerated idea of that of Polyphemus. Hence some have imagined that, according to the Homeric idea, the Cyclopes were not in general of such huge dimensions or cannibal habits as the poet assigns to Polyphemus himself; for the latter does not appear to have been of the ordinary Cyclops-race, but the son of Poseidon and a sea-nymph; and he is also said to have been the

Section of the Treasury of Atreus at Mycenae.

strongest of the Cyclopes (*Od.* i. 70). Later poets, however, lost no time in supplying whatever the fable wanted in this respect, and hence Vergil describes the whole race as of gigantic stature and compares them to so many tall forest-trees (*Aen.* iii. 680). It is not a little remarkable that neither in the description of the Cyclopes in general, nor of Polyphemus in particular, is there any notice taken of their being one-eyed; yet in the account of the blinding of the latter, it seems to be assumed as a thing well known. We may hence, perhaps, infer that Homer followed the usual derivation.

Such is the Homeric account of the Cyclopes. In Hesiod, on the other hand (*Theog.* 139 foll.), we have what appears to be the earlier legend respecting these fabled beings, a circumstance which may tend to show that the *Odyssey* was composed by a poet later than Hesiod, and not by the author of the *Iliad*. In the *Theogony* of Hesiod the Cyclopes are only three in number—Brontes, Steropes, and Arges. They are the sons of Uranus and Gaea (Caelus and Terra), and their employment is to forge the thunderbolts for Zeus. They are said to be in every other respect like gods, excepting the one single eye in the middle of their foreheads, a circumstance from which Hesiod also, like Homer, deduces their general name (*Theog.* 144 foll.). In the individual names given by Hesiod we have evidently the germ of the whole fable. The Cyclopes are the energies of the sky—the thunder, the lightning, and the rapid march of the latter (Brontes, from *βροντή*, "thunder"; Steropes, from *στεροπή*, "the lightning"; Arges, from *ἀργής*, "rapid"). In accordance with this idea the term Κύκλωψ (*Cyclops*) itself may be regarded as a simple, not a compound term, of the same class with *μώλωψ*, Κέρκωψ, Κέκροψ, Πέλοψ; and the word *κύκλος* being the root, we may make the Cyclopes to be "the Whirlers," or, to designate them by a Latin name, *Volvuli*.

When the thunder, the lightning, and the flame had been converted by poetry into one-eyed giants, and localized in the neighbourhood of volcanoes, it was an easy process to convert them into smiths, the assistants of Hephaestus (Callim. *H. in Artem.* 46 foll.; Verg. *Georg.* iv. 173; *Aen.* viii. 416 foll.). As they were now artists in one line, it gave no surprise to find them engaged in a task adapted to their huge strength—namely, that of rearing the massive walls of Tiryns, for which purpose they were brought by Proetus from Lycia (Schol. *ad* Eurip. *Orest.* 955). Hence, too, the name "Cyclopean" is applied to this species of architecture, just as in Germany the remains of ancient Roman walls are popularly called "Riesenmauer" and "Teufelsmauer." One theory refers the name Cyclops to the circular buildings constructed by the Pelasgi, of which we have so remarkable a specimen in what is called the Treasury of Atreus, at Mycenae. From the form of these buildings, resembling within a hollow cone or beehive, and the round opening at the top, the individuals who constructed them are thought to have derived their appellation. (Cf. Gell's *Argolis*, p. 34.) Those who make them to have dwelt in Sicily blend an old tradition with one of more recent date. This last probably took its rise when Aetna and the Lipari Islands were assigned to Hephaestus, by the popular belief of the day, as his workshops; which could only have happened when Aetna had become better known, and Mount Moschylus, in the isle of Lemnos, had ceased to be volcanic.

A few remarks may fittingly be added here on the subject of the Cyclopean architecture. This style of building is frequently alluded to by the ancient writers. In fact, every architectural work of extraordinary magnitude, to the execution of which human labour appeared inadequate, was ascribed to the Cyclopes (Eurip. *Iph. in Aul.* 534; id. *Herc. Fur.* 15; id. *Troad.* 108; Strab. 373; Sen. *Herc. Fur.* 996; Stat. *Theb.* iv. 151; Pausan. ii. 25). The general character of the Cyclopean style is immense blocks of stone, without cement, placed

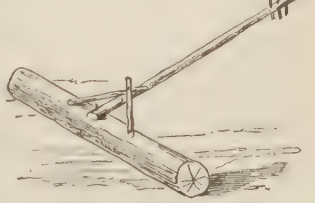
Cyclopean Pyramid at Cenchreae.

upon each other, sometimes irregularly and with smaller stones filling up the interstices, sometimes in regular and horizontal rows. The Cyclopean style is commonly divided into four eras. The first, or oldest, is that employed at Tiryns and Mycenae, consisting of blocks of various sizes, some of them very large, the interstices of which are, or were once, filled up with small stones. The second era is marked by polygonal stones, which nevertheless fit into each other with great nicety. Specimens exist at Delphi, Iulis, and at Cosa in Etruria. In this style there are no courses. The third era appears in the Phocian cities, and in some of Boeotia and Argolis. It is distinguished by the work being made in courses, and by the stones, though of unequal size, being of the same height. The fourth and youngest style presents horizontal courses of masonry, not always of the same height, but formed of stones which are all rectangular. This style is chiefly confined to Attica. The most reasonable opinion relative to the Cyclopean walls of antiquity is that which ascribes their erection to the ancient Pelasgi (q. v.). See Reber, *History of Ancient Art*, pp. 178–194 (Eng. trans. N. Y. 1882); and W. Gell, *Walls of Ancient Greece*.

Cyclops (Κύκλωψ). The title of a play of Euripides, which is remarkable as being the only undoubted specimen left to us of a Satyric drama (q. v.). The prologue is spoken by Silenus. He and his Satyrs are in search of Dionysus, who has been carried into the western seas by pirates. Odysseus appears, and his well-known adventure with the Cyclopes forms the rest of the plot, the story given in the *Odyssey* being closely followed. The play is little read, and has been seldom edited apart from the other works of Euripides, though there is a good recent edition with English notes by W. Long (Oxford, 1891). Shelley has rendered the *Cyclops* into English with a few omissions. There are no imitations. See Mahaffy, *Hist. of Class. Gk. Lit.* vol. i. pp. 377–379 (American ed.).

Cycnus (Κύκνος, "Swan"). (1) The son of Ares and Pelopia, who threw himself in the way of Heracles in Trachis, when the hero was on his way to Ceyx. According to another story, Heracles was sent against Cycnus by Apollo, because he lay in wait for the processions on their road to Delphi. In the contest between them, as described by Hesiod in his *Shield of Heracles*, Ares stood by the side of his son, while Heracles was supported by Athenê and his faithful Iolaüs. Heracles slew Cycnus and even wounded Ares, when the latter attempted to avenge the fall of his son. Cycnus was buried with all due honours by his father-in-law Ceyx, but Apollo destroyed the tomb by an inundation of the river Anaurus. There was a son of Ares and Pyrenê who bore the same name, and he too was said to have fallen in combat against Heracles. Ares attempted to avenge his son, when Zeus, by a flash of lightning, separated his angry children. After his death, so ran the story, Cycnus was changed by his father into a swan.

(2) The son of Poseidon and Calycé. He was exposed by his mother on the sea-shore and found by some fishermen, who named him Cycnus because they saw a swan flying round him. He was invulnerable and of gigantic strength and stature; his head (or, according to another account, his whole body) was as white as snow. He became king of Colonae in the Troad, and was twice married. A slanderous utterance of his second wife stung him to fury against the children of his first wife, so that he threw them into the sea in a chest. They were cast up alive on the island of Tenedos, where Tenes was king. At a later time Cycnus repented of his deed, sought for his son, and marched with him to the aid of the Trojans against the Greeks. They prevented the Greeks from landing; but both were at last slain by Achilles, who strangled the invulnerable Cycnus with his own helmet-strap. He was changed by Poseidon into a swan.



Cydias (Κυδίας). A painter, born in the island of Cythnus, one of the Cyclades, and who flourished B.C. 360. Hortensius, the orator, purchased his painting of the Argonauts for 144,000 sesterces (nearly $5800). This same work was afterwards transferred by Agrippa to the portico of Neptune (Plin. *H. N.* xxxv. 40).

Cydippé (Κυδίππη). The heroine of a very popular Greek love-story, which was treated by Callimachus in a poem now unfortunately lost. The later Greek prose romances were founded upon this version. Cydippé was the daughter of a well-born Athenian. It happened that she and Acontius, a youth from the island of Ceos, who was in love with her, had come at the same time to a festival of Artemis at Delos. Cydippé was sitting in the temple of Artemis when Acontius threw at her feet an apple on which was written, "I swear by the sanctuary of Artemis that I will wed Acontius." Cydippé took up the apple and read the words aloud, then threw it from her and took no notice of Acontius and his addresses. After this her father wished on several occasions to give her in marriage, but she always fell ill before the wedding. The father consulted the Delphic oracle, which revealed to him that the illness of his daughter was due to the wrath of Artemis, by whose shrine she had sworn and broken her oath. He accordingly gave her to Acontius in marriage.

Cydnus (Κύδνος). A river of Cilicia Campestris, rising in the Taurus and flowing through the midst of the city of Tarsus. It was celebrated for the coldness of its waters, in bathing in which Alexander the Great nearly lost his life (Plut. *Alex.* 19).

Cydonia (Κυδωνία). One of the chief cities of Crete, situated on the northwest coast, derived its name from the Cydones, a Cretan race, placed by Homer in the western part of the island. Cydonia was the place from which quinces (*Cydonia mala*) were first brought to Italy; and its inhabitants were among the best Cretan archers.

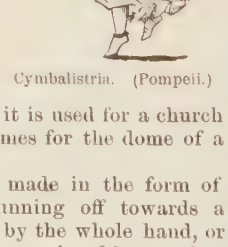
Cylindrus (κύλινδρος). (1) A roller for levelling the ground in agricultural and other operations (Verg. *Georg.* i. 178; Vitruv. x. 6). Unlike those of modern times, it did not revolve but was simply dragged upon the ground. (2) A precious stone cut or ground in a cylindrical form (Juv. ii. 61).

Cylindrus or Roller. (Rich.)

Cylix. See Calix.

Cyllărus (Κύλλαρος). A beautiful Centaur, killed at the wedding-feast of Pirithoüs (q. v.). The horse of Castor was likewise called Cyllarus.

Cyllēné (Κυλλήνη). (1) The highest mountain in the Peloponnesus, on the frontiers of Arcadia and Achaia, sacred to Hermes, who had a temple on the summit, was said to have been born there, and was hence called Cyllenius. (2) A seaport town of Elis.



Cyllenius (Κυλλήνιος). An epithet applied to Hermes, from his having been born on Mount Cyllené.

Cylon (Κύλων). An Athenian of noble family who formed the plan of making himself tyrant of Athens (B.C. 612). At the time of the Olympic Games, he seized the Acropolis, where he was soon after closely besieged by the archons. Being at last destitute of food, he and his followers capitulated, after receiving a promise from the archon Megacles, one of the Alcmaeonidae, that their lives would be spared. In violation of this promise, however, they were all put to death, some being even murdered at the altar of the Eumenides. For this sacrilege, the Alcmaeonidae were tried by the nobles and banished (B.C. 596 or 595), at the instigation of Solon. The family retired to Phocis and remained exiles from Athens until the time of Lycurgus (B.C. 560). See ALCMAEONIDAE.

Cyma (κῦμα). In architecture, an *ogee*, a wave-shaped moulding, consisting of two curves, the one concave and the other convex. There were two forms—the *cyma recta*, which was concave above and convex below, and the *cyma reversa*, which was convex above and concave below. The diminutive *cymatium* or *cumatium* (κυμάτιον) is the more common name. The original form of the *cymatium* was, however, a simple hollow, the *cavetto*.

Cymba (κύμβη). Literally "a hollow," was a small boat, probably made originally from the hollow of a tree, used on rivers and lakes, etc., especially by fishermen. Pliny ascribes its invention to the Phœnicians (Plin. *H. N.* vii. 208). The poets give the name of *cymba* to Charon's boat (Verg. *Aen.* vi. 303). See CHARON.

Cymbălum (κύμβαλον). A musical instrument in the shape of two half globes, which were held one in each hand by the performer and played by being struck against each other. The word is originally Greek, being derived from κύμβος, "a hollow." In Greek it has several other significations, as the cone of a helmet; it is also used for *ἀρδανία*, the vessel of purification placed at the door of a house where there had been a death. Besides this, it is often employed metaphorically for an empty, noisy person, as Tiberius called Apion the grammarian *cymbalum mundi*. In the mediæval Latin it is used for a church or convent bell and sometimes for the dome of a church.

Cymbalistria. (Pompeii.)

The cymbal was usually made in the form of two half globes, either running off towards a point, so as to be grasped by the whole hand, or with a handle. It was commonly of bronze, but sometimes of baser material, to which Aristophanes alludes. As with the *crotalum*, the performers were usually women and were known as *cymbalistriae*. See CROTALUM; SISTRUM.

Cymbium (κυμβίον, κύμβος, κύμβη). A small cup, not round, but long and without handles. They were used as drinking-cups, and also as ladles for dipping out wine from the mixer. Various materials were employed in their construction, such as silver, clay, and chrysoprase. The name is derived from κύμβη, "a boat," with which compare our "butter-boat," "sauce-boat," etc.

Cymé (Κύμη). The largest of the Aeolian cities of Asia Minor, upon the coast of Aeolis, on a bay named after it Cumaeus (also Elaïticus) Sinus. It was the mother-city of Cumae in Campania.

Cymothoë (Κυμοθόη). One of the Nereides, represented by Vergil as assisting the Trojans, with Triton, after the storm with which Aeolus, at the request of Iuno, had afflicted the fleet (*Aen.* i. 148).

Cynaegīrus (Κυναίγειρος). An Athenian, celebrated for his courage. He was brother to the poet Aeschylus. After the battle of Marathon (B.C. 490) he pursued the flying Persians to their ships, and seized one of their vessels with his right hand, which was immediately severed by the enemy. Upon this he seized the vessel with his left hand, and when he had lost that also he still kept his hold with his teeth. Herodotus (vi. 114) merely relates that he seized one of the Persian vessels by the stern, and had his hand cut off with an axe. The more detailed account is given by Justin (ii. 9).

Cynaetha (Κύναιθα). A town of Arcadia, on the river Crathis, near the northern borders, and some distance to the northwest of Cyllené. It had been united to the Achaean League, but was betrayed to the Aetolians in the Social War. This was effected by some exiles, who, on their return to their native city, formed a plot for admitting the enemy within its walls. The Aetolians, accordingly, having crossed into Achaia with a considerable force, advanced to Cynaetha and easily scaled the walls; they then sacked the town and destroyed many of the inhabitants, not sparing even those to whose treachery they were indebted for their success. Polybius observes that the calamity which thus overwhelmed the Cynaethians was considered by many as a just punishment for their unusually depraved and immoral life.

Cynānē (Κυνάνη), **Cyna** (Κύνα), or **Cynna** (Κύννα). The half-sister of Alexander the Great, daughter of Philip by Audata, an Illyrian woman. She married her cousin, Amyntas, and on Alexander's death went to Asia, intending to marry her daughter Eurydicé to Arrhidaeus; but Perdiccas, who controlled Arrhidaeus, fearing this project, had her put to death (Diod. Sic. xix. 15).

Cynegetĭca. A poem on the chase, written in Latin by Grattius (q. v.) towards the end of the Augustan Age, and existing in an imperfect state. It traces the development of the chase from the earliest ages, and goes on to describe the chase itself, giving also an account of the different breeds of dogs and horses, with digressions on various themes. The technical details are carefully given, but the poem has no very great merit. The part of the poem still existing consists of 536 hexameter lines and five fragments of lines. The same title was chosen by the later poet Nemesianus (about A.D. 275), of which we have the first 425 lines (hexameters), partly in imitation of Calpurnius (q. v.). The poems of both Grattius and Nemesia-

nus were edited together by Stern (Halle, 1832), by Haupt (Leipzig, 1838), and by Schenkl (Prague, 1885). See Birt, *Hist. Hexam. Lat.* p. 57. A treatise of Xenophon, in prose, on the chase is entitled Κυνηγετικός. See Oppianus.

Cynesii (Κυνήσιοι) or **Cynētes.** A people, according to Herodotus, dwelling in the extreme west of Europe, beyond the Kelts, apparently in Spain.

Cynĭci (Κυνικοί). A name given to the followers of Antisthenes who founded a distinct school of philosophy at Athens about B.C. 380. Antisthenes had been a pupil of Socrates, and, like that philosopher, he taught that speculative philosophy was unprofitable, and should be supplanted by the practical ethical teaching whose end is a moral and tranquil life. In this respect the Cynic School was like the Stoic, but differed in defining virtue to be extreme simplicity in living. This simplicity the followers of Antisthenes pushed so far as to violate the most elementary notions of cleanliness and even decency, and to plunge into the most frantic excesses of austerity, wearing filthy clothing, eating raw meat, and treating all who approached them with insulting rudeness. Hence the name Κυνικοί, "dog-like," was applied to them in its literal meaning, from their snarling insolence, though the name probably originated from the Gymnasium Cynosarges (q. v.), in which Antisthenes first taught. The most famous of the Cynics, Diogenes of Sinopé, accepted the name Κύων with a sort of pride, and was pleased to be styled "Diogenes the Dog," saying, however, that he did not, like other dogs, bite his enemies, but only his friends and for their own good. Besides Antisthenes and Diogenes, the best known Cynics were Crates of Thebes (Diog. Laërt. vi. 86), Hipparchia and her brother Metrocles, Monimus of Syracuse, Menippus of Sinopé, whom Lucian describes as "one of the ancient dogs who barks a great deal" (*Bis Accus.* 33); and at Rome, Demetrius, the friend of Seneca, Oenomaüs of Gadara, and Demonax of Cyprus. Cynicism became ultimately merged in Stoicism.

See Ueberweg, *Hist. of Philos.* vol. i. pp. 92–94 (Eng. trans. N. Y. 1872); Mullach, *Frag. Philosophorum Graecorum*, vol. ii. pp. 261–395; Diog. Laërt. vi.; and the articles Antisthenes; Demonax; Diogenes; Menippus.

Cynisca (Κυνίσκα). A daughter of Archidamus, king of Sparta, who was the first woman that ever turned her attention to the training of steeds, and the first that obtained a prize at the Olympic Games (Pausan. iii. 8).

Cyno (Κυνώ). The wife of a herdsman, and the one who nurtured and brought up Cyrus the Great, when exposed in infancy (Herod. i. 110). Her name in the Median language was Spaco, according to Herodotus, who makes Cyno the Greek translation of it, from κύων, "a dog," and adds that it signified in the Median tongue a female dog.

Cynocephăli (Κυνοκέφαλοι). A nation of India, who were said to have the heads of dogs, whence their name (Ctesias, *Ind.* 23; Aul. Gell. ix. 4). Diodorus Siculus speaks of them as resembling human beings of deformed visage and as sending forth human mutterings. It has been generally supposed that the Cynocephali of antiquity were nothing more than a species of large ape or baboon. Heeren, however (*Ideen*, i. 2, p. 689), thinks that Ctesias refers, in fact, to the Pariahs, or lowest caste of Hindoos; and that the appellation of Cynocephali is a figurative allusion to their degraded state. The name is also applied to the baboons revered by the ancient Egyptians. Thoth, the god of science, is often represented as dog-headed, and so Anubis (q. v.).

Cynosarges (Κυνόσαργες). A place in the suburbs of Athens, where the school of the Cynics was held. (See Cynici.) It derived its name from a white dog (κύων ἀργός), which, when Diomus was sacrificing to Heracles, snatched away part of the victim. It was adorned with several temples. The most remarkable thing in it, however, was the Gymnasium, where all strangers, who had but one parent an Athenian, had to perform their exercises, because Heracles, to whom it was consecrated, had a mortal for his mother and was not properly one of the immortals. Cynosarges is supposed to have been situated at the foot of Mount Anchesmus.

Cynoscephălae (Κυνὸς Κεφαλαί, i. e. "Dogs' Heads)." Two hills near Scotussa in Thessaly, where the Thebans defeated the Pheraeans (B.C. 364) and where Flamininus gained his celebrated victory over Philip of Macedonia, B.C. 197.

Cynossēma (Κυνὸς Σῆμα, i. e. "Dog's Tomb"). A promontory in the Thracian Chersonesus near Madytus, so called because it was supposed to be the tomb of Hecuba, who had been previously changed into a dog. See Hecuba.

Cynosūra (Κυνοσουρά). (1) A nymph of Ida in Crete, one of the nurses of Zeus, and afterwards changed into a constellation. (2) A promontory of Attica, formed by the range of Pentelicus. (3) A promontory of Attica, facing the northeastern extremity of Salamis. It is mentioned in the oracle delivered to the Athenians prior to the battle of Salamis (Herod. viii. 76).

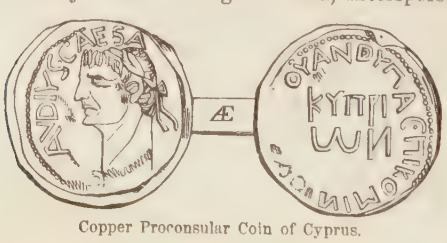
Cynthia (Κυνθία). A surname of Artemis, from Mount Cynthus, in the island of Delos, where she was born.

Cynthus (Κύνθος). A mountain of Delos, celebrated as the birthplace of Apollo and Artemis, who were hence called Cynthius and Cynthia respectively.

Cynuria (Κυνουρία). A district on the frontiers of Argolis and Laconia, for the possession of which the Argives and Spartans carried on frequent wars, and which the Spartans at length obtained about B.C. 550.

Cynus (Κῦνος). The chief seaport in the territory of the Locri Opuntii. According to some ancient traditions, it had long been the residence of Deucalion and Pyrrha; the latter was even said to have been interred here (Strab. ix. p. 425).

Cyparissia (Κυπαρισσία). A town in Messenia, on the western coast, on a promontory and bay of the same name.



Cyparissus (Κυπάρισσος). (1) Son of Telephus, who, having inadvertently killed his favorite stag, was seized with immoderate grief and metamorphosed into a cypress. (2) A small town in Phocis on Parnassus, near Delphi.

Cypria (Κυπρία). A poem in early days ascribed to Homer, but denied to him by Herodotus (ii. 117). Later, its author is variously given as Stasinus or Hegesias. It detailed the causes of the Trojan War, and served as a sort of introduction to the *Iliad*. See Cyclic Poets; Homerus.

Cyprus (Κύπρος). A large island of the Mediterranean, south of Cilicia and west of Syria, identical, at least in part, with the Hebrew *Kittim*, which seems to be its oldest known name; but it appears to be sometimes included in the name Caphtor, a title that properly belongs to Crete with other islands and coast lands settled by the Caphtorim. Other ancient names of Cyprus, most of them poetical, are Aeria, Aerosa, Acamantis, Amathusia, Aphrodisia, Aphelia, Collinia, Cerastis, Cryptos, Meïnis, Ophiusa, Macaria, Paphos, Sphekeia. The derivation of the name is uncertain, but the principal authorities, ancient and modern, refer it to the Hebrew *kopher* or *gopher*, the name of a tree; sometimes, without adequate reason, connecting it with *cupressus*. Another derivation is from *cuprum*, "copper," formerly found in the island; but the χάλκος κύπριος or *aes cyprium* probably took its name from the island, not the island from the metal.

Cyprus is reckoned by Strabo (or Timaeus, whom he follows) to be the third in extent of the Mediterranean isles. Its shape was aptly compared by the ancients to the outspread skin of an ox, or to the fleece of a sheep. Its extreme length, from Cape Acamas (now Cape Arnaouti or Epiphanio) on the west to the promontory Dinaretum (now St. Andrea) on the east, is about 140 miles; its greatest breadth, from Crommyon (now Cormaciti) on the north to Cape Curias (now Cape Gatto), on the south, about 60; its width varying greatly, the long strip that ends at Dinaretum being very narrow and scarcely more than 10 miles across at any point. Off Dinaretum are several small islands called Kleides (Keys). The coast is provided with numerous bays; but the harbors are now mere roadsteads, though the remains of ancient artificial harbor moles are to be seen at several places (as New Paphos, Soli, etc.).

From Crommyon to Dinaretum, along and quite near the coast, extends a mountainous chain, of which the highest peaks are Buffavento (3240 ft.), Pentedactylon (2480 ft.), and Elias (2810 ft.). The principal ranges, however, are in the west and southwest, the highest point being Mount Olympus (Trodos or Troödos, 6590 ft.), nearly midway between Curium on the south coast and Soli on the north, from the top of which a view of the whole island can be obtained. Next in height is Mount Adelphi (Maschera, 5380 ft.), a few miles to the east; still farther east, a hill (4370 ft.) whose ancient name is unknown; and still farther east again, Mount Santa Croce (Stavros, 2300 ft.). The chain extends nearly to Famagousta (Ammochostos, Constantia-Salamis), with frequent spurs to the shore; and spurs also extend from Olympus radially to the north, west, and south. Between the two ranges is a vast plain, now called the Messouria, whose principal river is the Pidias (Pidaeas), emptying into the sea near Salamis. The Messouria to-day is one vast grain-field, interspersed with insignificant villages. The island formerly abounded in trees and timber, of which it is now mostly denuded, though the kharub, olive, fig, orange, date-palm, lemon, nectarines, apricots, etc., and others suited to the climate flourish. Wild grape-vines still grow to an immense size. Wine, of various sorts, is abundant; the best and most famous being the Commanderia wine, so named from its original producers, the Knights of St. John, at Colossi. Formerly Cyprus yielded to no region in fertility, producing an abundance of grain, wine, oil, and fruits. At the proper season the hills and uncultivated plains are carpeted with anemones, ranunculuses, crocuses, hyacinths, squills, and a great variety of other flowers, especially those with bulbous roots. One ancient epithet of Cyprus is εὐώδης. But agriculture, along with irrigation and drainage, is much neglected. Salt lakes, or "Salines," exist near Larnaca, the ancient Citium, furnishing now, as in the times of Pliny, vast supplies of salt for home consumption and exportation, the salt coating the surface as the summer heat evaporates the water. The climate is still that of the ancient *nimio calore*.

Copper Proconsular Coin of Cyprus.

Although the names of special historians have come down to us, we possess no ancient special treatise or history of the island, but are dependent for information anciently current upon the frequent mention in the Greek and Roman classics, with brief notices in the later historians. These are best collected in Engel's monograph *Kypros* (Berlin, 1841).

The earliest inhabitants have generally been supposed to be Phœnicians, and it is true that the Phœnician language retained its hold in certain parts of Cyprus as late as anywhere, contemporarily, of course, with the Greek, the Lycian (locally), and later with the Latin. The Cypriotes, however, spoke a language peculiar to themselves, as was long ago evident from the scattered glosses preserved by the grammarians and lexicographers, and as has lately been further and most conclusively shown by the recent discovery and decipherment of inscriptions in the peculiar Cypriote character. This language was essentially Greek; and the Greek of Cyprus to-day embraces many peculiarities of its own. The legendary hero of Cyprus was Cinyras, who is said to have come to the island at the time of the beginning of the Trojan War. Without going into the matter of the legend, it may be said that Greek inscriptions of the "Cinyradae" (the priestly caste of Old Paphos, etc.) have been found in the island within the last twenty years.

The chief religion of the island was notoriously the worship of Venus; but with few exceptions (as e. g. Zeus Labranios, introduced near Amathus from Caria) the religion and deities were introduced from Phœnicia, and thus indirectly from the farther East—with, however, some Greek modification. Aphrodité, Apollo, Hercules, and other deities usually called Greek or Roman were thus introduced, the Greek and Phœnician names of some of them appearing now and then on the same bilingual inscription. Aphrodité had her epithet of "Paphian" not only at Paphos, where her rites included all the extravagancies of Mylitta at Babylon, but at the other seats of her worship—Golgos, Dali, Cerynia, etc. Apollo Hylates, who had a temple at Curium, is called by that name and also by his Phœnician name of Resheph Mical on a

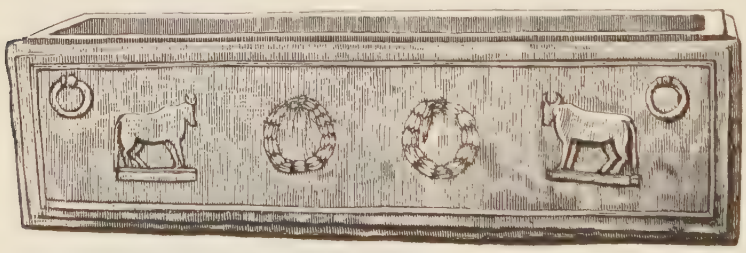
bilingual inscription found at Dali. A temple to Eshmunmelqarth (=Aesculapius-Hercules), a Phœnician deity much like the Greek Palaemon and the Roman Portumnus, near the Salines at Larnaca, has furnished a number of Phœnician inscriptions of the fourth century B.C.; while a temple to Artemis Paralia, close at hand, has furnished a few Greek inscriptions and an immense number of valuable terra-cotta remains.

Colossal Male Head from Cyprus. (Di Cesnola.)

Aside from the mythical reign of Cinyras over the whole island, the territory, so far as we know, was broken up into a number of kingdoms, whose detailed history has well-nigh perished. A dynasty of Phœnician kings ruled over Citium, Idalium, and Tamassus in the fifth and fourth centuries B.C. Salamis, said to have been founded by Teucer, and by him named after his native city, had its own Greek kings at the same period. Paphos had its dynasty of the Cinyradae, who seem also to have extended their power over Amathus and certain other parts. Soli and Cythrea traced their origin to the Athenians; Lapethus and Cerynia to a Lacedaemonian colony under Praxander and an Achaean one under Cepheus; Curium to the Argives. A town Asiné, whose site is not known, is said to have been colonized by the Dryopians; Neo-Paphos by Agapenor. The promontory Acamas is said to have its name from the hero of the Trojan War. Old Paphos, Amathus, and Citium were founded by the Phœnicians; and of these, Citium (with Dali and Tamassus) seems to have retained its Phœnician character with less modification than the others. Carpassia seems also to have had a Phœnician origin. Articles of Phœnician manufacture—bronze, gold, silver, pottery, etc.—have been found in abundance all over the island.

Terra-cotta Vase from Citium, inscribed *Kthac.* (Di Cesnola.)

Aside from these scattered data, we know that Thothmes III. of Egypt (cir. B.C. 1500) conquered Cyprus; Belus of Tyre was at one time its master; ten kingdoms, including Soli, Chytri, Curium, Lapethus, Cerynia, Neo Paphos, Marium, Idalium, Citium, and Amathus, sent their submission to the Assyrian Esarhaddon (cir. B.C. 890); Sargon put the island to tribute (cir. B.C. 707); Apries (Pharaoh Hophra) of Egypt defeated some Cyprian monarchs near Citium, and returned home laden with their spoils; Amasis of Egypt overran the island and put it to tribute, but the Cyprian rulers joined Cambyses the Persian against the son of Amasis. The king of Amathus revolted from the Persians in the time of Darius, and the longest record extant in the Cypriote character commemorates one of the side issues of this struggle. In B.C. 477, the Athenians and Lacedaemonians conquered part of Cyprus from the Persians; and a war resulted in which the Greeks, with the Tyrians and Egyptians as allies, were on one side, and the Persians on the other. The power of Alexander the Great was both felt and helped in Cyprus, after which, under the Ptolemies, followed wars and doubtful sovereignty, till Demetrius Poliorcetes conquered the island (cir. B.C. 306). About B.C. 296, Ptolemy Soter took the island, after which it remained under Egypt till conquered by the Romans.



Literature and the arts flourished in Cyprus even from a very early period, as witness the "Cypria Carmina," by some attributed to Homer. Citium was the birthplace of Zeno. It is foreign to the present article to trace the history of the island during the Roman rule, the Arabs, the dukedoms of the Crusades, Richard of England, the Lusignans, the Turks, and the recent occupation by the English. Its geographical position made it the field for the exhibition of the arts, deeds, and cults of various nations; and its remains, as brought to light in the explorations of the last twenty-five

Vase, with Phœnician Inscription Burnt on the Clay.

years, have given a deeper insight into the ancient life and occupations and attainments of its successive peoples and masters than it had been thought possible hitherto to attain, and necessitated the rewriting of the principal chapters in the history of ancient art. From the time of Pococke, who, nearly three centuries ago, made his famous discoveries of Phœnician inscriptions (chiefly about Citium), down to the English occupation, scattered and partial explorations have been made. The discovery, in the first half of this century, of inscriptions in a character hitherto unknown, and their decipherment, from 1873 onward, has furnished most valuable clues to the history of religions in Cyprus and the transference of deities thither from the East, besides many minor historical matters and a vast addition to the knowledge of Greek dialects. The characters are syllabic, with peculiar laws of writing, and the language Greek. Some hundreds of these inscriptions are now known (the most of them found by Di Cesnola)—some bilingual (Phœnician and Cypriote) and some digraphic (Greek and Cypriote). The decipherment is a brilliant record—George Smith, of England, discovering the key in a bilingual inscription now in the British Museum; R. H. Lang simultaneously and independently proving the incorrectness of certain previous attempts by others; after which Samuel Birch made additional progress; and complete inscriptions were first read simultaneously and independently by Justus Siegismund and W. Deecke of Strassburg, M. Schmidt of Jena, and I. H. Hall of New York, since which time many writers have contributed lexicographic and dialectic additions.

The discoveries by exploration and excavation have been chiefly made (though the work of others is not inconsiderable) by L. P. di Cesnola, while U. S. Consul at Cyprus, from 1866 to 1877. His work covered nearly all parts of the island, discovering the sites of many ancient cities, and ruins of others whose ancient identity is not yet known, besides many temples, necropoles, ancient aqueducts, and other remains, including over 200 inscriptions, in Assyrian, Cypriote, Phœnician, Greek, and Latin. The greatest number (many thousands) and most important of the objects discovered are deposited in the Metropolitan Museum of Art in New York, though many found their way to European museums and private collections. The

Cyprian Sarcophagus — Roman Period.

statuary, pottery, terra-cottas, glass, gold, silver, and gems are a unique and unrivalled collection, and their value for the study of Phœnician and Greek archæology, art, and history appears in their unceasing use in the learned publications of all countries. Since the occupation of Cyprus by the English, others have excavated and explored, but by no means on the same scale, the principal works accomplished being the further excavation of the site of the greater temple of Venus at Old Paphos, and some large operations near Salamis.

For authorities, among many, see Engel, *Kypros*, above referred to; Di Cesnola, *Cyprus* (New York and London, 1878); R. H. Lang, *Cyprus*, etc. (London, 1878). The literature in periodicals and minor volumes is very extensive.

Cypsĕla (*τὰ Κύψελα*). (1) A town in Arcadia on the frontiers of Laconia. (2) A town in Thrace on the Hebrus and the Egnatia Via.

Cypsĕlus (*Κύψελος*). A tyrant of Corinth, B.C. 655–625, so named because when a child he was concealed from the Bacchiadae (the Doric nobility of Corinth) by his mother in a chest (*κυψέλη*). He was succeeded in the tyranny by his son Periander.

Kyrbeis (*κύρβεις*). See AXONES.

Cyrenaïca (*ἡ Κυρηναία*). A country of Africa, east of the Syrtis Minor and west of Marmarica. It corresponds with the modern Barca. Cyrenaïca was considered by the Greeks as a sort of terrestrial paradise. This was partly owing to the force of contrast, as all the rest of the African coast along

Coins of Cyrené, bearing the sacred Silphium Plant.

the Mediterranean, from Carthage to the Nile, was a barren, sandy waste, and partly to the actual fertility of Cyrenaïca itself. It was extremely well watered, and the inhabitants, according to Herodotus (iv. 199), employed eight months in collecting the productions of the land; the maritime places first yielded their fruits, then the second region, which they called the hills, and lastly those of the highest part inland. One of the chief natural productions of Cyrenaïca was an herb called *silphium*, a kind of laserpitium or assafœtida. It was fattening for cattle, rendering their flesh also tender, and was a useful aperient for man. From its juice, too, when kneaded with clay, a powerful antiseptic was obtained. The silphium formed a great article of trade, and at Rome the composition above mentioned sold for its weight in silver. It is for this reason that the silphium appeared always on the medals of Cyrené. Its culture was neglected, however, when the Romans became masters of the country, and pasturage was more attended to. Cyrenaïca was called Pentapolis from its having five cities of

note in it—Cyrené, Arsinoë, Apollonia, Ptolemaïs, Berenicé, and Teuchira. All of these exist at the present day under the form of towns or villages. See CYRENÉ.

Cyrenaïci (Κυρηναϊκοί). A sect of philosophers who followed the doctrines of Aristippus (q. v.), and whose name was derived from their founder's having been a native of Cyrené, and from their school having been established in this place. Aristippus made the *summum bonum* and the τέλος of man to consist in enjoyment, accompanied by good taste and freedom of mind, τὸ κρατεῖν καὶ μὴ ἡττᾶσθαι ἡδόνων ἄριστον, οὐ τὸ μὴ χρῆσθαι (Diog. Laërt. ii. 75). Happiness, said the Cyrenaics, consists, not in tranquillity or indolence, but in a pleasing agitation of the mind or in active enjoyment. Pleasure (ἡδονή) is the ultimate object of human pursuit; it is only in subserviency to this that fame, friendship, and even virtue are to be desired. All crimes are venial, because never committed except through the immediate impulse of passion. Nothing is just or unjust by nature, but by custom and law. The business of philosophy is to regulate the senses in that manner which will render them most productive of pleasure. Since, then, pleasure is to be derived, not from the past or the future, but the present, a wise man will take care to enjoy the present hour, and will be indifferent to life or death. Such were the tenets of the Cyrenaic School. The short duration of this sect was owing, in part, to the remote distance of Cyrené from Greece, the chief seat of learning and philosophy; in part to the unbounded latitude which these philosophers allowed themselves in practice as well as opinion; and finally to the rise of the Epicurean School, which taught the doctrine of pleasure in a more philosophical form. The Cyrenaic teaching that pleasure is the only good was developed in a curious way by Hegesias (q. v.), who argued that as pleasure is the only good, and that as, by reason of the uncertainties of life, an existence of pure pleasure is impossible of attainment by man, the true philosopher will not seek to live, but will end his life by suicide. He therefore preached the doctrine of self-destruction. See Wendt, *De Philosophia Cyrenaica* (Göttingen, 1841); Von Stein, *De Philosophia Cyrenaica* (Göttingen, 1855); and Ueberweg, *Hist. of Philos.* vol. i. pp. 95–98 (Eng. trans. N. Y. 1872).

Cyrēnē (Κυρήνη). (1) Daughter of Hypseus, mother of Aristaeus by Apollo, and carried by the god from Mount Pelion to Libya, where the city of Cyrené derived its name from her. (2) An important Greek city in the north of Africa, lying between Alexandria and Carthage. It was founded by Battus (B.C. 631), who led a colony from the island of Thera, and he and his descendants ruled over the city for eight generations. It stood eighty stadia (eight geographical miles) from the coast, on the edge of the upper of two terraces of tableland, at the height of 1800 feet above the sea, in one of the finest situations in the world. At a later time Cyrené became subject to the Egyptian Ptolemies, and was eventually formed, with the island of Crete, into a Roman province. The ruins of the city of Cyrené are very extensive. It was the birthplace of Carneades, Callimachus, Eratosthenes, and Aristippus. The territory of Cyrené, called Cyrenaïca, included also the Greek cities of Barca, Teuchira, Hesperides, and Apollonia, the port of Cyrené. Under the Ptolemies, Hesperides became Berenicé, Teuchira was called Arsinoë, and Barca was eclipsed by its port, which became a city called Ptolemaïs.

Cyreschăta. See CYROPOLIS.

Cyriacus of Ancona. See RENAISSANCE.

Cyrillus (Κύριλλος). (1) A bishop of Jerusalem, A.D. 351–386, and a firm opponent of the Arians, by whose influence he was banished three times from Jerusalem. His works are not numerous. The most important are lectures to catechumens, etc., and a letter to the emperor Constantius, giving an account of a luminous cross which appeared at Jerusalem in 351. The best editions are by Milles (Oxford, 1703), Touttée (Paris, 1720), and Reischl and Rupp (1845–60). There is an English translation of his works in the *Oxford Library of the Fathers*, vol. iii. (1838). See also the works by Gounet (1876) and Marquardt (1882). (2) Bishop of Alexandria, A.D. 412–444, of which city he was a native. He was fond of power, and was of a remarkably polemical spirit. He persecuted the Jews, whom he expelled from Alexandria; and after a long protracted struggle he procured the deposition of Nestorius, bishop of Constantinople. He was the author of a large number of works, many of which are extant; but in a literary view they are almost worthless. The best edition is still that of Aubert, 6 vols. (Paris, 1638). See Newman's *Historical Sketches*, vol. ii.; Hefele's *History of the Councils*, vol. ii.; and Kopallik, *Cyril von Alexandria* (Mainz, 1881).

Kyrios (κύριος). A lord or guardian; a person charged with the protection of such members of a family as were regarded as incapable of protecting themselves. The early law of all countries takes notice of families only; in other words, it only takes notice of persons exercising *patria potestas*. Attic law, therefore, subordinates a woman to her blood-relations; though relieved from her parent's authority by his death, she continues subject through life to her nearest male relations as guardians (Maine, *Ancient Law*, p. 152 foll.). During marriage, of course, her husband was her κύριος; but when this relation was terminated by death or divorce, she acquired no more freedom than before, but returned to the guardianship of her own family. The term κύριος is applied to males only during minority; the κύριος of such was first, of course, the father, secondly the guardian appointed by his will, thirdly the nearest male relative. In cases of adoption, the natural father remained no longer the κύριος of the adoptee. See ADOPTIO; EPITROPOS; KAKOSIS.

Cyrnus (Κύρνος). The Greek name of the island of Corsica, from which is derived the adjective Cyrneus, used by the Latin poets.

Cyrnus. See THEOGNIS.

Cyropaedīa (Κύρου Παιδεία). A species of historical romance in eight books by Xenophon, professing to give an account of the early years of Cyrus the Great, but in reality setting forth an ideal system of kingly government. Some have considered the *Cyropaedia* as a criticism of the first two books of Plato's *Republic*, on which see Aulus Gellius, xiv. 3. It is the longest and most ambitious of all the works of Xenophon, and is interesting as containing in the form of an episode the earliest specimen of a love-romance the sto-

ry of the love of Abradatus and Panthea. The last chapter of the work is probably spurious. (See Mahaffy, *Hist. of Class. Gk. Lit.* ii. pp. 280–282.) Good editions are those of Breitenbach and Hertlein (1874); and Holden (1890).

Cyropŏlis (Κυρόπολις). A large city of Asia, on the banks of the Iaxartes, founded by Cyrus. It was also called Cyreschata. Alexander destroyed it, and built in its stead a city, called by the Roman geographers Alexandrea Ultima, by the Greeks, Ἀλεξανδρεία Ἐσχάτη, of which the Latin is a translation.

Cyrrhestĭcé (Κυρρηστική). The name given under the Seleucidae to a province of Syria, lying between Commagené on the north and the plain of Antioch on the south.

Cyrrhus (Κύρρος). (1) A city of Macedonia in the vicinity of Pella. (2) A city of Syria, the capital of a district named after it, Cyrrhestica. It derived its name from the Macedonian Cyrrhus.

Cyrus (Κῦρος; in Persian, *Kurus*). (1) A celebrated conqueror, and the founder of the Persian Empire. He comes forth in a line of monarchs who ruled in Susiana. According to Herodotus, he was the son of Mandani, daughter of Astyages, king of the Medes. The father of Cyrus was the Persian Cambyses. It having been foretold that Mandani's son would become the lord of all Asia, Astyages attempted to destroy the infant, and delivered it to Harpagus, his attendant, to kill. Harpagus, however, fearing the anger of Mandani, gave the child to a herdsman, one Mitradates, who reared the young Cyrus as his own son, under the name of Agradates. When ten years of age, the true parentage of the boy was accidentally discovered by Astyages, who, after punishing Harpagus with great barbarity, sent Cyrus to his parents in Persia. When the young prince grew up, he headed a revolt against Astyages, who had become unpopular by his tyranny, and defeated him in battle (B.C. 559). The Medes then accepted Cyrus as their king.

He had not been long seated on the throne when his dominions were invaded by Croesus, king of Lydia, the issue of which contest was so fatal to the latter. (See CROESUS.) The conquest of Lydia established the Persian monarchy on a firm foundation, and Cyrus was now called away to the East by vast designs and by the threats of a distant and formidable enemy. Babylon still remained an independent city in the heart of his empire, and to reduce it was his first and most pressing care. On another side he was tempted by the wealth and weakness of Egypt, while his northern frontier was disturbed and endangered by the fierce barbarians who ranged over the plains that stretch from the skirts of the Indian Caucasus to the Caspian. Until these last should be subdued or humbled his Eastern provinces could never enjoy peace or safety. These objects demanded his own presence; the subjugation of the Asiatic Greeks, as a less urgent and less difficult enterprise, he committed to his lieutenants. While the latter, therefore, were executing his commands in the West, he was himself enlarging and strengthening his power in the East. After completing the subjugation of the nations west of the Euphrates, he marched upon Babylon (q. v.), which he took. The account of this conquest, as described by Herodotus, is given in the article BABYLON. Recent archæological discoveries, however, tend to discredit his narrative. A tablet-inscription found at Babylon states that Cyrus, "king of Elam," took Sippara and Babylon "without fighting." This took place in B.C. 538. See Sayce, *Fresh Light from the Ancient Monuments* (London, 1883); and his *Introduction to Ezra, Nehemiah, and Esther* (2d ed. London, 1887).

Cyrus enjoyed no long interval of repose. The protection which he afforded to the Jews was probably connected with his designs upon Egypt, but he never found leisure to carry them into effect. Soon after the fall of Babylon he undertook an expedition against one of the nations on the eastern side of the Caspian. According to Herodotus, it was the Massagetae, a nomadic horde which had driven the Scythians before them towards the West; and, after gaining a victory over them by stratagem, he was defeated in a great battle and slain. The event is the same in the narrative of Ctesias; but the people against whom Cyrus marched are called the Derbices, and their army is strengthened by troops and elephants furnished by Indian allies; while the death of Cyrus is speedily avenged by one of his vassals, Amorges, king of the Sacae, who gains a decisive victory over the Derbices, and annexes their land to the Persian Empire. Cyrus died in B.C. 529. His son and successor, Cambyses, had been made by him king of Babylon three years before. Cyrus was one of the greatest Asiatics who ever lived; and with the exception of Egypt, the greater part of the Old World was under his rule at the time of his death. His capitals were Ecbatana and Susa; and his tomb exists to-day at Murgab, near Pasargadae.

Cyrus. (Pasargadae.)

(2) Commonly called "the Younger," to distinguish him from the preceding, was the second of the four sons of Darius Nothus and Parysatis. According to the customs of the monarchy, his elder brother Artaxerxes was the legitimate heir-apparent; but Cyrus was the first son born to Darius after his accession to the throne, and he was also his mother's favourite. She had encouraged him to hope that, as Xerxes, through the influence of Atossa, had been preferred to his elder brother, who was born while their father was yet in a private station, so she should be able to persuade Darius to set aside Artaxerxes and declare Cyrus his successor. In the meanwhile he was invested with the government of the western provinces. This appointment he seems from the first to have considered as a step to the throne. He had, however, sagacity and courage enough to perceive that, should he be disappointed in his first expec-

tations, the co-operation of the Greeks might still enable him to force his way to the throne. It was with this view that he zealously embraced the side of Sparta in her struggle with Athens, both as the power which he found in the most prosperous condition and as that which was most capable of furthering his designs. According to Plutarch (*Artax.* 2), Cyrus went to attend his father's sick-bed with sanguine hopes that his mother had accomplished her purpose, and that he was sent for to receive the crown. On his arrival at court, however, he saw himself disappointed in his expectations, and found that he had only come to witness his father's death and his brother's accession to the throne. He accompanied Artaxerxes, whom the Greeks distinguished by the epithet of Mnemon, to Pasargadae, where the Persian kings went through certain mystic ceremonies of inauguration, and Tissaphernes took this opportunity of charging Cyrus with a design against his life. It would seem, from Plutarch's account, that one of the officiating priests was suborned to support the charge, though it is by no means certain that it was unfounded. Artaxerxes was convinced of its truth, and determined on putting his brother to death; and Cyrus was only saved by the passionate entreaties of Parysatis, in whose arms he had sought refuge from the executioner. On this occasion Artaxerxes suffered her to overpower both the suspicions suggested by Tissaphernes and the jealousy which the temper and situation of Cyrus might reasonably have excited. He not only pardoned his brother, but permitted him to return to his government. Cyrus felt himself not obliged, but humbled, by his rival's clemency; and the danger he had escaped only strengthened his resolution to make himself, as soon as possible, independent of the power to which he owed his life.

Immediately after his return to Sardis, he began to make preparations for the execution of his designs. The chief difficulty was to keep them concealed from Artaxerxes until they were fully matured; for though his mother, who was probably from the beginning acquainted with his purpose, was at court, always ready to put the most favourable construction on his conduct, yet Tissaphernes was at hand to watch it with malignant attention and to send the earliest information of any suspicious movement to the king. Cyrus, however, devised a variety of pretexts to blind Tissaphernes and the court, while he collected an army for the expedition which he was meditating. His main object was to raise as strong a body of Greek troops as he could, for it was only with such aid that he could hope to overpower an adversary who had the whole force of the Empire at his command; and he knew enough of the Greeks to believe that their superiority over his countrymen, in skill and courage, was sufficient to compensate for almost any inequality of numbers.

In the spring of B.C. 401, Cyrus began his march from Sardis. His whole Grecian force, a part of which joined him on the route, amounted to 11,000 heavy infantry and about 2000 targeteers. His barbarian troops were 100,000 strong. After directing his line of march through the whole extent of Asia Minor, he entered the Babylonian territory; and it was not until he reached the plain of Cunaxa, between sixty and seventy miles from Babylon, that he became certain of his brother's intention to hazard an engagement. Artaxerxes met him in this spot at the head of an army of 900,000 men. If we may believe Plutarch, the Persian monarch had continued to waver almost to the last between the alternatives of fighting and retreating, and was only diverted from adopting the latter course by the energetic remonstrances of Tiribazus. In the battle which ensued the Greeks soon routed the barbarians opposed to them, but committed an error in pursuing them too far; and Cyrus was compelled, in order to avoid being surrounded by the rest of the king's army, to make an attack upon the centre, where his brother led in person. He routed the royal body-guard, and being hurried away by the violence of his feelings the moment he espied the king, he engaged with him, but was himself wounded and slain by a common soldier. Had Clearchus acted in conformity with the directions of Cyrus, and led his division against the king's centre, instead of being drawn off into pursuit of the flying enemy, the victory must have belonged to Cyrus. According to the Persian custom of treating slain rebels, the head and right hand of Cyrus were cut off and brought to the king, who is said himself to have seized the head by the hair and to have held it up as a proof of his victory to the view of the surrounding crowd. Thus ended the expedition of Cyrus. The Greeks, after the battle, began to negotiate with the king through Tissaphernes, who offered to lead them home. He treacherously violated his word, however; and having, by an act of perfidy, obtained possession of the persons of the Greek commanders, he sent them up to the king at Babylon, where they were all put to death. The Greeks were not, however, discouraged, though at a great distance from their country and surrounded on every side by a powerful enemy. They immediately chose new commanders, in the number of whom was Xenophon, who has given an account of their celebrated retreat. See ANABASIS.

Cyrus (Κύρος). A large river of Asia, rising in Iberia and falling into the Caspian; now the Kur. This river waters the great valley of Georgia, and is increased by the Aragui; the Iora, probably the Iberus of the ancients; and the Alasan, which is their Alazo.

Cyta (Κύτα). A city of Colchis, in the interior of the country, near the river Phasis, and northeast of Tyndaris. It was the birthplace of Medea. The inhabitants, like the Colchians generally, were famed for their acquaintance with poisonous herbs and magic rites. Scylax calls the place Malé (Μάλη). Medea was called Cytaeis from this her native city.

Cythēra (Κύθηρα). The modern Cerigo; an island off the southeast point of Laconia, with a town of the same name in the interior, the harbour of which was called Scandea. It was colonized at an early time by the Phœnicians, who introduced the worship of Aphroditē (q. v.) into the island, for which it was celebrated. This goddess was hence called Cytheraea, Cythereïs; and according to some traditions, it was in the neighbourhood of this island that she first rose from the foam of the sea.

Cythēris. A celebrated courtesan at Rome, the mistress of M. Antonius, and afterwards of the poet Gallus, the friend of Vergil, who in the Tenth Eclogue speaks of her as Lycoris.

Cythnus (Κύθνος). The modern Thermia; an island in the Aegaean Sea, one of the Cyclades (q. v.).

Cytinium (Κυτίνιον). The most important of the four cities of Doris in Greece. According to Thucydides (iii. 95), it was situated to the west of Parnassus, and on the borders of the Locri Ozolae.

Cytōrum (Κύτωρον). A city of Paphlagonia, on the coast between the promontory Carambis and Amastris. It was a Greek town of great antiquity, since Homer alludes to it (*Il.* ii. 853), and it is thought to have been founded by a colony of Milesians. According to Strabo, it had been a port of the inhabitants of Sinopé. In its vicinity was a mountain, named Cytorus, which produced a beautifully veined species of box-tree (Catull. iv. 13; Verg. *Georg.* ii. 437). It is now Kidros.

Cyzicēnus Nummus. See CYZICUS; ELECTRUM.

Cyzicēnus Oecus. See DOMUS, p. 546.

Cyzĭcus (Κύζικος). (1) An island off the northern coast of Mysia, nearly triangular in shape, and about five hundred stadia in circuit. Its base was turned towards the Propontis, while the vertex advanced so closely to the continent that it was easy to connect it by a double bridge, which, as Pliny relates, was done by Alexander. Scylax, however, says that it was always a peninsula, and his authority is followed by Mannert, who is of opinion that the inhabitants may, after the time of Scylax, have separated it from the mainland by a canal or ditch, for purposes of security. It is certainly a peninsula at the present day, and there are no indications whatever of the bridges mentioned by Pliny and others. (2) A celebrated city of Mysia, on the island of the same name, situated partly in the plain which extended to the bridges connecting the island with the continent, and partly on the slope of Mount Arcton Oros. Its first foundation was ascribed to a colony of Pelasgi from Thessaly, under the conduct of Cyzicus, son of Apollo. In process of time the Pelasgi were expelled by the Tyrrheni, and these again made way for the Milesians, who are generally looked upon by the Greeks as the real settlers, to whom the foundation of Cyzicus is to be attributed. Cyzicus became, in process of time, a flourishing commercial city, and was at the height of its prosperity when, through the means of the kings of Pergamus, it secured the favour and protection of Rome. Florus speaks of its beauty and opulence. The Cyzicene commonwealth resembled those of Rhodes, Marseilles, and Carthage. The Romans, in acknowledgment of the bravery and fidelity displayed by the Cyzicenians when besieged by Mithridates (B.C. 75), granted to them their independence and greatly enlarged their territory. Under the emperors, Cyzicus continued to prosper, and in the time of the Byzantine sway it was the metropolis of the Hellespontine province. Cyzicus gave birth to several historians, philosophers, and other writers. The coins of this place, called Κυζικηνοὶ στατῆρες, were so beautiful as to be deemed a miracle of art. (See ELECTRUM.) Persephoné was worshipped as the chief deity of the place, and the inhabitants had a legend among them that their city was given by Zeus to this goddess as a portion of her dowry.

D

D, as a symbol.

IN GREEK.—Δ = a tribus of Elis (*Arch. Zeit.* 1880, p. 57), δέκεμος, δικαστής, δοῦλος (*C. I. G.* 3104), δῆμου (*C. I. G.* 2383, Ψ. B. Δ. = ψηφισματι βουλῆς, δήμου).

Δ = 10 in the old decimal system of Greek numeration, ΔΔ = 20, ΔΔΔ = 30; in the alphabetic system = 4; τὸ Δ (*C. I. G.* 2059) = τὸ τέταρτον.

IN LATIN.—D = Decimus, decurio, December, decessit, decimanus, decretum, dedit, defunctus, denarius, designatus, deus, Diana, dies, dignus, divus, dixit, dominus, donavit, duumvir, etc., etc.

D·D = dare debebit, dea Dia, dedit dedicavit, donum dedit, dis deae, domus divina.

DD = devoti.

D·D·D = datum decreto decurionum, deo donum dedit, dono dedit dedicavit.

D·D·D·D = datum de decreto decurionum, donum dat dicat dedicat.

D·A = defunctus annorum, discens aquiliferum.

D·B·S = diis bonis sacrum.

D·C = decreto conscriptorum, decurionum consulto, decurio civitatis.

D·C·S = de conscriptorum (consilii, collegii) sententia.

D·D·D·D·L·M = donum dat dicat dedicat libens merito.

DDD·NNN = domini nostri tres.

D·D·E = dare damnas esto.

D·D·L·D·D·D = dedit dedicavit loco dato decreto decurionum.

D·D·O = diis deabus omnibus.

D·D·P·P·P = decreto decurionum pecunia publica posuerunt.

D·D·V·L·L·M = dono dedit votum laetus libens merito.

D·F = dare facere, defunctus, dulcissimas filiae.

D·I·M = deus invictus Mithras.

D·L = dedit libens, deus Liber, die Lunae.

D·M = dea magna, deum mater, decurio municipii, devotae memoriae, diis Manibus, divino mandatu, dolus malus.

D·O = dari oportet.

D·O·M = deo optimo maximo.

D·P = de proprio deus patrius, diis parentibus, donum posuit.

D·P·E = devotus pietati eius.

D·P·P = dii Penates publici, de pecunia publica.

D·P·S = de pagi sententia, de pecunia sua, de proprio suo.

D·P·S·F·D = de pecunia sua factum dedit.

D·Q = decurio quaestor.

D·Q·A = de qua agitur.

D·Q·L·S·T·T·L = dic qui legis: sit tibi terra levis.

D·R·P = dignum re publica.

D·S = de suo, deus sanctus, deus Saturnus, discens signiferum.

D·S·F·C = de suo faciendum curavit.

D·S·P·D·D = de sua pecunia dono dedit.

D·S·R = de suo restituit.

D·S·S·F·C = de senatus sententia faciendum curavit.

D·S·V·L = de suo vivus libens.
D·T = dum taxat, de thesauro.
D·T·S = dis te servent.
D·V·V·A·S·P·P = duumvir viis aedibus sacris publicis procurandis.
D = 500, formed by halving ⏀, the Etruscan symbol for 1000.

Daae (Δάαι). See DAHAE.

Dacia (Δακία), as a Roman province, lay between the Danube and the Carpathian Mountains, and comprehended the modern Transylvania, Wallachia, Moldavia, and part of Hungary. The Daci were of the same race and spoke the same language as the Getae, and are therefore usually said to be of Thracian origin. They were a brave and warlike people. In the reign of Domitian they became so formidable under their king, Decebalus, that the Romans were obliged to purchase a peace of them by the payment of tribute. Trajan delivered the Empire from this disgrace. He crossed the Danube, and after a war of five years (A.D. 101–106) conquered the country, and made it a Roman province. At a later period Dacia was invaded by the Goths; and as Aurelian considered it more prudent to make the Danube the boundary of the Empire, he resigned Dacia to the barbarians, removed the Roman inhabitants to Moesia, and gave the name of Dacia (Aureliani) to that part of the province along the Danube where they were settled.

Dacĭcus. A surname of the emperor Trajan, from his conquest of Dacia. See TRAIANUS.

Dacier, ANNE LEFÈVRE, a famous French translator of the classics, was born at Saumur about 1654. She was the daughter of Tanneguy Lefèvre, a Huguenot scholar of some note. On her father's death, and when in her eighteenth year, she went to Paris, where she soon after published an edition of Callimachus, which secured for her a place among the editors of the Delphin Edition (q. v.) of the classics, for which she prepared notes on Florus, Dictys Cretensis, Aurelius Victor, and Eutropius. In 1681 appeared her prose version of Anacreon and Sappho, followed by similar translations of Terence, selected plays of Plautus and Aristophanes, the *Iliad* (1711), and the *Odyssey* (1716). It is by these translations that she will be longest remembered, as she brought to the work much spirit and enthusiasm, combined with a good share of literary insight, so that her renderings are still cited by modern scholars. In her versions of Homer especially, her direct, simple, and often homely language is admirably fitted to express the original. In defence of Homer against La Motte, she wrote a treatise *Des Causes de la Corruption de la Goût* (1714).

Mlle. Lefèvre married in 1683 M. André Dacier, who subsequently became secretary of the French Academy, and was himself a man of much erudition but little talent, so that he was wittily described as *un gros mulet chargé de tout le bagage de l'antiquité*. Both husband and wife received pensions from the king. Mme. Dacier died at the Louvre, where her husband was librarian, August 17, 1720. See Sainte-Beuve, *Causeries de Lundi*, and Burette's *Éloge sur Mme. Dacier*.

Dactўli (Δάκτυλοι). Fabulous beings, to whom the discovery of iron, and of the art of working it by means of fire, was ascribed. Mount Ida, in Phrygia, is said to have been the original seat of the Dactyli, whence they are usually called Idaean (Ἰδαῖοι) Dactyli. In Phrygia they were connected with the worship of Rhea, or Cybelé. They are sometimes confounded or identified with the Curetes, Corybantes, and Cabeiri (q. v.). See RHEA.

The name Δάκτυλοι ("Fingers") is variously explained from their number being five or ten, or because they dwelt at the foot (ἐν δακτύλοις) of Mount Ida. The original number seems to have been three — i. e. Kelmis (Κελμίς) the Smelter, Damnameneus (Δαμναμενεύς) the Hammer, and Acmon (Ἄκμων) the Anvil. This number was afterwards increased to five, then to ten, to fifty-two, and finally to one hundred. See Lobeck, *Aglaophamos*, 1166 foll.; Pollux, ii. 4; Diod. v. 64.

Dactyliothēca (δακτυλιοθήκη). A case or box where rings were kept. Such a ring-case has been recognized in a round ivory box found at Pompeii (*Mus. Borb.* ix. pl. xiv. 8). From the centre of the lid projects a vertical stick, on which the rings might be slid when the wearer took them off at his toilet. The same purpose may have been served by a bronze stand which was found at Talese. It consists of a rod resting on three feet. Down the rod may be slid a ring furnished with catches to hold it steady, to one of which is attached a vertical oval ring broken at the top so as to admit of rings or other articles of jewellery being slid upon it. The name was also applied to a cabinet or collection of jewels, as to which we learn from Pliny (*H. N.* xxxvii. § 11) that Scaurus, the stepson of Sulla, was the first person at Rome who had a collection of this kind, and that his was the only one till Pompey brought to Rome the collection of Mithridates, which he placed in the Capitol.

Dactyliotheca. (Pompeii.)

Dactўlus (δάκτυλος). A Greek measure, answering to the Roman *digitus*, each signifying "a finger-breadth" and being the sixteenth part of a foot. See PES.

Dadūchus (δᾳδοῦχος). A torch-bearer. A name applied to the person who, on the fifth day of the Eleusinian Mysteries, led the initiated, torch in hand, to the temple of Demeter, in memory of her wanderings with a lighted torch in search of Persephoné (q. v.). See ELEUSINIA; MYSTERIA.

Daedăla (τὰ Δαίδαλα). (1) A town of Caria, near the confines of Lycia and on the northern shore of the Glaucus Sinus. It was said to have derived its name from Daedalus, who, being stung by a snake on crossing the small river Ninus, died and was buried here. (2) A mountain, in the vicinity of the city of the same name and on the confines of Lycia.

Daedăla, Daedalēa (δαίδαλα, δαιδάλεια). (1) A term applied to the earliest iconic representations of the gods roughly hewn out of wood (ἄγαλμα ξύλου, Pausan. ix. 3, 2). From a very early period stones and trees received divine honours (Lucian, *Pseudom.* 30). Thus Artemis Sotera at Boiae was a myrtle (Pausan. iii. 22, 12); the Paphian Aphrodité, a conical stone. The effigy of the god, down to the latest times, was placed in a tree. The immediate predecessor, however, of the δαίδαλον was a squared beam or flat board, which, like the pillar, was probably draped and decorated. (See DAEDALUS.) (2) A peculiar festival held by the Boeotians in honour of Heré. The goddess had, according to the story, once quarrelled with Zeus and hidden

herself on Mount Cithaeron. Her husband then spread the report that he was going to marry another wife, and had an image of oak-wood decked out in bridal attire and carried over Cithaeron on a chariot with a numerous train amid the singing of marriage hymns. Heré, in her jealousy, threw herself upon her supposed rival, but, on discovering the trick, reconciled herself, with laughter, to Zeus, took her seat on the chariot, and founded the festival in memory of the incident. The feast was celebrated every seven years by the Plataeans alone and called the Little Daedala. But every sixtieth year all the cities of the Boeotian federation kept it as the Great Daedala. At the Little Daedala, guided by the note of a bird, they fixed on a tree in a grove of oaks and cut a figure out of it, which they dressed in bridal attire and took, as in marriage procession, to the top of Cithaeron. Here they offered a goat to Zeus and a cow to Heré, and burned the image with the offering. At the Great Daedala the images made at the Little Daedala were distributed by lot among the cities of the Boeotian confederacy, and the same proceedings were then repeated (Pausan. ix. 3. 1, etc.).

Daedălus (*Δαίδαλος*, "cunning artificer"). The mythical Greek representative of all handiwork, especially of Attic and Cretan art. As such he was worshipped by the artists' guilds, especially in Attica. He is said to have been the son of the Athenian Metion, son of Eupalamus (the ready-handed), and grandson of Erechtheus. He was supposed to

Daedalus and Icarus. (Rome, Villa Albani.)

have been the first artist who represented the human figure with open eyes, and feet and arms in motion. Besides being an excellent architect, he was said to have invented many implements—the axe, for instance, the awl, and the bevel. His own nephew Talus (son of his sister Perdix) appeared likely to surpass him in readiness and originality. The invention of the saw, which he copied from the jawbone of a snake, of the potter's wheel, of the turning-lathe, of the axe, of the plumb-line, of glue, of the gimlet, and of other things of this kind, was attributed to him. Daedalus was so jealous of him that he threw him from the Acropolis; and, being detected in the act of burying the body, was condemned by the Areopagus, and fled to Crete to King Minos. Here, among other things, he made the labyrinth at Gnosus for the Minotaur. (See LABYRINTHUS.) He and his son Icarus were themselves confined in it, because he had given Ariadné (q. v.) the clue with which she guided Theseus through the maze. But the father and son succeeded in escaping, and fled over the sea upon wings of wax feathers made by Daedalus. Icarus, however, approached too near to the sun, so that the wax melted, and he fell into the sea and was drowned. The sea was called after him the Icarian, and the island on which his body was thrown up and buried by Heracles was called Icaria. Daedalus went to Camicus in Sicily, to King Cocalus, whose daughter loved him for his art, and slew Minos, who came in pursuit of him. He was supposed to have died in Sicily, where buildings attributed to him were shown in many places, as also in Sardinia, Egypt, and Italy, particularly at Cumae. In Greece a number of ancient wooden images were supposed to be his work—in particular a statue of Heracles at Thebes, which Daedalus was said to have made in gratitude for the burial of Icarus. Besides Icarus, Daedalus had a second son, Iapyx, said to be the founder of the Iapyges. See DAEDALA.

Daemon (*δαίμων*). Originally a term applied to deity in general, manifested in its active relation to human life, without special reference to any single divine personality. But as early as Hesiod the daemones appear as subordinates or servants of the higher gods. He gives the name especially to the spirits of the past age of gold, who are appointed to watch over men and guard them. In later times, too, the daemones were regarded as beings intermediate between the gods and mankind, forming, as it were, the retinue of the gods, representing their powers in activity, and intrusted with the fulfilment of their various functions. This was the relation, to take an instance, which the Satyrs and Sileni bore to Dionysus. But the popular belief varied in regard to these deities.

Another kind of daemones are those attached to individual men, attending them, like the Roman *genius* (q. v.), from birth to death. In later times two attendant daemones were assumed for every one; but this feeling was not universal, both good and evil being regarded as emanating at different times from the same daemon. The good spirit who gave rural prosperity and presided over vineyards (a sort of Hellenic brownie or Robin Goodfellow) was called Agathodaemon (*ἀγαθοδαίμων*).

On the famous daemon of Socrates, see the article SOCRATES.

Dagger. See PUGIO; SICA.

Dahae (*Δάαι*). A great Scythian people (Plin. *H. N.* vi. 19), who led a nomadic life over a great extent of country, on the east of the Caspian,

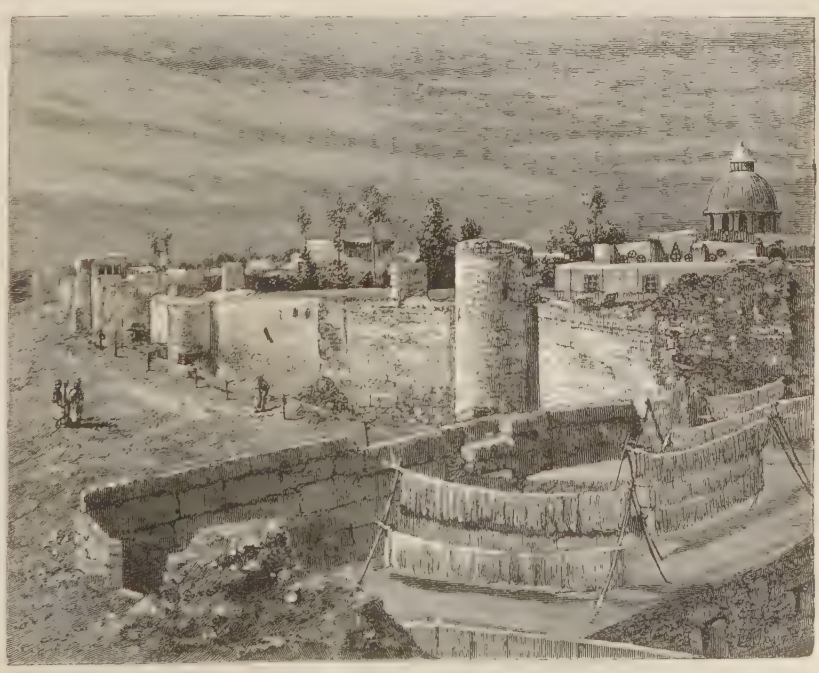
in Hyrcania (which still bears the name of Daghestan), on the banks of the Margus, the Oxus, and even the Iaxartes. Some of them served as cavalry and as archers under Darius Codomannus and Alexander.

Dalmatia (Δαλματία) or **Delmatia**. A part of the country along the eastern coast of the Adriatic Sea, included under the general name of Illyricum, and separated from Liburnia on the north by the Titius (Kerka), and from Greek Illyria on the south by the Drilo (Drino), thus nearly corresponding to the modern Dalmatia. The capital was Dalminium or Delminium, from which the country derived its name. The next most important town was Salona, the residence of Diocletian. The Dalmatians were a brave and warlike people and gave much trouble to the Romans. In B.C. 119, their country was overrun by L. Metellus, who assumed, in consequence, the surname Dalmaticus, but they continued independent of the Romans. In B.C. 39, they were defeated by Asinius Pollio, of whose Dalmatic triumph Horace speaks; but it was not till the year 23 that they were finally subdued by Statilius Taurus. They took part in the great Pannonian revolt under their leader Bato; but after a three years' war were again reduced to subjection by Tiberius, in A.D. 9.

Dalmatĭca or **Delmatĭca** (δαλματική, δελματική). A tunic with long sleeves (Isid. *Orig.* xix. 22, 9), introduced at Rome in the second century A.D. It was made both with and without purple stripes, and was sometimes of wool and sometimes of silk. See CLAVUS LATUS; TUNICA.

Dalmatius. A nephew of Constantine the Great. He was invested by this emperor with the title of Caesar, and commanded against the Goths in Thrace, Macedonia, and Greece. Dalmatius fell in a tumult of his own soldiers, A.D. 337, brought about by the intrigues of Constantius, after the death of Constantine (Zosim. ii. 39 foll.).

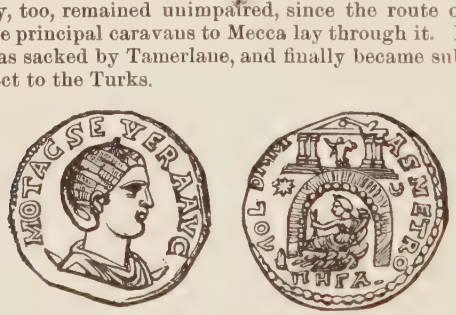
Dalminium. See DALMATIA.



Damălis (Δάμαλις) or **Bous** (Βοῦς). A small place in Bithynia, on the shore of the Thracian Bosporus north of Chalcedon; celebrated by tradition as the landing-place of Io (q. v.) after her transformation into a heifer.

Damarātus. See DEMARATUS.

Damascēnus, Nicolāŭs (Νικόλαος Δαμασκηνός). A Greek historical and philosophical writer who lived in the Augustan Age. His name is derived from that of his birthplace, Damascus. He was an intimate friend of Herod the Great, whom he survived. His chief work was a universal history in 144 books, of which only a few fragments remain. He also wrote an autobiography, a life of Augustus, a life of Herod, and some philosophical works. The standard edition of his fragments is that of Orelli (Leipzig, 1804; suppl. 1811).



Damascĭus (Δαμάσκιος). A philosopher, a native of Damascus. He commenced his studies under Ammonius at Alexandria, and completed them at Athens under Marinus, Isidorus, and Zenodotus. According to some, he was the successor of Isidorus. It is certain, however, that he was the last professor of Neo-Platonism at Athens. He appears to have been a man of excellent judgment, and to have had a strong attachment for the sciences, particularly mathematics. He wrote a work entitled Ἀπορίαι καὶ Λύσεις περὶ τῶν Πρώτων Ἀρχῶν, "Doubts and Solutions concerning the Origin of Things." Of this only two fragments remain—one preserved by Photius, which forms a biographical sketch of Isidorus of Gaza; the other treating Περὶ Γεννητοῦ, "Of what has been procreated." The remains of this work were edited, with a valuable preface, by J. Kopp (Frankfort, 1828). A Venetian MS. contains an unedited work of his, entitled Ἀπορίαι καὶ Λύσεις εἰς τὸν Πλάτωνος Παρμενίδην, "Doubts and Solutions relative to the Parmenides of Plato."

Damascus (Δαμασκός; in Hebrew, Dammesek; in Arabic, Dimeshk-es-Sham). One of the principal cities of Syria, in what was called Coelé-Syria, a few miles to the east of Antilibanus, where the chain begins to turn off to the southeast, under the name of Carmel. It is beautifully situated in an extensive and pleasant plain, and watered by a river called by the Greeks Bardiné or Chrysorrhoas, "the golden stream," now Barada. The Biblical name of this stream was Abana. Damascus is supposed to have been founded by Uz, the eldest son of Aram (Gen. x. 23). However this

South Wall of Damascus.

may be, it existed in the time of Abraham, and may be reckoned one of the most ancient cities of Syria. It was conquered by David (2 Sam. viii. 6), but freed itself from the Jewish yoke in the time of Solomon (1 Kings, xi. 23 foll.), and became the seat of a new principality, which often harassed the kingdoms of both Judah and Israel. It afterwards fell, in succession, under the power of the Assyrians and the Persians, and came from the latter into the hands of the Seleucidae. Damascus, however, did not flourish much under the Greek dynasty, as it had while held by the Persians. The Seleucidae neglected the place, and bestowed all their favour on the new cities erected by them in the northern parts of Syria; and here, no doubt, lies the reason why the later Greek and Roman writers say so little of the city itself, though they are all loud in their praises of the adjacent country. Damascus was seized by the Romans in the war of Pompey with Tigranes, B.C. 65, but still continued, as under the Greek dynasty, a comparatively unimportant place until the time of Diocletian. This emperor, feeling the necessity of a strongly fortified city in this quarter, as a dépôt for munitions of war and a military post against the frequent inroads of the Saracens, selected Damascus for the purpose. Everything was done, accordingly, to strengthen the place; extensive magazines were also established, and likewise numerous workshops for the preparation of weapons of war. It is not unlikely that the high reputation to which Damascus afterwards attained for its manufacture of sword-blades and other works in steel, may have had its first foundations laid by this arrangement on the part of Diocletian. The city continued from this time to be a flourishing place. In the seventh century it fell into the hands of the Saracens, and was for some time after this the seat of the califs. Its prosperity, too, remained unimpaired, since the route of the principal caravans to Mecca lay through it. It was sacked by Tamerlane, and finally became subject to the Turks.

Coin of Damascus.

The Great Mosque of Damascus still shows traces of the Graeco-Roman architecture. See Walch, *Antiquitates Damasc. Illustratae;* and Addison, *Damascus and Palmyra.*

Damasippus, Licinius. (1) A Roman praetor, B.C. 81, an adherent of Marius, and put to death by order of Sulla (Sall. *Cat.* 51, 32). (2) A contemporary of Cicero, who mentions him as a lover of statues, and speaks of purchasing a garden from Damasippus. He is probably the same person as the Damasippus ridiculed by Horace (*Sat.* ii. 3, 16, 64). It appears from Horace that Damasippus had become bankrupt, in consequence of which he intended to put an end to himself; but he was prevented by the Stoic Stertinius, and then turned Stoic himself, or at least affected to be one.

Damastes (Δαμάστης) of Sigeum. A Greek historian, and a contemporary of Herodotus and Hellanicus of Lesbos. His works are lost.

Damnonii. (1) Or Dumnonii or Dumnunii, a powerful people in the southwest of Britain, inhabiting Cornwall, Devonshire, and the western part of Somersetshire, from whom was called the promontory Damnonium, also Ocrinum (C. Lizard), in Cornwall. (2) Or Damnii, a people in North Britain, inhabiting parts of Perth, Argyle, Stirling, and Dumbarton shires.

Damnum. A Latin term which signifies loss or injury of any kind; but in its particular sense means loss or injury which a person has sustained in his property. Damnum in this particular sense may include loss of gain which a person is prevented from realizing (*lucrum cessans*), as well as loss of actually acquired property (*damnum emergens*). The causes of damnum are either chance, accident (*casus*), or acts or omissions of reasonable human beings for which they are held to be responsible. As a rule no liability arises out of loss or injury to property caused by accident. *Dolus malus* or *culpa*—i. e. wilful or negligent misconduct on the part of the person committing damnum—is, as a rule, necessary in order to constitute liability; but in exceptional cases a person may be liable, although neither *dolus malus* nor *culpa* can be imputed to him. A wrongful act by which damnum is caused may be either an independent delict, or the breach of some special duty to which a person has become subject as a breach of contract. The liability to make good a loss which another has suffered is *praestare damnum.* A person liable for damages is, as a rule, bound to put the injured party in the same position as he would have been in if the act by which the damage was done had not been committed. He may also be subject to a penalty.

Damnum Infectum. A term used in Roman law to denote damage not actually done, but apprehended on account of the dangerous condition of neighbouring property. If proceedings were not taken before damage had been done, the injured party had no action for damages subsequently; if, e. g. a ruinous house (*aedes ruinosae*) fell and damaged a neighbour before a *cautio* had been demanded, all the right that the damaged person had was to retain the materials that had fallen on his land (*Dig.* 39, 2, 6. 7, § 2. 8). Gaius states that a party who apprehended damage might have recourse to a *legis actio* in order to protect himself, but that the *stipulatio damni infecti* provided by the praetor in his edict for such cases was always sought as being the more convenient remedy (Gaius, iv. 31).

Damo (Δαμώ). A daughter of Pythagoras and Theano, to whom Pythagoras intrusted his writings, and forbade her to give them to any one. This command she strictly observed, although she was in extreme poverty and received many requests to sell them (Diog. Laërt. viii. 42).

Damŏcles (Δαμοκλῆς). A Syracusan, one of the companions and flatterers of the elder Dionysius. Damocles having extolled the great felicity of Dionysius on account of his wealth and power, the tyrant invited him to try what his happiness really was, and placed him at a magnificent banquet, in the midst of which Damocles saw a naked sword suspended over his head by a single horse-

hair—a sight which quickly dispelled all his visions of happiness. The story is alluded to by Horace (*Carm.* iii. 1. 17) and by Persius (ii. 40).

Damon (Δάμων). (1) A Pythagorean philosopher of Syracuse, united by ties of the firmest friendship to Phintias (not Pythias, as the name is commonly given), another Pythagorean, of the same city. Dionysius, the tyrant, having condemned Phintias to death for conspiring against him, the latter begged that leave might be allowed him to go for a short period to a neighbouring place, in order to arrange some family affairs, and offered to leave one of his friends in the hands of Dionysius as a pledge for his return by an appointed time, and who would be willing, in case Phintias broke his word, to die in his stead. Dionysius, sceptical as to the existence of such friendship, and prompted by curiosity, assented to the arrangement, and Damon took the place of Phintias. The day appointed for the return of the latter arrived, and public expectation was highly excited as to the probable issue of this singular affair. The day drew to a close; no Phintias came; and Damon was in the act of being led to execution, when, of a sudden, the absent friend, who had been detained by unforeseen and unavoidable obstacles, presented himself to the eyes of the admiring crowd and saved the life of Damon. Dionysius was so much struck by this instance of true attachment that he pardoned Phintias, and entreated the two to allow him to share their friendship (Val. Max. iv. 7; Plut. *De Amic. Mult.*). (2) An Athenian sophist, the teacher of Pericles and perhaps of Socrates (Diog. Laërt. ii. 19).

Damophĭla (Δαμοφίλη). A poetess of Lesbos, intimate with Sappho. She composed a hymn on the worship of the Pergaean Artemis (Philostrat. *Vit. Apollon.* i. 20).

Damosia (δαμοσία). The escort or retinue of the Spartan kings in time of war (Xen. *Rep. Lac.* xiii. 1).

Damoxĕnus (Δαμόξενος). A boxer of Syracuse, excluded from the Nemean Games for killing his opponent in a pugilistic encounter. The name of the latter was Creugas; and the two competitors, after having consumed the entire day in boxing, agreed each to receive from the other a blow without flinching. Creugas first struck Damoxenus on the head, and then Damoxenus, with his fingers unfairly stretched out, struck Creugas on the side; and such, observes Pausanias, was the hardness of his nails and the violence of the blow that his hand pierced the side, seized on the bowels, and, drawing them outward, caused instant death to Creugas. A fine piece of sculpture has come down to us with this for its subject (Pausan. viii. 40).

Dana (Δάνα). A great city of Cappadocia, probably the same as the later Tyana (q. v.) (Xen. *Anab.* i. 2, 20).

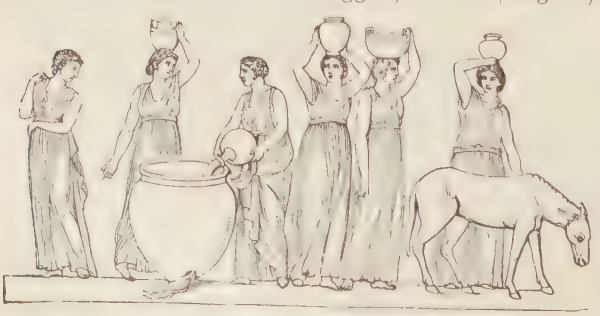
Danaë (Δανάη). (1) The daughter of Acrisius, king of Argos, by Eurydicé, daughter of Lacedaemon. Acrisius inquired of the oracle about a son; and the god replied that he would himself have no male issue, but that his daughter would bear a son, whose hand would deprive him of life. Fearing the accomplishment of this prediction, he framed a brazen subterranean chamber, in which he shut up his daughter and her nurse, in order that she might never become a mother. (The Latin poets call the place of confinement a brazen tower.) But Zeus had seen and loved the maiden; and, under the form of a golden shower, he poured through the roof into her bosom. Danaë became, in consequence, the mother of a son, whom she and her nurse reared in secrecy until he had attained his fourth year. Acrisius then chanced to hear the voice of the child at play. He brought out his daughter and her nurse, and, putting the latter instantly to death, drew Danaë privately, with her child, to the altar of Hercean Zeus, where he made her answer on oath whose was her son. She replied that he was the offspring of Zeus. Her father gave no credit to her protestations. Enclosing her and the boy in a coffer, he cast them into the sea, at the mercy of the winds and waves, a circumstance which has afforded a subject for a beautiful lyric by the poet Simonides. The coffer was carried to the little island of Seriphus, where a person named Dictys drew it out in his nets (δίκτυα); and, freeing Danaë and Perseus from their confinement, treated them with the greatest kindness. Polydectes, the brother of Dictys, reigned over the island. He fell in love with Danaë; but her son Perseus, who was now grown up, was an invincible obstacle in his way. He had, therefore, recourse to artifice to deliver himself of his presence; and, feigning that he was about to become a suitor to Hippodamia, the daughter of Oenomaüs, he managed to send Perseus, who had bound himself by a rash promise, in quest of the head of the Gorgon Medusa, which he pretended that he wished for a bridal gift. When Perseus had succeeded, by the aid of Hermes, in slaying the Gorgon, he proceeded to Seriphus, where he found that his mother and Dictys had been obliged to fly to the protection of the altar from the violence of Polydectes. He immediately went to the royal residence; and when, at his desire, Polydectes had summoned thither all the people to see the head of the Gorgon, it was displayed, and each became a stone of the form and position which he exhibited at the moment of the transformation. Having established Dictys as king of Seriphus, Perseus returned with his mother to Argos; and, not finding Acrisius there, proceeded to Larissa in Thessaly, whither the latter had retired through fear of the fulfilment of the oracle. Here he inadvertently killed Acrisius. See Acrisius; Perseus.

There was a legend in Italy that Ardea, the capital of the Rutulians, had been founded by Danaë (Verg. *Aen.* vii. 372, 410). It was probably caused by the similarity of sound in Danaë and Daunia. Daunus is the father of Turnus.

Danaï (Δαναοί). A name originally belonging to the Argives, as being, according to the common opinion, the subjects of Danaüs (q. v.). In consequence, however, of the warlike character of the race, and the high renown acquired by them, Homer uses the name Danaï as a general appellation for the Greeks, when that of Hellenes was still confined to a narrower range. See Danaüs.

Danaïdes (Δαναΐδες). The fifty daughters of Danaüs. See Danaüs.

Danăla (τὰ Δάναλα). A city in the territory of the Troini, in the northeast of Galatia, notable in the history of the Mithridatic War as the place where Lucullus resigned the command to Pompey.



Danapĕris (also Danapris). Another name for the Borysthenes, first mentioned in an anonymous

Periplus of the Euxine Sea. It is now the Dnieper. A little above its mouth the river widens into a kind of lake or marsh, called Liman, into which the Bog, the ancient Hypanis or Bogus, one of the principal tributaries of the Dnieper, discharges itself. See BORYSTHENES.

Danastris. See DANASTUS.

Danastus. Another name of the Tyras or Dniester. It is called Danastus by Ammianus Marcellinus (xxxi. 3), and Danastris by Constantine Porphyrogenitus. It rises from a lake amid the Carpathian Mountains in Galicia, and empties into the Black Sea after a course of about six hundred miles. The name Tyras (Τύρας) occurs in Ptolemy, Strabo, Stephanus of Byzantium, and Scymnus of Chios. Herodotus gives the Ionic form Τύρης (Herod. iv. 51).

Danaüs (Δαναός). A son of Belus and Anchinoë, and brother of Aegyptus. Belus assigned the country of Libya to Danaüs, while to Aegyptus he gave Arabia. Aegyptus conquered the country of the Melampodes and named it from himself. By many wives he became the father of fifty sons. Danaüs had by several wives an equal number of daughters. Dissension arising between him and the sons of Aegyptus, they aimed at depriving him of his kingdom; and, fearing their violence, he built, with the aid of Athenê, a fifty-oared vessel, the first that ever was made, in which he embarked with his daughters and fled over the sea. He first landed on the isle of Rhodes, where he set up a statue of the Lindian Athenê; but, not caring to remain in that island, he proceeded to Argos, where Gelanor, who at that time ruled over the country, cheerfully resigned the government to the stranger who had brought thither civilization and the arts. The people took the name of their new monarch, and were called Danaï (Δαναοί). The country of Argos being at this time extremely deficient in pure and wholesome water (see INACHUS), Danaüs sent forth his daughters in quest of some. As Amymonê, one of them, was engaged in the search, she was rescued by Poseidon from the intended violence of a satyr, and the god revealed to her a fountain called after her name and the most famous among the streams that contributed to form the Lernaean lake or marsh. The sons of Aegyptus came now to Argolis and entreated their uncle to bury past enmity in oblivion, and to give them their cousins in marriage. Danaüs, retaining a perfect recollection of the injuries they had done him and distrustful of their promises, consented to bestow upon them his daughters, whom he divided among them by lot; but on the wedding-day he armed the hands of the brides with daggers, and enjoined upon them to slay in the night their unsuspecting bridegrooms. All but Hypermnestra obeyed the cruel orders of their father; and cutting off the heads of their husbands, they flung them into Lerna, and buried their bodies with all due rites outside of the town. At the command of Zeus, Hermes and Athenê purified them from the guilt of their deed. Hypermnestra had spared Lynceus for the delicate regard which he had shown to her modesty. Her father, at first, in his anger at her disobedience, put her into close confinement. Relenting, however, after some time, he gave his consent to her union with Lynceus, and proclaimed gymnastic games, in which the victors were to receive his other daughters as the prizes. It was said, however, that the crime of the Danaïdes did not pass without due punishment in the lower world, where they were condemned to pour water forever into a perforated vessel.

Danaïdes. (Visconti, Museo Pio-Clementino.)

Dancing. See SALTATIO.

Danubius. See ISTER.

Daphnae (Δάφναι). A city of Egypt, about sixteen miles from Pelusium, on the route to Memphis. There was always a strong garrison in this place to keep in check the Arabians and the Syrians. Many Jews settled here after the destruction of Jerusalem.

Daphné (Δάφνη). (1) The daughter of the river-god Peneus, in Thessaly, pursued by Apollo, who was charmed by her beauty; but as she was on the point of being overtaken by him, she prayed for aid, and was metamorphosed into a laurel-tree (δάφνη), which became in consequence the favourite tree of Apollo. (2) See MANTO.

Daphné (Δάφνη). A beautiful spot, five miles south of Antioch in Syria, to which it formed a sort of park or pleasure garden. It was celebrated for the grove and temple dedicated to Apollo. Here was a sanctuary with the right of asylum which became famous, and to which pilgrims resorted in great numbers, making it a scene of perpetual vice. See the description in Gibbon's *Decline and Fall*, chap. xxiv. Hence *Daphnici mores* became proverbial.

Daphnephoria (δαφνηφορία). A festival celebrated every ninth year at Thebes in honour of Apollo, surnamed Ismenius or Galaxius. Its name was derived from the laurel branches (δάφναι) which were carried by those who took part in its celebration. A full account of the festival is given by Proclus (*Chrestomath.* p. 11). At one time all the Aeolians of Arné and the adjacent districts, at the command of an oracle, laid siege to Thebes, which was at the same time attacked by the Pelasgians, and ravaged the neighbouring country. But when the day came on which both parties had to celebrate a festival of Apollo, a truce was concluded, and on the day of the festival they went with laurel-boughs to the temple of the god. But Polematas, the general of the Boeotians, had a vision in which he saw a young man who presented to him a complete suit of armour, and who made him vow to institute a festival, to be celebrated every ninth year, in honour of Apollo, at which the Thebans, with laurel-boughs in their hands, were to go to his temple. When, on the third

day after this vision, both parties again were engaged in close combat, Polematas gained the victory. He now fulfilled his promise, and himself walked to the temple of Apollo in the manner prescribed by the being he had seen in his vision; and ever since that time, continues Proclus, this custom has been strictly observed.

Daphnis (*Δάφνις*). A Sicilian shepherd, son of Hermes by a nymph, and taught by Pan to play on the flute. He was regarded as the inventor of bucolic poetry. A Naiad, to whom he proved faithless, punished him with blindness, whereupon his father Hermes translated him to heaven. See the Fifth Eclogue of Vergil, 20–80.

Daphnus (*Δαφνοῦς*). A town of the Locri Opuntii, situated on the seacoast, at the mouth of a river of the same name, near the frontiers of the Epicnemidian Locri. Into the river Daphnus the body of Hesiod was thrown after his murder. See HESIODUS.

Darădus (*Δάραδος*) or **Daras** (*Δάρας*). A river of Africa, rising to the northwest of the Palus Nigrites, on Mount Maudras, and falling into the Atlantic to the north of the promontory Arsinarium. It is supposed to be the same with the Senegal.

Dardanarii. Monopolists at Rome who purchased and held grain in order to sell it at a high price. They were liable to severe punishment under the Empire. See Plin. *H. N.* xxx. § 9; *Dig.* 47, 11. 6.

Dardāni (*Δάρδανοι*). A people in Upper Moesia, occupying part of Illyricum.

Dardania (*Δαρδανία*). (1) A district of the Troad, lying along the Hellespont, southwest of Abydos, and adjacent to the territory of Ilium. Its people (Dardani) appear in the Trojan War, under Aeneas, in close alliance with the Trojans, with whose name their own is often interchanged, especially by the Roman poets. (2) A city in this district. See DARDANUS (2).

Dardānis or **Dardanium.** A promontory of Troas, south of Abydus, near which was situated the city of Dardanum. The Hellespont here begins to contract.

Dardānus (*Δάρδανος*). (1) The son of Zeus and Electra, the mythical ancestor of the Trojans, and through them of the Romans. The Greek traditions usually made him a king in Arcadia, from whence he emigrated first to Samothrace, and afterwards to Asia, where he received a tract of land from King Teucer, on which he built the town of Dardania. His grandson Tros removed to Troy the Palladium, which had belonged to his grandfather. According to the Italian traditions, Dardanus was the son of Corythus, an Etruscan prince of Corythus (Cortona); and, as in the Greek tradition, he afterwards emigrated to Phrygia. (2) Also DARDĂNUM (*Δάρδανον*), a Greek city in the Troad on the Hellespont, twelve Roman miles from Ilium, built by Aeolian colonists, at some distance from the site of the ancient city Dardania. From Dardanum arose the name of the Castles of the Dardanelles, after which the Hellespont is now called.

Dares (*Δάρης*). (1) A Trojan priest, mentioned by Homer (*Il.* v. 9). It is absurdly pretended, by some of the ancient writers, that he wrote an *Iliad*, or history of the Trojan War, in prose; and Aelian (*Var. Hist.* xi. 2) assures us that it still existed in his day, without telling us, however, whether he himself had read it or not. There can, of course, be no doubt that Aelian was deceived, and that the work which he took for the production of Dares was the composition of some sophist of a much later age. However this may be, the *Iliad* of which Aelian speaks no longer exists; but we have a Latin work remaining, written in prose, which was for some time regarded as a translation from the Greek original, and was ascribed to Cornelius Nepos, though abounding with absurdities and solecisms. It is entitled *Historia Excidii Troiae*, or *De Excidio Troiae*. It professes to be dedicated to the historian Sallust.

This work, together with that of Dictys Cretensis (q.v.) forms the original source of a famous romance of chivalry, which met with extraordinary success during the Middle Ages, and in the centuries immediately subsequent to the invention of printing. These works of Dares and Dictys having fallen into the hands of a Sicilian named Guido delle Colonne, a native of Messina, and a celebrated lawyer and poet of the thirteenth century, he conceived the idea of giving them that romantic air which would harmonize with the spirit of his age, when chivalry had acquired its greatest lustre. He consequently interpolated the narratives of the pretended poets of Phrygia and Crete with various adventures, suited to the taste of the time, such as tournaments, challenges, and single combats. His work having met with considerable success, he composed, in Latin prose, a romance of the war of Troy, into which he also introduced the war of the Seven against Thebes and the expedition of the Argonauts. He confounds together history and mythology, Greek and Oriental manners; his heroes are acquainted with alchemy and astronomy, and come into conflict with dragons, griffins, and other fabulous monsters. His romance was translated into almost every European language, and excited a general enthusiasm. Hence the desire which at that time seized the great families of Europe of claiming descent from one of the heroes of Trojan story; and hence the eagerness, on the part of the monks, to compose genealogies consisting of Greek and Roman names which had some analogy with the names of the sovereign princes of the Middle Ages. This same work of Dares Phrygius was the source whence Conrad of Würzburg, in the latter half of the thirteenth century, derived the materials of the poem which he composed in like manner on the war of Troy.

The oldest MS. of the *Historia de Excidio Troiae* is one at Paris, of the ninth century, and other MSS. are those of St. Gall, Bern, Bamberg, and Vienna. The work is at least as early as Isidorus, who mentions it (*Orig.* i. 41). The best edition is that by Meister (Leipzig, 1873). See Meister, *De Daretis Phryg.*, etc. (Breslau, 1871); Dunger's treatise in the Programme of the Vitzthum Gymnasium (Dresden, 1869); and Körting, *Dictys und Dares* (Halle, 1874). On the language, see the Index Latinitatis, in Meister's edition.

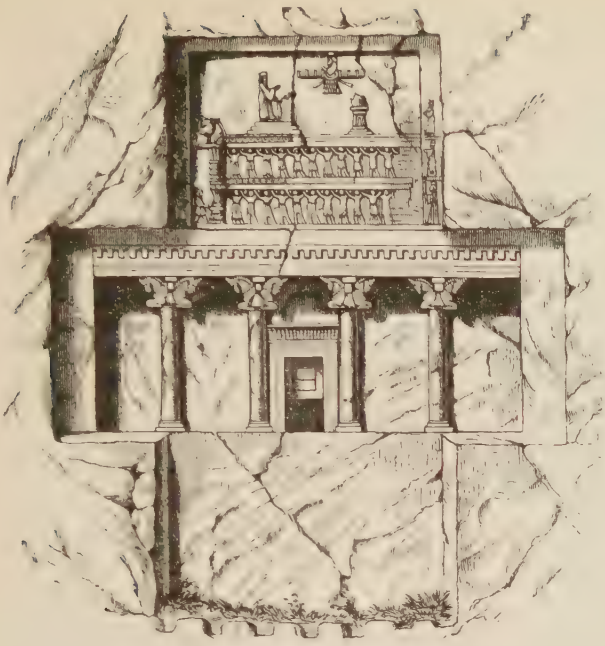
(2) One of the companions of Aeneas, celebrated as a pugilist, though conquered in the funeral games of Anchises by the aged Entellus (Verg. *Aen.* v. 369 foll.). This Dares, or a Trojan of the same name, was slain by Turnus in Italy (*Aen.* xii. 363).

Darīcus (*στατὴρ δαρεικός*). A daric; the gold coin which constituted for centuries, until the time of Alexander the Great, the main part of the coin-

age of Asia under Persian dominion. Gold darics are to be found in all great museums; their type is on the obverse a crowned archer kneeling, on the reverse a mere rude incuse; their weight is about 130 grains, and their intrinsic value about $5.40 of our money. In allusion to their type they were sometimes called τόξοται; whence the saying of Agesilaüs (Plut. *Ages.* 15) that he had been driven from Asia by 30,000 archers, when his recall was the result of Persian bribery at Athens and Thebes.

The Greeks connected the word δαρεικός with the name of Darius Hystaspis, to whom they attributed the first issue of these coins. This derivation, however, is certainly erroneous. Not only is there small likeness in sound between the name of the coin and that of the king in their Persian forms, but we learn from the Book of Ezra (ii. 69; viii. 27) that darics were in circulation in Palestine in the time of Cyrus; and M. Bertin has found the word *dariku* on a tablet of the reign of Nabonidus, which is still earlier (*Trans. Soc. Bibl. Arch.* 1883–1884, p. 87; cf. Head, *Historia Numorum*, p. 698). Of course in the cases just cited, though we have a complete proof of the great antiquity of the word *daric*, we cannot be sure whether a fixed weight of gold or a coin is intended. The probability is that the nations of the Euphrates valley did not coin money until they had conquered Lydia and Ionia in the time of Cyrus. Darius, Herodotus tells us, issued gold coin of great fineness (Herod. iv. 166); and this may have caused the Greeks to suppose that he issued the earliest Persian coins. The abundance of the darics in circulation in Asia Minor in the days of Xerxes is shown by the well-known story of Pythius the Lydian (Herod. vii. 28), who possessed four millions of them.

Gold Daric, actual size. (British Museum.)



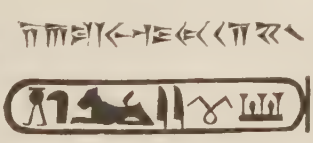
Silver Daric, actual size. (British Museum.)

Besides the gold darics there circulated silver coins of the same shape and bearing the same device of the archer; these were commonly known as the σίγλος or shekel, but were sometimes termed silver darics (Plut. *Cimon*, 10). These were of the value of about $0.27.

Darius (Δαρεῖος; Pers. *Dâryavas*). (1) Surnamed Hystaspis (or son of Hystaspes), a satrap of Persia, born B.C. 548, and belonging to the royal line of the Achaemenides. His father Hystaspes had been governor of the province of Persia. Seven noblemen of the highest rank, among whom was Darius, conspired to dethrone the Magian Smerdis (q. v.), who had usurped the crown after the death of Cambyses, and, having accomplished their object (B.C. 521), resolved that one of their number should reign in his stead. According to Herodotus (iii. 84), they agreed to meet at early dawn in the suburbs of the capital, and that he of their number whose horse should first neigh at the rising of the sun should possess the kingdom. If we believe the historian, who gives two accounts of the matter, Darius obtained the crown through an artful contrivance on the part of his groom. It is more probable, however, that, in consequence of his relationship to the royal line, his election to the throne was the unanimous act of the other conspirators. It is certain, indeed, that they reserved for themselves privileges which tended at least to make them independent of the monarch, and even to keep him dependent upon them. One of their number is said to have formally stipulated for absolute exemption from the royal authority, as the condition on which he withdrew his claim to the crown; and the rest acquired the right of access to the king's person at all seasons, without asking his leave, and bound him to select his wives exclusively from their families. How far the power of Darius, though nominally despotic, was really limited by these privileges of his nobles, may be seen from an occurrence which took place in the early part of his reign, in the case of Intaphernes, who had been one of the partners in the conspiracy. He revenged himself, it is true, for an outrage committed by this individual, by putting him to death; but before he ventured to take this step, he thought it necessary to sound the other four, and to ascertain whether they would make common cause with the offender.

Nevertheless, Darius was the greatest and most powerful king that ever filled the throne of Persia. Cyrus and Cambyses had conquered nations; Darius was the true founder of the Persian State. The dominions of his predecessors were a mass of countries only united by their subjection to the will of a common ruler, which expressed itself by arbitrary and irregular exactions. Darius first organized them into an empire, of which every member felt its place and knew its functions. His realm stretched from the Aegean to the Indus, from the steppes of Scythia to the Cataracts of the Nile. He divided this vast tract into twenty satrapies or provinces, and prescribed the tribute which each was to pay to the royal treasury, and the proportion in which they were to supply provisions for the army and for the king's household. A highway, on which distances were regularly marked and spacious buildings placed to receive all who travelled in the king's name, connected the western coast with the seat of government; and along this road couriers trained to extraordinary speed transmitted the king's messages. See Cursus Publicus; Persia.

Darius, in the very beginning of his reign, meditated an expedition against the Scythians to check their incursions for all time to come by a salutary display of the power and resources of the Persian Empire. His march, however, was delayed by a rebellion which broke out at Babylon. The ancient capital of Assyria had been secretly preparing for revolt during the troubles that followed the fall of Smerdis, and for nearly two years it defied the power of Darius. At length the strategy of Zopyrus, a noble Persian, who sacrificed his person and his power to the interest of his master, is said to have opened its gates to him (circa B.C. 516). When he was freed from this care he set out for the Scythian war (B.C. 513 or 508).



Rock-cut Tomb of Darius.

The whole military force of the Empire was put in motion, and the numbers of the army are rated at seven or eight hundred thousand men. This expedition of Darius into Scythia has given rise to considerable discussion. The first point involved is to ascertain how far the Persian monarch penetrated into the country. According to Herodotus (iv. 83), he crossed the Thracian Bosporus, marched through Thrace, passed the Danube on a bridge of boats, and then pursued a Scythian division as far as the Tanaïs. Having crossed this river, he traversed the territories of the Sauromatae as far as the Budini, whose city he burned. Beyond the Budini he entered upon a vast desert, and reached the river Oarus, where he remained some considerable time, erecting forts upon its banks. Finding that the Scythians had disappeared, he left these works only half finished, turned his course to the westward, and, advancing by rapid marches, entered Scythia, where he fell in with two of the divisions of the enemy. Pursuing these, he traversed the territories of the Melanchlaeni, Androphagi, and Neuri, without being able to bring them to an engagement. Provisions failing, he was eventually compelled to recross the Danube (see HISTIAEUS), glad to have saved a small portion of his once numerous army. According to other accounts (Strab. 305), Darius only came as far as the sandy tract between the Danube and the Tyrus, in the present Bessarabia, where, in after-days, Antigonus was taken prisoner by the Scythians, with his whole army.

Another expedition undertaken by command of Darius was an invasion of India (Herod. iv. 44), the date, however, being doubtful. In this affair he was more successful, and conquered a part of the Punjab; not, however, the whole country, as some modern writers erroneously represent.

Some time after this, Miletus having revolted, and Aristagoras, its ruler, having solicited aid from the Athenians for the purpose of enabling it to maintain its independence, they sent twenty ships, to which the Eretrians added five more, in order to requite a kindness previously received from the Milesians. Aristagoras, upon the arrival of this fleet, resolved to make an expedition against Sardis, the residence of the Persian satrap. Accordingly, landing at Ephesus, the confederates marched inland, took Sardis, and drove the governor into the citadel. Most of the houses in Sardis were made of reeds, and even those that were built of brick were roofed with reeds. One of these was set on fire by a soldier, and immediately the flames spread from house to house and consumed the whole city. The light of the conflagration showing to the Greeks the great numbers of their opponents, who were beginning to rally, being constrained by necessity to defend themselves, as their retreat was cut off by the river Pactolus, the former retired through fear and regained their ships (B.C. 501). Upon the receipt of this entelligence, Darius, having called for a bow, put an arrow into it, and shot it into the air, with these words, "Grant, O God, that I may be able to revenge myself upon the Athenians." After he had thus spoken, he commanded one of his attendants thrice every time dinner was set before him, to exclaim, "Master! remember the Athenians." Mardonius, the king's son-in-law, was intrusted with the care of the war. After crossing the Hellespont, he marched down through Thrace, but, in endeavouring to double Mount Athos, he lost 300 vessels and, it is said, more than 20,000 men (B.C. 492). After this he was attacked in the night by the Brygi, who killed many of his men and wounded Mardonius himself. He succeeded, however, in defeating and reducing them to subjection, but his army was so weakened by these circumstances that he was compelled to return ingloriously to Asia. Darius, only animated by this loss, sent a more considerable force, under the command of Datis and Artaphernes, with orders to sack the cities of Athens and Eretria, and to send to him all the surviving inhabitants in fetters. The Persians took the isle of Naxos and the city of Eretria in Euboea, but were defeated with great slaughter by the Athenians and Plataeans under the celebrated Miltiades at Marathon (B.C. 490). Their fleet was also completely unsuccessful in an attempt to surprise Athens after the battle. (See MILTIADES; MARATHON.) The anger of Darius was doubly inflamed against Athens by the result at Marathon; and he resolved that the insolent people, who had invaded his territories, violated the persons of his messengers, and put his generals to a shameful flight, should feel the whole weight of his arm.

Cuneiform and Hieroglyphical Forms of "Darius."

The preparations he now set on foot were on a vast scale and demanded a longer time. For three years all Asia was kept in a continual stir; in the

fourth, however, Darius was distracted by other causes—by a quarrel between his two sons respecting the succession to the throne, and by an insurrection in Egypt. In the following year, before he had ended his preparations against Egypt and Attica, he died, and Xerxes (q. v.) ascended the throne, in B.C. 485. Darius had reigned for thirty-six years. His memory was always held in veneration by the Persians and the other nations comprehended under his sway, whom he governed with much wisdom and moderation.

(2) The second of the name was styled Ὦχος. See Ochus; Cyrus (2).

(3) The third of the name, and the last king of Persia, was son of Arsames, who had for his father Osthames, one of the sons of Darius Ochus. His true name was Codomannus, and he had, before coming to the throne, acquired some reputation for personal courage, chiefly through an exploit which he had performed in one of the expeditions against the Cadusians, when he accepted a challenge from one of their stoutest warriors, and slew him in single combat. The eunuch Bagoas (q. v.) raised him to the throne, not so much, however, on this account, as because they had previously been friends, and because, perhaps, there was no other prince of the blood on whose gratitude he could safely rely. Codomannus, upon his accession (B.C. 336), which took place about the time when Philip of Macedon died, assumed the name of Darius. He soon discovered that Bagoas, who may have intended at length to seize the throne himself, designed that he should share the fate of his last two predecessors. A cup of poison had been prepared for him. But, having detected the plot, he called Bagoas into his presence and compelled him to drink the deadly draught.

The reign of Darius Codomannus was early disturbed by the invasion of Alexander. The Persian monarch, however, did not take the command of his forces until after the battle of the Granicus had been fought (334), and Alexander had advanced as far as Cilicia. He then proceeded to meet the invader, in all the pomp of royalty, but with an army ill fitted to contend against such an antagonist. Resolving to hazard an encounter, contrary to the advice of his Greek allies, Darius engaged in the battle of Issus, but was compelled to flee from the field with so much precipitation as to leave behind him his bow, shield, and royal mantle (333). His camp was plundered, and his mother, wife, and children fell into the hands of the conqueror. In vain, after this, did Darius supplicate for terms of peace. Alexander went on in his career of victory; and in a second pitched battle at Gaugamela, commonly called the battle of Arbela (q. v.), Darius again fought, and again was compelled to flee (331). His plan was now to advance into Media, lay waste the country through which he passed, and seek refuge finally on the other side of the Oxus, where he hoped that the conqueror would be content to leave him unmolested. Alexander allowed four months to elapse before he again set out in pursuit of Darius. He then advanced by forced marches in pursuit of him, and learned eventually that the monarch was a prisoner in the hands of Bessus (q. v.), one of his own satraps. A still more active pursuit now commenced, and the unhappy king, refusing to proceed any farther, was left mortally wounded in a chariot, while Bessus and his accomplices took to flight, accompanied by 600 horse. Darius expired before Alexander saw him (B.C. 330).

Alexander ordered his body to be buried in the sepulchre of his ancestors with royal magnificence, took charge of the education of his children, and married his daughter (Plut. *Alex.*; Arrian, *Exp. Al.*).

(4) The eldest son of Artaxerxes Mnemon, put to death for conspiring against his father (Plut. *Artax.*).

Dart. See Hasta; Iaculum; Pilum; Telum; Tragula.

Dassaretii (Δασσαρήτιοι), **Dassarītae** (Δασσαρῖται), or **Dassarētae** (Δασσαρῆται). A people in Greek Illyria on the borders of Macedonia; their chief town was Lychnidus, on a hill, on the north side of the lake Lychnitis, which was so called after the town.

Datămes (Δατάμης). A distinguished Persian general, a Carian by birth, and satrap of Cilicia under Artaxerxes II. (Mnemon), but who revolted against the king. He defeated the generals who were sent against him, but was at length assassinated, B.C. 362. Cornelius Nepos, who has written his life, calls him the bravest and most able of all barbarian generals, after Hamilcar and Hannibal.

Datātim Ludĕre. See Pila.

Datētae (*δατηταί*). Distributors or liquidators, employed in the winding up of a partnership concern when a disagreement existed among the partners. The datetae were usually chosen by lot from among the public *diaetetae* (q. v.).

Datis (Δᾶτις). A Mede who commanded, along with Artaphernes, the Persian army that was defeated at Marathon, B.C. 490 (Herod. vi. 94).

Dator. The attendant who, during the game of ball, picked up the balls that fell, or supplied new balls to the players (Plaut. *Curc.* ii. 3, 15). See Pila.

Datum (Δάτον) or **Datus** (Δάτος). A Thracian town on the Strymonic Gulf, subject to Macedonia, with gold mines in Mount Pangaeus in the neighbourhood, whence came the proverb, a "Datum of good things" (Herod. ix. 75).

Daulis (Δαυλίς) or **Daulia** (Δαυλία). An ancient town in Phocis, situated on a lofty hill, celebrated in mythology as the residence of the Thracian king Tereus, and as the scene of the tragic story of Philomela and Procné. Hence Daulias is the name of both Procné and Philomela (q. v.).

Daunia. See Apulia.

Daunus (Δαῦνος). (1) Son of Lycaon and brother of Iapyx and Peucetius, with whom he settled in Apulia and divided it into three parts. (2) Son of Pilumnus and Danaë, husband of Venilia, and ancestor of Turnus (q. v.).

Days. See Dies.

Dea Dia. An early Roman goddess, probably identical with Acca Larentia and worshipped by the Fratres Arvales (q. v.). See Romulus.

Dead, Book of the. A famous funerary work of the ancient Egyptians, consisting of prayers and exorcisms intended for the benefit of the soul on its journey through Amenti (Hades). Such being its purpose, portions of it were placed with the mummy when entombed. Nearly one half of all the Egyptian papyri now in existence consist of copies of this work, and from them a good text of the whole has been constructed by Naville, in

Das Aegyptische Todtenbuch der XVIII bis XX Dynastie (Berlin, 1886). See, also, an interesting review of this work by Miss Edwards in the *Academy* (London) for September 10th, 1887.

Dealbatōres. Workmen mentioned in the Codex of Justinian (x. 64, 1), who appear to have been simply whitewashers, and not, as some have supposed, workmen employed to cover walls with a coating of white cement or stucco. *Dealbare* is to cover the walls with lime-wash (*calce ex aqua liquida dealbentur*, Vitruv. vii. 4, 3).

Death. See THANATOS.

Debĭtor. See OBLIGATIONES.

Decadarchia or **Decarchia** (*δεκαδαρχία*, *δεκαρχία*). A council or government of ten. (1) In Thessaly, established by Philip on his conquest of that country and the overthrow of its tyrants in B.C. 352, after a defeat in the previous year (Demosth. *Phil.* ii. p. 71, § 22). (2) Introduced by Lysander at the close of the Peloponnesian War, and established in many Greek cities by the Lacedaemonians, who intrusted to it the whole government of the State under the direction of a Spartan harmost. It always consisted of the leading members of the aristocratic party (Xen. *Hell.* vi. 3, § 8). The form *δεκαδαρχία* is used by Demosthenes of the Thessalian institution, and *δεκαρχία* by Xenophon and Isocrates of the Lacedaemonian.

Decadūchi (*δεκαδοῦχοι*). The members of a Council of Ten, who succeeded the Thirty Tyrants in the supreme power at Athens, B.C. 403. They were chosen from the ten tribes, one from each; two of the Thirty, if not more, were among them, and, like the Thirty, they relied on Spartan assistance against Thrasybulus and the exiles. They remained masters of Athens till the party of Thrasybulus obtained possession of the city and the democracy was restored; and, like the Thirty, were excepted from the amnesty, but allowed to retire into banishment. See THIRTY TYRANTS.

Decānus (Fr. *doyen*, Eng. dean). The head of ten men. The word does not seem to occur before the time of Constantine, and then, except in its ecclesiastical use, only in the Eastern Empire. It perhaps took the place of the classical *decurio* at a time when the latter word had acquired its special meaning in the colonies and municipia. We may distinguish three senses.

(1) A petty officer commanding a *contubernium* of ten men (Modestus, § 9).

(2) Officials at the court of Constantinople, but of no higher than menial rank (*Cod. Theod.* vi. 12). St. Chrysostom instances the *ὕπαρχος* (= *praefectus praetorio*) and *δεκανός* as at opposite ends of the social scale. Like other *officiales*, they were under the orders of the *magister officiorum*.

(3) The members of a guild or confraternity at Constantinople, charged with the burial of the dead (*Cod. Iust.* i. 2, 4 and 9). The institution appears to be a distinctly Christian one, and to have organized what had been previously a matter of casual charity — the decent burial of the poor.

Decapŏlis. See PALAESTINA.

Decaprōti (*δεκάπρωτοι*). In the Greek-speaking cities of the Roman Empire a committee of ten, or more rarely of twenty (*εἰκοσάπρωτοι*, *icosaproti*), was chosen from among the decuriones or provincial senators, and charged with the collection of the taxes, for which they were made responsible. These decaproti are to be distinguished from the *decem primi* (q. v.) in Rome and the Italian municipia, who were honorary representatives of their curia, but not magistrates.

Decasmus (*δεκασμός*) Bribery; strictly meaning a systematic bribery by division into sets of ten. There were two actions for bribery at Athens — one, called *δεκασμοῦ γραφή*, lay against the person who gave the bribe; and the other, called *δώρων* or *δωροδοκίας γραφή*, against the person who received it (Pollux, viii. 42). These actions applied to the bribery of citizens in the public assemblies of the people, of the Heliaea or any of the courts of justice, of the *βουλή*, and of the public advocates (*συνηγόροι*). Demosthenes, indeed, says that orators were forbidden by the law, not merely to abstain from receiving gifts for the injury of the State, but even to receive any present at all.

Actions for bribery were under the jurisdiction of the thesmothetae. The punishment on conviction was death (Isocr. *De Pace*, § 50) or payment of ten times the value of the gift received (Dinarch. *c. Demosth.* § 60). An additional punishment (*προστίμημα*) might be inflicted by the court; as in the case of Demosthenes, who was not only fined fifty talents, but thrown into prison (Plut. *Demosth.* 26).

Decastȳlos. See TEMPLUM.

Decătē (*δεκάτη*). See DECUMA.

Decebălus. A celebrated king of the Dacians, to whom Domitian paid an annual tribute. He was defeated by Trajan, and put an end to his own life, whereupon Dacia became a Roman province, A.D. 106 (Suet. *Dom.* 6). See DACIA.

Decelēa (*Δεκέλεια*). A deme of Attica, northwest of Athens, on the borders of Boeotia, near the sources of the Cephissus, seized and fortified by the Spartans in the Peloponnesian War.

Decempĕda. The standard Roman unit in measuring land. It was a pole ten feet in length used by the *agrimensores* (q. v.), who were thence called *decempedatores*. See Cic. *Phil.* xiii. 18, § 37.

Decem Primi. (1) The First Ten of the Roman Senate were originally the heads of the decuries into which the Senate of one hundred was divided. They took the office of interrex by turns, and are mentioned in that capacity at the first interregnum, on the death of Romulus (Liv. i. 17; cf. Dionys. ii. 57). When subsequently the representatives of the Tities and Luceres were admitted into the Senate, the Ramnes with their Decem Primi retained for some time their precedence over the other two tribes and gave their votes first (Plut. *Num.* 3; Dionys. ii. 58; iii. 1). The first in rank among them was the *princeps senatus*, who was appointed by the king, and was at the same time *custos urbis* (Dionys. ii. 12; I. Lydus, *De Mens.* i. 19). In the early republican period the Decem Primi seem to have been the consulars of the greater houses in order of seniority, then those of the lesser houses.

When the censors acquired the power of nominating the senators from among qualified persons, the Decem Primi were simply the first ten named by them; this choice was usually exercised according to merit, and a man who was generally acknowledged as the first Roman of his time was tol-

erably certain to become *princeps senatus* and to retain the dignity for life. Valerius Corvus, the two Fabii Maximi, Rullianus and Cunctator, L. Aemilius Paullus, and the two Africani, all seem to have enjoyed this honour. The censors were often partial and passionate in the exercise of their almost irresponsible authority; but even the memorable quarrel between Livius Salinator and Claudius Nero did not prevent their giving the first place in the Senate to Fabius Cunctator (Liv. xxix. 37, § 1).

(2) In municipal senates we constantly find a committee, generally of ten, sometimes of a greater or less number, chosen (apparently by the decurions themselves) out of the larger body. In Italy this institution can be traced very far back; we find it in Latium as early as the great Latin War of B.C. 340 (Liv. viii. 3, § 8).

(3) Wherever there was an *ordo*, Roman organization seems to have involved the appointment of ten, or sometimes six, primi. Below the senatorian rank we find them among *apparitores*, *lictores*, and *praecones;* in priestly colleges (*C. I. L.* vi. 2010); and among the *domestici* or body-guards of the later Empire (*Cod. Theod.* vi. 24).

Decemrēmis (δεκήρης). See NAVIS.

Decemvĭri. (1) Ten commissioners appointed (B.C. 451) to frame a code of laws for the Roman State at a time when the feuds between the patricians and plebeians were continuing with unabated animosity. Occasionally one of the consuls favoured the plebeians, and proposed some mitigation of the hardships under which they were labouring, or some increase of their privileges, but generally with little success. The Agrarian Law, brought forward by Spurius Cassius, continued to be the main demand of the commons and their supporters, but its passage was, on every occasion, either directly or indirectly prevented. At last the commons became convinced that they need hope for no complete redress of grievances until they should have previously secured the establishment of some constitutional principle, from which equal justice would, of necessity and from its very nature, emanate. Accordingly, Gaius Terentillus Harsa, one of the tribunes, proposed a law (B.C. 462) for a reform of the existing state of things. Its purport was that ten commissioners should be chosen, five by the patricians and five by the plebeians, to draw up a constitution, which should define all points of constitutional, civil, and criminal law; and should thus determine, on just and fixed principles, all the political, social, and civil relations of all orders of the Roman people. After much opposition on the part of the patricians, the law was passed, and three commissioners were at length sent to Greece, to collect from the Grecian States such notices of their laws and constitutions as might be serviceable to the Romans. After the absence of a year they returned; and the plebeians, finding it in vain to insist upon five of their own body forming part of the reviewers of the laws, yielded the point, and ten of the most distinguished of the patrician and senatorial body were chosen to form an entirely new and complete code of laws by which the State should be governed. They were named *Decemviri*, "the ten men" (*Decemviri Legibus Scribendis*), and during their office they were to supersede every other magistrate. Each in his turn was to administer the government for a day, or, according to others, for several days, till they should complete their legislative labours. After the careful deliberation of a few months, the result was laid before the people in the form of ten tables, fully written out, and exhibited in a conspicuous place where all might read them. Various amendments were proposed, and the ten tables again laid before the Senate, the curiae, and the centuries, and, having received the sanction of both orders of the State, were recognized as the very fountain of the laws, public and private. The Decemvirs had conducted matters so much to the satisfaction of the community that when, at the expiration of their year, they requested a renewal of their office, on the ground that they had still two more tables to form in order to complete their task, an election of new Decemvirs was ordered. (See TWELVE TABLES.) The patrician Appius Claudius, who took the leading part in the whole affair, was nominated to preside over this election. He acted in concert with the plebeians, by receiving votes for plebeian candidates, and for himself likewise, though it had been declared contrary to law that any functionary should be re-elected immediately after holding office. By dint of intrigue, however, Appius was re-elected, and along with him nine others, half of whom were patricians, half plebeians.

The new commission soon showed itself very different from the first. Each of the Decemvirs had twelve lictors, whereas the previous commission had the lictors only by turns, and a single *accensus* or officer preceded each of the rest. The lictors, too, now bore amid the fasces the formidable axe, the emblem of judgment on life and death, which the consuls, since the time of Valerius Publicola, had been obliged to lay aside during their continuance in the city. The Decemvirs seemed resolved to change the government of Rome into a complete oligarchy, consisting of ten, whose power should be absolute in everything. They assumed the right of superseding all other magistracies; and, at the conclusion of their second year, they showed no intention of resigning their offices or of appointing their successors. Matters had nearly reached a crisis when a war arose, the Sabines and the Aequi having united their forces and being desirous of availing themselves of the distracted state of Rome. The Decemvirs assembled the Senate, obtained its authority to raise an army, at the head of which they placed three of their number, and sent it against the Sabines. Another was raised and sent against the Aequi, while Appius Claudius remained at Rome to provide for the safety of the city and for the maintenance of the power of the Decemvirs. Both armies were defeated, and retired nearer to the city, dissatisfied rather than discomfited. Then occurred the affair of Virginia, and the decemviral power was at an end. See CLAUDIUS (4); VIRGINIA; Liv. iii. 32 foll.; and Mommsen, *Hist. of Rome*, vol. i. pp. 345–371 (Eng. trans.).

(2) There were also military decemviri; and, on various emergencies, decemviri were created to manage and regulate certain affairs, after the same manner as boards of commissioners are now appointed. Thus there were decemviri for conducting colonies; decemviri who officiated as judges in litigated matters under the praetor; decemviri for dividing the lands among the veteran soldiers; decemviri to prepare and preside at feasts in honour

of the gods; decemviri to take care of the sacrifices (*Decemviri Sacris Faciundis*) and to guard the Sibylline Books. With regard to the last of these, however, it must be observed that the number, after having been originally two, and then increased to ten, was subsequently still further increased to fifteen and sixteen.

Decennalia or **Decennia.** A festival celebrated with games every ten years by the Roman emperors. This festival owed its origin to the fact that Augustus refused the supreme power when it was offered to him for life, and would only consent to accept it for ten years; and when these expired, for another period of ten years; and so on to the end of his life. The memory of this comedy, as Gibbon has called it, was preserved to the last ages of the Empire by the festival of the Decennalia, which was solemnized by subsequent emperors every tenth year of their reign, although they had received the *imperium* for life, and not for the limited period of ten years (Dio Cass. liii. 16; liv. 12; lviii. 24; lxxvi. 1).

Decetia. The modern Désize; a city of the Aedui, in Gallia Lugdunensis, on an island in the Liger (Loire). See Caes. *B. G.* vii. 33.

Decidius Saxa. See SAXA.

Decimatio. The selection, by lot, of every tenth man for capital punishment, when any number of soldiers in the Roman army had been guilty of certain military offences—usually cowardice, loss of standards in action, or mutiny. This punishment is not often mentioned in the early times of the Republic; but the case of the consul Appius Claudius and his mutinous army (B.C. 471) is recorded both by Livy (ii. 59) and Dionysius (ix. 50); the latter speaks of it as customary (*πάτριος*) for the offences named. Polybius notices it as usual when troops had given way to panic; the remainder were punished by having rations of barley instead of wheat served out to them, and by being made to lodge outside the camp (vi. 38). When, however, Crassus employed decimation in the servile war of Spartacus, he is described as having revived an ancient punishment which had long fallen into disuse (Plut. *Crass.* 10). In the Civil Wars it once more became common, and was retained under the Empire (Suet. *Galb.* 12). Sometimes only the twentieth man was punished (*vicesimatio*), or the hundredth (*centesimatio*) (Capitol. *Macr.* 12).

Decimātus. See QUINQUATRUS.

Decius. (1) PUBLIUS DECIUS MUS, a celebrated Roman consul, who, after many glorious exploits, devoted himself to the Manes for the safety of his country in a battle against the Latins, B.C. 337. His son, Decius, imitated his example, and devoted himself in like manner in his fourth consulship, when fighting against the Gauls and the Samnites at Sentinum, B.C. 296. His grandson is said to have done the same in the war against Pyrrhus and the Tarentines, B.C. 280 (Liv. vii. 21 foll.; id. viii. 10; Val. Max. v. 6). (2) GAIUS MESSIUS QUINTUS TRAIĀNUS. A native of Pannonia, sent by the emperor Philip to put down a sedition in Moesia. Instead of obeying his master's command, he assumed the imperial purple. His disaffected troops, it is said, forced him to this step. The emperor immediately marched against him, and a battle was fought near Verona, which terminated successfully for Decius, and Philip was either slain in the conflict or put to death after he fell into the conqueror's power. This took place A.D. 249, and from this period is dated the commencement of the reign of Decius. It was one of short duration, about two years. During this time, however, he proved a very cruel persecutor of the Christians. He greatly signalized himself against the Persians, but was slain in an action with the Goths, who had invaded his dominions. In advancing upon them he was, with the greater part of his troops, entangled in a morass, where, being surrounded by the enemy, he perished under a shower of darts, A.D. 251, aged fifty years. See Victor, *De Caes.* 29; Eutrop. ix. 4; Euseb. *Hist. Eccles.* vi. 39, etc.; Zonar. xii. 19, 20.

Declamatio. A term which came into use first in Cicero's time (*Brut.* 90, 310) for the rhetorical exercises employed in the training of orators. These were of two kinds: (*a*) *suasoriae;* (*b*) *controversiae.* The former were based upon some historical or legendary theme, and the pupil was required to treat some problem arising thence, as, for instance, whether Sulla should have resigned his dictatorship (Juv. i. 16) or Cato have committed suicide (Pers. iii. 45). These were regarded as suitable for beginners, as not requiring any wide or minute knowledge of law (Tac. *Dial.* 35). The latter dealt with legal questions, and took the form of the discussion of an imaginary case, such as might arise in the courts. Marcus Seneca (q. v.), the father of the philosopher, has left seven examples of *suasoriae*, thirty-five of *controversiae*, as well as ten books of *excerpta controversiarum*, which contain many interesting specimens of the kind of questions thus treated. The practice had at first a real value, and Cicero represents himself as continuing it for a great part of his life (*Tusc.* i. 4, 7), although in his later years he preferred philosophical topics. But, with the decline of free speech, the exercise sank into a mere occasion for display. The themes were hackneyed or extravagant, the language affected and full of strained antithesis and epigram (Quintil. viii. 3, 76; 5, 14, etc.); and what should have been a preparation for real life became an end in itself. The rage for declamation was at its height during the first century of the Empire. Quintilian's sober sense did much to check it; and though the practice did not wholly die out of the schools, it seems to have been confined within more reasonable limits. (Cf. Bernhardy, *Röm. Lit.* § 53; Petron. 1–3; and Mayor's notes on Juv. i. 16; vii. 150–170.)

Decoctor. A bankrupt; a term used in popular language to signify any spendthrift. The Romans were a frugal people, and spendthrifts were not only condemned by public opinion (Catull. xli. 4; Cic. *Cat.* ii. 3, 5) but punished by the censors with the *nota censoria*, which carried with it certain legal disabilities. By the Lex Roscia (B.C. 67) a certain place in the theatre was assigned to spendthrifts (Cic. *Phil.* ii. 18). According to Spartianus, Hadrian ordered that spendthrifts should be flogged ignominiously (*catomidiari*) in the amphitheatre and turned out (Spart. *Hadr.* 18). The Roman law against persons who would not pay borrowed money was very severe and is explained under NEXUM. Its severity, however, was mitigated by the *bonorum cessio* (q. v.). By

a constitution of the emperors Valentinian, Theodosius, and Arcadius, any decurio who had dissipated the funds of the city (*decoctor pecuniae publicae*) was to be scourged.

Decrētum. A word meaning that which is determined in a particular case after examination or consideration. It is thus applied to a resolution of the Senate.

A decretum of the Senate would seem to differ from a *senatusconsultum*, in that it was limited to the special occasion and circumstances instead of being of general application. But this distinction in the use of the two words, as applied to an act of the Senate, is not consistently observed.

Cicero (*Ad Fam.* xiii. 56) opposes *edictum* to decretum, between which there is in this passage apparently the same analogy as between a *consultum* and a decretum of the Senate.

Decretum is the technical term for the decision and order which a magistrate gives in a particular case after an inquiry into its circumstances (*causae cognitio*). A *iudex* is said *condemnare* not *decernere;* the latter word being appropriate in judicial proceedings to a magistrate who has *iurisdictio*. A decretum, as one of the kinds of imperial constitutions, was a judicial decision in a case before the emperor in his capacity of supreme magistrate; cases were brought into the imperial court (*consistorium principis*) by *supplicationes* or *provocationes* of suitors.

The interpretations of law laid down by the emperor in his decreta were, as a rule, binding on all courts in subsequent cases.

Decŭma (sc. *pars*). "A tithe." This name was applied by the Romans to the tribute in kind, which Sicily, and at one time Asia Minor, had to pay out of the yearly production of wheat, wine, oil, and produce, instead of the *stipendium* usual in other provinces. It was a burden on the land called after it *ager decumanus*, and was exacted from the persons occupying at the time. Every year the number of cultivators, of acres under cultivation, and the produce of the harvest, were ascertained, and the right of exacting the *decuma* of the whole territory of a city sold to the highest bidder. In the case of Sicily this took place at Syracuse; in the case of Asia, in Rome. The purchaser of the decuma bound himself to deliver a certain quantity of corn in Rome; if the harvest were good, he found his advantage in the surplus. Such farmers of the decumae were called *decumani*. (See Publicanus.) If the amount delivered were insufficient for the needs of the city, a second amount could be extracted by decree of the Senate or the people, which was paid for by the State. See Annona; Frumentariae Leges.

Decumāna Porta. See Castra.

Decumāni. See Decuma; Publicani.

Decumātes Agri. See Agri Decumates.

Decuncis. The *dextans*, or ten *unciae;* a division of the *as* (q. v.).

Decuria, from *decem*, "ten," and consequently a company of ten persons (Colum. i. 9, § 7).

(1) A division of the *curiae*. Each of the three ancient Roman tribes — the Ramnes, Tities, and Luceres — was divided into ten *curiae*, and each *curia* into ten decuriae, so that there were 300 decuriae, which, according to Niebuhr, were equivalent to the *gentes*, but this is doubtful (Dionys. ii. 7; Plut. *Rom.* 20; Cic. *de Rep.* ii. 8). The constitution of the *curiae* is discussed under Curia. See also Gens.

(2) A corresponding division of the Senate. The original hundred members of the Senate were divided into ten decuriae, the heads of each decuria forming the Decem Primi in the Senate. (See Decem Primi; Senatus). In like manner in the municipal towns the Senate, usually called *curia*, was divided into decuriae. See Decuriones.

(3) In the same way for military purposes each of the three Roman tribes was represented by 100 equites, called *centuriae*. The three *centuriae* were divided into ten *turmae*, each consisting of thirty men; every *turma* contained ten Ramnes, ten Tities, and ten Luceres, and each of these *decuriae* was commanded by a *decurio* (Liv. i. 13; Varr. *L. L.* v. 91). See Equites.

(4) The Iudices were divided into three decuriae, to which Augustus added a fourth, and Caligula a fifth decuria. See Iudex.

(5) Collegia or corporations were divided into decuriae. Thus we read of decuriae of *scribae*, lictors, viatores, etc. The members of these decuriae were called *decuriales*.

(6) The tribes were divided into decuriae by electioneering agents for bribery and corruption (Cic. *Planc.* 18, 45; 19, 47). See Ambitus.

Decuriālis. See Decuria; Decuriones.

Decurio. The head or representative of a *decuria*.

(1) The head of the *decuriae* into which the curiae and the Senate were divided. See Decuria.

(2) The head or commander of the *decuriae* of the Equites. But *decurio* was in later times the name of an officer of a division of cavalry, though such division might contain any number of men (Veget. *Mil.* ii. 14).

(3) The head or representative of a *decuria* in corporations. In like manner we find a *decurio cubiculariorum*, a *decurio palatii*, a *decurio ostiariorum*, a *decurio Germanorum*, and there was even a decurio of slaves in the imperial household (Orelli, 2785).

(4) The most important decuriones were those in the municipal towns, who are the subject of the following article.

Decuriōnes, Curiāles. In the constitution of the Italian towns (*municipia, coloniae, praefecturae*), as regulated by the Lex Iulia Municipalis, B.C. 45, each municipality was governed by an assembly of the *populus*, which elected magistrates and made laws, and also by a senate, which was an administrative body. Subsequently, by a change corresponding to that which took place in Rome, the power of the popular assembly was transferred to the senate, which thus became the supreme municipal body for legislative and administrative purposes.

The municipal senate is sometimes called *senatus*, but the terms commonly used to denote it are *ordo decurionum*, or simply *ordo*, and in later times *curia*. Decuriones or curiales signify members of the senate, these words being used indifferently in the same sense.

As opposed to the decuriones, which formed a sort of patrician body, the rest of the people were styled *plebeii*. The number of the decuriones was fixed by the local senate, and vacancies were filled by co-optation. To be eligible as decurio, a

person was required to be of a certain age; the limit was thirty (Tab. Heracl. 23), till reduced by Augustus to twenty-five for the municipal senate as well as for the Roman.

A property qualification, the amount of which depended on the constitution of each town, was attached to the acquisition of membership in a *curia*, but membership was not vacated by loss of property. We learn from Pliny (*Ep.* i. 19) that at Comum a person who had less than 100,000 sesterces could not become a decurio. Criminals, bankrupts, persons of infamous character, and persons who followed certain employments, as *praecones, designatores, libitinarii*, were incapable of holding this office (Tab. Heracl. 23 (25); cf. *Dig.* 50, 2, 12). Freedmen were likewise incapable.

The names of decuriones were inscribed on an album or register in a regular order, which was based partly on rank and partly on seniority. The album of Canusium, which was discovered in the last century and is now in the Museo Nazionale at Naples (Fabretti, *Inscr. C.* 9, p. 598; Orelli, No. 3721), shows the plan on which such an album was arranged.

Decursio, Decursus, Decurrere. (1) These words were used to signify the manœuvres of the Roman army, by which the soldiers were taught to make long marches in a given time, under arms and without quitting their ranks. They are frequently mentioned by Livy, and sometimes consisted of a sham fight between two divisions of the army (Liv. xl. 6, 5). With the standing armies under the Empire these manœuvres assumed a more regular form, and were constantly practised. Augustus and subsequently Hadrian ordered that the infantry and cavalry were to march out three times a month ten miles from the camp and ten miles back, fully armed and equipped. This is called by Vegetius *campicursio* (Veget. i. 27, iii. 4), and by Suetonius *campestris decursio* (Suet. *Galb.* 6).

(2) The same words were used to signify the military honours paid by soldiers at the funerals of distinguished generals or emperors. Such a decursio is first mentioned in connection with the funeral of Sempronius Gracchus, killed in the Second Punic War (Liv. xxv. 17, 4, 5). The soldiers marched three times around the funeral pyre (Verg. *Aen.* xi. 188; Tac. *Ann.* ii. 7; Suet. *Claud.* 1).

Decursio on Coin of Nero. (British Museum.)

(3) The decursio, which occurs on the coins of Nero, probably refers to the military manœuvres or sham fights in the circus. The above cut represents a horseman with a spear, and another carrying a standard. These games date from the time of the Republic and were continued under the Empire (Liv. xliv. 9, 3).

Decussis. Ten *asses;* as a Roman coin, a ten *as* piece, struck after the reduction of the weight of the as, but rarely found. (See As.) The name occurs in the Lex Aternia Tarpeia, B.C. 454.

Dedicatio. The Roman name for the consecration of a public sanctuary. The *pontifices* drew up the deed of foundation. When they had signified that they deemed the act permissible, and the consent of the people (in later times of the emperor) had been obtained, the rite was performed in the presence of the whole *collegium pontificum*. The Pontifex Maximus, whose head was veiled, and with him the representative of the people, took hold of the door-post with one hand, the former dictating, and the latter repeating after him, the formula of dedication. The people were represented usually by one of the two consuls, or a person or a commission (generally of two persons) elected by the people on the recommendation of the Senate. One of the persons forming the commission was generally the man who had vowed the dedication. The day on which the shrine was dedicated was regarded as the day of its foundation, and was inscribed in the calendar as a festival. See INAUGURATIO.

Dediticii. The lowest of the three classes of freedmen at Rome (Gaius, i. 26).

The Lex Aelia Sentia (A.D. 4) provided that, if a slave was put in bonds by his master as a punishment, or branded, or put to the torture on a criminal charge and convicted, or delivered to fight with men or beasts, or committed to a gladiatorial school (*ludus*) or a public prison, and was subsequently manumitted by the same or by another owner, he should acquire by manumission the status of a *peregrinus dediticius*. The *peregrini dediticii* were people who, in former times, having taken up arms and fought against the people of Rome, had surrendered themselves.

Gaius, from whom this account of the origin of *dediticii* is taken (*Inst.* i. 12–16), also informs us of the incapacities to which this class of freedmen were subject. Dediticii could never under any circumstances acquire Roman citizenship. They were not allowed to reside in Rome or within the hundredth mile-stone from it (cf. Liv. viii. 14, § 6); if they disobeyed this prohibition they forfeited their liberty and their goods and were made incapable of subsequent manumission. They did not participate in any of the rights of citizenship, but only had the status of *peregrini*. This class of persons had died out long before the time of Justinian; it was, however, formally abolished by that emperor (*Cod.* vii. 5).

The form of *deditio* occurs in Livy (i. 38).

Deditio. See DEDITICII.

Defensor Civitātis. The oppression of the lower orders of the people by the more powerful, which was prevalent throughout the Roman Empire in the fourth century, owing to the general weakness and corruption of local government, led to the institution of a new municipal officer, called *defensor civitatis, plebis, loci* (in Greek ἔκδικος), whose function it was to defend the rights of the inhabitants of a *civitas*, much as the citizens of the Scotch towns were protected in the Middle Ages by the Provost, of which relation Scott has given an interesting picture in his *Fair Maid of Perth*, i. 8, and ii. 3.

An edict of the emperor Valentinian I., issued in A.D. 364, established this office, but only for the province of Illyricum. By this edict the governor of the province was directed to choose a trustworthy person for each city of the dioceses subject to him, in order that the *plebs* of all Illyricum might be protected by means of public guardians (*patroni*) from injuries at the hands of the powerful (*Cod. Theod.* i. 29, 1).

In the next year, A.D. 365, Valentinian extended the office of defensor to all parts of his Empire, including Italy, but with some changes in its constitution. Each *civitas* acquired the right of choosing a defensor from its most eminent and independent citizens, who were bound to serve the office in a prescribed order.

The election of a defensor was made by the whole *civitas;* the choice of the township had to be confirmed by the emperor or his deputy. At first a defensor held office for five years, but the term was reduced by Justinian to two years. The protection of the inhabitants of his district from oppression of all kinds, and especially from that of the imperial governor and local authorities, was always considered to be the main object of a defensor civitatis. Moreover it was his business to prevent the taxes being made too burdensome. For the purpose of prosecuting oppressors, he had free access to the court of the governor, and, if necessary, he could bring his complaints against the governor or other officials before the emperor or ministers of the imperial government. The defensor acted as judge in civil cases of minor importance; his jurisdiction was first limited by Justinian to fifty *solidi*, and afterwards extended by that emperor to three hundred *solidi*. He had the right of appointing guardians and of registering many formal proceedings. In rank he had precedence of magistrates.

Deïanīra (Δηϊάνειρα or Δηάνειρα). The daughter of Althaea and Oeneus, and sister of Meleager. Acheloüs and Heracles both loved Deianira, and fought for the possession of her. Heracles was victorious, and she became his wife. She was the unwilling cause of her husband's death, by presenting him with the poisoned shirt which the Centaur Nessus (q. v.) gave her. In despair, she put an end to her own life. For details, see HERACLES.

Deïdamīa (Δηϊδάμεια). Daughter of Lycomedes, in the island of Scyros. When Achilles was concealed there in maiden's attire, she became by him the mother of Pyrrhus or Neoptolemus. See ACHILLES.

Deiecti Effusīvé Actio. At Rome, if any person threw or poured anything from the room of a house upon a place commonly frequented by people, and thereby caused damage, the praetor's edict gave the injured party an action against the occupant of the house or part of the house from which the thing had been thrown or poured. There was the same liability on account of a thing which had been suspended from a building, and which by its fall injured people, as for a thing which had been actually thrown.

Deigma (δεῖγμα). A particular place in the Piraeus, as well as in the harbours of other States, where merchants exposed samples of their goods for sale (Harpocrat. s. v. *Hesych.*; Pollux, ix. 34; Aristoph. *Eq.* 979). The samples themselves were also called *deigmata* (Plut. *Demosth.* 23).

Deilias Graphé (δειλίας γραφή). See ASTRATEIAS GRAPHÉ.

Deïŏces (Δηϊόκης). First king of Media, who after the Medes had thrown off the supremacy of the Assyrians, reigned B.C. 709–656. He built the city of Ecbatana, which he made the royal residence. He was succeeded by his son Phraortes (Herod. i. 16).

Deïonĭdes (Δηϊονίδης). Miletus, son of Deïoné by Apollo.

Deïotărus (Δηϊόταρος). A tetrarch of Galatia, who adhered to the Romans in their wars against Mithridates, and was rewarded by the Senate with the title of king. In the Civil War he sided with Pompey, and was present at the battle of Pharsalia, B.C. 48. He is remembered as having been defended by Cicero before Caesar (B.C. 45), in the house of the latter at Rome, in the speech (*Pro Rege Deiotaro*) still extant. The charge against Deiotarus was of attempting to murder Caesar.

Deïphŏbé (Δηϊφόβη). The Sibyl at Cumae, daughter of Glaucus. See SIBYLLA.

Deïphŏbus (Δηΐφοβος). Son of Priam and Hecuba, who married Helen after the death of Paris (*Il.* xii. 94). On the capture of Troy by the Greeks he was slain and fearfully mangled by Menelaüs.

Deipnon (δεῖπνον). See CENA.

Delatio Nomĭnis. In Roman criminal procedure the first step was to apply to the praetor to allow the accusation to be made (*postulare*), the next formally to arraign the defendant (*nomen deferre*). The judge might himself take the initiative and declare his readiness to receive a *nominis delatio;* this, however, is mentioned among the oppressive proceedings of Verres (Cic. *in Verr.* ii. 38, § 94; iv. 19, § 40).

The *postulatio* and *nominis delatio* occur most frequently in prosecutions of magistrates and provincial governors for misconduct in office. See REPETUNDAE.

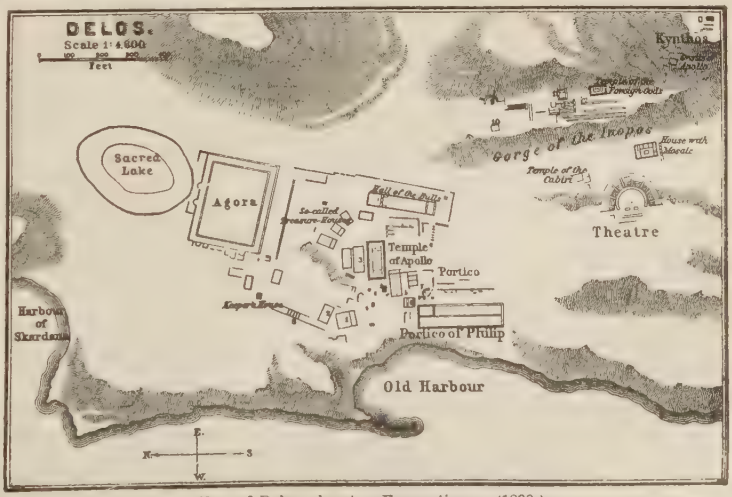
Delatōres. A term originally applied to those who gave notice to the officials of the treasury of moneys that had become due to the treasury. It subsequently received a wider application. A *delator* was not quite identical with our "informer"; the term covered two classes—one consisting of those who themselves acted as prosecutors, the other of those who simply gave information. The legislation of Augustus gave the first stimulus to the habit of delation by granting pecuniary rewards to those who secured the conviction of offenders against his laws relating to marriage (Tac. *Ann.* iii. 28). The Lex Iulia *de maiestate*, by rewarding the successful prosecutor with a fourth part of the estate of the condemned (Tac. *Ann.* iv. 20), gave a fatal encouragement to this class; and although Tiberius appears to have endeavoured at first to check the practice, it became during his reign a veritable scourge; and as his suspicious temper developed, he actually encouraged them. Caligula at the beginning of his reign *negavit se delatoribus aures habere* (Suet. *Calig.* 15), and Nero reduced the rewards of those who prosecuted offenders against the Papian law to the legal fourth part. Titus severely punished them; Domitian at first followed his example, but soon proved ready to use them as the tools of his tyrannous greed. They were again banished by Trajan (Plin. *Paneg.* 34), and denounced by a rescript of Constantine (*Cod.* x. 11, 5). But the need of this constant repression proves what a standing evil this class must have been to the State. See Mayor's notes on Juvenal, i. 33–36, iv. 48, x. 70; and the article MAIESTAS.

Delectus. See EXERCITUS.

Delia (τὰ Δήλια). The name of festivals and games celebrated at the great assemblage in the isl-

and of Delos (q. v.), the centre of an amphictyony, to which the Cyclades and the neighbouring Ionians on the coasts belonged (Hom. *Hymn. in Apoll.* 147, etc.) This amphictyony seems originally to have been instituted simply for the purpose of religious worship in the common sanctuary of Apollo, the *θεὸς πατρῷος* of the Ionians, who was believed to have been born at Delos. The Delia, as appears from the Hymn to Apollo, had existed from very early times, and were celebrated every fifth year (Pollux, viii. 104), and as Boeckh supposes, with great probability, on the sixth and seventh days of Thargelion, the birthdays of Apollo and Artemis. The members of the amphictyony assembled on these occasions (*ἐθεώρουν*) in Delos, in long garments, with their wives and children, to worship the god with gymnastic and musical contests, choruses, and dances. That the Athenians took part in these solemnities at a very early period is evident from the Deliastae (afterwards called *θεωροί*) mentioned in the laws of Solon (Athen. vi. p. 234). The sacred vessel (*θεωρίς*), moreover, which they sent to Delos every year, was said to be the same which Theseus had sent after his return from Crete. The Delians, during the celebration of these solemnities, performed the office of cooks for those who visited their island, whence they were called *Ἐλεοδύται* (Athen. iv. p. 173).

Delictum. See CRIMEN.



Delium (*Δήλιον*). A town on the coast of Boeotia, in the territory of Tanagra, near the Attic frontier, named after a temple of Apollo similar to that at Delos. Here the Athenians were defeated by the Boeotians, B.C. 424.

Delius (*Δήλιος*) and **Delia** (*Δηλία*). Surnames of Apollo and Artemis respectively, from the island of Delos (q. v.).

Dēlos (*Δῆλος*). An island of the Aegean, situated nearly in the centre of the Cyclades (q. v.). This island was called also Asteria, Pelasgia, Chlamydia, Lagia, Pyrpilis, Scythias, Mydia, and Ortygia. It was named Ortygia from *ὄρτυξ*, "a quail," and Lagia from *λαγώς*, "a hare," the island formerly abounding with both these creatures. On this account, according to Strabo, it was not allowed to have dogs at Delos, because they destroyed the quails and hares. The name Delos was commonly derived from *δῆλος*, "manifest," in allusion to the island having floated under the surface of the sea until made to appear and stand firm by order of Poseidon. This was done for the purpose of receiving Leto, who was on the eve of delivery, and could find no asylum on the earth, Heré having bound it by an oath not to receive her; but as Delos at the time was floating beneath the waters, it was freed from the obligation. Once fixed in its place, it continued, according to popular belief, to remain so firm as even to be unmoved by the shocks of an earthquake. This, however, is contradicted by Thucydides and Herodotus, who report that a shock was felt there before the Peloponnesian War (Thuc. ii. 8; Herod. vi. 98).

Delos was celebrated as the natal island of Apollo and Artemis, and the solemnities with which the festivals of these deities were observed there never failed to attract large crowds from the neighbouring islands and the continent. Among the seven wonders of the world was an altar at Delos which was made of the horns of animals. Tradition reported that it was constructed by Apollo with the horns of deer killed in hunting by his sister Artemis. Plutarch says he saw it, and he speaks of the wonderful interlacing of the horns of which it was made, no cement nor bond of any kind being employed to hold it together. Portions of this altar are identified by archæologists in the scattered blocks of marble lately found in the so-called Hall of the Bulls, to the east of the great temple, and named from its "taurine" capitals representing recumbent bulls. The Athenians were commanded by an oracle, in the time of Pisistratus, to purify Delos, which they did by causing the dead bodies which had been buried there to be taken up and removed from all places within view of the temple. In the sixth year of the Peloponnesian War, they, by the advice of an oracle, purified it anew by carrying all the dead bodies to the neighbouring island of Rhenaea, where they were interred. After having done this, in order to prevent its being polluted in the time to come, they published an edict that for the future no person should be suffered to die, nor any woman to be brought to bed, in the island, but that, when death or parturition approached, they should be carried over into Rhenaea. In memory of this purification, it is said, the Athenians instituted a solemn quinquennial festival. See DELIA.

When the Persian armament, under Datis and Artaphernes, was making its way through the Grecian islands, the inhabitants of Delos left their rich temple, with its treasures, to the protection of its tutelary deities, and fled to Tenos. The fame of the sanctuary, however, saved it from spoliation. The Persians had heard that Delos was the birthplace of two deities who corresponded to those who held the foremost rank in their own relig-

Plan of Delos, showing Excavations. (1890.)

ious system—the sun and moon. This comparison was probably suggested to them by some Greek who wished to save the temple. If we may credit the tradition which was current in the days of Herodotus, Delos received the highest honours from Datis. He would not suffer his ships to touch the sacred shore, but kept them at the island of Rhenaea. He also sent a herald to recall the Delians who had fled to Tenos, and offered sacrifice to the god, in which 300 talents of frankincense are said to have been consumed (Herod. vi. 97). After the Persian War, the Athenians established at Delos the treasury of the Greeks, and ordered that all meetings relative to the confederacy should be held there (Thuc. i. 96). In the tenth year of the Peloponnesian War, not being satisfied with the purifications which the island had hitherto undergone, they removed its entire population to Adramyttium, where they obtained a settlement from the Persian satrap Pharnaces (Thuc. v. 1). Here many of these unfortunate Delians were afterwards treacherously murdered by order of Arsaces, an officer of Tissaphernes (Thuc. viii. 108). Finally, however, the Athenians restored those that survived to their country after the battle of Amphipolis, as they considered that their ill success in the war proceeded from the anger of the god on account of their conduct towards this unfortunate people (Thuc. v. 32). Strabo says that Delos became a place of great commercial importance after the destruction of Corinth, as the merchants who had frequented that city then withdrew to this island, which afforded great facilities for carrying on trade on account of the convenience of its port, and its advantageous situation with respect to the coasts of Greece and Asia Minor, as well as from the great concourse of people who resorted thither at stated times. It was also very famous for its bronze. The Romans especially favoured the interests of the Delians, though they had conceded to the Athenians the sovereignty of the island and the administration of the temple (Polyb. xxx. 18). But on the occupation of Athens by the generals of Mithridates, they landed troops in Delos and committed the greatest devastations there in consequence of the inhabitants refusing to espouse their cause (B.C. 87). After this calamity it remained in an impoverished and deserted state. The town of Delos was situated at the foot of Mount Cynthus, in a plain watered by the little river Inopus, and by a lake called Trochoeides by Theognis and Herodotus. Remains of the great temple of Apollo, of the temple of Leto, a theatre, a private house, and of several porticoes are among the antiquities that are now visible. Since 1877, M. Homolle and others, on behalf of the French Archæological Institute, have prosecuted very extensive investigations on the site of the town. See Sallier, *Hist. de l'Isle de Délos*, in the *Mém. de l'Académie des Inscriptions* iii. 376; and Homolle, *Fouilles de Délos* (Paris, 1878).

Coin of Delos.

Delos, CONFEDERACY OF. A league entered into by the Greek States under the hegemony of Athens in B.C. 478, with the primary object of defending Greece against the designs of Persia. The league obtained its name from the fact that the representatives of the States composing it met periodically at the island of Delos, in the temple of Apollo and Artemis. Each State contributed at its option either ships or money according to the assessment proposed by Aristides (q. v.), representing Athens, and ratified by the assembled delegates. The first assessment amounted to 460 talents, or about $550,000. The contributions were collected and administered by officers called Hellenotamiae (q. v.).

Delphi (Δελφοί). A small but important city of Phocis in Greece, situated on the southern side of Mount Parnassus and built in the form of an amphitheatre. Justin (xxiv. 6) says that it had no walls, but was defended by its precipices. Pausanias (x. 5) calls it πόλις, which seems to imply that it was walled like other cities. In earlier times it was, perhaps, like Olympia, defended by the sanctity of its oracle and the presence of its god. These being found insufficient to afford protection against the enterprises of the profane, it was probably fortified and became a regular city after the predatory incursions of the Phocians. The walls may, however, be coeval with the foundation of the city itself; their high antiquity is not disproved by the use of mortar in the construction, for some of the Egyptian pyramids are built in a similar manner.

The more ancient name of Delphi was Pytho, from the serpent Python, as is commonly supposed, which was said to have been slain by Apollo (Apollod. *Biblioth.* i. 4, 3). Whence the name Delphi itself was derived we are not informed. Some make the city to have received this name from Delphus, a son of Apollo. Others deduce the appellation from the Greek ἀδελφοί, "brethren," because Apollo and his brother Bacchus were both worshipped there, each having one of the summits of Parnassus sacred to him. The author of the Hymn to Apollo seems to pun on the word Delphi, in making Apollo transform himself into a dolphin (δελφίς—v. 494). Some supposed that the name was intended to designate Delphi as the centre or navel of the earth.

A short sketch of the history of this most celebrated oracle and temple will not be out of place. Though not so ancient as Dodona (q. v.), it is evident that the fame of the Delphic shrine had been established at a very early period, from the mention made of it by Homer and the accounts supplied by Pausanias and Strabo. The Homeric Hymn to Apollo informs us (391 foll.) that, when the Pythian god was establishing his oracle at Delphi, he beheld on the sea a merchant-ship from Crete; this he directed to Crissa, and appointed the foreigners the servants of his newly established sanctuary, near which they settled. When this story is stripped of the language of poetry, it can only mean that a Cretan colony founded the temple and oracle of Delphi. Strabo reports that it was at first consulted only by the neighbouring States; but that after its fame became more widely spread, foreign princes and nations eagerly sought responses from the sacred tripod, and loaded the altar of the god with rich presents and costly offerings (420). Pausanias states that the most ancient temple of Apollo at Delphi was formed, according to some, out of branches of bay, and that these branches were cut from the tree that was at Tempé. The form of this temple resembled that of a cottage. After mentioning a

second and a third temple—the one raised, as the Delphians said, by bees from wax and wings, and sent by Apollo to the Hyperboreans, and the other built of brass—he adds that to this succeeded a fourth and more stately edifice of stone, erected by two architects named Trophonius and Agamedes (Pausan. x. 5). Here were deposited the sumptuous presents of Gyges and Midas, Alyattes and Croesus (Herod. i. 14, 51), as well as those of the Sybarites, Spinetae, and Siceliots, each prince and nation having their separate chapel or treasury for the reception of these offerings, with an inscription attesting the name of the donor and the cause of the gift. This temple having been accidentally destroyed by fire in B.C. 548, the Amphictyons undertook to build another for the sum of three hundred talents, of which the Delphians were to pay one fourth. The remainder of the amount is said to have been obtained by contributions from the different cities and nations. Amasis, king of Egypt, furnished a thousand talents of *electrum*. The Alcmaeonidae, a wealthy Athenian family, undertook the contract, and agreed to construct

View of Delphi and Mount Parnassus.

the edifice of Porine stone, but afterwards liberally substituted Parian marble for the front, a circumstance which is said to have added considerably to their influence at Delphi (Herod. ii. 180; v. 62). According to Strabo and Pausanias, the architect was Spintharus, a Corinthian. The vast riches accumulated in this temple led Xerxes, after having forced the pass of Thermopylae, to send a portion of his army into Phocis, with a view of securing Delphi and its treasures, which, as Herodotus affirms, were better known to him than the contents of his own palace. The enterprise, however, failed, owing, as it was reported by the Delphians, to the manifest interposition of the deity, who terrified the barbarians and hurled destruction on their scattered bands (Herod. viii. 37). Many years subsequent to this event, the temple fell into the hands of the Phocians, headed by Philomelus, who did not scruple to appropriate its riches to the payment of his troops in the war he was then waging against Thebes. The Phocians are said to have plundered the temple during this contest of gold and silver to the enormous amount of 10,000 talents, or about $11,000,000 (cf. Pausan. x. 2). At a still later period, Delphi became exposed to a formidable attack from a large body of Gauls, headed by their king, Brennus. These barbarians, having forced the defiles of Mount Oeta, possessed themselves of the temple and ransacked its treasures. The booty which they obtained on this occasion is stated to have been immense; and this they must have succeeded in removing to their own country, since we are told that, on the capture of Tolosa, a city of Gaul, by the Roman general Caepio, a great part of the Delphic spoils was found there. Pausanias, however, relates that the Gauls met with great disasters in their attempt on Delphi, and were totally discomfited through the miraculous intervention of the god (x. 23; cf. Polyb. i. 6, 5; ii. 20, 6). Sulla is also said to have robbed this temple as well as those of Olympia and Epidaurus. Strabo assures us that in his time the temple was greatly impoverished, all the offerings of any value having been successively removed. The emperor Nero carried off, according to Pausanias (x. 7), five hundred statues of bronze at one time. Constantine the Great, however, proved a more fatal enemy to Delphi than either Sulla or Nero. He removed the sacred tripods to adorn the Hippodrome of his new city, where, together with the Apollo, the statues of the Heliconian Muses, and a celebrated statue of Pan, they were extant when Sozomen wrote his history (Gibbon, *Decline and Fall*, ch. xvii.). Among these tripods was the famous one which the Greeks, after the battle of Plataea, found in the camp of Mardonius. The Brazen Column which supported this tripod is still to be seen at Constantinople. See the illustration on p. 386.

The spot whence issued the prophetic vapour which inspired the priestess was said to be the central point (ὀμφαλός) of the earth, this having been proved by Zeus himself, who despatched two eagles from opposite quarters of the heavens, which there encountered each other (Pausan. x. 16). The Omphalos was marked by a stone in the shape of half an egg. Strabo reports that the golden tripod was placed over the mouth of the cave, whence proceeded the exhalation, and which was of great depth. On this sat the Pythia, who, having caught the inspiration, pronounced her oracles in extempore prose or verse; if the former, it was immediately versified by the poet always employed for that purpose. The oracle itself is said to have been discovered by accident. Some goats having strayed to the mouth of the cavern, were suddenly seized with convulsions; those likewise by whom they were found in this situation having been affected in a similar manner, the circumstance was deemed supernatural and the cave pronounced the seat of prophecy (Pausan. x. 5; Plut. *De Orac. Def.* p. 433). Earthquakes have long since obliterated the chasm. The priestess could only be consulted on certain days. The season of inquiry was the spring, dur-

Plan of Delphi in 1890.

ing the month Busius (Plut. *Quaest. Graec.*). Sacrifices and other ceremonies were to be performed by those who sought an answer from the oracle before they could be admitted into the sanctuary.

The most remarkable of the Pythian responses are those which Herodotus records as having been delivered to the Athenians before the invasion of Xerxes (vii. 140); to Croesus (i. 47); to Lycurgus (i. 65); to Glaucus the Spartan (vi. 86). One relative to Agesilaüs is cited by Pausanias (iii. 8). There was, however, as it appears, no difficulty in bribing and otherwise influencing the Pythia herself, as history presents us with several instances of this imposture. Thus we are told that the Alcmaeonidae suggested on one occasion such answers as accorded with their political designs (Herod. v. 62, 90). Cleomenes, king of Sparta, also prevailed on the priestess to aver that his colleague Demaratus was illegitimate. On the discovery, however, of this machination, the Pythia was removed from her office (Herod. vi. 66). Delphi derived further celebrity from its being the place where the Amphictyonic Council held one of their assemblies, and also from the institution of the games which that body established after the successful termination of the Crissaean War. See AMPHICTYONES.

The site of Delphi is occupied by the modern hamlet of Kastri. There still exist at Delphi a part of the wall of the great temple of Apollo with columns and steps, a fragment of a curious marble sphinx, the "Column of the Naxians" with an inscription, a small part of the theatre, a carefully constructed tomb, remains of the Stoa of the Athenians, and some other remnants of the ancient buildings. For many interesting details regarding Delphi and the oracle, see A. Mommsen, *Delphika* (Leipzig, 1878), and Bouché-Leclerq, *Histoire de la Divination dans l'Antiquité*, vol. iii. (Paris, 1880); and on the temple, a valuable paper by Prof. Middleton in the *Journal of Hellenic Studies*, vol. ix. pp. 282–322. See also the article ORACULUM.

Delphĭca, sc. *mensa*. A table of bronze or marble, and made in imitation of the tripod. It was used at drinking-bouts and also for ornamental purposes (Mart. xii. 66).

Marble Delphica. (Rich.)

Delphic Oracle. See DELPHI; ORACULUM; PYTHIA.

Delphĭcus (Δελφικός). A surname of Apollo, from his sanctuary and worship at Delphi (q. v.).

Delphin Edition of the Latin classics. A name given to an edition of the classic authors, prepared by thirty-nine eminent scholars of the time for the use of the Dauphin (Delphinus) of France, the son of Louis XIV. The original editors of the whole were Bossuet and Huet, the Dauphin's tutors. The whole edition consists of sixty-four quarto volumes, and appeared at intervals from 1674 to 1730. The title-pages bear the words, "Ad Usum Serenissimi Delphini." The editors saw fit to expurgate all passages that appeared to them objectionable, and carried this process to absurd lengths, so that *ad usum Delphini* has passed into a phrase to denote that anything has been much Bowdlerized. For some curious details on this head see Larousse, *Dictionnaire du XIXe Siècle*, s. v. "Ad Usum Delphini."

Delphini. (From a Bas-relief.)

Delphīni or **Delphīnes**. The dolphins, seven in number, placed on the *meta* of the circus. (See CIRCUS.) Their object was to give notice of the number of turns round the goals which had been run in each race. Seven courses

round the *spina* constituted a single race; and, consequently, one of these dolphins was put up at one end of the course upon the completion of each circuit, and an egg (*ova curriculorum*) at the other, in order that there might be no mistake or dispute. The figure of a dolphin was selected in honour of Neptune; the egg, in honour of Castor and Pollux.

Delphinia (*τὰ δελφίνια*). A festival of the same expiatory character as the Apollonia, which was celebrated in various towns of Greece, in honour of Apollo, surnamed Delphinius, who was considered by the Ionians as their *θεὸς πατρῷος*. The name of the god, as well as that of his festival, must be derived from the belief of the ancients that in the beginning of the month of Munychion (probably identical with the Aeginetan Delphinius) Apollo came through the defile of Parnassus to Delphi and began the battle with Delphyné. As he thus assumed the character of a wrathful god, it was thought necessary to appease him, and the Delphinia accordingly were celebrated at Athens, as well as at other places where his worship had been adopted, on the sixth of Munychion. At Athens seven boys and seven girls carried olive-branches, bound with white wool (called the *ἱκετηρία*), into the Delphinium (Plut. *Thes.* 18).

Delphis (*δελφίς*). A mass of lead pointed with bronze or iron, perhaps in the shape of a dolphin, used for sinking an enemy's ship (Aristoph. *Eq.* 759; Thuc. vii. 41). In action, the delphis was hauled up from the deck to the point of a yard-arm, which was swung round by braces till over the hostile deck; the machine was then instantly let fall, after which it was again drawn up and deposited on board. The *νῆες δελφινοφόροι* were probably only of the transport class (*ὁλκάδες*), as swift (*ταχεῖαι*) triremes would have been impeded by the great weight.

Delphus (*Δελφός*). A son of Apollo and Celaeno, who, according to one account, was the founder of Delphi (Pausan. x. 6).

Delta. See AEGYPTUS.

Delūbrum. See TEMPLUM.

Demādes (*Δημάδης*). An Athenian orator, who belonged to the Macedonian party, and was a bitter enemy of Demosthenes. He was put to death by Antipater in B.C. 318. Demades was a man without principle, but a vigorous and brilliant orator, always speaking extemporaneously, and with such freshness and force as to rival Demosthenes himself. A long fragment of an oration (*Περὶ Δωδεκαετίας*) bears the name of Demades, but is probably spurious.

Demarātus (*Δημάρατος*). (1) The son and successor of Ariston on the throne of Sparta, B.C. 516. He was deposed, through the intrigues of Cleomenes, his colleague, on the ground of his being illegitimate. After his deposition he was chosen and held the office of magistrate; but being insultingly derided on one occasion by Leotychides, who had been appointed king in his stead, he crossed over into Asia to Darius, who received him honourably and presented him with lands and cities (Herod. vi. 65, 70). He enabled Xerxes subsequently to obtain the nomination to the empire, in preference to his elder brother Artabazarnes, by suggesting to him an argument, the justice of which was acknowledged by Darius (Herod. vii. 3). We find him after this, though an exile from his country, yet sending the first intelligence to Sparta of the designs of Xerxes against Greece. He accompanied that monarch on his expedition, frankly praised the discipline of the Greeks, and especially that of the Spartans; and before the battle of Thermopylae explained to him some of the warlike customs of the last-mentioned people. We learn also that he advised Xerxes to seize, with his fleet, the island of Cythera, off the coast of Laconia, from which he might continually ravage the shores of that country. The monarch did not adopt his suggestion, but still always regarded the exile Spartan as a friend, and treated him accordingly. (2) A rich citizen of Corinth, of the family of the Bacchiadae. When Cypselus had usurped the sovereign power of Corinth, Demaratus, with all his family, migrated to Italy, and settled at Tarquinii, 658 years before Christ. Commerce had not been deemed disreputable among the Corinthian nobility; and as a merchant, therefore, Demaratus had formed ties of friendship at this place. He brought great wealth with him. The sculptors Eucheir and Eugrammus, and Cleophantus the painter, were said to have accompanied him, and along with the fine arts of Greece he taught (so the popular account said) alphabetic writing to the Etrurians. His son called Lucumo went afterwards to Rome, and became king there under the name of Tarquinius Priscus (Liv. i. 34 foll.). (3) A Corinthian, in the time of Philip and his son Alexander. He had connections of hospitality with the royal family of Macedon, and, having paid a visit to Philip, succeeded in reconciling that monarch to his son. After Alexander had overthrown the Persian Empire, Demaratus, though advanced in years, made a voyage to the east in order to see the conqueror, and, when he beheld him, exclaimed, "What a pleasure have those Greeks missed, who died without seeing Alexander seated on the throne of Darius!" He died soon after, and was honoured with a magnificent funeral (Plut. *Alex.* 37, 56).

Demarchi (*δήμαρχοι*). The presidents of the demes (*δῆμοι*) in Attica, said to have been first appointed by Clisthenes when he abolished the *ναύκραροι*. (See NAUCRARIA.) They were probably elected by vote and not by lot. Their duties were various and important. Thus they convened meetings of the demotae, and took the votes upon all questions under consideration; they had the custody of the *ληξιαρχικὸν γραμματεῖον*, or book in which the members of the deme were enrolled (Demosth. *c. Eubul.* p. 1317, § 60); and they made and kept a register of the landed estates (*χωρία*) in their districts, whether belonging to individuals or the corporate property of the deme. See DEMUS.

Demens. See CURATOR.

Demensum. See SERVUS.

Dementia. See CURATOR.

Demētae (*Δημῆται*). A people of Britain, in the southwestern part of what is now Wales. Their chief town was Maridunum, now Caermarthen (Ptol. ii. 3, 23).

Demēter (*Δημήτηρ*). The daughter of Cronus and Rhea. Her name signifies Mother Earth, meaning that she was goddess of agriculture and of the civilization based upon it. Her children were: by Iasion, a son Plutus, the god of riches,

and by her brother Zeus, a daughter Persephoné. Round Demeter and this daughter centre her worship and the fables respecting her. Hades carried off Persephoné, and Demeter roamed for nine days over the earth seeking her, till on the tenth day she learned the truth from the all-seeing Sun. She was angry with Zeus for permitting the act of violence; visited Olympus, and wandered about among men in the form of an old woman under the name of Deo, or the Seeker, till at length, at Eleusis, in Attica, she was kindly received at the house of King Celeus, and found comfort in tending his newly born son Demophoön. Surprised by his mother in the act of trying to make the child immortal by putting it into the fire, she revealed her deity, and caused a temple to be built to her, in which she gave herself up to her grief. In her wrath she made the earth barren, so that mankind were threatened with destruction by famine, as she did not allow the fruit of the earth to spring up again until her daughter was allowed to spend two thirds of the year with her. On her return to Olympus she left the gift of corn, of agriculture, and of her holy mysteries with her host, as a token of grateful recollection. She sent Triptolemus the Eleusinian round the world on her chariot, drawn by serpents, to diffuse the knowledge of agriculture and other blessings accompanying it—the settlement of fixed places of abode, civil order, and wedlock. Thus Demeter was worshipped as the goddess of agriculture and founder of law, order, and especially of marriage, in all places where Greeks dwelt, her daughter being usually associated with her. (See THESMOPHORIA.) The most ancient seats of her worship were Athens and Eleusis, where the Rharian plain was solemnly ploughed every year in memory of the first sowing of wheat. She was also much worshipped in Sicily, which from its fertility was accounted one of her favourite places of abode. (See ELEUSINIA.) As the goddess of fertility, Demeter was in many regions associated with Poseidon, the god of fertilizing water. This was particularly the case in Arcadia, where Poseidon was regarded as the father of Persephoné. She was also joined with Dionysus, the god of wine; and as mother of Persephoné and goddess of the earth, to which not only the seed, but the dead are committed, she is connected with the lower world under the name of Chthonia. In later times she was often confused with Gaea and Rhea or Cybelé. Besides fruit and honeycombs, the cow and the sow were offered to her, both as emblems of productivity. Her attributes are poppies and ears of corn (also a symbol of fruitfulness), a basket of fruit, and a little pig. Other emblems had a mystic significance — e. g. the torch, and the serpent, as living in the earth, and as symbolizing a renewal of life by shedding its skin. The Romans identified her with their own Ceres (q. v.).

Demeter. (Mural Painting from Pompeii.)

Demetria (Δημητρία). An annual festival which the Athenians, in B.C. 307, instituted in honour of Demetrius Poliorcetes, who, together with his father Antigonus, was consecrated under the title of "saviour god." It was celebrated every year in the month of Munychion, the name of which, as well as that of the day on which the festival was held, was changed into Demetrion and Demetrias. A priest ministered at their altars, and conducted the solemn procession and the sacrifices and games with which the festival was celebrated (Diod. Sic. xx. 46; Plut. *Demetr.* 10, 46). To honour the new god still more, the Athenians at the same time changed the name of the festival of the Dionysia into that of Demetria, as the young prince was fond of hearing himself compared to Dionysus.

Demetrias (Δημητριάς). A town in Magnesia in Thessaly, on the innermost recesses of the Pagasaean Gulf, founded by Demetrius Poliorcetes, and peopled by the inhabitants of Iolcus and the surrounding towns. Its position was such that it was styled by the last Philip of Macedon one of the three fetters of Greece, the other two being Chalcis and Corinth (Liv. xxxii. 37).

Demetrius (Δημήτριος). (1) A son of Antigonus

and Stratonicé, surnamed Poliorcetes (Πολιορκητής), "besieger of cities," from his talents as an engineer and his peculiar skill in conducting sieges, especially by the aid of machines and engines either invented or improved by himself. At the age of twenty-two he was sent by his father against Ptolemy (B.C. 312), who had invaded Syria. He was defeated near Gaza, but soon repaired his loss by a victory over one of the generals of the enemy. He afterwards sailed with a fleet of 250 ships to Athens, and restored the Athenians to liberty, by freeing them from the power of Cassander and Ptolemy and expelling the garrison which was stationed there under Demetrius Phalereus. The gratitude of the Athenians to their deliverer passed all bounds, but Demetrius was soon summoned by his father to leave the flattery of their orators in order to resume the combined duties of an admiral and an engineer in the reduction of Cyprus. After a slight engagement with Menelaüs, the brother of Ptolemy, he laid siege to Salamis, the ancient capital of that island. The occurrences of this siege occupy a prominent place in history, not so much on account of the determined resistance opposed to the assailants and the great importance attached to its issue by the heads of the belligerent parties, as for a new species of warlike engine invented by Demetrius, and first employed by him against the city of Salamis. The instrument in question was called an ἑλέπολις, or "town-taker," and was an immense tower, consisting of nine stories, gradually diminishing as they rose in altitude, and affording accommodation for a large number of armed men, who thence discharged all sorts of missiles against the ramparts of the enemy. Ptolemy, dreading the fall of Salamis, which would pave the way, as he easily foresaw, for the entire conquest of Cyprus, had already made formidable preparations for compelling Demetrius to raise the siege. A memorable sea-fight ensued, in which the ruler of Egypt was completely defeated, with the loss of nearly all his fleet and 30,000 prisoners. An invasion of Egypt by Antigonus then took place, but ended disgracefully; and Demetrius was sent to reduce the Rhodians, who persisted in remaining allies of Ptolemy. The operations of Demetrius before Rhodes, and the resolute defence of the place by the inhabitants, present perhaps the most remarkable example of skill and heroism that is to be found in the annals of ancient warfare. The ἑλέπολις employed on this occasion greatly exceeded the one that was used in the siege of Salamis. Its towers were 150 feet high; it was supported on eight enormous wheels, and propelled by the labour of 3400 men. After a siege of a whole year, however, the enterprise was abandoned, a treaty was concluded with the Rhodians, and Demetrius, at the request of the Athenians, who were now again subjected to the Macedonians, proceeded to rescue Greece from the power of Cassander. In this he was so successful that he ultimately spread the terror of his arms over the whole of that country. The object of Antigonus and his son was now to effect the final subjugation of Macedonia, Egypt, and the East. The confederacy of Seleucus, Ptolemy, Lysimachus, and Cassander was therefore renewed, with the view of crushing these ambitious schemes, and in the battle of Ipsus they succeeded in effecting their object. Antigonus fell in the conflict, and Demetrius, after a precipitate flight of 200 miles, regained his fleet with only a small remnant of his once powerful host. Sailing soon after to Athens, he received information from the fickle inhabitants that they had resolved to admit no king within their city; upon which, finding that all Greece had now submitted to the influence of Cassander, he made a descent on the coast at Corinth for the mere purpose of plunder and revenge, and afterwards committed similar ravages along the whole coast of Thrace. Fortune, however, soon smiled again. Seleucus, jealous of the power of Lysimachus, whose territories now extended to the Syrian borders, resolved to strengthen his own dominions by forming an alliance with the family of Demetrius, which was still possessed of considerable claims and interests. He therefore made proposals for, and obtained in marriage, Stratonicé, the daughter of his former rival. The power of Demetrius again became formidable, an alliance with Ptolemy, who gave him his daughter Ptolemaïs in marriage, having also added to its increase. He compelled the Athenians to open their gates and receive a garrison; and having generously forgiven their previous fickleness, he turned his attention to Macedonia, and embracing an opportunity of interfering in the affairs of that country, which was afforded by dissensions between the two sons of Cassander, he cut off Alexander, one of the two princes, and made himself master of the throne. His restless ambition now projected new conquests in Europe and Asia. Turning his arms against Pyrrhus, he drove him from Thessaly, and then marched to Thebes, which he took by assault. About the same time also he built the city of Demetrias on the Pagasaean Gulf; and, in order to increase his naval power, formed a matrimonial union with the daughter of Agathocles, tyrant of Sicily. His fleet at length amounted to 500 galleys; while his land forces exceeded considerably 100,000 men, of which more than 12,000 were cavalry. This formidable power

Coin of Demetrius Poliorcetes.

excited the alarm of Lysimachus and Ptolemy; the latter advanced against Greece with his fleet, while the former, with Pyrrhus his ally, made a land attack on Macedon in two different points at once. Demetrius took the field with his usual alacrity, but when he approached the position of Pyrrhus the greater part of his troops deserted him and he was compelled to flee. Leaving Macedon a prey to Lysimachus and Pyrrhus, Demetrius passed over into Asia Minor with a body of his best troops, resolved to assail his adversary in the most vulnerable quarter. The enterprise was at first attended with the most brilliant success. In a short time, however, a check was imposed on his career by Agathocles, the son of Lysimachus, and Demetrius was compelled to apply for protection to his aged son-in-law Seleucus. The latter yielded to his solicitations only so far as to grant him permission to spend two months within his territory; and was subsequently induced by his courtiers to rid him-

self of so dangerous a guest, by sending him a prisoner to a strong fortress on the Syrian coast, about sixty miles south of Antioch. A sufficient revenue was allowed him for his support, and he was permitted to indulge in the chase and other exercises, always, however, under the eye of his keepers. At last, giving up all active pursuits, he died (B.C. 283) at the end of three years. The age of Demetrius at the time of his death was fifty-four. His posterity enjoyed the throne of Macedon in continued succession down to Perses, when the Roman conquest took place. See the life of Demetrius by Plutarch. (2) Son of Antigonus Gonatas, and grandson of Demetrius Poliorcetes, succeeded his father, B.C. 239. He made war on the Aetolians and the Achaeans, and was successful against both, especially the latter, whom he defeated, although under the command of Aratus. He had distinguished himself, before coming to the throne, by driving Alexander of Epirus out of Macedonia, and by stripping him of his own dominions. He reigned ten years, and was succeeded by Antigonus Doson. (3) Son of Philip III., of Macedonia, an excellent prince, greatly beloved by his countrymen, and sent by his father as a hostage to Rome, where he also made many friends. He was subsequently liberated, and not long after paid a second visit to the capital of Italy as an ambassador from Philip, on which occasion he obtained favourable terms for his father, when the latter was complained of to the Roman Senate by the cities of Greece. Returning home loaded with marks of distinction from the Romans, and honoured by the Macedonians themselves, who regarded him as the liberator of their country, he excited the jealousy of his own father and the envy and hatred of his brother Perses. The latter eventually accused him of aspiring to the crown, and of carrying on, for this purpose, a secret correspondence with the Romans. Philip, lending too credulous an ear to the charge, put his son Demetrius to death, and only discovered when too late the utter falsity of the accusation (Liv. xxxiii. 30; xxxix. 35 foll.; xl. 5, 24, 54 foll.). (4) A Syrian, called SOTER (Σωτήρ), or "the Preserver," the son of Seleucus Philopator, and sent by his father, at the age of twenty-three, as a hostage to Rome. He was living there in this condition when his father died of poison, B.C. 176. His uncle Antiochus Epiphanes thereupon usurped the throne, and was succeeded by Antiochus Eupator. Demetrius, meanwhile, having in vain endeavoured to interest the Senate in his behalf, secretly escaped from Rome, through the advice of Polybius the historian, and, finding a party in Syria ready to support his claims, defeated and put to death Eupator, and ascended the throne. He was subsequently acknowledged as king by the Romans. After this, he freed the Babylonians from the tyranny of Timarchus and Heraclides, and was honoured for this service with the title of Soter. At a subsequent period he sent his generals Nicanor and Bacchides into Iudaea, at the solicitation of Alcimus, the high-priest, who had usurped that office with the aid of Eupator. These two commanders ravaged the country, and Bacchides defeated and slew the celebrated Judas Maccabaeus. Demetrius at last became so hated by his own subjects, and an object of so much dislike, if not of fear, to the neighbouring princes, that they advocated the claims of Alexander Balas, and he fell in battle against this competitor for the crown after having reigned twelve years (from B.C. 162 to B.C. 150). His death was avenged, however, by his son and successor Demetrius Nicator (Just. xxxiv. 3, xxxv. 1). (5) Son of the preceding, and surnamed NICATOR (Νικάτωρ), or "the Conqueror." He drove out Alexander Balas, with the aid of Ptolemy Philometor, who had given him his daughter Cleopatra in marriage, though she was already the wife of Balas. He ascended the throne B.C. 146, but soon abandoned himself to a life of indolence and debauchery, leaving the reins of government in the hands of Lasthenes, his favourite, an unprincipled and violent man. The disgust to which his conduct gave rise induced Tryphon, who had been governor of Antioch under Balas, to revolt, and place upon the throne Antiochus Dionysius, son of Balas and Cleopatra, a child only four years of age. A battle ensued, in which Demetrius was defeated, and Antiochus, now receiving the surname of Theos, was conducted by the victors to Antioch and proclaimed king of Syria. He reigned, however, only in name. The actual monarch was Tryphon, who put him to death at the end of about two years and caused himself to be proclaimed in his stead. Demetrius, meanwhile, held his court at Seleucia. Thinking that the crimes of Tryphon would soon make him universally detested, he turned his arms in a different direction and marched against the Parthians, in the hope that, if he returned victorious, he would be enabled the more easily to rid himself of his Syrian antagonist. After some successes, however, he was entrapped and made prisoner by the Parthian monarch Mithridates, and his army was attacked and cut to pieces. His captivity among the Parthians was an honourable one, and Mithridates made him espouse his daughter Rhodoguna. The intelligence of this marriage so exasperated Cleopatra that she gave her hand to Antiochus Sidetes, her brother-in-law, who thereupon ascended the throne. Sidetes having been slain in a battle with the Parthians after a reign of several years, Demetrius escaped from the hands of Mithridates and resumed the throne. His subjects, however, unable any longer to endure his pride and cruelty, requested from Ptolemy Physcon a king of the race of the Seleucidae to govern them. Ptolemy sent Alexander Zubinas. Demetrius, driven out by the Syrians, came to Ptolemaïs, where Cleopatra, his first wife, then held sway, but the gates were shut against him. He then took refuge in Tyre, but was put to death by the governor (B.C. 125). Zubinas recompensed the Tyrians for this act by permitting them to live according to their own laws, and from this period commences what is called by chronologists the era of the independence of Tyre, which was still subsisting at the time of the Council of Chalcedon, 574 years after this event (Joseph. *Ant. Iud.* xiii. 9, 12, 17; Just. xxxvi. 1, xxxix. 1). (6) Surnamed EUKAERUS (Εὔκαιρος), "the Seasonable" or "Fortunate," was the fourth son of Antiochus Grypus. He was proclaimed king at Damascus, and, in conjunction with his brother Philip, to whom a part of Syria remained faithful, drove out Antiochus Eusebes from that country, compelling him to take refuge among the Parthians. The two brothers then divided Syria between them, Antioch being the capital of Philip and Damascus that of Demetrius. The latter afterwards marched to the aid of the Jews, who had revolted from their king, Alexander Ianneus. He was recalled, however, to his own

dominions by the news of an invasion on the part of his own brother Philip. He took Antioch, and besieged Philip in Beroea; but the latter being assisted by the Parthians and the Arabians, Demetrius was besieged in his own camp and at length taken prisoner. He was brought to the king of Parthia, who treated him with great distinction and sent him into Upper Asia. He reigned a little over six years. (7) PEPAGOMĒNUS, a medical writer, who flourished during the reign of Michael VIII. (Palaeologus). By the order of this monarch, he wrote a work on the gout (Περὶ Ποδάγρας). We have two treatises under his name, but it is extremely doubtful whether he was indeed their author. The first is on the art of training falcons; the second, on the mode of breaking and training dogs. (8) PHALĒREUS (Φαληρεύς), a native of Phalerum in Attica, and the last of the more distinguished orators of Greece. He was the son of a person who had been slave to Timotheus and Conon. But, though born in this low condition, he soon made himself distinguished by his talents, and was already a conspicuous individual in the public assemblies when Antipater became master of Athens, for he was obliged to save himself by flight from the vengeance of the Macedonian party. He was compelled to quit the city a second time when Polysperchon took possession of it through his son. Subsequently named by Cassander as governor of Athens (B.C. 317), he so gained the affections of his countrymen that, during the six years in which he filled this office, they are said to have raised to him three hundred and sixty statues. Athenaeus, however, on the authority of Duris, a Samian writer, reproaches him with luxurious and expensive habits, while he prescribed, at the same time, frugality to his fellow-citizens and fixed limits for their expenditures. After the death of his protector, Demetrius was driven from Athens by Antigonus and Demetrius Poliorcetes (B.C. 306). The people of that city, always fickle, overthrew the numerous statues they had erected to him, although he had been their benefactor and idol, and even condemned him to death. Demetrius, upon this, retired to the court of Alexandria, where he lived upwards of twenty years. It is generally supposed that he was the individual who gave Ptolemy the advice to found the Museum and the famous Library. This prince consulted him also as to the choice of a successor. Demetrius was in favour of the monarch's eldest son, but the king eventually decided for the son whom he had by his second wife Berenicé. When Ptolemy II., therefore, came to the throne, he revenged himself on the unlucky counsellor by exiling him to a distant province in Upper Egypt, where Demetrius put an end to his own life by the bite of an asp (B.C. 282). Cicero describes Demetrius as a polished, sweet, and graceful speaker, but deficient in energy and power. Plutarch cites his treatise "On Socrates," which appears to have contained also a life of Aristides. The works of Demetrius are lost. There exists, it is true, under his name a treatise on elocution (Περὶ Ἑρμηνείας), a work full of ingenious observations; but critics agree in making it of later origin. Besides the treatise on elocution, there exists a small work on the apophthegms of the Seven Sages, which Stobaeus has inserted in his third discourse, as being the production of Demetrius Phalereus. (9) Of Sunium; a Cynic philosopher, who flourished at Corinth in the first century. During the reign of Caligula he taught philosophy at Rome, where he obtained the highest reputation for wisdom and virtue. He was banished from Rome in the time of Nero for his free censure of public manners. After the death of this emperor he returned to Rome, but the boldness of his language soon offended Vespasian and again subjected him to the punishment of exile. Apollonius, with whom he had formed a friendship, prevailed on Titus to recall him; but under Domitian he withdrew to Puteoli. Seneca, who was acquainted with him, speaks in the highest terms of his masculine eloquence, sound judgment, intrepid fortitude, and inflexible integrity (Sen. *De Vit. Beat.* 25).

Deminutio Capĭtis. Diminution of civil rights and legal capacity. A term by which the Romans denoted degradation to an inferior civil condition, through the loss of the rights of freedom, citizenship, or family. The extreme form of it, *deminutio capitis maxima*, was entailed by the loss of freedom, which involved the loss of all other rights. This would occur if a Roman citizen were taken prisoner in war, or given up to the enemy for having violated the sanctity of an ambassador or concluding a treaty not approved of by the people. Or again if he was sold into slavery, whether by the State for refusing military service, or for declining to state the amount of his property at the census, or by his creditors for debt. If a prisoner of war returned home, or if the enemy refused to accept him when given up to them, his former civil rights were restored. The intermediate stage, *deminutio capitis media* or *minor*, consisted in loss of civil rights consequent on becoming a citizen of another State, or on a decree of exile confirmed by the people, or (in imperial times) on deportation. Restoration of the civil status was possible if the foreign citizenship were given up, or if the decree of exile were cancelled. The lowest grade (*deminutio capitis minima*) was the loss of hitherto existing family rights by emancipation (which involved leaving the family), adoption, or (if a girl) by marriage. See CAPUT.

Demioprāta (*δημιόπρατα*). Property confiscated at Athens and sold by public auction. The confiscation of property was one of the most common sources of revenue in many Greek States; and Aristophanes (*Vesp.* 659; *Eq.* 103) mentions the *δημιόπρατα* as a separate branch of the public revenue at Athens. A chapter of Boeckh's *Public Economy* is devoted to this subject (book iii. ch. 14). These sales were under the direction of the *poletae* (q. v.), who presented their reports to the people in the first assembly of each prytany (Poll. viii. 95); they also set up lists of *δημιόπρατα* (probably after the sale) upon tablets of stone in the Acropolis, at Eleusis, and elsewhere. Several fragments of such lists are preserved in inscriptions; one of the most important, throwing light on the prices realized by the *poletae*, is discussed in Boeckh-Fränkel (ii. 129 foll.). On *δημιόπρατα* in general, see Boeckh-Fränkel, Index, s. v. "Güter."

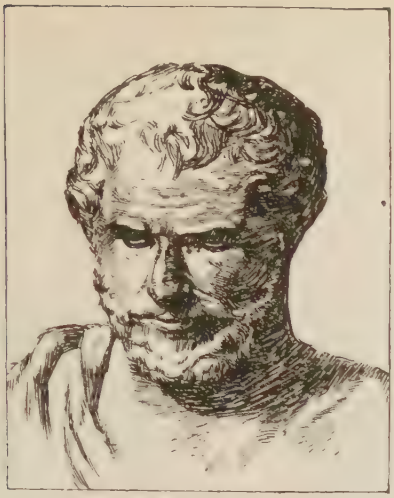
Demiurgi (*δημιουργοί*). A general term among the Greeks for tradesmen, among whom they included artists and physicians. In old times they formed, at Athens, the third order, the other two being the Eupatridae and Geomori (see these names). In some States, Demiurgi was the name of the public officials: in the Achaean League,

for instance, the ten Demiurgi were among the highest officers of the confederacy.

Demius (*δήμιος*). The public executioner at Athens, a slave, who was the servant of the Eleven. For references, see DEMOSII, HENDEKA, and TORMENTUM.

Democēdes (*Δημοκήδης*). A celebrated physician of Crotona (Herod. iii. 129). He practised medicine successively at Aegina, Athens, and Samos. He was taken prisoner by the Persians, in B.C. 522, and was sent to Susa to the court of Darius. Here he acquired great reputation by curing the king's foot and the breast of the queen Atossa. Notwithstanding his honours at the Persian court he was always desirous of returning to his native country, and in order to effect this, he procured by means of Atossa that he should be sent with some nobles to explore the coast of Greece and to ascertain in what parts it might be most successfully attacked. At Tarentum he escaped, and settled at Crotona, where he married the daughter of the famous wrestler Milo.

Demochăres (*Δημοχάρης*). An Athenian, the son of the sister of Demosthenes, and well known as an orator. Upon the restoration of the democracy by Demetrius Poliorcetes in B.C. 306, Demochares was at the head of the popular party for several years. He left orations and an elaborate history of his own times, only fragments of which remain. See the essay by Droysen in the *Zeitschrift für die Alterthumswissenschaft* (1836), xx. and xxi.



Democrătes (*Δημοκράτης*). A Pythagorean philosopher of whose life nothing is known, but who is remembered as the author of the so-called "Golden Maxims" (*γνῶμαι χρυσαῖ*), a number of moral sayings in the Ionic dialect. They are printed in Orelli's *Opusc. Graec. Vet. Sentent.* (Leipzig, 1819).

Democratia (*δημοκρατία*, "sovereignty of the people"). The Greek term for the form of constitution in which all citizens had the right of taking part in the government. This right was not always absolutely equal. Sometimes classes were formed on a property qualification and civil rights conferred accordingly (see TIMOCRATIA); but no class in this case was absolutely excluded from a share in the government, and it was possible to rise from one class to another. Sometimes provision was made by law to prevent any persons taking part in the administration but such as had proved their worth and capacity. In the absence of such limitations the democracy, as Plato in his *Republic* and Aristotle in his *Politics* observed, soon degenerated into a mob-government (*ὀχλοκρατία*) or developed into a despotism.

Democrĭtus (*Δημόκριτος*). A celebrated philosopher, born at Abdera, about B.C. 494 or 490, but according to some, B.C. 470 or 460. His father was a man of noble family and of great wealth, and contributed largely towards the entertainment of the army of Xerxes on his return to Asia. As a reward for this service the Persian monarch made him and the other Abderites rich presents and left among them several Chaldaean Magi. Democritus, according to Diogenes Laërtius, was instructed by these in astronomy and theology. After the death of his father he determined to travel in search of wisdom, and devoted to this purpose the portion which fell to him, amounting to one hundred talents. He is said to have visited Egypt and Ethiopia, the Persian Magi, and, according to some, even the Gymnosophists of India. Whether, in the course of his travels, he visited Athens or studied under Anaxagoras is uncertain. There can be little doubt, however, that during some part of his life he was instructed in the Pythagorean tenets, and particularly that he was a disciple of Leucippus (q. v.). After a long course of years thus spent in travelling, Democritus returned to Abdera, richly stored with the treasures of philosophy, but destitute even of the necessary means of subsistence. His brother Damosis, however, received him kindly and liberally supplied all his wants. According to the law of Abdera, whoever should waste his patrimony should be deprived of the rites of burial. Democritus, desiring to avoid this disgrace, gave public lectures to the people, chiefly from his larger *Διάκοσμος*, the most valuable of his writings; in return he received from his hearers many valuable presents and other testimonies of respect, which relieved him from all apprehension of suffering public censure as a spendthrift.

Democritus, by his learning and wisdom, and especially by his acquaintance with natural phenomena, acquired great fame and excited much admiration among the ignorant Abderites. By giving previous notices of unexpected changes in the weather, and by other artifices, he had the address to make them believe that he possessed a power of predicting future events; and they not only looked upon him as something more than mortal, but even proposed to invest him with the direction of their public affairs. From inclination and habit, however, he preferred a contemplative to an active life, and therefore declined these public honours and passed the remainder of his days in solitude. It is said that from this time he spent his days and nights in caverns and sepulchres; and some even relate that, in order to be more perfectly master of his intellectual faculties, he blinded himself by means of a burning-glass. The story, however, is utterly incredible, since the writers who mention it affirm that Democritus employed his leisure in writing books and in dissecting the bodies of animals, neither of which could well have been effected without eyes. Nor is greater credit due to the tale that Democritus spent his leisure hours in chemical researches after the philosopher's stone—the dream of a later age; or to the story of his conversation with Hippocrates, grounded upon letters which are said to have passed between the father of medicine and the people of Abdera on the supposed madness of Democritus, but which are evidently spurious. The only reasonable conclusion that can be drawn from these and other tales is that Democritus was a man of lofty genius and penetrating judgment, who, by a long course of study and observation, became an eminent master of speculative and physical science; the natural consequence of which was that, like Roger Bacon in a later period, he astonished and imposed upon his ignorant and credulous countrymen. Petronius relates that he was perfectly acquainted with the virtues of herbs, plants, and stones, and that he spent his life in making experiments upon natural bodies.

Democritus has been commonly known under the appellation of "The Laughing Philosopher,"

Democritus. (Naples Museum.)

and it is gravely related by Seneca (*De Ira*, ii. 10; *De Tranq.* 15) that he never appeared in public without expressing his contempt of the follies of mankind by laughter. Thus much, in fact, may be easily believed: that a man so superior to the generality of his contemporaries, and whose lot it was to live among a race of men who were stupid to a proverb, might frequently treat their follies with ridicule and contempt. Accordingly, we find that among his fellow-citizens he had the name of Γελασῖνος, or "the mocker" (cf. Juv. x. 33, 34).

Democritus appears to have been in his morals chaste and temperate, and his sobriety was repaid by a healthy old age. He lived and enjoyed the use of his faculties to the term of a hundred years, and at last died through mere decay.

Democritus expanded the atomic theory of his master Leucippus (q. v.), to support the truth of which he maintained the impossibility of division *ad infinitum;* and, from the difficulty of assigning a commencement of time, he argued the eternity of existing nature, of void space, and of motion. He supposed the atoms, originally similar, to be endowed with certain properties, such as impenetrability and a density proportionate to their volume. He referred every active and passive affection to motion, caused by impact, limited by the principle he assumed, that like can only act on like. He drew a distinction between primary motion and secondary; impulse and reaction; from a combination of which he produced rotary motion. Herein consists the law of necessity, by which all things in nature are ruled. From the endless multiplicity of falling atoms have resulted the worlds which we behold, with all the properties of immensity, resemblance, and dissimilitude which belong to them. The soul consists (such is his doctrine) of globular atoms of fire, which impart movement to the body. Maintaining his atomic theory throughout, Democritus introduced the hypothesis of images (εἴδωλα), a species of emanation from external objects, which make an impression on our senses, and from the influence of which he deduced sensation (αἴσθησις) and thought (νόησις). He distinguished between a rude, imperfect, and therefore false perception and a true one. In the same manner, consistently with his theory, he accounted for the popular notions of the Deity; partly through our incapacity to understand fully the phenomena of which we are witnesses, and partly from the impressions communicated by certain beings (εἴδωλα) of enormous stature and resembling the human figure which inhabit the air. To these he ascribed dreams and the causes of divination. He carried his theory into practical philosophy also, laying down that happiness consisted in an equability of temperament (εὐθυμία), whence he deduced his moral principles and prudential maxims. It was from Democritus that Epicurus (q. v.) borrowed the principal features of his philosophy. The fragments of Democritus have been collected and published by Mullach (Berlin, 1843), with notes. See Ueberweg, *History of Philosophy* (Eng. trans., N. Y. 1872), vol. i. pp. 67–71; and the dissertation by E. Johnson, *Der Sensualismus des Demokrit* (Plauen, 1868).

Demodŏcus (Δημοδόκος). (1) A blind musician at the court of Alcinoüs, who sang in the presence of Odysseus (Hom. *Od.* viii. 44; Plut. *De Mus.*). (2) A Trojan chief, who came with Aeneas into Italy, where he was killed (Verg. *Aen.* x. 413).

Demoleon (Δημολέων). (1) A Centaur, killed by Theseus at the nuptials of Pirithoüs (Ovid, *Met.* xii. 356). (2) A son of Antenor, killed by Achilles (Hom. *Il.* xx. 395).

Demon. See Daemon.

Demōnax (Δημώναξ). A philosopher of the second century B.C., who endeavoured to revive the philosophy of the Cynic School. Born in Cyprus, he went to Athens, where he became very popular, so that people vied with one another in presenting him with food, and even the young children gave him great quantities of fruit. Much less austere than Diogenes (q. v.), whom he took as his philosophic model, he nevertheless rebuked vice unsparingly, and was charged with neglecting the Eleusinian Mysteries, to which he replied: "If the mysteries are bad, no one should be initiated; and if they are good, they ought to be open to every one." He was a friend of Epictetus, who once rebuked him for not marrying, but was silenced by Demonax, who said, "Very well; give me one of your daughters for a wife"—Epictetus being himself a bachelor. Demonax lived to be nearly a hundred, and on his death was buried with great magnificence. See the *Demonax* of Lucian, in which the character of the philosopher is painted in glowing colours.

Demonēsi Insŭlae (Δημόνησοι). A group of islands in the Propontis (Sea of Marmora) belonging to Bithynia. The chief of these were Pityodes and Chalcitis, also called Demonesus.

Demophĭlus (Δημόφιλος). (1) An Athenian poet of the New Comedy, from whose Ὀναγός Plautus took his *Asinaria*. (2) A Pythagorean philosopher who wrote a work called Βίου Θεράπεια, of which a selection is extant under the name of Γνωμικὰ Ὁμοιώματα, which has been edited by Orelli (Leipzig, 1819). Of the life of Demophilus no particulars are known.

Demophoön (Δημοφόων) or **Demŏphon.** (1) See Eleusinia. (2) See Phyllis.

Demopoiētos (δημοποίητος). A newly made or naturalized citizen at Athens. See Demosth. *c. Steph.* i. p. 1125, § 78.

Demosii (*δημόσιοι*). Public slaves at Athens, bought by the State. The most numerous class were the *τοξόται* or *Σκύθαι*, a force of police, also called *Σπευσίνιοι*, from the first organizer of the service (Poll. viii. 131–132). Their duty was to preserve order in the assembly, courts, public places, and public works. They were at first encamped in tents in the Agora, and afterwards removed to the Areopagus. Certain of them were in personal attendance on officials. The corps dated from the year of Salamis, when 300 were bought; they were later increased to 1200 (Andoc. *De Pac.* 5, 7; Aesch. *De Fals. Leg.* § 173 f.).

Executioners, torturers, etc., whether police or not, were also slaves (Poll. viii. 71). Demosii were also employed in the treasury, in subordinate places in the assembly and courts, as checking-clerks (*ἀντιγραφεῖς*)—their amenability to torture making them especially serviceable for such duties. The State undertook their training.

In the mint were slave workmen, as also in the mines. Exceptionally, as at Arginusae, demosii rowed in the galleys. See SERVUS PUBLICUS.

Demosthĕnes (*Δημοσθένης*). (1) A celebrated Athenian orator, a native of the deme of Paeania, in the tribe Pandionis. His father, Demosthenes, was a citizen of rank and opulence, and the proprietor of a manufactory of arms; not a common blacksmith, as the language of Juvenal (x. 130) would lead us to believe. The son was born about B.C. 383, and lost his father at the early age of seven years, when he was left to the care of his mother, Cleobulé. The guardians to whom his father had intrusted the administration of a large property proving faithless to their charge and wasting a large portion of his patrimony, the orator's early studies were seriously hampered by the want of sufficient means, to say nothing of the delicate state of his own health. When Demosthenes was some sixteen years of age his curiosity was attracted by a trial in which Callistratus pleaded and won a cause of considerable importance. The eloquence which gained, and the applause which followed, his success so inflamed the ambition of the young Athenian that he determined to devote himself thenceforward to the assiduous study of oratory. He chose Isaeus as his master rather than Isocrates; from Plato, also, he imbibed much of the richness and the grandeur which characterize the writings of that philosopher. At the age of seventeen he appeared before the courts and pronounced against his faithless guardians, and against a debtor to his father's estate, five orations, which were crowned with complete success. These discourses, in all probability, had received the finishing touch from Isaeus, under whom Demosthenes continued to study for the space of four years after he had reached his majority.

An opening so successful emboldened the young orator to speak before the people in the assembly; but, when he made the attempt, his feeble and stammering voice, his interrupted respiration, his ungraceful gestures, and his ill-arranged periods, brought upon him general ridicule. Returning home in the utmost distress, he was encouraged by the kindness of the actor Satyrus, who, having requested Demosthenes to repeat some passage from a dramatic poet, pronounced the same extract after him with so much correctness of enunciation and in a manner so true to nature that it appeared to the young orator to be quite a different passage. Convinced, thereupon, how much grace and persuasive power a proper enunciation and manner add to the best oration, he resolved to correct the deficiencies of his youth, and accomplished this with a zeal and perseverance which have passed into a proverb. To free himself from stammering he spoke with pebbles in his mouth, a story resting on the authority of Demetrius Phalereus, his contemporary. It also appears that he was unable to articulate clearly the letter R; but he vanquished that difficulty most perfectly, for Cicero says that he *exercitatione fecisse ut plenissime diceret.* He removed the distortion of features which accompanied his utterance by watching the movements of his countenance in a mirror; and a naked sword was suspended over his left shoulder while he was declaiming in private, to prevent its rising above the level of the right. That his enunciation might be loud and full of emphasis he frequently ran up the steepest and most uneven walks, an exercise by which his voice acquired both force and energy; and on the sea-shore, when the waves were violently agitated, he declaimed aloud, to accustom himself to the noise and tumult of a public assembly. He constructed a subterranean study, where he would often stay for two or three months together, shaving one side of his head, that in case he should wish to go abroad the shame of appearing in that condition might keep him within. In this solitary retreat, by the light of his lamp, he is said to have copied and recopied, ten times at least, the orations scattered throughout the history of Thucydides, for the purpose of moulding his own style after so pure a model.

Whatever may be the truth of these stories, Demosthenes got credit for the most indefatigable labour in the acquisition of his art. His enemies, at a subsequent period of his career, attempted to ridicule this extraordinary industry, by remarking that all his arguments "smelled of the lamp," and they eagerly embraced the opportunity of denying him the possession of natural talents. This criticism of Demosthenes seems to have rested chiefly on his known reluctance to speak without preparation. The fact is, that though he could exert the talent of extemporaneous speaking, he avoided rather than sought such occasions, partly from deference to his audience and partly from apprehending the possibility of a failure. Plutarch, however, who mentions this reluctance of the orator, speaks at the same time of the great merit of his extemporaneous effusions.

Demosthenes reappeared in public at the age of twenty-five years, and pronounced two orations against Leptines, the author of a law which imposed on every citizen of Athens, except the descendants of Harmodius and Aristogiton, the exercise of certain burdensome functions. The second of these discourses, entitled "Of Immunities," is regarded as one of his happiest efforts. After this, he became much engaged in the business of the bar, and these professional labours, added to the scanty portion of his patrimony which he had recovered from his guardians, appear to have formed his only means of support. But, whatever may have been the distinction and the advantages which Demosthenes acquired by his practice at the bar, his principal glory is derived from his political discourses. At the period when he engaged in public affairs the State was a mere wreck. Public spirit was at the lowest ebb; the laws had

lost their authority; the austerity of early manners had yielded to the inroads of luxury, activity to indolence, and probity to venality. Of the virtues of their fathers there remained to the Athenians little save an attachment, carried almost to enthusiasm, for their native soil. On the slightest occasion this feeling of patriotism was sure to display itself; and, thanks to this sentiment, the people of Athens were still capable of making strenuous efforts for the preservation of their freedom. No one understood better than Demosthenes the art of exciting

Demosthenes. (Vatican Museum, Rome.)

and keeping alive this enthusiasm. His penetration enabled him easily to divine the ambitious plans of Philip of Macedon from the very outset of that monarch's operations, and he resolved to counteract them. His whole public career, indeed, had but one object in view, and that was war with Philip. For the space of fourteen years this monarch found the Athenian orator continually in his path, and every attempt proved unavailing to corrupt so formidable an adversary. These fourteen years, which immediately preceded the fall of Grecian freedom, constitute the brightest period in the history of Demosthenes. And yet his courage was political rather than military. At Chaeronea (B.C. 338) he fled from the field of battle, though in the Athenian assembly no private apprehensions could check his eloquence or influence his conduct. But, though overpowered in the contest with the enemy of Athenian independence, he received after his defeat the most honourable recompense which, in accordance with Grecian customs, a grateful country could bestow. Athens decreed him a crown of gold. The reward was opposed by Aeschines (q. v.). The combat of eloquence which arose between the two orators attracted to Athens an immense concourse of spectators. Demosthenes triumphed, and his antagonist, not having received the fifth part of the votes, was, in conformity with the existing law, compelled to retire into exile. A short time after this splendid victory Demosthenes was condemned for having suffered himself to be bribed by Harpalus, a Macedonian governor, who, dreading the anger of Alexander, had come to Athens to hide there the fruit of his extortion and rapine, and had bargained with the popular leaders of the day for the protection of the Republic. Demosthenes, having escaped from imprisonment, fled to Aegina (B.C. 324), whence he could behold the shores of his beloved country, and earnestly and constantly protested his innocence. After the death of Alexander he was restored, and his entry into Athens was marked by every demonstration of joy. A new league was formed among the Grecian cities against the Macedonians, and Demosthenes was the soul of it. But the confederacy was broken up by Antipater, and the death of the orator was decreed. He retired, thereupon, from Athens to the island of Calauria, off the coast of Argolis, and, being still pursued by the satellites of Antipater, terminated his life there by poison, in the temple of Poseidon, at the age of about sixty years, B.C. 322.

Before the time of Demosthenes there existed three distinct styles of eloquence: that of Lysias, mild and persuasive, which quietly engaged the attention and won the assent of an audience; that of Thucydides, bold and animated, which awakened the feelings and powerfully forced conviction on the mind; while that of Isocrates was, as it were, a combination of the two former. Demosthenes can scarcely be said to have adopted any individual as a model, although he bestowed so much untiring labour on the historian of the Peloponnesian War. He rather culled all that was valuable from the various styles of his great predecessors, working them up and blending them into one harmonious whole. In the general structure of many of his sentences he resembles Thucydides, but is simpler and more perspicuous and better calculated to be quickly comprehended by an audience. On the other hand, his clearness in narration and his elegance and purity of diction remind the reader of Lysias. But the argumentative parts of the speeches of Lysias are often deficient in vigour; whereas earnestness, power, zeal, rapidity, and passion, all exemplified in plain, unornamented language and a strain of close, business-like reasoning, are the distinctive characteristics of Demosthenes. The general tone of his oratory, indeed, was admirably adapted to an Athenian audience, constituted as it was of those whose habits of life were mechanical, and of those whom ambition or taste had led to

the cultivation of literature. The former were captivated by strong good sense, urged with masculine force and inextinguishable spirit, and by the forcible application of plain truths; while there was enough of grace and variety to please more learned and fastidious auditors. Another very remarkable excellence of Demosthenes is the collocation of his words. The arrangement of sentences in such a manner that their cadences should be harmonious, and to a certain degree rhythmical, was a study much in vogue among the great masters of Grecian composition. See COLON.

The question has often been raised as to the secret of the success of Demosthenes. The universal approbation will appear the more extraordinary to a reader who for the first time peruses the orations. They do not exhibit any of that declamation on which loosely hangs the fame of so many aspirants to eloquence. There appears no deep reflection to indicate a more than ordinary penetration, or any philosophical remarks to prove the extent of his acquaintance with the great moral writers of his country. He affects no learning; he aims at no elegance; he seeks no glaring ornaments; he rarely touches the heart with a soft or melting appeal, and when he does, it is only with an effect in which a third-rate speaker would have surpassed him. He had no wit, no humour, no vivacity, in our acceptance of these terms. The secret of his power is simple, for it lies essentially in this, that his political principles were interwoven with his very spirit; they were not assumed to serve an interested purpose, to be laid aside when he descended from the bema and resumed when he sought to accomplish an object, but were deeply seated in his heart and emanated from its profoundest depths. The more his country was environed by dangers, the more steady was his resolution. Nothing ever impaired the truth and integrity of his feelings or weakened his generous conviction. It was his undeviating firmness, his disdain of all compromise, that made him the first of statesmen and orators; in this lay the substance of his power, the primary foundation of his superiority; the rest was merely secondary. The mystery of his influence, then, lay in his honesty; and it is this that gave warmth and tone to his feelings, energy to his language, and an impression to his manner before which every imputation of insincerity must have immediately vanished. We may thus perceive the meaning of Demosthenes himself, when, to one who asked him what was the first requisite in an orator, he merely replied, "Delivery" (*ὑπόκρισις*); and when asked what were the second and third requisites, gave the same answer as at first (Plut. *Vit. X. Orat.*). His meaning was this: a lifeless manner on the part of a public speaker shows that his own feelings are not enlisted in the cause which he is advocating, and it is idle for him, therefore, to seek to make converts of others when he has failed in making one of himself. On the other hand, when the tone of voice, the gesture, the look, the whole manner of the orator, display the powerful feelings that agitate him, his emotion is communicated to his hearers, and success is inevitable. Cf. Quintil. *Inst. Or.* xi. 3 init.

Of the orations we have sixty-one (half of them spurious), and fifty-six Introductions, or *προοίμια δημηγορικά*. In confining ourselves to the classification adopted by the ancient rhetoricians, we may arrange all these discourses under one of three heads. (I.) Deliberative discourses (*λόγοι συμβουλεύτικοι*), treating of political topics, and delivered either before the Senate or the assembly of the people. (II.) Judicial speeches (*λόγοι δικάνικοι*), having for their object accusation or defence. (III.) Studied or set speeches (*λόγοι ἐπιδεικτικοι*), intended to censure or praise.

Seventeen of the orations of Demosthenes belong to the first of these classes, forty-two to the second, and two to the third.

Of the seventeen discourses which compose the first class, five treat of various subjects connected with the Republic, and twelve of the quarrels between the State and Philip. Our limits allow an examination of only a few of these that are most important in their character. Of the twelve harangues that turn upon the quarrels of the Republic with Philip, the first was pronounced in B.C. 351; the second, third, and fourth in B.C. 349; the fifth in B.C. 347; the sixth in B.C. 346; the seventh in B.C. 344; the eighth in B.C. 343; the ninth in B.C. 342; the tenth and eleventh in B.C. 341; and the twelfth in B.C. 340. The order here given is that of Dionysius of Halicarnassus, but no manuscript and no editions observe it. The manuscripts give the First, Second, Tenth, and Eleventh Philippics of Dionysius by name, and regard his fifth as forming the conclusion of the first. They give the title of Second, Third, and First Olynthiacs to his Second, Third, and Fourth. The remaining four (Sixth, Eighth, Ninth, Twelfth) have the following titles: "Of Peace," "Of Halonesus," "Of the Chersonesus," and "On the Letter of Philip." We shall now speak of them in chronological order. The (1 and 2) *Πρὸς Φιλίππον λόγος πρῶτος*, the First Philippic. Demosthenes here exhorts his fellow-citizens to prosecute the war with the greatest vigour against Philip. This monarch had, after the defeat of the Phocians, assumed a threatening attitude, as if wishing to establish himself in their country. The discourse we are now considering has been divided into two parts, which, according to Dionysius of Halicarnassus, were pronounced at different times; but this opinion is contradicted by most critics. (3, 4, 5) *Ὀλυνθιακός* A, B, Γ—The three Olynthiacs. Their object is to stimulate the Athenians to succour Olynthus and prevent its falling into the hands of Philip. (6) *Περὶ τῆς εἰρήνης*, "Of the Peace." Philip having obtained a seat in the council of the Amphictyons, Demosthenes advises his countrymen to preserve the peace with this prince. Libanius thinks that this discourse, though written by Demosthenes, was never delivered. Modern scholars are, however, of a different opinion. (7) *Κατὰ Φιλίππου λόγος* B, the Second Philippic, pronounced after the return of Demosthenes from the Peloponnesus, where he had negotiated a peace between Sparta and Messenia. (8) *Περὶ τῆς Ἁλονήσου*, "Of Halonesus," or, rather, of a letter of Philip's, by which he makes a present to the Athenians of the island of Halonesus, which he had taken from the pirates, and demands of the Athenians to share with them the office of protecting the seas. Demosthenes strenuously opposes so insulting an offer; it is, however, far from certain whether he ever pronounced such a discourse as this. Libanius says that the ancient critics ascribed it to Hegesippus, the friend of Demosthenes. Suidas and the author of the *Etymologicum*

Magnum agree with him. (9) Περὶ τῶν ἐν Χερρονήσῳ πραγμάτων, ἢ ὁ περὶ Διοπείθους, "Of the events in the Chersonesus, or of Diopithes." That general, sent at the head of a colony into the Chersonesus, had committed hostilities against the city of Cardia, the only one which Philip had reserved for himself in the conditions of peace. Diopithes had even made an inroad into Macedonia. Philip insisted on his being punished. Demosthenes undertakes in this oration to justify the conduct of the Athenian commander. (10) Κατὰ Φιλίππου λόγος Γ, the Third Philippic. The progress which Philip had made in Thrace, where he was preparing to lay siege to the cities of Perinthus and Byzantium, form the subject of this harangue. (11) Κατὰ Φιλίππου λόγος Δ, the Fourth Philippic, pronounced at the time when Philip had raised the siege of Perinthus, in order to fall upon Byzantium. Valckenaer (*Or. De Phil.* p. 250), Wolf (*Ad Lept. Proleg.* p. lx.), and Bekker do not acknowledge this as a production of Demosthenes. (12) Ὁ πρὸς τὴν ἐπιστολὴν Φιλίππου λόγος, "On the Letter of Philip." The letter of the king, to which this harangue refers, still exists. It contains many complaints, but no declaration of war. Taylor, Reiske, Valckenaer, and Bekker consider this letter to be spurious.

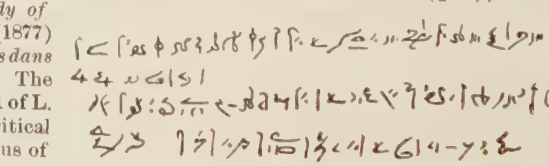
We come now to the second class of the orations of Demosthenes, namely, those of a judicial nature; and here a distinction must be made between those which refer to affairs connected with the State and those which relate to individual interests: in the former case, the procedure was called καταγορία; in the second, δίκη—words which may be translated by "accusation" and "pleadings." Of the first species we have twelve harangues remaining, the most important one of which is that entitled Περὶ Στεφάνου, "On the Crown." Demosthenes had been twice crowned in the theatre during the Dionysiac festival: the first time after the expulsion of the Macedonian garrisons from the island of Euboea, and again after the alliance with the Thebans. In the year B.C. 338, Ctesiphon, who was then president of the Senate, had a decree passed by this body that, if the people approved, Demosthenes should be crowned at the approaching Dionysiac festival, in the public theatre, as a recompense for the disinterested manner in which he had filled various offices, and for the services which he had never for a moment ceased to render the State. This matter had to be confirmed by a ψήφισμα, or decree of the people; but, before it was brought before them, Aeschines presented himself as the accuser of Ctesiphon. He charged him with having violated the laws in proposing to crown a public functionary before the latter had given an account of the manner in which he had discharged his office; and to crown him, too, in the theatre, instead of the senate-house or the Pnyx, where this could alone be done; finally, in having alleged what was false, for the purpose of favouring Demosthenes. He concluded by demanding that a fine of fifty talents be imposed upon Ctesiphon. The matter remained for some time pending, in consequence of the troubles that followed the battle of Chaeronea. When, however, the influence of the Macedonian party had, through the exertions of Antipater, gained the ascendency in Athens, Aeschines believed it to be a favourable moment for the revival of his accusation. It was brought forward, therefore, again, in B.C. 330, or eight years after the proposition of Ctesiphon had been made. Aeschines thereupon pronounced his famous harangue, to which Demosthenes replied. This speech of Demosthenes is regarded, and justly so, not only as his masterpiece, but as the most perfect specimen that eloquence has ever produced. It is said that after this discourse Demosthenes no longer appeared as a public speaker. Ulpian, in his commentary on the oration *De Corona*, relates an anecdote which has been often cited. Demosthenes is endeavouring to fix the charge of bribery on Aeschines, whom he represents as corrupted by Philip and by Alexander, and consequently their hireling and not their friend or guest. Of this assertion he declares his willingness to submit the truth to the judgment of the assembly. "I call thee," says the orator, "the hireling, first of Philip and now of Alexander; and all these who are here present agree in opinion with me. If thou disbelievest it, ask them the question; but no, I will ask them myself. Athenians, does Aeschines appear to you in the light of a hireling or a friend of Alexander's?" In putting this question, Demosthenes purposely commits a fault of accentuation: he places the accent improperly on the antepenultima, instead of the last syllable, of μισθωτός—in the words of Ulpian, ἐκὼν ἐβαρβάρισεν—in order to draw the attention of the people from the question to the pronunciation. This had the desired effect: the accurate ears of the Athenians were struck with the mistake; to correct it, they called out μισθωτός, μισθωτός, "a hireling! a hireling!" from every part of the assembly. Pretending to receive the word as the expression of their sentiments on the guilt of Aeschines, he cried out, "Dost thou hear what they say?"

The simple pleadings (δίκαι) relative to matters of private interest, constitute the second class of judicial actions. Of these we have thirty remaining, which are as follows: (1) Discourses having relation to the proceedings instituted by Demosthenes against his guardians. They are five in number: of these, two are against Aphobus, and two against Onetor, his brother. (2) Λόγοι παραγράφικοι, or, as Cicero (*De Invent.* 1, 8) calls them, *constitutiones translativae*. We have seven discourses of this class from the pen of Demosthenes, viz.: against Zenothemis, against Apaturius, against Lacritus, against Phormion, against Pantaenetus, against Nausimachus, and Xenopithaea. (3) Discourses relative to the rights of succession and to questions of dower. These are four in number: against Macartatus, against Leochares, against Spudias, against Boeotus for his mother's dowry. (4) Discourses in matters of commerce and of debt. These are three in number: against Calippus, against Nicostratus, against Timotheus. (5) Actions for indemnity and for damages (βλάβη, αἰκία). The discourses under this head are five in number: against Boeotus, against Olympiodorus, against Conon, against Dionysiodorus, against Callicles. (6) Actions for perjury: two discourses against Stephanus, and one against Euergus and Mnesibulus. (7) Three discourses on the subject of the ἀντίδοσις (q. v.), or exchange of estates. The discourses under this head are the following: against Phoenippus, against Polycles, and respecting the crown of the trierarchia. It is unnecessary to speak of each of these thirty pleadings; a few

remarks on some of them must suffice. The five discourses which Demosthenes pronounced against his guardians contain valuable details respecting his youth, his fortune, and the Athenian laws. Aphobus, one of the guardians, was condemned to pay Demosthenes the sum of ten talents. It does not appear whether he brought the two other guardians to trial or not. These discourses have some resemblance to those of Isaeus, his master. The *παραγραφή* for Phormio against Apollodorus has furnished occasion for a reproach to the memory of Demosthenes. We are told by Plutarch that Demosthenes "wrote an oration for Apollodorus, by which he carried his cause against the general Timotheus, in an action for debt to the public treasury; as also those others against Phormio and Stephanus, which formed a just exception against his character. For he composed likewise the oration which Phormio had pronounced against Apollodorus. This, therefore, was like furnishing the enemies with weapons out of the same shop."

The discourse against Macartatus, respecting the succession of Hagnias, is interesting from the circumstance of our having the defence of Macartatus by Isaeus, and from our being thus able to compare the pupil with his former master. It remains to speak of the third class of Demosthenes's orations, the *λόγοι ἐπιδεικτικοί*, "studied or set speeches." We have only two remaining, and these, very probably, are spurious. The one, *ἐπιτάφιος λόγος*, is a eulogy on the Athenians who had perished at Chaeronea; the other, *ἐρωτικὸς λόγος*, is written in praise of the beauty of the young Epicrates.

There are also six letters ascribed to Demosthenes; five of them are addressed to the people of Athens. All, however, are forgeries.



Good MANUSCRIPTS of Demosthenes are rare, but several of them are as old as the eleventh century, and most of them contain a very large portion, if not the whole, of the extant works. In all, there are some 170 MSS. They are divided by editors into three groups, of which the first is headed by a Codex Parisinus (S or Σ) of the tenth or eleventh century, distinguished by remarkable omissions in the text; the second is headed by a Marcianus Venetus (F) and another Codex Parisinus (γ), both of the eleventh century; the third by a Codex Monacensis (A), also of the eleventh century, distinguished by curious simplifications of hard passages. Editors are not entirely agreed as to the value of S or Σ, some maintaining that it gives the authentic text, others believing that it gives an edition by a clever scholar. The scholia on Demosthenes are inferior, the best being those in C. Müller (Paris, 1846–47) and *Scholia Graeca in Demosth.* (Oxford, 1851). On the MSS. see Vömel's *Prolegomena Critica* to his edition (Halle, 1856–57).

BIBLIOGRAPHY.—For the life of Demosthenes, the reader is referred to Schäfer's *Demosthenes und seine Zeit* (2d ed. Berlin, 1882); and for an exhaustive literary criticism, to Blass's *Attische Beredsamkeit* (1880). Butcher's *Introduction to the Study of Demosthenes* (London, 1881) and Brodribb's (1877) are useful. See also Croiset, *Des Idées Morales dans l'Eloquence Politique de Démosthène* (1871). The standard texts are those of Bekker (1866) and of L. Dindorf (Leip. 1878; rev. by Blass). For critical study of Demosthenes, the Apparatus Criticus of Schäfer in 5 vols. (London, 1824) is valuable, as are also the three volumes of *Annotationes Interpretum* of Dindorf (Oxford, 1849). The *editio princeps* of Demosthenes was that of Aldus (Venice, 1504). Good editions of the various orations with notes are as follows: *De Corona*, T. K. Arnold (London, 1860), Holmes (London, 1871), Drake (London, 1866), Simcox (Oxford, 1873), containing also the oration of Aeschines, D'Ooge (Chicago, 1875), Blass (Leipzig, 1890); *De Falsa Legatione*, Shilleto (London, 1874); *Contra Leptinem*, Beatson (London, 1864), King (London, 1880), and especially Sandys (Cambridge, 1890); *In Midiam*, Holmes (Buttmann), (London, 1868); of the *Olynthiacs*, Wilkins (London, 1860), T. K. Arnold (London, 1877); of the *Philippics*, Heslop (London, 1868), T. K. Arnold (London, 1868), Westermann (1825); of the First Philippic, Gwatkin (Rehdantz), (London, 1883); *Adv. Timocratem*, etc., Wayte (Camb. 1883); collections of *Select Private Orations*, Penrose (London, 1853), Sandys and Paley, in 2 pts., 9 orations (Camb. 1874–75), with French notes, Weil (Paris, 1877). See also Baiter and Sauppe's *Oratores Attici*, 8 vols. or one large quarto (1850); Bekker, 10 vols. with indices (Oxford, 1828); Dobson with variorum notes (London, 1828); and Jebb (London, 1882). Useful is Mitchell's *Index Graecitatis*, 3 vols. (London, 1828); and Westermann's *Geschichte d. Beredsamkeit* (1835) is to be commended for a general conspectus. The best translation into English is that of Kennedy in 5 vols. (London, 1852–63).

(2) An Athenian general, son of Alcisthenes, who obtained considerable reputation during a part of the Peloponnesian War. When the Spartan monarch Agis made an inroad into Attica, Demosthenes, on his part, harassed the coasts of the Peloponnesus, and seized upon and fortified the Messenian Pylos. This led to the affair of Sphacteria (q. v.), in which he had a conspicuous, or, rather, the principal share. He was afterwards sent with an armament to the relief of Nicias before Syracuse; but, by his precipitate measures there, brought defeat upon himself and the consequent ruin of the whole expedition. Demosthenes and Nicias were both put to death while in prison, notwithstanding the endeavours of the Spartan commander Gylippus to save their lives. Another account, alluded to by Plutarch, makes them to have been stoned to death (Thuc. iv. 3 foll.; Plut. *Nic.*).

(3) A Greek physician, a disciple of Alexander Philalethes, who obtained the same surname as his master—namely, Philalethes, or "Lover of Truth." He flourished about the commencement of our era, and turned his attention particularly to diseases of the eye. We have some fragments remaining of his writings on this subject, which appear to have formed part of a work often cited by Galen, Oribasius, and Aëtius.

Demotic Writing. A cursive form of the Egyptian hieroglyphic writing in use from the sixth century B.C. to the third century A.D. It was rarely used on the public monuments, though it is found on the Rosetta Stone (q. v.); but was

Demotic Writing. (Funerary Inscription.)

largely employed for documents, contracts, etc., and occasionally in religious formulas. See HIEROGLYPHICS.

Demus (*δῆμος*). A word which originally denoted a district or country. Then, because in the early days the lower classes lived in the country and the nobles in the city, it received the meaning of commons or common people. A third use, likewise derived from the original signification, is seen in its application to the local divisions, or townships as it were, of Attica.

A certain number of these *δῆμοι*, or demes, were included in each of the ten tribes established by Clisthenes to replace the four old Ionic tribes. Their exact number at that time is not positively known, though it is supposed by some, from a statement of Herodotus (v. 69), to have been one hundred. In the third century before Christ, at all events, they numbered one hundred and seventy-four (Strab. ix. 396). The names of one hundred and forty-five of these are known to us from inscriptions. If, however, we consider the division of some demes into *καθύπερθεν* and *ὑπένερθεν*, and of others between two different tribes, this sum is increased to one hundred and fifty-six (Milchhoefer, *Untersuchungen über die Demenordnung des Kleisthenes*, pp. 8–10; *C. I. A.* iii. index). The names were derived in part from places, as in the case of Acharnae, Rhamnus, etc., and in part from the founders of the demes, as in the case of Erchia and of Daedalidae (Aristot. *Athen. Polit.* 21). The largest deme, according to Thucydides, was Acharnae, which in the Peloponnesian War was able to furnish three thousand heavily armed troops (Thuc. ii. 19, 20).

At the time of his reforms Clisthenes admitted many resident aliens and even slaves to citizenship (Aristot. *Polit.* 3, 2), and to this fact is due that alteration in the official designation of citizens which he also introduced (Aristot. *Athen. Polit.* 21). They were no longer designated by the father's name only, but also by the name of the deme to which they belonged. The demes now became the centres of the local administrative power, and are said by Aristotle to have taken the place of the *naucraries* (*Athen. Polit.* 21). Each deme had its register of citizens, its own property, its own meetings and religious observances, and its own demarch. This officer made out the lists of the deme's property, kept in his possession the lexiarchic register, or register of qualified citizens, and convened the demesmen at will (Harpocration, s. v. *Δήμαρχος*). At these meetings the public business of the deme was transacted, such as the leasing of property, the election of officers, the revision of the lexiarchic register, and the enrolment of new members.

When a man was first admitted to citizenship he had the right to choose his own tribe and deme, but otherwise a man belonged to the same deme as his natural or adoptive father. The legitimate children of citizens could be enrolled on attaining their majority at the age of eighteen, and adopted children, whenever presented by their adoptive fathers. The enrolment took place in the presence of the assembled demesmen. If any member questioned the candidate's eligibility the matter was settled by a majority vote of those present (Demosth. *Eubul.* 1318). Illegal registration however, was not uncommon, and certain demes, as Potamus for example, were notorious for this abuse (Harpocration, s. v. *Ποταμός*; Demosth. *Leoch.* 1091). To counteract this evil an official investigation of those inscribed in the register, called *diapsephisis* (Harpocration, s. v. *Διαψήφισις*), was held at various times by the deme. A similar examination was also held if, by any chance, the lexiarchic registers were lost or destroyed (Demosth. *Eubul.* 1306). If any one in the course of this inquiry was disfranchised by vote of the demesmen, he had the right of appeal to the courts. If the decision of the deme were sustained he was sold as a slave and his property was confiscated. But were he successful in his suit his name was restored to the register of the deme (Isaeus, 12; *Argum. ad Demosthenis Eubul.* 1298).

A man was not obliged to reside within the limits of the deme of which he was a member. But he could only hold property in another deme upon payment to the demarch of a tax, called *ἐγκτητικόν*. This tax, however, was sometimes remitted by the demes in the case of individuals to whom they desired to grant special privileges or honours (*C. I. A.* ii. 589).

Denarius. A Roman silver coin, so called because it originally contained 10 *asses*. In later times it = 16 *asses* = 4 *sestertii* = $\frac{1}{25}$ of an *aureus*. Its original weight was 4.55 gr. (= between $0.18 and $0.20); from B.C. 217 to Nero, 3.90 (about $0.14); after Nero's time 3.41 gr., the amount of pure silver being so reduced that it was worth only about $0.12. Its value subsequently sank more and

Denarii, actual size. (British Museum.)

more, until at the beginning of the third century A.D. it was worth only $0.06. When at the end of the third century Diocletian introduced a new silver coin of full value according to the Neronian standard (the so-called *argenteus*), the name *denarius* was transferred to a small copper coin. See NUMISMATICS.

Dendrophŏri. A Roman collegium or corporation of carpenters, frequently mentioned in inscriptions in imperial times. They formed originally a religious corporation, carrying the sacred tree in the worship of the Magna Mater (*collegium dendrophorum Matris magnae*), and were under the Quindecimviri. See inscriptions quoted by Marquardt, *Röm. Staatsverw.* iii. pp. 356, 380.

Denicāles Feriae. See FUNUS, p. 699.

Dens (*ὀδούς*). A tooth. (1) Artificial teeth were made and used by the ancients, as may be seen from several passages in the classic writers. Cicero (*De Legibus*, ii. 24) quotes a very old sumptuary law forbidding gold to be placed in the tomb with the body, but especially excepting the gold used in fastening the artificial teeth. Little is

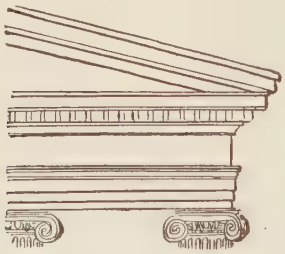
known of the degree of skill attained by ancient dentistry. Martial (i. 73) speaks of one Aeglé as provided with teeth "of purchased bones and ivory" (*dentata . . . emptis ossibus Indicoque cornu*).

(2) The word *dens* is also used of a number of pointed objects, such as the fluke of an anchor (Verg. *Aen.* vi. 3); the barb of a hunting-spear (Grat. *Cyneget.* 108); the prong of the implement called *ligo* (q. v.); of the ploughshare (Varr. *L. L.* v. 135); the tooth of a rake or harrow (*irpex, occa, rastrum*); the tooth of a saw (Ovid, *Met.* viii. 246); the wards of a key (Tibull. i. 2, 18); the hook of a clasp (Sidon. *Carm.* ii. 397); the cog of a wheel (Vitruv. x. 5); and poetically of a pruning-hook (*dens curvus Saturni*, Verg. *Georg.* ii. 406).

(3) Dens densus is the name given to a fine-toothed comb (Tibull. i. 9. 68), a specimen of which,

Dens Densus, or Comb. (Rich.)

exactly like those in use to-day, is given in the above illustration of one found in a Roman tomb.



Denselētae or **Denthelētae** (Δενθηλῆται). A Thracian tribe living on the Haemus between the Strymon and Nessus (Plin. *H. N.* iv. 11).

Dentālé (ἔλυμα). The share-beam of a plough to which the share (*vomer*) was attached (Colum. ii. 2, 24). See Aratrum.

Dentarpăga (ὀδοντάγρα). A forceps for drawing teeth (Varr. *ap.* Non. s. h. v.).

Dentātus, Manius Curius. See Curius Dentatus.

Denticŭlus. A "dentil" in architecture (Vitruv. iii. 5, 11). Dentils are small square blocks

Denticuli. (Temple of Dionysus at Teos.)

with interstices between them, used in the entablature of columnar architecture.

Dentidūcum. A dentist's forceps (Cael. Aurel. *Tard.* ii. 4).

Dentifricium (ὀδοντότριμμα, ὀδοντόσμηγμα). Dentifrice or tooth-powder appears to have been skilfully prepared and generally used among the Romans. A variety of substances, such as the bones, hoofs, and horns of certain animals, crabs, egg-shells, and the shells of the oyster and the murex, constituted the basis of the preparation. Having been previousiy burned, and sometimes mixed with honey, they were reduced to a fine powder. Though fancy and superstition often directed the choice of these ingredients, the addition of astringents, such as myrrh, or of nitre and hartshorn ground in a raw state, indicates science which was the result of experience, the intention being not only to clean the teeth and to render them white, but also to fix them when loose, to strengthen the gums, and to assuage toothache (Plin. *H. N.* xxviii. §§ 178, 179; xxxi. § 117; xxxii. §§ 65, 79; Scrib. Larg. *Comp.* 59).

Dentists. See Dens; Medicus.

Deo (Δηώ). Another name for Demeter; hence her daughter Persephoné is called by the patronymic Deoïs and Deoïné (Callim. *Frag.* 48).

Deoïné (Δηωΐνη). See Deo.

Depas (δέπας). A cup with two handles, frequently mentioned by Homer. It seems to have been a generic term, like ποτήριον. It was used in libations, and was usually of gold (*Il.* xxiii. 196, xxiv. 285, etc.) but later of earthenware. The term is applied to the golden bowl or boat in which the sun floated back from west to east during the night (Stesich. *Fr.* 8 Bergk). As a specific term it was probably applied to cups of a bowl-like shape, and is therefore identified by Panofka and Dennis with the form given in the above illustration.

Depas. (Dennis, *Etruria.*)

The word is frequently used in Homer with the epithet ἀμφικύπελλον (*Il.* i. 584), which has given rise to much discussion. It was, however, probably a double-cup, with a bottom half-way up, like a dice-box. That this was the form of the cup is inferred from a passage of Aristotle (*Hist. An.* ix. 40), where he describes the cells of bees as having two openings divided by a floor, like the ἀμφικύπελλα. No specimen is known to exist.

Depontāni Senes. A name given at Rome to men sixty years of age, hence called *sexagenarii*, because they were freed from the obligation of voting in the Roman comitia; that is, of passing over the bridges (*pontes*) which led into the *saepta*, where the voting took place. (See Comitia.) This is the most probable explanation of the word; and it is doubtful whether men of sixty years of age were absolutely deprived of the franchise, though this was the case if we accept literally the statement that they were thrust back from voting, *de ponte deiiciebantur* (Fest. pp. 75, 334 M.). Some ancient writers supposed that the name *depontani* had reference to a barbarous custom of antiquity, that men of sixty years of age were thrown down from the *pons sublicius* into the Tiber, but this interpretation was repudiated by Varro and Verrius (Fest. ll. cc.; Varr. *ap.* Non. p. 523; Cic. *Rosc. Am.* 35, 100; Ovid, *Fast.* v. 623; Macrob. i. 5; Plut. *Quaest. Rom.* 32).

Deportatio. Banishment to a specified locality, generally an island. This form of exile was devised under the early Roman emperors. It involved loss of civil rights, and generally also of property. See Exsilium.

Depositum. A real contract which consists in one man intrusting a movable thing to another to keep until it is demanded back, and without any reward for the trouble of keeping it. The

party who makes the *depositum* is called *deponens* or *depositor*, and he who receives the thing is called *depositarius*. The main object of a depositum is to benefit the *deponens* and not the *depositarius*. Accordingly the *depositarius* has, as a rule, no right to make use of the thing deposited, the contract by which one person lends a thing to another for his gratuitous use being *commodatum* and not depositum. The *deponens* is benefited by the depositum without being obliged to give anything in return. If money is promised to a person for taking care of a thing, the contract is *locatio conductio* and not depositum. If anything else except money is promised, the contract is one of the *innominati contractus*.

The *depositarius* is bound on demand to restore the thing deposited to the *deponens*, or to the person to whom the *deponens* has ordered it to be restored. If he cannot restore it, or cannot restore it uninjured, he is liable, should such loss or injury be due to his wilful misconduct (*dolus*), or to gross negligence (*culpa lata*), which is equivalent to wilful misconduct; but he is not liable on account of ordinary negligence (*culpa levis*), except under special circumstances, as that he has agreed to undertake such liability or has benefited in some way by the contract. The remedy by which the *deponens* could enforce these obligations is the *actio depositi directa*.

Roman law recognized an irregular kind of deposit, which consists in depositing "fungible" things, such as money, with another person, on the understanding that an equal quantity of things of the same kind shall be restored and not the identical things deposited, as in an ordinary deposit. In this case the *depositarius* has the use of the things deposited, the property in them passing to him; consequently he is subject to all risk of loss. This transaction is distinguished from a loan (*mutuum*) by the fact that it is entered into in the interest of the person who makes over the things, and not in that of the person who receives them.

Derbé (Δέρβη). A town in Lycaonia on the frontiers of Isauria (Pausan. iv. 15, § 4).

Derbĭces (Δέρβικες). A nation of Upper Asia, whom Ptolemy places in Margiana, where the Oxus, according to him, empties into the Caspian; but Strabo in Hyrcania, and others on the southern and western shores of the Caspian (Aelian, *V. H.* iv. 1).

Dercĕtis or **Dercĕto** (Δερκετίς or Δερκετώ), also called ATARGĂTIS. A Syrian goddess (Diod. Sic. ii. 4). She offended Aphrodité, who in consequence inspired her with love for a youth, to whom she bore a daughter, Semiramis; but ashamed of her frailty, she killed the youth, exposed her child in a desert, and threw herself into a lake near Ascalon. Her child was fed by doves, and she herself was changed into a fish. The Syrians thereupon worshipped her as a goddess. The upper part of the statue represented a beautiful woman, while the lower part terminated in the tail of a fish. She appears to be connected with the fish-god Dagon mentioned in the Old Testament as a deity of the Philistines.

Fish-god on Gems. (British Museum.)

Dercyllĭdas (Δερκυλλίδας). A Spartan who in B.C. 399 took command of the army levied for the defence of the Asiatic Greeks against Persia. He compelled Tissaphernes and Pharnabazus to sue for peace, but in 396 resigned the command to Agesilaüs (q. v.).

Dermatĭkon (δερματικόν, sc. ἀργύριον). "Hide-money"; that is, the money paid into the treasury at Athens from the sale of the hides of victims slain at the festivals (App. viii., vol. ii. pp. 100–102; *C. I. A.* ii. 741 A).

Dertōna (Δερτῶνα). The modern Tortona; an important town in Liguria on the road from Genua (Genoa) to Placentia (Ptol. iii. 1, 35).

Dertōsa (Δερτῶσα). Now Tortosa; a city of the Ilercaones in Spain, situated on the Iberus, a short distance above its mouth. Here was a bridge over the river, and along this route led the main military road to the southern parts of Spain and the colonies established there (Mela, ii. 6).

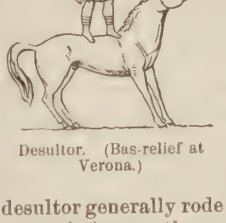
Desertor. In the military language of the Romans, a deserter. Those who deserted in time of peace were punished by reduction to the ranks (*gradus deiectio*), corporal chastisement, fines, or ignominious dismissal from the service (*missio ignominiosa*). Those who left the standards in time of war were usually punished with death. The *transfugae*, or deserters to the enemy, when taken, were sometimes deprived of their hands or feet (Liv. xxvi. 12), but generally were put to death. In imperial times they were exposed to wild beasts.

Designātor. See FUNUS; THEATRUM.

Designātus Consul. See CONSUL.

Desk. See SCRINIUM.

Desmoterion (δεσμωτήριον). See CARCER.



Despatches. See CURSUS PUBLICUS.

Despoena (Δέσποινα). "The mistress"; a title given to Aphrodité, to Demeter, and especially to Persephoné who was worshipped under this name in Arcadia (Plat. *De Leg.* 796 B).

Desponsionautae (δεσπονσιοναῦται). See HELOTAE.

Dessert. See CENA, pp. 311 and 314.

Desultor (ἀποβάτης, μεταβάτης). A word literally meaning "one who leaps off," and applied to a person who rode several horses or chariots, leaping from one to the other. As early as the Homeric times, we find the description of a man who keeps four horses abreast at full gallop, and leaps from one to another, amidst a crowd of admiring spectators (*Il.* xv. 679–684). In the games of the Roman circus this sport was also very popular. The Roman desultor generally rode only two horses at the same time, sitting on them without a saddle and vaulting upon either of them at his pleasure (Isid. *Orig.* xviii. 39). He wore a hat or cap made of felt. The taste for these exercises was carried to so great an extent that young men of the highest rank not only drove bigae and quadrigae in the circus, but

Desultor. (Bas-relief at Verona.)

exhibited these feats of horsemanship (Suet. *Jul.* 39). Among other nations this species of equestrian dexterity was applied to the purposes of war. Livy mentions a troop of horse in the Numidian army, in which each soldier was supplied with two horses, and, in the heat of battle and when clad in armour, would leap with the greatest ease and celerity from that which was wearied or disabled upon the back of the horse which was still sound and fresh (xxiii. 29).

The following illustration shows three figures of desultores—one from a bronze lamp, published

Desultores. (From an Ancient Lamp and Coins.)

by Bartoli (*Antiche Lucerne Sepolcrali*, i. 24), the others from coins.

Deucalion (Δευκαλίων). The son of Prometheus and Clymené, or of Prometheus and Pandora, and sometimes called the father (Thuc. i. 3), sometimes the brother of Hellen, the reputed founder of the Greek nation. His home was Thessaly, from which, according to general tradition, he was driven to Parnassus by a great deluge (Apollod. i. 7, 2), which, however, according to Aristotle (*Meteorol.* i. 14) occurred between Dodona and the Acheloüs. The Greek legend respecting this memorable event is as follows: Deucalion was married to Pyrrha, the daughter of Epimetheus and Pandora. When Zeus designed to destroy the brazen race of men on account of their impiety, Deucalion, by the advice of his father, made himself an ark (λάρναξ), and, putting provisions into it, entered it with his wife Pyrrha. Zeus then poured rain from heaven and inundated the greater part of Greece, so that all the people, except a few who escaped to the lofty mountains, perished in the waves. At the same time, the mountains of Thessaly were burst through by the flood, and all Greece without the Isthmus, as well as all the Peloponnesus, were overflowed. Deucalion was carried along the sea in his ark for nine days and nights, until he reached Mount Parnassus. By this time the rain had ceased, and, leaving his ark, he sacrificed to Zeus the flight-giver (Φύξιος), who sent Hermes, desiring him to ask what he would. His request was to have the earth replenished with men. By the direction of Zeus, thereupon, he and his wife flung stones behind them, and those which Deucalion cast became men, and those thrown by Pyrrha women; from which circumstance the Greeks derived the name for "people" (λαός) from λᾶας, "a stone" (Apollod. i. 7, 2).

This narrative restricts the general deluge to Greece proper, perhaps originally to Thessaly; and it most incongruously represents others as having escaped as well as Deucalion; while at the same time, it intimates that he and his wife alone had been preserved in the catastrophe. The circumstance of the ark is thought by some to be borrowed from the Mosaic account, and to have been learned at Alexandria, for we elsewhere find the dove noticed. "The mythologists," says Plutarch, "inform us that a dove let fly out of the ark was to Deucalion a sign of bad weather if it came in again, of good weather if it flew away" (Plut. *De Sollert. An.*). The sacrifice and the appearance of Hermes likewise strongly remind us of Noah. (See, also, the article APAMEA.) The Latin writers take a different view of the deluge. According to them it overspread the whole earth, and all animal life perished except Deucalion and Pyrrha, whom Ovid, who gives a very poetical account of this great catastrophe, conveys in a small boat to the summit of Parnassus; while others make Aetna or Athos the mountain which yielded them a refuge (Ovid, *Met.* i. 253 foll.; Hyg. *Fab.* 153; Serv. *ad* Verg. *Eclog.* vi. 41). According to Ovid they consulted the ancient oracle of Themis respecting the restoration of mankind, and received the following response: "Depart from the fane, veil your heads, loosen your girded vestments, and cast behind you the great bones of your parent" (*Met.* i. 381 foll.). They were at first horror-struck at such an act of impiety, but at length Deucalion understood the words of the oracle as referring to the earth, the common mother of all. Rationalizing mythologists make the story an allegory in which Deucalion represents water (as if from δεύω), and Pyrrha, fire (πῦρ). The meaning of the legend will then be, that when the passage through which the Peneus carries off the waters that run into the vale of Thessaly, which is on all sides shut in by lofty mountains, had been closed by some accident, they overflowed the whole of its surface, till the action of subterranean fire opened a way for them. According to this view of the subject, then, the deluge of Deucalion was merely a local one; and it was not until the time of Ptolemy Philadelphus, when the Hebrew Scriptures became known to the Greeks, that some features borrowed from the universal deluge of Noah were incorporated into the story of the Thessalian flood. See Harcourt, *Doctrine of the Deluge* (London, 1838); Sayce, *Fresh Light from the Ancient Monuments* (London, 1886); Motais, *Le Déluge Biblique* (Paris, 1887).

Deunx. Eleven ounces, eleven twelfths of the *as* (q. v.), not represented by a coin; or eleven twelfths of anything (Varr. *L. L.* v. 172; Cic. *Caecin.* 6, 17).

Deva. (1) Now Chester; the principal town of the Cornii in Britain, on the Seteia (Dee). A number of Roman remains are to be seen at Chester, preserved in the Grosvenor Museum. (2) Now the Dee; an estuary in Scotland, on which stood the town Dovanna, near the modern Aberdeen.

Deverbium. See DIVERBIUM.

Deverra. One of the three goddesses worshipped by the Italians as protecting new-born children against the mischievous intrusion of the

god Silvanus (q. v.). The two divinities who joined with Deverra in this function were Intercidona and Picumnus. See August. *De Civ. Dei*, vi. 9.

Deversorium. See CAUPONA.

Devotio. A Roman religious ceremony, by virtue of which a general whose army was in distress offered up as an atonement to the gods below, and a means of averting their wrath, the army, city, and land of the enemy; or some soldier in the Roman army; or even himself, as was the case with the Decii. (See DECIUS.) The general, standing on a spear and with veiled head, repeated a solemn formula dictated to him by the Pontifex. If the city and land of the enemy were offered, the gods were solemnly invited to burn the land or city. (See EVOCATIO.) The fate of the devoted person was left in the hands of the gods. If he survived, an image at least seven feet high was buried in the ground and a bloody sacrifice offered over it; he was meanwhile held incapable in future of performing any other religious rite, either on his own behalf or on that of the State.

Dexippus (*Δέξιππος*). (1) P. HERENNIUS, a Greek historian and rhetorician, born in Attica in the third century A.D. He held high office in Athens, and in the year 262, when the Goths invaded Greece, distinguished himself against them. He died about A.D. 280. Photius gives some account of three historical works by Dexippus—a history of Macedonia from the time of Alexander the Great; a general chronological history from the earliest times down to the year A.D. 268; and, finally, an account of the wars with the Goths in which Dexippus had himself fought. The fragments of these works, which are fairly numerous, are included in the collection of *Scriptores Historiae Byzantinae*. (2) A student of the philosopher Iamblichus, who wrote (about A.D. 350) a commentary on the Categories of Aristotle in the form of a dialogue, which is edited by Spengel (Munich, 1859).

Dextans. Ten ounces, ten twelfths of the *as* (q. v.), not represented by a coin; or ten twelfths of anything (Varr. *L. L.* v. 172; Suet. *Ner.* 32).

Dextrālé and **Dextrocherium** (from *dexter* and *χείρ*, "the hand"). Late Latin words, signifying a bracelet. See ARMILLA.

Dextrale. (From a Pompeian Painting.)

Dia (*Δία*). The daughter of Dioneus and wife of Ixion (q. v.), by whom (or, according to others, by Zeus) she became the mother of Pirithoüs (q. v.).

Dia (*Δία*). The ancient name of Naxos (q. v.).

Diabateria (*διαβατήρια*). A sacrifice offered to Zeus and Athenê by the Spartan kings on passing the frontier of Laconia in command of an army (Xen. *Rep. Lac.* 13, § 2 foll.). If the victims were unfavourable they disbanded the army and returned home (Thuc. v. 54, 55, 116). We also find *διαβατήρια* offered by a Roman general in passing a swollen river (Plut. *Lucull.* 24).

Diabathron (*διάβαθρον*). A Greek slipper.

Diablintes. A branch of the Aulerci (q. v.).

Diacria (*Διακρία*). A mountainous district in the northeast of Attica, including the plain of Marathon. See ATTICA.

Diadēma (*διάδημα*). The white fillet round the brow which was the emblem of sovereignty from the time of Alexander the Great. Caesar refused it when offered him by Antonius, and it was not,

Diadema on Heads of Seleucus II., King of Syria (left-hand figure), and of Ptolemaeus II., King of Egypt (right-hand figure). (Coins in British Museum.)

in consequence, worn by the Roman emperors, except in a few cases. But when the seat of government was removed to Byzantium, Constantine adopted the Greek emblem of royalty (Aurel. Vict. 41).

Before the diadem was worn by the Roman emperors as a symbol of sovereignty, it was used as a head-dress by Roman women (Isid. *Orig.* xix. 31).

Diadŏchi. ("Successors," from *διαδέχομαι*.) A name given to the successors of Alexander the Great.

Diadŏseis (*διαδόσεις*). See DIANOMAE.

Diadumeniānus or **Diaduměnus**, M. OPELIUS. A son of the Roman emperor Macrinus, who bestowed upon him in A.D. 217 the titles of Caesar, Princeps Iuventutis, Imperator, and Augustus. After the victory of Elagabalus, he was sent to Artabanus, king of the Parthians, and was murdered at about the same date as that of his father's death. Diadumenianus is said by Lampridius to have been a most marvellously beautiful child, so that the biographer compares his face to a heavenly star; but if so, the coins on which his likeness appears do him a sad injustice.

Diaeta (*δίαιτα*). See DOMUS, p. 546.

Diaetētae (*διαιτηταί*). Public arbitrators at Athens, to whom the parties in a private suit might apply if they wished to avoid a trial before the Heliastae (q. v.). For this object a considerable number of citizens of advanced age were nominated. They received no salary, but a fee of a drachma from each party and as much from the complainant for every adjournment. In case of misconduct they could be called to account. The diaetetae were assigned to the parties by lot by the magistrate who (according to the character of the case) would have presided in the court of the Heliaea. To this magistrate (in case the parties did not appeal to the Heliaea against it), the diaetetes handed in the sentence he had delivered as the result of his investigation, to have it signed and published and thus made legal. The name of diaetetae was also given to private arbitrators named by agreement between the parties, on the understanding that their decision was to be accepted without appeal.

See Perrot, *Essai sur le Droit Public d'Athènes* (1869); and Thalheim, *Rechtsalterth.* pp. 98, 99 (1884).

MARSHALL HIGH SCHOOL
LIBRARY
MINNEAPOLIS

Diaetetĭca (*διαιτητική*). One of the principal branches into which the ancients divided the art and science of medicine. The word is derived from *δίαιτα*, which meant much the same as our word diet. It is defined by Celsus (*De Medic.* Praef. lib. i.) to signify that part of medicine which cures diseases by means of regimen and diet. Taken strictly in this sense, it would correspond very nearly with the modern "dietetics," and this is the meaning which it always bears in the earlier medical writers.

In later times the comic poet Nicomachus (*Fr.* 1, 30 M. *ap.* Ath. vii. p. 291 c) introduces a cook who, among his other qualifications, implies that he is a physician; but no attention seems to have been paid to eating as a branch of medicine before the date of Hippocrates. Homer represents Machaon, who had been wounded in the shoulder by an arrow (*Il.* xi. 507) and forced to quit the field, as taking a draught composed of wine, goat's-milk cheese, and flour, which probably no surgeon in later times would have prescribed in such a case. Hippocrates seems to claim for himself the credit of being the first person who had studied this subject, and says that "the ancients had written nothing on it worth mentioning" (*De Rat. Vict. in Morb. Acut.* § 1, vol. ii. p. 26, ed. Kühn). Among the works forming the Hippocratic collection, there are four that bear upon this subject, of which, however, only one (viz. that just quoted) is considered to be undoubtedly genuine. It would be out of place here to attempt anything like a complete account of the opinions of the ancients on this point, so that in this article only such particulars are mentioned as may be supposed to have some interest for the classical reader.

In the works of Hippocrates and his successors almost all the articles of food used by the ancients are mentioned, and their real or supposed properties discussed, sometimes quite as fancifully as by Burton in his *Anatomy of Melancholy*. In some respects they appear to have been much less delicate than the moderns, as we find the flesh of the fox, the dog, the horse, and the ass spoken of as common articles of food. Beef and mutton were of course eaten, but the meat most generally esteemed was pork (see Oribas. *Coll. Med.* i. p. 585, Daremberg). A morbid taste for human flesh appears to have been secretly indulged in the time of Xenocrates (first century A.D.); so that the unnatural practice was forbidden by an imperial edict, which decree serves to illustrate the "strange and revolting anecdote," as Milman calls it, of the wild cry that, in a time of scarcity amounting to famine, assailed the ears of the emperor Attalus, "Fix the tariff for human flesh" (*pone pretium carni humanae*, Zosim. vi. 11).

With regard to the strength or quality of the wine drunk by the ancients, we may arrive at something like certainty from the fact that Coelius Aurelianus mentions it as something extraordinary that Asclepiades at Rome in the first century B.C. sometimes ordered his patients to double and treble the quantity of wine, till at last they drank half wine and half water (*De Morb. Chron.* ii. 7, p. 386). From this it appears that wine was commonly diluted with five or six times its quantity of water. Hippocrates also in particular cases recommends wine to be mixed with an equal quantity of water, and Galen approves of the proportion. According to Hippocrates, the proportions in which wine and water should be mixed together vary according to the season of the year; for instance, in summer the wine should be most diluted, in winter the least so. In one place the patient after great fatigue is recommended to get himself drunk once or twice, in which passage it has been doubted whether actual intoxication is meant or only the "drinking freely and to cheerfulness," in which sense the same word is used by St. John (ii. 10) and the Septuagint (Gen. xliii. 34; Cant. v. 1; and perhaps Gen. ix. 21).

Exercises of various kinds and bathing are also much insisted on by the writers on diet and regimen, but for further particulars on these subjects the articles BALNEAE and GYMNASIUM must be consulted. It may, however, be added that the bath could not have been very common, at least in private families, in the time of Hippocrates, as he says that "there are few houses in which the necessary conveniences are to be found" (*De Rat. Vict. in Morb. Acut.* § 18).

Another very favourite practice with the ancients, both as a preventive of sickness and as a remedy, was the taking of an emetic from time to time. In one of the treatises of the Hippocratic collection the unknown author recommends it two or three times a month. Celsus considers it more beneficial in the winter than in the summer (*De Medic.* i. 3, p. 28), and says that those who take an emetic twice a month had better do so on two successive days than once a fortnight. In the first century B.C. this practice was so commonly abused that Asclepiades rejected the use of emetics altogether. See Plin. *H. N.* xxvi. § 17.

It was the custom among the Romans to take an emetic immediately before their meals, in order to prepare themselves to eat more plentifully; and again soon after, so as to avoid any injury from repletion. Cicero, in his account of the day that Caesar spent with him at his house in the country (*Ad Att.* xiii. 52), says, "Accubuit, *ἐμετικὴν* agebat (*he was meditating an emetic*), itaque et edit et bibit *ἀδεῶς* et iucunde"; and this has by some persons been considered a sort of compliment paid by Caesar to his host, as it intimated a resolution to pass the day cheerfully and to eat and drink freely. He is represented as having done the same thing when he was entertained by King Deiotarus (Cic. *Pro Deiot.* 7, § 21). The glutton Vitellius is said to have preserved his own life by constant emetics, while he destroyed all his companions who did not use the same precaution; so that one of them, who was prevented by illness from dining with him for a few days, said, "I should certainly have been dead if I had not fallen sick" (Dio Cass. lxv. 2). It might truly be said, in the strong language of Seneca, *Vomunt, ut edant; edunt, ut vomant* (*Cons. ad Helv.* 9, § 10; cf. *De Provid.* 3, § 11; *Ep.* 95, § 21). By some, the practice was thought so effectual for strengthening the constitution that it was the constant regimen of all the *athletae*, or professed wrestlers, trained for the public shows, in order to make them more robust. Celsus, however, warns his readers against the too frequent use of emetics without necessity and merely for luxury and gluttony, and says that no one who has any regard for his health and wishes to live to old age ought to make it a daily practice. See Saalfeld, *Küche und Keller in Alt-Rom* (Berlin, 1883); and the articles ATHLETAE; CENA; MEDICINA; VICTUS; VINUM.

Diagŏras (Διαγόρας). (1) A native of the island of Melos and a follower of Democritus. Having been sold as a captive in his youth, he was redeemed by Democritus and trained up in the study of philosophy. He attached himself also to lyric poetry and was much distinguished for his success. His name, however, has been transmitted to posterity as that of an avowed advocate for the rejection of all religious belief. It is expressly asserted by ancient writers that when, in a particular instance, he saw a perjured person escape punishment, he publicly declared his disbelief of Divine Providence, and from that time spoke of the gods and all religious ceremonies with ridicule and contempt. He even attempted to lay open the sacred Mysteries, writing two books on the subject, called Φρύγιοι. A price at last was set upon his head, and he fled to Corinth, where he died. He lived about 416 years before Christ (Cic. *N. D.* i. 23; iii. 37; Val. Max. i. 1, § 7). (2) An athlete of Rhodes, who gained the prize in pugilism at the Olympic Games, B.C. 464. His victory was celebrated by Pindar in an ode which is still extant (Olymp. vii.), and which is said to have been inscribed in golden letters in the temple of the Lindian Athené at Rhodes. According to Pindar, he twice obtained the victory in the games of Rhodes, four times at the Isthmian, and was successful also at the Nemean and other contests. Aulus Gellius (iii. 15) informs us that he saw his three sons crowned on the same day at the Olympic Games and expired through joy.

Diagrăpheis (διαγραφεῖς). See Eisphora.

Dialects. A dialect, in the usual acceptance of the word, is a form of speech used by a limited number of people, or within a limited region, and differing from the language of the main branch of the race by reason of local usages due to separation and special conditions. The term also denotes any of the divisions of a linguistic family. It sometimes happens that those who use a particular dialect of a language come to be politically the most powerful branch, with greater wealth, refinement, and literary cultivation. Their dialect then ultimately becomes the standard form of the language, while the other variations of it sink to a subordinate position, and are then spoken of as *dialects*, and the first, which was originally of no more authority, is accepted as the normal form of speech. Thus, Latin became the great standard language of Italy, while its sister languages, Umbrian and Oscan, sank to the position of dialects. Thus, too, in England, the so-called Middle English, being spoken in that part of the country where the two great universities were situated, and being used by the early writers of the country, gradually became the tongue of the educated all over England and the literary form of speech, while the Northern English and the Southern English ceased to be heard except in the mouths of the uneducated. In Greek, the finest productions of literature were, on the whole, those of the Ionic Greeks, so that a form of the Ionic dialect (Attic) became the standard with which all others were compared, though the Doric and Aeolic, being used by many famous writers, never became, like Lowland Scotch or the Sussex speech in England, discredited and vulgar. Dialectic differences when perpetuated and intensified by continued separation and lack of intercourse between the peoples who use them at last develop into different languages. See Indo-European Languages.

I. Greek Dialects.—The three main divisions of the dialects of Greece are usually said to be the Aeolic, Ionic, and Doric. The exact lines of division are, however, obscure, for one dialect often borrows from another when spoken by contiguous peoples. It must be remembered, also, that the racial divisions of the Greeks do not always coincide with the dialectic divisions; that there were hundreds of minor dialects of which no account can be taken here; and that these dialects shaded off one into the other by almost imperceptible gradations. Scholars differ most as to what dialects are to be called Aeolic, some restricting the name to the Lesbian and Asiatic. Brugmann classes Northwest Greek (of Phocis, Locris, Aetolia, Acarnania, Phthiotis, and Epirus), Elean, Arcadian-Cyprian, and Pamphylian as separate dialects (*Comp. Gram.* i. p. 6).

A. Aeolic.—The Aeolic dialect was spoken in Macedonia, North Thessaly, Boeotia, Arcadia (?), Elis, Cyprus, and the northern part of Asiatic Hellas. Our knowledge of the *Lesbio-Aeolic* comes partly from inscriptions and partly from the fragments of Alcaeus and Sappho quoted by the grammarians and others, and from the statements of the grammarians themselves. Three of its inscriptions are of great importance—one found at Mitylené recording the return of certain exiles in the time of Alexander the Great (*C. I. G.* 2166), one found at Pordoselena (*C. I. G.* 2166 *c.*), and a third found at Eresus (edited by Conze and Sauppe). The chief peculiarities of the Aeolic dialect are (1) a strong tendency to barytone pronunciation (e. g. σόφος, θῦμος, Ἀχίλλευς, for σοφός, θυμός, Ἀχιλλεύς); (2) the retention of the digamma (q. v.); (3) the loss of the dual; a second singular ending *-σθα* in verbs (e. g. ἔχεισθα); (4) a third plural ending in *-ισι*; (5) ζ appears as *σδ*; (6) the absence of the rough breathing. Its general character was lightness and rapidity of utterance; the Aeolic poets abound in anapaests and dactyls. The Athenians regarded the Lesbian language as somewhat barbaric (Plat. *Protag.* 341 C.). The *Thessalian-Aeolic*, which is known to us by a few inscriptions only, is a sort of bridge between the Lesbian and the Boeotian (Collitz), doubling the liquids, changing *a* to *o*, and using an infinitive in *-μεν*. The *Boeotian-Aeolic* is known from inscriptions and from the fragments of Corinna, though in these it is mixed with Ionic forms, as is also true of the Boeotian passages in the *Acharnians* of Aristophanes. The Boeotian-Aeolic differed from the Lesbian chiefly in the following particulars: (1) In not throwing back the accent; (2) in a fondness for aspiration; (3) in retaining *τ* or *θ* where the Lesbian changes it to *σ*; (4) in using *δδ* for *σδ* = *ζ*; (5) in allowing the uncontracted *-ao* and *-αων* to stand; (6) in using such genitives as ἐμοῦς, τεοῦς, for which the Lesbian has ἔμεθεν, σέθεν. (See Beerman in Curtius's *Studien*, ix. p. 85.) The *Elean-Aeolic* is known from several inscriptions, such as the bronze plate found at Olympia by Gell (*C. I. G.* 11) and the inscription of Damocrates (Kirchhoff in the *Archaeol. Zeit.* 1876). The *Arcadian-Aeolic* is nearer to the Doric than to the Lesbian in its forms. It has *-αν* for the gen. sing. masc. of a-nouns, *-οι* as a dative (or locative) sing. of o-nouns, *ἰν* for εἰς and ἐν, and *-τοι* as a third sing. middle ending (e. g. γένητοι). (See Schrader in Curtius's *Studien*, x. pp. 273–280.) The *Cyprian* dialect is probably at the bottom Arcadian-Aeolic

(Herod. vii. 90; Pausan. viii. 5, 2)—a theory strengthened by the study of the Cypriote inscriptions by Birch, Deecke, Siegismund, Hall, Voigt, and others. See CYPRUS.

B. DORIC.—The Doric dialect was used in Doris, Argos, Laconia, Messenia, Crete, Sicily, Lower Italy (Magna Graecia), and the southern part of Asiatic Hellas. Ahrens recognizes two types—the severer Doric (spoken in Laconia, Crete, Cyrené, and Magna Graecia); and the milder Doric, influenced by Aeolic or Ionic usage (spoken in Argolis, Messenia, Megara, northern Greece, Asia Minor, and Sicily). It was used by the bucolic poets (Theocritus, Bion, Moschus), and by Pindar, Alcman, and others. Its principal features are (1) a tendency to use *ᾱ* for *η* and for *ω*; (2) the use of *-μες* (for *-μεν*) as a first plural verbal ending; (3) the use of *-ντι* as a third plural ending; (4) a strong tendency to oxytones (e. g. *ἐλέγον, ἀνθρώποι, παίδες*, for *ἔλεγον, ἄνθρωποι, παῖδες*); (5) the use of the digamma, which it retained longer than did any other Greek dialect; (6) peculiarities of contraction, such as *η* for *ει*, *ω* for *ου* (*ᾆς* for *εἶς*, *ᾆμεν* for *ἔσμεν*); (7) the shortening of long final syllables, usually when the length is due to a compensation for the loss of a consonant (e. g. *πός* for *πόδ-ς*, *λέγες* for *λέγεις*, *τίκτεν* for *τίκτειν*, etc.); (8) a free use of assimilation. There are many important inscriptions in Doric Greek. Chief among them are the famous Tables of Heraclea, found in the bed of the river Cavone in 1732 and 1735, and now partly in the Museo Nazionale at Naples and partly in the British Museum. Another (in the *Messenian-Doric*) was found at Andania, and though of late date (B.C. 95 ?) is valuable for its fulness and for some of the forms it exhibits. The *Megarian-Doric* is known from inscriptions at Byzantium; the *Corinthian* from inscriptions of Corcyra and Syracuse, both colonies of Corinth; the *Locrian* from the bronze tablet found at Oeanthia, and dating from the fourth century B.C.; the *Cretan* from treaty-tablets and others found in Crete (see GORTYN) and among the ruins of the Temple of Dionysus on the island of Teos. The general character of the Doric speech was slowness, deliberation, and fulness of sound, with the *πλατειασμός* which the Dorians shared with the Boeotians.

C. IONIC.—The character of the Ionic dialect, in its several subdivisions, gives striking evidence of its long-continued employment in literature. Its smoothness and harmony, its rich and full vowel-system, its variety and plasticity, all mark it out as eminently fitted for noble and expressive utterance in both prose and verse. It was used by the Greeks of Attica and Ionia and in most of the islands of the Aegean Sea. Under this head we may consider (1) the Old Ionic (Epic), (2) the New Ionic, (3) the Attic, and (4) the Common Dialect (New Attic).

The *Old Ionic* or *Epic* dialect is the Ionic of the poems of Homer. Strictly speaking it was not a genuine, popular form of speech in common use, but a mixed dialect, developed by the poets for artistic purposes. Its base is doubtless the spoken language of the district in which the *Iliad* and *Odyssey* were composed; but interwoven with this are forms and usages partly borrowed from other dialectic sources and partly modified by poetic license. Thus there is a strong Aeolic element in Homer, due perhaps in part to the Aeolic affinities of the Ionians of Smyrna, but cherished also because of the exigencies of the dactylic hexameter. Every page of the Homeric poetry shows a peculiar multiplicity of forms of the same word. Thus we find *ἵππου* and *ἵπποιο*, *μάχης* and *μάχῃσι*, *ἔπεσσι* and *ἔπεσι*, *ἥρωοι* and *ἡρώεσσι*: in the pronouns *ἐμοῦ, ἐμεῦ, ἔμεθεν*, and *ἐμεῖο, ἄμμες*, and *ἡμεῖς*. The augment is used or disused at pleasure, forms are contracted or not, diphthongs are shortened before succeeding vowels, the metrical value of vowels varies, both hiatus and elision are freely used—in a word, the widest license prevails and stamps the dialect as one established for the convenience of poets and not for the common use of men. "The polish of the style, the artistic perfection of the composition, and the elaborate nature of the syntax point back to a long series of years of development, during which poets and schools of poets composed and passed on by oral tradition many lays . . . which in course of time grew into more complete epic poems. Forms of speech had not then been fixed by the general use of writing; the poet willingly adopted any of the floating forms in common use around him, or caught and preserved for his purpose those older forms bequeathed by past generations: so that in this way we have an explanation of the remarkable fact that in Homeric Greek there are forms in use of such different ages—archaisms, as we might say, by the side of modernisms" (Merry). Some of the peculiarities of the Epic language, however, which were at one time ascribed to the license of the poet, are now properly recognized as the usage of the oldest Greek. The most interesting of these is the effect produced by the earlier existence of a spirant, no longer written, upon the quantity of a preceding syllable. This lost letter is sometimes *j* and sometimes *σ*—e. g. *θεὸς (j)ως, εἰς ἅλα (σ)αλτο, ἔτι γὰρ (σ)εχον*. The same is true of the digamma, to which, indeed, as late as the time of I. Bekker all such cases were ascribed. Real examples of the influence of the digamma in making position or in preventing elision are *φίλα Fείματα δύσω, οὕτω δὴ Foἶκονδε, ἔπειτα Fάναξ*. See DIGAMMA.

This complex and conventional dialect founded upon an Ionic base was disseminated throughout all Greece by the rhapsodes, or public reciters, who chanted the epics at the great public assemblies and festivals. Its forms and expressions colour the compositions of authors of very different ages and various styles. It forms the basis of the lyric language of Stesichorus and Pindar; it pervades the prose of Herodotus; and it tinges the style of the early Attic dramatists with a distinctly epic hue. See EPOS.

The *New Ionic* dialect is found in the writings of the iambic elegiac poets Archilochus, Callinus, and Mimnermus, and in the prose of Herodotus and Hippocrates. This dialect has the following distinctive peculiarities: (1) the retention of the earlier *κ* for *π* in interrogative and relative words (e. g. *κοῖος, ὁκόσος*); (2) the interchange of *ει* and *ου* with the simple vowels (e. g. *εἴρομαι, ξεῖνος*, but *μέζων, δέξω*; and *μοῦνος, οὔνομα*, etc.); (3) the contraction of *οη* into *ω* (e. g. *βῶσαι, ἐννώσας*); (4) the use of *ηϊ* for *ει* (e. g. *βασιληΐη*); (5) crasis (e. g. *ὠνήρ, ὦλλοι*); (6) the disuse of the appended *ν*; (7) the use of *-αται, -ατο* for *-νται, -ντο* whenever these are added directly to the tense-stem (e. g. *ἀπίκαται, τιθέαται*); (8) the genitive plural in *-εων* for the Homeric *-άων* and Attic *-ῶν*.

The *Attic* dialect is probably a modification of the Ionic spoken before the founding of the Ionic colonies. It is to the student of literature the most important of all the forms of Greek, since it was used by Thucydides, Aeschylus, Xenophon, Plato, Sophocles, Euripides, Aristophanes, Lysias, Isocrates, Demosthenes, Aeschines, and many others of genius scarcely inferior to them. Attic occupies a middle ground between the harsher Doric and the softer Ionic, and was thus fitted to be the common speech of all cultivated Greeks, and is now used as the standard of comparison in the study of the Hellenic tongue. Literary Attic is divided into Old and New, the point of division being approximately the beginning of the Peloponnesian War (B.C. 431). The differences between the Old and the New are slight, and seem to point to a gradual adoption in literature of popular forms. The Old Ionic is seen in Thucydides and the tragedians; both the Old and the New are noticeable in Plato; while the comic writers and the orators show the usages of the New. It is in the New Attic that the Greek language reached the zenith of its grace, expressiveness, and symmetry, combining at once the σεμνότης of the Doric with the χάρις of the Ionic speech.

The general use of the Attic gradually led to its corruption, so that we find a modified form of it developed by the time of Alexander, which is known as the *Common* dialect (ἡ κοινὴ διάλεκτος). It was used by the Greek writers of later times, such as Aristotle, Polybius, Plutarch, Pausanias, Babrius, and Lucian — writers, however, who exhibit very different degrees of divergence from the Attic standard of purity.

The rise of the Alexandrian School (q. v.) of critics and grammarians did much to check the tendency to linguistic corruption in literature; but the popular speech, continually receiving additions from foreign sources and especially from the East, ultimately developed into a distinct idiom which is known as *Hellenistic Greek*, and which is the basis of the diction of the New Testament and also of the Septuagint. The variations from earlier standards exhibited in this form of speech are rather to be seen in the vocabulary than in the syntax; but the following come under the latter head: (1) a confusion in the use of moods (e. g. ἵνα with the present indicative, ὅταν with the past indicative); (2) a construction of cases unknown in Attic (e. g. γένεσθαι with the accusative, προσφωνεῖν with the dative); (3) a gradual disuse of the optative mood, for which the subjunctive is substituted.

The corruption of the spoken language went on continuously, much as in the case of the Latin. For centuries literature still struggled to preserve the usages of Attic or at least of the κοινὴ διάλεκτος, but at last this attempt ended, and the popular speech became also the language of literature, being first so used by Theodorus Ptochoprodromus, a monk of Constantinople, about A.D. 1160. From this date begins the history of modern Greek.

BIBLIOGRAPHY.—The first scientific treatment of the Greek dialects is found in the work of Ahrens, *De Graecae Linguae Dialectis*, 2 vols. (Berlin, 1839–1843). Many of his views require modification, however, owing to more recent investigations. Much valuable material will be found in Curtius's *Studien zur griechischen und lateinischen Grammatik*, 10 vols. (Leipzig, 1868–78); and Merzdorf's *Sprachwissensch. Abhandl.* (Leipzig, 1874). For the Homeric dialect see La Roche's edition of the *Iliad* (Berlin, 1870); D. B. Monro's *Grammar of the Homeric Dialect* (Oxford, 1882); and Seymour's *Introduction to the Homeric Language* (Boston, 1885). Examples are given by Cauer in his *Delectus* (Leipzig, 1883); Meister, *Die griechischen Dialekte* (Gött. 1882–89); and by Hoffmann, *Die griechischen Dialekte* (Gött. 1891). See also Boisacq, *Les Dialectes Doriens* (Paris, 1891); and Smyth, *Greek Dialects*, part i. Ionic (Oxford, 1894). For Hellenistic and vulgar Greek see Winer's *Grammar*, part ii. pp. 69–128, ed. Moulton; Mullach, *Grammatik der griechischen Vulgarsprache* (Berlin, 1856); and Sophocles, *Glossary of Later and Byzantine Greek* (Boston, 1870).

II. ITALIAN DIALECTS.—The dialects spoken in Italy in ancient times and surely traceable to an Aryan stock may be roughly divided into two main groups—the Umbro-Sabellian and the Latin-Faliscan. Their general relations and divisions are indicated in the diagram given under ITALIA, p. 892. Of the Umbro-Sabellian group, the principal dialects are the Umbrian and the Oscan. See OSCI; UMBRIA.

The Latin and the Faliscan are so closely allied that the Faliscan may be roughly regarded as only a rustic variation of the Latin. It was used by the people of Falerii, a city situated within Etrurian territory, and probably one of the twelve confederated cities of the Etruscan League. That the language of the Falisci was not Etruscan or cognate with Etruscan was noticed by the ancients (e. g. Strabo, v. p. 266; Dionys. Hal. i. 21; Cato *ap.* Pliny, *H. N.* iii. 5, § 1), and inscriptions found in the present century have confirmed its close affinity with Old Latin. Thus the Falisci used the Latin R instead of the Etruscan and Umbro-Sabellian character Q, and possessed also the Old Latin Z. The principal phonetic peculiarity distinguishing the Faliscan from the Latin is the representation of an original *bh* medial by *f*, as in *lofertas* for *libertas*. See Deecke, *Die Falisker* (Strassburg, 1885); and Conway's *Italic Dialects* (announced in 1896).

Latin was originally spoken only in the plain of Latium (q. v.), and seems not to have developed any subordinate dialects. For its colloquial and rustic forms and usages, see SERMO PLEBEIUS. The best grammars of the language are those of Roby (2 vols., Oxford, 1881); Kühner, *Ausführliche Grammatik* (2 vols. Hanover, 1877–78); Stolz and Schmalz in Iwan Müller's *Handbuch der klassischen Alterthumswissenschaft*, vol. ii. (Nördlingen, 1885); and Gildersleeve, revised by Lodge (N. Y. 1894).

Besides the Latin-Faliscan and the Umbro-Sabellian, Greek was spoken in the Greek cities of southern Italy (Magna Graecia), Keltic by the Gaulish peoples in the north, Etruscan by the inhabitants of Etruria, and at one time in Campania and the plain of the Eridanus (Po); while at an early period, in the extreme southeast, inscriptions show the existence of a language whose affinities have not yet been wholly determined, but which is usually styled Messapian or Iapygian, and regarded as cognate with the language of the Veneti in the northeast of Italy. For these dialects, see the articles CELTAE; ETRURIA; MESSAPIA; VENETI.

Diālis Flamen. See FLAMEN.

Dialŏgus (διάλογος). A dialogue. As a form of literary composition, apart from its purely dra-

matic use, the dialogue plays an important part in the history of Greek and Roman letters. The vividness and pungency of rapid question and reply were fully appreciated by the earliest writers. The Homeric poems abound in passages whose great dramatic force is due to the use of this form. Herodotus continually employs it to give picturesqueness and life to his narrative; and this is true even of Thucydides, in whose history the so-called Melian dialogue at the close of the fifth book, the dialogue of Archidamus with the Plataeans (ii. 71–74), and of the Ambraciot herald and the Acarnanian soldiers of Demosthenes (iii. 113) are striking examples. The great popularity of the drama must have been a direct stimulus to the use of the dialogue in prose literature; so that it is not surprising to find Plato employing it in his philosophical writings, thus following the example of Alexamenus of Teos and Zeno of Elea (cf. Mahaffy, *Hist. of Class. Gk. Lit.* ii. pp. 170–174). In this way the philosophical argument is worked out in a most attractive form, the attack and defence excite a lively interest, and the reader is artfully made to accept the truth of the doctrine by witnessing, as it were, the utter overthrow of its assailants. The *ἠθοποιΐα*, or character-painting, of the dialogues of Plato has never been surpassed, even by the greatest dramatists. The subtlest touches are here given with wonderful deftness, and a whole gallery of portraits is presented to us as varied, as delicately drawn, and as life-like as those of Euripides, of Molière, or of Shakspeare. In some of them, however (e. g. the *Parmenides*, *Protagoras*, and *Symposium*), the artistic mistake has been made of reporting the conversation in the *oratio obliqua;* and in these the sustained indirectness of construction, the crowded infinitives, and the absurdity of supposing one man to repeat from memory the whole of an intricate dialogue, greatly diminish the pleasure of the reader.

The dialogues of Aristotle are very different from those of Plato, and are probably a reversion to the models of Alexamenus and Zeno. The form is still nominally that of a conversation, but in fact the *diverbium* appears only in the introductory parts, and after the argument is once under full headway it becomes an almost unbroken monologue. The conversational *proœmium* is, therefore, rather a device to secure the attention of the reader, than an essential part of the work as a whole; and the *ἠθοποιΐα* is conspicuously absent.

Such of the philosophical and rhetorical writings of Cicero as adopt the form of the dialogue are decidedly Aristotelian rather than Platonic in their arrangement and in their lack of dramatic ability. Such are the treatises *De Senectute*, *De Amicitia*, the *Brutus*, the *Tusculanae Disputationes*, the *De Oratore*, and the *De Republica*.

The so-called *Dialogi* of L. Annaeus Seneca (*Dialogorum Libri xii.*) get the name from the frequent introduction of a second speaker with the words *inquis*, *inquit*, *dicet aliquis*, etc., but they are in no true sense of the word dialogues at all.

In Latin literature the title Dialogus is given *par excellence* to a work of Tacitus (*Dialogus de Oratoribus*), a conversation between a number of literary celebrities of the time of Vespasian, who in it discuss the decay of oratory under the Empire. The style shows that the dialogue was composed at the time when the writer was in the Ciceronian period of his studies and was endeavouring to imitate the diction of that great master. Hence it differs in many respects from the later Tacitean compositions, so that some critics from the time of Lipsius have even suspected its authenticity; but in a letter of Pliny (ix. 10, 2) addressed to Tacitus is found an evident allusion to the *Dialogus*, even did not a careful study of the piece itself yield sufficient evidence of the authorship. See Weinkauff, *Untersuchungen über den Dialogus des Tacitus* (Cologne, 1880); and the elaborate work of Hirzel, *Der Dialog*, 2 vols. (1895). Editions are those of Ritter (Bonn, 1859), Michaelis (Leipzig, 1868), Peter (Jena, 1877), Andresen (Leipzig, 1879), Bährens (Leipzig, 1881), Peterson (Oxford, 1893), Bennett (Boston, 1894), and Gudeman (Boston, 1894).

Diamartyria (*διαμαρτυρία*). See Anacrisis.

Diamastigōsis (*διαμαστίγωσις*). A solemnity performed at Sparta at the festival of Artemis Orthia (Pausan. iii. 16, § 6). The ceremony was this: Spartan youths (*ἔφηβοι*) were scourged on the occasion at the altar of Artemis, by persons appointed for the purpose, until their blood gushed forth and covered the altar. The scourging itself was preceded by a preparation by which those who intended to undergo the diamastigosis tried to harden themselves against its pains. Pausanias describes the origin of the worship of Artemis Orthia, and of the diamastigosis, in the following manner: A wooden statue of Artemis, which Orestes had brought from Tauris, was found in a bush by Astrabacus and Alopecus, the sons of Irbus. The two men were immediately struck mad at the sight of it. The Limnaeans and the inhabitants of other neighbouring places then offered sacrifices to the goddess; but a quarrel ensued among them, in which several individuals were killed at the altar of Artemis, who now demanded atonement for the pollution of her sanctuary. From henceforth, human victims were selected by lot and offered to Artemis, until Lycurgus introduced the scourging of young men at her altar as a substitute for human sacrifices.

The diamastigosis, according to this account, was a substitute for human sacrifice, and Lycurgus made it also serve his purposes of education, in so far as he made it a part of the system of hardening the Spartan youths against bodily sufferings (Plut. *Lyc.* 18).

Diāna (from the root of *dies*). An ancient Italian deity, whose name is the feminine counterpart of Ianus (originally Dianus). She was the goddess of the moon; of the open air and open country with its mountains, forests, springs, and brooks; of the chase; and of childbirth, since the moon was believed to foster growth (Cic. *N. D.* ii. 19). In the latter capacity she, like Iuno, bore the second title of Lucina. Thus her attributes were akin to those of the Greek Artemis, and in the course of time she was completely identified with her and with Hecaté, who resembled her. The most celebrated shrine of Diana was at Aricia (q. v.), in a grove (*nemus*), from which she was sometimes simply called Nemorensis (Plin. *H. N.* xix. 3, 33). This was on the banks of the modern lake of Nemi, which was styled the mirror of Diana. Here a male deity named Virbius (Ovid, *Fast.* vi. 756) was worshipped with her, a god of the forest and the chase. He was in later times identified with Hippolytus, the risen favourite of Artemis, and the oldest priest of the sanctuary (*Rex Nemorensis*, Suet. *Calig.* 35).

He was said to have originated the custom of giving the priest's office to a runaway slave, who broke off a branch from a particular tree in the precincts and slew his predecessor in office in single combat. In consequence of this murderous custom the Greeks compared Diana of Aricia with the Tauric Artemis, and a fable arose that Orestes had brought the image of that goddess into the grove. Diana was chiefly worshipped by women, who prayed to her for happiness in marriage or childbirth. The most important temple of Diana at Rome was on the Aventine, founded by Servius Tullius as the sanctuary of the Latin confederacy. On the day of its foundation (August 13) the slaves had a holiday. This Diana was completely identified with the sister of Apollo, and worshipped simply as Artemis at the Secular Games. (See Ludi.) A sign of the original difference, however, remained. Cows were offered to the Diana of the Aventine, and her temple adorned with cows', not with stags', horns, but it was the doe which was sacred to Artemis. See Artemis.

Diana.

Dianium. The modern Denia; a town in Hispania Tarraconensis on a promontory of the same name (now Cape S. Martin) founded by the Massilians. Here stood a celebrated temple of Diana, from which the town derived its name (Plin. *H. N.* iii. 5, 11).

Dianŏmae (*διανομαί*) or **Diadŏseis** (*διαδόσεις*). Public doles to the Athenian people, resembling the Roman *congiarium*. To these belong the free distributions of corn (Aristoph. *Vesp.* 715 foll.), the *cleruchiae*, the revenues from the mines, and the theoric fund. See Theoricon.

Diapsephĭsis (*διαψήφισις*). A political institution at Athens, the object of which was to prevent aliens, or such as were the offspring of an unlawful marriage, from assuming the rights of citizens. As usurpations of this kind were not uncommon at Athens (Plut. *Pericl.* 37), various measures had been adopted against them; but, as none of them had the desired effect, a new method, the *διαψήφισις*, was devised, according to which the trial of spurious citizens was to be held by the demotae within whose deme intruders (*παρέγγραπτοι*) were suspected to exist; for if each deme separately was kept clear of intruders, the whole body of citizens would naturally feel the benefit. Every deme, therefore, obtained the right or duty at certain times to revise its lexiarchic registers, and to ascertain whether any had entered their names who had no claims to the rights of citizens. The assembly of the demotae, in which these investigations took place, was held under the presidency of the demarch or some senator belonging to the deme. When the demotae were assembled, an oath was administered to them, in which they promised to judge impartially. The president then read out the names of the demotae from the register, asking the opinion of the assembly (*διαψηφίζεσθαι*) respecting each individual, whether they thought him a true and legitimate citizen or not. Any one then had the right to say what he thought or knew of the person in question, and when any one was impeached a regular trial took place (Demosth. *c. Eubul.* p. 1301, § 9). If a person was found guilty of having usurped the rights of a citizen (*ἀποψηφίζεσθαι*), his name was struck from the lexiarchic register, and he himself was degraded to the rank of an alien. But if he did not acquiesce in the verdict, but appealed to the great courts of justice at Athens, a heavier punishment awaited him if he was found guilty there also; for he was then sold as a slave, and his property was confiscated by the State (Dion. Hal. *De Isaeo*, c. 16, and the fragment of the speech *pro Euphileto* there preserved).

If by any accident the lexiarchic registers had been lost or destroyed, a careful scrutiny of the same nature as that described above, and likewise called *διαψήφισις*, took place, in order to prevent any spurious citizen from having his name entered in the new registers. See Demus.

The oldest known *διαψήφισις* occurred in B.C. 445 (Plut. *Pericl.* 37; Schol. Aristoph. *Vesp.* l. c.).

Diarium. A day's allowance for Roman slaves or soldiers. See Servus.

Diary. See Commentarius; Ephemeris.

Diasia (*τὰ Διάσια*). A great festival celebrated at Athens, without the walls of the city, in honour of Zeus, surnamed Μειλίχιος. The whole people took part in it, and the wealthier citizens offered victims (*ἱερεῖα*), while the poorer classes burned such incense as their country furnished (*θύματα ἐπιχώρια*). The Diasia took place in the latter half of the month of Anthesterion, with feasting, and was, like most other festivals, accompanied by a fair. The etymology of Διάσια given by most of the ancient grammarians (from Διός and ἄση) is false; the name is a mere derivative from Διός, as Ἀπολλώνια from Ἀπόλλων.

Diastȳlus (*διάστυλος*). See Templum.

Diatrēta (sc. *vasa*). Cups of glass mentioned by Martial (xii. 70, 9) of an egg-shape, and hence could not be put down, but must be emptied at a draught. See Vitrum.

Diaulos (*δίαυλος*). See Cursus.

Diazōma (*διάζωμα*). See Subligaculum.

Diazomăta (*διαζώματα*). The broad passages in the Greek theatre, which horizontally divided the successive rows of seats into two or three flights. The Latin equivalent is *praecinctio* (q. v.). See Theatrum.

Dicaea (*Δικαία*). A town in Thrace on Lake Bistonis (Herod. vii. 109).

Dicaearchia. See Puteoli.

Dicaearchus (*Δικαίαρχος*). (1) A native of Messana in Sicily. He was a scholar of Aristotle's, and is called a Peripatetic philosopher by Cicero (*De Off.* ii. 5); but, though he wrote some works on philosophical subjects, he seems to have devoted his attention principally to geography and statistics. His chief philosophical work was two dialogues on the soul, each divided into three books, one dialogue (Κορινθιακοί) being supposed to have been held at Corinth, the other at Mitylené (Λεσ-

βιακοί). In these he argued against the existence of the soul. The greatest performance, however, of Dicaearchus was a treatise on the geography, politics, and manners of Greece, which he called Βίος Ἑλλάδος, "The Life of Greece," a title imitated by Varro in his *Vita Populi Romani*. All the philosophical writings of Dicaearchus are lost. His geographical works have shared the same fate, except a few fragments. We have remaining one hundred and fifty verses of his Ἀναγραφὴ τῆς Ἑλλάδος, or "Description of Greece," written in iambic trimeters; and also two fragments of the Βίος Ἑλλάδος, one containing a description of Boeotia and Attica, and another an account of Mount Pelion. Dicaearchus's maps were extant in the time of Cicero (*Ep. ad Att.* vi. 2). Cicero was very fond of the writings of Dicaearchus, and speaks of him in terms of warm admiration (*Ad Att.* ii. 2). In one of the extant fragments Dicaearchus quotes Posidippus, and must therefore have been alive in B.C. 289. There is an edition of the fragments of Dicaearchus by Fuhr (Darmstadt, 1841).

Dicasterion (δικαστήριον). A word which indicates both the aggregate judges that sat in court and the place itself in which they held their sittings. For an account of the former, the reader is referred to the article DICASTES; with respect to the latter, our information is very imperfect. In the earlier ages there were five celebrated places at Athens set apart for the sittings of the judges who had cognizance of the graver causes in which the loss of human life was avenged or expiated—viz., the Areopagites and the Ephetae. These places were on the Areopagus; in the Palladium, a sacred place in the southeastern part of the city; in the Delphinium, a place sacred to the Delphian Apollo in the same district; in the Prytaneum, the ancient sacred hearth of the State, to the northeast of the Acropolis; and finally at Phreatto or Phreattys in the Piraeus, at the inlet of Zea (Schömann, *Antiq.* i. 465, Eng. trans.; and the great passage in Demosth. *c. Aristocr.* pp. 641–646). The antiquity of these last four is sufficiently vouched for by the archaic character of the division of the causes that were appropriated to each: in the first we are told that accidental deaths were discussed, in the second, homicides confessed, but justified; in the third there were quasi-trials of inanimate things, which, by falling and the like, had occasioned a loss of human life (see APSYCHON DIKÉ); in the fourth, homicides who had returned from exile and committed a fresh manslaughter were appointed to be tried. With respect to these ancient institutions, of which little more than the name remained when the historical age commenced, it will be sufficient to observe that in accordance with the ancient Greek feeling respecting homicide—viz. that it involved ceremonial pollution in all cases, irrespective of the degree of criminality—the presiding judge was invariably the king archon, the Athenian *rex sacrorum;* and that the places in which the trials were held were open to the sky, to avoid the contamination which the judges might incur by being under the same roof with a murderer (Antiph. *de Caed. Her.* § 11; cf. PHONOU DIKÉ).

The Heliaea properly so called, and probably, also, the majority of the Heliastic courts, were situated in the Agora; others in various parts of the city. The statement that there were not more than ten of these is probably erroneous. Besides the Heliaea, the first in numbers and importance, the following are named: the Parabyston (παράβυστον), in which the Eleven presided, and which is said to have received its name from its position in a remote quarter of the city; the Dicasterion of Metiochus, or Metichus, and that of Calleas (τὸ Καλλειον), probably named after their builders; the Green Court (Βατραχιοῦν) and the Red Court (Φοινικιοῦν), the Middle Court (Μέσον), the Greater Court (Μεῖζον), the New Court (Καινόν), the Triangular Court (Τρίγωνον), and the Dicasterion at the holy place of Lycus (ἐπὶ Λύκῳ), probably near the Lyceum without the city. Dicasteries near the walls and in the street of the Hermoglyphi are mentioned with no further indication of their name. The Odeum, too, a building erected by Pericles and properly destined for musical performances, was used for the sittings of Heliastic courts; and so, probably, were other places of which no mention is found. The dicasts sat upon wooden benches, which were covered with rugs or matting (ψιαθία), and there were elevations or tribunes (βήματα), upon which the antagonist advocates stood during their address to the court. The space occupied by the persons engaged in the trial was protected by a railing (δρύφακτοι) from the intrusion of the bystanders; but in causes which bore upon the violation of the Mysteries, a further space of fifty feet all round was enclosed by a rope, and the security of this barrier guaranteed by the presence of the public slaves. See DEMOSII.

Dicastes (δικαστής). In its broadest acceptation a judge, but more particularly denoting the Athenian functionary of the democratic period, commonly rendered "juryman." Except, however, in the circumstance that they were sworn "well and truly" to discharge the duties intrusted to them, there was little resemblance between an Attic dicasterion and an English jury. As distinguished from the district judges (οἱ κατὰ δήμους δικασται, better known by their later name of οἱ τετταράκοντα), and from the Nautodicae or judges in commercial cases, the dicastae are frequently styled Heliastae, and their courts the Heliastic courts. The name comes from ἡλιαία, a word which, like ἀγορά, denotes both the assembly and the place in which it was held; and the court of the Heliaea, as the most strongly manned and the first in dignity, being taken as a representative of the rest, both names were used indiscriminately. Their jurisdiction extended to matters of every kind without exception. In private causes it is highly probable that they acted originally as judges of the second instance—i. e. of appeal; but in public matters they acted as the primary and sole judicial authority. The Heliastae were instituted by Solon, but what was their original number and how they were nominated at first we do not know. At the time when democracy was fully developed, when the causes even of the subject allies were brought before the Athenian courts, there were 6000 dicasts or Heliasts, 600 for each tribe, chosen by lot. Previously the number cannot have been very small; and divisions of the whole body into sections, such as we find afterwards, may without hesitation be assumed to have existed in the earlier times also. The ballot (κληροῦν, ἐπικληροῦν τὰ δικαστήρια, Demosth. *c. Everg.* p. 1144, § 17; sometimes also πληροῦν, after the analogy of "manning" a ship, *c. Timocr.* p. 729, § 92) was conducted annually by the nine archons; ac-

cording to some authorities their secretary (*γραμματεύς*) made the tenth.

The lots were drawn, and the persons chosen were sworn, in the earlier ages at a place called Ardettus, without the city, on the banks of the Ilissus; but in after-times at some other spot, of which we are not informed. The formula of the Heliastic oath, preserved in Demosthenes (*c. Timocr.* p. 746, §§ 149-151), passed until lately as genuine, and was accepted as such by Schömann in his early writings (*Att. Process*, etc.) as well as by other recent scholars. The first hint that, like most of the documents embodied in the Demosthenic speeches, it was the patchwork of a late grammarian, seems to have been given by Schömann in his *Antiquities* (1855); and the point was completely proved in a special dissertation by Westermann in 1859. The whole number of 6000 Heliasts was divided into ten sections of 500 each, so that 1000 remained over, in order, when necessary, to serve for the filling of vacancies in the sections. These sections, as well as the places of meeting, were called Dicasteria, and in each section members of all the tribes were mingled together. Each Heliast received, as a certificate of his appointment, a bronze tablet (*πινάκιον*, *σύμβολον*) with his name and the number or letter of the section to which he belonged (from A to K). Three of these *σύμβολα* have been found, inscribed as follows: Β. ΑΝΤΙΧΑΡΜΟΣ ΛΑΜΠ[ΤΡΕΥΣ], Δ. ΔΙΟΔΩΡΟΣ ΦΡΕΑ[ΡΡΙΟΣ], Ε. ΔΕΙΝΙΑΣ ΑΛΑΙΕΥΣ: and bear besides representations of owls and Gorgon heads, and other devices symbolic of the Athenian people (Boeckh, *C. I. G.* nos. 207–209).

As often as courts were to be held the Heliastae assembled in the Agora, and the courts in which each section had to sit for the day were there assigned by the Thesmothetae by lot. But it did not happen always, or in every suit, that whole sections sat; on the contrary, sometimes cases were tried only by parts of a section, sometimes by several sections combined, according to the importance of the issues. Provision, however, was made that the number should be always an uneven one, in order to avoid an equality of the votes; and if we find the number of 200 or 2000 dicasts mentioned, we are to assume that the round numbers only are given instead of 201 or 2001. For examples of the actual figures, we have in Demosthenes a court of 1001 dicasts taken from two sections (*δικαστηρίοιν δυοῖν εἰς ἕνα καὶ χιλίους ἐψηφισμένων*, *c. Timocr.* p. 702, § 9); and one of 1501 from three sections in *Lex Seguer.* s. v. *ἡλιαία*. The usual number in the Heliaea appears to have been 501.

For the trial of certain classes of cases Heliastae of a peculiar qualification were required; as, for instance, in the case of profaners of the Mysteries, when the initiated only were allowed to judge; and in that of military offenders, who were left to the justice of those only whose comrades they were, or should have been at the time when the offence was alleged to have been committed. After this ballot on the day of the trial each member of the section received a staff with the colour and number of the court in which he had to sit; this might serve both as a ticket to procure admittance and also to distinguish him from any loiterer who might endeavour clandestinely to obtain a seat after business had begun. That the dicasts were not sworn afresh before every case seems certain—the oath originally taken at the annual election sufficed. The legal age of the Heliastae was at least thirty, and of course the full franchise (*ἐπιτιμία*) was another condition of eligibility. No perquisite was ever more jealously guarded. For an *atimos* to attempt to earn the dicast's fee was a capital offence, and a case is mentioned in which this law was actually carried out (Demosth. *c. Mid.* p. 573, § 182). It would appear that they were only balloted for from among those who voluntarily offered themselves; we have no information on this point, but after the custom of payment was introduced there would be no lack of candidates.

This payment (*μισθὸς δικαστικός*, more usually *τὸ δικαστικόν*) is said to have been first instituted by Pericles. It is generally supposed from Aristophanes (*Nub.* 863), who makes Strepsiades say that with the first obolus he ever received as a dicast he bought a toy for his son, that it was at first only one obolus. It increased rapidly under the influence of the demagogues (Aristot. *ap.* Schol. Aristoph. *Vesp.* 682; Schol. *Ran.* 140; Poll. viii. 113; Hesych. s. v. *δικαστικόν*; Suid. s. v. *ἡλιασταί*). Three oboli or the *triobolon* (*τριώβολον*) occurs as early as B.C. 425 in the comedies of Aristophanes, and is afterwards mentioned frequently (Aristoph. *Eq.* 51, 255; *Vesp.* 300, 663, 684). The payment was made at the end of the day's work by the Colacretae (q. v.), in exchange for the staff (*βακτηρία*) and ticket (*σύμβολον*) with which, as we have seen, each dicast was already provided on entering the court (Schol. *ad* Aristoph. *Plut.* 277; Suid. s. v. *βακτηρία*; Poll. viii. 16). No doubt the staves only were given up, to be redistributed on another trial; the bronze *σύμβολα* merely shown, and retained by the dicast, as they were inscribed with his name and had to serve him throughout the year; unless we are to suppose that two different kinds of *σύμβολα* were used.

Dicastĭcon (*δικαστικόν*). See DICASTES.

Dice. See ALA; TALUS; TESSERA.

Diké (*Δίκη*). The personification of Justice. In Greek mythology she is the daughter of Zeus and Themis, and sister of Eunomia (Order) and Eirené (Peace). She is represented as one of the Horae; as the attendant and adviser (*πάρεδρος*, *ξύνεδρος*) of her father; and as the avenger of wrong who smites the wicked with the sword forged for her by Aesa. In this last character she resembles the Erinnyes, though, unlike them, she not only punishes wrong but rewards virtue.

Diké (*δίκη*). A term of Attic law which signifies generally any proceedings at law by one party directly or mediately against others. The object of all such actions is to protect the body politic, or one or more of its individual members, from injury and aggression—a distinction which has in most countries suggested the division of all causes into two great classes, the public and the private, and assigned to each its peculiar form and treatment. At Athens the first of these was implied by the terms public *δίκαι* or *ἀγῶνες*, or still more peculiarly by *γραφαί*; causes of the other class were termed private *δίκαι* or *ἀγῶνες*, or simply *δίκαι* in its limited sense. There is a still further subdivision of *γραφαί* into *δημοσίαι* and *ἴδιαι*, of which the former is somewhat analogous to impeachments for offences directly against the State; the latter to criminal prosecutions, in which the State appears as a party mediately injured in the violence or other wrong done to individual citizens. It will be

observed that cases frequently arise which, with reference to the wrong complained of, may with equal propriety be brought before a court in the form of the γραφή last mentioned, or in that of an ordinary δίκη; and under these circumstances the laws of Athens gave the prosecutor an ample choice of methods to vindicate his rights by private or public proceedings, much in the same way as a plaintiff in modern times may, for the same offence, prefer an indictment for assault or bring his civil action for trespass on the person. It will be necessary to mention some of the principal distinctions in the treatment of causes of the two great classes above mentioned before proceeding to discuss the forms and treatment of the private lawsuit.

In a δίκη, only the person whose rights were alleged to be affected, or the legal protector (κύριος) of such person, if a minor or otherwise incapable of appearing *suo iure*, was permitted to institute an action as plaintiff; in public causes, with the exception of some few in which the person injured or his family were peculiarly bound and interested to act, any free citizen, and sometimes, when the State was directly attacked, almost any alien, was empowered to do so. In all private causes, except those of ἐξούλης, βιαίων, and ἐξαιρέσεως, the penalty or other subject of contention was exclusively recovered by the plaintiff; while in most others the State alone, or jointly with the prosecutor, profited by the pecuniary punishment of the offender. The court fees, called πρυτανεῖα, were paid in private but not in public causes; and a public prosecutor who compromised the action with the defendant was in most cases punished by a fine of a thousand drachmas and a modified disfranchisement, while there was no legal impediment at any period of a private lawsuit to the reconciliation of the litigant parties (Meier, *Att. Process*, p. 163).

The proceedings in the δίκη were commenced by a summons to the defendant (πρόσκλησις) to appear on a certain day before the proper magistrate (εἰσαγωγεύς), and there answer the charges preferred against him (Aristoph. *Nub.* 1221). This summons was often served by the plaintiff in person, accompanied by one or two witnesses (see CLETERES), whose names were endorsed upon the declaration (λῆξις or ἔγκλημα). If there were an insufficient service of the summons, the lawsuit was styled ἀπρόσκλητος and dismissed by the magistrate (Hesych.). From the circumstance of the same officer who conducted the ἀνάκρισις being also necessarily present at the trial, and as there were besides *dies nefasti* (ἀποφράδες) and festivals during which none, or only some special causes could be commenced, the power of the plaintiff in selecting his time was, of course, in some degree limited; and of several causes, we know that the time for their institution was particularized by law (Aristoph. *Nub.* 1190). There were also occasions upon which a personal arrest of the party proceeded against took the place of, or at all events was simultaneous with, the service of the summons; as, for instance, when the plaintiff doubted whether such party would not leave the country to avoid answering the action; and accordingly we find that in such cases (Demosth. *c. Zenoth.* p. 890, § 29; *c. Aristog.* i. p. 788, § 60) an Athenian plaintiff might compel a foreigner to accompany him to the polemarch's office, and there produce bail for his appearance, or, failing to do so, submit to remain in custody till the trial. The word κατεγγυᾶν is peculiarly used of this proceeding. Between the service of the summons and appearance of the parties before the magistrate, it is very probable that the law prescribed the intervention of a period of five days (Meier, *Att. Process*, p. 580). If both parties appeared, the proceedings commenced by the plaintiff putting in his declaration, and at the same time depositing his share of the court fees (πρυτανεῖα), the non-payment of which was a fatal objection to the further progress of a cause (Matthiae, *de Iud. Ath.* p. 261). These were very trifling in amount. If the subject of litigation was rated at less than 100 drachmae, nothing was paid; if at more than 100 drachmae and less than 1000 drachmae, 3 drachmae was a sufficient deposit, and so on in proportion. The deposits being made, it became the duty of the magistrate, if no manifest objection appeared on the face of the declaration, to cause it to be written out on a tablet, and exposed for the inspection of the public on the wall or other place that served as the cause list of his court (Meier, *Att. Process*, p. 605).

The magistrate then appointed a day for the further proceedings of the anacrisis (q. v.), which was done by drawing lots for the priority in case there was a plurality of causes instituted at the same time; and to this proceeding the phrase λαγχάνειν δίκην, which generally denotes to bring an action, is to be primarily attributed. If the plaintiff failed to appear at the anacrisis, the suit, of course, fell to the ground; if the defendant made default, judgment passed against him (Meier, *Att. Process*, p. 623). Both parties, however, received an official summons before their non-appearance was made the ground of either result. An affidavit might at this, as well as at other periods of the action, be made in behalf of a person unable to attend upon the given day, and this would, if allowed, have the effect of postponing further proceedings (ὑπωμοσία); it might, however, be combated by a counter-affidavit to the effect that the alleged reason was unfounded or otherwise insufficient (ἀνθυπωμοσία); and a question would arise upon this point, the decision of which, when adverse to the defendant, would render him liable to the penalty of contumacy (Demosth. *c. Olymp.* p. 1174, § 25). The plaintiff was in this case said ἐρήμην ἑλεῖν; the defendant, ἐρήμην ὀφλεῖν, δίκην being the word omitted in both phrases. If the cause were primarily brought before an umpire (διαιτητής), the anacrisis was conducted by him; in cases of appeal it was dispensed with as unnecessary. The anacrisis began with the affidavit of the plaintiff (προωμοσία), then followed the answer of the defendant (ἀντωμοσία or ἀντιγραφή) (see ANTIGRAPHÉ), then the parties produced their respective witnesses, and reduced their evidence to writing, and put in originals, or authenticated copies, of all the records, deeds, and contracts that might be useful in establishing their case, as well as memoranda of offers and requisitions then made by either side (προκλήσεις). The whole of the documents were then, if the cause took a straightforward course (εὐθυδικία), enclosed on the last day of the anacrisis in a casket (ἐχῖνος), which was sealed and intrusted to the custody of the presiding magistrate till it was produced and opened at the trial. During the inter-

val no alteration in its contents was permitted, and accordingly evidence that had been discovered after the anacrisis was not producible at the trial (Demosth. *c. Boeot.* i. p. 999, § 18). In some causes, the trial before the dicasts was by law appointed to come on within a given time; in such as were not provided for by such regulations, we may suppose that it would principally depend upon the leisure of the magistrate. The parties, however, might defer the day (*κυρία*) by mutual consent (Demosth. *c. Phaen.* p. 1042, § 12). Upon the court being assembled the magistrate called on the cause (Platner, *Process und Klagen*, i. 182), and the plaintiff opened his case. At the commencement of the speech the proper officer (*ὁ ἐφ' ὕδωρ*) filled the clepsydra with water. As long as the water flowed from this vessel the orator was permitted to speak; if, however, evidence was to be read by the officer of the court or a law recited the water was stopped till the speaker recommenced. The quantity of water, or, in other words, the length of the speeches, was not by any means the same in all causes: in the speech against Macartatus, and elsewhere, one amphora only was deemed sufficient; eleven are mentioned in the impeachment of Aeschines for misconduct in his embassy. In some few cases, as those of *κάκωσις*, according to Harpocration, no limit was prescribed. The speeches were sometimes interrupted by the cry *κατάβα*, "go down"—in effect, "cease speaking"—from the dicasts, which placed the advocate in a serious dilemma; for if after this he still persisted in his address, he could hardly fail to offend those who bade him stop; if he obeyed the order, it might be found, after the votes had been taken, that it had emanated from a minority of the dicasts (Aristoph. *Vesp.* 980). After the speeches of the advocates, which were in general two on each side, and the incidental reading of the documentary and other evidence, the dicasts proceeded to give their judgment by ballot. See PSEPHOS.

When the principal point at issue was decided in favour of the plaintiff, there followed, in the case of a *δίκη τιμητή*, a further discussion as to the amount of damages, or penalty, which the defendant should pay. (See TIMEMA.) If the penalty was already prescribed by law, the suit was described as *ἀτίμητος*, not requiring assessment (Demosth. *c. Mid.* p. 543, § 90). The method of voting upon this question seems to have varied, in that the dicasts used a small tablet instead of a ballot-ball, upon which those that approved of the heavier penalty drew a long line, the others a short one (Aristoph. *Vesp.* 167). Upon judgment being given in a private suit, the Athenian law left its execution very much in the hands of the successful party, who was empowered to seize the movables of his antagonist as a pledge for the payment of the money or institute an action of ejectment (*ἐξούλης*) against the refractory debtor. The judgment of a court of dicasts was in general decisive (*δίκη αὐτοτελής*); but upon certain occasions, as, for instance, when a gross case of perjury or conspiracy could be proved by the unsuccessful party to have operated to his disadvantage, the cause, upon the conviction of such conspirators or witnesses, might be commenced *de novo*. In addition to which, the party against whom judgment has passed by default had the power to revive the cause, upon proving that his non-appearance in court was unavoidable (Platner, *Process und Klagen*, i. 396); this, however, was to be exercised within two months after the original judgment. If the parties were willing to refer the matter to an umpire (*διαιτητής*), it was in the power of the magistrate to transfer the proceedings as they stood to that officer; and in the same way, if the diaetetes considered the matter in hand too high for him, he might refer it to the *εἰσαγωγεύς*, to be brought by him before an Heliastic court. The whole of the proceedings before the diaetetes were analogous to those before the dicasts, and bore equally the name of *δίκη*; but it seems that the phrase *ἀντιλαχεῖν τὴν μὴ οὖσαν* is peculiarly applied to the revival of a cause before the umpire in which judgment had passed by default.

The following are the principal actions, both public and private, which we read of in the Greek writers, and which are briefly defined in this Dictionary under their several heads:

Δίκη or *Γραφή* — *Ἀγεωργίου*: *Ἀγραφίου*: *Ἀγράφου μετάλλου*: *Αἰκίας*: *Ἀλογίου*: *Ἀναγωγῆς*: *Ἀναμαχίου*: *Ἀνδραποδισμοῦ*: *Ἀνδραπόδων*: *Ἀπατήσεως τοῦ δήμου*: *Ἀφορμῆς*: *Ἀπολείψεως*: *Ἀποπέμψεως*: *Ἀπορρήσεως*: *Ἀπροστασίου*: *Ἀργίας*: *Ἀργυρίου*: *Ἀσεβείας*: *Ἀστρατείας*: *Αὐτομολίας*: *Βεβαιώσεως*: *Βιαίων*: *Βλάβης*: *Βουλεύσεως*: *Κακηγορίας*: *Κακολογίας*: *Κακώσεως*: *Κακοτεχνιῶν*: *Κάρπου*: *Καταλύσεως τοῦ δήμου*: *Κατασκοπῆς*: *Κλοπῆς*: *Δεκασμοῦ*: *Δειλίας*: *Δώρων*: *Δωροξενίας*: *Ἐγγύης*: *Ἐνοικίου*: *Ἐπιτριηραρχήματος*: *Ἐπιτροπῆς*: *Ἐξαγωγῆς*: *Ἐξαιρέσεως*: *Ἐξούλης*: *Ἁρπαγῆς*: *Εἱργμοῦ*: *Ἑταιρήσεως*: *Ἱεροσυλίας*: *Ὑποβολῆς*: *Ὕβρεως*: *Λειπομαρτυρίου*: *Λειποναυτίου*: *Λειποστρατίου*: *Λειποταξίου*: *Μισθοῦ*: *Μισθώσεως οἴκου*: *Μοιχείας*: *Νομίσματος διαφθορᾶς*: *Οἰκίας*: *Παρακαταθήκης*: *Παρανοίας*: *Παρανόμων*: *Παραπρεσβείας*: *Παρεισγραφῆς*: *Φαρμάκων*: *Φόνου*: *Φωρᾶς ἀφανοῦς καὶ μεθημερίνης*: *Φθορᾶς τῶν ἐλευθέρων*: *Προαγωγίας*: *Προδοσίας*: *Προεισφορᾶς*: *Προικός*: *Ψευδεγγραφῆς*: *Ψευδοκλητείας*: *Ψευδομαρτυριῶν*: *Ῥητορική*: *Σκυρία*: *Σίτου*: *Συκοφαντίας*: *Συμβολαίων* or *Συνθηκῶν παραβάσεως*: *Τραύματος ἐκ προνοίας*: *Τυραννίδος*. See DICASTES; JUDICIAL PROCEDURE; and for the Roman actions, ACTIO.

Dicrŏtus (*δίκροτος*). See NAVIS.

Dictaeus. See DICTÉ.

Dictamnum Promontorium. See DICTYNNAEUM PROMONTORIUM.

Dictātor. The Latin term for a magistrate appointed for special emergencies, after auspices duly taken by the consuls on the commission of the Senate. The dictator was never appointed for more than six months. The first instance of the appointment occurred in B.C. 501. The dictator was usually, though not always, chosen from the number of *consulares*, or men who had held the office of consul. No plebeian was elected before B.C. 356. He was always nominated for a particular or specified purpose, on the fulfilment of which he laid down his office. He combined the supreme judicial with the supreme military power, and there was, originally, no appeal against his proceedings, even the veto of the tribunes being powerless against him. He was free from responsibility for his acts, and could therefore not be called to account on the expiration of his term of office, the case of Camillus, who was so impeached, being very peculiar. (See Becker, *Röm. Alterth.* ii. pt. 2, p. 172.) That the dictator was free from subsequent

attack is expressly stated by Dion. Hal. (v. 70, vii. 56), Appian (*B. C.* ii. 23), and others. His insignia were the *sella curulis* and the *toga praetexta*, and he was attended by twenty-four lictors, who represented the lictors of two consuls, and who even in the city bore axes in their bundles of rods, as a sign of unlimited power of life and death. His assistant was the *magister equitum* (master of the horse), who was bound absolutely to obey his commands, and whom he had to nominate immediately after his own election. The original function of the dictator was military; but after B.C. 363 a dictator was occasionally chosen, in the absence of the consuls, for other purposes than dealing with external danger or internal troubles—especially to hold the games or religious festivities. The office gradually passed out of use, though not legally abolished. The last military dictator was appointed in B.C. 206, the last absolutely in B.C. 202. The dictatorships of Sulla and Caesar who was named perpetual dictator not long before his death, were anti-republican and unconstitutional. After Caesar had been murdered, in B.C. 44, the office was abolished forever by a law of Marcus Antonius. See Mommsen, *Römische Staatsrecht*, ii. 133–172; Becker, *Röm. Alterth.* ii. pt. 2, p. 150 foll.

Dicté (Δίκτη). A mountain in the east of Crete, where Zeus is said to have been reared. Hence he bore the surname Dictaeus. The Roman poets frequently employ the adjective Dictaeus as synonymous with Creticus.

Dictionaries. See GLOSSARIUM; LEXICON.

Dictynna (Δίκτυννα or Δίκτυνα). A surname of both Britomartis and Artemis, two divinities who were subsequently identified. The name is connected with δίκτυον, "a hunting-net," and was borne by Britomartis and by Artemis as goddesses of the chase (Herod. iii. 59). See ARTEMIS; BRITOMARTIS.

Dictynnaeum or **Dictamnum Promontorium.** A promontory on the northern coast of Crete, towards the northwest. This promontory, answering to the Psacum Promontorium of Ptolemy, forms the termination of a chain called Tityrus by Strabo. On its summit was placed a celebrated temple of the nymph Britomartis or Dictynna (Diod. Sic. v. 76). See DICTYNNA.

Dictynnia (τὰ Δικτύννια). A festival with sacrifices, celebrated at Cydonia in Crete, in honour of Artemis, surnamed Δίκτυννα, from δίκτυον, "a hunter's net" (Diod. Sic. v. 76). Particulars respecting its celebration are not known. Artemis Δίκτυννα was also worshipped at Sparta (Pausan. iii. 12, § 7) and at Ambrysos in Phocis (Pausan. x. 36, § 3).

Dictys (Δίκτυς), called CRETENSIS. A Cretan, said to have accompanied Idomeneus to the Trojan War, and to have written a history of that contest. This work (*Ephemeris Belli Troiani*), according to the account that has come down to us, was discovered in the reign of Nero, in a tomb near Cnossus, which was laid open by an earthquake. It was asserted to have been written in Phœnician on bark, and translated into Greek by one Eupraxides or Eupraxis. We have a pretended Latin version by one C. Septimius, who probably lived in the time of the emperor Diocletian. The work of Septimius contains the first five books, with an abridgment of the remainder. This work is a part of the fictitious literature that sprang up in the first century of the Christian era, and, though worthless except as a literary curiosity, it was an important source of the romances of the Middle Ages. (See DARES). Good editions are those of Dederich (Bonn, 1832–37), and Meister (Leipzig, 1872). See Dunger, *Dictys-Septimius: über die ursprüngliche Abfassung und die Quellen der Ephemeris* (Dresden, 1878); and Gudeman in *Classical Studies in Honour of Henry Drisler* (N. Y. 1894).

Didascalia (διδασκαλία). (1) The performance of a drama. (2) The pieces brought forward for performance at a dramatic entertainment. (3) A board hung up in the theatre, with short notices as to the time and place of the contest, the competing poets, their plays and other successes, perhaps also the *choregi*, and the most celebrated actors. These documents, so important for the history of the drama, were first collected and arranged by Aristotle, whose example was followed by the Alexandrian scholars Callimachus, Aristophanes of Byzantium, and others. From these writings, also called *didascaliae*, but now unfortunately lost, come the scanty notices preserved by grammarians and scholiasts upon the particular tragedies and comedies. Following the example of the Greeks, the Romans provided the dramas of their own poets with *didascaliae*, as for instance those attached to the comedies of Terence and the *Stichus* of Plautus.

Didius Salvius Iuliānus. A Roman who bought the Roman Empire from the Praetorian Guards, when they put up the Empire for sale after the death of Pertinax, A.D. 193. The price paid was 25,000 sesterces ($1000) to each soldier. After reigning for two months (March 28 to June 1), he was murdered by the soldiers while Severus was marching against the city. See his life by Spartianus.

Dido (Διδώ), also called ELISSA, the reputed founder of Carthage. She was a daughter of a Tyrian king, Belus, Agenor, or Mutgo, and sister of Pygmalion, who succeeded to the crown after the death of his father. Dido was married to her wealthy uncle, Acerbas or Sichaeus, who was murdered by Pygmalion. Upon this, Dido secretly sailed from Tyre with his treasures, accompanied by some noble Tyrians, and passed over to Africa. Here she purchased as much land as might be enclosed with the hide of a bull, but she ordered the hide to be cut up into the thinnest possible strips, and with them she surrounded a spot on which she built a citadel called Byrsa (from βύρσα, "bull's-hide"). Around this fort the city of Carthage arose and soon became a powerful and flourishing place. The neighbouring king, Hiarbas, jealous of the prosperity of the new city, demanded the hand of Dido in marriage, threatening Carthage with war in case of refusal. Dido had vowed eternal fidelity to her late husband; but seeing that the Carthaginians expected her to comply with the demands of Hiarbas, she pretended to yield to their wishes, and under pretence of soothing the manes of Acerbas by expiatory sacrifices she erected a funeral pile, on which she stabbed herself in presence of her people. After her death she was worshipped by the Carthaginians as a divinity. Vergil has inserted in his *Aeneid* the legend of Dido, with various modifications. According to the common chronology, there was an interval of more than

300 years between the capture of Troy (B.C. 1184) and the foundation of Carthage (B.C. 853); but Vergil, nevertheless, makes Dido a contemporary of Aeneas, with whom she falls in love on his arrival in Africa. When Aeneas hastened to seek the new home which the gods had promised him, Dido, in despair, destroyed herself on a funeral pile. She was worshipped at Carthage and may be identified with Iuno Caelestis, the Roman representative of the Phœnician Astarté. See Verg. *Aen.* bks. i.–iv. and vi.; and the article AENEAS.

Didrachmon (*δίδραχμον*). See DRACHMA.

Didŷma (*τὰ Δίδυμα*). See BRANCHIDAE.

Didȳmus (*Δίδυμος*). A famous grammarian, the son of a seller of fish at Alexandria, who was born in the consulship of Antonius and Cicero, B.C. 63, and flourished in the reign of Augustus. Macrobius calls him the greatest grammarian of his own or any other time (*Saturn.* v. 18, 9). According to Athenaeus (iv. 139), he published 3500 volumes, and had written so much that he was called "the forgetter of books" (*βιβλιολάθας*), for he often himself forgot what he had written; and also "the man with brazen bowels" (*χαλκέντερος*), from his unwearied industry. He wrote, among other things, commentaries on Hesiod, Homer, Pindar, Bacchylides, Aeschylus, Sophocles, Euripides, Cratinus, Eupolis, Aristophanes, Menander, Antiphon, Isaeus, Hyperides, Aeschines, Demosthenes, and Thucydides; on Ion; and also on the plays of Phrynichus; several treatises against Iuba, king of Mauretania; a book on the corruption of style; and a great number of historical and antiquarian treatises. The most important production of Didymus was his very learned treatise on the edition of Homer by Aristarchus (q. v.), parts of which are preserved in the Venetian scholia on Homer. His lexical works, in fact, were the source of innumerable lexica, scholia, etc. The collection of proverbs extant under the name of Zenobius was partly taken from a previous collection made by Didymus. The fragments of Didymus may be found in the collection by M. Schmidt (Leipzig, 1854). See the account of Didymus in Wilamowitz, Eurip. *Heracles*, i. 157–168; and Susemihl, *Geschichte d. griech. Lit.* ii. 195–210, 688 foll. (1892). See DIDASCALIA; SCHOLIUM.

Diefenbach, LORENZ. A celebrated German philologist, born at Ostheim, in the Grand Duchy of Hesse, July 29th, 1806. He studied theology and philology at Giessen, and after travelling extensively, was settled as pastor and librarian at Solms-Laubach, and in 1848 at Frankfort-on-the-Main. Here, from 1865 until 1876, he was the second librarian to the city. A writer and scholar of much versatility, he produced a large number of works in general literature, including verse and prose fiction, besides the famous books on linguistic topics whereby he will be longest remembered. These are *Celtica*, 3 vols. (1840); *Vergleichendes Wörterbuch der Gothischen Sprache*, 2 vols. (1846–51); *Glossarium Latino-Germanicum Mediae et Infimae Aetatis* (1857), being a supplement to the great work of Ducange (q. v.); and *Origines Europae*, 2 vols. (1874), completed by Wülcker in 1885. Diefenbach died at Darmstadt, March 28, 1883.

Diengyēsis (*διεγγύησις*). See ENGYÉ.

Dies. The ancients distinguished (1) *dies civilis* (*νυχθήμερον*), the time in which the sun apparently completed a course around the earth, including thus both night and day; and (2) *dies naturalis* or the time between the rising and the setting of the sun. The civil day began with the Athenians at the setting of the sun; with the Romans (as with the Egyptians and Hipparchus) at midnight; with the Babylonians at the rising of the sun, and with the Umbrians at mid-day (Macrob. *Saturn.* i. 3; Gell. iii. 2).

At the time of the Homeric poems, the natural day was divided into three parts (*Il.* xxi. 111). The first, called *ἠώς*, began with sunrise and comprehended the whole space of time during which light seemed to be increasing—i. e. till mid-day (*Il.* viii. 66, ix. 84; *Od.* ix. 56). The second part was called *μέσον ἦμαρ* or mid-day, during which the sun was thought to stand still (Hermias, *ad* Plat. *Phaedr.* p. 342). The third part bore the name of *δείλη* or *δείελον ἦμαρ* (*Od.* xvii. 606; cf. Buttman's *Lexilog.* ii. n. 95), which derived its name from the increased warmth of the atmosphere. The last part of the *δείλη* was sometimes designated by the words *ποτὶ ἕσπερα* or *βουλυτός* (*Od.* xvii. 191; *Il.* xvi. 779).

The first and last of the divisions made at the time of Homer were afterwards subdivided into two parts. The earlier part of the morning was termed *πρωΐ* or *πρὼ τῆς ἡμέρας*; the later—i. e. from 9 or 10 till noon—*πληθούσης τῆς ἀγορᾶς* or *περὶ πλήθουσαν ἀγορὰν*. The *μέσον ἦμαρ* of Homer was afterwards expressed by *μεσημβρία*, *μέσον ἡμέρας*, or *μέση ἡμέρα*, and comprehended, as before, the middle of the day, when the sun seemed neither to rise nor to decline. The two parts of the afternoon were called *δείλη πρωΐη* or *πρωΐα*, and *δείλη ὀψίη* or *ὀψία*. This division continued to be observed down to the latest period of Grecian history, though another more accurate division, and one more adapted to the purposes of common life, was introduced at an early period; for Anaximander, or according to others, Anaximenes, is said to have made the Greeks acquainted with the use of the Babylonian chronometer or sundial (called *πόλος* or *ὡρολόγιον*, sometimes with the epithet *σκιοθηρικόν* or *ἡλιαμάνδρον*), by means of which the natural day was divided into twelve equal spaces of time. These spaces were, of course, longer or shorter according to the various seasons of the year. The name hours (*ὧραι*), however, did not come into general use till a very late period, and the difference between natural and equinoctial hours was first observed by the Alexandrian astronomers. See Pollux, *Onom.* i. 68.

During the early ages of the history of Rome, the natural phenomena of increasing light and darkness formed with the Romans, as with the Greeks, the standard of division, as we see from the vague expressions in Censorinus (*De Die Nat.* 24). In the Twelve Tables only the rising and the setting of the sun and mid-day (*meridies*) were mentioned as the parts into which the day was then divided. Varro (*L. L.* vi. 4, 5) and Isidorus (*Orig.* v. 30 and 31) likewise distinguished three parts of the day—viz. *mane*, *meridies*, and *suprema*, sc. *tempestas*, after which no assembly could be held in the Forum.

But the division of the day most generally observed by the Romans was that into *tempus antemeridianum* and *pomeridianum*, the *meridies* itself being considered only as a point at which the one

ended and the other commenced. As it was of importance that this moment should be known, an officer (see ACCENSI) of the consuls was directed to proclaim the time of mid-day, when from the Curia he saw the sun standing between the Rostra and the Graecostasis. The division of the day into twelve equal spaces, which, here as in Greece, were shorter in winter than in summer, was adopted at the time when artificial means of measuring time were introduced among the Romans from Greece. This was about the year B.C. 293, when L. Papirius Cursor, before the war with Pyrrhus, brought to Rome an instrument called *solarium horologium*, or simply *solarium* (Plaut. *ap. Gellium*, iii. 3, § 5; Plin. *H. N.* vii. § 212). In B.C. 263, M. Valerius Messala brought one which he had taken at the capture of Catina; and although this was incorrect, having been constructed for a place 4° farther south than Rome, it was in use for 99 years before the error was discovered. In B.C. 164, the censor Q. Marcius Philippus had a more exact sundial constructed; but the time was still unknown in cloudy weather. Scipio Nasica, therefore, erected in B.C. 159 a public clepsydra, which indicated the hours of the night as well as of the day (Censor. c. 23). Before the erection of a clepsydra it was customary for one of the subordinate officers of the praetor to proclaim the third, sixth, and ninth hours; which shows that the day was, like the night, divided into four parts, each consisting of three hours. In daily life numerous terms were in use to denote the different parts of the day, mostly of a general and somewhat vague character. (Cf. Varr. *L. L.* vi. 4–7; Servius on *Aen.* ii. 268; iii. 587; Isid. *Orig.* v. 31, 32.) See, also, the article HOROLOGIUM.

All the days of the year were, according to different points of view, divided by the Romans into different classes. For the purpose of the administration of justice and of holding assemblies of the people all the days were divided into *dies fasti*, *dies nefasti*, and *dies* partly *fasti*, partly *nefasti*.

1. *Dies fasti*, in the wider sense, were days on which legal and political business could be lawfully transacted. They were divided into:

(*a*) *Dies fasti*, in the narrower sense, marked with F in the calendars. On these legal business could be conducted (Ovid, *Fast.* i. 48, *fastus erit per quem lege licebit agi*; Varr. *L. L.* vi. 29, *dies fasti per quos praetoribus omnia verba sine piaculo licet fari*). The word is derived by the ancients from *fari*; but, although the root is undoubtedly the same, the more immediate connection is with *fas*.

(*b*) *Dies comitiales*, days on which meetings of the people could legally be held, and on which, if there was no meeting convened, courts could be opened (Macrob. *Saturn.* i. 16).

These days are marked C in the calendar.

2. *Dies nefasti* were days on which no legal or political business could be done (Varr. *L. L.* vi. 30). These are again divided into two quite distinct classes:

(*a*) *Dies nefasti* or *feriati*, on which no business could be done because the day was sacred to some festival. These are marked NP in the calendars. This sign was commonly interpreted *nefastus parte* or *nefastus principio*, and was explained to mean that the day was one during the earlier part of which no business could be done. But Mommsen (*Chronol.* p. 220; *C. I. L.* i. 366) showed that this view was quite untenable, and explains the sign to be, like M' when used as an abbreviation for Manius, a modification of the archaic M with five strokes (MV).

(*b*) *Dies religiosi* or *vitiosi*, sometimes called *atri*, marked in the calendars by R. These were unlucky days, which had been declared to be such by a decree of the Senate in consequence of some disaster which had taken place upon them. All the *dies postriduani* were included under this head —i. e. the days after the Kalends, the Nones, and the Ides—because these were believed to have been especially unfortunate (Ovid, *Fast.* i. 59, 60). On these days it was not only unlawful to transact any legal or political business, but it was also unlucky to begin any affair of importance. Cf. Gell. iv. 9, 5.

3. Days partly *fasti* and partly not, including:

(*a*) *Dies intercisi*, marked in the calendars by EN, for *endotercisi* (*endo* being an archaic form of *in*, as in *endoperator*). On these days a victim was sacrificed in the morning and the *exta* offered in the evening. Between the sacrifice and the offering the day was *fastus*; before the former and after the latter it was *nefastus* (Varr. *L. L.* vi. 31; Ovid, *Fast.* i. 49).

(*b*) *Dies fissi*, three in number. To two of these, March 24 and May 24, are prefixed the letters Q. R. C. F.—i. e. *quando rex* (*sacrorum*) *comitiavit, fas.* These days were, even in ancient times, confused with the *Regifugium*—i. e. February 24—and the letters were wrongly interpreted *quando rex comitio fugit.* To the third, June 15, is prefixed Q. ST. D. F.—i. e. *quando stercus delatum fas*; on this day the temple of Vesta was solemnly cleansed by the Vestals, and the filth carried away or thrown into the Tiber (Ovid, *Fast.* vi. 707), no other business being permitted on this day.

Mommsen (*C. I. L.* i. p. 373) calculates that the year contained 45 *dies fasti*, 194 *dies comitiales*, 48 *dies nefasti* or *feriati*, 57 *dies religiosi*, 8 *dies intercisi*, and 3 *dies fissi*.

Another division of the days of the year was of a purely religious character, with which naturally the former division to a certain extent coincided in a city so dominated by religious scruples as Rome:

1. *Dies festi*, on which the gods were honoured by (a) *sacrificia*, (b) *epulae*, (c) *ludi*, (d) *feriae*. See FERIAE.

2. *Dies profesti*, ordinary working-days.

3. *Dies intercisi*, of a mixed character.

For the NUNDINAE, see the article with that title.

Diespĭter. See IUPITER.

Diet. See DIAETETICA.

Diffareatio. See DIVORTIUM.

Digamma (δίγαμμα). A name given by grammarians of the first century to Vau, the sixth letter of the early Greek alphabet, but which in the classical had ceased to be used and was known only by inscriptions. The digamma ("double gamma") gets its name from its form Ϝ or ϝ. Its sound was originally something like that of English *W*. Its form in the hieratic Egyptian was 𓅱; in the ancient Phœnician, 𐤅; the square Hebrew, ו. It is found in Peloponnesian inscriptions as late as the sixth century B.C., but it had disappeared from the Ionic or Eastern Greek alphabet before the middle of the seventh century B.C., being retained only as a numeral = 6. From the Chalcidian or Western alphabet it was transmitted to Italy, re-

taining its position as the sixth letter, but acquiring the sound of *F*, a labio-dental fricative. See ALPHABET.

That its influence remained after it ceased to be written, is shown by the fact that in the Homeric poems it prevents elision where a final vowel stands before a word which originally had the digamma (e. g. *φίλα Ϝείματα δύσω*). (See DIALECTS.) Too much was made of this fact at one time, and Mr. Payne Knight even published a text of Homer with the digamma restored, a part of this text being reprinted in this country by Dr. Charles Anthon in his edition of the *Iliad*. But more recent scholarship shows that many of the supposed instances are not those of words that originally were digammated, but which rather once had an initial spirant, *s* or *j*—e. g. *εἰς ἅλα (σ) ἅλτο: ἔτι γὰρ (σ) ἔχον*. See Hadley's *Essays*, pp. 56–80 (1873).

Words which finally lost the digamma in Greek still often show it in the cognate languages—e. g. *οἶκος*, Lat. *vicus; οἶνος*, Lat. *vinum; ὄϊς* (*ὀϜις*), Lat. *ovis; ῥήγνυμι*, Lat. *frango; ἔργον*, Eng. work. In Laconian it frequently became *β*—e. g. *βάνναξ* for *Ϝάναξ*, *βέργον* for *Ϝέργον*, etc.

The word *δίγαμμα* is not found earlier than the first century A.D., when it occurs in the grammarians. Dionysius of Halicarnassus describes it, but gives it no name (i. 20). Terentianus Maurus calls it *δίγαμμος littera* (163 K). Macrobius uses the word *δίγαμμον* (sc. *στοιχεῖον*) (*De Vero.* vi. 13). Quintilian (i. 7, 27) calls it *Aeolica littera* (cf. i. 4, 7), but it is not found in the later Lesbian inscriptions, and in Alcaeus and Sappho it is represented by *β* before *ρ* (e. g. *βράκος* for the Homeric *ῥάκος* = *Ϝράκος*). See Monro, *Homeric Grammar* (1882); and King and Cookson, *Principles of Sound and Inflexion*, pp. 166–171 (Oxford, 1888),

Digentia. The modern Licenza; a small stream in Latium, beautifully cool and clear, flowing into the Anio, through the Sabine farm of Horace.

Digesta. See CORPUS IURIS CIVILIS; PANDECTAE.

Digitalia. See MANICA.

Digĭtus. See PES.

Diïpolĭa (*τὰ Διῖπόλια, Διῖπόλεια*, or *Διπόλια*). A festival celebrated in Athens on the 14th Scirophorion (June to July) to Zeus (Aristoph. *Pax*, 420) as the protector of the city. It was also called Buphonia, from the sacrifice of an ox connected with it. A labouring ox was led to the altar of Zeus in the Acropolis, which was strewn with wheat and barley. As soon as the ox touched the consecrated grain he was punished by a blow on the neck from an axe, delivered by a priest of a particular family, who instantly threw away the axe and took to flight. In his absence the axe was brought to judgment in the Prytaneum, and condemned, as a thing polluted by murder, to be thrown into the sea. To kill a labouring ox, the trusty helper of man, was rigidly forbidden by custom. In the exceptional sacrifice of one at this festival the ancient custom may be regarded as on the one hand excusing the slaughter, and on the other insisting that it was, nevertheless, equivalent to a murder.

Dikes. See MOLES.

Dilectus. The levying of soldiers for military service among the Romans. In the republican age all the citizens who were liable to service assembled in the Capitol on the day previously announced by the consuls in their *edictum*, or proclamation. The twenty-four *tribuni militum* were first divided among the four legions to be levied. Then one of the tribes was chosen by lot, and the presence of the citizens ascertained by calling the names according to the lists of the several tribes. The calling was always opened with names of good omen. (See OMEN.) If a man did not appear he would be punished, according to circumstances, by a fine, confiscation of property, corporal punishment, even by being sold into slavery. Four men of equal age and bodily capacity were ordered to come forward, and were distributed among the four legions; then another four, and so on, so that each legion got men of equal quality. As the proceeding was the same with the other tribes, each legion had a quarter of the levy for each tribe. No one man had exemption (*vacatio*) from service unless he was over forty-six years of age, or had served the number of campaigns prescribed by law—twenty in the infantry, ten in the cavalry—or held a city office or priesthood, or had a temporary or perpetual dispensation granted on account of special business of State. In ancient times the levy of the cavalry followed that of the infantry, in later times it preceded it. On the oath taken after the levy, see SACRAMENTUM.

About the year B.C. 100, Marius procured the admission of the *capite censi*, or classes without property, to military service. (See PROLETARII.) After this the legions were chiefly made up out of this class by enlistment; and though the liability to common military service still existed for all citizens, the wealthy citizens strove to relieve themselves of it, the more so as after Marius the time of service was extended from twenty campaigns to twenty years. In B.C. 89, Roman citizenship was extended to all the inhabitants of Italy, and all, therefore, became liable to service. The levies were, in consequence, not held exclusively in Rome, but in all Italy by *conquisitores*. These officials, though they continued to use the official lists of qualified persons, assumed more and more the character of recruiting officers. They were ready to grant the *vacatio*, or exemption, for money or favour, and anxious to get hold of volunteers by holding out promises. The legal liability to military service continued to exist in imperial times, but after the time of Augustus it was only enforced in regard to the garrison at Rome and on occasions of special necessity. The army had become a standing one, and even outside of Italy, except when a special levy of new legions was made, the vacancies caused by the departure of the soldiers who had served their time were filled up by volunteers. The levy was carried out by imperial commissioners (*dilectatores*), whose business it was to test the qualifications of the recruits. These were, Roman citizenship—for only citizens were allowed to serve, whether in the legions or in the guard and other garrison cohorts of Rome (*cohortes urbanae*)—physical capacity, and a certain height, the average of which was 5 feet 10 inches under the Empire. For the republican age we have no information on this point. See EXERCITUS.

Dimăchae (*διμάχαι*). Macedonian cavalry, who also fought on foot when ordered. See Pollux, i. 132.

Dimachaeri (*διμάχαιροι*). See GLADIATORES.

Diminutio Capĭtis. See DEMINUTIO CAPITIS.

Dinarchus (*Δείναρχος*). One of the ten Greek orators, for the explanation of whose orations Harpocration compiled his lexicon. (See CANON ALEXANDRINUS.) He was a Corinthian by birth, but settled at Athens and became intimate with Theophrastus and Demetrius Phalereus. Dionysius of Halicarnassus fixes his birth at B.C. 361. The time of his highest reputation was after the death of Alexander, when Demosthenes and other great orators were dead or banished. He seems to have made a living by writing speeches for those who were in need of them. Having always been a friend to the aristocratic party, he was involved in a charge of conspiracy against the democracy and withdrew to Chalcis in Euboea. He was allowed to return to Athens after an absence of fifteen years. On his arrival, Dinarchus lodged with one Proxenus, an Athenian, a friend of his, who, however, if the story be true, robbed the old man of his money. Dinarchus brought an action against him, and, for the first time in his life, made his appearance in a court of justice. The charge against Proxenus, which is drawn up with a kind of legal formality, is preserved by Dionysius of Halicarnassus. Of the numerous orations of Dinarchus, only three remain, and these are not entitled to any very high praise. One of them is against Demosthenes, touching the affair of Harpalus. The best MSS. of Dinarchus are the Codex Cripsianus and the Codex Oxoniensis. The extant orations of Dinarchus are found in the usual collections of the Attic orators, especially Baiter and Sauppe's *Oratores Attici;* and an edition by Thalheim (1887); elaborate commentary by Mätzner (1842).

Dindorf. (1) KARL WILHELM. A celebrated Hellenist, son of Gottlieb Immanuel Dindorf, and born January 2d, 1802, at Leipzig, where his father was Professor of Oriental Languages in the University. There the young Dindorf pursued his own studies in classical philology under Gottfried Hermann and C. D. Beck. In 1827, he received a call to the University of Berlin, which he declined, but in the following year accepted the title of Professor Extraordinarius at Leipzig. This he held until 1833, when he resigned it in order to devote himself entirely to research. For fifty years he continued to labour in the line of Greek and especially upon the dramatic poetry of Greece, and his contributions are of the very greatest value to modern scholarship. He died August 1st, 1883.

The most important works of Dindorf's long and productive labours are vols. vii.–xiii. of the great Invernizzi-Beck edition of Aristophanes (1820–34); a separate edition of Aristophanes, with notes and scholia (1835–39); of Aeschylus (1841–51); of Euripides (1834–63); an annotated edition of Sophocles (1832–36); a second volume of scholia to Sophocles, edited by Elmsley (1852); an edition of Demosthenes, with notes and scholia (1846–51); a work on the metres of Aeschylus, Sophocles, Euripides, and Aristophanes (1842); lexicons to Sophocles and Aeschylus (1873–76); a text of Homer (1855–56); the scholia to the *Odyssey* (1855), and to the *Iliad* (1875–77). In collaboration with Hase and his brother, Ludwig Dindorf, he edited the *Thesaurus Graecae Linguae* of Stephanus (1831–65). See Bursian, *Geschichte der class. Philologie* (Munich, 1883), pp. 861–870.

(2) LUDWIG AUGUST, brother of the preceding, born January 3d, 1805, was a classical scholar of some eminence. He collaborated with his brother and C. B. Hase upon the *Thesaurus Graecae Linguae* of Stephanus (9 vols. Paris, 1831–65); and published, independently, critical editions of Xenophon, Diodorus Siculus, Pausanias, Polybius, Dio Cassius, Zonaras, Hesiod, Euripides, and the *Historici Graeci Minores*, besides a work on the chronography of John Malelas, etc. He died September 6th, 1871.

Dindymēné (*Δινδυμηνή*). See DINDYMUS.

Dindўmus (*Δίνδυμος*) or **Dindўma.** (1) A mountain in Phrygia on the frontiers of Galatia, near the town Pessinus, sacred to Cybelé, the mother of the gods, who is hence called Dindymené. (2) A mountain in Mysia, near Cyzicus, also sacred to Cybelé. See RHEA.

Dinia. A town of Gallia Narbonensis, and the capital of the Bodiontici. It is now Digne.

Dinocrătes (*Δεινοκράτης*). A very celebrated Macedonian architect, who offered to cut Mount Athos into a statue of Alexander. (See ATHOS.) That monarch took him to Egypt, and employed him in several works of art. Ptolemy Philadelphus directed him to construct a temple for his queen, Arsinoë, after her death; and the intention was to have the ceiling of lodestone and the statue of iron, in order that the latter might appear to be suspended in the air. The death of the artist himself frustrated the undertaking (Plin. *H. N.* xxxiv. 42). See EPHESUS, p. 599.

Dinostrătus (*Δεινοστράτος*). A famous mathematician of the Platonic school, the brother of Menechares, and a disciple of Plato. Pursuing the steps of his brother, who amplified the theory of conic sections, Dinostratus is said to have made many mathematical discoveries; but he is particularly distinguished as the inventor of the *quadratrix*, though there is some reason for ascribing the original invention of this curve to Hippias of Elea (Proclus, *Comment. in Eucl.* ii. 4).

Dio. See DION.

Diobŏlon (*διώβολον*). A small coin of two obols (see DRACHMA), which was given to each Athenian citizen during the festivals to pay for his seat in the theatre, whence the gift was called *διωβελία* (Xen. *Hell.* i. 7, § 2; Aristot. *Pol.* ii. 7, § 19). In Plautus the adjective *diobolaris* signifies anything very cheap or mean, like "tuppenny" in English.

Diocaesarēa (*Διοκαισάρεια*) (more anciently SEPPHŌRIS [*Σεπφώρις*]) in Galilaea was a small place until Herodes Antipas made it the capital of Galilaea, under the name of Diocaesarea.

Diocлĕa (*Δοκλέα*). A town of Dalmatia, the birthplace, according to some, of the emperor Diocletian (Aurel. Vict. *Epit.* 54).

Diocletian, EDICT OF. An edict published by the emperor Diocletian about A.D. 303, directing those engaged in the sale of provisions not to exceed certain fixed prices in times of scarcity. It is preserved in an inscription in Greek and Latin on the outer wall of the *cella* of a temple at Stratonicea (Eski-hissar) in Caria. It states the price of many varieties of provisions, and these inform us of their relative value at the time. The provisions specified include not only the ordinary food of the people, but also a number of articles of luxury. Thus mention is made of several kinds

of honey, of hams, sausages, salt and fresh-water fish, asparagus and beans, and even *pernae Menapicae* (Westphalian hams). At the time when the edict was published the *denarius* was obviously much reduced in value, that coin appearing as the equivalent of a single oyster. The inscription was first copied by Sherard in 1709; it has been elaborately edited by M. Waddington, with new fragments and a commentary, 1864; and by Mommsen in the third volume of the *Corpus Inscriptionum Latinarum*. Portions of the Greek copy and the Latin preamble were found at Platæa in 1888–89 during the explorations of the American School of Classical Archæology. In 1890, during the excavations of the British School of Archæology, several hundred lines of the Greek version of the decree were discovered at Megalopolis, including a list of pigments with their prices.

Diocletianopŏlis (Διοκλητιανούπολις). A city of Thrace, so called in honour of Diocletian. Its site is not known. See CELETRUM.

Diocletiānus, GAIUS VALERIUS IOVIUS. A celebrated Roman emperor, born of an obscure family in Dalmatia at the town of Dioclea, from which he derived his first name, which was probably Docles, afterwards lengthened to the more harmonious Greek form of Diocles, and at length, after his accession to the Empire, to the Roman form of Diocletianus. He likewise, on this occasion, assumed the patrician name of Valerius. Some, however, make him to have been born at Salona. His birth-year is also differently given. The common account says A.D. 245, but other statements make him ten years older. He was first a common soldier, and by merit and success gradually rose to rank, serving in Gaul and in Moesia under Probus, and being present at the campaign against the Persians when Carus perished in so mysterious a manner. He commanded the household or imperial body-guard when young Numerianus, the son of Carus, was secretly put to death by Aper, his father-in-law, while travelling in a litter on account of illness, on the return of the army from Persia. The death of Numerianus being discovered, after several days, by the soldiers near Chalcedon, they arrested Aper and proclaimed Diocletian emperor, who, addressing the army from his tribunal in the camp, protested his innocence of the death of Numerianus, and then, upbraiding Aper for the crime, plunged his sword into his body. Diocletian made his solemn entry into Nicomedia in September, A.D. 284, and afterwards chose this town for his favourite residence. Carinus, the other son of Carus, having collected a force to oppose Diocletian, the two armies met at Margum in Moesia, where the soldiers of Carinus had the advantage at first, but Carinus himself having been slain by one of his own officers, both armies joined in acknowledging Diocletian emperor, A.D. 285. Diocletian was generous after his victory, and, contrary to the common practice, there were no executions, proscriptions, or confiscations of property. He even retained most of the officers of Carinus in their places. Diocletian, on assuming the imperial power, found the Empire assailed in various quarters, but his talents and energy soon succeeded in counteracting these evils. In the year 286, he chose his old friend Maximian, a brave, but rude and uncultivated soldier, as his colleague, and it is to the credit of both that the latter continued ever after faithful to Diocletian and willing to follow his advice. Maximian was stationed in Gaul, and on the German frontier, to repel invasion; Diocletian resided chiefly in the East, to watch the Persians, though he appears to have visited Rome in the early part of his reign. After the lapse of a few years Diocletian thought it necessary, in consequence of invasions and revolts in different parts of the Empire, to increase the number of his colleagues. On the 1st of March, 292, or, according to some, 291, he appointed Galerius a Caesar, and Maximian, at the same time, adopted, on his part,

Coin of Diocletian.

Constantius Chlorus. The two Caesars repudiated their respective wives; Galerius married Valeria, Diocletian's daughter, and Constantius married Theodora, daughter of Maximian. The two Caesars remained subordinate to the two Augusti, though each of the four was intrusted with the administration of a part of the Empire. Diocletian kept to himself Asia and Egypt; Maximian had Italy and Africa; Galerius, Thrace and Illyricum; and Constantius, Gaul and Spain. But it was rather an administrative than a political division. At the head of the edicts of each prince were put the names of all four, beginning with that of Diocletian. Diocletian resorted to this arrangement probably as much for reasons of internal as of external policy. By fixing upon three colleagues, one in each of the great divisions of the Empire, each having his army, and all mutually checking one another, Diocletian put a stop to military insolence and anarchy, though another danger remained—that of disputes and wars between the various sharers of the imperial power.

The new Caesars justified Diocletian's expectations. Successful wars were waged in different quarters of the Empire; and though Galerius at first met with a defeat from Narses, king of Persia, yet, in the following year, he gave the Persians a terrible overthrow. Narses sued for peace, which was granted by Diocletian, on condition of the Persians giving up all the territory on the right or western bank of the Tigris. This peace was concluded in 297, and lasted forty years. At the same time Diocletian marched into Egypt against Achillaeus, whom he besieged in Alexandria, which he took after a siege of eight months, when the usurper and his chief adherents were put to death. Diocletian is said to have behaved on this occasion with unusual sternness, several towns of Egypt, among others Busiris and Coptos, being destroyed. For several years after this the Empire enjoyed repose, and Diocletian and his colleagues were chiefly employed in framing laws and administrative regulations and in constructing forts on the frontiers. Diocletian kept a splendid court at Nicomedia, which town he embellished with numerous structures. He, or rather Maximian by his order, caused the magnificent Thermae

at Rome to be built, the remains of which still bear Diocletian's name, and which contained, besides the baths, a library, a museum, and other establishments.

In February, 303, Diocletian issued an edict against the Christians, ordering their churches to be razed, their books to be burned, and all Christians to be dismissed from offices civil or military — with other penalties, exclusive, however, of death. Various causes have been assigned for this measure. It is known that Galerius had always been hostile to the Christians, while Diocletian had openly favoured them, and had employed them in his armies and about his person; and Eusebius speaks of the prosperity, security, and protection which they enjoyed under his reign. They had churches in most towns, and one at Nicomedia, in particular, under the very eye of the emperor. Just before the edict was issued, Galerius had repaired to Nicomedia to induce Diocletian to proscribe the Christians. He filled the emperor's mind with reports of conspiracies and seditions, and, aided by the artifices of the heathen priesthood, was at last successful. The barbarities that followed upon the issuing of the edict above referred to are beyond belief. Malicious ingenuity was racked to the utmost to devise tortures for the persecuted followers of Jesus. For the space of ten years did this persecution rage with scarcely mitigated horrors; and such multitudes were massacred in all parts of the Empire that at last the imperial murderers ventured to erect a triumphal column, bearing the barbarously boastful, yet false inscription, that they had extinguished the Christian name and superstition and restored the worship of the gods to its former purity and splendour. This was the last persecution under the Roman Empire.

In November, 303, Diocletian repaired to Rome, where he and Maximian enjoyed the honour of a triumph, followed by festive games. This was the last triumph that Rome saw. The populace of that city complained of the economy of Diocletian on that occasion, and so offended him by their gibes and sarcasms that he left Rome abruptly, in the month of December, in very cold weather. A long illness ensued, which confined him at Nicomedia; and soon after his recovery he was visited by Galerius, who persuaded and almost forced him to abdicate. According to others, however, Diocletian did so spontaneously. Setting off for Salona, in Dalmatia, he built himself, near this place, an extensive palace by the sea-shore, in which he lived for the rest of his life, respected by the other emperors, without cares and without regret. At the same time that Diocletian abdicated at Nicomedia, Maximian, according to an agreement between them, performed a similar ceremony at Milan. Maximian retired to his seat in Lucania; but, not being endowed with the firmness of Diocletian, he tried some time after to recover his former power, and wrote to his old colleague to induce him to do the same. "Were you but to come to Salona," answered Diocletian, "and see the vegetables which I raise in my garden with my own hands, you would no longer talk to me of empire." Diocletian died May 1, 313. See the studies by Preuss (1868) and Mason (1876).

Diodōrus (Διόδωρος). (1) An historian, surnamed SICŬLUS, because born at Agyrium in Sicily, and the contemporary of Iulius Caesar and Augustus. Our principal data for the events of his life are derived from his own work. In early life he travelled into Asia, Africa, and Europe, and on his return established himself at Rome, where he published a general history, in forty books, under the title of Βιβλιοθήκη Ἱστορική, or Historical Library. To this labour he devoted thirty years of his life. The history comprehended a period of 1138 years, besides the time preceding the Trojan War, and was carried down to the end of Caesar's Gallic war. His work was written after the death of Caesar. The first six books were devoted to the fabulous history anterior to the war of Troy, and of these the three former to the antiquities of barbarian States, the three latter to the archæology of the Greeks. But the historian, though treating of the fabulous history of the barbarians in the first three books, enters into an account of their manners and usages, and carries down the history of these nations to a point of time posterior to the Trojan War. Thus, in the first book he gives a sketch of Egyptian history from the reign of Menes to Amasis. In the eleven following books he details the different events which happened between the Trojan War and the death of Alexander the Great; while the remaining twenty-three books contain the history of the world down to the Gallic War and the conquest of Britain. We have only a small part remaining of this vast compilation—namely, the first five books; then from the eleventh to the twentieth, both inclusive; and, finally, fragments of the other books from the sixth to the tenth inclusive, and also of the last twenty. These rescued portions we owe to Eusebius; to John Malalas, Georgius Syncellus, and other writers of the Lower Empire, who have cited them in the course of their own works; but, above all, to the authors of the "Extracts respecting Embassies" and of the "Extracts respecting Virtues and Vices." We are indebted also for a part of them to the patriarch Photius, who has inserted in his *Myriobiblon* extracts from several of the books, from the thirty-first to the thirty-third, and from the thirty-sixth to the thirty-eighth and fortieth. Important additions have also been made from MSS. in the Vatican Library.

A great advantage possessed by Diodorus over most of the ancient historians is his indicating the order of time, though it must be acknowledged at the same time that his chronology offers occasional difficulties and often needs educing. Diodorus, who wrote at Rome, and at a period when the dominion of that city extended over the greater part of the civilized world, arranges his narrative in accordance with the Roman calendar and consular *fasti;* but he frequently adds the names of the Athenian archons who were contemporaneous.

With regard to the historical value of the work itself and the merits of the author, the most varying opinions have been entertained by modern writers. The principal fault of Diodorus seems to have been the too great extent of his work. It was not possible for any man living in the time of Augustus to write an unexceptionable universal history. It is not, then, a matter of surprise that Diodorus, who does not appear to have been a man of superior abilities, should have fallen into a number of particular errors and should have placed too much reliance on authorities sometimes far from trustworthy. Wherever he speaks from his own observation he may, perhaps, generally be relied

upon; but when he is compiling from the writings of others he has shown little judgment in the selection. The literary style of Diodorus, though not very pure or elegant, is sufficiently perspicuous and presents but few difficulties, except where the MSS. are defective, as is frequently the case. The best editions of Diodorus are those of Wesseling (1746), L. Dindorf (1867–68), and Bekker (1853–54). (2) A native of Caria, and a disciple of the Megaric School. He was a great adept in that species of verbal combat which prevailed among the philosophers of his sect. It is said that a question was proposed to him in the presence of Ptolemy Soter by Stilpo, one of his fraternity, which he required *time* to answer, and on this account he was ridiculed by Ptolemy and denominated "Chronus" (Χρόνος). Mortified at this defeat, he wrote a book on the question, but nevertheless died of vexation. He is the reputed author of the famous sophism against motion: "If any body be moved, it is moved either in the place where it is or in a place where it is not, for nothing can act or suffer where it is not, and therefore there is no such thing as motion." Diodorus was rewarded for this discovery; for, having dislocated his shoulder, the surgeon who was sent for kept him for some time in torture, while he proved from the philosopher's own mode of reasoning that the bone could not have moved out of its place. (3) A Peripatetic philosopher, with whom the uninterrupted succession of the Peripatetic School terminated. He was a native of Tyre and a pupil of Critolaüs. Mention is often made of him in the selections of Stobaeus and also in the works of Cicero. The sovereign good, according to Diodorus, was to live in a becoming manner, free from toil and care, τὸ *ἀμοχθήτως καὶ καλῶς ζῆν*, or, *vacare omni molestia cum honestate*, as Cicero expresses it (*Acad.* ii. 42). (4) An orator and epigrammatic poet, a native of Sardis. He was surnamed Zonas (*Ζωνᾶς*). He fought in Asia and was contemporaneous with Mithridates the Great, against whom he was charged with conspiring. He defended himself successfully. Nine of his epigrams remain. (5) Another native of Sardis, who wrote historical works, odes, and epigrams. Strabo speaks of him as subsequent to the former and a contemporary and friend of his own. We have one of his epigrams remaining.

Diodŏtus (Διόδοτος). A Stoic philosopher, and teacher of Cicero, in whose house he died B.C. 59 (Cic. *Brut.* 90; *Ad Att.* ii. 20; *Tusc.* v. 39).

Diogĕnes (Διογένης). (1) A celebrated Cynic philosopher of Sinopé. His father, Icesias, a banker, was convicted of debasing the public coin, and was obliged to leave the country; or, according to another account, his father and himself were charged with this offence, and the former was thrown into prison, while the son escaped and went to Athens. Here he attached himself, as a disciple, to Antisthenes, who was at the head of the Cynics. Antisthenes at first refused to admit him into his house and even struck him with a stick. Diogenes calmly bore the rebuke and said, "Strike me, Antisthenes, but you will never find a stick sufficiently hard to remove me from your presence, while you speak anything worth hearing." The philosopher was so much pleased with this reply that he at once admitted him among his scholars. Diogenes fully adopted the principles and character of his master. Renouncing every other object of ambition, he determined to distinguish himself by his contempt of riches and honours and by his invectives against luxury. He wore a coarse cloak, carried a wallet and a staff, made the porticoes and other public places his habitation, and depended upon casual contributions for his daily bread. A friend whom he had desired to procure him a cell not executing his order so soon as was expected, he took up his abode in a *πίθος*, or large vessel, in the Metroum. It is probable, however, that this was only a temporary expression of indignation and contempt, and that he did not make it the settled place of his residence. This famous "tub" is indeed celebrated by Juvenal; it is also ridiculed by Lucian and mentioned by Seneca. But no notice is taken of so singular a circumstance by other ancient writers who have mentioned this philosopher. It cannot be doubted, however, that Diogenes practised the most hardy self-control and the most rigid abstinence—exposing himself to the utmost extremes of heat and cold and living upon the simplest diet, casually supplied by the hand of charity. In his old age, sailing to Aegina, he was taken by pirates and carried to Crete, where he was exposed to sale in the public market. When the auctioneer asked him what he could do, he said, "I can govern men; therefore sell me to one who wants a master." Xeniades, a wealthy Corinthian, happening at that instant to pass by, was struck with the singularity of his reply and purchased him. On their arrival at Corinth, Xeniades gave him his freedom and committed to him the education of his children and the direction of his domestic concerns. Diogenes executed this trust with so much judgment and fidelity that Xeniades used to say that the gods had sent a good genius to his house. During his residence at Corinth, the interview between him and Alexander is said to have taken place. Plutarch relates that Alexander, when at Corinth, receiving the congratulations of all ranks on being appointed to command the army of the Greeks against the Persians, missed Diogenes among the number, with whose character he was not unacquainted. Curious to see one who had given so signal an instance of his haughty independence of spirit, Alexander went in search of him and found him sitting in his tub in the sun. "I am Alexander the Great," said the monarch. "And I am Diogenes the Cynic," replied the philosopher. Alexander then requested that he would inform him what service he could render him. "Stand from between me and the sun," said the Cynic. Alexander, struck with the reply, said to his friends, who were ridiculing the whimsical singularity of the philosopher, "If I were not Alexander, I should wish to be Diogenes." This story is too good to be omitted, but there are several circumstances which in some degree diminish its credibility. It supposes Diogenes to have lived in his tub at Corinth, whereas it is certain that he lived there in the house of Xeniades, and that, if he had ever dwelt in a tub, he left it behind him at Athens. Alexander, moreover, was at this time scarcely twenty years old, and could not call himself Alexander the Great, for he did not receive this title till his Persian and Indian expedition, after which he never returned to Greece; yet the whole transaction represents him as elated with the pride of conquest. Diogenes probably was visited by

Alexander, when the latter held the general assembly of the Greeks at Corinth, and was received by him with rudeness and incivility, which may have given rise to the whole story. The philosopher at this time would have been about seventy years of age.

Various accounts are given concerning the manner and time of his death. It seems most probable that he died at Corinth, of mere decay, in the ninetieth year of his age and in the 114th Olympiad. A column of Parian marble, terminating in the figure of a dog, was raised over his tomb. His fellow-townsmen of Sinopé also erected brazen statues in memory of the philosopher. Diogenes left behind him no system of philosophy. After the example of his school, he was more attentive to practical than to theoretical wisdom. See Hermann, *Zur Geschichte und Kritik des Diogenes* (Heilbronn, 1860); and the article Cynici.

Diogenes in his πίθος or "Tub." (From a fragment of a Lamp in the British Museum.)

(2) A native of Apollonia in Crete, who was a pupil of Anaximenes and contemporary with Anaxagoras. Schleiermacher, however, affirms, from the internal evidence of the fragments of the two philosophers, that Diogenes preceded Anaxagoras. But Diogenes might have written before Anaxagoras and yet have been his junior, as we know was the case with Empedocles. Diogenes followed Anaximenes in making air the primal element of all things; but he carried his views further, and regarded the universe as issuing from an intelligent principle, by which it was at once vivified and ordered, a rational as well as sensitive soul, but still without recognizing any distinction between matter and mind. Diogenes wrote several books on Cosmology (Περὶ Φύσεως).

(3) Laërtius, so called from his native city, Laërté in Cilicia. He wrote the lives of the philosophers (Φιλόσοφοι Βίοι), in ten books, which are still extant. The period when he lived is not exactly known, but it is supposed to have been during the reigns of Septimius Severus and Caracalla. Diogenes is thought to have belonged to the Epicurean School. He divides all the Greek philosophers into two classes: those of the Ionic and those of the Italic school. He derives the first from Anaximander, the second from Pythagoras. After Socrates, he divides the Ionian philosophers into three branches: (*a*) Plato and the Academics, down to Clitomachus; (*b*) the Cynics, down to Chrysippus; (*c*) Aristotle and Theophrastus. The series of Italic philosophers consists, after Pythagoras, of the following: Telanges, Xenophanes, Parmenides, Zeno of Elea, Leucippus, Democritus, and others down to Epicurus. The first seven books are devoted to the Ionic philosophers; the last three treat of the Italic school.

The work of Diogenes is a crude contribution towards the history of philosophy. It contains a brief account of the lives, doctrines, and sayings of most persons who have been called philosophers; and though the author is evidently a most unfit person for the task which he imposed upon himself, and has shown very little judgment and discrimination in the execution of it, yet the book is extremely useful as a collection of facts, which we could not have learned from any other quarter, and is entertaining as a sort of *pot-pourri* on the subject. The article on Epicurus is valuable, as containing some original letters of that philosopher, which comprise a fairly satisfactory epitome of the Epicurean doctrines and are very useful to the readers of Lucretius. The best editions of Diogenes are those of Hübner (Leipzig, 1828–31) and Cobet (Paris, 1850).

Diogenianus (Διογενειανός). A Greek grammarian of Heraclea. About the middle of the second century A.D. he made extracts, in five books, from the great collection of glosses compiled about a century before by Pamphilus. These extracts form the foundation of the lexicon of Hesychius (q. v.). A collection of proverbs made by him is preserved in an abridged form. See Lexicon.

Diomedēae Insŭlae (Διομήδειαι νῆσοι). Five small islands in the Adriatic Sea, north of the promontory Garganum in Apulia, named after Diomedes. (See Diomedes.) The largest of these, called Diomedea Insula or Trimerus (Tremiti), was the place whither Iulia, the daughter of Augustus, was exiled (Tac. *Ann.* iv. 71).

Diomēdes (Διομήδης). (1) The son of Tydeus and Deïpylé. He was king of Aetolia, and one of the bravest of the Grecian chiefs in the Trojan War, ranking next to Achilles and Aiax. Homer represents him as one of the favourites of Athené. Among his exploits, it is recorded of him that he engaged in single combat with Hector and Aeneas; that he wounded Ares, Aeneas, and Aphrodité; and that, in concert with Odysseus, he carried off the horses of Rhesus and the palladium, and secured the arrows of Philoctetes. Diomedes was deprived of the affection of his wife Aegialé through the wrath and vengeance of Aphrodité, by whose influence, during his absence at the war, she had become attached to Cyllabarus, the son of Sthenelus. Diomedes was so afflicted at the estrangement of Aegialé that he abandoned Greece and settled at the head of a colony in Magna Graecia, where he founded a city, to which he gave the name of Argyripa, and married a daughter of Daunus, prince of the country. In the progress of his voyage to Italy, Diomedes was shipwrecked on that part of the Libyan coast which was under the sway of Lycus, who seized and confined him. He was, however, liberated by Callirrhoé, the tyrant's daughter, who became so fond of him that upon his quitting the African shores she put herself to death. Diomedes, according to one account, died in Italy at a very advanced age; while another legend makes him to have been slain by his father-in-law Daunus. His companions were so much afflicted by his death that they were changed into birds. Vergil, however, makes this transformation earlier in date, and to have taken place during the lifetime of Diomedes (*Aen.* xi. 272). He seems to have followed the tradition recorded by Ovid (*Met.* xiv. 457), that Agnon, one of Diomedes's companions in his voyage from Troy, insulted Aphrodité with contemptuous language, and that the goddess, in revenge, transformed not only Agnon, but many

others of Diomedes's followers into birds. (See DIOMEDEAE INSULAE.) (2) A king of the Bistones, in Thrace, son of Ares and Cyrené. His mares fed on human flesh. Heracles sailed to this quarter, having been ordered, as his eighth labour, to bring these mares to Mycenae. The hero overcame the grooms of Diomedes and led the mares to the sea. The Bistones pursued with arms. Heracles, leaving the mares in charge of Abderus, one of his companions, went to engage the foe. Meantime the mares tore their keeper to pieces; and the hero, having defeated the Bistones and slain Diomedes, built a city by the tomb of Abderus, which he called Abdera after him. Heracles brought the mares to Eurystheus, who turned them loose, and they strayed to Mount Olympus, where they were destroyed by the wild beasts (Apollod. ii. 5, 8). Another account makes Heracles to have given Diomedes to be devoured by his own mares, and Eurystheus to have consecrated them to Heré (Diod. Sic. iv. 15). (3) A Roman grammarian of the fourth century A.D., whose work, entitled *Ars Grammatica*, has come down to us in three books. It is taken from the same sources as the contemporary work by Charisius (q. v.), and is chiefly valuable for the notices on literary history contained in the third book and taken from the *De Poetis* of Suetonius. The best text of Diomedes is that in Keil, *Grammatici Latini* (i. 298). On his Latinity see the treatise of Paucker (Berlin, 1883).

Diomosia (*διωμοσία*). See ANTOMOSIA.

Dion (*Δίων*). (1) An inhabitant of Syracuse, who became a disciple of Plato, invited to the court of Syracuse by the elder Dionysius. He was nearly connected with Dionysius by having married his daughter, and because his sister was one of his wives; and he was also much esteemed by him, so as to be employed on several embassies. At the accession of the younger Dionysius, Plato was again, at Dion's request, invited to Syracuse. (See PLATO.) In order, however, to counteract his influence, the courtiers obtained the recall of Philistus, a man notorious for his adherence to arbitrary principles. This faction determined to supplant Dion, and availed themselves of a real or supposititious letter to fix on him the charge of treason. Dion, precluded from defence, was transported to Italy, and from thence proceeded to Greece, where he was received with great honour. Dionysius became jealous of his popularity in Greece, especially at Athens, stopped his remittances, confiscated his estates, and compelled his wife, who had been left at Syracuse as an hostage, to marry another person. Dion, incensed at this treatment, determined to expel the tyrant. Plato resisted his intentions; but, encouraged by other friends, he assembled a body of troops, and with a small force sailed to Sicily, took advantage of the absence of Dionysius in Italy, and freed the people from his control. Dionysius returned; but, after some conflicts, was compelled to escape to Italy. The austere and philosophic manners of Dion, however, soon lost him the favour of his countrymen, and he was supplanted by Heraclides, a Syracusan exile, and obliged to make his retreat to Leontini. He afterwards regained the ascendency and caused Heraclides to be assassinated, which robbed him ever after of his peace of mind. An Athenian, an intimate friend, formed a conspiracy against his life, and Dion was assassinated in the fifty-fifth year of his age, B.C. 354 (Diod. Sic. xvi. 6 foll.; Plut. *Dion.*; Corn. Nep. *Dion*).

(2) DIO CASSIUS COCCEIĀNUS, son of Cassius Apronianus, a Roman senator, born A.D. 155, at Nicaea, in Bithynia. His true name was Cassius, but he assumed the other two names, as being descended on the mother's side from Dion Chrysostom. Thus, though he was on his mother's side of Greek descent, and though, in his writings, he adopted the prevailing language—Greek—of his native province, he must be considered as a Roman. Dio Cassius passed the greater part of his life in public employments. He was a senator under Commodus and governor of Smyrna after the death of Septimius Severus; and afterwards consul, as also proconsul in Africa and Pannonia. Alexander Severus entertained the highest esteem for him, and made him consul for the second time, with himself, though the Praetorian Guards, irritated against him on account of his severity, had demanded his life. When advanced in years (about A.D. 229), he returned to his native country. Dio published a Roman history, in eighty books, the fruit of his researches and labours for the space of twenty-two years. It embraced a period of 983 years, extending from the arrival of Aeneas in Italy, and the subsequent founding of Rome, to A.D. 229. Down to the time of Iulius Caesar, he only gives a summary of events; after this, he enters somewhat more into details; and from the time of Commodus he is very circumstantial in relating what passed under his own eyes. We have fragments remaining of the first thirty-six books: but there is a considerable portion of the thirty-fifth book, on the war of Lucullus against Mithridates, and of the thirty-sixth, on the war with the pirates and the expedition of Pompey against the king of Pontus. The books that follow, to the fifty-fourth inclusive, are nearly all entire: they comprehend a period from B.C. 65 to B.C. 12, or from the eastern campaign of Pompey and the death of Mithridates to the death of Agrippa. The fifty-fifth book has a considerable gap in it. The fifty-sixth to the sixtieth, both included, which comprehend the period from A.D. 9 to A.D. 54, are complete, and contain the events from the defeat of Varus in Germany to the death of Claudius. Of the following twenty books we have only fragments and the meagre abridgment of Xiphilinus. The eightieth or last book comprehends the period from A.D. 222 to A.D. 229, in the reign of Alexander Severus. The abridgment of Xiphilinus, as now extant, commences with the thirty-fifth and continues to the end of the eightieth book. It is a very indifferent performance, and was made by order of the emperor Michael VII., Parapinaces. The abbreviator, Xiphilinus, was a monk of the eleventh century.

The fragments of the first thirty-six books, as now collected, are of four kinds: (*a*) FRAGMENTA VALESIĀNA, such as were dispersed throughout various writers, scholiasts, grammarians, lexicographers, etc., and were collected by Henri de Valois. (*b*) FRAGMENTA PEIRESCIĀNA, comprising large extracts, found in the section entitled "Of Virtues and Vices," in the great collection or portative library compiled by order of Constantine VII., Porphyrogenitus. The manuscript of this belonged to Peiresc. (*c*) The fragments of the first thirty-four books, preserved in the second

section of the same work of Constantine's, entitled "Of Embassies." These are known under the name of FRAGMENTA URSINIANA, because the manuscript containing them was found in Sicily by Fulvio Orsini. (*d*) EXCERPTA VATICANA, by Mai, which contain fragments of books i.–xxxv. and lxi.–lxxx. To these are added the fragments of an unknown continuator of Dio, which go down to the time of Constantine. Other fragments from Dio belonging chiefly to the first thirty-five books were found by Mai in two Vatican MSS., which contain a collection made by Maximus Planudes. The annals of Zonaras also contain numerous extracts from Dion.

Dio has taken Thucydides for his model; but the imitator is comparable with his original neither in arrangement and the distribution of materials nor in soundness of view and just and accurate reasoning. His style is generally clear, where there appears to be no corruption of the text, though full of Latinisms. His diligence is unquestionable, and, from his opportunities, he was well acquainted with the circumstances of the Empire during the period for which he is a contemporary authority; and, indeed, we may assign a high value to his history of the whole period from the time of Augustus to his own age. Nor is his work without value for the earlier periods of Roman history, in which, though he has fallen into errors, like all the Greek and Roman writers who have handled the same obscure subject, he still enables us to correct some erroneous statements of Livy and Dionysius. The best editions are those of Fabricius, completed by Reimar, 2 vols. (Hamb. 1751); of Sturz, 8 vols. (Leipzig, 1824–25); of Bekker (1849); and especially of L. Dindorf (revised by Melber, 1890 foll.). The small Tauchnitz edition, 4 vols. 16mo, contains all the fragments.

(3) Surnamed CHRYSOSTŎMUS, or the Golden-mouthed, on account of the beauty of his style, was a native of Prusa in Bithynia, born about A.D. 50. He was a sophist and Stoic. Being in Egypt when Vespasian, who had been proclaimed emperor by his own army, came there, he was consulted by that prince on the proper course to be adopted under the circumstances. Dion had the candour to advise him to restore the Republic. Afterwards he resided for years at Rome, till, one of his friends having engaged in a conspiracy against Domitian, Dion, fearing for himself, fled to what is now Moldavia, where he remained till the tyrant's death, labouring for his subsistence with his own hands. Domitian having been assassinated, the legions quartered on the Danube were about to revolt, when Dion got upon an altar and harangued them so effectually that they submitted to the decision of the Senate. Dion was in high favour with Nerva and Trajan, and when the latter triumphed after his Dacian victories the orator sat in the emperor's car in the procession. He returned to Bithynia, where he spent the remainder of his life. Accusations of peculation and treason were brought against him, but rejected as frivolous. He died at an advanced age, but it is not known in what year. We have eighty orations attributed to him, which are very neatly written in pure Attic Greek, but are not of much intrinsic value. The best editions are those of Reiske, 2 vols. (Leipzig, 1784); Emper (1844); and L. Dindorf (1857).

Dionaea (*Διώναια*). See DIONÉ.

Diōné (*Διώνη*). A female Titan, loved by Zeus, by whom she became the mother of Aphrodité, who is hence called Dionaea and sometimes even Dioné. Hence Caesar is called Dionaeus Caesar, because he claimed descent from Venus (Aphrodité).

Dionysia (*τὰ Διονύσια*). A celebration in honour of Dionysus (q. v.), which was held in Athens in a special series of festivals, namely:

(1) The OSCHOPHORIA, supposed to have been instituted by Theseus on his return from Crete. This was celebrated in the month of Pyanepsion (October to November), when the grapes were ripe. It was so called from the shoots of vine (*ὄσχοι*) with grapes on them, which were borne in a race from the temple of Dionysus in Limnae, a southern suburb of Athens, to the sanctuary of Athené Sciras, in the harbour town of Phalerum. The bearers and runners were twenty youths (*ἔφηβοι*) of noble descent whose parents were still living, two being chosen from each of the ten tribes. The victor received a goblet containing a drink made of wine, cheese, meal, and honey, and an honorary place in the procession which followed the race. This procession, in which a chorus of singers was preceded by two youths in woman's clothing, marched from the temple of Athené to that of Dionysus. The festival was concluded by a sacrifice and a banquet.

(2) The SMALLER (*τὰ μικρά*), or RUSTIC DIONYSIA. This feast was held in the month of Poseideon (December to January), at the first tasting of the new wine. It was celebrated, with much rude merriment, throughout the various country districts. The members of the different tribes first went in solemn processions to the altar of the god, on which a goat was offered in sacrifice. The sacrifice was followed by feasting and revelry, with abundance of jesting and mockery and dramatic improvisations. Out of these were developed the elements of the regular drama (see DRAMA), for in the more prosperous villages, pieces—in most cases the same as had been played at the urban Dionysia—were performed by itinerant troupes of actors. The festival lasted some days, one of its chief features being the Ascoliasmus, or bag-dance. The point of this was to dance on one leg, without falling, upon oiled bags of inflated leather. (See ASCOLIA.) The Ἀλῷα, Harvest-home (or Feast of Threshing-floors), was celebrated at Athens and in the country in the same month to Demeter and Persephoné in common.

(3) The LENAEA (*Λήναια*), or Feast of Vats. This was held at Athens in the month of Gamelion (January to February), at the Lenaeum, the oldest and most venerable sanctuary of Dionysus in the city. After a great banquet, for which the meat was provided at the public expense, the citizens went in procession through the city, with the usual jesting and mockery, to attend the representation of the tragedies and comedies at the theatre.

(4) The ANTHESTERIA. Celebrated for three days in Anthesterion (February to March). On the first day (*Πιθοιγία*, or opening of casks) the casks were first opened, and masters and servants alike tasted the new wine. On the second (Χόες, or Feast of Beakers), a public banquet was held, at which a beaker of new wine was set by each guest. This was drunk with enthusiasm, to the sound of trumpets. The most important ceremony, however, was the marriage of the Basilissa, or wife of the Archon Basileus, with Dionysus, the Basilissa being re-

garded as representing the country. The ceremony took place in the older of the two temples in the Lenaeun, which was never opened except on this occasion. The last day was called Χύτροι, or the Feast of Pots, because on this day they made offerings of cooked pulse in pots to Hermes, as guide of the dead, and to the souls of the departed, especially those who had perished in the flood of Deucalion.

(5) The GREAT URBAN DIONYSIA (τὰ μέγαλα). This festival was held at Athens for six days in the mouth of Elaphebolion (March to April) with great splendour, and attended by multitudes from the surrounding country and other parts of Greece. A solemn procession was formed, representing a train of Dionysiac revellers. Choruses of boys sang dithyrambs, and an old wooden statue of Dionysus, worshipped as the liberator of the land from the bondage of winter, was borne from the Lenaeum to a small temple in the neighbourhood of the Acropolis and back again. The glory of this festival was the performance of the new tragedies, comedies, and satyric dramas, which took place, with lavish expenditure, on three consecutive days. In consequence of the immense number of citizens and strangers assembled, it was found convenient to take one of these six days for conferring public distinctions on meritorious persons, as in the case of the presentation of the golden crown to Demosthenes.

The Dionysia were celebrated at Rome under the name of BACCHANALIA. The circumstances of their introduction are given in detail by Livy, (xxxix. 8–19). According to his account, a Greek priest brought into Etruria the secret nightly celebration of this worship. It was not only accompanied by all manner of licentious excesses, but was also made the occasion for planning the most revolting crimes—perjury, forgery, false accusations, poisoning, and assassination. From Etruria the contagion spread to Rome. According to Livy, at first the rites were comparatively innocent. Women only were initiated, and that by day, three times in the year, and the priesthood was held by matrons in turn. It is quite possible that in this statement Livy has in view the worship of Stimula or Simila, an early Italian deity, afterwards identified with Semelé, whence Ovid (*Fast.* vi. 503–515) regards her rites as of a Bacchanalian character. Possibly Vergil is thinking of the same when (*Aen.* vii. 385) he speaks of the Bacchic rites as existing in Italy in the time of Aeneas. In any case it is hardly conceivable that the corrupt Etruscan cult should have so much changed its character in passing into Rome as Livy's account would require us to believe. He goes on to tell how a certain Paculliа Annia, a Campanian priestess, claiming to be acting under the inspiration of the gods, changed the whole character of the worship. She was the first to admit men, by initiating her own sons; she altered the time of celebration from the day to the night, and held initiations five times every month instead of three times a year. The promiscuous admission of men and women and the license of night opened the way to all manner of debauchery and crime. The most horrible immoralities were practised, the wildest frenzy indulged in. Men flung themselves about as if possessed, and uttered frantic prophecies; women dressed as Bacchanals, with dishevelled locks, ran down to the Tiber and plunged into the water torches which, composed of a mixture of sulphur and lime, were not extinguished in the waves. The initiated were a vast number, including many of high birth, both men and women. To secure the complete subjugation of the votaries a rule was made that none should be admitted who were not under twenty years of age, a time at which the judgment is weak and the passions strong. For some time, although the existence of these rites was generally known, not only by report, but also by the clanging of cymbals and the howlings of the devotees by night, their real nature was not suspected. But in B.C. 186, the lewd and criminal character of the meetings was brought to the knowledge of the consuls. P. Aebutius, the orphan of a Roman knight, had been left by the death of his guardians to the charge of his mother Duronia and his stepfather Sempronius Rutilus. The latter had embezzled his property, and in order to escape punishment desired either to make away with the youth or to get him wholly into his power. Duronia, who was entirely devoted to her husband, determined to avail herself of the Bacchanalia for the corruption or destruction of her son. She informed him that at a time when he was ill she had vowed that he should be initiated into the Bacchic rites if he recovered, and that now was the time to discharge the vow. Aebutius, taking the matter lightly, mentioned it to a freedwoman, Hispala Fecenia, with whom he had a *liaison;* but she, in the utmost terror and distress, warned him of the dangers that he was incurring—she, when still a slave, had accompanied her mistress to the orgies, and had seen the vile practices of the votaries. Aebutius, returning to his mother, refused to be initiated, without disclosing his reasons. She, in a fury, drove him from the house. He took refuge with his father's sister, and at her advice laid the whole facts of the case before the consuls. Hispala was induced by them to confess all that she knew. The Senate was consulted and full powers given to the consuls to investigate the matter. Prompt measures were taken to secure evidence and to prevent the escape of the guilty. The inquiry led to the belief that more than 7000 men and women were implicated in the affair. Those who were merely initiated, and had taken the oath binding them to every kind of crime and lewdness, were punished with imprisonment; those against whom actual guilt was found—and these, we are told, were the majority—received capital punishment. The women for the most part were handed over to their relations, or to those who were responsible for them, for private execution; the rest were put to death in public.

One of the most ancient and precious records of the old Latin language preserved to us is the bronze tablet, commonly called the SENĀTUS CONSULTUM DE BACCHANALĪBUS, containing the letter in which the consuls communicated to the magistrates *in agro Teurano* (Tirioli, in the country of the Bruttii) part (as Mommsen thinks) of the decree of the Senate passed on this occasion (cf. Mommsen, *C. I. L.* i. 196; Ritschl, *P. L. M. E.* tab. xviii.; Allen's *Early Latin*, pp. 28–31 [Boston, 1880]; and Cortese, *Latini Sermonis Vetustioris Exempla*, p. 9 [Turin, 1892]). Doubtless it is only a specimen of many which *mutatis mutandis* were sent throughout Italy. The Bacchanalia are rigidly prohibited: if any one, Roman, Latin, or ally, considers himself

under a religious obligation *bacanal habere*, he can only do so by obtaining permission from the *praetor urbanus*, confirmed by a vote of the Senate in which not less than one hundred have taken part. No priest, president, or common purse is allowed, nor any kind of common vow. Not more than two men or three women (five in all) may celebrate the rites, except by special permission. These regulations were carried out with unflinching rigour, apparently not without the use of military force (Cic. *De Leg.* ii. 15, 37); but it was some years before the Bacchanalian rites were completely extinguished in southern Italy (Liv. xxxix. 41, xl. 19). The Liberalia (q. v.) were of an entirely different character. The bronze tablet mentioned above is now preserved at Vienna.

Dionysiăca (*Διονυσιακά*). An epic poem, in forty-eight books, by the Christian Greek poet Nonnus, of Panopolis in Egypt, during the fifth century A.D. See NONNUS.

Dionysius (*Διονύσιος*). (1) THE ELDER, a celebrated tyrant of Syracuse, raised to that high rank from the station of a simple citizen, was born in that city, B.C. 430. He was son-in-law to Hermocrates, who, having been banished by an adverse party, attempted to return by force of arms and was killed in the action. Dionysius was dangerously wounded, but he recovered and was afterwards recalled. In time he caused himself to be nominated one of the generals, and, under pretence of raising a force sufficient to resist the Carthaginians, obtained a decree for recalling all the exiles, to whom he gave arms. Being sent to the relief of Gela, then besieged by the Carthaginians, he effected nothing against the enemy, pretending that he was not seconded by the other commanders; and his friends suggested that, in order to save the State, the supreme power ought to be confided to one man, reminding the people of the times of Gelon, who had defeated the Carthaginians. The General Assembly therefore proclaimed Dionysius supreme chief of the Republic about B.C. 405, when he was twenty-five years of age. He increased the pay of the soldiers, enlisted new ones, and, under pretence of a conspiracy against his person, formed a guard of mercenaries. He then proceeded to the relief of Gela, but failed in the attack on the Carthaginian camp; he, however, penetrated into the town, the inhabitants of which he advised to leave it quietly in the night under the escort of his troops. On his retreat he persuaded those of Camarina to do the same. This raised suspicion among his troops, and a party of horsemen, riding on before the rest, raised, on their arrival at Syracuse, an insurrection against Dionysius, plundered his house, and treated his wife so cruelly that she died in consequence. Dionysius, with a chosen body, followed close after, set fire to the gate of Acradina, forced his way into the city, put to death the leaders of the revolt, and remained undisputed possessor of the supreme power. The Carthaginians, being afflicted by a pestilence, made proposals of peace, which were accepted by Dionysius, and he then applied himself to fortifying Syracuse, and especially the island of Ortygia, which he made his stronghold, and which he peopled entirely with his trusty partisans and mercenaries, by the aid of whom he put down several revolts. After reducing the towns of Leontini, Catana, and Naxus, he engaged in a new war with Carthage, in which he met with the most brilliant success, making himself master of numerous towns in Sicily, and becoming eventually feared both in Italy and Sicily. In order to raise money, he allied himself with the Illyrians, and proposed to them the joint plunder of the temple of Delphi; the enterprise, however, failed. He then plundered several temples, such as that of Persephoné at Locri; and as he sailed back with the plunder, with a fair wind, he, being a humourist in his way, observed to his friends, "You see how the immortal gods favour sacrilege." Having carried off a golden mantle from a statue of Zeus, consecrated by Gelon out of the spoils of the Carthaginians, he replaced it by a woollen garment, saying that this was better suited to the vicissitudes of the seasons. He also took away a golden beard from Aesculapius, observing that it was not becoming for the son of a beardless father (Apollo) to make a display of his own beard. He likewise appropriated to himself the silver tables and golden vases and crowns in the temples, saying that he would make use of the bounty of the gods (Cic. *N. D.* iii. 34). He made a descent with a fleet on the coast of Etruria, and plundered the temple at Caeré or Agylla of 1000 talents. With these resources he was preparing himself for a new expedition to Italy, when a fresh Carthaginian armament landed in Sicily, B.C. 383, and defeated Dionysius, whose brother Leptines fell in the battle. A peace followed, of which Carthage dictated the conditions.

This peace lasted fourteen years, during which Dionysius remained the undisturbed ruler of Syracuse and one half of Sicily, with part of southern Italy. He sent colonies to the coasts of the Adriatic, and his fleets navigated both seas. Twice he sent assistance to his old ally, Sparta: once against the Athenians, B.C. 374, and again in 369 after the battle of Leuctra, when the Spartans were hard pressed by Epaminondas. Meantime the court of Dionysius was frequented by many distinguished men, philosophers and poets. Plato is said to have been among the former, being invited by Dion (q. v.), the brother-in-law of Dionysius; but the philosopher's declamations against tyranny led to his being sent away from Syracuse. The poets fared little better, as Dionysius himself aspired to poetical fame, for which, however, he was not so well qualified as for political success. Those who did not praise his verses were in danger of being led to prison. Dionysius twice sent some of his poems to be recited at the Olympic Games, but they were hissed by the assembly. He was more successful at Athens. A tragedy of his obtained the prize, and the news of his success almost turned his brain. He had just concluded a fresh truce with the Carthaginians, after having made an unsuccessful attack on Lilybaeum, at the expiration of the fourteen years' peace; and he now gave himself up to rejoicings and feastings for his poetical triumph. In a debauch with his friends he ate and drank so intemperately that he fell senseless, and soon after died, B.C. 367, in the sixty-third year of his age, having been tyrant of Syracuse for thirty-eight years. Dionysius, his elder son by Doris, succeeded him in the sovereignty.

Dionysius was a clever statesman and generally successful in his undertakings. He did much to strengthen and extend the power of Syracuse, and it was probably owing to him that all Sicily did not fall into the hands of the Carthaginians. He was unscrupulous, rapacious, and vindictive; but

several of the stories related of his cruelty and suspicious temper appear improbable, or at least exaggerated. An account of the famous prison, or "Ear of Dionysius," will be found under the title LAUTUMIAE.

(2) The second of the name, styled THE YOUNGER, was son of Dionysius I. by Doris. His father, whom he succeeded, had left the State in a prosperous condition, but young Dionysius had neither his abilities nor his prudence and experience. He followed at first the advice of Dion, who, although a republican in principle, had remained faithful to his father, and who now endeavoured to direct the inexperienced son for the good of his country. For this purpose Dion invited his friend Plato to Syracuse, about B.C. 364. Dionysius received the philosopher with great respect, and, in deference to his advice, reformed for a while his loose habits and the manners of his court. But a faction, headed by Philistus, who had always been a supporter of the tyranny of the elder Dionysius, succeeded in prejudicing the son against both Dion and Plato. Dion was exiled, under pretence that he had written privately to the Senate of Carthage for the purpose of concluding a peace. Plato urgently demanded of Dionysius the recall of Dion, and not being able to obtain it, he left Syracuse, after which Dionysius gave himself up to debauchery without restraint. Dion, meanwhile, was travelling through Greece, where his character gained him numerous friends. Dionysius, moved by jealousy, confiscated his property and obliged his wife to marry another. Upon this, Dion collected a small force at Zacynthus, with which he sailed for Sicily and entered Syracuse without resistance. Dionysius retired to the citadel in Ortygia, and after some resistance, in which Philistus, his best supporter, was taken prisoner and put to death, he quitted Syracuse by sea and retired to Locri, the country of his mother, where he had connections and friends. Dion having been treacherously murdered, several tyrants succeeded each other in Syracuse, until Dionysius himself came and retook it about B.C. 346. Instead, however, of profiting by his ten years' exile, he had grown worse. Having, during the interval of his absence from Syracuse, usurped the supreme power in Locri, he had committed many atrocities, had put to death several citizens and abused their wives and daughters. Upon his return to Syracuse, his cruelty and profligacy drove away a great number of people, who emigrated to various parts of Italy and Greece, while others joined Hicetas, tyrant of Leontini and a former friend of Dion. The latter sent messengers to Corinth to request assistance against Dionysius. The Corinthians appointed Timoleon leader of the expedition. This commander landed in Sicily, B.C. 344, entered Syracuse, and soon after obliged Dionysius to surrender. Dionysius was sent to Corinth, where he spent the remainder of his life in the company of actors and low women. Some say that at one time he kept a school. Several repartees are related of him, in answer to those who taunted him upon his altered fortunes, which are not destitute of wit or wisdom (Plut. *Dion;* Diod. Sic. xvi. 5 foll.).

(3) DIONYSIUS THRAX, a celebrated Greek grammarian, a native of Byzantium, or perhaps of Alexandria (Suidas). Coming to Rome about B.C. 80, he engaged in teaching rhetoric and grammar. Of numerous manuals, commentaries, etc., that he published, one entitled Τέχνη Γραμματική has come down to us, and is of very great importance, as it became the basis for all subsequent grammars, and for many centuries was a standard text-book, either in the original or in Latin translations. From it, through the Latin equivalents, came the technical terms of modern grammar, such as "case" (*casus*, πτῶσις), "plural" (*pluralis*, πληθυντικός), "singular" (*singularis*, ἑνικός), "nominative" (*nominativus*, ὀνομαστική), etc. In the fourth century the book was translated into Armenian, and this version, which contains five more chapters than the Greek MSS., has given a definitive text of the whole. It is to be found in Bekker's *Anecdota Graeca* (Berlin, 1821), but especially in the recent edition by Uhlig (Leipzig, 1884). A French translation is given in Cirbied, *Mémoires et Dissertations sur les Antiquités Nationales et Étrangères* (Paris, 1824). On Dionysius see Gräfenhan, *Geschichte d. Class. Phil.* i. p. 402 foll. (Bonn, 1850); Lersch, *Sprachphilosophie der Alten*, i. p. 64 foll. (Leipzig, 1841); Steinthal, *Geschichte der Sprachwissenschaft*, 2d ed. (Berlin, 1891); Sayce, *Science of Language*, Introduction; Hübschmann, *Casuslehre*, pp. 15 foll.; Suidas, s. v. Διονύσιος; and the article GRAMMATICA.

(4) HALICARNASSENSIS or HALICARNASSEUS, an historian and critic, born at Halicarnassus in the first century B.C. We know nothing of his history beyond what he has told us himself. He states that he came to Italy at the termination of the civil war between Augustus and Antony (B.C. 29), and that he spent the following two-and-twenty years at Rome in learning the Latin language and in collecting materials for his history. He died at Rome, B.C. 7. The principal work of Dionysius is his work on Roman antiquities (Ῥωμαϊκὴ Ἀρχαιολογία), which commenced with the early history of the people of Italy and terminated with the beginning of the First Punic War, B.C. 265. It originally consisted of twenty books, of which the first ten remain entire. The eleventh breaks off in the year B.C. 312, but several fragments of the latter half of the history are preserved in the collection of Constantine Porphyrogenitus, and to these a valuable addition was made in 1816, by Mai, from an old MS. Besides, the first three books of Appian were founded entirely upon Dionysius, and Plutarch's biography of Camillus must also be considered as a compilation mostly taken from the *Antiquitates Romanae*, so that perhaps, upon the whole, we have not lost much of his work. The intention of the author in writing his history was to give the Greeks a more accurate and favourable idea than they had hitherto entertained of the Roman people and its civilization, for it had always fretted the Easterns to have been conquered by a race of mere "barbarians." The work is founded upon a very careful and thorough study of authorities, and is one of our chief sources of information upon ancient Roman history in its internal and external development. Good editions of the *Antiquitates* are those of Reiske, 6 vols. (Leipzig, 1774–76), Schwartz (Leipzig, 1877), and Jacoby 2 vols. (1885–88). The first edition in the original Greek was that of R. Stephanus (Paris, 1546).

Dionysius also wrote a treatise on rhetoric (Τέχνη Ῥητορική); criticisms (Τῶν Ἀρχαίων Κρίσις) on the style of Thucydides, Lysias, Isocrates, Isaeus, Dinarchus, Plato, and Demosthenes; a treatise on the arrangement of words (Περὶ Συνθέσεως Ὀνομάτων); and some other short essays. The first complete

edition of the entire works of Dionysius was that of Sylburg (Frankfort, 1586; reprinted at Leipzig, 1691). More recent editors of the rhetorical works are Gros (Paris, 1826) and Westermann.

(5) The author of a Greek poem in 1186 hexameters, entitled Τῆς Γῆς Οἰκουμένης Περιήγησις, "A Description of the Habitable World." It is not clearly ascertained where he was born. The probability is, however, that he was a native of Charax in Susiana. It is uncertain, also, when he flourished; he belonged, however, according to the general opinion, to the latter part of the third or the beginning of the fourth century A.D. He derived from his poem the surname of Periegetes. This production of his has little merit as a work of imagination and but feeble interest for the geographer. The commentary, however, of Eustathius upon it possesses some value from the miscellaneous information which is scattered throughout. There are two Latin translations of the poem—one by Rufus Festus Avienus (q. v.) and the other by Priscianus (q. v.). The last and best edition of the *Periegesis* is that of Bernhardy (Leipzig, 1828), in the first volume of his *Geographi Graeci Minores*.

(6) A Christian writer, called AREOPAGĪTA, from his having been a member of the court of Areopagus at Athens. He was converted to Christianity by St. Paul's preaching (Acts, xvii. 34). He is reported to have been the first bishop of Athens, being appointed to that office by the apostle Paul, and to have suffered martyrdom under Domitian. His fundamental thought is the absolute transcendence of God. During the Middle Ages a great number of writings were circulated under his name, and were collected together and printed at Cologne in 1536, and subsequently at Antwerp in 1634 and at Paris in 1646. They have now, for a long time, been deemed spurious, although scholars differ in respect to the times and authors of the fabrication. The most probable reasoning, however, fixes them at the end of the fourth century. The standard text is that of Corderius, reprinted by the Abbé Migne. Trans. by Parker (1894). See Harnack's *Dogmengeschichte*, vol. ii., and the studies by Niemeyer (1869) and Schneider (1884).

(7) Surnamed EXIGUUS, or "the Little," on account of the smallness of his stature, a Scythian monk of the sixth century, who became an abbot at Rome. Cassiodorus, who was his intimate friend, speaks highly of his learning and character. At the request of Stephen, bishop of Salona, he drew up a body of canons entitled *Collectio sive Codex Canonum Ecclesiasticorum*, etc., translated from the Greek, containing the first fifty apostolical canons, as they are called, with those of the councils of Nice, Constantinople, Chalcedon, Sardis, and including 138 canons of certain African councils. He afterwards drew up a collection of the decretals. To him some ascribe the mode of computing the time of Easter, and of dating from the birth of Christ.

(8) Of Colophon, an artist, contemporary with Polygnotus, whom he imitated. Aristotle describes him as a realist in the treatment of his subjects.

(9) DIONYSIUS CATO. See CATO, p. 302.

Dionȳsus (Διώννσος or Διόνυσος). The god of luxuriant fertility, especially as displayed by the vine; and therefore the god of wine. His native place, according to the usual tradition, was Thebes, where he was born to Zeus by Semelé (q. v.), the daughter of Cadmus. Semelé was destroyed by the lightning of her lover, and the child was born after six months. Zeus accordingly sewed it up in his thigh till ripe for birth, and then gave it over to Ino, the sister of Semelé. (See ATHAMAS.) After her death Hermes took the boy to the nymphs of Mount Nysa, or according to another version, to the Hyades of Dodona, who brought him up and hid him in a cave away from the anger of Heré. It cannot be ascertained where Mount Nysa was originally supposed to be. In later times the name was transferred to many places where the vine was cultivated, not only in Greece, but in Asia, India, and Africa. When grown up, Dionysus is represented as planting the vine, and wandering through the wide world to spread his worship among men, with his wine-flushed train (θίασος)—his nurses and other nymphs, Satyrs, Sileni, and similar woodland deities. Whoever welcomed him kindly, like Icarius in Attica and Oeneus in Aetolia, received the gift of wine; but those who resisted him were terribly punished. A whole series of fables is apparently based upon the tradition that in many places, where a serious religious ritual existed, the dissolute worship of Dionysus met with a vigorous resistance. See LYCURGUS; MINYADAE; PENTHEUS; PROETUS.

This worship soon passed from the mainland of Greece to the wine-growing islands, and flourished pre-eminently at Naxos. Here it was, according to the story, that the god wedded Ariadné (q. v.). In the islands a fable was current that he fell in with some Tyrrhenian pirates, who took him to their ship and put him in chains. But his fetters fell off, the sails and the mast were wreathed with vine and ivy, the god was changed into a lion, while the seamen threw themselves madly into the sea and were turned into dolphins. In forms akin to this the worship of Dionysus passed into Egypt and far into Asia. Hence arose a fable, founded on the story of Alexander's campaigns, that the god passed victoriously through Egypt, Syria, and India as far as the Ganges, with his army of Sileni, Satyrs, and inspired women, the Maenades or Bacchantes, carrying their wands (θύρσοι) crowned with vines and ivy. Having thus constrained all the world to the recognition of his deity, and having with Heracles, assisted the gods, in the form of a lion, to victory in their war with the Giants, he was taken to Olympus, where, in Homer, he does not appear. From Olympus he descends to the lower world, whence he brings his mother, who is worshipped with him under the name of Thyoné ("the wild one"), as Leto was with Apollo and Artemis. From his mother he is called Thyoneus, a name which, with others of similar meaning, such as Bacchus, Bromios, Euios, and Iacchos, points to a worship founded upon a different conception of his nature.

In the myth with which we have been hitherto concerned, the god appears mainly in the character and surroundings of joy and triumph. But, as the god of the earth, Dionysus belongs, like Persephoné, to the world below as well as to the world above. The death of vegetation in winter was represented as the flight of the god into hiding from the sentence of his enemies, or even as his extinction; but he returned again from obscurity, or rose from the dead, to new life and activity. In this connection he was called Zagreus ("torn in pieces") and represented as a son of Zeus and his daughter Persephoné, or sometimes of Zeus and Demeter. In his childhood he was torn to pieces

Dionysus and Lion. (Choragic Monument of Lysicrates.)

by the Titans, at the command of the jealous Heré. But every third year, after spending the interval in the lower world, he is born anew. According to the Orphic story, Athené brought her son's heart to Zeus, who gave it to Semelé or swallowed it himself, whereupon the Theban or younger Dionysus was born. The grave of Dionysus was shown at Delphi in the inmost shrine of the Temple of Apollo. Secret offerings were brought thither, while the women who were celebrating the feast awakened Licnites; in other words, invoked the new-born god cradled in a winnowing-fan on the neighbouring mountain of Parnassus. Festivals of this kind, in celebration of the extinction and resurrection of the deity, were held by women and girls only, amid the mountains at night, every third year, about the time of the shortest day. The rites, intended to express the excess of grief and joy at the death and reappearance of the god, were wild even to savagery, and the women who performed them were hence known by the expressive names of Bacchae, Maenads, and Thyiades. They wandered through woods and mountains, their flying locks crowned with ivy or snakes, brandishing wands and torches, to the hollow sounds of the drum and the shrill notes of the flute, with wild dances and insane cries and jubilation. The victims of the sacrifice—oxen, goats, even fawns and roes from the forest—were killed, torn in pieces, and eaten raw, in imitation of the treatment of Zagreus by the Titans. Thrace and Macedonia and Asiatic Greece were the scene of the wildest orgies; indeed, Thrace seems to be the country of their birth. In Asiatic Greece, it should be added, the worship of Dionysus-Zagreus came to be associated with the equally wild rites of Rhea (Cybelé) and Atys and Sabus or Sabazius (q. v.). In Greece proper the chief seats of these were Parnassus, with Delphi and its neighbourhood, Boeotia, Argos, and Laconia, and in Boeotia and Laconia especially the mountains Cithaeron and Taÿgetus. They were also known in Naxos, Crete, and other islands. They seem to have been unknown in Attica, though Dionysus was worshipped at the Eleusinian Mysteries, with Persephoné and Demeter, under the name of Iacchos, as brother or bridegroom of Persephoné. (See Mysteria.) But the Attic cycle of national festivals in honour of Dionysus represents the idea of the ancient and simple Hellenic worship, with its merry usages. Here Dionysus is the god who gives increase and luxuriance to vineyard and tree. For he is a kindly and gentle power, terrible only to his enemies, and born for joy and blessing to mankind. His gifts bring strength and healing to the body, gladness and forgetfulness of care to the mind, whence he was called Lyaeus, or the loosener of care. They are ennobling in their effects, for they require tending, and thus keep men employed in diligent labour; they bring them together in merry meetings, and inspire them to music and poetry. Thus it is to the worship of Dionysus that the dithyramb and the drama owe their origin and development. In this way Dionysus is closely related, not only to Demeter, Aphroditê, Eros, the Graces, and the Muses, but to Apollo, because he inspires men to prophesy.

The most ancient representation of Dionysus consists of wooden images with the *φαλλός* (*membrum virile*) as the symbol of generative power. In works of art he is sometimes represented as the ancient Indian Dionysus, the conqueror of the East. In this character he appears, as in the Vatican statue incorrectly called Sardanapalus, of high stature, with a luxuriant wealth of hair on head and chin. Sometimes again, as in numerous statues which have survived, he is a youth of soft and feminine shape, with a dreamy expression, his long, clustering hair confined by a fillet or crown of ivy, generally naked, or with a fawn or panther skin thrown lightly over him. He is either reposing or leaning idly back with the *θύρσος*, grapes, or a cup in his hand. Often, too, he is surrounded by the Fauns of his retinue, Maenads, Satyrs, Sileni, Centaurs, etc., or by Nymphs, Muses, Cupids—indeed, in the greatest possible number and variety of situations. Besides the vine, ivy, and rose, the panther, lion, lynx, ox, goat, and dolphin were sacred to him. His usual sacrifices were the ox and the goat.

On the Italian god Liber, afterwards identified by the Romans with Dionysus, see Liber.

Diophantus (*Διόφαντος*). A mathematician of Alexandria, who, according to the most received opinion, was contemporary with the emperor Julian. This opinion is founded upon a passage of Abulfaraj, an Arabian author of the thirteenth century. He names, among the contemporaries of the emperor Julian, Diophantes (for Diophantus) as the author of a celebrated work on algebra and arithmetic; and he is thought to have derived his information from an Arabic commentator on Diophantus, Muhammed al Buziani, who flourished about the end of the eleventh century. The reputation of Diophantus was so great among the ancients that they ranked him with Pythagoras and Euclid. From his epitaph in the Anthology the following particulars of his life have been collected: that he was married when thirty-three years old, and had a son five years after; that the son died at the age of forty-two, and that Diophantes did not survive him above four years; whence it appears that Diophantus was eighty-four years old when he died. Diophantus wrote a work entitled *Ἀριθμητικά*, in thirteen books, of which only six remain. It would seem that in the fifteenth, and even at the beginning of the seventeenth, century all the thirteen books still existed. The arithmetic of Diophantus is not merely

important for the study of the history of mathematics, but is interesting also to the mathematician himself from its furnishing him with luminous methods for the resolution of analytical problems. We find in it, moreover, the first trace of that branch of the exact sciences called algebra. There exists also a second work of Diophantus, on *Polygon Numbers* (Περὶ Πολυγόνων Ἀριθμῶν). He himself cites a third, under the title of Πορίσματα, or *Corollaries*. A good edition of Diophantus is still that of Fermat (Toulouse, 1670). It is based upon that of Meziriac (Paris, 1621), with additions. A valuable translation of the *Arithmetica* into German was published by Otto Schulz (Berlin, 1822). The latest edition of the text is by Tannery (Leipzig, 1893).

On the so-called Diophantine Analysis, see Euler's *Algebra*, pt. ii. The reader is referred to Heath's *Diophantos of Alexandria* (1885).

Diopīthes (Διοπείθης). (1) An absurd character at Athens, half fanatic and half impostor, who traded in oracles and was the butt of the comic poets (Aristoph. *Vesp.* 380; *Aves*, 988, schol.). (2) An Athenian general, father of the poet Menander, sent out to the Thracian Chersonesus, about B.C. 344, at the head of a body of Athenian colonists (κληροῦχοι). Becoming involved in disputes with the Cardians, who had the support of Philip of Macedon, the latter sent a letter of remonstrance to Athens. Diopithes was impeached by the Macedonian party among the Athenians, but was ably defended by Demosthenes in the oration, still extant, "On the Chersonesus" (B.C. 341), so that he was permitted to retain his command. Subsequently he engaged in a military expedition against Philip, with much spirit and success (Diod. xvi. 75; Aristot. *Rhet.* ii. 8, 11).

Dioscorĭdes (Διοσκορίδης). A Greek physician and man of science. He flourished about the middle of the first century A.D., and was the author of a work *De Materia Medica* (Περὶ Ὕλης Ἰατρικῆς) in five books. For nearly 1700 years this book was the chief authority for students of botany and the science of healing. Two short essays on specifics against vegetable and animal poisons (*Alexipharmaca* and *Theriaca*) are appended to it as the sixth and seventh books; but these are probably from the hand of a later Dioscorides of Alexandria. A work on family medicine is also attributed to him, but is not genuine. The *Materia Medica* has been edited by Sprengel (1829–30).

Dioscorĭdis Insula (Διοσκορίδους νῆσος, Ptol.), or **Dioscorĭda** (Διοσκορίδα). An island situated at the south of the entrance of the Arabian Gulf and now called Socotra (Ptol. viii. 22).

Dioscūri (Διόσκουροι—i. e. sons of Zeus). The horse-tamer Castor (Κάστορ) and Polydeuces (Πολυδεύκης, Pollux), the master of the art of boxing. In Homer they are represented as the sons of Leda and Tyndareos, and called in consequence Tyndaridae; as dying in the time between the rape of Helen and the Trojan War, and as buried in Lacedaemon. But even under the earth they were alive. Honoured by Zeus, they lived and died on alternate days and enjoyed the prerogatives of godhead. In the later story sometimes both, sometimes only Polydeuces is the descendant of Zeus. (See Leda.) They undertook an expedition to Attica, where they set free their sister Helen whom Theseus had carried off. They took part in the expedition of the Argonauts. (See Amycus; Argonautae.) Castor, who had been born mortal, fell in a contest with Idas and Lynceus, the sons of their paternal uncle Aphareus. The fight arose, according to one version, in a quarrel over some cattle which they had carried off; according to another, it was about the rape of two daughters of another uncle Leucippus, Phoebé and Hilaïra, who were betrothed to the sons of Aphareus. On his brother's death, Polydeuces, the immortal son of Zeus, prayed his father to let him die, too. Zeus permitted him to spend alternately one day among the gods his peers, the other in the lower world with his beloved brother. According to another story, Zeus, in reward for their brotherly love, set them in the sky as the constellation Gemini, or the morning and evening star. They are the ideal types of bravery and dexterity in fight. Thus they are the tutelary gods of warlike youth, often sharing in their contests, and honoured as the inventors of military dances and melodies. The ancient symbol of the twin gods at Lacedaemon was two parallel beams (δόκανα), joined by cross-pieces, which the Spartans took with them to war. They were worshipped at Sparta and Olympia with Heracles and other heroes. At Athens, too, they were honoured as gods under the name of Ἄνακες. At sea, as in war, they lend their aid to men. The storm-tossed mariner sees the sign of their beneficent presence in the flame at the mast-head (Hor. *Carm.* i. 3). He prays and vows to them the sacrifice of a white lamb, and the storm soon ceases. (See Helena.) The rites of hospitality are also under their protection. They are generally represented with their horses Xanthus and Cyllarus, as in the celebrated colossal group of the Campidoglio in Rome. Their characteristic emblem is an oval helmet crowned with a star.

Dioscuri (Castor and Pollux). (From a Coin in the British Museum.)

The worship of Castor and Pollux was from early times current among the tribes of Italy. They enjoyed especial honours in Tusculum and Rome. In the latter city a considerable temple was built to them near the Forum (B.C. 484) in gratitude for their appearance and assistance at the battle of the Lake Regillus twelve years before. In this building, generally called simply the Temple of Castor, the Senate often held its sittings. It was in their honour, too, that (after B.C. 305) the solemn review of the Roman *equites* was held on the 15th of July. The names of Castor and Pollux, like that of Hercules, were often in use as familiar expletives, but the name of Castor was invoked by women only (Aul. Gell. xi. 6), since man had caused his death. Both were worshipped as gods of the sea, particularly in Ostia, the harbour town of Rome. Their image is to be seen stamped on the reverse of the oldest Roman silver coins. See Numismatics.

Dioscuria (Διοσκούρια or Διοσκούρεια, *C. I. G.* 1444). Festivals celebrated in various parts of Greece in honour of the Dioscuri, the heroes

Castor and Polydeuces (Pollux). The Spartan Dioscuria, mentioned by Pausanias (iv. 27, § 1), were celebrated with sacrifices, rejoicings, and drinking. At Cyrené the Dioscuri were likewise honoured with a great festival (Schol. *ad* Pind. *Pyth.* v. 629). The Athenian festival of the Dioscuri has been mentioned under ANAKEIA, where they were worshipped under the name of Ἄνακες. Their worship was very generally adopted in Greece, especially in the Doric and Achaean States (Pausan. x. 33, 3; 38, 3), as we conclude from the great number of temples dedicated to them; but scarcely anything is known respecting the manner in which their festivals were celebrated.

The festival of the Dioscuri was celebrated at Rome with great splendour on the Ides of Quinctilis, the 15th of July, the day on which they were believed to have assisted the Romans against the Latins in the battle of the Lake Regillus. On this occasion the *equites*, who regarded the Dioscuri as their patrons, went in a magnificent procession, crowned with olive chaplets and wearing their state dress, the trabea, from the Temple of Mars outside the city, through the main streets, across the Forum, and by the ancient temple of the Dioscuri (Dionys. vi. 13). See EQUITES.

Dioscurĭas (Διοσκουριάς). A maritime town of Colchis at the mouth of the small river Charus. It was afterwards called Sebastopolis, and was, in the earliest ages, the port most frequented in Colchis by distant as well as neighbouring nations speaking different languages—a circumstance that still distinguishes Iskuriah, which name is only a corruption of the ancient one.

Diospŏlis (Διόσπολις). (1) MAGNA, a famous city of Egypt. (See THEBAE.) (2) PARVA, a city of Egypt, west of Tentyra, and on the western side of the Nile. It was the capital of the nome Diospolites.

Diōta (δίωτος). A vessel with two "ears" (ὦτα) or handles, and often used as synonymous with amphora, though equally applicable to any vessel with two handles. See AMPHORA.

Diota. (Naples Mus.)

Diovis. See IUPITER.

Diphĭlus (Δίφιλος). A poet of the new Attic comedy, a native of Sinopé, and contemporary of Menander. He is supposed to have written some one hundred pieces, of which we have the titles and fragments of about fifty. The *Casina* and *Rudens* of Plautus are modelled on two plays of Diphilus; and Terence has adopted some scenes from one of them (the Συναποθνήσκοντες) in his *Adelphoe*. Diphilus took his subjects both from common life and from mythology. Most of the passages that have been preserved relate to matters of cookery, the longest being one of forty-one lines. Both the judgments passed on him in antiquity and his remaining fragments justify us in recognizing him as one of the most gifted poets of his age. These fragments are collected in Meineke, i. pp. 445–457; iv. pp. 375–430.

Diphros (δίφρος). See CURRUS; SELLA.

Diphthĕra (διφθέρα). A leathern cloak worn in Greece by workmen and rustics. See Aristoph. *Nubes*, 72.

Diplax (δίπλαξ). A double cloak. See PALLIUM.

Diploïs (διπλοΐς). See PALLIUM.

Diplōma (δίπλωμα). (1) A sort of passport, consisting of two leaves (whence the name originated), which was given to a messenger or other person travelling upon public business, in order that he might readily obtain everything necessary on his journey, without delay or hindrance (Cic. *Fam.* vi. 12; Plin. *Ep.* x. 31; Capitol. *Pert.* 1). See CURSUS PUBLICUS. (2) A document drawn up by a chief-magistrate, which conferred some particular privilege upon the person to whom it was given (Suet. *Nero*, 12).

Diplomatics. See PALAEOGRAPHY.

Dipoenus (Δίποινος). A Greek sculptor, born in Crete, who flourished in Argos and Sicyon about B.C. 560. In conjunction with his countryman Scyllis he founded an influential school of sculpture in the Peloponnesus of the Daedalian style. See DAEDALA; STATUARIA ARS.

Dipolia. See DIIPOLIA.

Diptĕros (δίπτερος). An architectural term used of a temple with a double row of columns. See TEMPLUM.

Diptȳcha (δίπτυχα). Two writing-tablets fastened at the back by wires upon which, as upon hinges, they opened and shut. They were also known as *pugillares*. When three or more tablets are joined they are called *triptycha* or *polyptycha*. For further details see TABULA.

Diptychon. (Herculaneum.)

The DIPTYCHA CONSULARIA, frequently mentioned in the later times of the Empire, were made of ivory, and were presented by the consuls to the emperor and to their friends on the day on which they entered upon their office. Other magistrates, such as the quaestors, also distributed diptycha on the same occasion (Symmach. *Ep.* ii. 81). These diptycha contained the portraits and names of the consuls, with other representations in bas-relief. Several of these diptycha are still extant—sixty-one in all, according to Marquardt—the earliest bearing the date of A.D. 406 and the latest of 541.

Dirae. (1) A name of the Furiae. See ERINYES; FURIAE. (2) See CATO, VALERIUS.

Dircé (Δίρκη). The wife of Lycus, who married her after divorcing his former wife Antiopé. Dircé treated Antiopé with great cruelty; and accordingly, when Amphion and Zethus, the sons of Antiopé by Zeus, obtained possession of Thebes, they took a signal vengeance upon Dircé. They tied her to a wild bull, which dragged her about till she perished. They then threw her body into a fountain near Thebes, which was henceforth called the fountain of Dircé. (See ANTIOPÉ.) The adjective Dircaeus is frequently used as equivalent to Boeoticus.

Diré or **Deré** (Δειρή, called by Ptolemy Δηρή). A promontory of Africa over against the coast of Arabia, and at the narrowest part of the Sinus Arabicus or Red Sea. From its appearance as it stretched along the coast, it received the appellation of Diré (Δειρή) or "the neck." The modern name is Bab-el-Mandeb.

Diribitōres. Officers who, at the Roman elections, divided the votes when taken out of the *cistae*,

so as to determine which had the majority. See Cic. *In Pis.* 15.

Discordia. The Roman goddess of strife. See ERIS.

Discus (*δίσκος*). (1) A circular plate or quoit of stone, iron, or bronze made for throwing to a distance as a feat of strength or skill. Of this game (*δισκοβολία*) it is sufficient to say that it was identical with our "putting the shot." See *Odyssey*, viii. 186–200. A very celebrated representation in art is the Discobolus of the sculptor Myron, whose powerful portrayal of the initial attitude of the thrower has been praised by critics from the time of Quintilian. (Cf. Quintil. ii. 13, § 10.) Many of the copies of the original vary the pose so as to represent the athlete's head as not turned aside, and this is the case with the famous statue in the Vatican. The most correct reproduction is that now in possession of Prince Lancelotti, and kept in his private bed-chamber in the Palazzo Lancelotti, Rome. (2) A dish or plate.

Discus Thrower. (Vatican.)

Dish. See LANX; PATINA.

Dis Pater (*Dives Pater*, "Father Dives" or The Rich). The ruler of the world below, worshipped by the Romans as the god who corresponded to the Greek Pluto (q. v.). His worship, like that of Proserpina, was first introduced in the early days of the Republic, at the command of the Sibylline Books. Dis Pater had a chapel near the altar of Saturnus, and a subterranean altar on the Campus Martius in common with Proserpina. This was only opened when, as at the Secular Games, sacrifices were offered to both. The victims offered thus were black animals.

Dispensator. A steward in the Roman city household, who had the charge of the accounts and made the payments (Cic. *Att.* xi. 1; Juv. i. 91; Mart. v. 42). The dispensator was usually, perhaps always, a slave. If there was a procurator in the house, the dispensator was under him and acted simply as cashier. Thus we read in Petronius (30) that the procurator received the rents, while the dispensator paid out the money in the atrium. If there was a dispensator on the country estate, he was nearly the same as the *villicus* (*Dig.* l. 16, 166). The imperial procuratores discharged important duties, not only at the court but in Rome and the provinces (Plin. *H. N.* vii. § 129). How valuable was the appointment may be seen from the fact that Otho extorted a million sesterces from a slave whom he had recommended to Galba for the office of dispensator (Suet. *Oth.* 5).

Dissen, GEORG LUDOLF, a German classical scholar, was born near Göttingen, December 17th, 1784. He studied philology and philosophy at the university of his native city (1804–1808), and not long after receiving his degree was made Professor Extraordinarius at the University of Marburg, soon returning, however, to take the same office at Göttingen, where in 1817 he became Professor Ordinarius. Besides two valuable treatises —*De Temporibus et Modis Verbi Graeci* (Gött. 1809) and *De Philosophia in Xenophontis de Socrate Commentariis Tradita* (Marburg, 1812)—he published valuable editions of Pindar (1830), Tibullus (1831), and of the *Oration on the Crown* of Demosthenes (1837). His minor writings (*Kleine lat. und deutsche Schriften*) appeared in 1839 after his death, which occurred September 21st, 1837.

Distaff. See COLUS; FUSUS.

Dithyrambus (*διθύραμβος*). A hymn sung at the festivals of Dionysus to the accompaniment of a flute and a dance round the altar. (See DIONYSIA.) The hymn celebrated the sufferings and actions of the god in a style corresponding to the passionate character of his worship. In the course of time it developed into a distinct kind of Greek lyric poetry. It was in Corinth that it first received anything like a definite artistic form, and this at the hands of Arion, who was therefore credited by the ancients with its actual invention. The truth probably is that he was the first who divided the festal song of the chorus into strophe and antistrophe, an arrangement from which tragedy took its rise. (See TRAGOEDIA.) Dithyrambs were sung at Athens twice in the year—at the Great Dionysia in the spring and at the Lenaea in the beginning of winter. The chorus consisted of fifty persons, who stood in a circle round the altar. The dithyramb was further developed by Lasus of Hermioné, the lyric poet and musician who lived about B.C. 520 at the court of the Pisistratidae. By several innovations in music and rhythm, especially by a stronger and more complete instrumentation, this artist gave it greater variety and a more secular character. He also introduced the prize contests

for the best dithyramb, and apparently abolished the antistrophical division; at least this is not found in the dithyrambs of his pupil Pindar. With Lasus and Pindar, Simonides and Bacchylides may be named as among the foremost dithyrambic poets of their time. At the dithyrambic contests the poets of the different tribes contended for the prize. Each had its chorus, brilliantly fitted out at great expense by the richer citizens. Besides the honour of the victory the poet received a tripod; the chorus, and the people which it represented, an ox for the sacrificial feast. These performances were very popular for a long time; but, as the new tendency developed itself, voices of authority made themselves heard, condemning them as involving a serious degeneracy in art. There is, in fact, no doubt that in the form which it assumed after the time of the Peloponnesian War the dithyramb did violence to the older taste. More and more it lost the inner unity and beautiful proportion which that feeling required. A continuous and rapid change of rhythm and mode was accompanied by an extraordinary boldness of diction, in keeping with the wild character of the composition. In the hands of inferior poets this often passed into turgidity and bombast, if not into mere nonsense. Solo pieces were inserted to relieve the choruses, the text was gradually subordinated to the music, and the dithyramb was thus gradually transformed into a kind of opera. Though the subjects of the poems had long ceased to be taken exclusively from the cycle of Dionysiac myths, they were never, of course, entirely out of harmony with the lyrical spirit of the dithyramb.

There was a very considerable number of dithyrambic poets. The best known are Melanippides (q. v.) of Melos (about B.C. 415), who is generally held responsible for the degeneracy of the dithyramb and the excess of instrumental music; his disciple Philoxenus of Cythera, who died in 380; Timotheus of Miletus, who died in 357, and his contemporaries Polyidus and Telestes. Of the whole literature we possess nothing but fragments. See CHORUS; MUSICA.

Dittography. The name given to a clerical error frequently found in MSS. It consists in writing twice what should properly be written only once. Thus in the best MS. (Σ) of the *Fals. Leg.* of Demosthenes, we find Ἀριστοφῶν καὶ ὁ Ἀριστόδημος for Κτήσιφων καὶ ὁ Ἀριστόδημος. One of the scholiasts on Horace *Carm.* i. 27, 19 doubles two syllables, writing *laboraborabas* for *laborabas*. A very extraordinary instance is found in the Codex Puteolanus of Livy, which in xxvii. 11, 11, has *dedissent et ius liberum eosdem dedissent et ius liberum eosdem dedissent et ius liberum eosdem dedissent* — a proof of how mechanically the scribes performed their work. See TEXTUAL CRITICISM.

Dium (Δῖον). (1) An important town in Macedonia on the Thermaic Gulf (Thuc. iv. 28). (2) A promontory on the northern coast of Crete where the island has its greatest breadth (Ptol. iii. 17, 7).

Dius Fidius. See SANCUS.

Diverbium. Dialogue. See DIALOGUS.

Diversorium. A wayside inn. See CAUPONA.

Divĭco. The leader of the Helvetians in the war against L. Cassius in B.C. 107. He was at the head of the embassy sent to Iulius Caesar, nearly fifty years later, B.C. 58, when he was preparing to attack the Helvetians (Caes. *B. G.* i. 13).

Divinatio (prevision of the future). (1) In general the word is applied to all prophecy or foretelling in the simplest sense of the word. Among the Romans, prophecy was based, not on inspiration, as with the Greeks, but on the observation of definite signs, such as the *omen* (or voice), the prodigies and the auspices taken note of by the augurs. (See AUGUR.) The science of the *haruspices* (or the foretelling of events from the inspection of the carcases of sacrificial victims) was a later importation from Etruria. The ancient Romans were not familiar with the divinatio from *sortes* or lots, which was common in many parts of Italy. The Sibylline Books threw no light on future events. (See SIBYLLA.) Towards the end of the republican period the sciences of the augurs and haruspices lost their significance, and the Greek oracles, in the various forms of their craft, with the Chaldaean astrology, came into vogue, and carried the fashion in the society of the Empire. On divination among the Greeks see MANTIKĒ.

(2) In the language of Roman law, *divinatio* meant the legal inquiry for deciding who, among many advocates proposing themselves, was the fittest to undertake a prosecution, and also the speeches by which the various advocates tried to make good their competency for the task. Thus Cicero's oration called *Divinatio in Caecilium* was pronounced by him against Q. Caecilius Niger, a sham accuser of Verres, who claimed the right to prosecute, but who would have played into the hands of the accused.

Divisor. See AMBITUS.

Divitiăcus. An Aeduan noble and brother of Dumnorix (q. v.). He was a warm adherent of the Romans and of Caesar, who, in consideration of his entreaties, pardoned the treason of Dumnorix in B.C. 58 (Caes. *B. G.* i. 3, 16–20). He is mentioned by Cicero (*De Div.* i. 41) as a Druid.

Divodūrum (Διουόδουρον). The modern Metz; subsequently Mediomatrici, and still later Metis or Mettis, the capital of the Mediomatrici in Gallia Belgica (Ptol. ii. 9, 12).

Divŏna. See CADURCI.

Divortium. Divorce. (1) GREEK. The term for this act was ἀπόλειψις or ἀπόπεμψις, the former denoting the act of a wife leaving her husband, and the latter that of a husband dismissing his wife (Demosth. *c. Onet.* i. p. 865, § 4; *c. Neaer.* p. 1362, § 52, 1365, § 59). The only Greek States respecting whose laws of divorce we have any knowledge are Athens and Sparta. In both States the law permitted either husband or wife to call for and effect a divorce, though it was much easier for a husband to get rid of his wife than for a wife to escape from her husband. At Sparta, it seems, a man might dismiss his wife if she bore him no issue; the recorded instances, however, are those of kings, and private inclination was sacrificed to State policy (Herod. v. 39; vi. 61). The law at Athens allowed a man to divorce his wife without ceremony, simply by his act of sending her out of his house (ἐκπέμπειν, ἀποπέμπειν), upon which she returned to the guardianship of her nearest male relation. (See KYRIOS.) The husband was then bound to return the dowry which she had brought him, or

to pay her interest at the rate of nine obols per mina per month—18 per cent. per annum; and in addition to this to provide alimony (σῖτος). A husband thus dismissing his wife usually did so, as might be expected, in the presence of witnesses (Lys. *c. Alcib.* i. § 28). What became of the children in such a case is not mentioned, but it is probable that they remained with the father. Adultery on the part of the wife compelled her husband to divorce her, or himself incur the penalty of atimia (Lex *ap.* Demosth. *c. Neaer.* p. 1374, § 87). When, on the other hand, a wife wished to leave her husband, if both parties agreed upon a divorce no further proceedings were required: mutual consent was sufficient to dissolve a marriage. If the husband objected, she was obliged to appear in person before the archon, and state in writing the grounds of her application (Plut. *Alcib.* 12). She had to conduct her case quite alone, for, as she was in her husband's power until judgment was given, no one had a right to come forward as her advocate. It has been maintained that she could be represented by her κύριος, but the notorious case of Alcibiades and his ill-used wife Hippareté, in the passage just cited, leaves little doubt that she could not. The action thus brought by a woman was called ἀπολείψεως δίκη. Her right to a separation would depend on the treatment she had received (see Κακοσις); but of the nature of the archon's jurisdiction we know but little. The husband's loss of freedom (i. e. by becoming a prisoner of war and being sold into slavery) is mentioned as affording an absolute claim to a divorce.

(2) Roman. The word *divortium* signified generally a separation; and, in a special sense, a divorce or dissolution of marriage. Several authorities (Gell. iv. 3; Dionys. ii. 25) state that divorce was unknown at Rome in early times, and that the first instance of divorce occurred in B.C. 233, when Sp. Carvilius Ruga put away his wife on the ground of barrenness. It is said that the act of Carvilius was generally disapproved of (Val. Max. ii. 1–4). It is probable that divorce on account of the misconduct of the wife was in use from a very early period; but the case of Carvilius Ruga may have been the beginning of the lax system of divorce which prevailed towards the end of the free Republic and under the Empire.

The marriage by which the husband acquired *manus* over his wife, as well as the later free marriage, was dissoluble; but the marriage of a *flamen*, which was solemnized by *confarreatio*, could never under any circumstances be severed. See Matrimonium.

A corresponding form to that by which a marriage had been created was used for dissolving it: thus a marriage entered into by *confarreatio* was put an end to by a similar ceremony, called *diffarreatio* (Festus, s. v. *diffarr.*). If a wife had passed into the *manus* of her husband by *coemptio*, she could only be released by a *remancipatio*, which, according to Gaius, the husband could be compelled to execute (i. 137). These formal restrictions on the right of divorce disappeared under the free form of marriage, which did not bring the wife *in manum viri*. The theory on which Roman marriage was based admitted the utmost facility of divorce: the consent and conjugal affection of the parties were regarded as the essential part of a marriage, and this *affectio maritalis* was necessary for the continuance as well as for the creation of a marriage. Accordingly, either party might declare his or her consent to dissolve the connection. No judicial decree and no interference of any public authority was necessary to dissolve the marriage. A divorce which was brought about by one party renouncing the marriage and not by mutual consent was called a *repudium*. It was customary for one who renounced a marriage to send a distinct notice or declaration of intention to the other party, and it was doubted in the time of Cicero whether the simple fact of either party marrying again without any such notice having been given was sufficient to constitute a divorce (Cic. *Orat.* i. 40). The ceremony of breaking the *nuptiales tabulae*, or of taking the keys of the house from the woman and turning her out of doors, was probably considered to be an act of itself significant enough; but the general practice was apparently to deliver a written notice, and perhaps to assign a reason. By the Lex Iulia *de adulteriis* it was required that a *repudium* should be executed in the presence of seven witnesses, Roman citizens of the age of puberty (*Dig.* xxiv. 2, 9). This prevented an adulteress from setting up the pretence of a *repudium* as an excuse for her conduct. See Adulterium.

Not only the wife herself, but also her father, if she was under his power, might dissolve the marriage. This right of a paterfamilias was made practically ineffectual by a decree of the emperor Marcus. Towards the latter part of the Republic and under the Empire, divorces became very common. Cn. Pompeius divorced his wife Mucia for alleged adultery, and his conduct was approved (Cic. *Ad Att.* i. 12, 18); and Cicero speaks (*Ad Fam.* viii. 7) of Paulla Valeria as being ready to serve her husband on his return from his province with notice of divorce. Cicero himself divorced his wife Terentia after living with her for thirty years, and married a young woman whom he also divorced. Cato the Younger divorced his wife Marcia, that his friend Hortensius might marry her and have children by her; for this is the true meaning of the story (Plut. *Cat. Min.* 25). Maecenas put away his wife Terentia so often that the Roman wits said that he had been a hundred times married, and always to the same woman; Sempronius Sophus divorced his wife because she had once been to the public games without his knowledge. Seneca declared that there were women at Rome who reckoned the years by their husbands rather than by the consuls. Juvenal mentions one who had had eight husbands in five years; and Tertullian sums up the prevailing practices epigrammatically in the sentence, "The fruit of marriage is divorce" (*Apol.* 6). By the Lex Papia Poppaea a freedwoman who had married her patron was prevented from divorcing herself (*Dig.* xxiv. 2, 11) so as to be capable of marrying any one else. From an early time penalties were imposed on those who divorced without good cause, and also on those who by their conduct made a divorce necessary.

A man was punished by *nota censoria*, a woman by loss of *dos* (q. v.). There was the *retentio dotis propter mores* when the divorce was caused by the fault of the wife, and also the *retentio propter liberos* which was the right of the husband to deduct an additional amount of *dos* in case there were children of the marriage. The free right of divorce was not taken away by the early Christian emperors, but its exercise except on grounds de-

fined by statute was severely punished. Justinian went further than his predecessors in limiting the legal grounds of divorce. He even punished divorce by mutual consent unless the object of the parties was to live a life of chastity (*Dig.* 34, 2; *Cod. Theod.* iii. 16; *Cod.* v. 17). See Lecky, *Hist. of European Morals*, ii. pp. 304–308; Wächter, *Ueber Ehescheidungen bei den Römern;* Bader, *La Femme Romaine* (Paris, 1877); Friedländer, *Sittengeschichte Roms*, ch. v. (6th ed. Leipzig, 1888); Baecker, *Le Droit de la Femme dans l'Antiquité* (1880).

Diyllus (Δίνλλος). An Athenian, the author of a history of Greece and Sicily, in twenty-six or twenty-seven books; and also of a work on drinking-bouts (Συμποσιακά). His date is uncertain, but he probably flourished in the first century B.C. (Diod. xvi. 14, 78, etc.).

Dobērus (Δόβηρος). A town in Paeonia in Macedonia, east of the river Echedorus (Thuc. ii. 98).

Dobree, Peter Paul, an English scholar of eminence, born in the island of Guernsey of French ancestry, in 1782. He studied under Porson at the University of Cambridge, and on the death of that distinguished Hellenist undertook to edit his unpublished papers, which had come into the possession of Trinity College. In 1820, appeared the *Plutus* of Aristophanes with Porson's notes; and in 1822, the Lexicon of Photius. In the same year, Dobree was made Regius Professor of Greek. On his death in 1825, he left an edition of Demosthenes in MS., which was edited and published by his successor.

Dokăna (*τὰ δόκανα*, from *δοκός*, "a beam"). An ancient symbolical representation of the Dioscuri (Castor and Polydeuces) at Sparta. It consisted of two upright beams with others laid across them transversely (Plut. *De Amor. Fratr.*). This rude symbol of fraternal unity evidently points to a very remote age, in which scarcely any attempts in sculpture can have been made. At a later time, when works of art were introduced into all the spheres of ordinary life, this rude and ancient object of worship, like many others of its kind, was not superseded by a more appropriate symbol. The Dioscuri were worshipped as gods of war, and we know that their images accompanied the Spartan kings whenever they took the field against an enemy. But when in the year B.C. 504 the two kings, during their invasion of Attica, failed in their undertaking on account of their secret enmity towards each other, it was decreed at Sparta that in future only one king should command the army, and in consequence should be accompanied by only one of the images of the Dioscuri (Herod. v. 75). It is not improbable that these images, accompanying the kings into the field, were the ancient *δόκανα*, which were now disjointed, so that one half of the symbol remained at Sparta, while the other was taken into the field by one of the kings. See Daedala; Dioscuri.

Dokimasia (*δοκιμασία*). The name used at Athens to denote the process of ascertaining the capacity of the citizens for the exercise of public rights and duties. If, for instance, a young citizen was to be admitted among the Ephebi (q. v.), he was examined in an assembly of his district to find out whether he was descended on both sides from Athenian citizens, and whether he possessed the physical capacity for military service. All officials, too—even the members of the Senate—had to submit to an examination before entering upon their office. The purpose of this was to ascertain, not their actual capacity for the post, which was presupposed in all candidates, but their descent from Athenian citizens, their life and character, and (in the case of some offices which involved the administration of large sums) even the amount of their property. The examination was carried on in public by the archons in the presence of the Senate, and any one present had the right to raise objections. If such objections were held to be valid the candidate was rejected; but he had the right to appeal to the decision of a court, which would take cognizance of the matter in judicial form. On the other hand, if he were accepted, any one who thought his claims insufficient had the right of instituting judicial proceedings against him. If the decision was adverse he would lose his office, and was further liable to punishment varying according to the offence charged against him—which might be, for instance, that of unlawfully assuming the rights of a citizen. A speaker in a public assembly might thus be brought before a court by any citizen, for no one not possessed of the full right of citizenship could legally address the people. The question might thus be raised whether the orator were not actually *atimos*, or guilty of an offence which involved *atimia* (q. v.).

Docimia (Δοκιμία) and **Docimēum** (Δοκίμειον). A town of Phrygia near Synnada and famed for the marble quarries in its vicinity.

Doctors. See Chirurgia; Medicina; Medicus.

Doctus. A title given by the Roman writers to various poets, especially to Pacuvius (Hor. *Epist.* ii. 1, 56) and Catullus (Ovid, *Amor.* iii. 9, 62; Mart. viii. 73, 8). It is to be understood in the sense of "accomplished," "polished." Cf. Hor. *Odes*, i. 1, 29, where it is applied to poets in general, as being taught by the Muses.

Döderlein, Ludwig, a great classical scholar and teacher, was born at Jena, December 19th, 1791. He began his higher studies at Pforta when sixteen years of age, continuing them under Thiersch at Munich, under Kreuzer and Voss at Heidelberg, and under Boeckh, Buttmann, and Wolf at Berlin. He reached the doctorate at Erlangen in 1813, and in 1815 was called to the chair of philosophy at Bern, transferring himself in 1819 to Erlangen, with the titles of Professor of Philosophy and Director of the Philological Seminary in the University, and Rector of the Gymnasium. At Erlangen he remained until his death, November 9th, 1863. His publications comprise editions of Tacitus (Halle, 1847); Horace (*Epistles*, Leipzig, 1856–58; *Satires*, 1860); and the *Iliad* (Leipzig, 1863–64); besides the following works, some of them of enduring value: *Latein. Synonyme und Etymologien*, 6 vols. (Leipzig, 1826–38); *Lat. Wortbildung* (Leipzig, 1838); *Handbuch d. lat. Synonymik* (Leipzig, 1839–49); *Handbuch d. lat. Etymologie* (Leipzig, 1841); *Reden und Aussätze* (Frankfort, 1860); *Homerisches Glossarium*, 3 vols. (Erlangen, 1850–58); and a German Anthology—*Deutsche Mustersammlung* (1840).

Döderlein was fully as remarkable as a teacher as for his scholarship, and appears to have made upon his hearers a profound and ineffaceable impression. To great acuteness and unfailing tact he added an enthusiasm, energy, and vigour that

carried at once himself and his hearers away. Thoroughly imbued with the very genius of antiquity, the great masters of classical literature were to him not subjects of study but, as he himself called them, "intimate and cherished friends," and into all who listened to him he inspired much of his own passionate zeal. An untiring worker, rising every morning soon after midnight to pursue his researches, he left behind him both in his works and in the memories of his pupils the figure of a great and impressive personality.

Dodōna (Δωδώνη). (1) A celebrated city and oracle of Epirus, whose exact position has only of late been ascertained. We are not assisted here by any accurate ancient traveller like Pausanias, nor have we any itineraries or faithful measurements of distances to guide us; all is vague and indefinite. Dionysius of Halicarnassus placed it four days' journey from Buthrotum and two from Ambracia (*Antiq. Rom.* i. 5). It is universally allowed that the temple of Dodona owed its origin to the Pelasgi at a period much anterior to the Trojan War; since many writers represent it as existing in the time of Deucalion, and even of Inachus (Aesch. *Prom. Vinct.* 679). Herodotus distinctly states that it was the most ancient oracle of Greece, and represents the Pelasgi as consulting it on various occasions (ii. 52). Hence the title of "Pelasgic" assigned to Zeus, to whom the temple was dedicated (*Iliad*, xvi. 233). Of the existence, however, of another oracle in Thessaly of the same name no doubt can be entertained; and to this the prayer of Achilles, in Homer, probably had reference. Setting aside the fables which Herodotus has transmitted to us, and to which he evidently attached no belief, his report of the affinity which existed between the service of this temple and that of Thebes in Egypt is deserving of attention. It appears from this author that in his time the service of the temple was performed by women; and he has recorded the names of the three priestesses who officiated when he visited Dodona (ii. 55). Strabo, however, asserts that these duties were originally allotted to men, from the circumstance of Homer's mention of the Selli as being attendant upon the gods. The term Selli was considered by many ancient writers to refer to a people of Pelasgic origin (Soph. *Trach.* v. 1160 foll.; Aristot. *Meteorol.* 1, 14).

The responses of the oracle were originally delivered from the sacred oak or beech (φηγός) (Soph. *Trach.* v. 173). The god revealed his message in the rustling of the leaves, and the priests interpreted its meaning. Its reputation was at first confined to the inhabitants of Epirus, Acarnania, Aetolia, and the western parts of Greece (Pausan. vii. 21), but its fame was afterwards extended over the whole of that country, and even to Asia, as we know that on one occasion the oracle was consulted by Croesus (Herod. i. 46). The Boeotians were the only people who received the prophetic answers from the mouth of men; to all other nations they were always communicated by the priestesses of the temple. The reason of this exception is stated at length by Strabo (401), on the authority of Ephorus. Dodona was the first station in Greece to which the offerings of the Hyperboreans were despatched, according to Herodotus; they arrived there from the Adriatic, and were thence passed on to the Maliac Gulf (iv. 33). Among the several offerings presented to the temple by various nations, one dedicated by the Corcyreans is particularly noticed. It was a brazen figure placed over a caldron of the same metal; this statue held in its hand a whip, the lash of which consisted of three chains, each having an astragalus fastened to the end of it; these, when agitated by the wind, struck the caldron and produced so continued a sound that 400 vibrations could be counted before it ceased. Hence arose the various proverbs of the Dodonean caldron and the Corcyrean lash. Menander, in one of his plays, compared an old nurse's chatter to the endless sound of this kettle (*Menand. Reliq. ed.* Meineke, p. 27). See ORACULA.

We hear of the oracle of Dodona at the time of the Persian invasion (Herod. ix. 93); and again in the reign of Agesilaüs, who consulted it previously to his expedition into Asia. It is stated by Diodorus Siculus (xiv. 13) that Lysander was accused openly of having offered to bribe the priestess. The oracle which warned the Molossian Alexander of his fate is well known from Livy (viii. 24). From Demosthenes we learn that the answers delivered from time to time to the Athenians were laid up in the public archives, and he himself appeals to their testimony on more than one occasion. At length, during the Social War, Dodona was, according to Polybius (iv. 67), almost entirely destroyed in an irruption of the Aetolians, under their leader Dorimachus, then at war with Epirus. It is probable that the temple of Dodona never recovered from this disaster, as in Strabo's time there was scarcely any trace left of the oracle, but the town must still have existed, as it is mentioned by Hierocles among the cities of Epirus in the seventh century, and we hear of a bishop of Dodona in the council of Ephesus. All accounts seem to agree that Dodona stood either on the declivity or at the foot of an elevated mountain called Tomarus or Tamarus. Hence the term Tomuri, supposed to be a contraction for Tomaruri (Τομαρούροι), or guardians of Tomarus, which was given to the priests of the temple. The site of Dodona was at one time supposed to be near Janina in Epirus, but recent explorations in the valley of Dramisius at the foot of Mount Olytzika have brought to light many dedicatory inscriptions to Zeus Naïos and Dioné, with other evidences that make this the probable site of the oracle. See Leake, *Northern Greece*, vols. i. and iv.; the *Revue Archéologique* for 1877, pp. 329, 397; and Carapanos, *Dodone et ses Ruines* (1878). (2) A city and oracle of Thessaly. It has given rise to much controversy whether Homer (*Il.* ii. 750) refers to this or the city of Epirus, and the scholiasts and commentators are divided in their opinions.

Dodonaeus (Δωδωναῖος). A surname of Zeus from Dodona. See Homer, *Il.* xvi. 233.

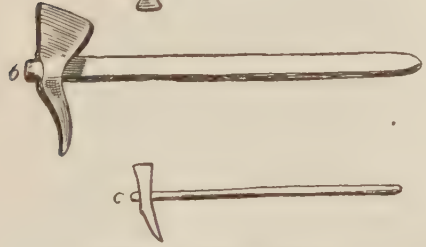
Dodonĭdes (Δωδωνίδες). The priestesses who gave oracles in the temple of Zeus in Dodona. See DODONA.

Dodrans. Nine twelfths or three fourths of a Roman *as;* three fourths. Hence the phrase *heres ex dodrante* was used of an heir to three fourths of an estate. See As.

Dodwell Vase. A small Greek vase covered with a lid and found at Corinth. The lid shows the representation of a boar-hunt and is inscribed with names. The body of the vase is ornamented with figures of animals. Its pattern shows traces of Phœnician influence. The Dodwell vase is now

in the Old Pinacothek at Munich. See Zahn, *Beschreibung der Galerie bemalter Vasen der königlichen bayerischen Sammlung* (Munich, 1854); Lau and Krell, *Die griechischen Vasen*, etc. (Leipzig, 1877); and the article Vas.

Dodwell Vase. (Munich.)



Dog-days. See Caniculares Dies.

Dogmatĭci (*δογματικοί*). See Medicina.

Dogs. See Canis.

Dolabella. The name of a celebrated patrician family of the Cornelia gens. Those most deserving of notice are: (1) Cn. Cornelius Dolabella, consul B.C. 81, whom the young Iulius Caesar accused in the year 77 of extortion in his province. (2) Cn. Cornelius Dolabella, praetor urbanus B.C. 81. With Verres as his legate he plundered his province in Cilicia, and upon his return was accused, betrayed by Verres, and condemned. (3) P. Cornelius Dolabella, the son-in-law of Cicero, whose daughter Tullia he married in B.C. 51. He was one of the most profligate men of his age, and his conduct caused Cicero great uneasiness. On the breaking out of the Civil War he joined Caesar, and fought on his side at the battle of Pharsalia (B.C. 48), and was raised by him to the consulship in 44. He afterwards received from Antony the province of Syria. On his way to his province he plundered the cities of Greece and Asia Minor, in consequence of which the Senate sent against him Cassius, who took Caesarea, in which Dolabella had taken refuge. That he might not fall into the hands of his enemies he committed suicide, B.C. 43.

Dolābra, dim. Dolabella (*σμίλη, σμιλίον*). A tool consisting of a long handle and a double head, which terminated on one side in a sharp blade, the edge of which ran parallel to the handle (while the

Dolabrae. (Blümner, *Technologie.*)

blade of the *ascia* was at right angles to the handle), and on the other side in a pick, which was usually curved (*falx*). In this form it was used for hewing wood, for pruning where the pruning-hook was not strong enough, for making stockades, and for breaking down ramparts and walls. It was consequently a tool familiar to the Roman soldier, as may be seen in the accompanying illustration (fig. *b*) from Trajan's Column. For the purpose, however, of excavating or breaking up the earth (Pallad. ii. 1 and 3; iii. 21), a dolabra with a straighter pick appears to have been used, as is shown in fig. *a*, from a relief on a tomb. Of a similar form is fig. *c*, which represents the dolabra used by masons (Isid. *Orig.* xix. 19, 11). The hatchet used at sacrifices and by butchers was also called *dolabra*.

Dolĭché (*Δολίχη*). (1) A town of Thessaly in the Perrhaebian district, to the southeast of Azorus. Here the Roman consul Q. Marcius Philippus received a deputation from the Achaean League, at the head of which was Polybius, who accompanied the Roman army in their singular and perilous march through the defiles of Olympus into Pieria (Liv. xlii. 53; id. xliv. 2). (2) A town of Syria, situated in the district Euphratensis and northwest of Zeugma.

Dolĭchos (*δόλιχος*). See Cursus; Stadium.

Dolium (*πίθος*). A large jar of earthenware into which new wine was placed to ferment. Many of them were large enough to hold a man, and were shaped like a huge caldron with globular bodies and wide mouths. Diogenes (q. v.) the Cynic took up his abode in a dolium (not in a tub, as popularly said), and in some ancient works of art he is depicted as lolling in one of these vessels during his celebrated interview with Alexander the Great. See Diog. Laërt. vi. 23; Sen. *Ep.* 90, 14.

Dolia curta were urinals placed in the narrow streets between the houses for the convenience of those who passed by (Lucret. iv. 1026; Macrob. iii. 16, § 15; Suet. *Vesp.* 23).

Dolia were also used as coffins. In the Crimea, near Sebastopol, sixteen *πίθοι* were discovered, four feet four inches high, and two feet two inches in diameter.

Makers of dolia were known as *doliarii*.

Dolius (*Δόλιος*). A slave of Penelopé who, with his six sons, welcomed Odysseus home and joined him against the suitors (*Odys.* xxiv. 498).

Dolls. See Pupa.

Dolo (*δόλων*). (1) A weapon consisting of a long staff with a short iron point (Verg. *Aen.* vii. 664). (2) A secret poniard or dagger inserted in a walking-stick (Plut. *Tib. Gracch.* 10; Suet. *Claud.* 13, *Domit.* 17) or a whip (*Dig.* 9, 2, 52). (3) A small topsail of a ship.

Dolonci (*Δόλογκοι*). A people of Thrace (Herod. vi. 34).

Dolŏpes (*Δόλοπες*). A powerful people in Thessaly, who dwelt on the Enipeus and fought before Troy. At a later time they dwelt at the foot of Mount Pindus; and their country, called Dolopia, was reckoned part of Epirus (Herod. vii. 132).

Dolus Malus. See Culpa.

Domestĭci. See Praetoriani.

Domicilium. A term of Roman law, signifying a man's permanent home. The following is the well-known definition of *domicilium* given in the *Corpus Iuris* (*Cod.* x. 40, 7): "In eo loco singulos habere domicilium non ambigitur, ubi quis larem rerumque ac fortunarum suarum summam constituit, unde rursus non sit discessurus, si nihil avocet, unde cum profectus est peregrinari videtur, quo si rediit peregrinari iam destitit." In a passage of the *Digest* a man's home is thus defined (*Dig.* l. 16, 203): "Sed de ea re constitutum esse (respondit) eam domum unicuique nostrum debere

existimari, ubi quisque sedes et tabulas haberet suarumque rerum constitutionem fecisset." A man acquired domicilium by making a place his residence and intending to remain in it permanently (*animus manendi*). Domicilium was lost by abandonment, and the question of the existence of domicile was treated as one of fact to be determined by the circumstances of each case.

The conception of domicile has far more important consequences in modern systems of law than in ancient; it is the foundation of a branch of what is sometimes called private international law, but more correctly the conflict of laws.

Dominium. *Dominium* or *rerum dominium* signifies ownership of property, and *dominus* is the owner. *Proprietas* is frequently used as an equivalent to *dominium;* and when ownership is distinguished from *usus fructus,* the word *proprietas* is preferred to *dominium* as an expression for ownership. The term *dominium* or *dominium legitimum* is, strictly speaking, confined to ownership *ex iure Quiritium*—i. e. to civil ownership—and does not include ownership *in bonis*—i. e. praetorian ownership.

Ownership is not defined by Roman legal writers, but the general notion implied in the term is clear. It is a right which, subject to certain legal limitations, entitles a person to exercise full control over a corporeal thing to the exclusion of all other persons. Ownership cannot, however, be defined by enumerating all the powers which may be incidental to it, as the *ius utendi, fruendi, possidendi, disponendi,* since ownership may exist notwithstanding that one or more of these powers is detached from it. A thing may be considered to belong to a person whose powers over it are very much curtailed; hence arises the difficulty of defining ownership. The limitations to which ownership in Roman law is subject are either general or special. The former are imposed for the purpose of enforcing the precept *sic utere tuo ut alienum non laedas:* they prevent owners from so using their powers as to injure adjoining owners or the public generally. Special limitations on ownership arise by persons acquiring rights over property owned by some one else. For instance, the owner may be bound to allow to another person a certain use or enjoyment of the thing of which he is *dominus,* or to abstain from doing certain acts on or to his property and for the benefit of some other person. The only rights of this kind recognized by Roman law are *servitus, emphyteusis, superficies, pignus:* such rights are called *iura in re aliena;* they are protected, like *dominium,* by actions *in rem:* their nature is more fully explained under the head of SERVITUS. Ownership is in its nature single and entire; consequently the same thing cannot belong to several separate owners, but several persons may be joint *domini* or owners of one thing.

Domĭnus. A master, owner. The word was applied as a title of respect to a superior in rank or station. Thus the head of a family was sometimes called *dominus* by the free members of his family as well as by his slaves. The title of *dominus* came to be ascribed to the emperor. The history of this use of the word, which corresponds with changes in the character of the emperor, is briefly as follows: Augustus refused to be called *dominus* (Suet. *Aug.* 53, with Peck's note), as did also Tiberius (Suet. *Tib.* 27); and Caligula was the first emperor who allowed himself to be addressed by the title (Victor. *Caes.* 3). Domitian claimed the titles of *Deus et Dominus* (Dio Cass. lxii. 13). Trajan only wished to be called *princeps* (Plin. *Paneg.* §§ 2, 63, 88). Pliny in his letters always addresses Trajan as *dominus,* but in doing so he does not intend to make use of an official title. *Dominus* first appears on imperial monuments in the reign of Septimius Severus. Aurelian first adopted the title *Deus et Dominus* on his coins. Diocletian allowed himself to be publicly addressed as *dominus.* From the fourth century the emperors freely ascribe the title to themselves. The reason why the earlier emperors objected to being styled *dominus* is to be found in the fact that they still kept up a pretence of republican equality. Now the word *dominus* to a Roman, like δεσπότης to a Greek, means a master in relation to slaves, or (politically) a tyrant, the possessor of arbitrary power (Sall. *Iug.* 85). Later, when the imperial power had become hedged about by precedent and tradition, the emperor willingly accepted the title as his due.

The word *dominus,* besides retaining its full force as a term of great dignity, underwent a further development as a social title. In Suet. *Claud.* 21, it is applied by the emperor to his plebeian guests as an ordinary title of courtesy. In Mart. vi. 88, it is equivalent to "Mister." It is used by Ovid (*Am.* iii. 7. 11) as a term of affection. In the modern languages it has developed through the Low Latin forms *domnus, domna, donnus, dominicella* into the Portuguese *dom,* Span. *don, doña,* Fr. *dame, madame* (*mea domna*), *demoiselle,* and Old English *dan.* See Peck's note to Suet. *Aug.* 53.

Domitia. (1) LEPĬDA, aunt of Nero, accused of magic and put to death (A.D. 54) through the intrigues of Agrippina, who was jealous of her influence over Nero (Tac. *Ann.* xii. 64 foll.). (2) DOMITILLA, wife of Vespasian, who had by her Titus and Domitian and a daughter named Domitilla. She had been the mistress of a Roman knight and passed for a freedwoman; but she was declared of free birth on having been acknowledged by her father Flavius Liberalis, who held the situation of scribe to one of the quaestors. She died before Vespasian came to the throne (Suet. *Vesp.* 3). (3) LONGĪNA, daughter of the famous Corbulo, the general of Nero. She married Aelius Lamia, but was seduced by Domitian and, after the birth of a daughter, publicly raised to the throne. Hardly, however, had the emperor elevated her to the station of Augusta, when his jealousy was alarmed by certain familiarities to which she admitted the pantomime Paris, so that he drove her from the palace. The ascendency which she had acquired, however, over the vicious emperor was too strong to be thus suddenly dissolved, and she was recalled to her former station. Domitia was concerned, it is thought, in the conspiracy by which the emperor lost his life. She died during the reign of Trajan (Suet. *Dom.* 3).

Domitiānus, TITUS FLAVIUS. The second son of Vespasian, born at Rome A.D. 51. Vespasian, well aware of his natural disposition, reposed no confidence in him during his whole reign. Domitian, however, accompanied his father and his brother Titus in their triumph at the close of the Jewish War. Upon the death of Vespasian he

endeavoured to foment troubles in the Empire and share the succession with Titus. The latter, however, forgave him, treated him with great kindness, and made him his colleague in the consulship, always declaring to him that he intended him for his successor. Domitian is accused of hastening the death of Titus by poison—a charge, however, not warranted by the circumstances of Titus's death. The beginning of his reign was marked by moderation and a display of justice bordering upon severity. His affected great zeal for the reformation of public morals, and punished with death several persons guilty of adultery as well as some vestals who had broken their vows. He completed several splendid buildings begun by Titus—among others an *odeum*, or theatre for musical performances. The most important event of his reign was the conquest of Britain by Agricola, but Domitian grew jealous of that great commander's reputation and recalled him to Rome. His suspicious temper and his pusillanimity made him afraid of every man who was distinguished either by birth and connections or by merit and popularity, and he mercilessly sacrificed many to his fears, while his avarice led him to put to death a number of wealthy persons for the sake of their property. The usual pretext for these murders was the charge of conspiracy or treason, and thus a numerous race of informers was created and maintained by this system of spoliation. His cruelty was united to a deep dissimulation, and in this particular he resembled Tiberius rather than Caligula or Nero. He either put to death or drove away from Rome the philosophers and men of letters; Epictetus was one of the exiled. He found, however, some flatterers among the poets, such as Martial, Silius Italicus, and Statius. The latter dedicated to him his *Thebaïs* and *Achilleïs* and commemorated the events of his reign in his *Silvae*. But, in reality, the reign of Domitian was other than favourable to the Roman arms, except in Britain. In Moesia and Dacia, in Germany and Pannonia, his armies were defeated and whole provinces lost (Tac. *Agric.* 41). Domitian himself went twice into Moesia to oppose the Dacians, but, after several defeats, concluded a disgraceful peace with their king Decebalus, whom he acknowledged as sovereign, and to whom he agreed to pay tribute, which was afterwards discontinued by Trajan. Yet Domitian made a pompous report of his victories to the Senate and assumed the honours of a triumph. In the same manner he triumphed over the Cotti and the Sarmatians, which made Pliny the Younger say that the triumphs of Domitian were always evidence of some advantages gained by the enemies of Rome. In A.D. 95, Domitian assumed the consulship for the seventeenth time, together with Flavius Clemens, who had married Domitilla, a relative of the emperor. In that year a persecution of the Christians is recorded in the history of the Church, but it seems that it was not directed particularly against them, but against the Jews, with whom the Christians were often confounded by the Romans. Flavius Clemens and his wife were among the victims. In the following year, A.D. 96, a conspiracy was formed against Domitian among the officers of his guards and several of his intimate friends, and his wife, the infamous Domitilla, herself is said to have participated in it. The immediate cause of it was his increasing suspicion, which threatened the life of every one around him, and which is said to have been stimulated by the predictions of astrologers and soothsayers, whom he was very ready to consult. He was killed in his apartments by several of the conspirators, after struggling with them for some time, in his forty-fifth year and in the fifteenth of his reign. On the news of his death the Senate assembled and elected M. Cocceius Nerva emperor.

Domitian. (Cameo in Paris.)

The character of Domitian is represented by all ancient historians in the darkest colours, as being a compound of timidity and cruelty, of dissimulation and arrogance, of self-indulgence and stern severity towards others. He gave himself up to every excess and plunged into the most degrading vices. Conceiving at last the idea of arrogating divine honours to himself, he assumed the titles of Lord and God and claimed to be a son of Minerva. Soon after he had succeeded to the government he indulged in that love of solitude which pride and fear combined to render in a very short time the most confirmed of all his habits. In the beginning of his reign, says his biographer, he accustomed himself to spend several hours every day in the strictest privacy, employed frequently in nothing else than in catching flies and piercing them with a sharp instrument. Hence the well-known remark made by Vibius Crispus, who, when asked whether there was any one with the emperor, replied, "No, not even a fly." Domitian took a delight in inspiring others with terror, and Dio Cassius tells of a singular banquet, to which he invited the principal members of the Senate and equestrian order, where everything wore the appearance of an intended execution. He once even convened the Senate to determine in what way a large turbot should be cooked, whether whole or divided (Juv. iv.). The Senate, after his death, issued a decree that his name should be struck out of the Roman annals and obliterated from every public monument. His career is sketched in detail by Imhoff (1857).

Domitia Gens. A celebrated plebeian family, divided into two branches—that of the Calvini and that of the Ahenobarbi. The Calvini attained to the consular office B.C. 331, and the Ahenobarbi in B.C. 191. The latter, at length, in the person of Nero, became invested with imperial power; but with this emperor perished the male line of the Domitii. Domitian belonged to this family only through his mother Domitia.

Domna, IULIA PIA. A native of Emesa, of low birth, but married to the Roman emperor Septimius Severus (A.D. 175), by whom she had Caracalla and Geta. She was a woman of much intellectual power and both political and literary ability, having great influence over her husband, after whose death she was intrusted by Caracalla with the conduct of state business of the first importance. When Caracalla was put to death by Macrinus (A.D. 217) she was at first treated with much consideration; but having excited the suspicion of Macrinus, she was banished from Antioch, and soon after ended her own life by voluntary starvation

Iulia Pia Domna. (Vatican Museum.)

(A.D. 217). She is described as a woman of much beauty but of loose morals; and is accused by Spartianus, Aurelius Victor, Eutropius, and Orosius of having maintained an incestuous intercourse with Caracalla, so that she was popularly known at Alexandria as "Iocasta." Dio Cassius, however, her contemporary, does not mention this scandalous story. Iulia was the great-aunt of Elagabalus and of Alexander Severus.

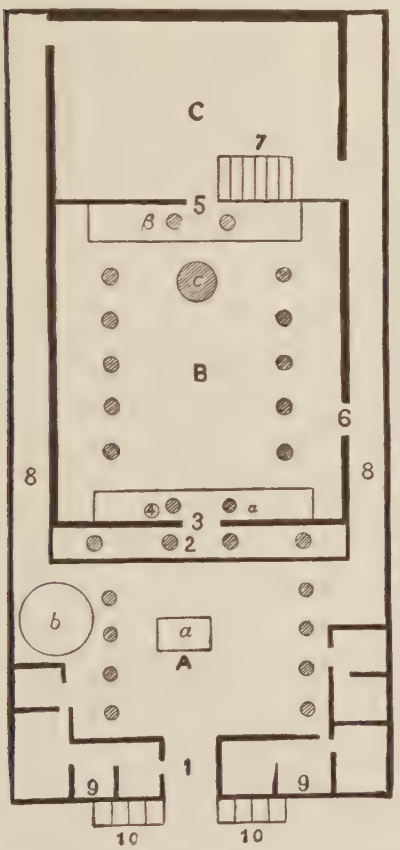
Domus (*οἰκία, οἴκησις, οἰκητήριον*, a dwelling-house; *οἶκος*, generally a room; in Homer and the tragedians, *δόμος*, but more usually in the plural as a dwelling-house). A house.

I. PRE-HISTORIC.—One special form of hut appears to have been commonly used by many different races of men at an early stage of their development. This was a small circular structure made of branches of trees stuck into the ground in a circle, and then bent inwards till their ends met and were tied together at the top. This rude frame-work was then filled in by wattled work woven in and out, and the whole was daubed over with tempered mud or clay. The hut of Achilles, thatched with rushes (*Il.* xxiv. 450), was probably a dwelling of this sort.

In historic times a survival of this ancient circular form of house existed in the form of the Prytaneum in Athens and elsewhere, and also in the Athenian *Θόλος*, which was built in the newer part of Athens as an adjunct, in a more convenient position for the use of the Prytanes. The Tholus was a round building with a conical roof, and must have had some resemblance to the Roman Temple of Vesta, to which the same name was frequently applied. The original Temple of Vesta was a round hut formed with wattle-work of osiers (Ovid, *Fast.* vi. 261 foll.; Fest. p. 250 M.).

Even during the imperial period in Rome one or more wattled huts were preserved in memory of the primitive dwellings of its founders. One of these, which stood at the western angle of the Palatine Hill, was known as the *Casa Romuli* (Dionys. i. 79); it was twice burned and repaired during the reign of Augustus (Dio Cass. xlviii. 43, and liv. 29). The Tugurium Faustuli is probably another name for the same thing. Another hut, also called after Romulus, appears to have been preserved on the Capitoline Hill (Vitruv. ii. 1; Sen. *Contr.* i. 6).

Casa Romuli.



A careful representation of this early form of house, as used by the prehistoric Latin race, exists in the small sepulchral "house-urns," which are found in considerable numbers in the early cemeteries of central Italy and elsewhere. These curious pieces of archaic pottery have small movable doors fixed with a wooden peg. See Virchow, *Die italienischen und deutschen Haus-Urnen* (Berlin, 1884).

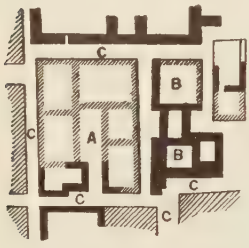
During the many centuries which elapsed before the commencement of the historic period of Greece, a state of society existed very different from that with which Greek literature has made us familiar. Instead of large cities, a number of small, highly fortified towns or villages were ruled in an autocratic way by some chieftain of semi-Oriental habits, who lived in a style of much luxury and splendour, surrounded by a group of followers, very much like those of a mediæval feudal lord. At this early period wealth and splendour, which in historic times were devoted to the more public uses of the agora, the council chamber, and the temples of the gods, were lavished on the palace of the chief. It is this period that is celebrated in the Homeric poems which, there is every reason to believe, give us a faithful, if highly coloured, picture of the magnificence which adorned the dwellings of wealthy chiefs, such as Alcinoüs and, in a lesser degree, Odysseus. The recent discoveries made by Dr. Schliemann and Dr. Dörpfeld, within the massive walls of Tiryns (the *Τίρυνς τειχιόεσσα* of Homer), have for the first time shown us that the stately and richly decorated palaces of the *Odyssey* were not wholly the offspring of a poet's fancy. See TIRYNS.

II. THE HOMERIC PALACE OF ODYSSEUS.—The palace of Odysseus, as depicted in the *Odyssey*, may be taken as representing the Homeric house. It has been most clearly described by Prof. Gardner, of whose valuable paper in the *Quarterly Review* (January, 1886) what follows under this head is practically a summary.

The Homeric house consisted of three parts:

αὐλή, the fore-court; δῶμα or μέγαρον, the hall of the men; and θάλαμος, called in later times γυναικωνῖτις, the apartments of the women. The house was entered by massive folding-doors (θύραι δικλίδες), and on either side were stone seats (ἕδραι). The doors led into the αὐλή, or open court-yard, which was used as a kind of farm-yard. On either side and behind were chambers (θάλαμοι) used for various purposes, such as grinding the corn (*Od.* xx. 105), and sometimes for sleeping in (*Od.* xix. 48). In one corner of the court was the θόλος, a circular building. In the midst of the court was the altar of Ζεὺς ἑρκεῖος. In the court were two colonnades or porticoes, each called αἴθουσα, one on either side right and left of the court-yard (αἴθουσα αὐλῆς), and the other opposite the entrance to the court-yard and along the front of the δῶμα or μέγαρον. The latter is often considered as part of the πρόδομος, so that αἴθουσα and πρόδομος are often used as synonymous terms. Crossing the αἴθουσα, the visitor passed into the μέγαρον or δῶμα, where the chiefs lived. At either end of the μέγαρον was a door, one leading into the court-yard through the αἴθουσα, and the other into the women's apartments, the θάλαμος, properly so called. In front of either door was a threshold (οὐδός), probably raised. The threshold in front of the door into the μέγαρον was made of ash-wood, and the threshold in front of the door into the women's apartments was of stone, λάϊνος οὐδός (*Od.* xx. 258), a distinction which is most important for understanding the combat between Odysseus and the suitors. By the ashen threshold was the δουροδόκη, or spear-stand, close to one of the pillars (*Od.* i. 128). The μέγαρον was of great size. In the palace of Odysseus the three hundred suitors of Penelopé feasted in it. Its height was that of the house itself, and its roof was supported by lofty pillars (κίονες). In the upper part of the μέγαρον was the ἐσχάρα, or hearth, where the food was cooked (*Od.* xx. 123), and the smoke escaped through a hole in the roof, as in the old Roman *atrium*. Besides the two principal doors of the μέγαρον already mentioned, there was a third, or postern-door, called ὀρσοθύρη, the position of which has given rise to much dispute. It should, however, probably be placed, for the reasons given by Gardner and Jebb, on the side of the μέγαρον, as shown in the plan (Plan, 6), leading into the λαύρη (*Od.* xxii. 128, 137), or narrow passage which gave access to the women's apartments from the outer court-yard, thus avoiding the necessity of passing through the μέγαρον (Plan, 8).

Palace of Odysseus. Ground-plan. (Gardner.)

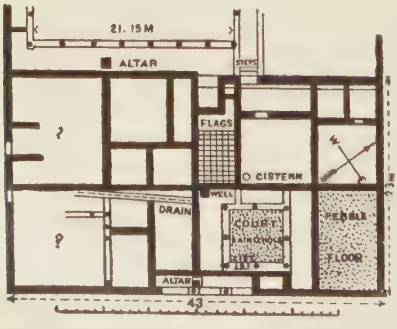


A. αὐλή, fore-court.
a. Altar of Ζεὺς ἑρκεῖος.
b. θόλος.
B. δῶμα or μέγαρον, men's hall.
c. ἐσχάρα.
C. θάλαμος, women's hall.
1. θύραι δικλίδες.
2. αἴθουσα, πρόδομος.
3. θύρα.
4. δουροδόκη.
α. μέλινος οὐδός.
β. λάϊνος οὐδός.
5. θύρα.
6. ὀρσοθύρη.
7. κλῖμαξ.
8. λαύρη.
9, 9. θάλαμοι.
10, 10. ἕδραι.

The women's rooms, or θάλαμος, properly so called, also styled μέγαρα γυναικῶν (*Od.* xxii. 151), were immediately behind the μέγαρον on the ground-floor, directly communicating with the latter by a door. This is clear from the whole narrative in the *Odyssey* of the combat between Odysseus and the suitors. The passages proving this have been critically examined by Prof. Jebb in the essay quoted below. (Cf. *Od.* xvii. 506, xx. 389, etc.; see also iv. 718.) Here the women sat engaged in weaving and domestic occupations. Here was the nuptial chamber, with the marriage-bed made by Odysseus with his own hands (*Od.* xxiii. 192, 295). The ordinary sleeping and other rooms of the women were in the upper story (ὑπερῷϊον), which was reached by a ladder, κλῖμαξ (*Od.* xxi. 5; cf. *Od.* ii. 358, iv. 760; *Il.* ii. 514, xvi. 184; Eustath. *ad Od.* i. 328, p. 1420, 53). Hence we find Penelopé, after sleeping with Odysseus in the nuptial chamber, ascending with her handmaids into the upper chamber (*Od.* xxiii. 364). It is therefore a mistake on the part of some modern writers to describe the women's rooms as situated only in the upper story. In the women's rooms was the armory (θάλαμος ὅπλων, cf. *Od.* xxii. 140, 151–156), and the treasury at the further extremity (θάλαμος ἔσχατος), with a high roof (*Od.* xxi. 8). In the women's part of the house there was also an open court, in which grew an olive-tree in the palace of Odysseus (*Od.* xxiii. 190).

For further details regarding the Homeric house, reference may be made to Gardner, *Journ. of Hellenic Studies*, iii. p. 264 foll.; Jebb, ib. vii. p. 170 foll.; Dörpfeld, in Schliemann's *Tiryns* (London, 1866); Winckler, *Die Wohnhäuser der Hellenen* (Berlin, 1868); Protodikos, *De Aedibus Homericis* (Leipzig, 1877); Rumpf, *De Aedibus Homericis* (Giessen, 1884). Valuable accounts of the architecture and other arts of the Homeric period are

given by Helbig, *Das homerische Epos* (1876), and by Buchholz, *Die homerischen Realien* (Leipzig, 1883–85).



III. The later Greek House.—The discoveries of recent years have shown that bricks made of unbaked clay were very extensively used down to quite late times for the private houses of the Greeks, and this is one reason why examples of Hellenic domestic architecture are so very rare. Burnt bricks were first introduced by the Romans (Blümner, *Technol. u. Terminol.*, etc., ii. p. 11). Till quite recently very few remains of Greek houses were known to exist. The excavations, however, made in the Greek city of Naukratis in the Egyptian Delta during 1884–86 by Messrs. Flinders Petrie and Ernest Gardner have brought to light remains of a large number of Greek streets and houses, all built of sun-dried brick, coated with painted stucco. The accompanying figure shows part of Mr. Petrie's discoveries: A is a single house forming a complete *insula*, as the Romans would call it; it consists of six rooms, with what was probably a small central open court. B B appear to be shops. C C are narrow streets. In this Greek city the streets seem all to be very narrow, and the *insulae* are mostly very small—in many cases, like the figured example, consisting of one house only. Though but very scanty remains were found of the unbaked-brick walls, yet in a few places patches of painted stucco on the exterior were found *in situ*. Though walls of this sort would last very well so long as they were roofed over and protected by their coating of hard stucco, yet when once they had fallen into a ruined state the process of decay would be rapid and complete, even in Egypt, and of course much more so in a more rainy climate.

Plan of a Greek House at Naukratis in Egypt.

The other more important examples of Greek domestic architecture which have yet been discovered are some houses in the Piraeus, the foundations of which were exposed in 1884 during the laying out of a new street by the municipality. (See Dr. Dörpfeld, in *Mittheil. d. deutsch. archäol. Inst. in Athen*, vol. ix. no. 3, 1884.) The figure shows a reduction made from Dr. Dörpfeld's plan.

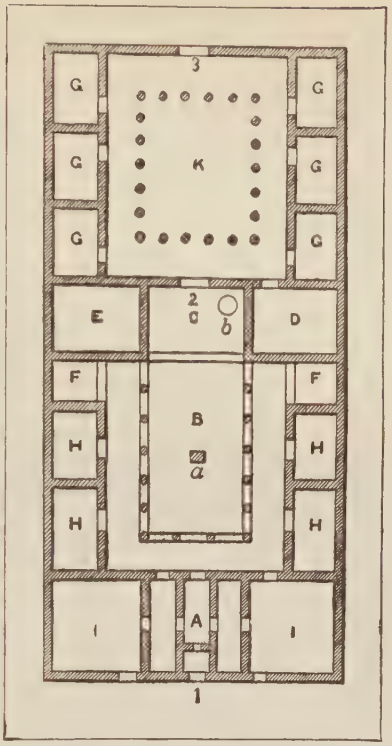
On the southeast and southwest sides the block faces upon streets; it appears to be a double house, though this is not quite certain, owing to the impossibility of ascertaining the positions of all the doors. On the northwest side remains were found of a large open peristyle, apparently derived from the *αὐλή* of the earlier Hellenic plan; under the covered porticus of this cloister an altar was found, probably dedicated to Zeus Herkeios. On the southeast side the house was entered through a long shallow porch, with two columns, in which stood another altar, probably that of Apollo Agyieus. This porch led into a small open court, surrounded on three sides by a covered walk (*στοά* or *porticus*). The pavement of this was laid so as to drain into an open gully, through which the rain-water escaped into a drain. In one corner of the court was a well, and on the other side a stone cistern for storing water; a second cistern stood in the room adjoining the open court on the northwest. Some remains of paving were found, as is indicated on the plan. In one room it consists of stone flags; in another of a sort of rude mosaic, formed of pebbles set in concrete. On the southwest side are some rooms which were entered directly from the street; these may have been shops or public offices. Traces of a staircase leading to an upper floor were found at one end of the room with the flagging pavement. This block measures, without counting the large peristyle, about 140 feet by 75 feet. The clear open space of the peristyle was about 68 feet wide; its other dimension was not discovered. It is possible that this block may have been all part of the same house—one portion being the *ἀνδρωνῖτις*, or men's part, and the rest the *γυναικωνῖτις*, or women's part.

Plan of a Greek House discovered in the Piraeus.

During the most flourishing period of Greece the private houses appear to have been small and simple in design; splendour of materials and ornament were reserved for the temples of the gods and the public buildings, such as the Agora and the great *στοαί*, which in Athens especially contributed so largely to the architectural magnificence of the city. The front of the house towards the street was not large, as the apartments extended rather in the direction of its depth than of its width. In towns the houses were often built side by side, with party walls between (*ὁμότοιχοι οἰκίαι*). The exterior wall was plain and often covered with plaster or stucco. Sometimes, as in Tanagra, the exterior was adorned with what was probably terra-cotta (Dicaearch. p. 245, Fuhr). Plutarch says that Phocion's house was ornamented with plates of bronze (Plut. *Phoc.* 18). Unbaked clay, as we have already shown, was used for the walls; thus it was easy for the Plataeans to break through the party walls of their houses, so as to communicate with each other. For the same reason the burglar was called *τοιχωρύχος*, because he found it easier to obtain an entrance into houses by breaking through the soft walls than by the door or windows (Plat. *De Leg.* 831 E).

Foreigners were specially struck by the mean appearance of the private houses of Athens in the time of Pericles, as strongly contrasting with the splendour of the public buildings (Thuc. ii. 14, 65). "A stranger," says Dicaearchus, "might doubt upon a sudden view whether this were really the city of Athens," so mean were the houses and crooked and narrow the streets. It was not till the time of Demosthenes that good houses began to be built in Athens.

In all cases the country houses must have been



much finer buildings than those in the old cities, where streets were narrow and sites often very cramped (Isocr. *Areop.* § 20). Thucydides (ii. 14) speaks of the preference of the Athenians for houses in the country. See VILLA.

The plan and whole arrangement of town and country houses would naturally be absolutely different, and it is unreasonable to suppose that one fixed type of house was used by the Greeks. Existing remains show us that the Roman houses had as many varieties of plan as we have now, and yet many archæologists have written as if there was one stereotyped plan of house used in classical times. The somewhat pedantic language of Vitruvius (vi. 7, 10) on the subject has tended to support the belief in the existence of one fixed type of Greek house, but at his date, in the reign of Augustus, archæology was practically an unknown science, and it may reasonably be suggested that the so-called Greek plan of Vitruvius does not represent the domestic architecture of the bygone days when the Greeks were an independent race, but rather Vitruvius's private notion, as a practising architect, of a house to be built for some wealthy Roman in the revived pseudo-Hellenic style which began to be popular in the reigns of the early emperors of Rome.

Nevertheless, many of Vitruvius's statements may be of great use in illustrating difficult passages in older Greek writers, which treat of some details in the Hellenic house, especially when the description is compared with some of the existing Roman dwellings, which are evidently designed to some extent after a real or supposed Greek model.

Greek houses had three principal features in common. First, there were one or two open courts, surrounded by the various rooms. Secondly, in a Greek family the women lived in private apartments allotted to their respective use. Hence the house was always divided into two distinct portions, already mentioned—the Andronitis (*ἀνδρωνῖτις*), or men's apartments, and the Gynaeconitis (*γυναικωνῖτις*), or women's apartments. Thirdly, the Gynaeconitis was, as a general rule, in larger houses behind the Andronitis, and on the same floor as the latter Much difficulty has been occasioned in the arrangement of a Greek house by the statement of Vitruvius (vi. 7 [10]) that the principal entrance led at once into the Gynaeconitis, and that the Andronitis therefore was behind the women's rooms, or rather, if we construe his words strictly, by their side. But such an arrangement is alike inconsistent with the careful state of seclusion in which the Greek women were kept, and also with the positive statements of the writers of the period. It is very likely that Vitruvius misunderstood to some extent the descriptions given by his Greek authorities, and has assigned to the Gynaeconitis the arrangement of the Andronitis.

The plan below of the ground-floor of a Greek house of the larger size, with two courts or peristyles, is taken, with slight alterations, from Guhl and Koner. It is of course conjectural, but it will serve for the *probable* arrangements (for further we cannot go) of the Greek house at the period we are speaking of. Other plans, differing very much from this, have been given by several modern writers; but this appears on the whole the most consistent with the ancient authorities. In smaller houses the Gynaeconitis was much more limited, having no open court, and in some cases was restricted to the upper story.

Plan of a Greek House. (Guhl and Koner.)

A. Entrance-hall.
B. Peristyle of the Andronitis.
a. Altar of *Ζεὺς ἑρκεῖος*.
C. Andron, or dining-hall.
b. ἑστία.
K. Peristyle of the Gynaeconitis.
H. Rooms of the Andronitis.
F. Perhaps sanctuaries of the *θεοὶ κτήσιοι* and *θεοὶ πατρῷοι*.
D. Thalamos.
E. Amphithalamos.
G. Rooms of the Gynaeconitis, for working in wool and other purposes.
I. Rooms of the Andronitis, and in some houses perhaps shops opening to the street.
1. *Πρόδομος*, and farther back, street-door, *αὔλειος θύρα*.
2. Door between the men's and women's rooms, *μέσαυλος* or *μέταυλος θύρα*.
3. Garden-door, *κηπαία θύρα*.

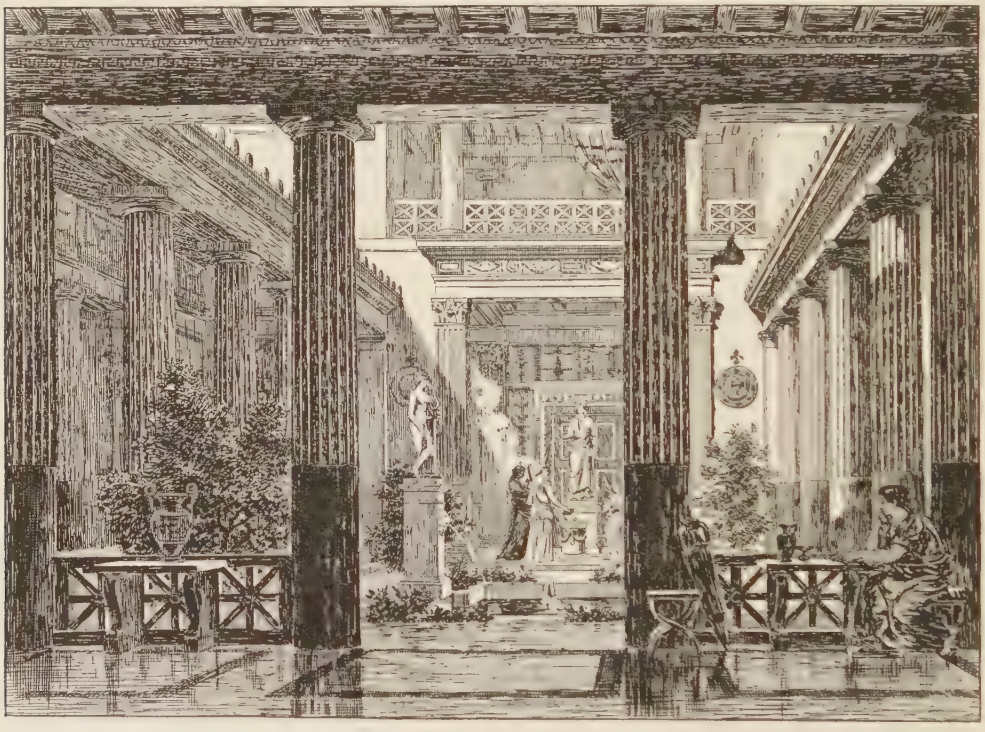
Some other matters connected with a Greek house require notice.

(1) *Upper Stories.*—When there was an upper story (*ὑπερῷον, διῆρες*), it seldom extended over the whole space occupied by the lower story. The principal use of the upper story was for the sleeping apartments, both of the family and of the slaves. Houses rarely had more than two stories; but in later times we find in the larger towns mention of houses with three stories (*τριστέγη*, Artemid. iv. 46; Acts, xx. 8, 9). The access to the upper floor seems to have been sometimes by stairs (*ἀναβαθμοί*) on the outside of the house, leading up from the street, as was the case at Rome (Aristot. *Oec.* ii. 5, p. 1347, 5). The upper story was sometimes let, or used for lodging guests (Antiph. *De Venef.* § 14). But in some large houses there were rooms set apart for the reception of guests (*ξενῶνες*) on the ground-floor.

Portions of the upper story sometimes projected beyond the walls of the lower part, forming balconies or verandas (*προβολαί*, *γεισιποδίσματα*, Pollux, i. 81), like the Roman *maeniana*.

(2) *Roofs.*—The roofs were generally flat, and it was customary to walk about upon them, as on the *solaria* at Rome (Lys. *adv. Simon.* § 11; Aristoph. *Lysistr.* 389), or to pass from one house to another (Demosth. *c. Androt.* p. 609, § 53). But high-pitched roofs were also used, covered with tiles (*κέραμος*, Pollux, i. 81).

(3) *Doors.*—For particulars, see IANUA and CLAVIS. In the interior of the house the place of doors was sometimes supplied by curtains (*παραπετάσματα*, *παρακαλύμματα*), which also hung between the pillars of the peristyle. They were either plain, dyed, or embroidered (Pollux, x. 32; Theophr. 5).



(4) *Windows.*—The principal openings for the admission of light and air were in the uncovered peristyle and perhaps in the roofed part of the peristyle; but it is incorrect to suppose that the houses had no windows (*θυρίδες*), or at least none overlooking the street. They appear to have been chiefly in the upper story, and in ancient works of art women are represented looking out of them (Aristoph. *Thesm.* 797, *Eccles.* 961).

(5) *Privies.*—These were called *ἀπόπατοι*, *ἄφοδοι*, or *κοπρῶνες*. Their position is nowhere expressly indicated, but they were probably, as in Roman houses (see below), in proximity to the kitchen.

(6) *Heating.*—Artificial warmth was procured by little portable stoves (*ἐσχάρια*, *ἐσχαρίδες*) or chafing-dishes (*ἀνθράκια*). (See FOCUS.) It is often supposed that the chimney was altogether unknown, and that the smoke escaped through an opening in the roof; but it is not easy to understand how this could be the case when there was an upper story. The *καπνοδόκη* mentioned by Herodotus (viii. 137) was not really a chimney, but only an opening in the roof. But the *κάπνη* of Aristophanes (*Vesp.* 143) seems to have been really a chimney, as it is described by the Scholiast on the passage as pipe-shaped (*σωληνοειδής*). In any case, the chimney seems to have been used only in the kitchen (*ὀπτάνιον*, Alexis *ap.* Athen. ix. p. 386 b).

(7) *Decoration.*—The decorations of the interior were very plain at the period to which our description refers. The floors were mere plaster. At a late period coloured stones were used (Plin. *H. N.* xxxvi. § 184). Mosaics are first mentioned as introduced under the kings of Pergamus. The walls, up to the fourth century B.C., seem to have been only whitewashed. The first instance of painting them is that of Alcibiades (Andoc. *In Alcib.* § 17)—an innovation that met with considerable opposition (Xen. *Mem.* iii. 8, § 10; *Oecon.* ix. 2). Plato mentions the painting of the walls of houses as a mark of a *τρυφῶσα πόλις* (*Repub.* ii. 373 A). These allusions prove that the practice was not uncommon in the time of Plato and Xenophon. We have also mention of painted ceilings at the same period, and at a later period this mode of decoration became general.

(8) *Letting and Price of Houses.*—There was a great deal of speculation in the building and letting of houses at Athens (Xen. *Oecon.* iii. 1). A distinction was made at Athens between the *οἰκία*, which was a dwelling-house for a single family, and the *συνοικία*, which was adapted to hold sev-

Aula of Greek House. (Von Falke.)

eral families—like the Roman *insula*. The lodging-houses were let mostly to foreigners who came to Athens on business, and especially to the μέτοικοι, whom the law did not allow to acquire real property, and who therefore could not purchase houses of their own. Pasion, the banker, had a lodging-house valued at 100 minas (Demosth. *c. Steph.* i. p. 1110, § 28). Two counting-houses are mentioned by Isaeus (*De Hagn. Her.* § 42) as yielding a return of rather more than 8⅓ per cent. interest on the purchase-money. But this probably was much below the average. The summer season was the most profitable for the letting of houses, when merchants and other visitors flocked to Athens. The rent was commonly paid by the month. Lodging-houses were frequently taken on speculation by persons called ναύκληροι or σταθμοῦχοι (Ammon., Harpocrat.), who made a profit by underletting them, and sometimes for not very reputable purposes (Isaeus, *De Philoct. Her.* § 19). Boeckh has given an account from the ancient writers of the prices of houses at Athens, which seem to have been very small. They varied from 3 minas ($54) to 120 minas ($2160), according to their size, situation, and condition, from 30 to 50 minas ($540 to $900) being an ordinary price (Boeckh, *Publ. Econ. of Athens*, pp. 65, 141; *Staatshaush.* i. p. 84).

For further details regarding the Greek house, see the commentators on Vitruvius; Schneider, *Epim. ad Xen. Mem.*; Hirt, *Die Lehre der Gebäude*, pp. 287–289; Stieglitz, *Archäol. d. Baukunst*, vol. ii. pt. 2, pp. 150–159; Krause, *Deinokrates*, p. 488 foll.; Winckler, *Die Wohnhäuser der Hellenen* (Berlin, 1868); Becker-Göll, *Charikles*, ii. p. 105 foll.; Hermann-Blümner, *Griech. Privatalt.* p. 143 foll.; Guhl and Koner, *Leben d. Griech. u. Röm.* p. 95 foll., 5th ed.); Laloux, *L'Architecture Grecque* (1888).

IV. The Roman House.—The earliest dwellings of the Latins on the Palatine Hill were probably mere huts of mud-daubed osiers, like the hut of Romulus, which was preserved as a sacred relic for many centuries. After the burning of Rome by the Gauls, the city was rebuilt in haste, with very narrow streets and on no regular plan (Liv. v. 55). Even the houses of the richest citizens were small and of inexpensive materials, such as unburnt brick or soft brown tufa. No examples of fired bricks are known in Roman buildings till the time of Iulius Caesar; and the remarks of Vitruvius seem to refer wholly to crude or sun-dried bricks, of which no examples in Rome have survived to modern times. Down to the beginning of the last century of the Republic, Romans of rank continued to live in small houses. In B.C. 125, the censors censured Lepidus, the augur, because he paid 6000 sesterces (about $250) for his house rent (Vell. Paterc. ii. 10); and Sulla, when a young man, paid only 3000 sesterces for his rooms on the ground-floor, while a freedman in the upper part of the same house paid only 2000 sesterces, or $80 (Plut. *Sall.* c. 1).

The earliest regulation we find respecting houses is a law of the Twelve Tables that each building should be separated from another by a space of 2½ feet called *ambitus* (Fest. pp. 5, 11, M.). But this enactment was disregarded, and was again enforced by Nero when he rebuilt the city (Tac. *Ann.* xv. 43; see below). As Rome increased in population, the houses were raised in height. The *insula*, in which the lower and middle classes lived, was a building of several stories, let out in flats or separate rooms to different families or persons. The *domus* or *aedes privatae*, on the contrary, was a separate house, in later times a palace, usually with only one story above the ground-floor, the abode of the rich and great, and inhabited for the most part by a single family; though, as in the case of the palazzi in modern Rome, parts of them, especially at the back or top of the *domus*, were sometimes rented (Plaut. *Trin.* i. 2, 157; Suet. *Ner.* 44, *Vitell.* 7). In the general description of a Roman house our remarks apply only to the *domus*, properly so called, as the *insula* was built on an entirely different plan.

The INSULA is defined by Festus (p. 111, M.) to be a building not joined by common walls with neighbouring houses, but surrounded by a street, so that it stood like an island surrounded by rivers or the sea. It was thus, as has been said, very much like one of the large hotels in modern cities, with one or more courts, and bounded on all sides by streets, like the Louvre Hotel at Paris. The ground-floor was usually rented for shops (*tabernae*), and the upper stories in flats or separate rooms, as in continental and American cities at the present day. Such an *insula*, containing various tenements and shops, is the house of Pansa at Pompeii, described below. The number of *insulae* at Rome naturally exceeded that of the *domus*; and accordingly we find in the *Notitia*, which was compiled between A.D. 334 and 357, that there were at Rome 44,171 *insulae* and 1782 *domus* (Marquardt, *Staatsverw.* ii. p. 120). To the same effect Suetonius, in describing the fire at Rome under Nero, speaks of the "immense number" of *insulae* that were burned, in addition to the palaces (*domus*) of the nobles (Suet. *Ner.* 38). Becker and some other writers erroneously suppose that a single floor or a separate room in such a house was also called *insula*, but the proper name for such a separate lodging was *cenaculum* (Becker-Göll, *Gallus*, ii. p. 221).

It was apparently usual for an *insula* to have been built on speculation, and let by the proprietor to different occupants (Plut. *Crass.* 2; Mart. iv. 37). Hence the stories or separate rooms were called *cenacula meritoria* (Suet. *Vitell.* 7; Juv. iii. 234) or *conducta*. Cicero had some shops, which he let (Cic. *Ad Att.* xiv. 9). The rent (*pensio*) at Rome was considerable, even for a miserable garret (Juv. iii. 166, 225). Poor persons in the time of Iulius Caesar appear to have paid 2000 sesterces ($80 or $85) as the usual rent (Suet. *Caes.* 38). Caelius was said to have paid 30,000 sesterces (about $1200) for the rent of a third floor in the *insula* of P. Clodius, though Cicero says the real rent was only one third of this sum (*Cael.* 7, 17). The *insularii* were not the occupants of the *insulae*, but the agents who had charge of the *insulae* and collected the rents. They were also called *procuratores insularum*. The *insula* appears to have been named after the person to whom it belonged. Thus we find in inscriptions the *insula Arriana Polliana*, the *insula Sertoriana*, etc. (Orelli, 4324).

The upper stories and the separate rooms of the *insula* were, as we have already said, called *cenacula*. This word properly signifies rooms to dine in; but after it became the fashion to dine in the upper part of the house, all the rooms above the ground-floor were called *cenacula* (Varr. *L. L.* v. 162). There were different flights of stairs connecting the upper stories with the lower part of the house, as we find to be the case in houses at

Pompeii. Sometimes the stairs had no connection with the lower part of the house, but ascended at once from the street (Liv. xxxix. 14, 2; xxi. 62, 3). As the different stories could not all be lighted from openings in the roof, as in the *domus*, they had windows looking out into the street (Liv. i. 41, xxiv. 21). They also had sometimes balconies, supported by brackets, projecting into the street, from which an occupant could shake hands with his next-door or opposite neighbour (Mart. i. 86). These balconies were called *maeniana*, and the same name was also given to the stories which projected over those below, as we see in some old houses in England (Fest. p. 134, 22, M.; Isid. xv. 3, 11; Vitruv. v. 1, 2). Projecting stories were forbidden in A.D. 368 to be erected in Rome (Ammian. Marcell. xxvii. 9, 8) on account of the narrowness of the streets, and were again forbidden by the emperors Honorius and Theodosius unless there was an open space, in some cases of ten, in others of fifteen feet, clear of any adjacent building (*Cod. Iust.* viii. 10, 11). Such a projecting story is seen in some of the Pompeian houses.

Maenianum, or Projecting Story. (Overbeck, *Pompeii.*)

We find mention of a house three stories high in B.C. 218 (Liv. xxi. 62, 3); and Martial considered the third story, where he lived, as very high. If we were to estimate the height of the Roman houses by the way in which they are spoken of by the ancient writers, we should probably assign to them too many stories; for the houses, as Friedländer observes, very likely appeared higher than they really were in consequence of the narrowness of the streets. We have no express mention of any houses more than four stories high; but from various circumstances we may infer that some of the houses at Rome had a larger number of stories than are expressly mentioned. Thus Augustus limited the height of houses to seventy feet, which implies that they had been built still higher, and Cicero describes the houses as hoisted up and suspended in the air (*Leg. Agr.* ii. 35, 96). See Friedländer, *Sittengesch. Roms*, i. p. 5 foll.

The houses let for hire were in Rome, as in modern cities at the present day, badly built by speculators. The upper stories were of wood (*tabulata, contignationes*) and frequently fell down, while their material made them more liable to fires, which were very frequent in Rome. Catullus speaks ironically of the advantages of a beggar, who had nothing to fear from fire or the fall of houses. The returns from house property in Rome were large, but people feared to invest in it on account of fires (Gell. xv. 1). The inundations of the Tiber also caused the fall of houses. For further details, see Friedländer, i. p. 26 foll.

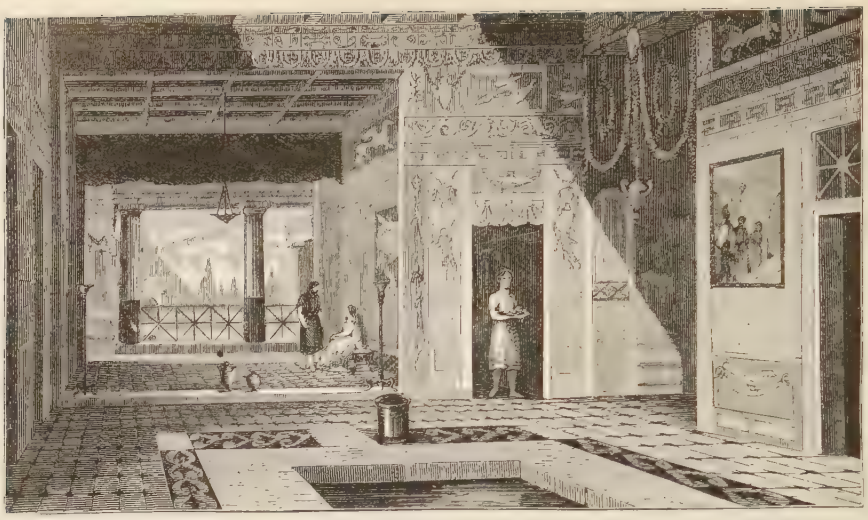
It was not, however, till the reign of Nero that a complete reform was effected in the arrangement and construction of the houses and streets of Rome. Nero had a new and elaborate Building Act drawn up, which required fire-proof materials, such as *peperino*, a hard volcanic stone, to be used for the external walls of houses. He also enacted that each building should have separate walls and a space (*ambitus*) left open all round it. As a means of escape and assistance in the case of fire he also caused arcades or colonnades to be built at his own expense in front of the *insulae*. In Trajan's reign the limit of height for street houses was fixed at sixty feet (Aurel. Vict. *Epit.* 13). The emperors Antoninus and Verus again made an ordinance about the space to be left round the *insulae* (*Dig.* viii. 2, 14).

We now turn to the history and construction of the DOMUS, or mansion of the great and wealthy. It was not till the last century of the Republic, when wealth had been acquired by conquests in the East, that houses of any splendour began to be built; but it then became the fashion not only to build houses of an immense size, but to adorn them with marble columns, paintings, statues, and costly works of art. They covered a large space, most of the rooms being on the ground-floor. The spacious *atria* and *peristylia*, being open to the sky, did not permit an upper story, which, if it existed, must have been confined to the sides of the building, and could not have been very high, as otherwise it would have darkened the *atria* and *peristylia*. These splendid mansions were erected for the most part on the hills and along the slopes of the Palatine, on the side near the Forum, which was the favourite quarter for the Roman nobles. In later times the various palaces of the emperors swallowed up almost the whole of this site.

The house of the orator L. Crassus on the Palatine, built about B.C. 92, was the first which had marble columns. For this, Crassus was severely blamed, and the stern republican M. Brutus nicknamed him the "Palatine Venus." This house was valued at 6,000,000 sesterces (about $240,000); but Pliny says that it yielded in magnificence to the house of Q. Catulus on the same hill, and was much inferior to that of C. Aquilius on the Viminal. The house of Catulus had a fine colonnade (*porticus*), adorned with the spoils of the Cimbric War. It was near the house of Cicero, as a portion of the colonnade was destroyed when Clodius razed the house of Cicero (Val. Max. vi. 3, § 1).

In B.C. 78, M. Lepidus, for the first time in Rome, used the rich Numidian marble not only for columns, but even for the thresholds of his doors; yet the fashion of building magnificent houses increased so rapidly that the house of Lepidus, which in his consulship was the first in

Rome, was thirty-five years later eclipsed by a hundred others. Lucullus was especially celebrated for the magnificence of his houses. The Romans were exceedingly fond of marble for the decoration of their abodes. An advance in costly magnificence was made by the ædile M. Aemilius Scaurus in the middle of the first century B.C. He purchased the house of L. Crassus and greatly enlarged it. He introduced, as the supports of his atrium, columns of the black "Lucullean" marble no less than thirty-eight feet in height, and of which the weight was so great that he had to provide security for an indemnity in case of injury that might be done to the main sewers while these immense blocks of marble were being carted through the streets (Plin. *H. N.* xxxvi. § 5 foll.). This house was sold to Clodius for nearly 15,000,000 sesterces (about $600,000) — a price, says Pliny, worthy of the madness of kings. This is the highest price recorded in the time of the Republic for a house. The consul Messalla bought the house of Autronius for 3,400,000 sesterces (about $140,000), and Cicero the house of Crassus (not L. Crassus, the orator) for 3,500,000 sesterces (about $140,000) (Cic. *Ad Att.* i. 13, 6, with Tyrrell's note; *Ad Fam.* v. 6). Cicero's house was on the lower slope of the Palatine towards the *Regia*, the official residence of Iulius Caesar as Pontifex Maximus, whom Cicero calls his neighbour (*Ad Fam.* v. 6, *Ad Att.* xiii. 45). These houses will serve as samples of the value of the mansions of the nobles during the Republic. Sallust speaks of them as like cities in size (*Cat.* 12), and Seneca describes them in the same terms under the Empire (*Ep.* 90, 43), when the imperial palaces became still more magnificent. Many of them, like the houses of Sallust and Maecenas, described below, were surrounded by gardens. The rich noble, we are told, was not content unless he had a *rus in urbe* (Mart. xii. 57, 21), and the extensive pleasure-grounds are alluded to in other passages.



According to Vitruvius, the principal parts of a Roman house were: (1) *Vestibulum*, (2) *Ostium*, (3) *Atrium*, (4) *Alae*, (5) *Tablinum*, (6) *Fauces*, (7) *Peristylium*. The parts of a house which were considered of less importance, and of which the arrangement differed in different houses, were: (1) *Cubicula*, (2) *Triclinia*, (3) *Oeci*, (4) *Exedrae*, (5) *Pinacotheca*, (6) *Bibliotheca*, (7) *Balineum*, (8) *Culina*, (9) *Cenacula*, (10) *Lararium* or *Sacrarium*, (11) *Diaetae*, (12) *Solaria*, (13) *Cellae*. We shall speak of each in order.

(1) *Vestibulum.*—There has been much dispute respecting the exact signification of this word, which has arisen from the different meanings attached to it at different periods of history and in different kinds of houses. In the palaces of the nobles the *vestibulum* was a vacant space before the house, forming a court-yard or entrance-court, surrounded on three sides by the house, and open on the fourth to the street. The two wings ran out beyond the façade of the building, and the door was in the third side opposite the street. In some houses the projecting sides were occupied by shops opening into the street. In the *vestibulum* the clients assembled, till the door was opened, to pay their respects (*salutatio*) to the master of the house, so that they might not be left standing either in the street or within the house (Gell. xvi. 5, §§ 3, 8; *vestibulum, quod est ante domum,* Varr. *L. L.* vii. 81; Macrob. vi. 8, § 15). Hence in the smaller houses in Rome and the municipal towns, there was either no *vestibulum*, so that the door opened straight upon the street, or the *vestibulum* was simply indicated by the door standing back a few feet from the street, as in many of the houses at Pompeii. Sometimes there were steps from the street leading up to the *vestibulum* (Sen. *Ep.* 84). In the houses of the nobility the *vestibulum* was adorned with statues, arms, and other trophies (Plin. *H. N.* xxxv. § 7). Public buildings also had *vestibula*, as the curia or senate-house (Liv. i. 48, ii. 48), and various temples (Liv. *Ep.* 86).

(2) *Ostium.*—The *ostium* was the entrance to the house, and is constantly used as synonymous with *ianua* and *fores*, "the door." But *ostium* properly signified the small vacant space before the *ianua*, whence Plautus (*Pers.* v. 1, 6) says *ante ostium et ianuam.* Here stood the *antae* (q. v.), two posts or pillars flanking the doorway. On the threshold the word *Salve* was frequently wrought in mosaic, as we see in the Pompeian houses; and over the threshold there sometimes hung a cage containing a magpie or a parrot, taught to greet those who entered (Petron. 28; Mart. vii. 87, 6; xiv. 76). Over the door a few words of good omen were sometimes written, such as *nihil intret mali* (Orelli-Henz. *Inscr.* 7287), or *deprecatio incendiorum* (Plin. *H. N.* xxviii. § 20). Sometimes the house was indicated by a sign over the door, as in mediæval times. Thus we are told that Augustus was born *ad Capita Bubula* (Suet. *Aug.* 5), and Domitian, *ad Malum Punicum* (Suet. *Dom.* 1). The street-door itself is fully described under IANUA.

Whether the street-door opened into a hall or directly into the *atrium* has been a subject of dispute. Vitruvius mentions no entrance-hall in a Roman house; but there are reasons for believing there must have been an entrance-hall in the palaces of the nobility, as behind the door there was a small room (*cella*) for the house-porter (*ostiarius* or *ianitor*), and it is difficult to suppose that this was in the *atrium* (Petron. 28), especially as a dog was kept by his side, chained to the wall, with a written warning *Cave Canem* (Plaut. *Most.* iii. 2, 169). Sometimes a dog was painted on the wall (Petron. 29) or wrought in mosaic on the pavement, as we find in the House of the Tragic Poet at Pompeii. (See illust. p. 296.) At the end of the hall, which seems to have been called *ostium*, there was no inner door, as Becker describes, but the entrance to the *atrium* was closed by a curtain (*velum*), which was drawn aside by the usher when he admitted strangers to an interview (Lamprid. *Alex. Sev.* 5, *Heliog.* 14; Sen. *Ep.* 20). The entrance-hall was small, so that a person in the *atrium* could look through it at those walking in the street (Suet. *Calig.* 41).

(3) *Atrium.*—The first point to be determined in connection with the *atrium*, upon which the whole disposition of a Roman house depends, is whether the *atrium* and the *cavum aedium* or *cavaedium* denote two separate courts or one and the same. Some modern writers maintain that they were distinct courts, and accordingly place three courts in a Roman house—first the *atrium*, then the *cavum aedium* in the centre, and lastly the *peristylium* in the rear. But this view cannot be maintained; it is rejected by the best modern authorities; it is in direct opposition to the statements of Varro (*L. L.* v. 161) and Vitruvius (vi. 3 and 8), who call

Restoration of the Interior of Roman House. (Overbeck, *Pompeii.*)

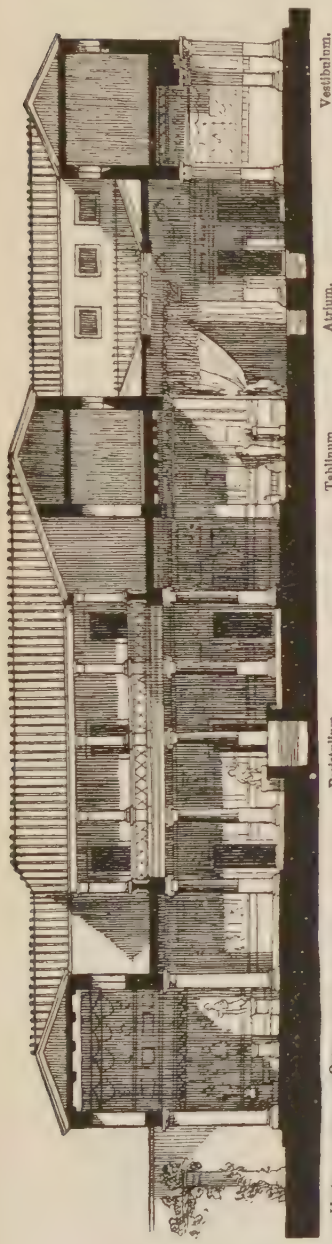
sometimes the chief room of the house *atrium* and sometimes *cavum aedium;* and it is contradicted by the fact that no houses in Pompeii have yet been discovered containing more than two courts —namely, the *atrium* and the *peristylium.* We may therefore conclude that the *atrium* and the *cavum aedium* denote the same room, the only difference perhaps being that *cavum aedium* indicated originally the open part, and *atrium* the entire area; but in general the two words are used as synonymous. The *atrium* or *cavum aedium* was a large room or court roofed over, with the exception of an opening in the centre, called *compluvium,* towards which the roof sloped so as to throw the rain-water into a cistern in the floor, termed *impluvium* (Varr. l. c.; Fest. p. 108, M.; Liv. xliii. 13, 6; Plaut. *Amph.* v 1, 56). The water from the *impluvium* flowed into a well (*puteus*) under ground; for before the construction of the aqueducts the Romans were dependent upon wells for their supply of water. The word *impluvium,* however, is sometimes employed in a wider sense to denote the whole uncovered space in the *atrium,* and therefore the opening in the top as well as the cistern at the bottom (Cic. *Act. in Verr.* i. 23, 61, with the note of Pseudo-Ascon. p. 177, Or.). *Compluvium* in like manner is sometimes used in the same wide signification as equivalent to *impluvium* (Suet. *Aug.* 92). The *compluvium* was sometimes covered with hangings, as a protection against the sun (Ovid, *Met.* x. 595). The breadth of the *impluvium,* according to Vitruvius, was not less than a quarter nor greater than a third of the breadth of the *atrium;* its length was in the same proportion according to the length of the *atrium.*

Vitruvius (vi. 3) distinguishes five kinds of *atria* or *cava aedium,* which were called by the following names:

(*a*) *Tuscanicum.* In this the roof was supported by four beams, crossing each other at right angles, the included space forming the *compluvium.* This kind of *atrium* was the most ancient of all.

(*b*) *Tetrastylum.* This was of the same form as the preceding, except that the main beams of the roof were supported by pillars, placed at the four angles of the *impluvium.*

(*c*) *Corinthium* was on the same principle as the tetrastyle, only that there were a greater number of pillars around the *impluvium,* on which the beams of the roof rested.



(*d*) *Displuviatum* had its roof sloping the contrary way to the *compluvium,* so that the water fell outside the house instead of being carried into the *impluvium,* and was carried off by gutters.

(*e*) *Testudinatum* was constructed in the same way as the *displuviatum,* but it was roofed all over and had no *compluvium.* We are not informed, however, how light was admitted into an *atrium* of this kind.

The *atrium,* as we have already seen, was originally the only room of the house, serving as sitting-room, bedroom, and kitchen, which it probably continued to do among the lower classes even in later times (Serv. *ad* Verg. *Aen.* i. 726, ix. 648). Here was the *focus,* or hearth, which served not only for cooking, but from its sacred character was used also for the receptacle of the Lares or Penates that were sometimes kept in little cupboards near the hearth (Plaut. *Aul.* ii. 18, 15; Tibull. i. 10, 20; Juv. viii. 110; Petron. 29). The Lar, or tutelary god of the house, stood close to the entrance behind the door leading into the *atrium* (Ovid, *Fast.* i. 136 foll.); and we find him so placed in some of the Pompeian houses. Near the sacred flame the members of the family took the common meal, and the same custom continued in the country even in the time of Augustus (Hor. *Sat.* ii. 6, 65 foll.). In the *atrium* the master of the house kept his *arca* (q. v.), or money-chest, which was fastened to the floor. Here stood the nuptial bed (*lectus genialis*) against the back wall, opposite the entrance to the *atrium,* whence it was also called *lectus adversus* (Gell. xvi. 9). Here sat the mistress of the house, spinning and weaving with her maids (Liv. i. 57, 9). Here all visits were paid and here the patron received his clients (Hor. *Ep.* i. 5, 31). Here the corpse was placed before it was carried out to burial. (See FUNUS.) Here, in the *alae,* were placed the waxen *imagines* (q. v.) of the ancestors of the house.

But as wealth increased, and numerous clients came to wait upon their patron, new rooms were built, and the *atrium* ceased to be the only room for the family. A kitchen (*culina*) was made for

cooking; the Lares were placed in a special *lararium;* the meals were taken in the upper story, hence called *cenaculum;* the master and mistress slept in a separate *cubiculum.* As the *atrium* now became the reception-room, it was fitted up among the wealthy with much splendour and magnificence for the reception of their clients. The opening in the roof was enlarged for the admission of more light, and was supported by pillars frequently made of costly marble. Between the pillars and along the walls, statues and other works of art were placed (Cic. *Verr.* i. 23, 61). In the middle of the *impluvium* was a marble fountain, with jets of water, frequently adorned with reliefs, of which many beautiful specimens have been found at Pompeii. Near the fountain, where the hearth formerly stood, was a marble table, called *cartibulum* (q.v.). The *atrium,* however, still continued, as in ancient times, to be the chief room of the house, and it was not only the room for the reception of guests, but its primitive character was preserved by its retaining the symbolical nuptial couch (Hor. *Ep.* i. 1, 87), the *imagines* of the ancestors, and the instruments for weaving and spinning.

Section of a Roman House. (From Von Falke's *Hellas und Rom.*)

The rooms which opened out of the *atrium* were lighted only through the *compluvium,* as there were no windows, as a general rule, upon the ground-floor.

(4) *Alae,* wings, were two small quadrangular apartments or recesses on the left and right sides of the *atrium* (Vitruv. vi. 4), but at its farther end and open to the *atrium,* as we see in the Pompeian houses. Here the *imagines* were kept in the houses of the nobles. But as the *alae* were really a part of the *atrium,* the *imagines* were frequently described as standing in the *atrium* (Juv. viii. 19 foll.; Plin. *H. N.* xxxv. § 6; Ovid, *Fast.* i. 591; Marquardt, *Privatl.* p. 235).

(5) *Tablinum* was in all probability a recess or room at the farther end of the *atrium* opposite the door leading into the hall, and was regarded as part of the *atrium.* It contained the family records and archives (Vitruv. vi. 4 and 8). It appears, from the houses of Pompeii, to have been separated not by a door, but simply by a curtain or *velum,* while it had a door at the back leading into the *peristylium.* Marquardt supposes that the *tablinum* was originally an alcove made of wood (whence its name) built at the back of the *atrium,* in which meals were taken during the summer, and was afterwards joined to the *atrium* by breaking through the walls of the latter.

With the *tablinum* the Roman house appears to have originally ceased, the sleeping-rooms being arranged on the upper floor. But when the *atrium* and its surrounding rooms were used for the reception of clients and other public visitors, it became necessary to increase the size of the house, and the following rooms were accordingly added:

(6) *Fauces* was a passage by the side of the *tablinum,* which passed from the *atrium* to the *peristylium,* or open court, as we see in the Pompeian houses. We must not suppose, however, that the plural indicates two passages (Vitruv. vi. 4).

(7) *Peristylium* was in its general form like the *atrium,* but it was one third greater in breadth, measured transversely, than in length (Vitruv. vi. 4); but we do not find these proportions preserved in the Pompeian houses. It was a court open to the sky in the middle; the open part, which was surrounded by columns, had a fountain in the centre, and was planted with flowers, shrubs, and trees forming a *viridarium.* The *atrium* and *peristylium* were the two important parts of a Roman house.

The arrangement of the rooms leading out of the *peristylium,* which are next to be noticed, varied, as has been remarked, according to the taste and circumstances of the owner. It is therefore impossible to assign to them any regular place in the house.

(*a*) *Cubicula,* bed-chambers, appear to have been usually small. There were separate *cubicula* for the day and night (*cubicula diurna et nocturna,* Plin. *Ep.* i. 3); the latter were also called *dormitoria,* and were mostly on the upper floor (*id.* v. 6, 21). Vitruvius (vi. 7) recommends that they should face the east for the benefit of the rising sun. They sometimes had a small ante-room, which was called by the Greek name of *προκοιτών,* in which the *cubicularius,* or valet, probably slept (Plin. *Ep.* ii. 17, 23). In some of the Pompeian houses we find a recess in which the bed was placed. This recess was called *zotheca* or *zothecula.*

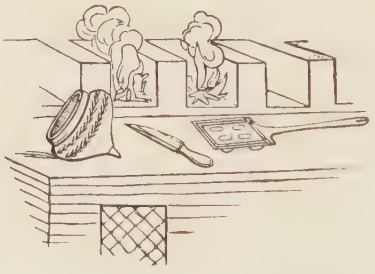
(*b*) *Triclinia,* dining-rooms, are treated of in a separate article. See TRICLINIUM.

(*c*) *Oeci,* from the Greek *οἶκος,* were spacious halls or saloons borrowed from the Greeks, and were frequently used as *triclinia.* (Cf. Plin. *H. N.* xxxvi. § 184.) They were to have the same proportions as *triclinia,* but were to be more spacious on account of having columns, which *triclinia* had not (Vitruv. vi. 5). Vitruvius mentions four kinds of *oeci:*

(*α*) The *Tetrastyle,* which needs no further description. Four columns supported the roof.

(*β*) The *Corinthian,* which possessed only one

row of columns, supporting the architrave (*epistylium*), cornice (*corona*), and a vaulted roof.



(*c*) The *Egyptian*, which was more splendid and more like a basilica than a Corinthian *triclinium*. In the Egyptian *oecus*, the pillars supported a gallery with paved floor, which formed a walk round the apartment; and upon these pillars others were placed, a fourth part less in height than the lower, which surrounded the roof. Between the upper columns windows were inserted.

(*d*) The *Cyzicene* (Κυζικηνός) appears in the time of Vitruvius to have been seldom used in Italy. These were meant for summer use, looking to the north, and if possible facing gardens, to which they opened by folding-doors. Pliny had *oeci* of this kind in his villa.

(*e*) *Exedrae*, which appear to have been in form much the same as the *oeci*, for Vitruvius (vi. 5) speaks of the *exedrae* in connection with *oeci quadrati*, were rooms for conversation and the other purposes of society (Cic. *De Nat. Deor.* i. 6, 15). They served the same purpose as the *exedrae* in the Thermae and Gymnasia, which were semicircular rooms with seats for philosophers and others to converse in. See BALNEAE.

(*f*, *g*, *h*) *Pinacotheca*, *Bibliotheca*, and *Balineum* (see BALNEAE), are treated of in separate articles.

(8) *Culina*, the kitchen.—The food was originally cooked in the *atrium*, as has been already stated, but the progress of refinement afterwards led to the use of another part of the house for this purpose. In the kitchen of Pansa's house, of which a restoration is given below, a stove for stews and similar preparations was found, very much like the charcoal stoves used in the present day. Before it lie a knife, a strainer, and a kind of frying-pan with four spherical cavities, as if it were meant to cook eggs.

Culina, or Kitchen, in Pansa's House.

In this kitchen, as well as in many others at Pompeii, there are paintings of the Lares and Penates, to whom the hearth in the *atrium* was sacred, and under whose care the kitchen was also placed (Arnob. ii. 67). In the country the meals were taken in the kitchen, as they were in ancient times in the *atrium* (Colum. i. 6). The kitchen was in the back part of the house, and in connection with it was the *pistrinum*, or bake-house, where bread was baked at home (Varr. *ap.* Non. p. 55, 18); but after B.C. 171 there were public bake-houses in Rome. (See PISTOR.) In Pompeii have been found sinks of kitchens, called *confluvia* (Varr. *ap.* Non. p. 544, 20) or *coquinae fusoria* (Pallad. *R. R.* i. 37).

In close and inconvenient proximity to the kitchen was the *latrina*, or privy, in order that a common drain might carry off the contents of both to the *cloaca* or public sewer (Varr. l. c.; Colum. x. 85; cf. Plaut. *Curc.* iv. 4, 24; Suet. *Tib.* 58; Apul. *Met.* i. c. 17, p. 15). In many of the Pompeian houses we find the *latrina* contiguous to the kitchen, as is shown in the annexed cut from the house

Culina and Latrina in the House of Sallust. (Gell, *Pompeiana*, p. 107.)

of Sallust. On the right are two small arches, which are the kitchen stove. On the left is an arched recess, which is the *latrina*. At the bottom is the mouth of a pipe supplying it with water.

(9) *Cenacula*, or rooms in the upper stories, have been already explained.

(10) *Lararium* or *Sacrarium*.—The Lares or Penates were originally placed near the hearth of the house in the *atrium*, but when the latter became only a reception-room they were removed to a special chapel, called *Lararium* (Lamprid. *Alex. Sev.* 29, 31) or *Sacrarium* (Cic. *ad Fam.* xiii. 2), in which statues of other divinities were also placed. Such a chapel is found in the *peristylium* of many of the Pompeian houses.

(11) *Diaeta* does not denote any particular kind of room, but is a word borrowed from the Greek (δίαιτα) to signify a room used for any of the purposes of life (Plin. *Ep.* ii. 17, 12). Thus it denotes a bed-chamber (Plin. *Ep.* vi. 16, 14), a dining-room (Sidon. Apoll. *Ep.* ii. 2), a summer-house or a room in a garden (Plin. *Ep.* ii. 17, 20; *Dig.* 7, 1, 66, § 1; Orelli, *Inscr.* 4373, etc.). It is also the collective name of a set of chambers. Thus Pliny speaks (*H. N.* v. 6, 31) of two *diaetae*, in one of which were four bed-chambers and in another three.

(12) *Solarium*, literally a place for basking in the sun, denotes a terrace on the flat roof of a house, frequently used by the Romans, as is still the case in Italy and the East (Isid. xv. 3, 12; Plaut. *Mil. Glor.* ii. 3, 69; ii. 4, 25; Suet. *Claud.* 10). In the time of the emperors these *solaria* on the tops of houses were turned into gardens, which contained even fruit-trees and fish-ponds (Sen. *Ep.* 122). Somewhat similar were the *solaria* built by Nero on the colonnades in front of the *insulae* and *domus* (Suet. *Ner.* 16). Sometimes the *solaria* were covered by a roof (Orelli, *Inscr.* 2417).

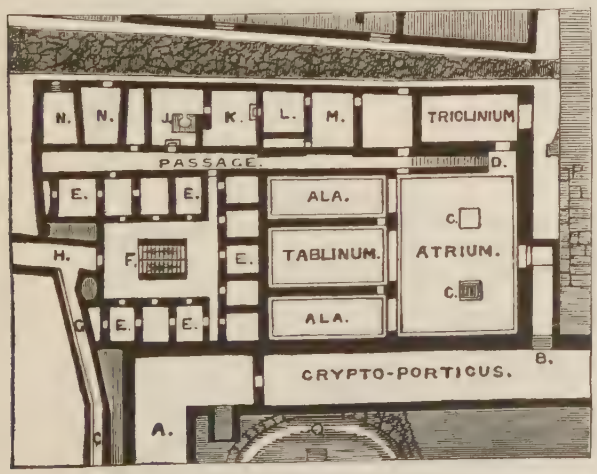
(13) *Cellae servorum*, *familiares* or *familiaricae*, the small bedrooms of the slaves, were usually situated in the upper story, as in the house of Pansa at Pompeii, or in the back of the house, with the exception of the *cella* of the house-porter, which naturally was close to the front door (Colum. i. 6; Cic. *Phil.* ii. 27, 67; Hor. *Sat.* i. 8, 8).

Cella also denoted the store-room, of which there

were several, bearing various names, according to their contents. Of these an account is given under CELLA.

Cellars underground and vaulted are rarely mentioned (*hypogea concamerationesque*, Vitruv. vi. [8] 11), though several have been found at Pompeii.

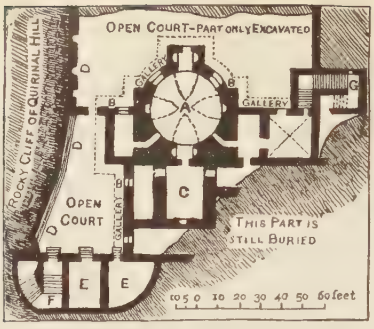
V. SOME EXISTING REMAINS OF ROMAN HOUSES. —The oldest remains of a house in Rome are those of the Regia, which was the residence of the Pontifex Maximus and built on the site of the house occupied by Numa. It stood at the southeast limits of the Forum, adjoining the House of the Vestal Virgins. (See Dio Cass. xliii. 42, xliv. 17; Gell. iv. 6.) Another house which is also of interest from its early date is that known as "the House of Livia" or "of Germanicus," which is built in a hollow in the northwestern part of the Palatine Hill. That it is probably not later in date than the time of Augustus is shown by the construction of its walls, which are formed of concrete faced with very neat *opus reticulatum* of tufa, no brick being used. The figure below shows its plan, which, owing to the irregularity of the site, is at two different levels, the small rooms grouped round the staircase F being at a much higher level than the larger rooms by the *atrium*: the stairs D lead from the *atrium* up to the higher floor behind. The main entrance is at B, approached down a short flight of steps. C C are pedestals for a statue and an altar; E E are bedrooms; G is a narrow *crypto-porticus*, which branches out of H, another dark passage, forming hidden communications with different buildings on this part of the Palatine. A is a third vaulted passage which leads to Caligula's palace; this is possibly the path by which Caligula's murderers escaped when they hid themselves in the house of Germanicus (Joseph. *Ant. Iud.* xix. 1, 2; Suet. *Calig.* 58).



The paintings in the principal rooms of this house are among the finest examples of Roman wall decoration that still exist. See Renier, *Les Peintures du Palatin*.

The floors are formed of marble mosaic in simple geometrical patterns, very neatly fitted together, with much smaller *tesserae* than were used under the later Empire.

On the upper floor a long passage, approached by the staircase D, divides the house into two parts. J K L M seem to be small bath-rooms. N N are shops with no communication with the house, facing a public street, O O. At P are remains of a very ancient tufa building. Q is a *piscina*, which seems partly to have supplied the house with water. A number of inscribed lead pipes were found, but these were of later date than the house itself; water was laid on to the upper as well as to the ground floors.



In 1874, remains of a very interesting house of the time of Augustus were found on the Esquiline Hill, not far from the Basilica of S. Maria Maggiore. From its position on the line of the Servian wall and *agger*, it has been called "the House of Maecenas," who lived in that quarter, where he converted the public burial-ground into a large park (Hor. *Sat.* i. 8, 14). One fine room of this house, still well preserved, is of especial interest. It appears to have been a sort of greenhouse for plants and flowers, and is a large vaulted chamber, with a semicircular apse at one end. All round the walls are tiers of high steps once lined with marble, intended to form stands for rows of flower-pots — arranged exactly as in a modern conservatory. Prof. Mohr (*Bull. Inst. Arch.* for 1875) has pointed out that the cultivation of shrubs and flowers in this way was largely practised by the Romans. On each side of the hall are six recesses, decorated with paintings of garden scenes, with fountains among the flowers, treated in a skilfully deceptive way, so as to look as if each recess were a window opening upon a real garden. The light was admitted only through openings in the barrel-vault of the hall, on which were paintings of similar floral subjects—a remarkable example of the theatrical scene-painter's style of decoration which was popular among the Romans.

The House of Sallust, the historian, was one of the finest houses in Rome. It had, like the House of Maecenas, extensive gardens, whence the residence was frequently called Horti Sallustiani. So large were the gardens that the emperor Aurelian, who preferred living there to the Palatine, erected in them a colonnade 1000 paces long, in which he took horse exercise. Part of this house still exists in the narrow valley between the Pincian and Quirinal Hills, near the Porta Collina in the Servian wall. The following figure shows the plan of the existing remains, which will be soon destroyed by the filling up of the valley where the building stands to make new boulevards—a most serious loss. The circular part A is a lofty domed hall; B B is a balcony-like gallery, supported on corbels, which runs round the outside of the main building, at a height of about forty feet above the ground; C is a fine vaulted room, with two stories over it; D D is a retaining wall, built against the scarped face of the cliff to keep the crumbling tufa rock from decay; E E are rooms in four or five

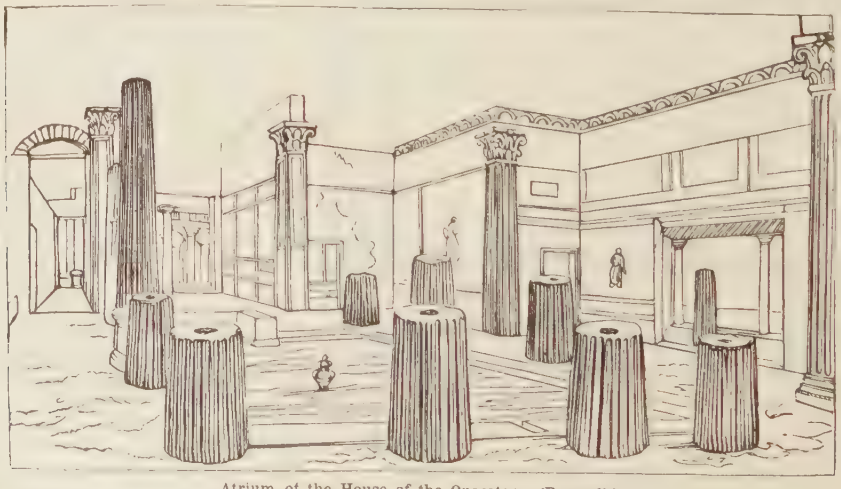
stories, some with concrete and others with wooden floors; F are winding marble-lined stairs, with mosaic landings, which led to the top of the house and the rooms on the higher level of the hill. This part is still about seventy feet high. G is another marble-lined staircase. A great part of the house is still unexcavated. The date of the existing portion is of the first century A.D., and is evidently part of additions made by the early emperors. In the sixteenth century an immense quantity of valuable marbles, including magnificent columns of Oriental alabaster and Numidian stone, were found in the ruins of Sallust's house and used to decorate several of the churches of Rome.

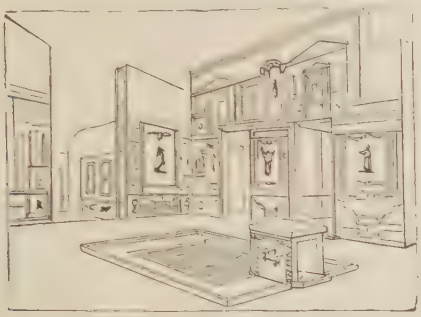
VI. Pompeian Houses.—Though of course less magnificent than the palaces of Rome, the houses of Pompeii, from their exceptionally perfect state of preservation, are of especial value as examples of Roman domestic architecture, and have the advantage of being in most cases of known date. Few are older than the Christian era, and none of course are later than A.D. 79, when the city was overwhelmed by the eruption of Vesuvius. The existing remains show us, as a rule, only the ground-floor of each house; and it should be remembered that a number of the best rooms—especially, there is reason to believe, the bedrooms and the women's apartments—were on the upper floors. The presence of stairs in apparently all the houses proves that one-storied buildings were practically unknown in Pompeii; the few fragments of the upper story which have been found standing show that, in some cases at least, the upper part of the house was partly constructed of wood, and was arranged so as to project beyond the line of the lower story, very like the half-timbered houses of England and France in the fifteenth and sixteenth centuries.



In one respect the Pompeian arrangement resembled that of mediæval and modern Italy; that is, the street-front on the ground-floor, even of large and handsome houses, was usually occupied by a row of shops. In some cases these shops have no doorway or passage communicating with the main house, and were probably rented by the owner to independent tradesmen; in others the shops could be entered from the house, and in these cases we may suppose that the shops were managed by the slaves or clients of the house-owner.

The accompanying plan shows a small shop, to which is joined the residence of its owner, forming a small block independent of the adjoining larger house. (1) An open archway, in which a wooden shop-front was fitted; the threshold of this opening is rebated to receive the wooden partition, part of which was hinged so as to form a narrow door; the upper part would be closed at night by flap-shutters hinged at the top, an arrangement very like that of a modern Oriental bazaar. This method of constructing shop-fronts was very common, not only in Pompeii, but in Rome and elsewhere. The presence of a shop appears always to be indicated by this long grooved sill, with marks of the hinged door on one side. A large number of examples still exist in Rome. The L-shaped counter (2) is formed of concrete and brick stuccoed; in it are inserted a row of *amphorae*, apparently for the reception of hot food or drink of some kind. At one end is a charcoal stove (3); 5, 5 are the dining-room and store-room of the shopkeeper; 4 is the staircase leading to the sleeping apartments. The whole forms a complete house of the smallest type.

Plan of House with Shop.



The two illustrations annexed represent two *atria* of houses at Pompeii. The first is the *atrium*

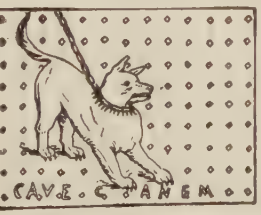
Atrium of the House of the Quaestor. (Pompeii.)

of what is usually called the "House of the Quaestor." The view is taken near the entrance-hall facing the *tablinum*, through which the columns of the peristyle and the garden are seen. This *atrium*, which is a specimen of what Vitruvius calls the Corinthian, is surrounded by various rooms, and is beautifully painted with arabesque designs upon red and yellow grounds.

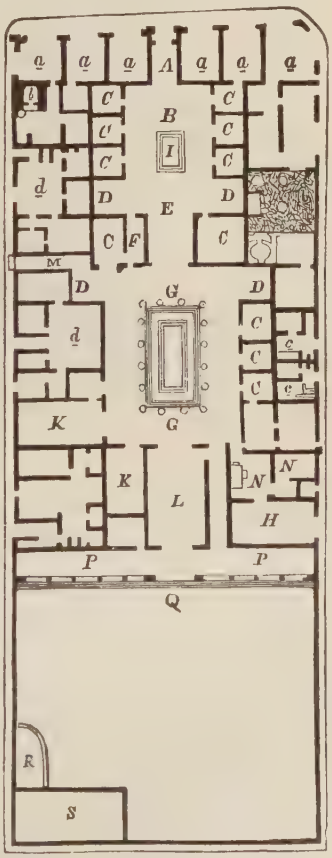
The next illustration represents the *atrium* of what is usually called the "House of Ceres." In

Atrium of the House of Ceres. (Restoration.)

the centre is the *impluvium;* and, as there are no pillars around the *impluvium*, this *atrium* must belong to the kind called by Vitruvius the "Tuscan."



The three following plans are good typical examples of the best class of houses in Pompeii. The first is popularly known as "the House of the Tragic Poet."



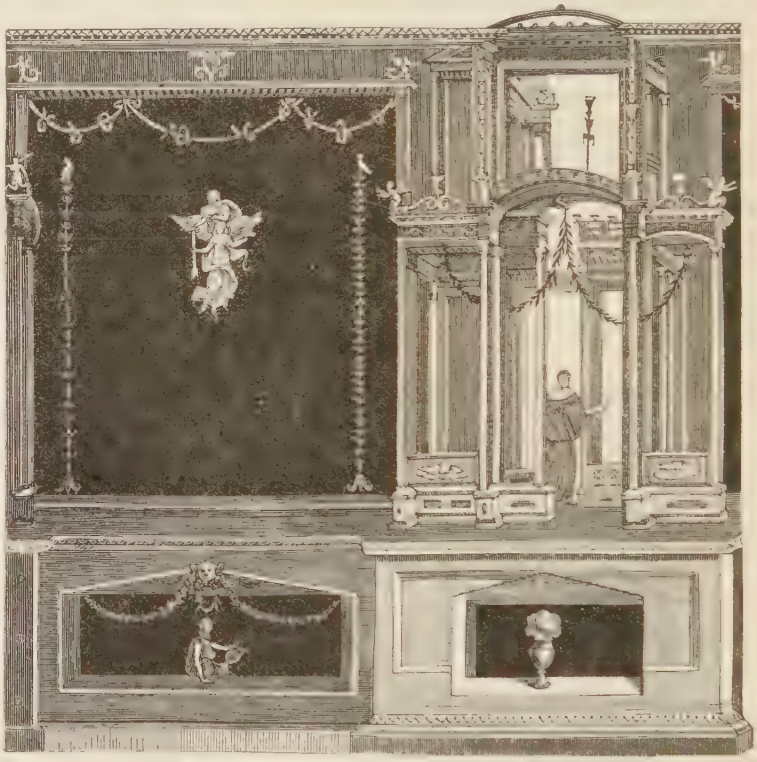
House of the Tragic Poet.

Like most of the other houses at Pompeii, it had no *vestibulum* according to the meaning which we have attached to the word. The *ostium*, or entrance-hall, which is six feet wide, is nearly thirty long — a length occasioned by the shops on each side. Near the street-door there is a figure of a large fierce dog worked in mosaic on the pavement, and beneath it is written *Cave Canem*, as here shown. The two large rooms on each side of the vestibule appear from the large openings in front of them to have been shops; they communicate with the entrance-hall, and were therefore probably occupied by the master of the house. The *atrium* is about twenty-eight feet in length and twenty in breadth; its *impluvium* is near the centre of the room, and its floor is paved with white *tesserae*, spotted with black. On the left-hand corner of the *atrium* is a small room (marked 1 in plan), perhaps the *cella* of the *ostiarius*, with a staircase leading to the upper rooms. On each side of the *atrium* are chambers for the use of the family or intended for the reception of guests, who were entitled to claim hospitality. When a house did not possess a *hospitium* (q. v.), or rooms expressly for the reception of guests, they appear to have been lodged in rooms attached to the *atrium*. At the farther end of the *atrium* is the *tablinum*, with the *fauces*, or passage, at the side, leading into the *peristylium*, with Doric columns and garden (*viridarium*). The large room on the right of the peristyle is the *triclinium;* beside it is the kitchen, with a *latrina*.

The second illustration contains the ground-plan of an *insula* surrounded by shops, which belonged to the owner and were let by him. The house itself, which is usually called the "House of Pansa," evidently belonged to one of the principal men of Pompeii. Including the garden, which

Pompeian Mosaic. (Overbeck.)

Ground-plan of an Insula, known as the House of Pansa.



is a third of the whole length, it is about 300 feet long and 100 wide.

A. *Ostium*, or entrance-hall, paved with mosaic. B. Tuscan *atrium*. I. *Impluvium*. C. Chambers on each side of the *atrium*, probably for the reception of guests. D. *Ala*. E. *Tablinum*, which is open to the *peristylium*, so that the whole length of the house could be seen at once; but as there is a passage (*fauces*), F, beside it, the *tablinum* might probably be closed at the pleasure of the owner. C. Chambers by the *fauces* and *tablinum*, of which the use is uncertain. G. *Peristylium*. D. Recesses in the *peristylium*. C. *Cubicula* by the side of the *peristylium*. K. *Triclinium*. L. *Oecus*, and by its side there is a passage leading from the *peristylium* to the garden. M. Back door (*posticum ostium*) to the street. N. *Culina*. H. Servants' hall, with a back door to the street. P. Portico of two stories, which proves that the house had an upper floor. The site of the staircase, however, is unknown, though it is thought there is some indication of one in the passage M. Q. The garden. R. Reservoir for supplying a tank, S.

The preceding rooms belonged exclusively to Pansa's house; but there were a good many apartments besides in the *insula*, which were not in his occupation: *a*. Six shops let out to tenants. Those on the right and left hand corners were bakers' shops, which contained mills, ovens, etc., at *b*. The one on the right appears to have been a large establishment, as it contains many rooms. *c*. Two houses of a very mean class, having formerly an upper story. On the other side are two houses much larger, *d*.

In addition to painting, other methods of decoration were used: in Rome especially the chief way of ornamenting the rooms of the best houses was by lining the walls with slabs of sawn marble, moulded into a skirting below and a cornice above. Great magnificence of effect was produced by the skilful admixture of marbles of different rich colours, the moulded part being usually of a deeper tint than the flat surfaces. In the most careful work these marble linings were fastened to the walls by bronze clamps, but more often the slabs were simply attached by a thick bedding of cement behind them (Sen. *Ep.* 86, § 4).

Another very rich method of decoration was the application of stucco reliefs enriched with gold and colours. A third system, applied also to vaults, was to encrust the walls with mosaics,

Specimen of Decorative Wall-painting at Pompeii. (Reber.)

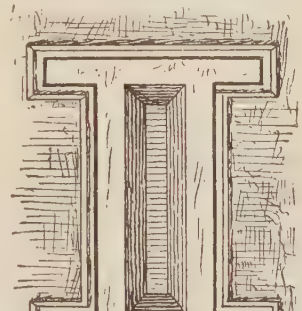
VII. General Details of Roman Houses.—(1) *Walls*.—The wall (*paries*) in earlier times was made of some easily worked stone, such as tufa or peperino in large square blocks; or for the best houses unburnt brick was used. In the time of Augustus concrete began to be the chief building material, and later kiln-dried bricks. The inner walls were originally whitewashed (see Dealbatores), and later were covered with stucco (*opus albarium*). The plain surface of the walls was broken by quadrangular panels, called *abaci* (Plin. *H. N.* xxxiii. § 159; xxxv. §§ 3, 32). (See, also, Abacus.) In the second century B.C., the practice was introduced from Greece of painting these panels with an endless variety of figures, landscapes, buildings, gardens, etc., of which we have numerous examples in the existing remains of houses in Rome and Pompeii. See Pictura.

chiefly made of glass *tesserae* of the most brilliant jewel-like colours. See Musivum Opus.

In fact, splendour of effect and a brilliant *ensemble* were the characteristics of Roman house-decoration from the Augustan era down to later times.

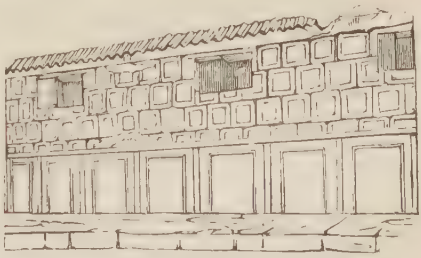
(2) *Roofs*.—The roofs (*tecta*) of Roman houses were in the oldest times covered with straw. Next came the use of shingles for the roofing of houses, which continued down to the time of the war with Pyrrhus (Plin. *H. N.* xvi. § 36). Subsequently clay tiles, called *tegulae* and *imbrices*, superseded the shingles. The roofs of houses were sometimes flat, but they were also gabled (*pectenata*) like modern houses. These were of two kinds, the *tecta pectenata*, sloping two ways, and the *tecta testudinata*, sloping four ways (Fest. p. 213, M). Both kinds of roofs were *displuviata*—that is, sloping towards the street—and the houses had around

Roof in Peristyle of the House of C. Vibius. (Overbeck.)



them an *ambitus*, or vacant space of 2½ feet, to receive the rain-water running off the roofs. The projecting eaves of roofs were called *suggrundae*. The gabled roofs rose to a point called *fastigium* (q. v.). For the most magnificent buildings, such as some of the imperial palaces, the roofs were covered with tiles made of white marble, or even with bronze tiles plated with gold. For further details, see TEGULA.

(3) *Floors.*—The floor (*solum*) of a room was seldom boarded (*strata solo tabulata*, Stat. *Silv.* i. 5, 57), except in the upper stories. The floor on the ground-floor was usually of stone, and, in the case of common houses, consisted of small pieces of stone, brick, tiles, etc. (*ruderatio, opus ruderatum*), beaten down (*pavita*) with a rammer (*fistuca*), whence the word *pavimentum* became the general name for a floor (Plin. *H. N.* xxxvi. § 185 foll.). Sometimes the floors were paved with thin slabs of richly-coloured marbles, brought from Northern Africa, Arabia, or Greece (Tibull. iii. 3, 16; Sen. *Ep.* 86, 6; Pallad. i. 9), and still more frequently with mosaics (*opus musivum*). See PAVIMENTUM and MUSIVUM OPUS.



In Rome and other parts of Italy, owing to the wonderful strength of the *pozzolana*, the upper floors of houses were very frequently made of concrete cast in one great slab on temporary boarding, fixed at the required level. This set into one compact mass, like a piece of solid stone. On this, mosaic and other paving was laid, as on the ground-floors.

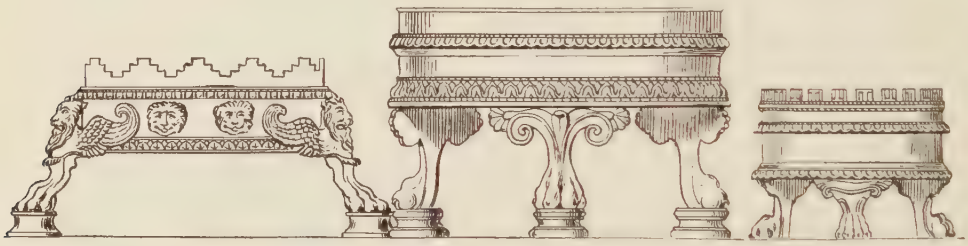
(4) *Ceilings.*—Ceilings were very commonly semicircular or "barrel" vaults (*camarae*), decorated with stucco reliefs, mosaics, or painting. (See CAMARA.) The *extrados* of the vault was filled in level with concrete to form the floor above. Wooden ceilings and flat concrete ceilings were decorated in the same way. One common method of ceiling decoration, applied both to brick and concrete or to wooden ceilings, was to divide the whole area into a number of deeply sunk panels, like pits or lakes (*lacus, lacunae*), whence they were called *lacunaria* or *laquearia*. These were richly ornamented, either by stucco reliefs gilt and coloured, or, in the case of wooden ceilings, by inlaid work of ivory, ebony, or other precious materials as well as by paintings. In a few cases the "coffers" were covered with enriched bronze plates, thickly gilt.

(5) *Windows.*—The Roman houses had few windows (*fenestrae*). The *atrium* and *peristylium* were lighted, as we have seen, from above, and the smaller rooms leading out of them generally derived their light from them and not from windows looking into the street. The rooms only on the upper stories (*cenacula*) seem to have been usually lighted by windows, and looked out upon the street as well as the inner courts. Hence they are frequently mentioned by the ancient writers (Livy, i. 41, xxiv. 21; Hor. *Carm.* i. 25; Propert. iv. [v.], 7, 16; Juv. iii. 270). In Pompeii, in like manner, the ground-floor rooms were mostly lighted from the inner courts, so that few lower windows opened on the street. There is an exception to this in the "House of the Tragic Poet," which has six windows on the ground-floor. Even in this case, however, the windows are not near the ground, as in a modern house, but are six feet six inches above the foot-pavement, which is raised one foot seven inches above the centre of the street. The windows are small, being hardly three feet by two; and at the side there is a wooden frame, in which the window or shutter might be moved backwards or forwards. The lower part of the wall is occupied by a row of red panels four feet and a half high. The following illustration represents part of the wall, with the apertures for windows above it, as it appears from the street. The tiling upon the wall is modern, and is only placed there to preserve it from the weather.

Pompeian Fenestra or Window. (Overbeck.)

Wall with Apertures for the Windows in a House at Pompeii.

There has been much discussion whether glass windows were known to the ancients; but in the excavations at Pompeii many fragments of flat glass have been discovered, and in the *tepidarium* of the public baths a bronze lattice was found



with some of the panes still inserted in the frame (Gell, *Pompeiana*, i. p. 99). (See VITRUM.) Besides glass, other transparent substances were also used, such as talc, the *lapis specularis* of Pliny. Windows made of this were called *specularia* (Sen. *Ep.* 90, 25).

(6) *Doors.*—The subject of doors, with their locks and keys, is discussed under IANUA and CLAVIS. It is only necessary to mention here that many of the rooms in Roman houses had no doors, but only curtains, *vela, aulaea, centones* (Sen. *Ep.* 80; Plin. *Ep.* ii. 17; Petron. 7; Lamprid. *Alex. Sev.* 4, *Heliog.* 14). Sometimes, when there were doors, curtains were also drawn across them. See VELUM.

(7) *The Heating of Houses.*—The rooms were heated in winter in different ways. The *cubicula, triclinia*, and other rooms which were intended for winter use, were built in that part of the house upon which the sun shone most; and in the mild climate of Italy this frequently enabled them to dispense with any artificial mode of warming the rooms. Rooms exposed to the sun in this way were sometimes called *heliocamini* (Plin. *Ep.* ii. 17, 20; *Dig.* 8, 2, 17). The rooms were occasionally heated by hot air, which was introduced by means of pipes from a furnace below (Plin. *Ep.* ii. 17, v. 6, 24; Sen. *Ep.* 90), but more frequently in earlier times by portable furnaces or braziers (*foculi*), in which charcoal was burned. (See FOCUS.) The *caminus*, however, was a fixed stove, in which wood appears to have been usually burned (Suet. *Vitell.* 8; Hor. *Sat.* i. 5, 81; *Ep.* i. 11, 19; Cic. *Ad Fam.* vii. 10; Sidon. Apoll. *Ep.* ii. 2). It has been a subject of much dispute among modern writers whether the Romans had chimneys for carrying off the smoke, except in the baths and kitchens. From many passages in ancient writers it certainly appears that rooms usually had no chimneys, but that the smoke escaped through the windows, doors, and openings in the roof (Vitruv. vii. 3, 4); but chimneys do not appear to have been entirely unknown to the ancients, as some have been found in the ruins of ancient buildings, and it is impossible to believe that among a luxurious people like the Romans in imperial times, they were unacquainted with the use of chimneys.

(8) *The water supply* of a good Roman house was very complete; in towns the main usually ran under the pavement in the middle of the street, and from it "rising mains" branched off to the houses right and left, and often were carried to the upper stories, where a cistern supplied the fountain-jets (*salientes*) and other purposes below. For further details on the water-supply, see AQUAE DUCTUS.

VIII. BIBLIOGRAPHY.—Becker-Göll, *Gallus*, ii. pp. 213 foll.; Marquardt, *Privatl.* pp. 208 foll.; Guhl and Koner, pp. 462 foll., 5th ed.; Hirt, *Gesch. d. Baukunst*, iii. pp. 267 foll.; Fergusson, *Hist. of Arch.* i. pp. 363 foll.; Burn, *Rome*, pp. lxvii. foll.; Friedländer, *Sittengesch.* i. pp. i. foll., pp. 26 foll.; Ménard, *La Vie Privée des Anciens* (Paris, 1880–83); Zumpt, *Ueber die bauliche Einrichtung des röm. Wohnhauses* (Berlin, 1844); Mazois, *Le Palais de Scaurus* (Paris, 1859). Although a large number of well-illustrated works on Pompeii have been recently published, they have by no means superseded the earlier ones, which describe a great deal that is now lost; this is specially the case with Sir William Gell's valuable *Pompeiana* (London, 1824); and second part (London, 1832). The objects discovered are well illustrated by Pistolesi, *Real Museo Borbonico* (1824–67). Dyer's *Ruins of Pompeii* (London, 1867) is a convenient hand-book. Niccolini and others, *Le Case di Pompeii* (Naples, 1854–84), is a valuable work, which gives recent discoveries. A very splendidly illustrated work is the *Recueil des Peintures, etc., de Pompéi* (Paris, 1870–77). See also Zahn, *Die schönsten Ornamente aus Pompeji* (Berlin, 1827–59); Mazois and Gau, *Les Ruines de Pompéi* (Paris, 1824–38); Ternite, *Wandgemälde aus Pompeji* (Berlin, no date); Presuhn, *Les Décorations de Pompéi* (Leipzig, 1878); Mau's edition of Overbeck's *Pompeji* (Leipzig, 1884); and Nissen, *Pompejanische Studien* (Leipzig, 1877). Reference may be made to the extensive bibliography at the end of the article POMPEII in this Dictionary. Middleton, in his *Ancient Rome in 1888*, and *Remains of Ancient Rome* (London, 1892), gives some account of existing houses in Rome.

Bronze Braziers from Pompeii (Overbeck.)

Domus Aurea. See PALATIUM.

Donatio Inter Virum et Uxōrem. By the Roman law, during marriage, neither husband nor wife could, as a general rule, make a gift of anything to one another. This rule would, however, only apply where there was no *conventio in manum;* for in such a case the rule of law would be unnecessary, because a gift between husband and wife would be legally impossible. The reason for this rule was said to be the preservation of the marriage relation in its purity, as a contract subsisting by affection, and not maintained by purchase or by gift from one party to the other. The reason seems a singular one, but it is that which is given by the Roman writers. It has apparently a tacit reference to the power of divorce, and appears like an implied recommendation of it when the conjugal affection ceases. Donationes of this kind were, however, valid when there were certain considerations, as *mortis causa, divortii causa, servi manumittendi gratia.* By certain imperial constitutions, a

woman could make gifts to her husband in order to qualify him for certain honours. It must be remembered that when there was no *conventio in manum*, a wife retained all her rights of property which she did not surrender on her marriage (see Dos), and she might, during the marriage, hold property quite distinct from her husband. It was a consequence of this rule as to gifts between husband and wife that every legal form by which the gift was affected to be transferred, as *mancipatio*, *cessio*, and *traditio*, conveyed no ownership; stipulations were not binding, and *acceptilationes* were no release. See Matrimonium.

Donatio Mortis Causa. There were in Roman law three kinds of *donatio mortis causa:* (1) When a man, under no present apprehension of danger, but moved solely by a consideration of human mortality, makes a gift to another. (2) When a man, being in immediate danger, makes a gift to another in such a manner that the thing immediately becomes the property of the donee. (3) When a man, under the like circumstances, gives a thing in such a manner that it shall become the property of the donee in case the giver dies. Every person could receive such a gift who was capable of receiving a legacy.

It appears, then, that there were several forms of gift called *donatio mortis causa;* but the third seems the only proper one, and that of which mention is chiefly made, for it was a rule of law that a donation of this kind was not perfected unless death followed, and it was revocable by the donor. A thing given absolutely could hardly be a *donatio mortis causa*, for this *donatio* had a condition attached to it—namely, the death of the donor and the survivorship of the donee. The thing might be a thing capable of *traditio*, or delivery, or it might be a promise of a sum of money to be paid after the death of the testator. It would appear as if the law about such donations was not free from difficulty. They were finally assimilated to legacies in all respects by Justinian, though this had been done in some particulars before his time. Still they differed in some respects from legacies, for such a donation could take effect though there was no *heres;* and a filius familias, who could not make a will, might, with his father's consent, make a *donatio mortis causa*.

Donatio Propter Nuptias signifies in Roman law that which is given by a husband or by any other person to a woman on the occasion of her marriage, whether it be by way of security for her dowry or for her support during the marriage or widowhood. Justinian required this *donatio* whenever the wife brought a dowry; and it was enacted that it should be equal in amount to the dowry, and should be increased when the dowry was increased. Such a gift was the property of the wife, but it was managed by the husband, and he was bound to apply it to its proper purposes; but he could not alienate it, even with the consent of the wife (*Cod.* v. 3). See Matrimonium.

Donativum. A present of money made to Roman soldiers. In the republican age donatives were distributed on the occasion of a triumph, the expense being defrayed out of the money raised by selling the spoil. Under the Empire it was usual for the emperor to grant a *donativum* on his accession. Tiberius on this occasion made a present of some $3,750,000 to the army; and the sum increased in later reigns. After the time of Claudius it became the fashion for the emperor to purchase the favour of the praetorians by a special largess. See Congiarium; Praetoriani.

Donātus. (1) Aelius. A celebrated grammarian, born in the fourth century of our era, about A.D. 333. He was preceptor to St. Jerome, who speaks with great approbation of his talents and of the manner in which he explained the comedies of Terence. Independently of his commentaries on Vergil and Terence, Donatus composed a treatise (*Ars Donati Grammatici Urbis Romae*) in two parts. In one (*Ars Minor*) he treats of the eight parts of speech only, and in the other (*Ars Maior*), deals with grammar more elaborately. This work was highly esteemed and so much used in the Middle Ages that the word *donat* (Chaucer) became the generic term for a grammar. The commentary on Vergil appears to have been worthy neither of the author commented on nor of the reputation of the grammarian to whom it is ascribed, if we may judge from the contemptuous allusions made to it by Servius; but of it only the preface and the introduction (*enarrationes*) are now extant, besides quotations given in Servius. The commentary on Terence, however, is extremely valuable, though we have it in a form different from that which it originally possessed. The chief MS. of the commentaries of Donatus is one at Paris of the eleventh century. The *editio princeps* appeared at Rome in 1472. The text of the *Ars* is contained in Keil's *Grammatici Latini*, vol. iv. (Leipzig, 1856–1880). See Gräfenhan, *Geschichte d. class. Philologie*, iv. 107; J. Becker, *De Donati in Terentium Commentario* (Mayence, 1870); and Rosenstock, *De Donato*, etc. (Königsberg, 1886). (2) Not to be confounded with the preceding is Tiberius Claudius Donatus, who wrote *Interpretationes* on the *Aeneid*, probably in the fourth century. Of the author, nothing is known. The work, which is preceded by a short epistle, was first published at Naples in 1535, and is included in the editions of Vergil by Fabricius (Basle, 1561), and Lucius (Basle, 1613). See Ribbeck's Prolegomena to Vergil, 185; and Burkas, *De Ti. Claud. Donati in Aen. Commentario* (Jena, 1889). (3) A bishop of Numidia, in the fourth century. According to some writers he was the founder of the sect of Donatists, which grew out of a schism produced by the election of a bishop of Carthage. He was deposed and excommunicated in councils held at Rome and at Arles in the years A.D. 313 and 314, but was for some time after supported by a party at home. His end is unknown.

Donūsa (Δόννσα) or **Donusia** (Δονονσία). One of the smaller Sporades in the Aegaean Sea near Naxos. It produced green marble, whence Vergil calls the island *viridis*. Under the Roman emperors it was used as a place of banishment.

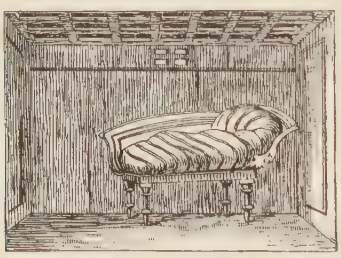
Doors. See Ianua.

Dora (τὰ Δῶρα), **Dorus, Dorum**, called Dor in the Old Testament. The most southerly town of Phœnicia on the coast, on a kind of peninsula at the foot of Mount Carmel.

Dorian Hexapolis. See Doris, p. 554.

Doric Dialect. See Dialects.

Doris (Δωρίς). (1) Daughter of Oceanus and Thetis, wife of her brother Nereus, and mother of the Nereides. The Latin poets sometimes use the



name of this divinity for the sea itself. (2) One of the Nereides, daughter of the preceding.

Doris (Δῶρις). (1) A small and mountainous country in Greece, formerly called Dryopis, bounded by Thessaly on the north, by Aetolia on the west, by Locris on the south, and by Phocis on the east. It contained four towns —Boum, Citinium, Erineus, and Pindus — which formed the Dorian tetrapolis. These towns never attained any consequence; but the country is of importance as the home of the Dorians (Δωριεῖς), one of the great Hellenic races, who conquered Peloponnesus. It was related that Aegimius, king of the Dorians, had been driven from his dominions by the Lapithae, but was reinstated by Heracles; that the children of Heracles hence took refuge in this land when they had been expelled from the Peloponnesus; and that it was to restore them to their rights that the Dorians invaded the Peloponnesus. Accordingly, the conquest of Peloponnesus by the Dorians is usually called the Return of the Heraclidae. (See HERACLIDAE.) The Dorians were divided into three tribes: the Hylleis, Pamphyli, and Dymanes. They were the ruling class throughout the Peloponnesus; the old inhabitants were reduced to slavery, or became subjects of the Dorians under the name of Perioeci (Περίοικοι). (2) A district in Asia Minor consisting of the Dorian settlements on the coast of Caria and the neighbouring islands. Six of these towns formed a league, called the "Dorian Hexapolis," consisting of Lindus, Ialysus, and Camirus in the island of Rhodes, the island of Cos, and Cnidus and Halicarnassus on the mainland.

Doriscus (Δορίσκος). A town in Thrace at the mouth of the Hebrus, in the midst of an extensive plain of the same name, where Xerxes reviewed his vast forces (Herod. vii. 25, etc.).

Dorium (Δώριον). A town of Messenia, where Thamyris the musician challenged the Muses to a trial of skill. Pausanias (iv. 33) notices this ancient town, of which he saw the ruins near a fountain named Achaia.

Dormitorium (δωμάτιον). A bed-chamber, usually small and sparely furnished (Plin. *H. N.* xxx. 17). See DOMUS.

Dormitorium. (From the Vatican Vergil.)

Doron (δῶρον). A hand-breadth. See PES.

Dorpon (δόρπον). See CENA, p. 310.

Dorso, C. Fabius. A Roman, who, according to the old legend, when Rome was in the possession of the Gauls, issued from the Capitol, which was then besieged, to go and offer on the Mons Quirinalis a stated sacrifice enjoined on the Fabian house. In the Gabian cincture, and bearing the sacred vessels in his hands, he descended from the Capitol and passed through the enemy without betraying the least signs of fear. When he had finished his sacrifice, he returned to the Capitol unmolested by the foe, who were astonished at his boldness and did not obstruct his passage or molest his sacrifice (Liv. v. 46).

Dorus (Δῶρος). A son of Hellen, and the mythical ancestor of the Dorians (Diod. iv. 60).

Dory (δόρυ). A spear. See HASTA.

Dorylaeum (Δορύλαιον). A town in Phrygia Epictetus, on the river Thymbris, with warm baths, which are used at the present day.

Doryphŏri (δορυφόροι). See MERCENARII.

Dos. A dowry. See MATRIMONIUM.

Dositheus (Δωσίθεος). A grammarian who flourished towards the end of the fourth century A.D. He wrote a Latin grammar for Greek boys, with a literal Greek translation, which was not fully completed. With this was bound up (whether by Dositheus himself is uncertain) a miscellany of very various contents by another author. This comprises (1) anecdotes of the emperor Hadrian; (2) fables of Aesop; (3) an important chapter on jurisprudence; (4) mythological stories from Hyginus; (5) an abridgment of the Iliad; (6) an interesting collection of words and phrases from ordinary conversation, styled Ἑρμηνεύματα. The Latin grammar has the Greek translation inserted in the Latin text, thus: *Ars τέχνη grammatica γραμματική est ἐστίν scientia γνῶσις.* The Latin is the text of a grammar now lost, Dositheus making only the Greek translation. A separate edition of the grammar is that of Keil (Halle, 1869–71). Other parts of the work are edited by Böcking (Bonn, 1832), and Keil, *Grammatici Latini*, vii. 424. See Hagen, *De Dosithei Magistri quae Feruntur Glossis* (Berne, 1877); and Schönemann, *De Lexicographis Antiquis* (Bonn, 1886).

Dōson. A surname of Antigonus III., because he promised and never performed; δώσων, "about to give"; i. e. always promising. See ANTIGONUS.

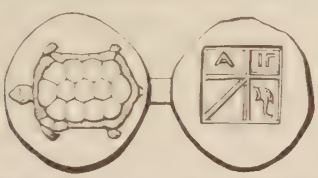
Dossennus, Fabius. A Roman comic poet and writer of Atellan fables, who enjoyed some reputation as a popular dramatist. Seneca makes mention of the inscription on his tomb, which ran as follows: *Hospes resiste, et sophiam Dossenni lege* (Sen. *Ep.* lxxxix. 6).

Dossennus. One of the stock characters of the Atellanae Fabulae, and representing the typical sharper, *dottore*. See Vel. Longus in the *Grammatici Latini* (ed. Keil), vii. 79, 4; and Mommsen, *Unterital. Dial.* 118.

Dossuarius or **Dorsuarius.** A name given to any animal carrying burdens on its back (Varr. *R. R.* ii. 6 and 10). It carried its load either by means of panniers (*clitellae*) or the pack-saddles (*sagmae*),

Dossuarii. (Column of Theodosius.)

whence we read of *equus sagmarius*. Hence came the German *Saum*-pferd and the English *sumpter*-horse.



Doulos (δοῦλος). A slave. See SERVUS.

Drabescus (Δραβῆσκος). A town in the district Edonis in Macedonia, on the Strymon.

Dracănum (Δράκανον). A town and promontory in the island Icaria.

Drachma (δραχμή). The name of a weight and of a denomination of coin among the Greeks. As weight and as coin it was the hundredth part of the *mina*, and was divided into six lesser units called ὀβολοί. The ancients (*Etym. Mag.* s. v. ὀβελίσκος) connected the word with δράσσομαι, "I grasp," and δράγμα, "a handful," and supposed that a drachm was originally the value in silver of a handful of six ὀβολοί, or wedge-shaped pieces of metal, which circulated as money. It is, however, very doubtful if this derivation is not a mere fancy; it is far more probable that δραχμή, like δαρεικός, is connected with the Persian word *darag*, "a part," since the weight of the drachma seems to be derived by division of the *mina*, rather than the weight of the mina to be produced by multiplication of the drachma.

The ordinary denominations of Greek coins were: for gold, the didrachma (double drachma), drachma, hemi-drachma, and smaller divisions; for silver, the same, with the addition of the tetra-drachma, and occasionally of the decadrachma. The weight of the drachma varied according to the standard to which it belonged; the heaviest drachma was the Aeginetan of 96 grains, worth in silver rather more

Aeginetan Drachma, actual size. (British Museum.)

than twenty-five cents of our money; it was called at Athens παχεῖα δραχμή (Pollux, ix. 76). The Athenian drachma weighed but 67.5 grains, and the Co-

Attic Drachma: late, actual size. (British Museum.)

rinthian only 45 grains, value about twelve cents. The sign for drachma in Attic inscriptions is Ⱶ. As the Romans reckoned in sesterces, so the Greeks generally reckoned by drachmae; and when a sum is mentioned in the Attic writers, without any specification of the unit, drachmae are usually meant. See NUMISMATICS; PONDERA.

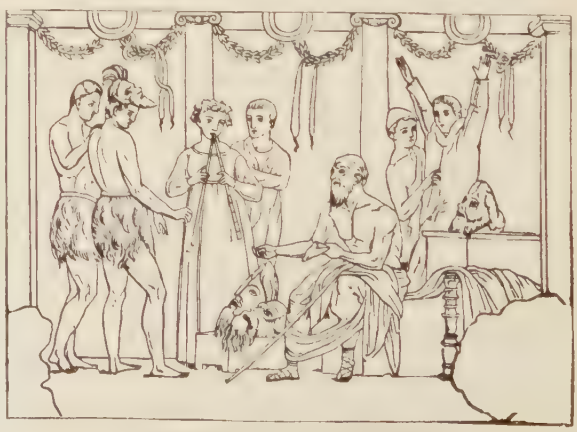
Draco. See CALDARIUM; SIGNA MILITARIA.

Draco (Δράκων). A very celebrated Athenian legislator, who flourished about B.C. 621. Suidas tells us that he brought forward his code of laws (θεσμοί) in this year, and that he was then an old man. Aristotle (*Pol.* ii. *fin.*) says that Draco adapted his laws to the existing constitution, and that they contained nothing particular beyond the severity of their penalties. The slightest theft was punished capitally, as well as the most atrocious murder; and Demades remarked of his laws that they were written with blood, and not with ink (Plut *Solon*, 17). Draco, however, deserves credit as the first who introduced written laws at Athens; and it is probable that he improved the criminal courts by his transfer of cases of bloodshed from the archon to the ephetae, since before his time the archons had a right of settling all cases arbitrarily and without appeal—a right which they enjoyed in other cases until Solon's time. It appears that there were some offences which he did not punish with death; for instance, loss of civil rights was the punishment of attempting to alter one of his laws (Demosth. *c. Aristocr.* p. 714, Bekker). Draco was an archon (Pausan. ix. 36, 8), and, consequently, an Eupatrid; it is not, therefore, to be supposed that his object was to favour the lower orders, though his code seems to have tended to abridge the power of the nobles. The Athenians, it is said, could not endure the rigour of his laws, and the legislator himself was obliged to withdraw to the island of Aegina. Here he is said by Suidas to have been suffocated in the theatre beneath the number of cloaks and garments which the people of the island, according to the usual mode of expressing approbation among the Greeks, showered upon him. He was buried in the theatre.

Dracontius, BLOSSIUS AEMILIUS. A Latin poet who lived and practised as an advocate at Carthage towards the end of the fifth century A.D. He was a man of real poetic gifts and considerable reading, but his style is spoiled by rhetorical exaggeration and false taste. His surviving works are: (1) A number of short epics upon subjects taken from the old mythology and school-room rhetoric (e. g. Hylas, Raptus Helenae, *Deliberativa Achillis*, etc.). (2) An apologetic poem (*Satisfactio*) addressed in the form of an elegy to Gunthamund, king of the Vandals (A.D. 484–496), whose wrath he had excited by writing a panegyric on a foreign prince. (3) A Christian didactic poem (*De Laudibus Dei* or *Hexaëmeron*) in three books. This is a fairly poetical treatment of the story of the Creation. (4) Two *epithalamia* in hexameters, composed in early youth. (5) Several distichs *De Origine Rosarum* and *De Mensibus*. He is probably the author, also, of 971 hexameters, entitled *Orestis Tragoedia*, attributed during the Middle Ages to Horace or Lucan. The *editio princeps* of the complete works of Dracontius is that of Arevalo (Rome, 1791). Earlier editions give only the *Satisfactio* and the *Hexaëmeron*. The minor poems of Dracontius have been edited by Duhn (Leipzig, 1873). Editions of the *Orestis Tragoedia* are those of Mähly (Leipzig, 1866) and Schenkl (Prague, 1867). See, also, Rossberg, *De Dracontio* (Göttingen, 1880).

Drakenborch, ARNOLD, a distinguished Dutch classical scholar, was born at Utrecht, January 1st, 1684. He studied at both Utrecht and Leyden, receiving the degree in law in 1706. His attention, however, had been very strongly attracted to the study of archæology and history, and in 1704 he had already won much commendation by his treatise *De Praefectis Urbis*, dealing with the city government of Rome. In 1716, he became Professor of History and Eloquence at the university of his native town, succeeding Burmann, who had accepted a call to Leyden. This post he held until his death, which occurred on January 16th, 1748. Besides the treatise *De Praefectis*, mentioned above, of which a

third edition appeared at Bayreuth in 1787, Drakenborch published a dissertation on the advantages to be derived from classical study (1715), an edition of Silius Italicus (Utrecht, 1717), and his *magnum opus*, an edition of Livy in seven volumes (Amsterdam, 1738–46). This work is still often cited and contains much valuable material, though marred by a lack of definite method, so that Scipio Maffei even said of it that "the only thing that gave it value was the high price at which it was sold." A portrait of Drakenborch is given at the commencement of the first volume of his Livy.



Drama (*δρᾶμα*). In Athens the production of plays was a State affair, not a private undertaking. It formed a great part of the religious festival of the Dionysia, in which the drama took its rise (see Dionysia); and it was only at the Greater Dionysia that pieces could be performed during the author's lifetime. The performances lasted three days and took the form of musical contests, the competitors being three tragic poets, with their tetralogies, and five comic poets, with one piece each. The authority who superintended the whole was the archon, to whom the poets had to bring their plays for reading and apply for a chorus. If the pieces were accepted and the chorus granted, the citizens who were liable for the *choregia* undertook at their own cost to practise and furnish for them one chorus each. (See Liturgia.) The poets whose plays were accepted received a reward from the State. The State also supplied the regular number of actors, and made provision for the maintenance of order during the performances. At the end of the performance a certain number of persons (usually five) were chosen by lot from a committee (*ἀγωνοθέται*) nominated by the Senate to award the prizes, and bound by solemn oath to give their judgment on the plays, the *choregi*, and the actors. The poet who won the first prize was presented with a crown in the presence of the assembled multitude—the highest distinction that could be conferred on a dramatic author at Athens. The victorious *choregus* also received a crown, with the permission to dedicate a votive offering to Dionysus. This was generally a tripod, which was set up either in the theatre or in the temple of the deity or in the Street of Tripods, so named from this custom, an inscription being put on it recording the event, as in that of Panofka, *Musée Blacas*, pl. I. (British Museum): Ακαμαντὶς ἐνίκα φυλή: Γλαύκων καλός. The actors in the successful play received prizes of money, besides the usual *honoraria*.

From the time of Sophocles the actors in a play were three in number. They had to represent all the parts, those of women included. This involved changing their costume several times during the performance. The three actors were distinguished as *protagonistes*, *deuteragonistes*, and *tritagonistes*, according to the importance of their parts. If the piece required a fourth actor, which was seldom the case, the *choregus* had to provide one. The *choregus* had also to see to the position and equipment of the mute actors.

In earlier times it is possible that the persons engaged in the representation did not make a business of their art, but performed gratuitously, as the poets down to the time of Sophocles appeared upon the stage. But the dramatic art gradually became a profession requiring careful preparation, and winning general respect for its members as artists. The chief requirements for the profession were distinctness and correctness of pronunciation, especially in declamatory passages, and an unusual power of memory, as there was no prompter in a Greek theatre. An actor had also to be thoroughly trained in singing, melodramatic action, dancing, and play of gesture. The latter was especially necessary, as the use of masks precluded any facial expression. The actors were according to strict rule assigned to the poets by lot; yet a poet generally had his special protagonist, on whose peculiar gifts he kept his eye in writing the dramatic pieces.

The Athenian tragedies began to be known all over the Hellenic world as early as the time of Aeschylus. The first city outside of Attica that had a theatre was Syracuse, where Aeschylus brought out some of his own plays. Scenic contests soon began to form part of the religious festivals in various Greek cities, and were celebrated in honour of other deities besides Dionysus. It was a habit of Alexander the Great to celebrate almost every considerable event with dramatic exhibitions, and after him this became the regular custom. A considerable increase in the number of actors was one consequence of the new demand. The actors called themselves artists of Dionysus, and in the larger cities they formed permanent societies (*σύνοδοι*) with special privileges, including exemption from military service and security in person and property. These companies had a regular organization, presided over by a priest of their patron-god Dionysus, annually elected from among their members. A treasurer and officers completed the staff. At the time of the festivals the societies sent out their members in groups of three actors, with a manager and a flute-player, to the different cities. This business was especially lively in Ionia and on the Euxine, the societies of Teos being the most distinguished. The same arrangement was adopted in Italy, and continued to exist under the Roman Empire.

The universal employment of masks was a remarkable peculiarity of costume. (See Persona.) It naturally excluded all play of feature, but the masks corresponded to the general types of character, as well as to the special types indicated by the requirements of the play. Certain conven-

Masking-room of a Greek Theatre.

tionalities were observed in the colour of the hair. Goddesses and young persons had light hair; gods and persons of riper age, dark brown; aged persons, white; and the deities of the lower world, black. The height of the masks and top-knots varied with the age of the actors and the parts they took. Lucian ridicules the "chest-paddings and stomach-paddings" of the tragic actors (*De Salt.* 27). Their stature was considerably heightened in tragedies by the high boot (see COTHURNUS), and the defects in proportion corrected by padding and the use of a kind of gloves. The conventionalities of costume, probably as fixed by Aeschylus, maintained themselves as long as Greek tragedies were performed at all. Men and women of high rank wore on the stage a variegated or richly embroidered long-sleeved χιτών, reaching to the feet, and fastened with a girdle as high as the breast. The upper garment, whether ἱμάτιον or χλαμύς, was long and splendid, and often embroidered with gold. Kings and queens had a purple train and a white ἱμάτιον with a purple border; soothsayers, a netted upper garment reaching to the feet. Persons in misfortune, especially fugitives, appeared in soiled garments of gray, green, or blue; black was the symbol of mourning.

(1) Mask of Perseus with Cap of Darkness. (2) Pompeian Mask.

Soothsayers always wore a woollen garment of network; shepherds, a short leathern tunic; while each of the gods had some distinguishing mark, as the bow for Apollo, the caduceus for Hermes, the aegis for Athenê. So with the well-known heroes: Heracles bore a club; Perseus, the cap of darkness. Kings wore a crown, and carried a sceptre. Warriors appeared in complete armour. Old men bore a staff with a curved handle, introduced by Sophocles. Messengers who brought good news were crowned with olive or laurel. Myrtle crowns denoted festivity. Foreigners wore some one special badge, as a Persian turban for Darius (Aesch. *Pers.* 661). From the time of Euripides, heroes in misfortune (e. g. Telephus and Philoctetes) were sometimes dressed in rags.

In the Satyric Drama the costumes of the heroic characters resembled in all essentials what they wore in the tragedies, although, to suit the greater liveliness of the action, the χιτών was shorter and the boot lower. In the Old Comedy the costumes were taken as nearly as possible from actual life, but in the Middle and New Comedy they were conventional. The men wore a white coat; youths, a purple one; slaves, a motley, with mantle to match; cooks, an unbleached double mantle; peasants, a fur or shaggy coat, with wallet and staff; panders, a coloured coat and motley overgarment. Old women appeared in sky-blue or dark yellow; priestesses and maidens, in white; courtesans, in motley colours, and so on. Red hair marked a roguish slave; beards were not given to youths or old men. The eyebrows were strongly marked and highly characteristic. When drawn up, they denoted pride or impudence. A touchy old man had one eyebrow drawn up and one down. The members of the chorus were masked and dressed in a costume corresponding to the part assigned them by the poet. (On their dress in the Satyric Drama, see SATYRIC DRAMA.) The chorus of the comedy caricatured the ordinary dress of the tragic

Comedy Scene. (Painting from Pompeii.)

chorus. Sometimes they represented animals, as in the *Frogs* and *Birds* of Aristophanes. In the *Frogs* they wore tight dresses of frog-colour, and masks with a mouth wide open; in the *Birds*, large beaks, bunches of feathers, combs, and so on, to imitate particular birds.

(2) ROMAN. Dramatic performances in Rome, as in Greece, formed a part of the usual public festivals, whether exceptional or ordinary, and were set on foot by the aediles and praetors. (See LUDI.) A private individual, however, if he were giving a festival or celebrating a funeral, would have theatrical representations on his own account. The giver of the festival hired a troupe of players (*grex*), the director of which (*dominus gregis*) bought a play from a poet at his own risk. If the piece was a failure the manager received no compensation. But after its performance the piece became his property, to be used at future representations for his own profit. In the time of Cicero, when it was fashionable to revive the works of older masters, the selection of suitable pieces was generally left to the director. The Romans did not, like the Greeks, limit the number of actors to three, but varied it according to the requirements of the play. Women's parts were originally played by men, as in Greece. Women first appeared in mimes, and not till very late times in comedies. The actors were usually freedmen or slaves, whom their masters sent out to be educated, and then hired them out to the directors of the theatres. The profession was technically branded with *infamia*, nor was its legal position ever essentially altered. The social standing of actors was, however, improved through the influence of Greek education; and gifted artists like the comedian Roscius, and Aesopus, the tragedian, in Cicero's time, enjoyed the friendship of the best men in Rome. The instance of these two men may show what profits could be made by a good actor. Roscius received, for every day that he played, $175, and made an annual income of some $21,000. Aesopus, in spite of his great extravagance, left $852,500 at his death. Besides the regular *honoraria*, actors, if thought to deserve it, received other and voluntary presents from the giver of the performance. These often took the form of finely wrought crowns of silver or gold work. Masks were not worn until Roscius made their use general. Before his time actors had recourse to false hair of different colours and paint for the face. Young men wore black wigs; slaves, red ones; old men, white ones. The costume in general was modelled on that of actual life, Greek or Roman, but parasites were conventionally represented in black or gray (Pollux, iv. 148). As early as the later years of the Republic, a great increase took place in the splendour of the costumes and the general magnificence of the performance. In tragedy, particularly, a new effect was attained by massing the actors in great numbers on the stage.

BIBLIOGRAPHY.—For the historical development of the drama, see CHORUS; COMOEDIA; MIMUS; SATIRA; THESPIS; TRAGOEDIA. For the theatre and the setting of plays, see THEATRUM. For the actors, see HISTRIO. For theatrical costumes, see CHLAMYS; HIMATION; PERSONA; TUNICA. For the great dramatic writers of Greece, see AESCHYLUS; ARISTOPHANES; CRATINUS; EUPOLIS; EURIPIDES; SOPHOCLES. For the great Roman writers, see ENNIUS; LIVIUS (ANDRONICUS); PLAUTUS; SENECA; TERENTIUS. Valuable works on the subject of the ancient drama are the following: Witzschell, *The Athenian Stage* (Eng. tr. London, 1850); Walford, *Handbook of the Greek Drama* (London, 1856); Donaldson, *The Theatre of the Greeks* (8th ed. London, 1875); Bergk, *Griech. Literaturgeschichte*, vol. iii. (Berlin, 1884); Bernhardy, *Grundriss d. griech. Litteratur*, vol. ii. pt. ii. (Halle, 1880); Schneider, *Das Attische Theaterwesen* (Weimar, 1835); Klein, *Geschichte des Dramas*, vols. i.–iii. (Leipzig, 1866); Haigh, *The Attic Theatre* (Oxford, 1889).

Drancae. See ZARANGAEI.

Drangiāna (*Δραγγιανή*). A part of Ariana, bounded by Gedrosia, Carmania, Arachosia, and Aria. It sometimes formed a separate satrapy, but was more usually united to the satrapies either of Arachosia or of Gedrosia or of Aria. In the north of the country dwelt the Drangae, a warlike people, from whom the province derived its name. The Ariaspae inhabited the southern part of the province, which was known for its production of tin.

Dravus. The modern Drave; a tributary of the Danube, flowing through Noricum and Pannonia, and after receiving the Murius (Muhr) falling into the Danube east of Mursa (Esseck).

Drepănum (*Δρέπανον*). A sickle. (1) Also DREPĂNA (*τὰ Δρέπανα*), more rarely DREPĂNĒ (Trapani), a seaport town in the northwest corner of Sicily, founded by the Carthaginians. It was here that Anchises died, according to Vergil. (2) Also DREPANÉ, a town in Bithynia, the birthplace of Helena (q. v.), mother of Constantine the Great, in whose honour it was called Helenopolis and made an important place. (3) The ancient name of Corcyra.

Dress. See CLOTHING.

Druentia. The modern Durance; a large and rapid river in Gallia Narbonensis, rising in the Alps, and flowing into the Rhone near Avenio (Avignon). See Auson. *Mosella*, 479.

Drugs. See MEDICINA.

Druĭdae and **Druĭdes.** The priests of religion among the ancient Gauls and Britons. Britain, according to Caesar (*B. G.* vi. 13 and 14), was the great school of the Druids, and their chief settlement was in the island called Mona by Tacitus, now Anglesey. To this island the natives of Gaul and Germany, who wished to be thoroughly versed in the mysteries of Druidism, resorted to complete their studies.

Caesar's account of the Druids is as follows: "They attend to divine worship, perform public and private sacrifices, and expound matters of religion. A great number of youths are gathered round them for the sake of education, and they enjoy the highest honour in the nation; for nearly all public and private quarrels come under their jurisdiction; and when any crime has been committed, when a murder has been perpetrated, when a controversy arises about a legacy or about landmarks, they are the judges too. They fix rewards and punishments; and should any one, whether a private individual or a public man, disobey their decrees, then they exclude him from the sacrifices. This is with them the severest punishment. The persons who are thus laid under interdict are regarded as impious and wicked; everybody recoils from them, and shuns their society and conversation, lest he should be injured by as-

sociating with them. They cannot obtain legal redress when they ask for it, nor are they admitted to any honourable office. All these Druids have one chief, who enjoys the supreme authority amongst them. When he dies, he is succeeded by that member of the order who is most prominent amongst the others, if there be any such single individual; if, however, there are several men equally distinguished, the successor is elected by the Druids. Sometimes they even go to war about this supremacy. At a certain time of the year, the Druids assemble on the territory of the Carnutes, which is believed to be the centre of all Gaul, in a sacred place. To that spot are gathered from everywhere all persons that have quarrels, and these abide by their judgments and decrees. It is believed that this institution was founded in Britain, and thence transplanted into Gaul. Even nowadays, those who wish to become more intimately acquainted with the institution generally go to Britain for instruction.

"The Druids take no part in warfare; nor do they pay taxes like the rest of the people; they are exempt from military service, and from all public burdens. Attracted by such rewards, many come to be instructed of their own choice, while others are sent by their parents. They are reported to learn in the school a great number of verses, so that some remain there twenty years. They think it an unlawful thing to commit their lore to writing, though in the other public and private affairs of life they frequently make use of the Greek alphabet.

"Beyond all things they are desirous to inspire a belief that men's souls do not perish, but transmigrate after death from one individual to another; and they hold that people are thereby most strongly incited to bravery, as the fear of death is thus destroyed. Besides, they hold a great many discourses about the stars and their motion, about the size of the world and of various countries, about the nature of things, about the power and might of the immortal gods; and they instruct the youths in these subjects."

Some further details are given by Pliny the Elder in his *Historia Naturalis* (xxix. 62, 1; xxiv. 12, 1; xxx. 4, 1). Besides their priestly character, the Druids appear to have practised magic, and to have been thoroughly versed in botany and in other sciences. The oak was especially sacred among them, and in oak-groves they performed their rites. The mistletoe was particularly reverenced, and Pliny tells us that it was removed from the tree by a Druid clothed in white, who cut it with a golden knife and gave it to a second Druid also in white, who, standing on the ground, received it. Pliny further speaks of a distinguishing badge, "the serpent's egg," worn by the Druids, and formed by the poisonous spittle of a great number of serpents twined together and gathered by moonlight. It was worn in the bosom and was regarded as a powerful talisman. The account of Pliny refers to the Druids of Gaul, but there is no reason for supposing that there existed any essential difference between the Druidism of Gaul and that of Britain as described by Caesar. Mr. Whitley Stokes asserts that the Druids of Ireland were of less importance, forming not a priestly class, but simply a species of wizards and soothsayers.

The Druids, by reason of their great influence with the people, were a cause of continual trouble to the Roman conquerors, keeping alive the national aspirations and encouraging rebellion. Hence, the emperor Claudius formally refused the privilege of practising Druidical rites, and when Suetonius Paulinus defeated the Britons on the island of Mona (Anglesey) the sacred groves were destroyed. Yet on the Continent, Druidism continued to have followers down to the final overthrow of paganism.

Scholars at the present day are extremely conservative in making any general statements regarding the Druids, and nearly all the elaborate theories that were formerly held are now regarded as unsafe. Even the view that the huge structures of stone found in Keltic countries were Druidical altars, or mark the seats of Druidical worship, is no longer accepted. The so-called Druidical temples at Avebury and Stonehenge in England, and at Carnac in France, were very possibly not Druidical at all; since similar structures have been found in Scandinavia and other parts of Europe where Druidism never existed. Regarding the etymology of the name *Druid* nothing certain can be alleged. Among the tentative and traditional explanations are the following: from the Keltic *deru*, "an oak"; the Old German *druthin*, "a master"; the Saxon *dry*, "a magician"; the Irish *drui*, "a sacred person, or priest"; and in the Keltic compare *derouyd*, "a prophet" (De Chiniac). The old etymology from δρῦς is absurd. The feminine form of the Latinized *Druida* is *Druias* (Lamprid. *Alex. Sev.* 60) or *Druis* (Vop. *Aurel.* 41). The Greek masculine form is Δρυΐδης (Aristoph. *Fr.* 30).

See Pelloutier, *Histoire des Celtes* (Paris, 1771); Davis, *Mythology and Rites of the British Druids* (London, 1809); Pictet, *Du Culte des Cabires chez les Anciens Irlandais* (Geneva, 1824); Higgins, *Celtic Druids* (London, 1829); Thierry, *Histoire des Gaulois* (Paris, 1828); Reynaud, *De l'Esprit de la Gaule* (Paris, 1866); Barth, *Ueber die Druiden der Kelten* (Erlangen, 1828); Scarth, *Roman Britain* (London, 1883); Rhys, *Celtic Heathendom* (London, 1888). Besides Caesar and Pliny, scattering notices of the Druids are found in Cicero (*De Divinatione*), Diodorus Siculus, Strabo, Pomponius Mela, Tacitus, Lucan, Lampridius, Vopiscus, Ausonius (*Professores*), Ammianus Marcellinus, Origen, and Clemens Alexandrinus.

Drum. See TYMPANUM.

Drusilla. (1) LIVIA. The wife of Augustus Caesar. See LIVIA. (2) LIVIA, a daughter of Germanicus and Agrippina, born at Augusta Trevirorum (Trèves) A.D. 15. She was far from inheriting the excellent qualities of her mother. Her own brother Caligula seduced her, and then gave her in marriage, at the age of seventeen, to Lucius Cassius Longinus, a man of consular rank. Subsequently, however, he took her away from her husband and lived with her as his own wife. This connection lasted until the death of Drusilla, A.D. 38, and at her decease Caligula abandoned himself to the most extravagant sorrow. Divine honours were rendered to her memory, and medals were struck in her honour with the title of Augusta. She was twenty-three years of age at the time of her death (Suet. *Calig.* 24). Dio Cassius calls the name of her husband Marcus Lepidus, differing in this from Suetonius. He may possibly refer to a second husband, who may have been given her, for

form's sake, a short time before her death (Dio Cass. lix. 3). (3) A daughter of Agrippa, king of Iudaea, remarkable for her beauty. She was at first affianced to Epiphanes, son of Antiochus, king of Commagené. But, on his declining to submit to the rite of circumcision and become a Jew, the marriage was broken off. She was then given to Azizus, king of Emesa. Not long after, however, Drusilla renounced the religion of her fathers, abandoned her husband, and espoused Antonius Felix, a freedman of the emperor Claudius, and brother to Pallas, the freedman of Nero. This is the Felix who was governor of Iudaea and is mentioned in the Acts of the Apostles. Drusilla was with Felix at Caesarea when St. Paul appeared before the latter. She had a son by her second husband, named Agrippa, who perished in the eruption of Vesuvius which took place during the reign of Titus (Joseph. *Ant. Iud.* xix. 9).

Drusus. (1) Claudius Nero, son of Tiberius Claudius Nero and of Livia, was born B.C. 38. He served early in the army, and was sent, in B.C. 17, with his brother Tiberius, against the Rhaeti and the Vindelici, who had made an irruption into Italy. He defeated the invaders, pursued them across the Alps, and reduced their country. Horace has celebrated this victory in one of his finest odes (iv. 4). Drusus married Antonia Minor, daughter of Antony and Octavia, by whom he had Germanicus and Claudius, afterwards emperor, and Livia or Livilla. In B.C. 14, being sent to quell an insurrection in Gaul, he succeeded by his conciliatory address. In the following year he attacked the Germans, and, carrying the war beyond the Rhine, he obtained a series of victories over the Sicambri, Cherusci, Catti, and Tencteri, and advanced as far as the Visurgis (Weser), for which the Senate bestowed on him and his posterity the surname of Germanicus. In B.C. 9, Drusus was made consul. He was soon after sent by Augustus against the Germans, crossed the Visurgis, and advanced as far as the Albis (Elbe). He imposed a moderate tribute on the Frisians, which, being afterwards aggravated by his successors, caused a revolt in the reign of Tiberius (Tac. *Ann.* iv. 72). He caused a canal to be cut, for the purpose of uniting the Rhine to the Yssel, which was known long after by the name of Fossa Drusi. Drusus did not cross the Albis, but retired towards the Rhine. Before he reached that river, he died, at the age of thirty, in consequence, as it was reported, of his horse falling upon him and fracturing his leg (Livy, *Epit.* 142). Tiberius, who was sent for in haste, and found his brother expiring, accompanied his body to Rome, where his funeral was performed with the greatest solemnity. Both Augustus and Tiberius delivered orations in his praise. Drusus was much regretted by both the army and the Romans in general, who had formed great expectations from his manly and generous character. (2) The son of the emperor Tiberius by Vipsania, daughter of Agrippa. He served with distinction in Pannonia and Illyricum, and was consul with his father, A.D. 21. In a quarrel with the imperial favourite Seianus, he gave the latter a blow in the face. Seianus, in revenge, seduced his wife Livia or Livilla, daughter of Drusus the elder and of Antonia; and the guilty pair destroyed Drusus by poison, which was administered by the eunuch Lygdus. The crime remained a secret for eight years, when it was discovered after the death of Seianus, and Livia was put to death (Tac. *Ann.* i. 24, etc.; iv. 3 foll.). (3) Caesar, son of Germanicus and Agrippina, and brother of Nero Caesar and Caligula. He married Aemilia Lepida, who was induced by Seianus to betray her husband. Deluded himself by the arts of that evil minister, he conspired against the life of his brother, Nero Caesar, and was starved to death by order of Tiberius (Tac. *Ann.* iv. 60). (4) M. Livius. See Liviae Leges.

Statue of Drusus from Pompeii. (Overbeck.)

Dryădes (Δρυάδες). Wood-nymphs. See Nymphae.

Dryas (Δρύας). Father of the Thracian king Lycurgus (q. v.), who is hence called Dryantides.

Drymaea (Δρυμαία) or **Drymus** (Δρύμος). A town in Phocis, a little south of the Cephissus.

Drymus. (1) See Drymaea. (2) A strong place in Attica, on the frontiers of Boeotia.

Drymussa (Δρυμοῦσσα). An island off the coast of Ionia, opposite Clazomenae (Thuc. viii. 31).

Dryŏpé (Δρυόπη). The daughter of King Dryops and beloved by Apollo, who, in order to get possession of her, changed himself into a tortoise. Dryopé took the creature into her lap, whereupon it became a serpent. This sudden transformation frightened away the companions of Dryopé, thus leaving her alone with the god, who then accomplished his purpose. Soon after she married Andraemon, but became by Apollo the mother of Amphissus, who founded the town of Oeta and built there a shrine to his father. Dryopé was at last carried off by the wood-nymphs and became one of them. See Ovid, *Met.* ix. 331.

Dryŏpes (Δρύοπες). A Pelasgic people, who dwelt first in Thessaly, from the Spercheus to Parnassus, and afterwards in Doris, which was called from them Dryopis. Driven out of Doris by the Dorians, they migrated to other countries, and settled in Peloponnesus, Euboea, and Asia Minor. See Herod. viii. 31.

Dryops (Δρύοψ). The son of the river-god Spercheus. He was the father of Dryopé (q. v.) and the reputed ancestor of the Dryopes (q. v.).

Dryos Cephălae (Δρυὸς Κεφαλαί). A narrow pass of Mount Cithaeron in Boeotia, between Athens and Plataeae.

Dubis. The modern Doubs, a river in Gaul, rising in Mons Iurassus (Jura), flowing past Vesontio

(Besançon), and falling into the Arar (Saône) near Cabillonum (Châlons). Caesar (*B. G.* i. 38) calls it Aldnasdubis according to many MSS.

Dubris Portus. The modern Dover; a seaport town of the Cantii in Britain; here was a fortress erected by the Romans against the Saxon pirates. It is mentioned in both the *Itinerarium* and the *Notitia.*

Du Cange, CHARLES DUFRESNE, SIEUR. One of the most famous of French scholars, born at Amiens, December 18th, 1610. He adopted the profession of a parliamentary advocate in Paris, but passed the greater part of his life in study, having a remarkably versatile and retentive mind. He is well known by his works on Byzantine history, and pre-eminently by his great *Glossarium ad Scriptores Mediae et Infimae Latinitatis*—a treasure-house of valuable information regarding mediæval Latin. It first appeared in three folio volumes at Paris in 1678, and was subsequently greatly enlarged by the Benedictines of St. Maur to six volumes (Paris, 1733–36), to which four more volumes were added by the Benedictine Charpentier (1766). A new edition appeared in seven volumes by G. A. Henschel (Paris, 1840–46), to which Diefenbach added supplements (Frankfort, 1857 and 1867). Still another edition was begun in 1883 to consist of ten volumes. Besides this invaluable lexicon, Du Cange put forth a *Glossarium ad Scriptores Mediae et Infimae Graecitatis* (Paris, 1688); *Historia Byzantina* (Paris, 1680); the *Annals* of Zonaras, with notes (Paris, 1686); and *Chronicon Paschale* (Paris, 1689). See Feugère, *Essai sur la Vie et les Ouvrages de Ducange* (Paris, 1852).

Ducas, MICHAEL (Μιχαὴλ ὁ Δοῦκας). A Byzantine historian who held office under the last of the Greek emperors, Constantine XIII. On the capture of Constantinople by the Turks (A.D. 1453), he escaped to Lesbos, where he wrote a history of the period from the time of John VI., Palaeologus (A.D. 1355), to the capture of Lesbos by the Turks (1462). Though written in barbarous Greek, the history is clear and impartial and of considerable value. The best edition is that of Bekker (Bonn, 1834), which has appended to it an early Italian translation.

Ducenarii. The name of various officers and magistrates in the imperial period, of whom the principal were as follows:

(1) The imperial *procuratores*, who received a salary of 200 sestertia (Dio Cass. liii. 15). We read of *centenarii*, etc., as well as of ducenarii. (See Capitol. *Pert.* 2; Orelli, *Inscript.* No. 946.)

(2) A class or decuria of iudices, first established by Augustus. They were so called because their property, as valued in the census, only amounted to 200 sestertia, and they tried causes of small importance (Suet. *Aug.* 32).

(3) Officers who commanded two centuries, and who held the same rank as the *primi hastati* in the ancient legion (Veget. ii. 8).

(4) The imperial household troops, who were under the authority of the *magister officiorum* (*Cod.* i. tit. 31; xii. tit. 20).

In the third century A.D. and later, the title is often applied in inscriptions to *protectores Augusti* and to many officials of equestrian rank, as *praefecti legionum, praefecti vehiculorum, imperatori a consiliis.* In these cases it appears to denote the rank as well as the salary of the official, and is seldom used without the addition of another title (Th. Mommsen in *Ephem. Epigraphica*, v. 121–127). The office of a ducenarius is *ducenaria* or *ducena.*

Ducetius (Δουκέτιος). A Sicilian chief who carried on a war with the Greeks of that island in the middle of the fifth century B.C. Defeated by the Syracusans, he surrendered and was exiled to Corinth. Subsequently returning to Sicily, he founded there the city of Calacté, and died B.C. 440 (Diod. xi. and xii.).

Duella. See UNCIA.

Duēnos Inscription. The name commonly given to a very interesting inscription found at Rome near the Quirinal in 1880. It is inscribed upon three small earthen pots connected together, and is written from right to left. It reads as follows: IOVEI SAT DEIVOS QOI MED MITAT NEI TED ENDO COSMIS VIRCO SIED ASTED NOISI OPE TOITESIAI PACARI VOIS. DVENOS MED FECED EN MANOM EINOM DZENOINE MED MAAO STATOD. This, rendered into classical forms, is probably to be read thus: *Iovi, Saturno divis qui* (=*si quis*) *me mittet, ne te endo* (=*in te*) *comis virgo sit ast nisi Opi Tutesiae pacari vis. Duenus me fecit in Manum: enim die noni me Mano stato*—i. e. "If any one brings me to the gods Iupiter and Saturn, let not any maiden be kind to thee, unless thou shalt offer a sacrifice to Ops Tutesia. Duenus made me for an offering to the Dead (Manus); therefore, on the ninth day, set me for the offering to the Dead."

Important peculiarities of this inscription, which seems to be at least as early as B.C. 300, are the use of *q* before *o*, the *ei* for *é*, and the *dz* used to represent the sound of *dy*=*j*. See Dressel, in the *Annali dell' Instituto*, lii. 158; Bücheler, in the *Rhein. Museum*, xxxvi. 235 foll.; Schneider, *Dialectorum Italicarum Exempla*, i. 19 (Leipzig, 1886); Jordan in *Hermes*, xvi. 225–60; Cortese, *Latini Sermonis Vetustioris Exempla* (Turin, 1892); and for a fac-simile, the article EPIGRAPHY in this Dictionary. Notes on the text are given by Schneider. See also Maarenbrecher in the *Rheinisches Museum* for 1896.

Duilia Lex. See LEX.

Duilian Column. See COLUMNA ROSTRATA.

Duilius Nepos, GAIUS. A Roman consul, the first who obtained a victory over the naval power of Carthage, B.C. 260. After his colleague, Cn. Corn. Scipio, had been taken at sea by the Carthaginians in the First Punic War, Duilius proceeded, with a newly built Roman fleet, to Sicily, in quest of the enemy, whom he met near the Lipari Islands; and, by means of grappling-irons, so connected the ships of the Carthaginians with his own that the contest became a sort of land-fight. By this unexpected manœuvre he took eighty and destroyed thirteen of the Carthaginian fleet and obtained a naval triumph, the first ever enjoyed at Rome. There were some medals struck in commemoration of this victory, and a column was erected on the occasion. This column (called Columna Rostrata, because adorned with beaks of ships) was, as Livy informs us, struck down by lightning during the interval between the second and third Punic wars. See COLUMNA ROSTRATA.

Dulcia. Confectionery, sweetmeats, "candy." A general name applied to sweets made with honey, as distinguished from pastry, or sweet dishes made with meal, fruit, milk, etc. See Lamprid. *Elagab.* 27 and 32; and the articles DIAETETICA; PISTOR.

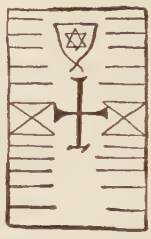
Dulciarii. See PISTOR.

Dulgibīni. A people in Germany, dwelling on the right bank of the Weser (Ptol. ii. 11, 17).

Dulichium (Δουλίχιον). See ECHINADES.

Dumnŏrix. A chieftain of the Aedui, and brother of Divitiacus. He was an enemy of the Romans, and was put to death by Caesar's order, B.C. 54 (Caes. *B. G.* i. 3).

Dungeon. See CARCER.



Dunium. See DUROTRIGES.

Duodĕcim Scripta (*κύβοι, διαγραμμισμός*: in late Greek *τάβλα*). A game of mixed chance and skill, which must have been substantially the same as our backgammon. The following points of identity may be regarded as established: The game was played on a board of twelve double lines with fifteen white and fifteen black men; the throws were counted as we count them; "blots" (*ἄζυγες*) might be captured; the pieces (whether they started from home or not) had to be brought home; and the winner was he who first cleared off his men. On the other hand, there were three dice instead of two (see TESSERA), and it is impossible to say where the men started or how blots taken up re-entered. In the initial position the pieces may have stood in three rows of five or five rows of three, and either in the player's own table with a view to the double journey or in the opponent's table with a view to the journey home. With the three dice the pieces would soon be scattered, and thus a less artificial arrangement than our own may be thought probable. The phrase *ὀπισθιδίη ὁδὸς* in Agathias may seem to favour the notion that they were played out and home. The board was *ἄβαξ* (see ABACUS), more generally *tabula*, or from its raised rim *alveus, alveolus;* the men *ψῆφοι, calculi;* the situation at any point of the game, *θέσις;* to move, *τιθέναι, dare;* to retract a move, *ἀνατιθέναι, reducere.* In a fragment of Cicero (*ap.* Non. p. 170, s. v. *Scripta*) we find: *Itaque tibi concedo, quod in duodecim scriptis solemus, ut calculum reducas, si te alicuius dati poenitet.* This privilege is more likely to have been of the nature of odds granted by a superior player than a regular rule of the game.

The classical Greek writers mostly use *κύβοι, κυβεύειν*, of games into which skill entered as well as of mere dicing. That *κυβεία* was a game of skill as well as chance is clear from Plato (*Rep.* x. 604 C, *Phaedr.* 274 D) and from a story told by Plutarch (*Artax.* 17); cf. Ter. *Adelph.* iv. 7, 21. Ovid alludes to the Duodecim Scripta (*A. A.* iii. 363–364) among games which lovers are to play together; others are *latrunculi* (357–358, 361–362), and "go-bang" (365–366). Martial includes among his modest wants *tabulamque calculosque* (ii. 48). The celebrated jurisconsult P. Mucius Scaevola was famed for his skill at Duodecim Scripta (Cic. *de Or.* i. 50, § 217). Quintilian (xi. 2) further tells the story that Scaevola, after losing a game, accurately recalled all the throws and the way that each had been played; pointing out the move where he had made a mistake, and verifying his own recollections by those of his opponent. This is cited as an example of memory and logical sequence (*ordo*).

None of the above passages shed much light on the details of the game. Our knowledge of them is mostly gained from an epigram of Agathias (*Anth. Pal.* ix. 482; also in Brunck, *Anal.* iii. 60) on a case of special ill-luck which befell the emperor Zeno (A.D. 474–491). This epigram has been discussed by many scholars, but until lately was never rendered intelligible. The problem has been solved independently by M. Becq de Fouquières, in his *Jeux des Anciens*, and Dr. H. Jackson, in the English *Journal of Philology;* on the few points where they differed, Dr. Jackson has since given in his adherence to M. Becq de Fouquières's conclusions.

More than a hundred ancient boards, serving for six different games, had been found in Rome alone down to 1877 (Marquardt, *Privatl.* 838); but only a single example shows the twelve lines. This is of marble, bears a Christian inscription, and is of very rude workmanship and illiterate spelling. It has been engraved by Gruter (*Mon. Chr.* p. 1091), Becq de Fouquières (p. 364), and in a simplified form, omitting the inscription, by Rich. This is to all intents and purposes a backgammon board, exhibiting the four half tables of six lines each.

Board for Duodecim Scripta. (Rich.)

Mention is made of boards and men of costly materials or of peculiar construction. In Petronius (33) Trimalchio plays on a board of terebinth-wood, with dice of crystal, and with gold and silver denarii for black and white men. Pliny (*H. N.* xxxvii. § 13) has an absurdly rhetorical account of the splendours of an *alveus lusorius*, in gold and jewels, borne in Pompey's third triumph, B.C. 61; in the centre of it was a golden moon of thirty pounds' weight. The emperor Claudius had his carriage fitted with a board which could not upset, in order to play when travelling (Suet. *Claud.* 33). The *tabula lusoria* described by Martial (xiv. 17) was also specially adapted for two different games, probably on opposite sides. The first line refers to the Duodecim Scripta; the second, modelled on a couplet of Ovid (*Trist.* ii. 477–478), to the game of draughts (*latrunculi*), in which the player left with but one man is bound to lose to his opponent who has two. See Becq de Fouquières, *Jeux des Anciens*, 2d ed. (1873), pp. 357–383; H. Jackson, in *Journ. of Philol.* vii. 236–243; Marquardt, *Privatl.* 834–838; and Falkener, *Games Ancient and Oriental* (1892).

Duodĕcim Tabulārum Lex. See DECEMVIRI; TWELVE TABLES.

Duo Viri. "The two men"; a name applied to various magistrates and commissioners at Rome and in the *coloniae* and *municipii*. The form *duumvir*, "one of the two men," is used in the singular (Liv. ii. 42, 5, etc.); it is doubtful whether *duumviri* should ever be used in the plural. Some editors print it so, but in the MSS. and inscriptions we generally find only *iiviri;* in *C. I. L.* i. 1196 we have *duo viri*, and also *duo vir* (cf. *C. I. L.* vi. 3732); but there seems to be no epigraphic authority for *duumviri*. That Cicero knew only *tres viri*, not *triumviri*, is shown by *Ep. Fam.* viii. 13, 2. The most important of these "commissions of two" were the following:

(1) DUO VIRI IURI DICUNDO, the highest magistrates in the municipal towns.

(2) DUO VIRI SACRORUM, to whom was at first intrusted the charge of the Sibylline Books (q. v.) (cf. Liv. iii. 10, 7). The commission was afterwards made to consist of ten (Liv. vi. 37, 12; 42, 2), and subsequently, probably by Sulla, of fifteen.

(3) Duo viri navāles, an extraordinary commission appointed for the purpose of equipping or repairing a fleet (Mommsen, *Röm. Staatsr.* ii. 565).

(4) Duo viri aedi dedicandae, elected by the people for the purpose of dedicating a temple. The duty was always performed by one of the two only, and the election of a second seems to have been due solely to the desire of the Romans to have two colleagues in each magistracy (Liv. vii. 28, xxii. 33, xxxv. 41). The *duo viri aedi locandae*, who gave out the contract for the erection of a temple, were not necessarily the same as those who dedicated it (cf. Liv. xxii. 33 with xxiii. 21, 7), although they frequently were.

(5) Duo viri viis extra urbem purgandis were officers under the aediles, first mentioned in the Lex Iulia Municipalis, and possibly therefore instituted by Caesar. They were abolished by Augustus when the *curatores viarum* were instituted (Dio, liv. 26).

(6) Duo viri perduellionis. (See Perduellio.)

(7) Duo viri quinquennāles, the censors in the municipia.

Duplarii or **Duplicarii**. Soldiers who received, on account of their good conduct, double allowance (*duplicia cibaria*), and perhaps in some cases double pay likewise (Varr. *L. L.* v. 90; Liv. ii. 59, xxiv. 47; Orelli, *Inscript.* No. 3535). The forms are *duplicarius* (Or. 3533), *dupliciarius* (ib. 3534), *duplaris* (Veget. ii. 7), *duplarius* (Or. 3531).

Dupondius or **Dupondium**. A coin of two asses, struck after the reduction of the weight of the *as*. (See As.) It was in use under the Empire, when it was the weight of half an ounce (Marquardt, *Röm. Staatsverw.* ii. pp. 8, 11). As the Romans applied the uncial division of the *as* to the foot, *dupondium* also signified two feet (Colum. iii. 15, § 2).

Dura (*τὰ Δοῦρα*). (1) A town in Mesopotamia on the Euphrates, founded by the Macedonians. It was also styled Nicanŏris and Eurōpus (Ammian. Marc. xxiii. 5). (2) A fortified place in Assyria on the Tigris (Polyb. v. 52). It is still called Dúr.

Duranius. A river in Aquitania, near the Dordagne (Auson. *Mosella*, 464). It enters the Garumna (Garonne) on the right bank near Bordeaux.

Duria (*Δουρίας*). The name of two small rivers in Italy, now the Dora Baltia and the Dora Riparia, both rising in the Alps and emptying into the Padus (Po) (Plin. *H. N.* iii. 16).

Duris (*Δοῦρις*). A Samian writer of history who flourished about B.C. 350. He was a descendant of Alcibiades, and at one time was tyrant of Samos. Only fragments now remain of his historical writings, which were as follows: (1) A history of Greece (*Ἡ τῶν Ἑλληνικῶν Ἱστορία*), from B.C. 370 to B.C. 281; (2) *Περὶ Ἀγαθοκλέα Ἱστορίαι*; (3) *Σαμίων Ὧροι*; (4) *Περὶ Εὐριπίδου καὶ Σοφοκλέους*; (5) *Περὶ Νόμων*; (6) *Περὶ Ἀγώνων*; (7) *Περὶ Ζωγραφίας*; (8) *Περὶ Τορευτικῆς*; (9) *Λιρυκά*. The fragments were collected by Hulleman (Utrecht, 1841).

Durius (*Δούριος*). The modern Douro; one of the chief rivers of Spain, near Numantia, and flowing into the Atlantic.

Durobrivae. (1) A town of the Cantii in Britain, now Rochester. (2) A British town north of the Thames, by some identified with Godmanchester.

Durocasses (called also Drocae and Fanum Druĭdum). A city of the Eburovices, in Gallia Lugdunensis, southwest of Lutetia (Paris). In its vicinity was the principal residence of the Druids in Gaul (Caes. *B. G.* vi. 13). The modern name is Dreux.

Durocortōrum. The modern Rheims; the capital of the Remi in Gallia Belgica, subsequently called Remi (Caes. *B. G.* vi. 44).

Duronia. A town in Samnium, in Italy, west of the Caudine passes (Liv. x. 39).

Durotrĭges. A people in Britain, in Dorsetshire and the west of Somersetshire; their chief town was Dunium (Dorchester).

Durovernum or **Darvernum**. The modern Canterbury; a town of the Cantii in Britain, afterwards called Cantuaria.

Duumvir. See Duo Viri.

Dux. See Provincia.

Dyardănes or **Oedănes** (*Οἰδάνης*). A great river of India (Q. Curt. viii. 9), possibly to be identified with the Brahmaputra.

Dymas (*Δύμας*). Father of Hecuba (*Iliad*, xvi. 718), who is hence called Dymantis.

Dymé (*Δύμη*) or **Dymae** (*Δῦμαι*). A town in the west of Achaia, near the coast; one of the twelve Achaean towns (Herod. i. 145).

Dyras (*Δύρας*). A river of Thessaly, twenty stadia beyond the Sperchius, said to have sprung from the ground in order to assist Heracles when burning on Oeta (Herod. vii. 199).

Dyrrhachium (*Δυρράχιον*). The modern Durazzo, formerly called Epidamnus (*Ἐπίδαμνος*); a town in Greek Illyria, on a peninsula in the Adriatic Sea. It was founded by the Corcyreans and received the name of Epidamnus; but since the Romans regarded this name as one of bad omen, reminding them of *damnum*, they changed it into Dyrrhachium. It was the usual place of landing for persons who crossed over from Brundisium, and was to that town what Calais is to Dover. Here commenced the great Via Egnatia. The place was one of much commerce, so that Catullus (xxxvi. 15) calls it *taberna Hadriae*, "the shop of the Adriatic." During the Civil Wars it was the headquarters of Pompey, who kept his military stores here. In A.D. 345 it was destroyed by an earthquake.

Dysōrum (*Δύσωρον*). A gold-producing mountain in Macedonia between Chalcidicé and Odomanticé (Herod. v. 17).

Dyspontium (*Δυσπόντιον*). A town of Pisatis in Elis, of great antiquity, north of the Alpheus. It was destroyed by the Eleans in their war with the Pisatae. See Pausan. vi. 22.

E

E, as a symbol.

In Greek.—E·Θ = *ἐπικουρίοις θεοῖς* (*C. I. G.* 158, 213).

ΞΕ = *εὐχὴν ἐποίησεν.*

Ē = 5, *τὸ* Ē = *τὸ πέμπτον* (*C. I. G.* 2572).

Ⱶ = *ἡμέρας* (*ἡμερῶν*).

In Latin.—E = eius, (h)eres, est, evocatus, exsculpsit.

E·A·E = eques alae eiusdem.

E·M = ex monitu.

E·M·V = egregiae memoriae vir.

E·O·B·Q = ei ossa bene quiescant.

E·R·P = e re publica.

E·S·C·R·C = e senatus consulto reficiendum curavit.

E·S·F·S·F·L = ei sine fraude sua facere liceto.

E·T·F = ex testamento fecit.

E·V·S = ex voto suscepto.

Ear-rings. See Inauris.

Ĕbĕnus (*ἔβενος*) and **Hebĕnus** (*ἔβενος*). Ebony; spoken of by Vergil as produced only in India, but by Herodotus mentioned as one of the articles of tribute paid by the Ethiopians to the king of Persia (Verg. *Georg.* ii. 117; Herod. iii. 97). By the ancients it was frequently inlaid with ivory because of the contrast of the colours.

Eblāna. A place in Hibernia mentioned by Ptolemy and identified with the site of Dublin.

Eborācum or **Eburācum** (*Ἐβόρακον*). The modern York; a town of the Brigantes in Britain, which, having been made a Roman station by Agricola, became the chief Roman settlement in the island. It was both a municipium and a colony, and was the residence of the Roman emperors when they visited Britain. Here the emperors Septimius Severus and Constantius Chlorus died. Many Roman remains still exist at York, and in its vicinity are portions of Roman walls. A number of important inscriptions have also been found here, besides articles of glass, metal, and stone. The name Eboracum is the Latinized form of the British Caer-Evrauc. See Eutrop. viii. 19; *Inscript. Orell.* 190; Spart. *Sever.* 19; Aurel. Vict. *De Caes.* 20; and Raine, *York* (1893).

Ebūdae or **Hebūdae.** The modern Hebrides; islands in the Western Ocean off Britain (Pliny, *H. N.* iv. 30; Solin. 23). Five are named by Ptolemy, two being called Ebudae, and the others Maleus, Epidium, and Ricina.

Ebur. Ivory. See Elephas.

Eburōnes. A German people, who crossed the Rhine and settled in Gallia Belgica, between the Rhine and the Mosa (Maas). See Caes. *B. G.* ii. 4.

Eburovices. See Aulerci.

Ebūsus. The modern Iviza; the largest of the Pityusae Insulae, off the east coast of Spain.

Ecbatăna (*τὰ Ἐκβάτανα*; Heb. *Acmetha*). (1) The capital of Media, situated, according to Diodorus (ii. 13), about twelve stadia from Mount Orontes. The genuine orthography of the word appears to be Agbatana (*Ἀγβάτανα*), a form employed by Ctesias. Ecbatana, being in a high and mountainous country, was a favourite residence of the Persian kings during summer, when the heat of Susa was almost insupportable. The Parthian kings also, at a later period, retired to it in the summer to avoid the excessive heat of Ctesiphon. According to Herodotus (i. 98), Ecbatana was built near the close of the eighth century B.C. by Deïoces, the founder of the Median monarchy. The Book of Judith (i. 2) assigns the building of this city, or, rather, the erection of its citadel, to Arphaxad, in the twelfth year of the reign of Nebuchadnezzar, king of Assyria. Some writers make Arphaxad the same with Deïoces, while others identify him with Phraortes, the son of the latter, who might have repaired the city or else made some additions to it.

Herodotus furnishes us with no hint whence we may infer the relative position of Ecbatana on the map of Media. His description of the fortress or citadel, however, is particular. "The Medes," he remarks, "in obedience to their king's command, built those spacious and massive fortifications now called Ecbatana, circle within circle, according to the following plan: each inner circle overtops its outer neighbour by the height of the battlements alone. This was effected partly by the nature of the ground, a conical hill, and partly by the building itself. The number of the circles was seven; within the innermost were built the palace and the treasury. The circumference of the outermost wall and of the city of Athens may be regarded as nearly equal. The battlements of the first circle are white; of the second, black; of the third, scarlet; of the fourth, azure; of the fifth, orange. All these are brilliantly coloured with different paints. But the battlements of the sixth circle are silvered over, while those of the seventh are gilt. Deïoces constructed these walls around his palace for his own personal safety; but he ordered the people to erect their houses in a circle around the outer wall" (i. 98 foll.). The Orientals, however, according to Diodorus Siculus, claimed a far more ancient origin for Ecbatana. Ctesias not only describes it as the capital of the first Median monarchy, founded by Arbaces, but as existing prior to the era of the famed and fabulous Semiramis, who is said to have visited Ecbatana in the course of her royal journeys and to have built there a magnificent palace. She also, with immense labour and expense, introduced abundance of excellent water into the city by perforating the adjacent Mount Orontes, and forming a tunnel, fifteen feet broad and forty feet high, through which she conveyed a lake-stream (Diod. Sic. ii. 13). The palace stood below the citadel. Its tiles were of silver and its capitals, entablatures, and wainscotings of gold and silver. This metal the Seleucidae coined into money, amounting to the sum of 4000 talents, or $4,730,000.

Ecbatana was taken by Cyrus in B.C. 549, and remained a splendid city under the Persian sway, the great king spending at this place the two hottest months of the year. The Macedonian conquest did not prove destructive to Ecbatana, as it had to the royal palace at Persepolis. Alexander deposited

in Ecbatana the treasures taken from Persepolis and Pasargada, and one of the last acts of his life was a royal visit to the Median capital. Although not equally favoured by the Seleucidae, it still retained the traces of its former grandeur; and Polybius has left on record a description of its state under Antiochus the Great, which shows that Ecbatana was still a splendid city, though it had been despoiled of many of its more costly decorations (Polyb. x. frag. 4). When the Seleucidae were driven from Upper Asia, Ecbatana became the favourite summer residence of the Arsacidae, and at the close of the first century it still continued to be the Parthian capital (Tac. *Ann.* xv. 31). When the Persians, under the house of Sassan, A.D. 226, recovered the dominion of Upper Asia, Ecbatana continued to be a favourite and secure place of residence. The natural bulwarks of Mount Zagros were never forced by the Roman legions. Consequently, as we learn from Ammianus Marcellinus, near the close of the fourth century Ecbatana continued to be a strongly fortified city. See G. Rawlinson's *Herodotus*, vol. i. p. 226 (1875); and on the site, Sir Henry Rawlinson in the *Journal of the Royal Geog. Society* for 1841.

(2) A town of Syria, in Galilaea Inferior, at the foot of Mount Carmel. Here Cambyses (q. v.) gave himself a mortal wound as he was mounting his horse, and thus fulfilled the oracle which had warned him to beware of Ecbatana (Herod. iii. 64).

Ecclesia (*ἐκκλησία*). The assembly of the people, which in Greek cities had the power of final decision in public affairs.

(1) At ATHENS every citizen in possession of full civic rights was entitled to take part in it from his twentieth year upwards. In early times one ecclesia met regularly once a year in each of the ten prytanies of the Senate (see BOULÉ); in later times four, making forty annually. Special assemblies might also be called on occasion. The place of meeting was in early times the market-place, in later times a special locality, called the Pnyx; but generally the theatre, after a permanent theatre had been erected. To summon the assembly was the duty of the Prytanes, who did so by publishing the notice of proceedings. There was a special authority, a board of six Lexiarchi (*λῃξίαρχοι*) with thirty assistants, whose business it was to keep unauthorized persons out of the assembly. The members on their appearance were each presented with a ticket, on exhibiting which, after the conclusion of the meeting, they received a payment of an *obolus* (about three cents), in later times of three obols. After a solemn prayer and sacrifice the president (*ἐπιστάτης*) communicated to the meeting the subjects of discussion. If there were a previous resolution of the Senate for discussion, he put the question whether the people would adopt it or proceed to discuss it. In the debates every citizen had the right of addressing the meeting, but no one could speak more than once. Before doing so he put a crown of myrtle on his head. The president (but no one else) had the right of interrupting a speaker. If his behaviour were unseemly, the president could cut short his harangue, expel him from the rostrum and from the meeting, and inflict upon him a fine not exceeding 500 drachmae ($83). Cases of graver misconduct had to be referred to the Senate or Assembly for punishment. Any citizen could move an amendment or counter-proposal, which he handed in writing to the presiding *πρυτανεία*. The president had to decide whether it should be put to vote. This could be prevented, not only by the mere declaration of the president that it was illegal, but by any one present who bound himself on oath to prosecute the proposer for illegality. The speaker might also retract his proposal. The votes were taken by show of hands. (See CHIROTONIA.) The voting was never secret, unless the question affected some one's personal interest, as in the case of ostracism. In such cases a majority of at least 6000 votes was necessary. The resolution (*ψήφισμα*) was announced by the president, and a record of it taken, which was deposited in the archives, and often publicly exhibited on tables of stone or bronze. After the conclusion of business, the president, through his herald, dismissed the people. If no final result was arrived at, or if the business was interrupted by a sign from heaven, such as a storm or a shower of rain, the meeting was adjourned. Certain classes of business were assigned to the ordinary assemblies.

The functions of the ecclesia were:

(*a*) To take part in legislation. At the first regular assembly in the year the president asked the question whether the people thought any alteration necessary in the existing laws. If the answer were in the affirmative, the proposals for alteration were brought forward, and in the third regular assembly a legislative commission was appointed from among the members of the Heliaea or jury for the current year. (See HELIAEA.) The members of this commission were called *νομοθέται*. The question between the old laws and the new proposals was then decided by a quasi-judicial process under the presidency of the *θεσμοθέται*, the proposers of the new law appearing as prosecutors, and advocates, appointed by the people, coming forward to defend the old one. If the verdict were in favour of the new law, the latter had the same authority as a resolution of the ecclesia. The whole proceeding was called "voting (*ἐπιχειροτονία*) upon the laws." In the decadence of the democracy the custom grew up of bringing legislative proposals before the people, and having them decided at any time that pleased the proposer.

(*b*) Election of officials. (See PROBOLÉ.) This only affected, of course, the officials who were elected by show of hands, as the strategi and ministers of finance, not those chosen by lot. In the first ecclesia of every prytany the archon asked the question whether the existing ministers were to be allowed to remain in office or not, and those who failed to commend themselves were deposed.

(*c*) The banishment of citizens by ostracism. See OSTRACISMUS.

(*d*) Judicial functions in certain exceptional cases only. (See EISANGELIA.) Sometimes, if offences came to its knowledge, the people would appoint a special commission of inquiry, or put the inquiry into the hands of the Areopagus or the Senate. Offences committed against officials or against private individuals were also at times brought before the assembly, to obtain from it a declaration that it did, or did not, think the case one which called for a judicial process. Such a declaration, though not binding on the judge, always carried with it a certain influence.

(*e*) In legal co-operation with the Senate the ecclesia had the final decision in all matters affect-

ing the supreme interests of the State, as war, peace, alliances, treaties, the regulation of the army and navy, finance, loans, tributes, duties, prohibition of exports or imports, the introduction of new religious rites and festivals, the awarding of honours and rewards, and the conferring of the citizenship.

(2) At SPARTA all the Spartiatae, or citizens in possession of full civic rights, were entitled to take part in the deliberations of the Assembly from their thirtieth year onwards. The Assembly was convoked once a month at the full moon by the kings, and later by the ephors as well. After B.C. 600 it met in a special building in the market-place at Sparta, the Scias, the members standing, not sitting, as in the Athenian ecclesia. Its business was to accept or reject proposals made by the γερουσία or Senate. (See GERUSIA.) It made its will known by acclamation, or, in doubtful cases, by separation of the parties into different places. The right of bringing forward proposals and speaking in the debates belonged only to the kings, the members of the Gerusia, and the ephors; in all other cases special consent was required. The functions of the Assembly were the election of the officials and senators to decide (in doubtful cases) on the regal succession, on war and peace, treaties, legislation, and other matters affecting the State.

Ecclesiazūsae (Ἐκκλησιάζουσαι). "The Women in Council." A comedy of Aristophanes (q. v.), in which the Athenian women are represented as getting into the Ecclesia in the guise of men and altering the Constitution. This play contains the longest word in the Greek language, an extraordinary compound of 169 letters and 77 syllables, covering six verses of the play (1169–1174).

Ecclēti (ἔκκλητοι). The name of an assembly in Sparta of which little is known. It is mentioned only by Xenophon (*Hell.* ii. 4, § 38 *et al.*).

Ecdĭcus (ἔκδικος). The name of an officer in many of the towns of Asia Minor under the Roman dominion. The word is translated in the ancient glossaries by *cognitor*, "agent" or "attorney." The ecdicus was the agent of a city in its foreign business and its relations with the central government, and especially in prosecuting its claims against debtors. In Cicero's time the office seems to have been occasional and something like that of an ambassador. Under the Empire it was placed on a permanent footing (Plin. *Ep.* x. 111). The Defensor Civitatis (q. v.) of the later Empire was also called ἔκδικος in Greek.

Ekdŏsis (ἔκδοσις). See FENUS.

Ekecheiria (ἐκεχειρία). The "truce of God" (literally, "holding of hands"), observed in Greece at the great festivals which were visited by strangers—e. g. the national games and the Eleusinia in Attica. This peace was proclaimed by heralds throughout Greece, to secure the visitors to the games freedom in passing backwards and forwards and security during the festival. In the case of the Eleusinia the truce lasted one and a half month and ten days. See Gell. i. 25, 8; and the article ELEUSINIA.

Echelĭdae (Ἐχελίδαι). A deme of Attica, east of Munychia, named after a hero Echelus.

Echĕmus (Ἔχεμος). A king of Arcadia, who slew, in single combat, Hyllus, the son of Heracles, during the Dorian invasion of the Peloponnesus. As a result of the combat, the Heraclidae (q. v.) were obliged to promise not to repeat their attempt on the Peloponnesus for fifty years (Herod. ix. 26). See HYLLUS.

Echĕtus (Ἔχετος). A king of Epirus whose daughter Metopé or Amphissa yielded to the solicitations of her lover Aechmodicus. As a punishment, Echetus blinded her and caused Aechmodicus to be castrated (*Odyss.* xviii. 85; xxi. 308).

Echidna (Ἔχιδνα). A monster and robber in Greek legends, half maiden, half snake, the daughter of Chrysaor and Callirrhoé, or, according to another story, of Tartarus and Gaea. Her home was the country of the Arimi in Cilicia, where she brought forth to Typhoeus a number of monsters, Cerberus, the Chimaera, Sphinx, Scylla, the serpent of Lerna, the Nemean lion, the vulture that devoured the liver of Prometheus, etc. (See TYPHOEUS.) She was surprised in her sleep and slain by Argus. See Herod. iv. 8–10, and the article ARGUS.

Echinădes (Ἐχινάδες νῆσοι). A group of small islands at the mouth of the Acheloüs belonging to Acarnania, said to have been formed by the alluvial deposits of the Acheloüs. They appear to have derived their name from their resemblance to the *echinus*, or sea-urchin. The largest of these islands was named Dulichium, and belonged to the kingdom of Odysseus, who is hence called Dulichius. See Herod. ii. 10.

Echīnus (ἐχῖνος). The hedgehog or sea-urchin, and hence a name for things having a similar shape. (1) A pot, pitcher, or saltcellar (Hor. *Sat.* i. 6, 117). (2) The casket, probably of a cylindrical shape, in which documents were sealed up between the ἀνάκρισις and the trial. (3) In Doric architecture, the ovolo or convex part of the capital immediately beneath the abacus (Vitruv. iv. 3 and 7).

Echīnus (Ἔχινος). A town in Thessaly on the Maliac Gulf, said to have derived its name from Echion, who sprang from the dragon's teeth. See ECHION.

Echinussa. See CIMOLUS.

Echīon (Ἐχίων). (1) One of the heroes who sprang from the dragon's teeth sown by Cadmus. (See SPARTI.) He was the husband of Agavé and father of Pentheus, who is hence called Echionides. (2) Son of Hermes and Antianira; took part in the Calydonian hunt and in the expedition of the Argonauts. (3) A distinguished Greek painter who flourished about B.C. 352. One of his pictures, representing Semiramis passing from the state of a handmaid to that of a queen, is supposed by many to be the original of the picture known as the Aldobrandini Marriage discovered at Rome in 1606 and now in the Vatican. See Woltmann and Woermann, *Hist. of Painting*, i. p. 115 (1880).

Echionius. An epithet applied to the city of Thebes as founded by the aid of Echion (Ovid, *Met.* iii. 311).

Echo (Ἠχώ). A daughter of Aër and Gaea, who chiefly resided in the vicinity of the Cephissus. She was once one of Heré's attendants; but, having offended that goddess by her deception, she was deprived, in a great measure, by her of the power of speech. Heré declared that in future she should have but little use of her tongue, and immediately she lost all power of doing any more

than to repeat the sounds which she heard. Echo happening to see the beautiful youth Narcissus, became deeply enamoured of him. But, her love being slighted, she pined away till nothing remained of her but her voice and bones. The former still exists, the latter were converted into stone (Ovid, *Met.* iii. 341 foll.).

Echoïci Versus, also called **Serpentīni**. A name given to verses in which the first words of the hexameter are repeated as the second half of the following pentameter. The name is also given to palindromes, in which the line reads the same both backwards and forwards. These trifles were composed by both the Greeks and the Romans. Martial speaks slightingly of them (*carmen supinum*, ii. 86). The following will serve as illustrations:

ἤδή μοι Διος ἄρ' ἀπάτα παρὰ σοι Διομήδη.
(Kaibel, *Epigr. Gr.* 1124.)

Roma tibi subito motibus ibit amor.
(Sidon. *Epist.* ix. 14.)

Nemo te cedis, murorum si decet omen.
(*Anthol. Lat.* 325.)

In the following, the distich read backwards, word by word, gives a second distich:

Praecipiti modo quod decurrit tramite flumen
Tempore consumptum iam cito deficiat.
(Sidon. *Epist.* ix. 14.)

These verses were also styled *analytici versus* and *reciproci versus*. Further examples will be found in Apoll. Sid. (*Epist.* viii. 11), Venantius Fortunatus, Sedulius, and among the *Poetae Latini Minores* (iv. 260–267). See Friedländer on Martial ii. 86; and for other metrical whims, the articles Abecedarii Versus; Acrosticha; Cento; Hymnus; Leonini Versus; Sotadici Versus.

Eclectĭci (*ἐκλεκτικοί*). A name given to those ancient students of philosophy who, from the existing philosophical beliefs, tried to select (*ἐκλέγειν*) the doctrines that seemed to them most reasonable, and out of these constructed a new system. (Cf. Diog. Laërt. prooem. 21.) The name was first generally used in the first century B.C. Stoicism and Epicureanism had made the search for pure truth subordinate to the attainment of practical virtue and happiness; Skepticism had denied that pure truth was possible to discover; Eclecticism sought to reach by selection the highest possible degree of probability, in the despair of attaining to what is absolutely true. In Greek philosophy, the best known Eclectics were the Stoics Panaetius (B.C. 150) and Posidonius (B.C. 75); the New Academic, Carneades (B.C. 155), and Philo of Larissa (B.C. 75). Among the Romans, Cicero, whose cast of mind made him always doubtful and uncertain of his own attitude, was thoroughly eclectic, uniting the Peripatetic, Stoic, and New Academic doctrines, and seeking the probable (*illud probabile*). The same general line was followed by Varro, and in the next century the Stoic Seneca propounded a philosophical system largely based upon eclecticism.

In the latest Greek philosophy appears an eclectic system consisting of a compromise between the Neo-Pythagoreans and the various Platonic sects. Still another school is that of Philo Iudaeus (q. v.), who at Alexandria, in the first century A.D., interpreted the Old Testament allegorically, and endeavoured to harmonize it with selected doctrines of Greek philosophy. Neo-Platonism (q. v.), the last product of Greek speculation, was also a fusion of Greek philosophy with Oriental religion. Its chief representatives were Plotinus (A.D. 230), Porphyrius (A.D. 275), Iamblichus (A.D. 300), and Proclus (A.D. 450). The desire of this school was to attain right relations between God and man; it was therefore religious.

See Ueberweg, *Hist. of Philosophy*, vol. i. pp. 217–221 (Eng. trans. N. Y. 1872); Mayor, *A Sketch of Ancient Philosophy*, pp. 212 foll. (Cambridge, 1881); Ritter, *Hist. of Ancient Philosophy*, vol. iv., first part (Eng. trans. Oxford, 1838–46); Zeller, *Hist. of Eclecticism in Gk. Philosophy* (Eng. tr. London, 1882); Levin, *Lectures on the Philosophy of Cicero* (London, 1871); Hirtzel, *Untersuchungen z. Cicero's philosoph. Schriften* (1877–83); and the article Philosophia. Cicero's *Academica* should be read, as also his *Tusculanae* (bk. iv.) and his *De Natura Deorum*.

Eclogue (*ecloga*, *ἐκλογή*). A selected piece of writing. Properly a poem taken out of a larger collection, and so applied, at the time of the Roman Empire, to a short poem, as an idyl or satire. The term was especially applied to the pastoral poems of Vergil and Calpurnius Siculus. See Bucolica.

Ekmartyria (*ἐκμαρτυρία*). The deposition of a witness, who, by reason of absence abroad or illness, was unable to attend in court. His statement was taken down in writing, in the presence of persons expressly appointed to receive it, and afterwards, upon their swearing to its identity, was read as evidence in the cause. They were said *μαρτυρεῖν τὴν ἐκμαρτυρίαν*: the absent witness, *ἐκμαρτυρεῖν*: the party who procured the evidence, *ἐκμαρτυρίαν ποιεῖσθαι*. It was considered as the testimony of the deponent himself, not that of the certifying witnesses, and therefore did not come within the description of hearsay evidence, which (except the declaration of a deceased person) was not admissible at Athens. (See Akoen Martyrein.) The deponent (like any other witness) was liable to an action for false testimony if the contents of the deposition were untrue, unless he could show that it was incorrectly taken down or forged, in which case the certifying witnesses would be liable. An *ἐκμαρτυρία* was allowed to a witness about to start on a journey, if he could not conveniently wait (Isaeus, *Or.* 3 [*Pyrrhus*], § 20). The form of *ἐκμαρτυρία*, or what purports to be such, occurs in Demosth. *c. Lacrit.* p. 929, § 20; 934, § 34.

Ecphŏra (*ἐκφορά*). See Funus.

Ectēnes (*Ἔκτηνες*). A people who, according to Pausanias, first inhabited the territory of Thebes, in Boeotia. Ogyges (q. v.) is said to have been their first king. They were exterminated by a plague, and succeeded by the Hyantes. See Pausan. ix. 5.

Ectўpus (*ἔκτυπος*), properly an adjective, "formed in a mould" (*τύπος*, *forma*), or "wrought in high relief," thus distinguished from *ἀνάγλυφος*, "in low relief." Hence (1) the noun ectypum, a cast in plaster or terra-cotta, which presents the objects in relief (Plin. *H. N.* xxxv. § 152). The accompanying examples, on the following page, are from a terra-cotta and mould in the British Museum. (2) Ectypa gemma (Sen. *Ben.* iii. 26) or *scalptura* (Plin. *H. N.* xxxvii. § 173), an engraved stone cut in relief, now called a cameo. See Caelatura; Gemma.

Eculeus, or, less correctly, **Equuleus**. An in-

Ectypum. (British Museum.)

strument of torture commonly used at Rome in extracting evidence from slaves. It was a wooden horse, as the name implies, on which the sufferer was mounted and then stretched or racked with weights or pulleys (Sen. *Ep.* 67, § 3). Rich (s. v.) thinks that the infliction consisted in being seated on a sharp point, as in impalement — a form of cruelty not unknown in recent times, of which he gives a specimen. Very little is really known about this and the other engines of torture among the Greeks and Romans. Cicero says that slaves accused of murder might expect the eculeus at the trial, the *crux* on conviction (*Pro Mil.* 21, § 57; 22, § 60). Seneca mentions as the usual modes of torture, *fidiculae, talaria, eculeus,* and *ignis* (*De Ira,* iii. 19, § 1). Rich supposes the criminal to have been made to sit upon a sharp point with weights attached to his arms and legs, as shown in the illustration here given, representing an instrument of torture formerly used at Mirandola in Italy and, curiously enough, called "the colt" (*il cavaletto*). See CRUX; FIDICULA; FLAGELLUM; TORMENTUM.

Supposed form of Eculeus. (Rich.)

Edessa (Ἔδεσσα). (1) Also called Antiochia Callirrhoé (Old Test. UR), a very ancient city in the north of Mesopotamia, the capital of Osroëné, and the seat of an independent kingdom from B.C. 137 to A.D. 216. (See ABGARUS.) Here Caracalla was murdered, A.D. 217. In Christian times, Edessa was celebrated for its schools of theology. (2) A city of Macedonia, once the capital and the burial-place of the kings (Plut. *Pyrrh.* 26).

Edetāni or Sedetāni. A people in Hispania Tarraconensis, east of the Celtiberi (Liv. xxiv. 20). They possessed the celebrated cities of Caesaraugusta (Saragossa), Saguntum (Murviedro), and Valentia (Valencia).

Edfou (Edfu); in Egyptian, *Teb;* in Coptic, *Atbô;* called also APOLLINOPŎLIS MAGNA. A town of Upper Egypt on the left bank of the Nile. It was founded by Ptolemy IV. (Philopator) in the third century before Christ, and is famous for the remains of two temples, the larger of which is the best preserved of any in Egypt. An illustration of it is given on page 26. Its length is 451 feet, and the breadth of its façade, 250 feet. It is entered by a gateway 50 feet in height between two immense truncated pylons 115 feet high, the whole surface being covered with sculptures and inscriptions in bas-relief. See Mariette, *Monuments of Upper Egypt* (1877); Lepsius, *Denkmäler aus Aegypten und Aethiopen* (1849–60); and Brugsch, *Reiseberichte.*

Edictum. The Roman term for any written announcement made by a magistrate to the people. An *edictum* was sometimes temporary only—as, e. g., the announcements of the public assemblies or games; sometimes it contained permanent enactments—as, for instance, the *edicta* of the censors against luxury. The name was especially applied to the proclamations issued by judicial functionaries on assuming office, and stating the principles or rules which they intended to follow in the exercise of their authority. The *edicta* of the ædiles relative to the markets belong to this class. One kind of *edictum* was specially important in its bearing upon Roman law, the *edictum* of the praetor. In his *edictum* the praetor laid down the rules which he would observe in arranging the proceedings of the regular courts and of his voluntary jurisdiction, and in deciding cases which did not appear to be covered by the written enactments of the Twelve Tables or later legislation. These *edicta,* written on wood, stone, or bronze, were in early times published only as occasion required, but in later times the praetors regularly promulgated them on entering upon their office. They prevented the fossilization of the law, and allowed the enactments of the Twelve Tables to adapt themselves in natural development to the changing circumstances of civic life and intercourse. It is true that the *edicta* had no force beyond the praetor's year of office, but, as every new praetor observed what was found in the *edicta* of his predecessors, a permanent nucleus of constantly repeated rules, called *edictum perpetuum* ("continuous edict"), was formed in course of time. This became, for the later period, a recognized source of customary law, side by side with the *leges* proper. At length, under Hadrian, the mass of *edicta* was reduced to system by Salvius Iulianus, and received the force of law at the imperial command. This body of law included the accepted *edicta* of the *praetor urbanus* and the other praetors administering law in the provinces, of the proconsuls, propraetors, and ædiles. It was called *edictum perpetuum, ius praetorium,* or *ius honorarium*—the latter because its authors had held public offices (*honores*). On this collection the *Corpus Iuris* of Justinian is in great part founded. The emperor and imperial officials, as *praefectus urbi* and *praefectus praetorio,* had also the right of issuing *edicta.* See CORPUS IURIS.

Edictum Theodorīci. The first collection of law that was made after the downfall of the Roman power in Italy. It was promulgated by Theodoric, king of the Ostrogoths, probably on his visit to Rome in A.D. 500, though some authorities fix the date after 506. It consists of 154 chapters (besides a prologue and epilogue), parts of which may be traced to the Code and Novellae of Theodosius II., to the Codices Gregorianus and Hermogenianus, and to the *Sententiae* of Paulus; and, though it was doubtless drawn up by Roman writers, the original sources are more disfigured and altered than in any other compilation. Though the Ostrogothic kingdom was in point of fact quite inde-

pendent of the Eastern Roman Empire, in constitutional theory it was considered part of it, the king representing the Caesar, and his army being reckoned a portion of the emperor's forces; consequently the Roman law was still held binding in Italy, for the barbarian invaders no less than for the old inhabitants. Hence the Edict of Theodoric, so far as it went, was intended as law for both nationalities; but where it had made no change in the Gothic rules, the latter were still applied to the barbarians, while the Roman law was to prevail for the Romans in those cases to which the Edict was not applicable. After Narses had again united Italy to the empire of Justinian, the latter's legislation was established in Italy (A.D. 554), and the Edict of Theodoric had no longer any authority.

This edict was first printed in the edition of Cassiodorus by Nivellius (Paris, 1579), and there is an edition by G. F. Rhon (Halle, 1816). Cf. also Von Glöden, *Das römische Recht im ostgothischen Reich* (1843); Hänel, *Lex Rom. Visig.* (1847); and Rudorff, *Röm. Rechtsgeschichte*, i. 288, 303. Hodgkin, *Italy and her Invaders*, iii. p. 342, gives the prologue and epilogue and an analysis of the contents of the Edict.

Editio Princeps. A name given to the first printed edition of any classical author. The *editio princeps* often has a special value to text-critics in that its text is sometimes derived from a MS. that has since been lost. The oldest printed edition of any classic is that of the *De Officiis* of Cicero, which appeared at Mainz in 1465. Soon after the invention of printing (about 1440), the great publishing houses of Aldus Manutius (son and grandson, 1449–1597) in Venice, of Giunta in Florence, and others in Switzerland, Germany, France, and the Low Countries, sent out printed copies of the ancient texts with commentaries and grammars, as well as Latin translations of Greek authors, thus aiding in the revival of letters known as the Renaissance. Many of the *editiones principes* are not dated; sometimes the date is given in a chronogram (see CHRONOGRAM) in the preface. (See Hilson, *Chronograms* [London, 1882], and id. *Chronograms Continued* [London, 1885]). The place of publication is usually in its ancient or mediæval Latin form, but sometimes in Greek (as Enetiai for Venice), and rarely in Slavonic (as Bnezieh, Mnezik, or Mletka, for the same place). For the benefit of the student, the following list is given, comprising the names oftenest found on the title-pages of early editions: ARGENTORĀTUM (Strassburg); AUGUSTA or AUGUSTA VINDELICŌRUM (Augsburg); BASILĒA (Basel, Bâle); BIPONTUM (Deux Ponts, Zweibrücken); BONONIA (Bologna); CADOMUM (Caen); CAESARAUGUSTA (Saragossa); CANTABRĬGA (Cambridge); CORŌNA (Cronstadt); DORTRĀCHUM (Dort, Dordrecht); EBORĀCUM (York); ELEUTHEROPŌLIS or FRANCAVILLA (Freystadt); GRATIANOPŌLIS (Grenoble); HAFNIA or HAUNIA (Copenhagen); HALA (Halle); HERBIPŌLIS (Würzburg); HOLMIA (Stockholm); INSŬLA or INSULAE (Lille); ISPALIS (Seville); LEODĬCUM (Liège); LIPSIA (Leipzig); LUGDŪNUM (Lyons); LUGDUNUM BATAVORUM (Leyden); LUTETIA (Paris); MASSILIA (Marseilles); MATISCO (Macon); MEDIOLĀNUM (Milan); MOGUNTIĂCUM (Mainz, Mayence); MONS REGĀLIS (Mondovì); MUSSĬPONS or PONTIMUSSUM (Pont-à-Musson); NĒAPŎLIS (Naples); NEAPŎLIS CASIMIRIĀNI (Neustadt); OENĬPONS (Innsbruck); OLISĬPO, ULYSSĬPO, or ULYSSIPŎLIS (Lisbon); OXONIA (Oxford); PETROPŎLIS (St. Petersburg); PROBATŌPOLIS (Schaffhausen); REGIOMONTIUM (Königsberg); ROTOMĂGUS (Rouen); SARUM (Salisbury); TARVISIUM (Treviso); TOURNĂCUM (Tournai); TRAIECTUM, TRAIECTUM RHENI, or ULTRAIECTUM (Utrecht); TRECAE or CIVĬTAS TRICASSŌNA (Troyes); TRIDENTUM (Trent); TURŌNI or CAESARODŪNUM (Tours); VENETIA or ENETIAI (Venice). See Deschamps, *Dictionnaire de Géographie à l'Usage du Libraire* (Paris, 1870).

Greek type (very imperfect) was first used in the edition of the *De Officiis* mentioned above. The first edition of a work in Greek minuscules was an edition of the grammar of Lascaris by Paravinus (Milan, 1476). In 1494 the *Anthologia Graeca* of Lascaris appeared at Florence, printed wholly in Greek capitals. The first edition of a classical Greek author is that of the *Idyls* of Theocritus (i.–xviii.), with the *Works and Days* of Hesiod, which was published in 1481.

The following list of the most famous of the *editiones principes* is taken from Gudeman's valuable *Outlines of the History of Classical Philology* (Boston, 1894):

GREEK.

1481. Theocritus (bks. i.–xviii.), together with Hesiod, *Works and Days*.
1488. Homer (ed. Chalcondylas). (Valla's Latin transl. of the *Iliad* was printed as early as 1474.)
1495. Hesiod, Opera omnia (Aldus).
1495–98. Aristotle (Aldus).
1496. Euripides, *Medea*, *Hippolytus*, *Alcestis*, *Andromaché* (I. Lascaris); Apollonius (Lascaris); Lucian (Florence).
1498. Aristophanes (except *Lysistrata* and *Thesmophoriazusae*), Opera omnia (Basle, 1532).
1499. Aratus (in *Astronomi Vett. ap.* Aldum).
1500. Callimachus, *Hymns* (Lascaris).
1502. Herodotus, Thucydides, Sophocles (Aldi).
1503. Euripides, Opera (except *Electra*, edit. by Victorius [1545], from Cod. Laurent. xxxii. 2).
1513. Plato, Oratt. Att. [Hyperides, papyrus discovered 1847]; Pindar (together with Callim., Dionys. Perieg., Lycophron) (Aldus).
1514. Athenaeus (Aldus).
1516. Xenophon (except *Agesilaüs*, *Apologia*, Πόροι [Iunta]); Opera omnia, 1525, ap. Aldum; Strabo (transl. printed in Rome, 1470); Pausanias.
1518. Aeschylus (Aldus).
1530. Polybius (by Vincent. Opsopocus, i. e. Koch). Latin transl. by Nic. Perrotto (bks. i.–v.), printed 1473.
1533. Diogenes Laërtius (Froben, Basle).
1539. Diodorus (bks. xvi.–xx.). Latin transl. (bks. i.–v.) by Poggio, 1472.
1544. Josephus (Basle).
1548. Dio Cassius (R. Stephanus).
1551. Appian.
1572. Plutarch (H. Stephanus). Latin transl. by Campanus (1471).

LATIN.

1465. Cicero, *De Officiis* (Mainz); Lactantius (Rome).
1469. Caesar, Vergil, Livy, Lucan, Apuleius, Gellius (Rome).
1470. Persius, Juvenal, Livy, Martial, Quintilian (Rome); Tacitus, Juvenal, Sallust, Horace (Venice); Terence (Strassburg).
1471. Ovid (Rome and Bonn); Nepos (Venice).

1472. Plautus (G. Merula), Catullus, Tibullus, Propertius, Statius (Venice).
1473. Lucretius (Brescia).
1474. Valerius Flaccus (Bonn).
1475. Seneca's Prose Works.
1484. Seneca's Tragedies (Ferrara).
1485. Pliny the Younger (Venice).
1498. Ciceronis Opera omnia.
1520. Velleius Paterculus (Basle).

BIBLIOGRAPHY. — See Saxe, *Onomasticon* (1775–1790); Schweiger, *Handbuch d. class. Bibliographie* (1830–34); Hain, *Repertorium Bibliographicum*, 4 vols. (1838); Hoffman, *Lexicon Bibliographicum*, for Greek authors only, 3 vols. (1832); Brunet, *Manuel du Libraire* (1880); Egger, *Histoire du Livre* (Paris, no date); Bouchot, *The Printed Book* (1887); Sotheby, *Principia Typographica* (1858); Berjeau, *Early Printers' Marks* (1866); Silvestre, *Marques Typographiques* (1867); Brunet, *Connaissances Nécessaires à un Bibliophile* (1872); Legrand, *Bibliographie Hellénique* (1885); Hawkins, *First Books and Printers of the Fifteenth Century* (N. Hessels, vol. xxiii. pp. 681–697; and the articles LEXICON; LIBER; MANUTIUS; STEPHANUS, in this Dictionary.

Edōni (Ἤδωνοι) or **Edōnes** (Ἤδωνες). A Thracian people, between the Nestus and the Strymon, celebrated for their orgiastic worship of Bacchus; whence Edonis in the Latin poets signifies a female Bacchanal, and Edonus is used as equivalent to Thracicus.

Education. (1) GREEK. The Dorians of Crete and Sparta followed a peculiar line in the matter of education. Throughout Greece generally the State left it to private effort, but in Sparta and Crete it came under the direct supervision of the community. At Sparta, as soon as a child was born, a commission of the elders of its tribe had to decide whether it should be reared or exposed. If it was weakly or deformed it was exposed in a defile of Mount Taÿgetus. Till his seventh year a boy was left to the care of his parents. After this the παιδονόμος, or officer presiding over the whole department of education, assigned him to a division of children of the same age called a βοΰα. Several of such βοῦαι together formed a troop or ἴλη (Dor. ἴλα). Each βοΰα was superintended by a βουαγός, each ἴλη by an ἰλάρχης. Both these officers were elected from among the most promising of the grown-up youths, and were bound to instruct the children in their exercises. The exercises were calculated to suit the various ages of the children, and consisted in running, leaping, wrestling, throwing the spear and the discus, as well as in a number of dances, particularly the war dance or πυρρίχη (q. v.). The dancing was under the constant superintendence of the παιδονόμος and five βιδιαῖοι under him. The discipline was generally directed to strengthening or hardening the body. The boys went barefoot and bareheaded, with hair cut short, and in light clothing. From their twelfth year they wore nothing but an upper garment, which had to last the whole year. They slept in a common room without a roof, on a litter of hay or straw, and from their fifteenth year on rushes or reeds. Their food was extremely simple, and not sufficient to satisfy hunger. A boy who did not want to be hungry had to steal; if he did this cleverly he was praised, and punished if detected. Every year the boys had to undergo a flogging at the altar of Artemis Orthia, as a test of their power to endure bodily pain. They were whipped till the blood flowed, and deemed it a disgrace to show any sign of suffering. (See BOMONIKES; DIAMASTIGOSIS.) Reading and writing were left to private instructors; but music, and choral singing in particular, formed a part of the regular discipline. The understanding was assumed to be formed by daily life in public and the conversation of the men, to which the boys were admitted. Every Spartan boy looked up to his seniors as his instructors and superiors, the consequence being that in Sparta the young behaved to their elders with more modesty and respect than in any other Greek city. Besides this, every man chose a boy or youth as his favourite. He was bound to set the boy an example of all manly excellence, and was regarded as responsible and punishable for his delinquencies. This public education and the performance of the regular exercises, under the superintendence of the βιδιαῖοι, lasted till the thirtieth year. In the eighteenth year the boy passed into the class of youths. From the twentieth year, when military service proper began, to the thirtieth, the youth was called an εἴρην or ἰρήν. He was not regarded as a man or allowed to attend the public assembly till his thirtieth year.

The girls had an education in music and gymnastic exercises similar to that of the boys, and at the public games and contests each sex was witness of the performances of the other. The girls' dress was extremely simple, consisting of a sleeveless tunic reaching not quite down to the knees and open at the sides. In this, however, there was nothing which interfered with modesty and propriety of behaviour.

In Crete the system of education was generally similar to that of Sparta. But the public training did not begin till the seventeenth year, when the boys of the same age joined themselves freely into divisions called ἀγέλαι, each led by some noble youth, whose father was called ἀγελάτας and undertook the supervision of the games and exercises. It is probable that the young men remained in this organization till their twenty-seventh year, when the law compelled them to marry.

At Athens, as in Greece generally, the father decided whether the child should be reared or exposed. The latter alternative seems to have been not seldom adopted, especially when the child was a girl. If the education of a child was once fairly commenced the parents had no power to put it out of the way. At the birth of a boy the door of the house was adorned with a branch of olive; at the birth of a girl, with wool. On the fifth or seventh day after birth the child underwent a religious dedication at the festival of the Amphidromia ("running round"). It was touched with instruments of purification, and carried several times round the burning hearth. On the tenth day came the festival of naming the child, with sacrifice and entertainment, when the father acknowledged it as legitimate. To the end of the sixth year the boys and girls were brought up together under female supervision, but after this the sexes were educated apart. The girl's life was almost entirely confined to her home: she was brought up under the superintendence of women and with hardly anything which can be called profitable

instruction. The boy was handed over to a slave older than himself called *παιδαγωγός*. It was the slave's duty to watch the boy's outward behaviour, and to attend him, until his boyhood was over, whenever he went out, especially to the school and the gymnasium. The laws made some provision for the proper education of boys. They obliged every citizen to have his son instructed in music, gymnastics, and the elements of letters (*γράμματα*) —i. e. writing, reading, and arithmetic. They further obliged the parents to teach their boys some profitable trade, in case they were unable to leave them a property sufficient to maintain them independent. If they failed in this, they forfeited all claim to support from the children in old age. But with schools and their arrangements the State did not concern itself. The schools were entirely in private hands, though they were under the eye of the police. The elementary instruction was given by the *γραμματισταί*, or teachers of letters, the teacher writing and the scholars copying. The text-books for reading were mostly poems, especially such as were calculated to have an influence on the formation of character. The Homeric poems were the favourite reading-book, but Hesiod, Theognis, and others were also admitted. Collections of suitable passages from the poets were early made for the boys to copy, learn by heart, and repeat aloud. The higher instruction given by the *γραμματικός* was also of this literary character.

Mathematics were introduced into the school curriculum as early as the fifth century, drawing not till the middle of the fourth century B.C. Instruction in music proper began about the thirteenth year. The profound moral influence attributed to music in Greek antiquity made this art an essential part of education. It brought with it, naturally, an acquaintance with the masterpieces of Greek poetry. The instrument most practised was the lyre, from its suitableness as an accompaniment to song. The flute was held in less esteem. See MUSICA.

The aim of education was supposed to be the harmonious development of mind and body alike. Instruction in gymnastics was consequently regarded as no less essential than in music, and began at about the same age. It was carried on in the *παλαίστρα* under the *παιδοτρίβαι*, who were, like the *γραμματικοί*, private, not public, instructors. The boys began their gymnastics in the palaestra, and completed them in the gymnasia under the superintendence of the *γυμνασταί*. The *ἔφηβοι*, in particular, or boys between sixteen and nineteen, practised their exercises in the gymnasia, till, in their twentieth year, they were considered capable of bearing arms and employed on frontier service. At this point they became liable to enlistment for foreign service, and obtained the right of attending the meeting of the public assembly. Towards the end of the fifth century B.C. the class of *σοφισταί*, or professors of practical education, arose. These gave the young men an opportunity of extending their education by attending lectures in rhetoric and philosophy, but the high fees charged by the sophists had the effect of restricting this instruction to the sons of the wealthy.

(2) ROMAN. Among the Romans the father was free, when the new-born child was laid before him, either to expose it, or to take it up as a sign that he meant to rear it. He had also the right of selling his children or putting them to death. It was not till the beginning of the third century A.D. that the exposure of children was legally accounted murder, nor did the evil practice cease even then. If the child was to be reared, it was named, if a boy, on the ninth day after birth, if a girl, on the eighth. The day was called *dies lustricus*, or day of purification. A sacrifice in the house, accompanied with a feast, gave to the child's life a religious dedication. A box with an amulet was hung round the child's neck as a protection against magic. (See AMULETUM; BULLA.) Official lists of births were not published until the second century after Christ. In earlier times, in the case of boys, the name was not formally confirmed until the assumption of the *toga virilis*. The child's physical and moral education was, in old times, regularly given at home under the superintendence of the parents, chiefly the mother. The training was strict, and aimed at making the children strong and healthy, religious, obedient to the laws, temperate, modest in speech and action, strictly submissive to their superiors, well-behaved, virtuous, intelligent, and self-reliant. The girls were taught by their mothers to spin and weave. The boys were instructed by their fathers in ploughing, sowing, reaping, riding, swimming, boxing, and fencing; in the knowledge necessary for household management; in reading, writing, and counting; and in the laws of the country. The Romans did not, like the Greeks, lay stress on gymnastics, but only carried physical exercises to the point necessary for military service. The contests and exercises took place in the Campus Martius, which, down to the time of the Empire, was the favourite arena of the youths. The State took as little care of mental as of physical education. If a man could not educate his children himself, he sent them to a master. From an early time there were elementary teachers (*litteratores*) at Rome, corresponding to the Greek *γραμματισταί*. These were sometimes slaves, who taught in their masters' houses for their benefit. Sometimes they were freedmen, who gave instruction either in families or in schools (*schola* or *ludus*) of their own. They received their salary monthly, but only for eight months in the year — no instruction being given between June and November. Boys and girls were taught together. The elementary instruction included reading, writing, and arithmetic; arithmetic being, as among the Greeks, practised by counting on the fingers. In later times grown-up boys learned arithmetic with a special master (*calculator*), who was paid at a higher rate than the *litterator*. With the duodecimal system in use arithmetic was regarded as very difficult. (See MATHEMATICA.) The reading-lessons included learning the Twelve Tables by heart.

After the Second Punic War it became usual, at first in single families, and afterwards more and more generally, to employ a *litterator*, or *grammaticus*, to teach Greek. The chief element in this instruction was the explanation of Greek poets, above all of Homer, whose writings became a school-book among the Romans as among the Greeks. At the same time higher instruction was given in Latin as well, the text-books being the Latin *Odyssey* of Livius Andronicus, the works of Terence, and in later times of Vergil, Horace, and others. The exposition of these authors gave an opportunity of communicating a variety of information. Girls were educated on the same lines. The highest point in Roman education was attained by the

schools of the rhetoricians, which came into existence before the end of the republican age. In these schools, as in those of the *grammatici*, Greek was at first the only language taught. Since the time when Greek literature became the highest educational standard, boys, and sometimes girls, were taught Greek from their earliest years. They were put into the hands of a Greek *paedagogus* or a Greek female slave, and learned the first rudiments from Greek schoolmasters. As the range of subjects widened so as to include, among other things, music and geometry, more importance came to be attached to scholastic education. This tendency was strengthened by the increased demand for Greek culture which manifested itself under the Empire throughout the length and breadth of the Western provinces. Education was carried out on stricter lines as the old system of home-training disappeared, mainly owing to the diffusion of an effeminate refinement and the parents' habit of putting their children into the hands of Greek slaves.

The ordinary educational course generally concluded with a boy's sixteenth or seventeenth year, though rhetorical instruction was sometimes continued far beyond this limit; and towards the end of the republican age young men of intellectual ambition would often go to Greece to enlarge their sphere of culture.

On the 17th of March, the festival of the Liberalia, boys who had reached the age of puberty, or their fifteenth year, took off, in the presence of the Lares, their *bulla* and *toga praetexta*, or purple-edged toga, and put on the unadorned *toga virilis*. They were then, after a sacrifice at home, taken by their fathers or guardians, accompanied by friends and relations, to the Forum and enrolled in the lists of citizens. The boys were from this time, in the eyes of the law, capable of marriage, bound to military service, and, in fact, had now entered upon their *tirocinium*, which was regarded as the last stage of education. See TIROCINIUM.

After the time of Vespasian the higher public instruction began to be a matter of imperial concern. Vespasian paid away the sum of $4250 annually to the Latin and Greek rhetoricians in Rome. Hadrian founded the Athenaeum, the first known public institution for the higher education, with salaried teachers. (See ATHENAEUM.) After his time philosophers, rhetoricians, and grammarians were publicly appointed to lecture in all the larger cities of the Empire. They were maintained partly at the expense of the respective communities, partly by the emperors, and enjoyed in all cases certain immunities conferred by the State.

(3) THE HIGHER EDUCATION.—In the days of the Roman Empire there existed at Athens and some of the other Greek cities what closely corresponded to the universities of modern times. Athens had always been what Pericles called "the school of Greece;" and in the early centuries of the Christian era it contained an organized faculty (*χορός*, *συνουσία*, *ἀγέλη*) of accomplished professors, who lectured to a body of students drawn from every quarter of the civilized world. The university at Athens was gradually formed as the result of two previously existing institutions—the Ephebi (*ἔφηβοι*) and the schools of the philosophers and sophists. The Ephebi, or free Athenian youths, were in early times enrolled as a body primarily intended for the defence of the State. They were educated both physically and mentally, and they formed the nucleus of what afterwards became the student body of the university. Two changes in the constitution of the Ephebi prepared the way for their transformation from a quasi-military body into a university. These changes were (1) the neglect of the principle of compulsory enrollment, and (2) the fact that membership ceased to be confined to Athenians or even to Greeks alone.

These changes left a body of young men, organized and regularly enrolled, free to follow such a course of training as best suited their inclinations and capacities, and ready to be turned to any line of study that had the advocacy of brilliant, energetic, and popular men. The schools of the philosophers supplied the influence necessary for completing the change from a military college to a great university.

Four schools of philosophy had, since the time of the Macedonian wars, been flourishing at Athens. These were the Academic or Platonic School, the Peripatetic or Aristotelian School, the Stoic School, and the Epicurean. Each of these schools from the time of its foundation had received an endowment sufficient to maintain and perpetuate it. Plato (q. v.) had purchased a small garden near the Eleusinian Way, in the grove of Academé, for 3000 drachmas. His philosophic successors, Xenocrates and Polemon, continued to teach in the same spot; their wealthy pupils and other friends of learning added to the grounds, and bequeathed sufficient funds for the support of the philosopher, and thus practically endowed an academic chair (*θρόνος*). Later we find that the endowment of this chair had so increased that its annual income was 7000 *aurei*. In like manner Aristotle (q. v.) left to his successor, Theophrastus, the valuable property near the Ilissus; and Theophrastus, in the will whose text has come down to us in Diogenes Laërtius (v. 2, 14), completed the permanent endowment of the Peripatetic chair. So Epicurus left his property in the Ceramicus to be the nucleus of an endowment for his school (Diog. Laërt. xx. 10), and the Stoics were probably in like manner made independent. Around these four schools of philosophy which, being endowed, taught gratuitously, a multitude of teachers of rhetoric, grammar, literature, logic, physics, and mathematics clustered, and many chairs were endowed by the Roman emperors. The world soon learned to think of Athens as a great seat of learning and culture, brilliant and renowned. Students flocked to her from every quarter of the world. It appears to have been necessary to become enrolled among the Ephebi, but the scholars selected for themselves their own instructors, and attended such lectures as they chose. The number of these students became enormous. Theophrastus alone lectured to as many as two thousand men. The records show the names of many foreign students, some of them being of the Semitic race. The most noted writers of Rome had studied at this university, of whom Cicero, Ovid, and Horace are perhaps the most brilliant names. The customs of the university may be gathered from a perusal of the works of Aulus Gellius, Libanius (A.D. 314), and Philostratus, author of the *Βίοι Σοφιστῶν* (A.D. 250). From these sources we learn that matriculation took place early in the year; that the students wore a gown (*τρίβων*) like that of the undergraduates at the English universities; that they pursued athletic

sports with much ardour; that at the theatre a special gallery was reserved for them; that certificates of attendance at the courses of lectures were required; that they were under the general direction of a president (κοσμητής); that fees were exacted in the shape of an annual contribution to the university library; that breaches of discipline were punished, as at Oxford, by fines; that the relation between student and professor was very close, so that for a student to cease to take a course was very cutting; and that the students themselves "touted" for the professors. "Most of the young enthusiasts for learning," says Gregory Nanzianzen, "become mere partisans of their professors. They are all anxiety to get their audiences larger and their fees increased. This they carry to portentous lengths. They post themselves over the city at the beginning of the year; as each new comer disembarks he falls into their hands; they carry him off at once to the house of some countryman or friend who is best at trumpeting the praises of his own professor" (Libanius, i. 13).

Private tutors (φύλακες) were often employed. They looked over the students' notes, "coached" them on the subjects in which they were most interested, and helped them at their exercises. At the end of the year there seems to have been an examination (δοκιμασία).

Freshmen appear to have been subject to a sort of hazing (τελεταί). Gregory, in a funeral address over his friend Basil, recalls some of the memories of their sport with freshmen. We find one of the professors, Proaeresius, asking his class not to haze a new student, Eunapius, because of his feeble health. Sometimes the inferior officers of the university were subjected to similar annoyances, and Libanius tells of one of the tutors who was tossed in a blanket, an exercise known to the Romans as *sagatio*.

Many of the coincidences between ancient and modern university life are interesting. The following is a quotation from Libanius, who gives an account of how his classes conducted themselves:

"I send my proctor to summon the students to my lecture, but they are in no mood to hurry, though they ought to be. They stay outside to sing songs which we have all heard till we are tired, or else amuse themselves with foolish merriment and jesting. This they do until the lecture has actually begun. Then they come in and keep whispering to one another, to the annoyance of the real students, about the races, or actresses, or opera-dancers; or about some contest either past or future." And he adds, very naïvely, "I had a very different class of students once. Perhaps some one may say that the fault is mine, and that my lectures are not as good as they used to be; but some of my best students now do not think so; they declare solemnly that I now quite surpass myself; and that while my lectures were always admirable, there is more in them now than there ever was before" (i. 199).

Schools of philosophy and letters similar to those at Athens sprang up at other great cities in the later Roman Empire — at Constantinople, at Rhodes, at Scepsis in the Troad, Massilia (Marseilles), Tarsus, and especially at Alexandria, which last city was definitely designed by the Ptolemies to be a centre of scientific research and investigation, to which end they gave it a magnificent library (see BIBLIOTHECA), handsome buildings, and ample endowments.

Eedna (τὰ ἔεδνα). See MATRIMONIUM.

Eëtion (Ἠετίων). King of the Hypoplacian Thebé, in Cilicia, and father of Andromaché, the wife of Hector. See ANDROMACHÉ.

Effigies. See IMAGINES.

Effractor (τοιχωρύχος, *effractarius*). A burglar. As the name τοιχωρύχος implies, the Greek burglar sought to effect an entrance through the wall of a house, rather than through the doors or windows. (See DOMUS, p. 538.) In Attic law he was reckoned among the κακοῦργοι whose crimes were capital (Demosth. *c. Lacrit.* p. 940, § 47); the summary processes called ἀπαγωγή and ἐφήγησις were available against him; he is often coupled with the λωποδύτης (e. g. Aristoph. *Plut.* 165), both offences being hedged in with special penalties because they were so easy to commit. The midnight terrors of a rich miser behind his flimsy walls are amusingly depicted by Lucian (*Gall.* p. 748, Reitz). See KLOPES DIKÉ.

The Romans did not shrink from capital punishments, at least under the Empire; and yet the crime of *effractio* was not visited with death, as among the Greeks. Their houses were better built than those of the Greeks, and thus they did not legislate under the influence of panic. The penalty was hard labour for life (*opus perpetuum*), and for burglary by night, in the mines (*poena metalli*). The trial was before the *praefectus vigilum*, or chief of police (Sidon. Apollin. *Ep.* ix. 7; *Dig.* 1, 15, 1).

Egeria. A Roman goddess of fountains, who was also a goddess of birth, and possessed the gift of prophecy. It was from her fountain, in the sacred enclosure of the Camenae, before the Porta Capena in Rome, that the Vestal Virgins brought the water necessary for the baths and purifications of their office. There was another fountain of Egeria in the precincts of Diana at Aricia. In Roman legend, Egeria was the consort and counsellor of King Numa, who used to meet her in a grotto in the precincts of the Camenae. After the death of her lover she fled to the shrine of the Arician Diana, by whom, as her wailings disturbed the worship,

she was changed into the fountain which bore her name. Married women worshipped her at Rome as a goddess of childbirth.

Egesta. See SEGESTA.

Egnatia. A town in Apulia on the coast of Italy. It was celebrated for its miraculous stone or altar, which of itself set on fire frankincense and wood—a prodigy which afforded amusement to Horace and his friends, who looked upon it as a mere trick (*Sat.* I. v. 98). Egnatia was situated on the high-road from Rome to Brundisium, which from Egnatia to Brundisium bore the name of the Via Egnatia. The continuation of this road on the other side of the Adriatic from Dyrrhachium to Byzantium also bore the name of Via Egnatia. It was the great military road between Italy and the East. Commencing at Dyrrhachium, it passed by Lychnidus, Heraclea, Lyncestis, Edessa, Thessalonica, Amphipolis, Philippi, and traversing the whole of Thrace, finally reached Byzantium. Egnatia is called Gnatia in Horace by a popular contraction like that which gives us "Frisco" for San Francisco.

Egnatii. A Roman family of Samnitic origin. (1) GELLIUS EGNATIUS. A leader of the Samnites in the Third Samnite War. He fell in battle against the Romans in B.C. 295. (2) MARIUS EGNATIUS. A general of the Italian allies in the Social War, who was killed in battle, B.C. 89. (3) M. EGNATIUS RUFUS. A Roman of some note who was aedile in B.C. 20, and praetor in the following year. Having conspired against Augustus, he was put to death in B.C. 18. (4) P. EGNATIUS CELER. A Stoic philosopher, the teacher of Barea Soranus (q. v.), who was the chief witness against his upright pupil when accused of treason under Nero. See Juv. iii. 116, with Mayor's note.

Egypt. See AEGYPTUS.

Eicosté (*εἰκοστή*). A customs duty of one-twentieth (five per cent.) upon all commodities exported or imported by sea in the States of the allies subject to Athens. This tax was first imposed in B.C. 413–412, in the place of the direct tribute (*φόρος*) which had up to this time been paid by the subject allies; and the change was made with the hope of raising a greater revenue (Thuc. vii. 28). This tax, like so many others, was farmed, and the farmers of it were called *εἰκοστολόγοι*.

Eidothea (*Εἰδοθέα*). A sea-goddess, daughter of Proteus (q. v.), the old man of the sea (Hom. *Od.* iv. 366).

Eidyllia. See IDYLLIUM.

Einsiedeln Poems. A name given to the extensive fragments of two bucolic poems in Latin of unknown authorship, contained in a MS. of the tenth century found at Einsiedeln. One has forty-nine hexameters and the other thirty-nine. The first is a poetical contest and the second a dialogue. The last line of the second poem is that of Verg. *Ecl.* iv. 10. Both poems praise Nero in a fulsome vein. For criticism see Bücheler in the *Rhein. Museum*, xxvi. 235; and Peiper in the preface to his *Senecae Trag.* suppl. (Breslau, 1870). The style resembles that of Calpurnius (q. v.).

Eïon (*Ἠιών*). A town in Thrace, at the mouth of the Strymon, twenty-five stadia from Amphipolis, of which it was the harbour (Thuc. iv. 102).

Eiren or **Iren** (*εἴρην, ἴρην*). The third class of Spartan youth with regard to age, the series being: *παῖδες* (aged 7–18), *μελλίρανες* (18–20), *ἴρανες* (20–30). The last were distinguished again as *πρωτίρανες* or *σφαιρεῖς*, according as they were near the lower or upper limit (Plut. *Lyc.* 17). The boys and youths forming a *βούα* or *ἴλα* chose as their leader (*βουαγός*) the wisest and bravest of the *ἴρανες* (Plut. ib.; Xen. *Rep. Lac.* ii. 11). These leaders excepted, the *ἴρανες* partook with their elders of the common meal (*ἀνδρεῖα*). See Müller, *Dorians*, ii. 315; Gilbert, *Staatsalterth.* i. pp. 68, 71; and the article EDUCATION; on the form of the word, see Kuhn's *Zeitschr.* viii. 53; *Philol.* x. 431; and Curt. *Stud.* iv. 1, 116.

Eirênê (*Εἰρήνη*). See IRENÉ.

Eiresiônê (*εἰρεσιώνη*). See PYANEPSIA.

Eisagōgeis (*εἰσαγωγεῖς*). In Attic law, a term which denotes (1) the name of any ordinary magistrates to whom application was made for the purpose of bringing a case (*εἰσάγειν*) into the proper court; and (2) particular magistrates, probably ten in number, chosen by lot to try (*εἰσάγειν*) some sorts of *ἔμμηνοι δίκαι*. See EMMENOI DIKAI; and the *Corp. Inscript. Gr.* i. 37, 38.

Eisangelia (*εἰσαγγελία*). Properly, an announcement made in presence of a legal authority. In Attic jurisprudence it was a special form of public prosecution, instituted especially for offences which appeared to inflict injury, directly or indirectly, upon the State, but which it was impracticable to prosecute under the regular and customary procedure. The accusation was put into writing and handed in to the Senate; if the Senate received it the accused was arrested, or had to get three persons to stand surety for him. But if the charge were one of treason or an attack upon the constitution this was not allowed. If the voting on the guilt or innocence of the accused were unfavourable, the Senate itself fixed the penalty, supposing it fell short of the amount which lay within its competence (500 drachmae, or $83). If not, the Senate referred the case at once to one of the courts of the Heliaea, or even to the *ἐκκλησία*, or Assembly, to which the prosecutor might, indeed, have applied from the first. If the *ecclesia* decided to take up the case, the first thing it did was to fix the penalty in case there were no legal provisions on this point. It then either entered on the investigation and decided the case or handed it over to a court of law. The name *εἰσαγγελία* was also given to the prosecution of judges in office for neglect of their duties, and to certain charges lodged before the archons—namely, charges against children for ill-treatment of parents, against husbands for ill-treatment of heiresses, and against guardians for ill-treatment of their wards. See ARCHON.

Eisiteria (*εἰσιτήρια*, sc. *ἱερά*). Sacrifices offered at Athens, upon entrance into office; according to Suidas (s. v.) upon the first day of the new year, which in consequence was kept as a holiday. Besides the higher magistrates, the Senate offered *εἰσιτήρια* through one of its members chosen for the purpose (Demosth. *c. Mid.* p. 552, § 114). When an embassy set out, at least on the most important occasions, the Senate and principal magistrates offered *εἰσιτήρια* for its success and dined together. The *ἐξιτήρια* on going out of office (Hesych.) are less well attested (Schömann, *Assemblies*, p. 306).

Eisphŏra (*εἰσφορά*). An income-tax, levied only

in extraordinary cases. It was based on the Solonian division of classes into *Pentacosiomedimni*, *Hippeis*, *Zeugitae*, and *Thetes*, the last of whom were not taxed at all. The taxable capital was estimated at twelve times a man's net income as estimated by himself. In the case of the *Pentacosiomedimni*, with a minimum income of 500 drachmae and minimum capital of 6000 drachmae (=1 talent, or $1080), the whole property was treated as taxable capital (*τίμημα*). In the case of the *Hippeis* (300–3600 drachmae), five sixths in that of the *Zeugitae* (150–1800 drachmae), five ninths, or 1000 drachmae. The first instance of the levy of an *eisphora* occurred in B.C. 428. In B.C. 378 another method of levying it was introduced under the archon Nausinicus. According to this, the taxable capital of the highest class was fixed at one fifth of the whole property. The resident aliens (*μέτοικοι*), as well as the citizens, were liable to pay the *eisphora*. On the method of collecting it, see SYMMORIAE.

Elaea (Ἐλαία). An ancient city on the coast of Aeolis in Asia Minor, which at one time served as the harbour of Pergamus. The gulf on which it stood was named after it Sinus Elaïticus.

Elaeothesium (ἐλαιοθέσιον). The oiling-room in a set of baths, where the oils and unguents were kept, and to which the bather retired to be rubbed and anointed. In large establishments a separate chamber was appropriated for this purpose, adjoining the *frigidarium*, or cold chamber (Vitruv. v. 11, 2). See BALNEAE.

Elaeus or **Eleus** (Ἐλαιοῦς or Ἐλεοῦς). A town on the southeast point of the Thracian Chersonesus, with a harbour and an *heroum* of Protesilaüs. See Herod. vi. 140.

Elagabălus. (1) ELAGABAL, a deity among the Phœnicians. This deity, according to Capitolinus (*Macr.* 9) and Aurelius Victor, was the Sun. Lampridius, however, fluctuates between the Sun and Iupiter, while Spartianus (*Caracall.* 11) leaves it uncertain. The orthography of the name is also disputed, some writing it Elagabal, others Eleagabal and Alagabal. Herodian gives us an accurate description of the form under which this deity was worshipped (v. 3, 10 foll.); he also informs us that by this appellation the Sun was meant, and that the deity in question was revered not only by the Syrians, but that the native satraps and barbarian kings were accustomed to send splendid presents to his shrine. According to Herodian, the god Elagabalus was worshipped under the form of a large black stone, round below and terminating above in a point — in other words, of a conical shape. This description is confirmed by the medals of Emesa, the principal seat of his worship, on which the conical stone is represented. So also, on the medals of Antoninus Pius, struck in this same city, an eagle appears perched on a cone. The same thing appears on medals of Caracalla, and on one an eagle with expanded wings stands before a conical stone in the middle of a hexastyle temple. (2) M. AURELIUS ANTONĪNUS, a Roman emperor. He was the grandson of Maesa, sister to the empress Iulia, the wife of Septimius Severus. Maesa had two daughters, Soaemias or Semiamira, the mother of the subject of this article, and Mammaea, mother of Alexander Severus. The true name of Elagabalus was Varius Avitus Bassianus, and he was reported to have been the illegitimate son of Caracalla. He was born at Antioch, A.D. 204. Maesa took care of his infancy, and placed him, when five years of age, in the temple of the Sun at Emesa, to be educated as a priest; and through her influence he was made, while yet a boy, high-priest of the Sun. That divinity was called in Syria Elagabal, whence the young Varius assumed the name of Elagabalus. After the death of Caracalla and the elevation of Macrinus, the latter having incurred by his severity the dislike of the soldiers, Maesa availed herself of this feeling to induce the officers to rise in favour of her grandson, whom she presented to them as the son of the murdered Caracalla. Elagabalus, who was then in his fifteenth year, was proclaimed emperor by the legion stationed at Emesa. Having put himself at their head, he was attacked by Macrinus, who at first had the advantage; but he and his mother Soaemias, with great spirit, brought the soldiers again to the charge and defeated Macrinus, who was overtaken in his flight and put to death, A.D. 218. Elagabalus, having entered Antioch, wrote a letter to the Senate, professing to take for his model Marcus Aurelius Antoninus, a name revered at Rome; and he also assumed that emperor's name. The Senate acknowledged him, and he set out for Rome, but delayed for several months on his way amid festivities and amusements, and at last stopped at Nicomedia for the winter. In the following year he arrived at Rome and began a career of debauchery, extravagance, and cruelty which lasted the remaining three years of his reign, and the disgusting details of which are given by Lampridius, Herodian, and Dio Cassius. He surrounded himself with gladiators, actors, and other base favourites, who made an unworthy use of their influence. He married several wives, among others a Ves-

Elagabalus. (Bust in the Capitol, Rome.)

tal. The imperial palace became a scene of debauch and open prostitution. Elagabalus, being attached to the superstitions of the East, raised a temple on the Palatine Hill to the Syrian god whose name he bore, and plundered the temples of the Roman gods to enrich his own. He put to death many senators, and established a senate of women, under the presidency of his mother, Soaemias, which body decided all questions relative to women's dresses, and to visits, precedence, and amusements. He wore his pontifical vest as high-priest of the Sun, with a rich tiara on his head. His grandmother Maesa, seeing his folly, thought of conciliating the Romans by associating with him, as Caesar, his younger cousin, Alexander Severus, who soon became a favourite with the people. Elagabalus, who had consented to the association, became afterwards jealous of his cousin and wished to deprive him of his honours, but he could not obtain the consent of the Senate. His next measure was to spread the report of Alexander's death, which produced an insurrection among the praetorians; and Elagabalus, having repaired to the camp to quell the mutiny, was murdered, together with his mother and his favourites, and his body was thrown into the Tiber, A.D. 222. He was succeeded by Alexander Severus. Elagabalus was eighteen years of age at the time of his death, and had reigned three years, nine months, and four days (Lamprid. *Elagab.;* Herodian, v. 3 foll.; Dio Cass. lxxviii. 31 foll.; lxxix. 1 foll.).

Elaphebolia (*ἐλαφηβόλια*). The greatest festival in the town of Hyampolis in Phocis, and celebrated in honour of Artemis, in commemoration, it is said, of a victory which its inhabitants had gained over the Thessalians, who had ravaged the country and reduced the Phocians in the neighbourhood of the town nearly to the last extremity (Plut. *De Mul. Virt.* p. 244 B; Pausan. x. 35, § 4). The only particular which we know of its celebration is, that a peculiar kind of cake (*ἔλαφος*) was made on the occasion (Athen. xv. p. 646 e). These cakes were, as their name indicates, probably made in the shape of a stag or a deer and offered to the goddess.

Elaphebolion (Ἐλαφηβολιών). The ninth month of the Attic year, answering to the last of March and the early part of April. See CALENDARIUM.

Elăra (Ἐλάρα). The daughter of Orchomenus or Minyus, and mother by Zeus of the giant Tityus. Through fear of Heré, Zeus concealed her under the earth (Apollod. i. 4, 1).

Elatēa (Ἐλάτεια). (1) A town in Phocis (Pausan. x. 34, § 1), situated near the Cephissus in a fertile valley, which was an important pass from Thessaly to Boeotia. (2) A town in Pelasgiotis in Thessaly, near Gonni. (3) Or ELATRĒA, a town in Epirus, near the sources of the Cocytus.

Elătus (Ἔλατος). One of the Lapithae, and father of Polyphemus and of Caeneus, who is hence called Elateius.

Elāver. The modern Allier; a river in Aquitania, a tributary of the Liger (Loire).

Elea. See VELIA.

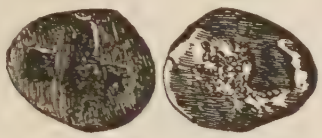
Eleatic School. See PHILOSOPHIA.

Electra (Ἠλέκτρα). (1) One of the Oceanides, wife of Atlas, and mother of Dardanus by Zeus (Ovid, *Fast.* iv. 31). (2) A daughter of Atlas and Pleioné, and one of the Pleiades. (See PLEIADES.) (3) One of the daughters of Agamemnon (q. v.). Upon the murder of her father, after his return from Troy, Electra rescued her brother Orestes, then quite young, from the fury of Aegisthus, by despatching him to the court of her uncle Strophius, king of Phocis. There Orestes formed the well-known attachment for his cousin Pylades, which, in the end, led to the marriage of Electra with that prince. According to one account, Electra had previously been compelled, by Aegisthus, to become the wife of a Mycenean rustic, who, having regarded her merely as a sacred trust confided to him by the gods, restored her to Orestes on the return of that prince to Mycenae and on his accession to the throne of his ancestors. Electra became, by Pylades, the mother of two sons, Strophius and Medon. Her story has formed the basis of three extant plays, the *Choëphori* of Aeschylus, and the *Electra* of Sophocles and Euripides. See ORESTES.

Electra.

Electrĭdes Insŭlae. See ERIDANUS.

Electrum (*ἤλεκτρος* or *ἤλεκτρον*). Lepsius has maintained (*Ueber die Metalle in den ägypt. Inschriften*, Appendix) that the early Greek usage was to employ the masculine form when the mixture of gold and silver was intended; the neuter form when the mineral which we call amber was meant. It is likely that the Greeks were acquainted in very early times with the use of amber, trade in this mineral having taken place in pre-historic days between North and South Europe. They must also have been early acquainted with the compounded metal, since gold alike in Asia and Europe is commonly found mixed with silver. Which of the two substances, therefore, was first called electrum is a matter quite open to dispute. They will be spoken of in turn.



(1) AMBER. Beads of amber were found in the royal tombs at Mycenae, and chemical analysis (Schliemann, *Tiryns*, p. 370) has proved that this amber came from the Baltic and not from elsewhere. Similar beads have also been found in the very early tombs at Ialysus in Rhodes. At a later period amber is mentioned in the *Odyssey* (xv. 460, xviii. 295) as a material of necklaces. In one of these passages the necklace is spoken of as an import from Phœnicia. It is also stated (iv. 73) that the walls of the palace of Menelaüs were adorned with amber, as well as with gold, silver, and ivory. The author of the *Shield of Heracles*, ascribed to Hesiod, speaks of that shield (141) as adorned with electrum, in which case, however, the metal may be meant. In South Italy amber was used in the archaic period as a material for statuettes and reliefs; many specimens of this kind of work are in the British Museum. It is probable that the amber of early Greece was imported by the Phœnicians who sailed round the coast to the north of Europe, especially in view of the fact that after the Homeric Age amber disappeared from Greek tombs, and does not again figure until Roman times, when a regular trade with the Baltic coast had sprung up.

(2) MIXED GOLD AND SILVER. The earliest certain mention of this mixed metal as electrum (rather *ἤλεκτρος*) is in Sophocles's *Antigone*, 1037,

where the substance is said to come from Sardis; for Sardis by the Pactolus was noted in antiquity as the place whence came the river-gold, mixed when found with a considerable percentage of silver. Herodotus, however, speaking of this same Sardian metal in connection with the donaria of Croesus to Delphi (i. 50), calls it white gold, λευκὸς χρυσός. Pliny remarks (*H. N.* xxxiii. § 80) that gold is invariably found mixed with silver (which is true), and that when the proportion of silver reaches a fifth the metal is called electrum. He adds that electrum was made by art as well as found.

This white gold or electrum is used on the sword-blades found at Mycenae for purposes of inlaying. In later times it was used, as being a harder material than gold, for objects in which hardness was desirable. By far the most important use to which it was put was as a material for coins.

In the seventh century B.C., or possibly late in the eighth, the kings of Lydia began to issue stamped money of electrum, using probably the metal in its natural state, and the maritime cities of the Asiatic coast and of Euboea adopted the idea. (See PONDERA.) For some time, until silver

Early Electrum Stater, probably struck at Miletus before B.C. 623. (British Museum.)

was first minted at Aegina, all the coinage of the world consisted of stamped pellets of electrum, though no doubt unstamped bars of gold and silver circulated with them. It is observed by Mr. Head (*Numismatic Chronicle*, 1875, p. 254), in his account of early electrum coins, that the mixed metal had two advantages over pure gold in circulation: (1) it was more durable; (2) the proportionate value of gold to silver being 13⅓ to 1 (Herodotus says 13), and electrum being of three-fourths the value of gold, each coin of electrum would pass as the equivalent of ten silver bars of equal weight.

Croesus is believed to have first introduced into Asia coined money of gold and silver in place of electrum. See NUMISMATICS.

Electrȳon (Ἠλεκτρύων). Son of Perseus and Andromeda, and father of Alcmené, the wife of Amphitryon. See AMPHITRYON.

Electryōné (Ἠλεκτρυώνη). A patronymic given to Alcmené, daughter of Electryon.

Elegīa (ἐλεγεῖον, a distich consisting of an hexameter line followed by a pentameter; then in the plural, a collection of such distichs, and hence ἐλεγεία). The general term in Greek for any poem written in the elegiac metre, a combination of the dactylic hexameter and pentameter in a couplet. The word ἔλεγος is probably not Greek, but borrowed from the Lydians, and means a plaintive melody accompanied by the flute. How it happened that the word was applied to elegiac poetry, the earliest representatives of which by no means confined it to mournful subjects, is doubtful. It may be that the term was chosen only in reference to the musical setting, the elegy having originally been accompanied by the flute. Like the epic, the elegy was a production of the Ionians of Asia Minor. (See EPOS.) Its dialect was the same as that of the epos, and its metre only a variation of the epic metre, the pentameter being no more than an abbreviation of the hexameter. The elegy marks the first transition from the epic to lyric proper. The earliest representatives of the elegy, Callinus of Ephesus (about B.C. 700) and Tyrtaeus of Aphidnae in Attica (about B.C. 600), gave it a decidedly warlike and political direction, and so did Solon (B.C. 640–559) in his earlier poems, though his later elegies have mostly a contemplative character. The elegies of Theognis of Megara (about B.C. 540), though gnomic and erotic, are essentially political. The first typical representative of the erotic elegy was Mimnermus of Colophon, an elder contemporary of Solon. The elegy of mourning or sorrow was brought to perfection by Simonides (q. v.) of Ceos (died B.C. 469). After him the emotional element predominated. Antimachus of Colophon (about B.C. 400) gave the elegy a learned tinge, and was thus the prototype of the elegiac poets of Alexandria, Phanocles, Philetas of Cos, Hermesianax of Colophon, and Callimachus (q. v.) of Cyrené, the master of them all. The subject of the Alexandrian elegy is sometimes the passion of love, with its pains and pleasures, treated through the medium of images and similes taken from mythology; sometimes learned narrative of fable and history, from which personal emotion is absent.

This type of elegy, with its learned and obscure manner, was taken up and imitated at Rome towards the end of the Republic. The Romans soon easily surpassed their Greek masters both in warmth and sincerity of feeling and in finish of style. The elegies of Catullus are among their earliest attempts; but in the Augustan Age, in the hands of Cornelius Gallus, Propertius, Tibullus, and Ovid, the elegiac style was entirely appropriated by Latin literature. Ovid, in his *Fasti*, showed how a learned subject could be treated in this metre. From his time onward the elegiac metre was constantly employed, and was used even in schools for practice in style. In the later literature it was applied, like the epic metre, to every possible subject, as, for instance, by Rutilius Namatianus in the description of his return from Rome to Gaul (A.D. 416). In the sixth century A.D. the poet Maximianus, born in Etruria at the beginning of that century, is a late instance of a genuine elegiac poet.

On the elegy, see an article by O. Crusius in the *Wochenschrift für klass. Phil.* for 1885; Eichner, *De Poetarum Lat. Distichis* (Breslau, 1866); Prien, *Symmetrie und Responsion der röm. Elegie* (Lübeck, 1867); Madvig in his *Adversaria*, ii. 110; and Gruppe, *Die röm. Elegie*, ed. by Schulze (Berlin, 1884).

Elenchus. A large drop ear-ring consisting of a single pearl; also often worn as a bangle (Plin. *H. N.* ix. 56; Juv. vi. 459). See INAURIS.

Eleos (Ἔλεος). An Athenian deity personifying pity (Pausan. i. 17, § 1).

Elephantīné (Ἐλεφαντίνη νῆσος). An island in the Nile, with a city of the same name, opposite to Syené, and seven stadia below the Little Cataract. It was the frontier station of Egypt towards Ethiopia, and was strongly garrisoned under the Persians and the Romans (Ptol. iv. 5, § 70). The original name of the island was Ebo—Eb being in the

language of hieroglyphics symbolical of the elephant and of ivory. Here was a temple of Cnuphis and here also a Nilometer. Many important inscriptions have been found here; and until 1822 (when they were destroyed by the governor) there existed the ruins of the temple and of a granite gateway of the time of Alexander III. See Mariette, *Monuments of Upper Egypt* (1877); A. B. Edwards, *A Thousand Miles up the Nile* (1877).

Elephantis (Ἐλεφαντίς). The author of erotic and indecent books, generally supposed to have been a woman, but of whose personality nothing is known. See Mart. xii. 43, 4; Suet. *Tib.* 43.

Ĕlĕphas (*ἐλέφας, ebur; elephantus*, poet., Verg. *Georg.* iii. 26; *Aen.* iii. 464, vi. 896). African ivory was known to the ancients, through Phœnician trade, long before the elephant. Accordingly, early writers—Homer, Hesiod, Pindar—speak of the material only. Herodotus, indeed, was aware of its origin (iv. 191; Plin. *H. N.* viii. § 7), but the Greeks generally only became acquainted with the animal from the Macedonian expeditions into Asia, the Romans from the arrival of Pyrrhus in Italy. Both words—*ἐλέφας, ebur*—possibly contain the Egyptian *âb*, "ivory, elephant" (Schrader, *Linguist. histor. Forsch. zur Handelsgesch.* i. 71).

Ivory Spoon. (Schliemann.)

The use of ivory in the manufacture of small objects of use or ornament, and for purposes of decoration, is earliest in Egypt and Assyria. There have been found, for instance, castanets, stick-handles, hilts and hefts, combs, flutes, sceptres, caskets, statuettes, made of the tusk, and many different articles of furniture inlaid with it. In Homer, besides its employment when carved in mass, it is referred to in connection with walls, doors, harness, etc., and was then probably attached in plates by nails to a metal or wooden ground. In later times true inlaying was resorted to, and almost every kind of furniture, as beds, sofas, thrones, carriages even, enriched with the precious material.

Among objects not enumerated above may be mentioned masks and writing-tablets. The latter (*δέλτοι, libri elephantini*), with two, three, or more leaves (*diptycha, triptycha, pentaptycha*, etc.), were either entirely, or had their covers only, of ivory. Those extant are chiefly of the later Roman age. They are of two classes, *consularia* and *ecclesiastica*, distinguished by the subjects of the carvings on their covers, the former being figures of consuls at the *pompa circensis, missiones*, etc., while the latter are of a Biblical nature (Müller, *Arch. d. Kunst*, § 312, n. 3). They were presented to officers and dignitaries to commemorate their appointment. See Diptycha.

Ivory Handle. (Schliemann.)

For further information see H. Blümner, *Technol. u. Terminol. d. Gewerbe*, etc., ii. 361–375, where there is a full bibliography; and cf. the article Chrys-elephantina.

Elephēnor (Ἐλεφήνωρ). The son of Chalcodon and Melanippé, and prince of the Abantes. He was one of the suitors of Helen, and led a force against Troy, before which city he was slain by Agenor.

Eleusinia (*τὰ Ἐλευσίνια*). A title chiefly applied to a festival held by the Athenians in the autumn, in honour of Demeter, Persephoné, and Iacchus, consisting of sacrifices, processions, and certain mystical ceremonies. It was one of the most important festivals of Greece.

The mythical origin of the Eleusinia is contained in the Homeric hymn to Demeter, which tells how Persephoné, while gathering flowers, was, with the connivance of Zeus, carried off by the god of the lower world, Hades or Polydegmon (the great receiver); and how her mother Demeter, daughter of Rhea, searching distractedly for her child, is advised by Hecaté to consult Helios, who sees all things; and how Helios in pity tells her that Zeus has granted to Hades to carry off her daughter to be his wife. Forthwith Demeter changes herself into an old woman; and as she wanders forth disconsolate through the world she comes to Eleusis, and sits down on the cheerless stone by a well. The daughters of Celeus, the king of Eleusis, come to the well to draw water. They bring her to their home, where Metanira, wife of Celeus, gives her the latest born child, Demophoön, to nurse. But Demeter is still bowed down with grief; she sits dignified but silent in her room, till the jests and raillery of Iambé, the servant-maid, at last make her smile. She consents to take food and drink, but will have no wine, only a mixture (*κυκεών*) of water with barley-meal and mint. Days go on, and the child Demophoön thrives beyond what mortal child was wont, for a goddess was his nurse; she used to anoint him daily with ambrosia and place him in the fire by night. But a little more time and the child would have been immortal, when one night Metanira saw the nurse place him in the fire and cried aloud with terror. Then the anger of Demeter blazed forth, and the aged nurse transformed herself into the goddess, told who she was, what she had intended to do, and how that the little faith of the mother had robbed the child of immortality, and finally bade the people of Eleusis to erect a temple for her on the hill above the fountain, when she herself would prescribe the services they must perform in order to gain her favour. They did so, and Demeter dwelt there, shunning all association with the other gods who had been parties to the carrying off of her daughter. For a year Demeter dwelt there—a year of want, for nothing grew; and the human race would have perished, had not Zeus agreed that Persephoné should return. Gladly did Persephoné obey the summons of Hermes; but Hades persuaded her to eat a pomegranate seed before she left, and that prevented her staying away from him for a whole year. So Persephoné returns, and great is the joy of mother and daughter, in which the faithful Hecaté sympathizes. Rhea is then sent down by Zeus to her daughter and effects the reconciliation. The corn comes up in abundance in the Rarian plain; Demeter returns to Olympus to dwell with the gods, and prescribes to Celeus and to his sons Triptolemus, Diocles, and Eumolpus the solemnities and divine services that were in future time to be paid her; and hence the famous Eleusinian Mysteries were a

direct appointment of the great goddess Demeter herself.

Such was the story of the origin of the mysteries; but how the mysteries came to be Athenian depends on another story, which concerns the union of Eleusis with Athens. Erechtheus warred with the Eleusinians (Pausan. i. 38, 3), who were helped by one Eumolpus, a Thracian, son of Poseidon (Apollod. iii. 14, 4) and founder of the mysteries (Lucian, *Demon.* 34). The difficulties connected with the exact birthplace and genealogical position of Eumolpus (see Roscher, *Lexikon der Mythol.* s. v. *Eumolpus*) we may pass over, remembering that he is, according to this legend, a foreigner (Plut. *De Exsilio*, p. 607, 10). Eleusis was conquered, and to the Athenians fell the political headship, but to the family of Eumolpus and the daughters of the Eleusinian king Celeus was assigned the high-priesthood (*ἱεροφαντία*) of the Eleusinian worship. The other family which held a priesthood in the mysteries, the Kerykes, were said to have been descended from Keryx, the son of Eumolpus; though the family itself considered its ancestors to have been Hermes and Aglauros, daughter of Erechtheus, and so genuine Athenians (Pausan. i. 38, 3).

Mysteries were celebrated in honour of Demeter, Persephoné, and Dionysus in Asia Minor (e. g. at Cyzicus); in Egypt on Lake Mareotis (Strab. xvii. p. 800); in Sicily at Gela and elsewhere (Herod. vii. 153; Diod. Sic. v. 77); in Boeotia at Plataea (Herod. ix. 62, 65, 101); in many parts of Arcadia (Pausan. ii. 14, 1; viii. 15, 1); and in Messenia at Andania (Pausan. iv. 1, 5). But the most splendid and important of all the Eleusinia were those of Attica, which may be regarded as having consisted of two parts: (1) the Lesser Mysteries at Agrae, and (2) the Greater Mysteries at Eleusis.

(1) The Lesser Mysteries at Agrae (*τὰ ἐν Ἄγραις*). These were held in the spring at Agrae, a place on the Ilissus, southeast of the Acropolis. There is no doubt that they were held in the month Anthesterion, when there were the first signs of returning vegetation just after field-work began (*C. I. G.* 103, l. 20). The exact date cannot be fixed, but Mommsen's suggestion is most probable, that the chief day was the 20th, the same day of the month as the Greater Mysteries were held on in Boedromion, to which the Lesser Mysteries had many points of similarity, even in matters connected with the calendar — e. g. the same length of the mystery truce (*C. I. G.* 71). Mommsen supposes that the 19th was a day of preparation, and the 20th and 21st the special mystery days. These Lesser Mysteries were considered as a prelude to the Greater (Schol. on Aristoph. *Plut.* 845), being on a much smaller scale; but initiation in the Lesser was generally required before the candidate could present himself for initiation into the Greater (Plat. *Gorg.* 497 C). The mysteries at Agrae consisted probably to a large extent of purifications, for which the water of the Ilissus was much used (Polyaen. v. 17). They were held more especially in honour of Persephoné, called Pherrephatta here, than of Demeter (Schol. on Aristoph. *Plut.* 845). It appears that the carrying off of Persephoné was the most important representation in these mysteries. Again we hear that at Agrae the fate of Dionysus was pourtrayed (*μίμημα τῶν περὶ τὸν Διόνυσον*, Steph. Byzant. s. v. *Ἄγραι*). The death of Dionysus-Zagreus took place on the 13th of Anthesterion, the day on which the festival of the Chytri was held (see Dionysia); so perhaps on the ninth day after, the 21st (for funeral rites on the ninth day after death, the *ἔνατα*, see Aesch. *Ctesiph.* § 225), the funeral ceremony may have been held and his violent death related in a drama. A great many, especially strangers, were initiated into these mysteries who did not proceed to initiation into the regular Eleusinia; the legend, too, said it was for the purpose of initiat-

Initiation of Heracles. (Vase from Panticapaeum.)

ing Heracles, who was a stranger and according to the primitive regulations could not be initiated into the Eleusinia, that these Lesser Mysteries were established (Schol. on Aristoph. *Plut.* 845, 1013).

(2) THE GREATER MYSTERIES AT ELEUSIS. Two days are fixed by definite evidence—viz. the 16th Boëdromion for the Ἅλαδε μύσται (Polyaen. iii. 11, 11; *De Glor. Ath.* 349 fin.), and the 20th for the Iacchus day (Plut. *Cam.* 19, *Phoc.* 28). The fixing of other days depends on conjecture, but can be determined with a considerable degree of certainty. A month before the middle of Boëdromion—i. e. the middle of Metageitnion—the σπονδοφόροι used to announce the mystery truce to the neighbouring States (Aesch. *Fals. Leg.* § 133), so as to give the strangers time to make all arrangements necessary for a visit to Athens. During the latter portion of this month the votary who intended to be initiated used to betake himself to some private man who had gone through all the grades of initiation, was examined by him as to his freedom from sin, received instruction as to what purifications and offerings were necessary to gain the favour of the goddesses, and submitted the actual offerings for his inspection and approval. This instructor was the μυσταγωγός. He certified to the Hierophant the fitness of the applicant and introduced him, this proceeding being apparently called σύστασις. Sincere devotees appear to have fasted for nine days (cf. Hom. *Hymn. Dem.* 47), from the 13th to the 21st—i. e. ate nothing during the day, taking whatever food they did take between sunset and sunrise, like the Mahomedans during Ramadan; and votaries generally appear to have abstained from domestic birds, fish, pomegranates, apples, and beans (Porphyr. *Abst.* iv. 16). On the 15th of Boëdromion the formal assemblage (ἀγυρμός, Hesych. s. v.) was held of those citizens and strangers who intended to take part in the mysteries—though this assemblage does not appear to have been absolutely essential, at least in late times (*C. I. G.* 523). At the beginning of the 16th, in the evening (the day is reckoned from sunset to sunset), Chabrias's distribution of wine to the people in honour of his victory at Naxos used to take place (Plut. *Phoc.* 6); and the next morning began the first formal act of the festival—viz. the πρόρρησις or Ἅλαδε μύσται. A proclamation was made by the Archon Basileus (Poll. viii. 90) and by the Hierophant and Daduchus in the Stoa Poecilé (Schol. on Aristoph. *Ran.* 369), for the departure of all strangers and all murderers; and then the order for purification given, "Ye mystae, to the sea!" The "sea" was sometimes the Piraeus (Plut. *Phoc.* 28), though probably only in time of Attica being occupied by enemies; but generally the Ῥειτοί, two salt streams on the Sacred Road, one dedicated to Demeter, the other to Coré, which contained fish that the priests alone were allowed to eat (Pausan. i. 38, 1; Hesych. s. v.). The next day, the 17th, sacrifices (ἱερεῖα) were offered for the safety of the State by the Archon Basileus and the ἐπιμεληταί in the Eleusinium at Athens; and at all these sacrifices the θεωροί of foreign States seem to have taken part (Eurip. *Suppl.* 173). The night of the 18th may have been spent by the very devout in sleeping in the Temple of Aesculapius, southwest of the Acropolis, or in the Iaccheum (Boeckh on *C. I. G.* 481), also called the Temple of Demeter. It was just where the road from the Piraeus entered Athens (Pausan. i. 2, 4). The early morning of that day till about 9 A.M. was devoted to ordinary business, as we find decrees issued bearing that date (Mommsen, pp. 95, 225, 226). After this hour the Epidauria was celebrated in the Temple of Demeter or Iacchus and in the Temple of Aesculapius. It was, as has been seen, a supplementary sacrifice for those who came late, and legend said it was instituted for the sake of Aesculapius, who himself came late for the mysteries. Doubtless, however, the thought really lay in this, that Aesculapius was supposed by his wondrous skill to have raised again Iacchus from the dead, and the festival probably was incorporated in the Eleusinia when the worship of Epidaurus became connected with that of Athens (Herod. v. 82). Meanwhile there were being brought from Eleusis certain religious objects—playthings, it was said, of the child Iacchus—bone (ἀστράγαλος), top (στρόβιλος), ball (σφαῖρα), apples (μῆλα), tambourine (ῥόμβος), looking-glass (ἔσοπτρον), fleece (πόκος), fan (λίκνον), and such like, as is learned from Clement of Alexandria (*Protrept.* p. 15, ed. Potter; cf. Lobeck, *Aglaoph.* 701, 702). Phalli were perhaps also carried among these mystical objects (see PHALLUS); but we must remember that the statue of Iacchus, as we shall see, which was carried in procession to Eleusis on the 19th, was not kept at Eleusis during the year, but at Athens, having been brought back some day shortly after the conclusion of the mysteries; for there was no Iaccheum at Eleusis (Mommsen, p. 253). The Athenian Ephebi met this convoy at the Temple of Echo (evidence from inscriptions in Mommsen, p. 252), and conveyed it to Athens by nightfall. In the early morning of the 19th, there were occasionally decrees passed. In the forenoon the Iacchus procession started from the Eleusinium and proceeded to the Iaccheum, where they got the statue of Iacchus; perhaps then definitely organized the procession in the building assigned for that purpose (Pausan. i. 2, 4); and then passing through the Ceramicus (Schol. on Aristoph. *Ran.* 399) left Athens by the Sacred Gate (Plut. *Sull.* 14), priests and people crowned with myrtle and ivy, the rich ladies till the time of the orator Lycurgus riding in carriages (Schol. on Aristoph. *Plut.* 1014). The statue of Iacchus was probably that of a fair child crowned with myrtle and holding a torch, hence called φωσφόρος ἀστὴρ in Aristophanes (*Ran.* 342). There were many ceremonies to be performed as the procession passed along the Sacred Way to Eleusis—ceremonies which had to be given up during the Peloponnesian War, while Attica was invaded by the Peloponnesians (Plut. *Alcib.* 34). One section of the procession repaired to the Cephissus and took baths therein, another to the bath by Anemocritus's statue near the tomb of Scirus the soothsayer, who came from Dodona to Eleusis to assist the Eleusinians in the war against Erechtheus and was slain. The Phytalidae sacrificed to Phytalus in Laciadae, where lay a temple to the Mourning (Ἀχέα) Demeter, and to Coré, with whose worship that of Athené and Poseidon was joined (Pausan. i. 37, 2). At the palace of Crocon, the Croconidae perhaps bound small bands of saffron thread round the right wrist and right foot of each mystes (cf. Phot. s. v. κροκοῦν), which was considered as a protection from the evil eye.

Occasionally during the procession the majority of those who took part in it indulged in flouts and gibes at one another, a proceeding called γεφυρισ-

μός, the origin of which title is unknown, but is generally associated with the bridge over the Cephissus (Strab. ix. 400). Chants in honour of Iacchus were sung constantly during the procession, which swelled louder as when, near midnight, Iacchus arrived at Eleusis amid the blaze of torches (Soph. *Oed. Col.* 1045). That the procession did not arrive till late at night is plain from the splendid chorus in the *Ion* (1076 foll.), which sings of the torches and of the moon and stars dancing in heaven at the sight. The journey from Athens to Eleusis is really only four hours long, but the various ceremonies performed during the course of the procession extended it to three or four times its normal length. On the next morning certain sacrifices were performed, consisting probably in part of swine, to Demeter (Schol. on Aristoph. *Pax*, 374). An inscription in Mommsen, p. 257, orders sacrifices to be made by the ἱεροποιοί to Hermes Enagonius, the Graces, Artemis, and certain heroes, Telesidromus and Triptolemus. It is not known what these sacrifices were at Eleusis; at Andania they were, besides others, a sheep to Persephoné and a sow to Demeter. In later times the Ephebi made supplementary sacrifices of cattle. The bulls were brought unbound to the altar, and the Ephebi struggled with them to hold them as they were being sacrificed.

The 22d and 23d were the μυστηριώτιδες ἡμέραι, and the ceremonies celebrated thereon were παννυχίδες. During the evening of the 22d was probably what was called λαμπάδων ἡμέρα, which consisted of a symbol of search after Coré with torches (Lactant. *Inst.* i. 21), performed principally by and for the less highly initiated, who conducted the search crowned with myrtle, wearing a fawn-skin, and holding a wand, the mystagogues of the several initiates taking part in the search —the whole proceeding being perhaps an interlude in the story of Demeter and Coré, which appears to have been represented in the temple on this night. After it, came with much ceremonial the partaking of the κυκεών, a mixture of mint, barley-meal, and water. This was a cardinal feature in the ceremony, being, if we may so say, a participation in the Eleusinian sacrament. It was in remembrance of Demeter being refreshed after her long wandering and fruitless search. Thereafter followed what was called the παράδοσις τῶν ἱερῶν (Suidas, s. v.): certain relics and amulets were given to the votary to touch or kiss or even taste, the votary repeating, as the priest tendered him the objects with a regular question (Arnob. *Adv. Gentes*, v. 26), a formula (σύνθημα), given by Clement of Alexandria (*Protrept.* p. 18). It appears that some kind of memento of this ceremony was given by the priest to the votaries, which a sincere believer used to keep in a linen cloth (Apul. *Apol.* p. 140). The actual ἱερὰ themselves were kept in a chest (τελέτης ἐγκύμονα μυστίδα κίστην, Nonnus, *Dionys.* ix. 127) bound with purple ribbons, and consisted among others of sesame cakes of particular shapes, pomegranates, salt, ferules, ivy, poppy-seeds, quinces, etc. (Clem. Alex. *Protrept.* p. 19): the uninitiated were not allowed to see these "even from the housetop" (Callim. *Hymn to Ceres*, 4).

Not very different appear to have been the ceremonies of the 23d. There were many wand-bearers but few bacchants, as the superintendents of the mysteries used to say (Plato, *Phaed.* 69 C), and it was for these latter, the more highly initiated mystae of at least a year's standing, generally called ἐπόπται, that the ceremonies of the 23d were held, and they were the highest and greatest. Here, too, was probably a παράδοσις τῶν ἱερῶν, the sacramental words used in receiving which being ἐκ τυμπάνου ἔφαγον, ἐκ κυμβάλου ἔπιον, ἐκερνοφόρησα, ὑπὸ τὸν παστὸν ὑπέδυον. All this undoubtedly points to the Phrygian worship of Sabazius, which was introduced by the Orphics into the Eleusinian mysteries. On the afternoon of the 23d was held that portion of the feast which was called πλημοχόαι (Athen. x. p. 496) or πλημοχόη (Poll. x. 74), a sacrifice to the dead. The πλημοχόη was a broad-bottomed earthen jar, and two such were used in the ceremony, one filled with wine and the other with water, the contents of the one thrown to the east and of the other to the west, while mystic words (ὗε κύε) were spoken. This sacrifice formed a fitting conclusion to the mysteries in the special sense, the μυστηριώτιδες ἡμέραι. It ended with a χαίρετε to the dead, which conclusion was called προχαιρητήρια (Harpocr. 161, 9).

The next morning, the 24th, occurred perhaps the βαλλητύς, also called τύπται, a sort of sham fight, enjoined, it seems, in the Homeric hymn (267 foll.). There was a similar contest, called λιθοβολία, at the festival of Damia and Auxesia at Troezen (cf. Pausan. ii. 32, 2). On this same morning and afternoon were the ἀγῶνες σταδιακοί. They were called Eleusinia or Demetria, and the prize was some barley grown on the Rarian Plain (Schol. on Pind. *Ol.* ix. 150, 166). There is no reason to suppose that these games were not annual (see Hermann, *Gottesd. Alterth.* § 55, 39). In early times these games probably lasted two days; but in later times, on the 25th, the theatrical representations of the Διονύσου τεχνῖται were held, and we have some inscriptions referring to the sacrifices offered by this guild. As time went on, the 26th and 27th appear to have been devoted to such theatrical exhibitions (Rangabé, 813, 6), held perhaps for the purpose of keeping the visitors in the country. The people do not appear to have returned to Athens in a regular procession, though Lenormant thinks they did, and that the γεφυρισμός and the πλημοχόη were incidents in that return journey. The mystery truce lasted till the middle of Pyanepsion (*C. I. G.* 71).

(3) The Priests and Priestesses. (*a*) The most important priest was the *Hierophant* (Ἱεροφάντης). In lists of the Eleusinian priests he is put first (*C. I. G.* 184, 190). He was nominated for life (Pausan. ii. 14, 1) from the Eleusinian family of the Eumolpidae, and was generally an elderly man and bound to a life of strict chastity. There was only one Hierophant at a time, and his name was never mentioned (Lucian, *Lexiph.* 10), though in late inscriptions we find the Roman gentile name but not the praenomen or the cognomen given (*C. I. G.* 187). His principal duty was, clothed in an Oriental style, with a long robe and a turban (στρόφιον), as his name indicates, to show and explain the sacred symbols and figures—perhaps in a kind of chant or recitative, as he was required to have a good voice (cf. Plut. *Alcib.* 22; Epictet. iii. 21, § 16). (*b*) The *Daduchus* (δᾳδοῦχος) or torch-bearer was inferior to the Hierophant, and of the same rank with the Keryx (*C. I. G.* 185, compared with 188). Originally he was descended from the Eleusinian Triptolemus (Xen. *Hell.* vi. 3, 6); but about B.C. 380 this family

died out, and the Lycomidae, the family to which Themistocles belonged, which celebrated a local worship of Demeter at Phlyae full of Orphic doctrines and ceremonies, succeeded to the daduchia (see Boeckh on *C. I. G.* i. p. 441 f.). It is uncertain whether the name of the Daduchus was sacred. His head-dress was Oriental, as we may infer from a Persian soldier mistaking a Daduchus for a king (Plut. *Arist.* 5). His main duty was to hold the torch at the sacrifices, as his name indicates; but he shared with the Hierophant several functions, reciting portions of the ritual, taking part in certain purifications in the *πρόρρησις*, and even in the exhibition of the mysteries (Suid. s. v. *δᾳδουχεῖ*). For these two priests, the Hierophant and the Daduchus, who had to be men of tried sanctity, there was a regular consecration on their entering office. It was the *τέλος τῆς ἐποπτείας*, and was called *ἀνάδεσις καὶ στεμμάτων ἐπίθεσις*, because the sign of it consisted in placing on the head of the new priest the diadem of purple and the wreath of myrtle which they wore permanently. (*c*) The *Keryx* or *Hierokeryx* (Κῆρυξ, Ἱεροκῆρυξ). According to Eleusinian tradition, the Kerykes traced their origin back to Keryx, a younger son of Eumolpus; but they themselves considered their ancestors to be Hermes and one of the daughters of Cecrops—Aglauros according to Pausanias (i. 38, 3), Pandrosos according to Pollux (viii. 103). His duties were chiefly to proclaim silence at the sacrifices (Poll. iv. 91). (*d*) The *Epibomios* (*ὁ ἐπὶ βωμῷ*). In early times he was certainly a priest (*C. I. G.* 71 a, 39); he is generally mentioned in connection with the other three priests, but not always. No family laid especial claim to this priesthood. His name, as well as that of the Keryx, was probably not sacred. The four Eleusinian priests were among those who were maintained in the Prytaneum — were *ἀείσιτοι*, as they were called (*C. I. G.* 183 foll.). (*e*) The *Hierophantis* (Ἱερόφαντις). There was originally only one at a time; she belonged to Demeter (*C. I. G.* 434, 2), and her name was sacred; but a new one was added when Hadrian's wife Sabina was deified as the younger Demeter (ib. 435, 1073). Perhaps at this time or afterwards the priestesses came to be multiplied. (See the Schol. on Soph. *Oed. Col.* 683). They lived a life of perfect chastity during their tenure of office, though they might have been married previously. It is uncertain to what family the original Hierophantis of Demeter belonged; that of the younger belonged to a branch of the Lycomidae. The duties of the Hierophantis corresponded to those of the Hierophant. Pollux (i. 14) appears to call these priestesses *προφάντιδες*, and perhaps they were also called *μέλισσαι* (Hesych. s. v.). (*f*) *Female torch-bearer*, *Δᾳδουχήσασα* (*C. I. G.* 1535). (*g*) *Priestess* (Ἱέρεια). She was not hieronymous, but eponymous. These priestesses belonged to the family of the Phillidae.

Eleusinian Priest. (Vase from Kertch; Gerhard, *Ges. Abh.*, taf. 77.)

Their duties corresponded in all probability with those of the Epibomius. (*h*) The *Spondophori* (*Σπονδοφόροι*) were sent out to the adjoining country a month before the ceremony to announce the truce for the mysteries (Aesch. *Fals. Leg.* § 133). They belonged to the families of the Eudanemi and Kerykes. (*i*) *Minor offices:* (1) *φαιδρύντης τοῖν θεοῖν* (Inscr. in Mommsen, p. 227), perhaps belonging to the Eleusinium of the city. (2) *ὑδρανός*, whom Hesychius describes as *ἀγνίστης τῶν Ἐλευσινίων*. He probably superintended the *ἅλαδε μύσται*. (3) *ἰακχαγωγός* and *κουροτρόφος*, female nurses attending on the child Iacchus (Poll. i. 35). (4) Perhaps the same may be said of the *δαειρῖτις*, but it is very uncertain. It is known that Persephoné was originally called Daeira in the Eleusinian worship. (5) *ἱεραύλης* (ib. 184, c. 18) was probably the head of the *ὑμνῳδοί* and *ὑμνητρίδες* (Poll. i. 35), a sort of choir. (6) Who the *παναγεῖς* and the *πυρφόροι* were, beyond what can be inferred from their names, cannot be determined. Lenormant says the *παναγεῖς* were intermediate between the ministers and the initiates. Though not strictly a priest, yet as exercising an important function in the mysteries, (*j*) the *mystagogi* (*μυσταγωγοί*) may be mentioned here. They had to be men who had passed through all the grades of initiation. They were probably under the cognizance of the State, in a manner licensed. Prior to presenting himself for initiation, each votary had to place himself under the guidance of one of these mystagogues, and get instruction from him as to the various purifications and ceremonies he was to perform. It was only by the carelessness of mystagogues that unworthy applicants ever got admission to the mysteries. After due examination, if the mystagogue was satisfied, he presented the applicant or returned his name to the Archon Basileus or his assistants. This was called *σύστασις*. If a mystagogue could not say what purificatory sacrifices were required for a special candidate, recourse was had to (*k*) an *Exegetes* (Ἐξηγήτης), who appears to have been elected by the people from the Eumolpidae or Kerykes, and whose business it was to decide such difficult cases and generally to give *responsa* on Eleusinian ecclesiastical law. There were many books of the mysteries (cf. Lenormant, *Contemp. Rev.* xxxvii. 871) which were intended to have been strictly kept from the uninitiated, and which appear to have contained not only what ritual was to be performed in various cases, but also, perhaps, the allegorical and symbolical interpretations of some of the myths. Cf. Galen, viii. 181, ed. Kuhn; Lobeck, *Aglaoph.* 194.

The priests of the mysteries, especially the Eumolpidae, appear to have had a special ecclesiastical court (*ἱερὰ γερουσία*) for trying offences of impiety, in connection with the festival, which court they conducted according to unwritten laws of immemorial antiquity (Lys. *in Andoc.* § 10). To prosecute before this court was called *δικάζεσθαι πρὸς Εὐμολπίδας*. Their punishments, according to Caillemer (D. and S., s. v. *Asebeia*), were strictly religious—exclusion from the mysteries, deprivation of title of initiate, and such like. The curse and excommunication were most solemn—priests and priestesses, turning to the west, uttered the words of imprecation and shook their garments ([Lys.] *in Andoc.* § 51). It may be that this court was the only tribunal for cases of what we may call heterodoxy, impiety consisting in the performance

of rites contrary to the traditional one and to that held by the priests; while other kinds of procedure, superadded to the religious investigation and condemnation, were adopted in accordance with ordinary criminal law in cases of impiety, which consisted of disorder and vulgar profanity. These charges were brought before the Senate of Five Hundred sitting in the Eleusinium of the city on the day after the mysteries (Andoc. *De Myst.* § 111). The penalty was death (Thuc. vi. 61 fin.) or banishment (Andoc. § 15), with confiscation of goods (*C. I. A.* i. 277), for profanation of the mysteries. The accuser, if he did not get the fifth part of the votes, suffered a kind of *ἀτιμία* (Andoc. § 33)—i. e. was deprived of the right to enter the temples and fined the usual 1000 drachmas. Many shrank from themselves bringing the accusation, and used to inform the Archon Basileus of the profanation they had observed, and if he thought it serious he made the accusation officially.

(4) Civil Functionaries connected with the Festival. The chief civil superintendence of the festival was intrusted to the Archon Basileus, who was assisted by four *ἐπιμεληταί*, elected by the people, two from the people generally and one each from the families of the Eumolpidae and Kerykes (Aristot. *ap.* Harpocr. p. 118). The Archon generally appears to have appointed an assistant (*πάρεδρος*). The duties of the Archon and his assistant were to sacrifice and pray for the prosperity of the people, both at Athens and Eleusis, and to have general police supervision over the whole solemnity (Lys. *c. Andoc.* § 4). The *ἐπιμεληταί* had also such duties as looking after the sacrifices, testing the offerings of the votaries, classifying and marshalling the different grades of initiates, managing certain moneys, etc., as may be inferred from the similar duties attaching to the officials of this name at Andania. As to the finances of the festival generally, according to *C. I. G.* 71 a, 29, three *ἱεροποιοί* had the administration of them.

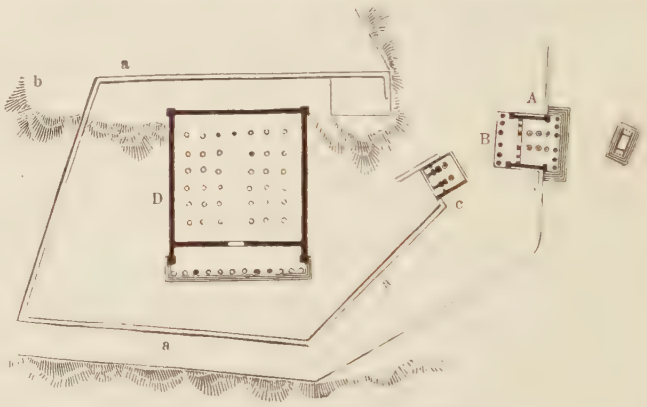
(5) The Initiates. Originally only Athenians were admitted; legend said that Heracles and the Dioscuri (Plut. *Thes.* 33) had to be adopted prior to initiation; but later all Greek-speaking people who were not murderers were admissible to be initiated (Isocr. *Paneg.* § 42). Barbarians were excluded (Lucian, *Scyth.* 8); but it was not at all necessary to be an Athenian citizen. Women (Aristid. *Eleus.* vol. i. p. 257, Jebb), and even perhaps slaves (Theophilus, *Fr.* i., vol. ii. p. 473, Kock), were admissible. Children were admitted to the first grade only; but among the children brought to Eleusis one was picked out for special initiation, and "to appease the divinity by a more exact performance" of the ceremonies required (Porphyr. *Abst.* iv. 5). The boy or girl had to be an Athenian of high birth (Bekk. *Anecd.* 204), perhaps of the special family of the Lycomidae, Eumolpidae, or the like; and was probably initiated standing on the steps of the altar, while the rest stood afar off. The parents of the child had to make extensive offerings and pay a large fee. Originally admission was free for all initiates; but by virtue of a law passed by the orator Aristogiton, each initiate paid a fee to the public treasury (Lenormant, *Contemp. Review*, xxxviii. p. 123).

The ordinary proceeding was for the initiate to receive his first introduction as a child and afterwards the higher grades as a man. The whole cycle of the mysteries was a *trieteris*, and could be gone through in two years; even the Homeric hymn extends the whole legend beyond a year; and when the Orphic theology blended Iacchus-Zagreus into the story, the regular course of two years came to be adopted. There is a high probability that the first-year votaries at Eleusis viewed a drama representing the usual story of Demeter and Coré, while the second-year votaries were shown the whole legend of Zagreus; and as to the whole course of the actual mysteries, there is a possibility that the following arrangement was that adopted, though it must be remembered that it is little more than conjecture and given for what it is worth:

(*a*) First Spring at Agrae—the votaries mourn for Coré ravished by Hades.

(*b*) First Autumn at Eleusis—mourning with Demeter for the loss of her daughter, and exhibition of the ordinary legend.

(*c*) Second Spring at Agrae—the murder of Zagreus and his heart being given to Coré (who here seems to take the place of Semelé), and conception of Iacchus.



(*d*) Second Autumn at Eleusis—rebirth of Iacchus, who is carried in procession to Demeter at Eleusis, and there the votaries sympathize in the joy of the earth-goddess, who once more has her child and grandchild about her.

That there were different grades of initiates hardly needs proof: the *μύσται* were those who had received any degree of initiation, the *ἐπόπται* or *ἔφοροι* the second-year votaries. Suidas (s. v. *ἐπόπται*) says so explicitly. (Cf. Harpocr. s. v. *ἐπωπτευκότων*, and Plut. *Demetr.* 26.) There were mystic ceremonies for both these classes of initiates, one on each of the two days, 22d and 23d. While any one introduced by a mystagogue could get admission to the ceremonies of the first year, the *μύησις*, the *ἐπόπτεια* or *ἐποψία* could only be seen by those who got a ticket from the *δαδοῦχος*. A ticket of that kind has been discovered marked ΔΑΔ and ΕΠΟΨ, with the symbols of an ear of corn and a poppy. What those ceremonies were is the most important and interesting point in our subject, but the seal of silence which was laid on the votaries has not been broken. This secrecy was most strenuously enjoined and most rigorously enforced, as we have seen. The prosecution of Alcibiades for holding a travesty of the mysteries in his own house and Andocides's speech on the subject are well known. Aeschylus is said to have divulged the mysteries in styling Artemis a daughter of Demeter (Herod. ii. 156; Pausan. viii. 37, 6) and in other matters (Aristot. *Nic. Eth.* iii. 1, 17), and to have only barely escaped death. Diagoras of Melos (Diod. xiii. 6) was banished from Athens and a price set on his head for having divulged the mysteries. It was the prevailing belief of antiquity that he who was guilty of divulging the mysteries was sure to bring down divine vengeance on himself and those associated with him (Hor. *Carm.* iii. 2, 26).

(6) The Ceremonies in the Temple. They were performed in the temple of the two goddesses at Eleusis, a building reckoned one of the greatest masterpieces of the Periclean Age. Ictinus superintended the whole. Coroebus built the lower story, with four rows of columns which divided the interior space. On his death Metagenes took up the work and added an upper story, and Xenocles built a cupola roof with an opening (*ὄπαιον*)

in the middle for the light (Plut. *Pericl.* 13; Vitruv. vii. Pref. §§ 16, 17). The dimensions of the whole building were 223 feet by 179, the measurement of the cella being 175 feet by 179. The temple had no pillars in the façade till the architect Philon, in the time of Demetrius of Phalerum, built a pronaos with twelve pillars. The temple stood inside a large enclosure, which was approached by a propylaeum, there being yet another propylaeum leading to the temple. Inside this enclosure Lenormant has fixed the position of the *ἀγέλαστος πέτρα*, where Demeter was said to have rested in her wanderings, as the rock where the great statue of Demeter Achea, now at Cambridge, stood—i. e. on the axis of the first propylaeum close to a well, which he also identifies as Callichorum. (See the *Πρακτικὰ τῆς Ἀρχαιολογικῆς Ἑταιρίας* for 1883, and M. Blavette in *Bulletin de Correspondance Hellénique*, viii. [1884], pp. 254 foll.). The temple of Ictinus, though built on the site of an older and smaller one, must be distinguished from the most ancient temple which stood more to the north, occupying a platform which overlooked the well Callichorum and the *ἀγέλαστος πέτρα*, exactly on the spot where the Homeric hymn (273) orders it to be built. The great temple of Ictinus was called by the ancients *μυστικὸς σηκός* (Strab. ix. 395), and the inner portion *τελεστήριον* or *ἀνάκτορον* or *μέγαρον* (cf. Lobeck, *Aglaoph.* 59).

The ceremony was doubtless dramatic. "Deo and Coré," says Clement of Alexandria (*Protrept.* p. 12), "have become a mystic drama. Eleusis illustrates by the light of the torches of the Daduchus the carrying off of Coré, the wandering journeys and grief of Deo." The ceremony, then, was dramatic. Aelius Aristides (*Eleus.* i. 256) asks, "Where else do the recitals of the narratives chant forth greater marvels, or does the ceremonial (*τὰ δρώμενα*) involve a greater affrightment (*ἔκπληξιν*), or does the spectacle match more fully what the ear hears?" The drama consisted of *δρώμενα* and *λεγόμενα*, the former being much the more important, for the ancient religious worship addressed itself more to the eye than to the ear. There were hymns and chants (Pausan. ix. 27, 2), speeches and exhortations (*ῥήσεις, παραγγέλματα*), recitals of myths (*μύθων φῆμαι*), and wailings for the loss of Persephoné (Proclus on Plat. *Polit.* p. 384). There were kinds of dancing or rhythmical movements by those performing the ceremony (Lucian, *De Salt.* 15), clashing of cymbals (Vell. i. 4, 1), sudden changes from light to darkness (Dio Chrys. xii. 387), "toilsome wanderings and dangerous passages through the gloom, but the end is not yet, and then before the end all kinds of terror, shivering and quaking, sweating and amazement, when suddenly a wondrous light flashes forth to the worshipper, and pure regions and meadows receive him: there are chants, voices, and dances, solemn words and holy images; and amongst these the votary now perfected is freed at last and is released, he wanders to and fro with a crown on his head, joining in the worship and in the company of pure and holy men; and he sees the uninitiated and unpurified crowd of the living in the thick mire and mist, trampling one another down, and huddled together, abiding ever in evils through fear of death and disbelief in the good things yonder" (Themist. in Stob. *Serm.* cxx. 26). Lucian (*Catapl.* 22) represents a man having entered Hades and got into the dark asking his companion if what was represented at Eleusis was not like this. Claudian's description (*De Rapt. Proserp.* init.) is sufficiently terrible; and amidst that rhetoric Lenormant fancies he can infer that the votaries, waiting anxiously outside the building, saw the glimmer of the lighted interior through the *ὄπαιον*: then was heard the noise of the preparations for the play, the doors were thrown open, and the Daduchus appeared with torches in his hands, and the statue of Demeter was seen in gorgeous vestments and brilliantly lighted up. It is more probable that the whole performance took place inside the temple. But that figures of the gods were introduced is certain, which flitted noiselessly (*ἀψοφητί*, Themist. *Or.* xvi. 224, ed. Dind.) across the stage; but the images were incomplete, not simple but overcharged with strange attributes,

Plan of the Temple Enclosure at Eleusis.

A, outer *peribolos*; a a, inner *peribolos*; B, greater *propylaea*; C, lesser *propylaea*; D, Great Temple of the Mysteries, with portico of Philon (183 ft. × 37½ ft.), and *Telesterion*, or interior of the temple (178 ft. × 170 ft.), with eight rows of seats, partly hewn out of the rock.

they were ever in motion and represented in a dim and murky light. To be more precise, the mystic drama of Demeter and Coré was unfolded to the mystae, the first-year initiates; but the epoptae were shown a representation of what Clement calls "the mysteries of the dragon," which is the story of Zeus uniting himself with Persephoné (called Brimo: cf. *Philosophumena*, viii. p. 115, ed. Miller) in the form of a serpent, and the whole tale of Iacchus-Zagreus was probably told (Clem. Alex. *Protrept.* pp. 13–15; Tatian, *Or. ad Graecos*, 13 [9 ed. Migne]; and Lenormant, p. 426). There was shown to the epoptae a representation, symbolical probably of creation, in which we hear (Euseb. *Praep. Evang.* iii. 12) that the Hierophant used to assume the part of the Creator, the Daduchus that of the sun, the altar-priest that of the moon, and the Hierokeryx that of Hermes. Again, "the last, the most solemn, and the most wonderful act of the *ἐποψία*" was shown—the ear of corn cut in perfect stillness; the blade of corn symbolized, we are told, the great and perfect ray of light issuing from the Inexpressible One, whatever that means, or rather, perhaps, it was the symbol of life, the cutting down being death.

This may lead us to what is to be said in conclusion on the moral and religious import of the mysteries. If we choose to regard them in a cold, un-religious way, we can say that they were a somewhat melodramatic performance, splendid no doubt, full of what Lobeck calls fireworks (*pyrotechnia*), but a mere theatrical display. That there were connections between the mysteries and the theatre (the Hierophants are said to have borrowed costume from the dramas of Aeschylus, Athen. i. p. 22, if the reverse is not rather the case) need not surprise us; and that modern archæologists profess to find in the temple of Eleusis evidences of machinery by which the spectacle was worked (Preller in Pauly, iii. 89; Lenormant, p. 415) is only natural; for there undoubtedly was a spectacle, a religious spectacle. But anything moral or religious may be made ridiculous if one chooses to regard it from the lower plane of the intellect alone, and does not take into account the subjective condition of the moral worker or the religious worshipper. The universal voice of the great names of pagan antiquity, from the Homeric hymn down to the writers of the late Roman Empire, attest to the wonderfully soothing effect the mysteries had on the religious emotions, and what glad hopes they inspired of good fortune in the world to come. *Neque solum*, says Cicero (*De Leg.* ii. 14, 36), *cum laetitia vivendi rationem accepimus, sed etiam cum spe meliore moriendi.* For the object aimed at was rather, not that the initiate should be taught anything that would appeal merely to his intellect, but should be moved and have his higher impulses stirred. "The light of the sun is bright for the initiated alone," sing the chorus of mystae in the *Ranae* (454). Not but that there were many scenes and symbols of a somewhat coarse nature—phallic rites, ἱεροὶ γάμοι, such as those represented by the Hierophant and Hierophantis, which portrayed perhaps the unions of Zeus and Demeter, Zeus and Persephoné, and which entered into the higher worship, but which are probably grossly exaggerated by the Christian writers, who did not take into consideration their symbolical meaning. The truths, however, which these and other symbolical performances contained were known only to the Hierophant, and explained by him to those whom he thought fit to hear them. Even the ἐπόπται only knew part of the mystic secrets, γνῶναί τι τῶν ἀπορρήτων (Sopatros, *Distinct. Quaest.* p. 121). The multitude of worshippers took it all on faith, but, as Mahaffy finely remarks, "even the coarsest features were hallowed and ennobled by the spirit of the celebrants, whose reverence blinded their eyes while it lifted up their hearts."

The Eleusinian Mysteries lasted for more than five centuries after Greece became a Roman province. As late as the time of the emperor Julian they still enjoyed a considerable portion of their primeval sanctity, and were held in the highest esteem by the Neo-Platonic philosophers. The edict of Valentinian and Valens against secret worships did not extend to the Eleusinia, the prefect of Achaea, Pretextatus, having represented that the life of the Greeks would be barren and comfortless without the mysteries. The Hierophant who initiated Maximus and Eunapius in the fourth century was the last Eumolpid. Subsequently Mithraic worship was blended with the Eleusinian; but the mysteries did not finally perish till the destruction of Eleusis by Alaric in his invasion of Greece, A.D. 396.

For further discussion on the mysteries, see CABEIRIA; MYSTERIA; ORPHICA. The principal works to consult on the Eleusinia are: St. Croix, *Récherches sur les Mystères;* Creuzer, *Symbolik*, iv. 33 foll.; Lobeck, *Aglaophamus*, especially pp. 3–228; K. O. Müller, *Kleine Schriften*, ii. 242–311 (a reprint of his article "Eleusinia" in Ersch and Grüber); Petersen in Ersch and Grüber, xxviii. 219 foll., especially 252–269, in the second volume of the article "Griechenland"; id. *Der Geheime Gottesdienst;* Guigniaut, *Mémoires sur les Mystères de Ceres et de Proserpine* in the *Mémoires de l'Académie des Inscr.* xxi.; Preller in Pauly, art. "Eleusinia," and "Griechische Mythologie," i. 643–653; id. *Mythologie* (1873–75); Hermann, *Gottesdienstliche Alterthümer*, §§ 35, 55; Maury, *Religions de la Grèce*, ii. pp. 297–381; Schömann, *Griechische Alterthümer*, ii 380–402; August Mommsen, *Heortologie der Athener*, 62–75, 222–269; Baumeister, *Denkmäler*, s. vv. "Eleusinia" and "Eleusis"; Lenormant, *Monographie de la Voie Sacrée Éleusinienne* (1864), and "The Eleusinian Mysteries" in the *Contemporary Review*, xxxvii. and xxxviii. (May, July, and September, 1880); and Sauppe, *Die Mysterieninschrift von Andania.*

Eleusis or **Eleusin** (Ἐλευσίς, Ἐλευσίν). (1) An ancient city of Boeotia, which stood, according to tradition, near Copae and the Lake Copaïs, and was, together with another ancient city, named Athenae, inundated by the waters of that lake. Stephanus of Byzantium reports that when Crates drained the waters which had overspread the plains the city of Athenae became visible (s. v. Ἀθῆναι). (2) A city of Attica, equidistant from Megara and the Piraeus, and famed for the celebration of the mysteries of Demeter. According to some writers it derived its name from a hero, whom some affirmed to be the son of Hermes but others of Ogyges (Pausan. i. 38). Its origin is certainly of the highest antiquity, as it appears to have already existed in the time of Cecrops, but we are not informed by whom, or at what period, the worship of Demeter was introduced there. Eusebius places the building of the first temple in the reign of Pandion; but, according to other authors, it is more ancient. Celeus is said to have been king of Eleusis when Demeter first arrived there. See ELEUSINIA.

At one period Eleusis was powerful enough to contend with Athens for the sovereignty of Attica. This was in the time of Eumolpus. The controversy was ended by a treaty, wherein it was stipulated that Eleusis should yield to the control of Athens, but that the sacred rites of Demeter should be celebrated at the former city. Demeter and Triptolemus were both worshipped here with peculiar solemnity, and here also was shown the Rarius Campus, where Demeter was said to have first sown corn (Pausan. i. 38). The temple of Eleusis was burned by the Persian army in the invasion of Attica (Herod. ix. 65), but was rebuilt, under the administration of Pericles, by Ictinus, the architect of the Parthenon (Plut. *Pericles*). This magnificent structure was entirely destroyed by Alaric in the year A.D. 396. Eleusis, though so considerable and important a place, was classed among the Attic demes and belonged to the tribe Hippothoöntis. The colossal statue of the Eleusinian Demeter, the work of Phidias, after having

suffered many mutilations, was taken to England by Dr. Clarke and Mr. Cripps in 1801, and now stands in the vestibule of the University Library at Cambridge. The temple itself was cleared by Sir William Gell, and important excavations have been made by the Greek Archaeological Society since 1887.

Eleutheria (*τὰ ἐλευθέρια*). The feast of liberty; a festival which the Greeks, after the battle of Plataea (B.C. 479), instituted in honour of Zeus Eleutherius (the deliverer). It was intended not merely to be a token of their gratitude to the god, but also as a bond of union among themselves; for, in an assembly of all the Greeks, Aristides carried a decree that delegates from all the Greek States should assemble every year at Plataea for the celebration of the Eleutheria. The town itself was at the same time declared sacred and inviolable, as long as its citizens offered the annual sacrifices which were then instituted on behalf of Greece. Every fifth year these solemnities were celebrated with contests (*ἀγὼν τῶν Ἐλευθερίων*) in which the victors were rewarded with chaplets. The annual solemnity at Plataea, which continued to be observed down to the time of Plutarch (*Arist.* 19 and 21), was as follows: On the sixteenth of the month of Maemacterion, a procession, led by a trumpeter, who blew the signal for battle, marched at daybreak through the middle of the town. It was followed by wagons loaded with myrtle-boughs and chaplets, by a black bull, and by free youths who carried the vessels containing the libations for the dead. No slave was permitted to minister on this occasion. At the end of this procession followed the archon of Plataea, who was not allowed at any other time during his office to touch a weapon or to wear any other but white garments, now wearing a purple tunic and with a sword in his hand, and also bearing an urn, kept for this solemnity in the public archives (*γραμματοφυλάκιον*). When the procession came to the place where the Greeks who had fallen at Plataea were buried, the archon first washed and anointed the tombstones, and then led the bull to a pyre and sacrificed it, praying to Zeus and Hermes Chthonius, and inviting the brave men who had fallen in the defence of their country to take part in the banquet prepared for them. See Thuc. iii. 58.

Eleutheria was also the name of a festival celebrated in Samos, in honour of Eros.

Eleutherius (*Ἐλευθέριος*). "The Deliverer." An epithet applied to Zeus. See ELEUTHERIA.

Eleutherna (*Ἐλευθέρνα*). An important city of Crete on the northwestern slope of Mount Ida, and traditionally founded by the Curetes. Dio Cassius (xxxvi. 1) tells a story of how a breach was made in its towers by the use of vinegar, at the time when the city was taken by Q. Metellus Creticus. In sixteenth century MSS. the ancient ruins of the place are spoken of as enormous, but of them few vestiges now remain.

Eleuthĕro-Cilĭces. A name given to those of the Cilicians who had fled to the mountains when the Greek settlers established themselves in that country. The appellation, which means "Free Cilicians," has reference to their independent mode of life. The Greeks, however, connected a fable with this. According to them, when Myrina, queen of the Amazons, was extending her conquests over Asia Minor, the Cilicians were the only people that voluntarily surrendered to her, and hence they were allowed to retain their freedom (Diod. Sic. iii. 55). Cicero came in contact with them during his government in Cilicia and partially brought them under the Roman sway, but they soon after became as free and independent as ever (*Ad Fam.* xv. 4; *Ad Att.* v. 20).

Eleuthĕro-Lacōnes. A title conferred by Augustus on a considerable part of the Laconian nation, consisting of several maritime towns, for the zeal which the inhabitants had early testified in favour of the Romans. Enfranchisement and other privileges accompanied the title (Pausan. iii. 21).

Eleutheropŏlis (*Ἐλευθερόπολις*). A city of Palestine, sixteen Roman miles northeast from Ascalon, and twenty miles southwest from Jerusalem. Its earlier name was Bethogabris (*Βαιτογαβρά*). In the days of Eusebius and Jerome, however, it was an important and flourishing city. In modern Latin, Eleutheropolis is the name given to Freistadtl in Hungary, and to Freibourg and Freiburg.

Eleuthĕrus (*Ἐλεύθερος*). A river forming the boundary between Syria and Phœnicia.

Eleutho (*Ἐλεύθω*). A surname of Ilithyia, from her *coming* (*ἐλθεῖν*), when invoked, to the aid of women in labour (Pind. *Ol.* vi. 72).

Eleven, THE. See HENDEKA.

Elgin Marbles. A collection of ancient sculptures brought from Greece to England by the Earl of Elgin, in 1812, while he was British ambassador to the Porte. On the strength of a firman from the Sultan authorizing Lord Elgin to examine, measure, and remove certain stones and inscriptions from the Athenian acropolis, his agents took possession of these marbles, which are said to have cost the ambassador nearly £75,000. In 1816, they were acquired by the British Museum for £35,000, and are now the property of the British nation, though a bitter controversy has from that time to this been waged sporadically, both as to the artistic value of the statues and as to the propriety of their removal from Greece. The chief marbles formed a part of the Parthenon, and were probably designed by Phidias and executed under his direction. They are mainly statues from the pediments and metopes, together with a large portion of the frieze of the *cella*. In addition, there are also figures from the Erechtheum and from the Temple of Niké Apteros. See Ellis, *Elgin Marbles* (London, 1847); Newton, in the *Contents of the British Museum, Elgin Room* (London, 1881–82); Michaelis, *Ancient Marbles in Great Britain* (Eng. trans. by Fennell, Cambridge, 1882); and the article ATHENAE. On the Phidian theory of their origin, see an article by W. W. Story in *Blackwood's Magazine* for December, 1873.

Eliăci (*Ἠλειακοί*). A name given to the school of philosophy established by Phaedo of Elis (Diog. Laërt. ii. 106). It was instituted after the Socratic model by Phaedo of Elis, and was continued by Plistanus, an Elian, and afterwards by Menedemus of Eretria.

Elicius. A surname of Iupiter at Rome, because he was invoked to send down lightning (Ovid, *Fast.* iii. 328; and cf. Livy, i. 20).

Elimberrum or **Climberrum.** A town of the Ausci in Aquitania (Mela, iii. 2).

Elimēa (*Ἐλίμεια*) or **Elimiōtis** (*Ἐλιμιῶτις*). A

district of Macedonia, on the frontiers of Epirus and Thessaly, originally belonging to Illyria. Its inhabitants, the Elimaei, were Epirots (Arrian, *Anab.* i. 7, § 5).

Elis (Ἦλις; Doric, Ἅλις). A district of the Peloponnesus, lying west of Arcadia. At the period of the Peloponnesian War the name of Elis was applied to the whole of that northwestern portion of the peninsula situated between the rivers Larissus and Neda which served to separate it from Achaea and Messenia. But in earlier times this tract of country was divided into several districts or principalities, each occupied by a separate clan or people, of whom the Caucones were probably the most ancient, so that Strabo affirms that, according to some authors, the whole of Elis once bore the name of Cauconia. Before the siege of Troy, the Epei, an Elean tribe, are said to have been greatly reduced by their wars with Heracles, who conquered Augeas their king, and the Pylians commanded by Nestor. They subsequently, however, acquired a great accession of strength by the influx of a large colony from Aetolia, under the conduct of Oxylus, and their numbers were further increased by a considerable detachment of the Dorians and Heraclidae. Iphitus, descended from Oxylus, and a contemporary of Lycurgus, re-established the Olympic Games, which, though instituted, as it was said, by Heracles, had been interrupted for several years (Pausan. v. 4). The Pisatae, having remained masters of Olympia from the first celebration of the festival, long disputed its possession with the Eleans, but they were finally conquered, when the temple and the presidency of the games fell into the hands of their rivals. The preponderance obtained by the latter is chiefly attributable to the assistance they derived from Sparta, in return for the aid afforded to that State in the Messenian War. From this period we may date the ascendency of Elis over all the other surrounding districts hitherto independent. It now comprised not only the country of the Epei and Caucones, which might be termed Elis Proper, but the territories of Pisa and Olympia, forming the ancient kingdom of Pelops, and the whole of Triphylia.

The troops of Elis were present in all the engagements fought against the Persians, and in the Peloponnesian War zealously adhered to the Spartan confederacy, until the conclusion of the treaty after the battle of Amphipolis, when an open rupture took place between this people and the Lacedaemonians, in consequence of protection and countenance afforded by the latter to the inhabitants of Lepraeum, who had revolted from them (Thuc. v. 31). Such was the resentment of the Eleans on this occasion that they imposed a heavy fine on the Lacedaemonians, and prohibited their taking part in the Olympic Games. They also made war upon Sparta, in conjunction with the Mantineans, Argives, and Athenians; and it was not till after the unsuccessful battle of Mantinea that this confederacy was dissolved (Thuc. v. 81). The Lacedaemonians, on the other hand, avenged those injuries by frequent incursions into the territory of Elis, the fertility of which presented an alluring prospect of booty to an invading army. They were beaten, however, at Olympia under the command of Agis (Pausan. v. 4); and again repulsed before the city of Elis, whither they had advanced under Pausanias (Diod. Sic. xiv. 17). At length the Eleans, wearied with the continual incursions to which their country was exposed, since it furnished entire subsistence to the army of the enemy, gladly sued for peace. Not long after, however, we find them again in arms, together with the Boeotians and Argives, against Sparta (Xen. *Hist. Gr.* vii. 2). At the battle of Mantinea they once more fought under the Spartan banners, jealousy of the rising ascendency obtained by the Thebans having led them to abandon their interests (id. vii. 5, 1). Pausanias writes that when Philip acquired the dominion of Greece the Eleans, who had suffered much from civil dissensions, joined the Macedonian alliance, but refused to fight against the Athenians and Thebans at Chaeronea, and on the death of Alexander they united their arms with those of the other confederates, who carried on the war of Lamia against Antipater and the other commanders of the Macedonian forces. Some years after, Aristotimus, son of Damaretus, through the assistance of Antigonus Gonatas, usurped the sovereignty of Elis; but a conspiracy having been formed against him he was slain at the altar of Zeus Soter, whither he had fled for refuge (Pausan. v. 4, 5). During the Social War the Eleans were the firmest allies of the Aetolians in the Peloponnesus; and though they were on more than one occasion basely deserted by that people, and sustained heavy losses in the field as well as from

Coins of Elis with Effigies of Zeus.

the devastation of their territory and the capture of their towns, they could not be induced to desert their cause and join the Achaean League. These events, described by Polybius, are the last in which the Eleans are mentioned as an independent people; for, though they do not appear to have taken any part in the Achaean War, they were included with the rest of the Peloponnesus in the general decree by which the whole of Greece was annexed to the Roman Empire. Elis was by far the most fertile and populous district of the Peloponnesus, and its inhabitants are described as fond of agriculture and rural pursuits (Polyb. iv. 73).

Elis was divided into three districts—Elis Proper, or "Hollow Elis" (ἡ Κοίλη Ἦλις), Pisatis, and Triphylia. The first of these occupied the northern section of the country and has already been alluded to; the second, or Pisatis, was that part of the Elean territory through which flowed the Alpheus after its junction with the Erymanthus. It derived its name from the city of Pisa; the third, or Triphylia, formed the southern division.

(2) The capital of Elis, situated on the Peneus, at the distance of 120 stadia from the sea. It was, like many other towns of Greece, at first composed of several detached villages, which, being united after the Persian War, formed one considerable city. It always, however, remained without walls, as it was deemed sacred and under the immediate protection of the god whose festival was there solemnized. Hence, in early times, according to Ephorus, those troops which were obliged to traverse this country delivered up their arms on entering it and received them again upon quitting the frontier. But this primitive state of things was not of long duration, for we subsequently find the Elean territory as little respected as any other Grecian State by the powers at war with that republic. Still the peace and tranquillity thus enjoyed for a time by the Eleans, together with the vast concourse of persons attracted by the Olympic Games, greatly contributed to the prosperity and opulence of their city. See Olympia.

Elīso. See Aliso.

Elissa. See Dido.

Ellopia (Ἐλλοπία). (1) A district in the north of Euboea, near the promontory Cenaeum, with a town of the same name. The whole island of Euboea is sometimes called Ellopia. (2) An ancient name of the district about Dodona in Epirus.

Ellotia or **Hellotia** (τὰ ἑλλώτια or ἑλλώτια). A festival with a torch-race celebrated at Corinth in honour of Athenē as a goddess of fire (Athen. xv. p. 678 a, b).

A festival of the same name was celebrated in Crete in honour of Europa. The ἑλλωτίς, from which the festival derived its name, was, according to Seleucus (*ap.* Athen. l. c.), a myrtle garland twenty cubits in circumference, which was carried about in the procession at the festival of the Ellotia.

Ellychnium (ἐλλύχνιον). See Lucerna.

Elmsley, Peter. An English classical scholar, born in 1773. He was educated at Westminster School and at Merton College, Oxford, receiving his Bachelor's degree in 1794. He took orders in 1798, but inheriting a fortune from an uncle, he decided to devote himself to literary studies and to Greek literature in particular. During a prolonged residence in Edinburgh he contributed many papers on classical topics to the *Edinburgh Review*. In 1816 he visited Italy in search of classical MSS., and spent the winter of 1818 in researches at the Laurentian Library at Florence. In the following year he did good work in deciphering some of the papyri found in Herculaneum, assisting Sir Humphry Davy. In 1823 he was made Principal of St. Alban's Hall and Camden Professor of Ancient History in the University of Oxford. He died at Oxford, March 8th, 1825.

Elmsley is best known by his critical editions of the *Alcestis*, *Andromeda*, *Bacchae*, *Electra*, *Heraclidae*, and *Medea* of Euripides; of the *Oedipus Tyrannus* and *Oedipus Coloneus* of Sophocles; and of the *Acharnians* of Aristophanes (1809). He also edited Thucydides. See *Elmsleiana Critica* (1833).

Elogium. An inscription on tombs, doors, images of ancestors, votive tablets, etc. Many of these elogia (ἐλεγεῖα) are preserved to us from the pedestals of the statues with which Augustus adorned the colonnades of the temple of Mars in the Forum (Hor. *Carm.* iv. 8, 13) and from the *hermae* in libraries. They are of some historical value, though not always representing original sources of information. For specimens, see the *Corp. Inscript. Lat.* i. pp. 277, 281, and Wilmanns pp. 622 foll.; also the *Poetae Lat. Minores* (ed. Bährens), v. 396. For the etymology of the word *elogium* see Curtius's *Kleine Schriften*, ii. 230 (Leipzig, 1880); and for discussion, Hildesheimer, *De Libro de Viris Illustribus Urbis Romae* (Berlin, 1880).

Elōné (Ἠλώνη). A town of the Perrhaebi, in Thessaly, afterwards called Limoné.

Elpēnor (Ἐλπήνωρ). One of the companions of Odysseus, who were metamorphosed by Circé into swine and afterwards back into men. Intoxicated with wine, Elpenor one day, while asleep on Circé's roof, fell and broke his neck (*Od.* x. 552).

Elpinīcé (Ἐλπινίκη). A daughter of Miltiades, married to Callias (Plut. *Per.* 10). See Cimon.

Elusātes. A people in Aquitania in the interior of the country (Caes. *B. G.* iii. 27). Their chief town was Elusa, now Euse.

Elymaei. See Elymaïs.

Elymāïs (Ἐλυμαΐς). A district of Susiana, which derived its name from the Elymaei or Elymi, a warlike and predatory people (Ptol. vi. 3, § 3). They were also found in the mountains of Great Media, and were probably among the most ancient inhabitants of the country north of the head of the Persian Gulf. In the Old Testament, Susiana is called Elam.

Elymi. See Elymus.

Elymus (Ἔλυμος). A natural son of Anchises and brother of Eryx; one of the Trojans who fled from Troy to Sicily. With the aid of Aeneas they built the towns of Aegesta and Elymé. The Trojans who settled in that part of Sicily called themselves Elymi, after Elymus.

Elysii Campi (Elysium, Ἠλύσιον πέδιον). The abode of the blessed in another world, where they enjoyed all manner of the purest pleasures. In the Homeric mythology the Elysian Fields lay on the western margin of the earth, by the stream of Oceanus, and to them the mortal relatives of the king of the gods were transported, without tasting

of death, to enjoy an immortality of bliss (*Od.* iv. 563 foll.). In the time of Hesiod, the Elysian Plains had become the Isles of the Blessed (*μακάρων νῆσοι*) in the Western Ocean (*Op. et D.* 171). Pindar, who has left a glowing description of Elysium, appears to reduce the number of these happy islands to one (*Ol.* ii. 129). At a later day a change of religious ideas ensued, brought about by the increase of geographical knowledge, and Elysium was moved down to the lower world as the place of reward for the good. The Vergilian conception respecting Elysium made it a region blessed with perpetual spring, clothed with continual verdure, beautiful with flowers, shaded by pleasant groves, and refreshed by never-failing fountains. Here the righteous lived in perfect felicity, communing with each other, bathed in a flood of light proceeding from their own sun, and with the sky at eve lighted up by their own constellations: *solemque suum, sua sidera norunt* (Verg. *Aen.* vi. 541). Their employments below resembled those on earth, and whatever had greatly engaged their attention in the upper world continued to be a source of innocent enjoyment in the world below (Verg. *Aen.* vi. 653). See HADES.

Elysium. See ELYSII CAMPI.

Emancipatio. The formal liberation of a son from the control (*manus*) of his father. If the son were sold three times over all the rights of his father came to an end. If then a father wished to make a son his own master (*sui iuris*), he made him over three times by *mancipatio* or a fictitious sale to a third person. The third person emancipated him the first and second time, so that he came again into the control of his father. After purchasing him a third time he either emancipated him himself, and thus became his *patronus*, or he sold him back to the father, to whom he now stood, not in the relation of a son, but *in mancipio*, so that the father could liberate him without more ado. In this case the father remained *patronus* of the son. The emancipated son did not, as in the case of adoption (see ADOPTIO), pass into the *patria potestas* of another, and therefore retained his father's family name; but he lost his right to inherit in default of a will. See MANUS.

Emansor. A soldier who exceeds his furlough.

Emathia (*Ἡμαθία*). A district of Macedonia, between the Haliacmon and the Axius. The poets frequently give the name of Emathia to the whole of Macedonia, and sometimes even to the neighbouring Thessaly.

Emathĭdes (*Ἡμαθίδες*). The nine daughters of Pierus, king of Emathia. See PIERIDES.

Emathion (*Ἡμαθίων*). Son of Eos and Tithonus, brother of Memnon, from whom he seized the government of the Ethiopians. He was slain by Heracles when travelling in search of the golden apples of the Hesperides. See Hes. *Theog.* 985.

Embas (*ἐμβάς*). This is sometimes used as a generic term for a closed boot, so called because one's foot "got into" (*ἐμβαίνειν*) it, and it was not merely fastened to the foot like a sandal. But at Athens *ἐμβάς* had a special signification; it was a cheap sort of boot first manufactured in Thrace, and in kind like low *κόθορνοι* (Poll. vii. 85), closed-in boots with rectangular soles, often wooden. These *ἐμβάδες* were worn by men (Aristoph. *Eccl.* 47) and by the poorer classes (id. *Vesp.* 1157).

Embatēa (*ἐμβατεία*). In Attic law this word (like the corresponding English one, *entry*) was used to denote a formal taking possession of real property. Thus, when a son entered upon the land left him by his father, he was said *ἐμβατεύειν*, or *βαδίζειν εἰς τὰ πατρῶα*, and thereupon he became *seised*, or possessed of his inheritance. If any one disturbed him in the enjoyment of this property, with an intention to dispute the title, he might maintain an action of ejectment, *ἐξούλης δίκη*. Before entry he could not maintain such action. Ἐξούλη is from *ἐξέλλειν*, an old word signifying to eject. The supposed ejectment, for which the action was brought, was a mere formality. The defendant, after the plaintiff's entry, came and turned him off, *ἐξῆγεν ἐκ τῆς γῆς*. This proceeding (called *ἐξαγωγή*) took place quietly and in the presence of witnesses; the defendant then became a wrong-doer, and the plaintiff was in a condition to try the right. See EXOULES DIKÉ.

Emblēma (*ἔμβλημα*), **Emblemăta.** (1) Emblemata were metal ornaments, such as masks, busts, medallions, figures of men and animals, wrought in relief and artificially attached by soldering or riveting to the interior or exterior of metal bowls, vases, cups, etc. (Cic. *in Verr.* iv. 22). Such ornaments were sometimes made of gold and silver, and had an artistic and pecuniary value even when detached from the objects to which they belonged. Thus, the plunderer Verres took especial care to wrench off emblemata from vases and cups. Emblemata must be distinguished from metal ornaments in relief (such as those produced in repoussé), which formed an integral part of the vase itself: the essence of the emblema was that it could be detached, if necessary, from the vase which it ornamented. Many of the metal masks, figures, dishes, etc., in modern museums are doubtless emblemata which have been broken off from vases.

Crustae were metal vase-ornaments similar to emblemata. The *crustae* were made by artisans called *crustarii*.

(2) The word *emblema* is also used to signify inlaid work (Cic. *Brut.* 79). This usage is, however, rare; and as a general rule when the words *emblema, emblemata* occur in the ancient authors and in modern archæological treatises, the metal ornaments described above are designated. See CAELATURA.

Embolĭma (*Ἐμβόλιμα*). A city of the Paropamisadae in Northern India, near the fortress of Aornos (Q. Curt. viii. 12, § 1).

Embolium (*ἐμβόλιον*). An interlude recited or sang between the acts of a play by an actress, hence styled *emboliaria* (Plin. *H. N.* vii. 49).

Embŏlum (*ἔμβολον*). The beak of a ship. See NAVIS; ROSTRUM.

Emerĭta Augusta. A town of Lusitania, below Norba Caesarea, on the northern bank of the Anas (Guadiana). It is now Merida.

Emerĭti. Roman soldiers who were discharged from military duty (Val. Max. vi. 1, 10; Ovid, *Trist.* iv. 8, 21), having served the full time required by law — viz., twenty years for the legionaries and sixteen for the praetorians (Tac. *Ann.* i. 78; Dio. Cass. lv. 23).

Emĕsa or **Emissa** (*Ἔμισσα*). A city of Syria on the east bank of the Orontes, the native city of Iulia Domna, Elagabalus (q. v.), and of Alexan-

der Severus. It was the scene of the decisive battle between Aurelian and Zenobia (A.D. 273).

Emetics. See DIAETETICA.

Emissarium (*ὑπόνομος*). The name given to an artificial channel by which an outlet is formed to carry off any stagnant body of water (Cic. *Ad Fam.* xvi. 18). In Greece, in the early times of the Minyae of Orchomenus, we find the natural channels (*katavóthra*, as they are now called) which carry off the waters of the Boeotian Cephissus through Lake Copais to the sea supplemented by two artificial emissaria or tunnels. The longer of the two, connecting the lake with the lower course of the Cephissus, is nearly four miles in length, according to Forchhammer, and with about twenty perpendicular shafts sunk into it, some of which are from 100 to 150 feet in depth. The second tunnel, much shorter, unites the lakes Copaïs and Hylica, running under the Acraephian Plain at no great depth, and is likewise provided with shafts. Both tunnels and shafts are now choked up, but can still be traced. The natural *katavóthra* being insufficient to carry off the waters of the Cephissus, much of what was once fertile alluvial land is now turned to a swamp and awaits the efforts of modern enterprise. An abortive attempt to clear out these tunnels was made by an engineer named Crates under the orders of Alexander the Great (Strab. ix. p. 407), and it was announced in 1888 that the reclamation of Lake Copaïs was again to be attempted.

Herodotus describes with marked interest the tunnel of Eupalinus at Samos, by which a supply of fresh water was introduced into the city, and gives it the first place among the "three greatest works of the Greeks," the others being the mole in the harbour of Samos and the Heraeum or temple of Heré (iii. 60). These works unquestionably date from the tyranny of Polycrates, the most flourishing period of Samos, which ended about B.C. 522.

In Italy the Etruscans were the first great masters in the art of tunnelling, and the Romans learned it from them. The Cloaca Maxima itself is quite as much an emissary as a sewer, draining the Forum and the Velabrum, which previously were swamps. (See CLOACA.) But the greatest Roman emissarium is that of Lake Fucinus. Iulius Caesar is said to have first conceived the idea of this stupendous undertaking (Suet. *Iul.* 44), which was carried into effect by the emperor Claudius (Tac. *Ann.* xii. 57). The length of the emissary, which lies nearly in a direct line from the lake to the river Liris (Garigliano), is 15,600 English feet, or three miles all but 80 yards. The number of workmen employed was 30,000, and the time occupied in the work eleven years (Suet. *Claud.* 20). For more than a mile the tunnel is carried under a mountain, of which the highest part is 1000 feet above the level of the lake, and through a stratum of rocky formation so hard that every inch required to be worked by the chisel. The remaining portion runs through a softer soil, not much below the level of the earth, and is vaulted with brick. Perpendicular shafts (*putei*) are sunk at various distances into the tunnel, and a number of lateral openings (*cuniculi*), some of which separate themselves into two branches, one above the other, are likewise directed into it, the lowest at an elevation of five feet from the bottom. Through these the materials excavated were carried out. The immediate mouth of the tunnel was at some distance from the margin of the lake. The upper end of the tunnel itself consists of a splendid archway of the Doric order, nineteen feet high and nine wide, formed out of large blocks of stone, resembling in construction the works of the Claudian aqueduct. The mouth through which the waters discharged themselves into the Liris was more simple and is represented in the preceding illustration.

Emissarium.

The modern work of Prince Torlonia (1862–75) is an extension and enlargement of the tunnel of Claudius.

Emmelīa (*ἐμμέλεια*). The serious and majestic dance of the chorus in the Greek tragedy. See CHORUS; TRAGOEDIA.

Emmenĭdae (*Ἐμμενίδαι*). A noble family of Agrigentum claiming descent from Polynices (q. v.). Of this family was Aenesidamus, whose sons, Theron and Xenocrates, are celebrated by Pindar as victors in the games.

Emmēnoi Dikai (*ἔμμηνοι δίκαι*). A name given in Attic law to those suits that were not allowed to be pending for more than a month. Most of these were suits respecting commerce or mines, in which delay would be especially injurious.

Emōdi Montes (*τὰ Ἠμωδὰ ὄρη*). Part of a chain of mountains in Asia. That part of the chain which Alexander crossed in order to invade Bactriana was called Paropamisus; the more easterly continuation of the range was termed Emodi Montes; and its still farther continuation, even to the Eastern Ocean, was styled Imaüs. See IMAÜS.

Empedŏcles (*Ἐμπεδοκλῆς*). A native of Agrigentum in Sicily, who flourished about B.C. 450. He was distinguished not only as a philosopher, but also for his knowledge of natural history and medicine, and as a poet and statesman. After the death of his father Meto, who was a wealthy citizen of Agrigentum, he acquired great weight among his fellow-citizens by espousing the popular party and favouring democratic measures.

His consequence in the State became at length so great that he ventured to assume several of the distinctions of royalty, particularly a purple robe, a golden girdle, a Delphic crown, and a train of attendants. The skill which he possessed in medicine and natural philosophy enabled him to perform many wonders, which he passed upon the superstitious and credulous multitude for miracles. He pretended to drive away noxious winds from his country and thereby put a stop to epidemic diseases. He is said to have checked, by the power of music, the madness of a young man who was threatening his enemy with instant death; to have restored a woman to life who had lain breathless thirty days; and to have done many other things, equally astonishing, after the manner of Pythagoras. On account of all this he was an object of universal admiration. Besides medical skill Empedocles possessed poetical talents. The fragments of his verses are scattered throughout the ancient writers; and Fabricius is of opinion that he was the real author of those ancient fragments which bear the name of the "Golden Verses of Pythagoras," and may be found printed at the end of Göttling's edition of Hesiod. His principal works were a didactic poem on Nature (Περὶ Φύσεως), and another entitled Καθαρμοί, which seems to have recommended virtuous conduct as a means of averting disease. Gorgias of Leontini, the well-known orator, known as "the Nihilist," was his pupil, whence it may seem reasonable to infer that Empedocles was no inconsiderable master of the art of eloquence. According to the common account he threw himself into the burning crater of Aetna, in order that the manner of his death might not be known, and that he might afterwards pass for a god; but the secret was discovered by means of one of his brazen sandals, which was thrown out from the mountain in a subsequent eruption of the volcano. This story is rejected, however, as fictitious by Strabo and other writers. According to Aristotle he died at sixty years of age.

His views in philosophy are variously given. By some he is called a Pythagorean, in consequence of a resemblance of doctrine in a few unessential points. But the principles of his theory evidently show that he belongs to the Eleatic School. Empedocles taught that originally All was one, a God eternal and at rest; a sphere and a mixture (σφαῖρος, μίγμα), without a vacuum, in which the elements of things were held together in undistinguishable confusion by love (φιλία), the primal force which unites the like to like. In a portion of this whole, however, or, as he expresses it, in the members of the Deity, strife (νεῖκος), the force which binds like to unlike, prevailed, and gave the elements a tendency to separate themselves, whereby the first became perceptible as such, although the separation was not so complete but that each contained portions of the others. Hence arose the multiplicity of things. By the vivifying counteraction of love, organic life was produced, not, however, so perfect and so full of design as it now appears; but, at first, single limbs, then irregular combinations, till ultimately they received their present adjustments and perfection. But, as the forces of love and hate are constantly acting upon each other for generation or destruction, the present condition of things cannot persist forever, and the world which, properly, is not the All, but only the ordered part of it, will again be reduced to a chaotic unity, out of which a new system will be formed, and so on forever. There is no real destruction of anything, but only a change of combinations.

Of the elements (which he seems to have been the first to describe as four distinct species of matter), fire, as the rarest and most powerful, he held to be the chief, and, consequently, the soul of all sentient and intellectual beings which issue from the central fire, or soul of the world. The soul migrates through animal and vegetable bodies in atonement for some guilt committed in its unembodied state when it is a daemon, of which he supposed that an infinite number existed. The seat of a daemon, when in a human body, is the blood. Closely connected with this view of the objects of knowledge was his theory of human knowledge. In the impure separation of the elements it is only the predominant one that the senses can apprehend; and, consequently, though man can know all the elements of the whole singly, he is unable to see them in their perfect unity, wherein consists their truth. Empedocles therefore rejects the testimony of the senses, and maintains that pure intellect alone can arrive at a knowledge of the truth. This is the attribute of the Deity, for man cannot overlook the work of love in all its extent; and the true unity is open only to itself. Hence he was led to distinguish between the world as presented to our senses (κόσμος αἰσθητός) and its type, the intellectual world (κόσμος νοητός). Lucretius, who praises Empedocles highly even while criticising his philosophy, appears to have taken him as a model. (Cf. Lucret. i. 716 foll.) The fragments of Empedocles have been published, with a commentary, by Sturz (1805); by Peyron (1810); Karsten (1838); Stein (1852); and Bergk (2d ed. Leipzig, 1866). Good monographs are those by Lommatsch (1830); Reynaud (1848); Hollenberg, *Empedoclea* (Berlin, 1853); Gladisch, *Empedocles und die Aegypter* (Leipzig, 1858); and Winnefeld, *Die Philosophie des Empedocles* (Rastatt, 1862).

Emperor. See IMPERATOR.

Emphrūri (ἔμφρουροι). From φρουρά, the name given to the body of Spartan citizens and Perioeci during the period in which they were liable to military service (Xen. *Rep. Lac.* 5, § 7). This period lasted to the fortieth year from manhood (ἀφ' ἥβης) —that is to say, to the sixtieth year from birth; and during this time a man could not go out of the country without permission from the authorities.

The only exemption was for the father of three sons, who became ἄφρουρος (Aelian, *V. H.* vi. 6). The word φρουρά, as Schömann observes, is characteristic of Spartan modes of thought; all Laconia was a camp, the Spartiatae a garrison.

Emphyteusis (ἐμφύτευσις, lit. "an implanting"). A perpetual and "real" right in agricultural land which belongs to another person, entitling the *emphyteuta* to cultivate it practically as though it were his own, on condition of paying a fixed rent (*pensio, canon*) to the *dominus*, or owner, somewhat after the nature of the English "fee-farm" rent ("feodifirma," *Magna Carta*, c. 37).

The origin of emphyteusis is traceable to the *agri vectigales*, first distinctly mentioned about the time of Hadrian—large tracts of grazing land in

Italy, belonging to the State, religious corporations (e. g. the Vestal Virgins), or the smaller *civitates* and *municipia*, but held and enjoyed by private persons subject to the payment of a perpetual rent (*vectigal*), or let out upon very long leases. The rights of such occupiers, at first purely contractual, acquired a "real" character, analogous to that of genuine ownership, from the praetor, who protected their possession (*Dig.* 2, 8, 15, 1) by interdicts and by a *utilis actio in rem* (*actio vectigalis*), availing even against the lessor when nonpayment of rent was not alleged (*Dig.* vi. 3, 1, 2). An addition had thus been made to the *iura in re aliena* of Roman law: the right was alienable both *inter vivos* and by will, and descended to the tenant's heirs on his intestacy, though at that time it had not acquired a specific name.

Empirĭci. See MEDICINA.

Emplecton (ἔμπλεκτον). See MURUS.

Emporiae (Ἐμπορίαι) or **Emporĭum** (Ἐμπόριον, Ἐμπορεῖον). The modern Ampurias; a town of the Indigetes in Hispania Tarraconensis, near the Pyrenees, situated on the river Clodianus, founded by the Phocaeans from Massilia (Livy, xxi. 60).

Emporium (τὸ ἐμπόριον). A place for wholesale trade in commodities carried by sea. The name is sometimes applied to a seaport town, but it properly signifies only a particular place in such a town. The word is derived from ἔμπορος, which signifies in Homer a person who sails as a passenger in a ship belonging to another person (*Od.* ii. 319, xxiv. 300); but in later writers it denotes the merchant who carries on commerce with foreign countries, and differs from κάπηλος, the retail dealer, who purchases his goods from the ἔμπορος and retails them in the market-place (Plat. *Protag.* 313 C). The emporium at Athens was under the inspection of certain officers, who were elected annually (ἐπιμεληταὶ τοῦ ἐμπορίου). See EPIMELETAE.

Empti et Vendĭti Actio. The Roman seller had an *actio venditi*, and the buyer an *actio empti*, to recover damages for breach of the duties imposed by the contract of sale upon the other party. Both are *actiones directae*, and belong to the class of remedies known as *bonae fidei iudicia* (Gaius, iv. 62; *Inst.* iv. 6, 28).

Emptio. See BONORUM EMPTIO.

Emptio et Venditio. In Roman law the contract of buying and selling consists in the buyer agreeing to give a certain sum of money to the seller, and the seller agreeing to give to the buyer some certain thing for his money. After the agreement is made the buyer is bound to pay his money, even if the thing which is the object of purchase should be accidentally destroyed before it is delivered; and the seller must deliver the thing with all its intermediate increase. The seller must also guarantee a good title to the purchase (see EVICTIO), and he must also guarantee that the thing has no concealed defects, and that it has all the good qualities which he (the seller) attributes to it. It was with a view to check frauds in sales, and especially in the sales of slaves, that the seller was obliged, by the edict of the curule aediles (see EDICTUM), to inform the buyer of the defects of any slave offered for sale: *Qui mancipia venduntˌ certiores faciant emtores quod morbi vitiique*, etc. In reference to this part of the law, in addition to the usual action arising from the contract, the buyer had against the seller, according to the circumstances, an *actio ex stipulatu*, *redhibitoria*, and *quanti minoris*. Horace, in the beginning of the second epistle of the second book, alludes to the precautions to be taken by the buyer and the seller of a slave.

Empūsa (Ἔμπουσα). A monstrous spectre, which was believed by the Greeks to devour human beings. It was said to be sent by Hecaté and to assume various shapes, being sometimes known as Ὀνοκώλη, Ὀνοσκελίς, "Donkey-footed." (See Aristoph. *Ran.* 293; *Eccl.* 1056). By some it was identified with Hecaté herself. See LAMIAE; MORMOLYCEA.

Enarephŏrus (Ἐναρήφορος). Son of Hippocoön. He was a passionate admirer of Helen when she was still very young, so that Tyndareus intrusted her to the care of Theseus. See HELENA.

Encarpa (ἔγκαρπα). Festoons of fruit and flowers, employed as a decorative ornament in sculpture or painting (Vitruv. iv. 1, 7), as shown by the example, from a Roman sepulchral monument.

Encarpa. (Rich.)

Encaustĭké (ἐγκαυστική). The art of painting by burning in the colours. See PICTURA.

Encelădus (Ἐγκέλαδος). Son of Tartarus and Gaea, and one of the hundred-armed giants who made war upon the gods. He was killed by Zeus, who buried him under Mount Aetna. See GIGANTES.

Encombōma (ἐγκόμβωμα). An article of Greek attire—viz. a sort of apron tied round the body in a knot (whence the name arose), and worn by slaves to keep the tunic clean (Longus, ii. 33), by young girls (Varr. *ap.* Non. s. v. p. 542), and also on the comic stage (Iul. Pollux, iv. 18). Both of these latter uses are exemplified by the annexed figure of a young woman playing on the double pipes, from a marble bas-relief representing a scene from some play.

Encomboma. (Rich.)

Encomion (ἐγκώμιον). Originally the song sung by the chorus at the κῶμος, or festal procession, held at the great national games in honour of the victor, either on the day of his victory or on its anniversary. The word came afterwards to denote any song written in celebration of distinguished persons, and in later times any spoken or written panegyric whatever.

Endēïs (Ἐνδηΐς). Daughter of Chiron and the Naiad Chariclo, wife of Aeacus, mother of Peleus and Telamon (Pind. *Nem.* v. 21).

Endeixis (ἔνδειξις). A term in Athenian jurisprudence, denoting a prosecution in notorious cases—as, for instance, against the Prytanes, if they refused to put a question to the vote in the great assembly. It was especially employed against persons who, although lying under *atimia*, presumed to claim a share in civic rights, as (particularly) by instituting prosecutions, or appearing,

speaking, and voting in the assembly. See APAGOGÉ.

Endoeus (Ἔνδοιος). An Athenian sculptor who flourished about the year B.C. 560, though tradition made him the student of Daedalus and to have fled with him from Crete. A statue of Athené by him was removed by Augustus Caesar from Tegea to Rome (Pausan. i. 26, § 5).

Endrŏmis (ἐνδρομίς). (1) A boot of leather or felt, rising as far as the calf or above it and fitting close to the foot. In front it was open and fastened with straps. It was specially adapted for journeys or hunting, and consequently appears often in representations of Artemis and of the Erinyes. Runners in races, too, often wore it (Sidon. Apollin. *Carm.* ii. 400). (2) In Roman times *endromis* was used for a thick woollen rug (Tertull. *Pall.* 4), sometimes in the palaestra thrown over the body after violent exercise (Juv. vi. 246), but also used by the humbler classes as a protection against cold and rain (Mart. iv. 19, xiv. 126; cf. Juv. iii. 102).

Endromis. (From a Pompeian Painting.)

Roman Endromis. (Rich.)

Endymion (Ἐνδυμίων). In Greek mythology, the beautiful son of Aëthlius (or, according to another story, of Zeus) and Calycé, daughter of Aeolus, king of Elis, father of Epeus, Aetolus, and Paeon, the first of whom won the government of the country by conquering in a race which his father had set on foot. He was loved by Selené, the moon-goddess, by whom he had fifty daughters. They were supposed to symbolize the fifty lunar months which intervened between the Olympic Games. His grave was at Olympia. Another story made him a shepherd or hunter on Mount Latmos in Caria. Zeus bestowed on him eternal youth and eternal life in the form of unbroken slumber. Selené descended every night from heaven to visit and embrace the beautiful sleeper in his grotto. The usual story, however, makes Selené to have thrown him into a sleep so that she might kiss and caress him without his knowledge. A beautiful statue in the British Museum represents Endymion, and the legend inspired Keats to write one of the most exquisite poems in English literature.

Enechўra (ἐνέχυρα). A word denoting the goods, usually movables, handed over to a creditor as security—as, for example, bronze, slaves, horses, etc. It was forbidden to pledge weapons and agricultural implements (Aristoph. *Plut.* 450; Diod. i. 79), or slaves already mortgaged to a creditor. If the money advanced was not paid back by the time specified, the security passed into the possession of the creditor (Demosth. *c. Aphob.* ii. p. 841, § 18).

The right of taking property in pledge is stipulated in some inscriptions for breach of contract (*C. I. A.* ii. Nos. 565, 11; 600, 36). No seizure of this sort could take place during several of the religious festivals of the Athenians, such as the Dionysia, the Lenaea, the Thargelia, etc. (*Att. Process*, ed. Lipsius, p. 338, n. 393).

Engўé (ἐγγύη). See PRAES.

Engyēsis (ἐγγύησις). See MATRIMONIUM.

Engўum (Ἔγγυον). A town in the interior of Sicily, possessing a celebrated temple of the great mother of the gods (Diod. Sic. iv. 79; Cic. *Verr.* iv. 44; v. 72).

Enīpeus (Ἐνιπεύς). (1) A river in Thessaly, rising in Mount Othrys, receiving the Apidanus, near Pharsalus, and flowing into the Peneus (Ovid, *Met.* i. 579). Poseidon assumed the form of the god of this river in order to obtain possession of Tyro, who was in love with Enipeus. She became by Poseidon the mother of Pelias and Neleus. (2) A small river in Pisatis (Elis) flowing into the Alpheus.

Enna (Ἔννα) or **Henna**. An ancient town of the Siculi in Sicily, on the road from Catana to Agrigentum, said to be the centre of the island (ὀμφαλὸς Σικελίας). It was surrounded by fertile plains, which bore large crops of wheat; it was one of the chief seats of the worship of Demeter; and, according to later tradition, it was in a flowery meadow near this place that Pluto carried off Persephoné.

Ennaetēris (ἐνναετηρίς). See CALENDARIUM.

Ennăta (ἔννατα). See FUNUS.

Ennea Hodoi (Ἐννέα Ὁδοί). A spot in Thrace, near which the city of Amphipolis was founded. It appears to have derived its name, which means "the Nine Ways," from the number of roads which met here from different parts of Thrace and Macedon. It was here, according to Herodotus (vii. 114), that Xerxes and his army crossed the Strymon on bridges, after having offered a sacrifice of white horses to that river and buried alive nine youths and nine maidens.

Ennius. (1) QUINTUS, the "father of Roman poetry," was born at Rudiae in Calabria, B.C. 239. He served in the Second Punic War and held the post of centurion in Sardinia, whence he was brought to Rome by Cato, B.C. 204. We have no ground for attributing to Cato any appreciation of Ennius's poetical gifts; he was no doubt attracted by his vigour and practical capacity. Established at Rome, Ennius gained a livelihood by giving instruction in the Greek language and by translating Greek plays for the Roman stage. His talents soon brought him recognition. Among those who honoured him with their friendship was the great Africanus, beside whose tomb the poet's bust is said to have been placed. In B.C. 189, he accompanied the consul M. Fulvius Nobilior into his province of Aetolia, expressly to record his exploits. In grateful recollection of this service the son of Fulvius in B.C. 184, with the approval of the people, assigned him a lot among the *triumviri coloniae deducendae*, thus constituting him a Roman citizen. To this he alludes in the last book of his *Annales* with justifiable pride, *Nos sumu' Romani, qui fuimus ante Rudini.* His honours did not, however, bring him wealth. Cicero relates that his old age was passed in poverty, but he did not allow this to cloud his genial temper. He is said to have keenly enjoyed the pleasures of convivial

Supposed Bust of Ennius. (Tomb of the Scipios.)

intercourse, and died of an attack of the gout at the age of seventy (B.C. 169).

Ennius was a remarkably prolific writer, and left untouched few departments of poetical composition. He probably did not commence his literary career till middle life, and he certainly continued it till the time of his death (Cic. *Brut.* 78). In the absence of certain data for determining the chronological order of his writings, it will be best to enumerate them in the order of their importance. His chief work was the *Annales*, an epic chronicle of Roman history and legend from the time of Aeneas to his own day, in eighteen books, written in hexameter verse. The first twelve books formed a connected poem, and may have been published together B.C. 172 (cf. Aul. Gell. xvii. 21, 43), though Teuffel thinks the whole work was issued in successive parts of three books each. Of this renowned work, so justly celebrated in antiquity, which gained for its author the title of "the Roman Homer," sufficient fragments still remain to enable us to appreciate the qualities of his genius, and to deplore the loss of historical and literary material which it contained. The first book seems to have been the most poetical, and is naturally the most often quoted. The longest passages we possess are the Dream of Hia and the Auspices of Romulus and Remus, about ten lines each. The second and third books continued the regal period to its close, but are almost entirely lost to us. In all these the poet made a free use of supernatural machinery. The fourth, fifth, and sixth books began the *Annales* proper and carried the history of the Republic down to the conquest of Italy and the war with Pyrrhus; of these we possess a few short but striking fragments. In the third triad the Punic Wars were described—the first briefly, as having been already treated by Naevius (for whose rude Saturnian verse Ennius shows much contempt); the second, in which he himself had been an actor, at greater length and not without mythological embellishment. The thirteenth book began with a fresh exordium, as also did the sixteenth, which headed the closing series and brought the history down to B.C. 181 at least, if not somewhat later. The poem gained immediate popularity. It is recorded that large crowds attended its public recitation, and Vergil is said to have "introduced many lines into the *Aeneid* with the view of pleasing a people devoted to Ennius" (*populus Ennianus*). Its high estimation continued far into the times of the Empire, as we know from abundant evidence. It is not until Macrobius that we find it falling into neglect.

Next in importance to the *Annales* come the tragedies. These were free imitations of Greek dramas, generally those of Euripides, though a few recall by their titles the works of Aeschylus and Sophocles. The list is thus given by Ribbeck: *Achilles, Achilles* (from Aristarchus), *Aiax, Alcumena, Alexander, Andromaché Aechmalotis, Andromeda, Athamas, Cresphontes, Erechtheus, Eumenides, Hectoris Lutra* (or *Lustra*), *Hecuba, Iphigenia, Medea Atheniensis, Medea Exul, Menalippa, Nemea, Phoenix, Telamo, Telephus, Thyestes.* Their composition extended over the whole period of his literary life, B.C. 204–169, in which latter year the *Thyestes* was written. It has been doubted whether Ennius used the chorus. If not, such a play as the *Eumenides*, where the chorus is the chief character, would have had to be entirely recast; and, besides, the criticisms of the *Ars Poetica* presuppose a Roman tragic chorus. The reservation of the orchestra for the senators' seats would, of course, make choral evolutions impossible; but with this exception the plays of Ennius were closely modelled on their Greek originals. The magniloquence of their style and their moral grandeur made them special favourites with the public. Cicero gives them high praise, and it is to him that we are indebted for the greater part of the scanty fragments that remain. A *praetexta*, entitled *Sabinae* (Rape of the Sabine Women), has been attributed to Ennius by Vahlen from a passage of Iulius Victor, and there is some ground for conjecturing that the *Ambracia* was a drama of the same class, celebrating the deeds of Fulvius.

There also remain, besides the titles, some insignificant traces of two comedies by him—*Cupuncula* and *Pancratiastes*. But his bent of mind was unsuited for comedy, and he is mentioned by Volcacius Sedigitus only *antiquitatis causa!*

Ennius was addicted to philosophical speculations. His convictions oscillated between the mystic doctrines of Pythagoras and the scepticism of Euhemerus. Both found expression in his works. In the *Annales* he mentioned that the soul of Homer migrated into his own. In the *Epicharmus*, a distant precursor of the *De Rerum Natura*, written in trochaic tetrameters, he explained the tenets of Pythagoreanism. In the *Euhemerus* (erroneously supposed by some to have been a prose work) he adopted the mythologic theory of that superficial writer. It is probable that both these works formed part of the four (or six) books of *Saturae*—i. e. miscellaneous poems in various metres. To these, also, belonged the *Sota*, mentioned by Varro; the *Protrepticus*, or "Art of Life"; the *Hedyphagetica*, a treatise on gastronomics, based on that of Archestratus of Gela; and a few epigrams, the most celebrated of which were the epitaphs on Africanus and on himself.

Ennius was filled with a proud and noble self-consciousness. He entered Rome (1) as a missionary of culture and free-thought; and (2) as a consecrator of ancient tradition. He gave to Latin literature an impulse it never quite lost. In nearly every field he led the van. To him, more than to any one, it owes its predominant tone of sober directness and moral strength. In him Greek culture, grafted on an Oscan or Messapian stock, combined with Roman patriotism to form for the first time that special intellectual type, enthusiastic but disciplined, imitative yet independent, Hellenic in source but in development intensely national, which we can trace all through the subsequent course of Roman letters, and most conspicuously in their best and most illustrious representatives. In formal polish he was no doubt deficient; yet he is often imitated by later writers, and by none with happier effect than Vergil.

BIBLIOGRAPHY.—The earliest edition of his fragments was in the *Fragm. Poët. Vet. Lat. a Rob. Stephano Congesta*, etc. (Henr. Stephanus, Paris, 1564). Far more complete was the edition of Hieronymus Columna (Naples, 1590), reprinted with the emendations and commentaries of M. A. Debrius and G. I. Voss by F. Hesselius of Rotterdam (Amsterdam, 1707).

The best modern edition of the whole of Ennius is that of J. Vahlen (Leipzig, 1854). He is also included in Wordsworth's *Fragments and Specimens of Early Latin* (Oxford, 1874), and in L. Müller's

Enn. Carm. Reliquiae, accedunt Cn. Naevi Belli Poenici quae supersunt (St. Petersburg, 1885).

In the year 1595, Paulus Merula published at Leyden an edition of the *Annales*, which, among other alterations, included additional fragments said to come from a MS. treatise *De Continentia Vett. Poetarum ad Traianum Principem*, by L. Calpurnius Piso. This MS. has never appeared, and its very existence is suspected. Merula's edition was reprinted with revisions by E. Spangenberg (Leipzig, 1825). Cf. Hoch, *De Enn. Ann. Fr. a Paulo Merula Auctis* (Bonn, 1839), and J. Lawicki, *De Fraude P. Merulae* (Bonn, 1852). Books VII.–IX. (Punic Wars) have been treated by T. Hug, *Dissertatio Inaug.* (Bonn, 1852); Book I. by H. Ilberg (Bonn, 1852).

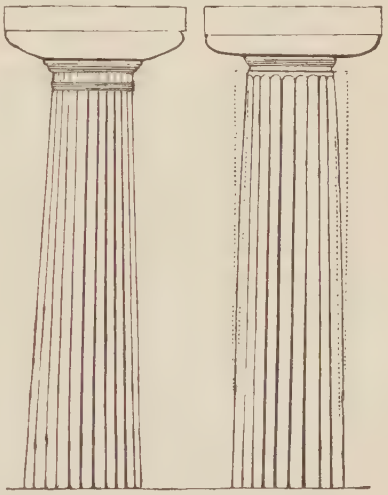
The tragic fragments by M. A. Debrius, in his *Syntagma Tragoediae Latinae I.* (Antwerp, 1593), reprinted at Paris in 1607 and 1619; also in the *Collectanea Vett. Tragg.* of P. Scriverius (Leyden, 1620). The fragment of the *Medea*, including additions to those given by Hessel and Merula, with a dissertation on Roman tragedy, by H. Planck (Göttingen, 1807). Also in *Analecta Crit. Poesis Rom. Sen. Relig. Illustrantia*, by F. Osann (Berlin, 1816). A critical edition of his dramatic fragments, published by F. H. Bothe, in *Poet. Scen. Lat.* (Halberstadt, 1821–1823; Leipzig, 1840). Also in Ribbeck's *Scaenicae Rom. Poësis Fragmenta*, 2 vols. (Leipzig, 1852–55).

Other Ennian fragments are given in *Enn. Carm.* ed. P. Burmann; in the *Anthol. Vett. Lat. Epigr. et Poem.* (Amsterdam, 1759). Of this an enlarged edition was published by H. Meyer (Leipzig, 1835). The *Hedyphagetica* fragments were collected by J. C. Wernsdorf in the *Poetae Lat. Minores*, vols. i.–v. part i. (Altenburg, 1780–88); vol. v. 2, 3–5 (Helmstadt, 1791–99). The ancient authorities for the poet's life and writings are given by Hessel, Spangenberg, and Teuffel (*Rom. Lit.* vol. i.; Eng. edit. London, 1891). Special discussions in Vahlen, *Die Annalen des Ennius* (Berlin, 1886); H. Jordan, *Quaest. Enn.* (Königsberg, 1885). For general criticisms of his style and genius, see Patin, *Études sur la Poésie Latine*, vol. ii. (Paris, 1869); Sellar, *R. Poets of Republic*, vol. i. (Oxford, 1881).

(2) A grammarian of whose personality nothing is known, but who is mentioned by Suetonius as being probably the author of a work on letters, syllables, and metres, usually ascribed to the poet Ennius (Suet. *Gram.* 1). To him is perhaps to be credited the introduction of shorthand writing at Rome. See W. Deecke in the *Rhein. Museum*, xxxvi. 577; and the article NOTAE.

Ennodius, MAGNUS FELIX. A Latin rhetorician and poet. He was born about A.D. 473 in the south of Gaul, and died in 521 as bishop of Pavia. Among other works, he wrote between 504 and 508 an extremely fulsome panegyric on Theodoric the Great and a biography of Epiphanius, his predecessor in the see. Both these writings have a value for the historian. Besides these we have a collection of twenty-eight model speeches (*Dictiones*), some of which were really delivered; nine books of letters (297 in number) and two of poems, sacred and secular. The first book of poems contains longer, the second shorter and occasional pieces. Both show a certain command of form, and treat of journeys, marriages, etc. The panegyric on Theodoric has been translated into German by Fertig in his work *Ennodius und seine Zeit* (vols. i. and ii. Passau, 1855; vol. iii. Landshut, 1858). A good edition of Ennodius is that of Vogel (Berlin, 1885), after Hartel (Vienna, 1882).

Enoikiou Diké (*ἐνοικίου δίκη*). An action brought to recover the rents withheld from the owner during the period of his being kept out of possession. If the property recovered were not a house, but land (in the more confined sense of the word), the action for the rents and profits was called *καρποῦ δίκη*.



Enomotia (*ἐνωμοτία*). A subordinate division of the *λόχος* in the Spartan army. See LOCHOS; MORA.

Ensigns. See SIGNUM; VEXILLUM.

Ensis. See GLADIUS.

Entablature. See INTABULAMENTUM.

Entăsis (*ἔντασις*), called by Vitruvius *adiectio*. An architectural term applied to the swelling in a column from the lower end to a certain point, after which a diminution takes place to the *hypotrachelium*, which forms part of the capital. In some ancient columns, as at Assos, the entasis is much exaggerated; in others, as at Corinth, it is entirely absent.

Entasis. (From Doric Columns at Paestum.)

Examples of the absence and presence of entasis are represented in the illustration: from the great temple at Paestum (to left), from a later building in the same city (to right).

Entella (*Ἔντελλα*). A town of the Sicani in the interior of the island of Sicily, on the west side, said to have been founded by Entellus, one of the companions of the Trojan Acestes.

Entellus. A Sicilian who, though advanced in years, entered the lists against the Trojan Dares and conquered him in a pugilistic encounter (Verg. *Aen.* v. 387 foll.).

Enyalius (*Ἐνυάλιος*), "The Warlike," frequently occurs in the *Iliad* (never in the *Odyssey*) as an epithet of Ares. At a later time Enyalius and Ares were distinguished as two different gods of war. The name is evidently derived from Enyo (q. v.).

Enyo (*Ἐνυώ*). The daughter of Phorcys and Ceto, according to Hesiod (*Theog.* 273). She was a war-goddess and one of the companions of Ares, and answers to the Bellona of the Romans. Some

mythologists make her the sister, others the wife, of Ares. See BELLONA.

Eōra. See AEORA.

Eordaea (Ἐορδαία and Ἐορδία). A district and town in Northwestern Macedonia, peopled by the Eordaei (Thuc. ii. 99).

Eos (Ἠώς). The Greek name of Aurora (q. v.), the goddess of morning, whence the epithet *Eous* is applied to all the eastern parts of the world (Ovid, *Fast.* iii. 406). She was the daughter of Hyperion and Thia or Euryphassa. At the close of each night she arose from the couch of her consort Tithonus and, drawn on a chariot by the steeds Lampus and Phaëton, ascended to heaven from the river Oceanus to announce the coming of the sun to gods and mortals. In Homer she accompanies the sun on his course, and in the tragic poets is identified with Hemera or the Day. For her relations with Cephalus, Orion, and Tithonus, see the respective articles. By the last named she had Memnon; and by Astraeus, she had Zephyrus, Boreas, Notus, and Hesperus.

Epaminondas (Ἐπαμεινώνδας). A Theban statesman and soldier, son of Polymnis, and in whose praise, for both talents and rectitude, there is a remarkable concurrence of ancient writers. Nepos observes that before Epaminondas was born and after his death Thebes was always in subjection to some other power; while he directed her councils she was at the head of Greece. His public life extends from the restoration of democracy by Pelopidas and the other exiles, B.C. 379, to the battle of Mantinea, B.C. 362. In the conspiracy by which that revolution was effected he took no part, but thenceforward he became the prime mover of the Theban State. His policy was first directed to assert the right and to secure the power to Thebes of controlling the other cities of Boeotia, several of which claimed to be independent. In this cause he ventured to engage his country, single-handed, in war with the Spartans, who marched into Boeotia, B.C. 371, with a force superior to any which could be brought against them. The Theban generals were divided in opinion whether a battle should be risked, for to encounter the Lacedaemonians with inferior numbers was universally esteemed hopeless. Epaminondas prevailed upon his colleagues to venture it, and devised on this occasion a new method of attack. Instead of joining battle along the whole line he concentrated an overwhelming force on one point, directing the weaker part of his line to keep back. The Spartan right being broken and their king slain, the rest of the army found it necessary to abandon the field. This memorable battle was fought at Leuctra (B.C. 371). The moral effect of it was much more important than the mere loss inflicted upon Sparta, for it overthrew the prescriptive superiority in arms claimed by that State ever since its reformation by Lycurgus.

This brilliant success led Epaminondas to the second object of his policy, the overthrow of the supremacy of Sparta and the substitution of Thebes as the leader of Greece in the democratic interest. In this hope a Theban army, under his command, marched into the Peloponnesus early in the winter, B.C. 369, and, in conjunction with the Eleans, Arcadians, and Argives, invaded and laid waste a large part of Laconia. Numbers of the Helots took that opportunity to shake off a most oppressive slavery; and Epaminondas struck a deadly blow at the power of Sparta by establishing these descendants of the old Messenians on Mount Ithomé in Messenia, as an independent State, and inviting their countrymen, scattered through Italy and Sicily, to return to their ancient patrimony. Numbers obeyed the call. This memorable event is known in history as the return of the Messenians, and two hundred years had elapsed since their expulsion. In B.C. 368, Epaminondas again led an army into the Peloponnesus; but, not fulfilling the expectations of the people, he was disgraced and, according to Diodorus (xv. 71), was ordered to serve in the ranks. In that capacity he is said to have saved the army in Thessaly when entangled in dangers which threatened it with destruction, being required by the general voice to assume the command. He is not again heard of in a public capacity till B.C. 366, when he was sent to support the democratic interest in Achaia, and by his moderation and judgment brought that whole confederation over to the Theban alliance without bloodshed or banishment. It soon became plain, however, that a mere change of masters—Thebes instead of Sparta—would be of no service to the Grecian States. Achaia first, then Elis, then Mantinea and a great part of Arcadia, returned to the Lacedaemonian alliance. To check this defection, Epaminondas led an army into the Peloponnesus for the fourth time, in B.C. 362. Joined by the Argives, Messenians, and part of the Arcadians, he entered Laconia and endeavoured to take Sparta by surprise; but the vigilance of Agesilaüs just frustrated his scheme. Epaminondas then marched against Mantinea, near which was fought the celebrated battle in which he fell. The disposition of his troops on this occasion was an improvement on that by which he had gained the battle of Leuctra, and would have had the same decisive success, but that, in the critical moment, when the Lacedaemonian line was just broken, he received a mortal wound, said to have been inflicted by Gryllus, the son of Xenophon. The Theban army was paralyzed by this misfortune; nothing was done to profit by a victory which might have been made certain; and this battle, on which the expectation of all Greece waited, led to no important result.

Whether Epaminondas could much longer have upheld Thebes in the rank to which he had raised her is very doubtful; without him she fell at once to her former obscurity. His character is certainly one of the noblest recorded in Greek history. His private life was moral and refined, his public conduct uninfluenced by personal ambition or by personal hatred. He was a sincere lover of his country; and if, in his schemes for her advancement, he was indifferent to the injury done to other members of the Grecian family, this is a fault from which, perhaps, no Greek statesman except Aristides was free. His life was written in Latin by Cornelius Nepos; and in recent times in German by Bauch (1834) and Pomtow (1870). See also Sankey, *Spartan and Theban Supremacies* (London, 1877).

Epangelia (*ἐπαγγελία*). If a citizen of Athens had incurred *ἀτιμία*, the privilege of taking part or speaking in the public assembly was forfeited. (See ATIMIA.) But as it sometimes might happen that a person, though not formally declared *ἄτιμος*, had committed such crimes as would, on accusa-

tion, draw upon him this punishment, it was, of course, desirable that such individuals, like real ἄτιμοι, should be excluded from the exercise of the rights of citizens. Whenever, therefore, such a person ventured to speak in the assembly, any Athenian citizen had the right to come forward in the assembly itself and demand of him to establish his right to speak by a trial or examination of his conduct (δοκιμασία τοῦ βίου), and this demand, denouncement, or threat was called ἐπαγγελία or ἐπαγγελία δοκιμασίας. The impeached individual was then compelled to desist from speaking, and to submit to a scrutiny into his conduct and if he was convicted a formal declaration of ἀτιμία followed.

Epaphroditus (Ἐπαφρόδιτος). (1) A freedman and favourite of the emperor Nero, whom he assisted in committing suicide. He was himself put to death by Domitian. The philosopher Epictetus (q. v.) was his freedman. (2) M. Mettius. A Greek grammarian of Chaeronea, the slave and subsequently the freedman of Modestus, Roman prefect of Egypt. He resided at Rome under Nero, and died there about A.D. 95. He was the author of several commentaries and grammatical works.

Epăphus (Ἔπαφος). A son of Zeus and Io. This mythological personage is the instrument by which Grecian myth derived the rulers of more ancient countries from its own gods and princes. Epaphus, according to the legend, was born in Egypt, and married Memphis, the daughter of the Nile, by whom he had a daughter named Libya. The same fable made him the founder of the city of Memphis (Aesch. *Prom. Vinct.* 850 foll.; Herod. ii. 153). Libya bore to Poseidon Agenor, the father of Cadmus and Europa, and also Belus, who had by another daughter of the Nile, named Anchinoë, two sons, Danaüs and Aegyptus (Apollod. ii. 1, 4). See Io.

Epariti (ἐπάριτοι). A corps of picked troops in Arcadia, which was formed to preserve the independence of the Arcadian towns, when they became united as one State after the defeat of the Spartans at Leuctra. They were 5000 in number, and were paid by the State. Cf. Hesych. s. v. ἐπαρόητοι: Thirlwall, v. 90.

Epaulia (ἐπαύλια). See Matrimonium.

Epēi (Ἐπειοί). A people of Elis. See Elis.

Epetium (Ἐπέτιον). A town of the Lissii in Dalmatia with a good harbour (Plin. *H. N.* iii. 25).

Epeunacti or **Epeunactae** (ἐπεύνακτοι, ἐπευνακταί). A class of citizens at Sparta who are said to have been the offspring of slaves and the widows of Spartan citizens. Theopompus tells us (Athen. vi. p. 271 c) that in the Messenian War, in consequence of the great losses which the Spartans sustained, they married the widows of those who were slain to Helots, and that these Helots were admitted to the citizenship under the name of ἐπεύνακτοι. See Partheniae.

Epēus (Ἐπειός). (1) Son of Panopeus and builder of the Trojan horse. See *Iliad*, xxiii. 665. (2) Son of Endymion, king of Elis. From him the Epei derived their name.

Ephebēum (ἐφηβεῖον). A spacious apartment in the Greek gymnasium, where the youths performed their exercises in the presence of their masters (Vitruv. v. 11; Strab. v. 4, 7). See Ephebi; Gymnasium.

Ephēbi (ἔφηβοι). The Athenian name for youths over the age of eighteen. The completion of a boy's eighteenth year was the occasion of a festival, at which the ἔφηβος made a drink-offering to Heracles and entertained his friends with wine. His hair, hitherto worn long, was cut, and the locks dedicated to Apollo. For the two following years the ephebi were mainly employed in gymnastic exercises, and after that time the proper civic ἐφηβεία commenced. After an examination (δοκιμασία) to test the genuineness of their civic descent and their physical capacity, the ephebi were entered on the list of their tribe, presented to the people assembled in the theatre, armed with spear and shield, and taken to the sanctuary of Agraulos at the foot of the citadel, where they bound themselves by a solemn oath to the service and defence of their country. For the next two years they served as guards on the frontier. After the completion of their twentieth year they were admitted to the meetings of the assembly and employed in foreign service. Their dress was the χλαμύς and the πέτασος. See Dittenberger, *De Ephebis Atticis* (Gött. 1863); Dumont, *Essai sur l'Ephébie Attique* (Paris, 1876); Portelette, *L'Ephébie en Grèce* in *L'Instruction Publique* for December, 1878; and the article Education, p. 570.

Ephegēsis (ἐφήγησις). See Apagogé.

Ephemĕris (ἐφημερίς). An account book; also a diary. See Commentarius.

Ephesia (τὰ Ἐφέσια). A great gathering of Ionians at Ephesus, the ancient capital of the Ionians in Asia. It was held every year, and had, like all *panegyreis*, a twofold character—that of a bond of political union among the Greeks of the Ionian race, and that of a common worship of the Ephesian Artemis. Thucydides compares it (iii. 104) to the ancient Delia (q. v.). Respecting the particulars of its celebration, we only know that it took place at night and was accompanied with much mirth and feasting, and that mystical sacrifices were offered to the Ephesian goddess (Thuc. l. c.; Dion. Hal. *Antiq. Rom.* iv. 25). That games and contests formed likewise a chief part of the solemnities is clear from Hesychius (s. v.), who calls the Ephesia an ἀγὼν ἐπιφανής. The drunken revelry described in the love-tale of Achilles Tatius (books vi.–viii.) is not mentioned by these authors. See Ephesus.

From the manner in which Thucydides and Strabo speak of the Ephesia, it seems that it was only a panegyris of a part of the Ionians, perhaps of those who lived in Ephesus itself and its vicinity.

Ephesiae Littĕrae (Ἐφέσια γράμματα). Mystic words engraved on the crown, the girdle, and the feet of the Ephesian Artemis (Eustath. *ad* Hom. *Od.* p. 1864). When pronounced, they were regarded as a charm (Menand. *ap.* Suid. s. v. ἀλεξιφάρμακα = *fr.* 360 M.). Written copies, apparently on strips of parchment like the Jewish phylacteries, were worn as amulets (Athen. xii. 548 c. = *fr.* 15 M.). They cured diseases, charmed away evil spirits, and gave victory in contests of various kinds. They are among the περίεργα, or "curious arts," of Acts, xix. 19, where see the commentators, and cf. Conybeare and Howson, *St. Paul*, ii. 13 (first edition, London, 1852). The charms and amulets of Alexander of Tralles (q. v.), a physician of the sixth century, seem to have been a survival of the

Ἐφέσια γράμματα, though he was almost certainly a Christian and employs Hebrew as well as Greek mystical expressions. See AMULETUM.

Ephesian Tales. See NOVELS AND ROMANCES.

Ephĕsis (ἔφεσις). An appeal to the Athenian assembly from the decision of the public arbitrators (διαιτηταὶ κληρωτοί) of the δημόται, or of the magistrates. See Pollux, viii. 62, 63.

Ephĕsus (Ἔφεσος). A city of Ionia, near the mouth of the river Caÿster, called by Pliny (*H. N.* v. 29) *alterum lumen Asiae.* Mythology assigns, as its founders, Ephesus, the son of the river Caÿster, and Cresus (Κρῆσος), a native of the soil (Pausan. vii. 2). Another account makes it to have been settled by Ephesus, one of the Amazons (Steph. Byzant. s. v.; *Etymol. Mag.* s. v.). According to a third tradition, the place owed its origin to the Amazons. If we follow the better authority of Strabo, we will find a settlement to have been

Bronze Coin of Ephesus.

first made in this quarter by the Carians and Leleges. Androclus, the son of Codrus, came subsequently with a body of Ionian colonists (Pausan. vii. 2). He protected the natives who had settled from devotion about the Temple of Artemis and incorporated them with his followers, but expelled those who inhabited the town above, which the Carians and Leleges had built on Mount Prion (Pausan. l. c.). Pliny enumerates other names for the city, such as Alopé, Morges, Ortygia, Ptelea, Samornia, Smyrna, Trachea, etc.

Lysimachus, wishing to protect Ephesus from the inundations to which it was yearly exposed by the overflowings of the Caÿster, built a city upon the mountain and surrounded it with walls. The inhabitants were unwilling to remove into this, but a heavy rain falling, and Lysimachus stopping the drains and flooding their houses, they were glad to exchange. The port of Ephesus had originally a wide mouth, but foul with the mud lodging in it from the Caÿster. Attalus Philadelphus and his architect were of opinion that if the entrance were contracted, it would become deeper and in time be capable of receiving ships of burden. But the slime, which had before been moved by the flux and reflux of the tide and carried off, being stopped, the whole basin, quite to the mouth, was rendered shallow. The situation, however, was so advantageous as to overbalance the inconveniences attending the port. The town increased daily, and under the Romans was considered the chief emporium of Asia this side of Taurus. In the arrangement of the provinces under the Eastern emperors it became the capital of the province of Asia. Towards the end of the eleventh century Ephesus experienced the same fate as Smyrna (q. v.). A Turkish pirate, named Tangripanes, settled here; but the Greek admiral, Ioannes Ducas, defeated him in a bloody battle and pursued the flying Turks up the Maeander to Polybotum. In 1306, it was among the places which suffered from the exactions of the Grand Duke Roger; and two years after it surrendered to the sultan Saysan, who, to prevent future insurrections, removed most of the inhabitants to Tyriaeum, where they were massacred. In the conflicts which desolated Asia Minor at a subsequent period, Ephesus was again a sufferer, and the city became at length reduced to a heap of ruins.

Ephesus was famed for its splendid temple of Artemis or Diana. The statue of the goddess was regarded with peculiar veneration and was believed by the people to have fallen from the skies. It was never changed, though the temple had been more than once restored. This rude object of primeval worship was a block of wood, said by some to be of beech or elm, by others cedar, ebony, or vine, and attesting its very great antiquity by the fashion in which it had been formed. It was carved into the similitude of Artemis, not as the graceful huntress, but an allegorical figure which we may call the goddess of nature, with many breasts, and the lower parts formed into an Hermaean statue, grotesquely ornamented, and discovering the feet beneath. (See illustration on p. 137). It was gorgeously apparelled, the vest embroidered with emblems and symbolical devices, and to prevent its tottering a bar of metal was placed under each hand. A veil or curtain, which was drawn up from the floor to the ceiling, hid it from view, except while service was in progress in the temple. This image was preserved till the later ages in a shrine, on the embellishment of which mines of wealth were consumed. The priests of Artemis suffered emasculation, and virgins were devoted to inviolable chastity. They were eligible only from the superior ranks, and enjoyed a great revenue with privileges, the eventual abuse of which induced Augustus to restrict them.

The reputation and the riches of their goddess had made the Ephesians desirous of providing for her a magnificent temple. The fortunate discovery of marble in Mount Prion gave them new vigour. The cities of Asia contributed largely, and Croesus defrayed the expense of many of the columns. The spot chosen for it was a marsh, as most likely to preserve the structure free from gaps and uninjured by earthquakes. The foundation was made with charcoal rammed down and with fleeces. The base consumed immense quantities of marble. The edifice was erected on a basement with ten steps. The architects were Chersiphron of Crete and his son Metagenes (B.C. 541); and their plan was continued by Demetrius, a priest of Artemis; but the whole was completed by Daphnis of Miletus and a citizen of Ephesus, the building having occupied 220 years. It was the first specimen of the Ionic style in which the fluted column and capital with volutes were introduced. The whole length of the temple was 425 feet, and the breadth 220; with 127 columns of the Ionic order and of Parian marble, each of a single shaft and sixty feet high. These were donations from kings, according to Pliny (*H. N.* xxxvi. 14), but there is reason to doubt the correctness of the text where this assertion is made. Of these columns thirty-six were carved; and one of them, perhaps as a model, by Scopas. The temple had a double row of columns, fifteen on either side; but Vitruvius has not determined if it had a roof, probably over the cell only. The folding-doors or gates had been con-

tinued four years in glue, and were made of cypress wood, which had been treasured up for four generations, highly polished. These were found by Mutianus as fresh and as beautiful 400 years after as when new. The ceiling was of cedar; and the steps for ascending the roof were of the single stem of a vine.

The dimensions of this great temple excite ideas of uncommon grandeur from their massiveness; but the notices of its internal ornament increase one's admiration. It was the repository in which the great artists of antiquity dedicated their most perfect works to posterity. Praxiteles and his son Cephisodorus adorned the shrine; Scopas contributed a statue of Hecaté; Timareté, the daughter of Micon, the first recorded female artist, finished a picture of the goddess, the most ancient in Ephesus; and Parrhasius and Apelles employed their skill to embellish the walls. The excellence of these performances may be supposed to have been proportionate to their price; and a picture of Alexander grasping a thunderbolt, by the latter, was added to the superb collection at the expense of twenty talents of gold. This description, however, applies chiefly to the temple as it was rebuilt, after the earlier temple had been partially burned (perhaps the roof of timber only), by Herostratus, who chose that method to ensure to himself an immortal name, on the very night that Alexander the Great was born. Twenty years after, that magnificent prince, during his expedition against Persia, offered to appropriate his spoils to the restoration of it if the Ephesians would consent to allow him the sole honour and would place his name on the temple. They declined the proposal, however, with the flattering remark that it was not right for one deity to erect a temple to another; national vanity was, however, the real ground of their refusal. The architect who superintended the erection of the new edifice was Dinocrates, of whose aid Alexander afterwards availed himself in building Alexandria (Vitruv. ii. praef.; Plut. *Alex.* 72; Plin. *H. N.* vii. 37; Solin. 40). The extreme sanctity of the temple inspired universal awe and reverence; and it was for many ages a repository of foreign and domestic treasure. There property, whether public or private, was secure amid all revolutions. The conduct of Xerxes was an example to subsequent conquerors, and the impiety of sacrilege was not suffered by the Ephesian goddess; but Nero deviated from this rule in removing many costly offerings and images and an immense quantity of silver and gold. It was again plundered by the Goths from beyond the Danube in the time of Gallienus — a party under Raspa crossing the Hellespont and ravaging the country until compelled to retreat, when they carried off a prodigious booty.

The destruction of so illustrious an edifice deserved to have been carefully recorded by contemporary historians. We may conjecture that it followed the triumph of Christianity. The Ephesian reformers, when authorized by the imperial edicts, rejoiced in the opportunity of insulting Artemis, and deemed it piety to demolish the very ruin of her habitation. When, under the auspices of Constantine and Theodosius, churches were erected, the pagan temples were despoiled of their ornaments or accommodated to other worship. The immense dome of Saint Sophia now rises from the columns of green jasper which were originally placed in the Temple of Artemis, and were taken down and brought to Constantinople by order of Justinian. Two pillars in the great church at Pisa were also transported thence. The very site of this stupendous and celebrated edifice was long undetermined, but in 1869 was discovered by Mr. J. T. Wood—an Englishman who found a clue to its situation in two letters from Antoninus Pius to the Ephesians (A.D. 145–150); in another letter from Hadrian, dated September 27th, A.D. 120; and in an inscription which prescribed the order of the processions to the temple. Excavations continued until 1874 have greatly added to our knowledge of the temple. See Falkner, *Ephesus and the Temple of Diana* (1862); Wood, *Discoveries at Ephesus* (1877); and Fergusson, *The Temple of Diana at Ephesus* (1883).

Ephĕsus, Seven Sleepers of. See Seven Sleepers of Ephesus.

Ephĕtae (*ἐφέται*). A judicial court of high antiquity at Athens, consisting of fifty-one judges elected from the noblest Athenian families. It gave decisions in cases of murder at five different places, differing according to the character of the case. If the crime had a religious character, the Archon Basileus presided. (See Archon.) Solon did not abolish this court, but handed over to the newly organized Areopagus (q. v.) its most important functions—the power of deciding cases of intentional murder, poisoning, malicious wounding, arson, and the like. The nearest relations of the murdered person were bound by religious sanction to avenge his blood. At the funeral, and after that in the market-place, they uttered a solemn denunciation, which bade the murderer keep away from all public places, assemblies, and sanctuaries, and to appear before the court. The Archon Basileus, after the charge had been announced and received, repeated this denunciation. The preliminary investigation, and determination of the place where the court was to be held, followed at three appointed times in three successive months. The case was not finally dealt with till the fourth month. On the first two days of the final trial the two parties, after solemnly taking an oath, conducted their case in person. On the third day judgment was given, in case the accused had not gone into voluntary exile. If he had, his property was confiscated, but he was pursued no further. Intentional murder was punished with death, malicious wounding with exile; the man's property was confiscated in both cases. In the court of Areopagus if the votes of the judges were equal the accused was acquitted. If the homicide were legally allowed (as, for instance, that of an adulterer) or legally innocent (as in self-defence), the case was investigated in the Delphinium, a sanctuary of the Delphic Apollo; and only a religious purification was exacted. Cases of unintentional homicide, murder of an alien, and instigation to murder, were taken at the Palladium, a sanctuary of Pallas. Instigation to murder was punished with banishment and confiscation of property, the murder of an alien with banishment, unintentional murder with banishment until the kinsmen of the murdered person gave permission to the slayer to return. In the time of Demosthenes it would seem that the cases which used to be heard at the Delphinium and Palladium were handed over to the Heliastae. Thus the Ephetae had only two courts left them—that in Phreatto, a place in the Piraeus,

MARSHALL HIGH SCHOOL
LIBRARY
MINNEAPOLIS

near the sea, and the Prytaneum. The former had only to judge in the rare event of a person banished for unintentional homicide being charged with intentional murder. As he might not set foot on land, he was heard standing in a ship, and if found guilty was punished with banishment for life. At the Prytaneum a regular court was held on inanimate objects and animals which had been the cause of death to a human being. See APSYCHON DIKÉ; and the works by Lange, *Die Epheten und der Areopag vor Solon*; and Philippi, *Der Areopag und die Epheten.*

Ephialtes (Ἐφιάλτης). (1) One of the Aloadae (*Il.* v. 385). See ALOEUS. (2) A Malian, who in B.C. 480, when Leonidas was defending the pass of Thermopylae, guided a body of Persians over the mountain path, and thus enabled them to fall on the rear of the Greeks. (3) An Athenian statesman, a friend and partisan of Pericles, whom he assisted in carrying his political measures. He was instrumental in abridging the powers of the Areopagus — a measure assailed by Aeschylus in his *Eumenides*. Ephialtes thus made himself so obnoxious to the aristocratic party that his enemies had him assassinated, probably in the year B.C. 456.

Ephippĭum (ἐφίππιον or ἐφίππειον). A saddle-cloth or pad. The saddle with a "tree" was unknown till the fourth century, although the pack-saddle seems to be of much earlier occurrence.

In the absence of stirrups (later *staffae, stapides*, etc.), which are not mentioned till the emperor Mauricius (A.D. 602), there were several ways of mounting—as jumping with or without the aid of a lance-shaft, with the assistance of others (*ἀναβολεῖς*), or from steps (*ἀνάβαθρα*). The last were set up, according to Plutarch, along the main roads by C. Gracchus. Or, the horse was taught to kneel at the word of command (Sil. Ital. x. 465).

In more ancient art the horse is represented ridden bare-backed. Later, saddle-cloths, often double or with pads beneath, and fastened with one to three girths, appear with increasing frequency. The most elaborate trappings of this kind are seen on Scythian antiquities of the fourth century B.C.

The use of trappings was originally regarded as effeminate by the Romans (Varro on Cato, *De Lib. Educ.*), but they were used in pomps. Their development may be seen by a comparison of the examples appearing on the columns of Trajan, Antoninus, and Theodosius. On the first and second, and in the equestrian statue of M. Aurelius, are to be seen cloths alone, and pads filling up the hollow of the horse's back with and without cloths. It is only on the Theodosian Column that the true saddle, with a bow behind and before, appears for the first time. The new name *sella* now emphasizes the new fashion.

Ephippium. (Coin of Labienus.)

Ephŏri (ἔφοροι, "overseers"). A board of five members at Sparta, elected annually from all the citizens. It is said to have been established by Lycurgus or King Theopompus (B.C. 770). The original intention was that it should give decisions in private matters, and represent the absent kings in certain of their duties, especially in the superintendence of the officials and of public discipline. But their circle of authority gradually widened, till it came to mean a superintendence over the whole commonwealth, including the kings. The ephors had the right of raising objections against their actions, calling them, like other officials, to account for their conduct, punishing them with fines and reprimands, and even prosecuting them before the Senate, and threatening them with deposition and death. They were the only citizens who were not obliged to rise in the kings' presence, a fact which gives a good idea of the relative position of the two parties. Besides the duty of opposing everything which they thought adverse to the laws and interests of Sparta, they had from early times the right of summoning the deliberative and legislative assemblies, the Γερουσία and Ἐκκλησία, to make proposals to them, and take the lead in proceedings left to their management. Two of them regularly accompanied the kings on their campaigns. It is probable also that they had the superintendence of the public treasure. In their capacity of protectors of the public discipline their authority extended itself to the minutest details of private life. In regard to the Helots and Perioeci it was still more absolute. Even on a *perioecus* they could pass sentence of death without trial. (See PERIOECI.) On important occasions a majority of their votes was required. At the end of their annual office, on which they entered at the beginning of the Spartan year or at the time of the autumnal equinox, they were liable to be called to account by their successors. The year was dated by the name of the first ephor on the board.

Ephŏrus (Ἔφορος). Of Cymae in Aeolis, a celebrated Greek historian, a contemporary of Philip and Alexander, flourished about B.C. 340. He wrote a universal history (Ἱστορίαι), in thirty books, the first that was attempted in Greece. It covers a period of 750 years, from the return of the Heraclidae to B.C. 341. Of this history Diodorus Siculus made an extensive use. The work, however, has perished, with the exception of a few fragments, which may be found in Müller's *Historicorum Graecorum Fragmenta* (Paris, 1841–73).

Ephўra (Ἔφυρα). (1) The ancient name of Corinth; whence Ephyreius is used as equivalent to Corinthian. See CORINTHUS. (2) A town in Thessaly, afterwards called Cranon. (3) A town in Epirus, afterwards called Cichyrus.

Epibătae (ἐπιβάται). Marines appointed to defend the vessels in the Athenian navy, and entirely distinct from the rowers as well as from the land soldiers, such as hoplitae, peltasts, and cavalry (Xen. *Hell.* i. 2, § 7; v. 1, § 11). It appears that the ordinary number of epibatae on board a trireme was ten, though in Thucydides vi. 42 we find 700 epibatae for a fleet of 100 ships, sixty of which were equipped in the ordinary way and forty had troops on board. In consequence of the number of heavy-armed men ἐκ τοῦ καταλόγου on the expedition, the Athenians appear to have reduced the number of regular epibatae from ten to seven.

The epibatae were usually taken from the Thetes, or fourth class of Athenian citizens (Thuc. vi. 42); but on one occasion, in a season of extraordinary danger, the citizens of the higher classes were compelled to serve as epibatae (Thuc. viii. 24).

The term is sometimes also applied by the Roman writers to the marines (Hirt. *Bell. Alex.* 11;

Bell. Afric. 63); though these are more usually called *classiarii milites.*

Epiblēma (ἐπίβλημα). See PALLIUM; TUNICA.

Epibŏlē (ἐπιβολή). A fine imposed by a magistrate on any official, or official body, for a misdemeanor. The various magistrates at Athens had, each in his own department, a summary penal jurisdiction—i. e. for certain offences they might inflict a pecuniary mulct or fine, not exceeding a fixed amount; if the offender deserved further punishment, it was their duty to bring him before a judicial tribunal, the magistrate proposing the penalty. Thus, in case of injury done to orphans and heiresses, or of misconduct at the great Dionysia, the archon might fine the parties; the generals could fine a phylarch for disobedience; the same power belonged to the τειχοποιοί (Aesch. *c. Ctes.* § 27). If the person fined would not submit to it, the magistrate had to lay the case before a court (Lys. *pro Milit.* § 11); that was always required when a demarch imposed a fine (*C. I. A.* ii. 573 b). The amount of the fine (τέλος) which the individual magistrate might inflict, we do not know; the Senate of Five Hundred was competent to fine to the extent of 500 drachmas.

These ἐπιβολαί are to be distinguished from the penalties awarded by a jury or court of law (τιμήματα) upon a formal prosecution, and from the fine of a thousand drachmas, which the accuser in a public action incurred when he dropped his accusation or failed to obtain a fifth part of the votes, or when a citizen refused to obey the summons to appear as a witness in court: in all these cases the magistrates had no discretionary power.

Epicasté (Ἐπικάστη). Commonly called Iocasté (q. v.). See *Odyss.* xi. 271.

Epicephesia (Ἐπικεφησία). A deme of Attica belonging to the tribe Oeneïs.

Epicharmus (Ἐπίχαρμος). The first Greek comic writer of whom we have any definite account. He was a Syracusan, either by birth or emigration (Theocr. *Epig.* 17). Some writers make him a native of the island of Cos, but all agree that he passed his life at Syracuse. It was about B.C. 500, thirty-five years after Thespis began to exhibit, eleven years after the commencement of Phrynichus, and just before the appearance of Aeschylus as a tragedian, that Epicharmus produced the first comedy properly so called. Before him, this department of the drama was little more than a series of licentious songs and sarcastic episodes, without plot, connection, or consistency. (See COMOEDIA; DRAMA.) He gave to each exhibition continuity, and converted the loose interlocutions into regular dialogue (Aristot. *Poet.* v. 5). The subjects of his Doric comedies, as we may infer from the extant titles of thirty-five of them, were partly parodies of mythological subjects, and, as such, not very different from the dialogue of the satyric drama, and partly political, and in this respect may have furnished a model for the dialogue of the Athenian comedy. (See RHINTHONICA FABULA.) Tragedy had, some years before the era of Epicharmus, begun to assume its dignified character. The woes of heroes and the majesty of the gods had, under Phrynicus, become its favourite themes. The Sicilian poet seems to have been struck with the idea of exciting the mirth of his audience by the exhibition of some ludicrous matter dressed up in all the grave solemnity of the newly invented art. Discarding, therefore, the low drolleries and scurrilous invectives of the ancient κωμῳδία, he opened a novel and less objectionable source of amusement by composing a set of burlesque dramas upon the usual tragic subjects. They succeeded, and the turn thus given to comedy long continued; so that when it once more returned to personality and satire, as it afterwards did, tragedy and tragic poets were the constant objects of its parody and ridicule. The great changes thus effected by Epicharmus justly entitled him to be called the Inventor of Comedy (Theocr. *Epig.* 17), though it is probable that Phormis or Phormus preceded him by a few Olympiads (Aristot. *Poet.* iii. 5). But his merits do not rest here: he was distinguished for elegance of composition as well as originality of conception. Demetrius Phalereus says that Epicharmus excelled in the choice and collocation of epithets, on which account the name of Ἐπιχάρμιος was given to his kind of style, making it proverbial for elegance and beauty. So many were his dramatic excellences that Plato terms him the king of comic writers, and in a later age and foreign country Plautus chose him as his model (Hor. *Epist.* ii. 1. 58) and is thought to have borrowed from him the plot of the *Menaechmi.* The parasite who figures so greatly in the plays of the New Comedy and in those of Plautus was first brought upon the stage by Epicharmus.

The plays of Epicharmus, to judge from the fragments still left us, abounded in apophthegms, little consistent with the ideas we might otherwise have entertained of their nature from our knowledge of the buffooneries whence his comedy sprang and of the writings of Aristophanes, his partially extant successor. Epicharmus, however, was a philosopher and a Pythagorean (Diog. Laert. viii. 78). We find Epicharmus still composing comedies B.C. 485 (Suidas, s. v. Ἐπίχ.), and again during the reign of Hiero, B.C. 477. He died at the age of ninety or ninety-seven years. Epicharmus is said by some authorities to have added the letters ξ, η, ψ, ω to the Greek alphabet, but inscriptions show that these characters were in use at Miletus half a century before his reputed birth. See Clermont-Ganneau, *Origine des Caractères Complémentaires de l'Alphabet Grec* in the *Mélanges Graux* (Paris, 1884). See also Lorenz, *Leben und Schriften des Epicharmus* (1864); Klein, *Griechisches u. römisches Drama* (1865); and Donaldson's *Theatre of the Greeks,* pp. 187–88 (8th ed. 1875).

Epicheirotonia (ἐπιχειροτονία). See ECCLESIA.

Epichўsis (ἐπίχυσις). A wine-jug with a narrow neck and small lip and with a handle (Menand. *Fr.* 490 M.); usually of metal—i. e. silver among the luxurious, bronze where simplicity was studied. Among the Romans it took the place of the earlier *guttus,* a narrow-necked cruet without a handle (Varr. *L. L.* v. 124); and glass became the favourite material. It was not unlike a modern claret-jug.

Epichysis. (Rich.)

Epiclērus (ἐπίκληρος, also ἐπικληρῖτις and ἔγκληρος). The name given to the daughter or daughters of an Athenian citizen who had no son, or

whose sons had died leaving no male issue. The *ἐπίκληρος* was not, in our sense of the word, an "heiress," but rather a person who went with the estate. The heir was either the person to whom her father had devised the property on condition of marrying her, or her son or sons. It was deemed an object of importance at Athens to preserve the *οἶκος*. This was effected, where a man had no child, by adoption (*εἰσποίησις*); if he had no sons or grandsons, but a daughter, he might bequeath his property to any person, but the devisee was obliged to marry her; on the other hand, if he died intestate, her nearest relative might claim her in marriage, and the inheritance was transmitted through her to a grandson, who was, when of full age, adopted into the maternal grandfather's family (Isae. *Pyrrh.* § 73). Such an epicleras might be claimed in marriage by her father's brothers, or in default of such by their sons or by the sons of her father's sisters, or by her father's uncles. If the daughter was poor (*θῆσσα*), the nearest of kin was bound by law either to marry her himself or to portion her, the law fixing a sliding scale for the different classes of the census—e. g. 500 drachmas, if he be of the highest class, etc. If there were several in the same degree of consanguinity, each of them had to contribute their share (*πρὸς μέρος*). Upon the nearest relative making his claim before the archon, public notice was given of the claim; it was written on the *σανίς*, and read out in the following assembly (Poll. viii. 95), and at a later day the herald put the question *εἴ τις ἀμφισβητεῖν ἢ παρακαταβάλλειν βούλεται*. If no one appeared to dispute the claim, the archon adjudged the heiress to him; if other claimants appeared, the archon instituted an anakrisis, and a court was held for the decision of the right, which was determined according to the Athenian law of consanguinity.

Even when a woman was already married, her husband was obliged to give her up to a man with a better title; and men sometimes put away their former wives in order to marry heiresses (Isae. *Pyrrh.* § 64). Even after the decision of the court had been given in favour of one claimant, any other person who could show a better title might bring an action against the husband and claim the heiress ([Demosth.] *c. Macart.* p. 1054, § 16). The limit of time for making such a claim is not known.

The estate never passed into the possession of the husband of the heiress (Isae. *Ciron.* § 31); their son when of full age was adopted into his maternal grandfather's family (Isae. *Pyrrh.* § 73) and took possession of the estate. He then became his mother's legal protector (*κύριος*), and was bound to find her maintenance. If there were more sons, they shared the property equally. There were epicleri at Mitylené and Phocis. With the Lycians daughters only could inherit.

Epicnemidii Locri. See LOCRIS.

Epic Poetry. See EPOS.

Epicrătes (Ἐπικράτης). (1) An Athenian who helped to expel the Thirty Tyrants (q. v.). Later, being sent on a mission to King Artaxerxes of Persia, he was accused of receiving a bribe from that monarch. Though acquitted of this charge, he was afterwards convicted of a similar offence and escaped death by flight. He is ridiculed by the comic poets for his large beard, whence he received the nickname *σακεσφόρος* (Plat. Com. *Presb.* 4 Meineke). (2) Of Ambracia; an Athenian writer of the Middle Comedy (Aelian, *N. A.* xii. 10).

Epictētus (Ἐπίκτητος). An eminent Stoic philosopher, born in a servile condition at Hierapolis in Phrygia, about A.D. 50. The names of his parents are unknown; neither do we know how he came to be brought to Rome. But in that city he was for some time a slave to Epaphroditus, a freedman of Nero, who had been one of his body-guard An anecdote related by Origen, which illustrates the fortitude of Epictetus, would also show, if it were true, that Epaphroditus was a most cruel master. Epictetus, when his master was twisting his leg one day, smiled and quietly said, "You will break it"; and when he did break it, only observed, "Did I not tell you that you would do so?" It is not known how or when Epictetus managed to effect his freedom, but he could not have been still a slave when he left Rome in consequence of an edict against philosophers. This event, the only one in his life the date of which can be assigned, took place, as has been said, in the year A.D. 89, being the eighth year of Domitian's reign. Epictetus then retired to Nicopolis in Epirus, and it is a question whether he ever returned to Rome. The chief ground for believing that he did is a statement of Spartianus (*Hadr.* 16), that Epictetus lived on terms of intimacy with the emperor Hadrian; while it is agreed, on the other hand, that there is no good evidence of any of his discourses having been delivered at Rome, but that they contain frequent mention of Nicopolis. This argument, however, is hardly sufficient to overthrow the express testimony of Spartianus. It is not known when he died. Suidas says that he lived till the reign of Marcus Aurelius, yet the authority of Aulus Gellius is strong on the other side. He, writing during the reign of the first Antonine, speaks of Epictetus, in two places, as being dead (*Noct. Att.* ii. 18; xvii. 19).

Epictetus led a life of exemplary contentment, simplicity, and virtue, practising in all particulars the morality which he taught. He lived for a long while in a small hut, with no other furniture than a bed and a lamp, and without an attendant; until he benevolently adopted a child whom a friend had been compelled by poverty to expose, and hired a nurse for its sake. A teacher of the Stoic philosophy, he was the chief of those who lived during the period of the Roman Empire. His lessons were principally, if not solely, directed to practical morality. His favourite maxim, and that into which he resolved all practical morality, was "bear and forbear," *ἀνέχου καὶ ἀπέχου*. He appears to have differed from the Stoics on the subject of suicide. We are told by Arrian, in his Preface to the *Discourses*, that he was a powerful and inspiring lecturer; and, according to Origen (*c. Cels.* 7, *ad init.*), his style was superior to that of Plato. It is a proof of the estimation in which Epictetus was held, that, on his death, his lamp was purchased by some aspirant after philosophy more eager than wise for 3000 drachmas, or over $500. Though it is said by Suidas that Epictetus wrote much, there is good reason to believe that he himself wrote nothing. His *Διατριβαί* were taken down by his pupil Arrian, and published after his death in eight books, of which four remain. The same Arrian compiled the *Enchiridion* or "manual," an abstract of the teaching of

his master, and wrote a life of Epictetus, which is lost. Some fragments have been preserved, however, by Stobaeus. Simplicius has also left a commentary on his doctrine in the Eclectic manner. The best edition of the remains of Epictetus is still that of Schweighäuser, 5 vols. (Leipzig, 1800). The text and a Latin translation by Dübner (1840) may be recommended. The best English translations are those of Higginson, with a sketch of Epictetus (Boston, 1865); Long (London, 1877); and Rolleston (1881). See the popular work of Canon Farrar, *Seekers after God* (1863).

Epicūrus (Ἐπίκουρος). A celebrated philosopher, born in the year B.C. 341, in the island of Samos, whither his father had gone from Athens, in the year B.C. 352, among 2000 colonists then sent out by the Athenians. Yet he was an Athenian by right, belonging to the deme Gargettus and to the tribe Aegeïs. His father Neocles is said to have been a school-master, and his mother Chaeristrata to have practised arts of magic, in which it was afterwards made a charge against Epicurus that, when he was young, he assisted her (Diog. Laërt. x. 4). Having passed his early years in Samos and Teos, he went to Athens at the age of eighteen. He had begun to study philosophy when only fourteen, from a desire, which the teachers to whom he had applied had failed to satisfy, of understanding Hesiod's description of chaos. In Samos he is said to have received lessons from Pamphilus, a follower of Plato (Cic. *N. D.* i. 26). On the occasion of this his first visit to Athens, Epicurus stayed there for a very short time. He left it in consequence of the measures taken by Perdiccas after the death of Alexander the Great, and went to Colophon to join his father. In B.C. 310, he went to Mitylené, where he set up a school. Staying only one year at this latter place, he next proceeded to Lampsacus, where he taught for four years. He returned to Athens in the year B.C. 306, and now founded the school which ever after was named from him the Epicurean. He purchased a garden (Κῆποι Ἐπικούρου) for eighty minae (about $1450), wherein he might live with his disciples and deliver his lectures, and henceforth remained in Athens, with the exception only of two or three visits to his friends in Asia Minor, until his death, from stone in the bladder, B.C 270. He was in his seventy-second year when he died, and he had then been settled in Athens as a teacher for thirty-six years.

Epicurus is said by Diogenes Laërtius (x. 9) to have had so many pupils that even whole cities could not contain them. Hearers came to him from distant places; and while men often deserted other schools to join that of Epicurus, there were only two instances, at most, of Epicurus being deserted for any other teacher. Epicurus and his pupils lived together in the garden of which we have spoken, in a state of friendship, which, as it is usually represented, could not be surpassed — abstaining from putting their property together and enjoying it in common for the quaint yet significant reason that such a plan implied mutual distrust. The friendship subsisting between Epicurus and his pupils is commemorated by Cicero (*De Fin.* i. 20). In this garden, too, they lived in the most frugal and decorous manner, though it was the delight of the enemies of Epicurus to represent it differently, and though Timocrates, who had once been his pupil and had abandoned him, spread such gossip as that Epicurus used to vomit twice a day after a surfeit and that harlots were inmates of the garden. (See LEONTIUM.) An inscription over the gate of the garden told him who might be disposed to enter that barley-cakes and water would be the fare provided for him (Sen. *Ep.* 31); and such was the chastity of Epicurus that one of his principal opponents, Chrysippus, endeavoured to account for it, so as to deny him any merit, by saying that he was without passions (Stob. *Serm.* 117). Epicurus remained unmarried, in order that he might be able to prosecute philosophy without interruption. His most attached friends and pupils were Hermachus of Mitylené, whom he appointed by will to succeed him as master of the school; Metrodorus, who wrote several books in defence of his system; and Polyaenus. Epicurus's three brothers, Neocles, Chaeredemus, and Aristobulus, also followed his philosophy, as also one of his servants, Mys, whom at his death he made free. Besides the garden in Athens, from which the followers of Epicurus, in succeeding time, came to be named "the philosophers of the garden" (Juv. *Sat.* xiii. 122; xiv. 319), Epicurus possessed a house in Melité, a village near Athens, to which he used often to retire with his friends. On his death he left this house, together with the garden, to Hermachus, as head of the school, to be left by him again to whosoever might be his successor. See EDUCATION.

In physics Epicurus trod pretty closely in the footsteps of Democritus; so much so, indeed, that he was accused of taking his atomic cosmology from that philosopher without acknowledgment. He made very few, and these unimportant, alterations. According to Epicurus, as also to Democritus and Leucippus before him, the universe consists of two parts, matter (σῶμα) and space, or vacuum (τὸ κενόν), in which matter exists and moves; and all matter, of every kind and form, is reducible to certain indivisible particles or atoms (ἄτομοι), which are eternal. These atoms, moving, according to a natural tendency, straight downward, and also obliquely, have thereby come to form the different bodies which are found in the world, and which differ in kind and shape, according as the atoms are differently placed in respect to one another. It is clear that, in this system, a creator is dispensed with; and indeed Epicurus, here again following Democritus, set about to prove, in an *a priori* way, that this creator could not exist, inasmuch as nothing could arise out of nothing, any more than it could utterly perish and becoming nothing. The atoms have existed always, and always will exist; and all the various physical phenomena are brought about, from time to time, by their various motions. The soul itself is made of a finer and more subtle kind of atoms, which, when the body dies and decays, separate and are dissipated. The various processes of sense are explained on the principles of materialism. From the surfaces of all objects continually flow thin, filmy images of things (εἴδωλα), which, by impact on the organism, cause the phenomena of vision, hearing, etc.

It remains to speak of the Epicurean system of ethics. Setting out with the two facts that man is susceptible of pleasure and pain and that he seeks the one and avoids the other, Epicurus declared that it is a man's duty to endeavour to increase to the utmost his pleasures and diminish

to the utmost his pains—choosing that which tends to pleasure rather than that which tends to pain, and that which tends to a greater pleasure or to a lesser pain rather than that which tends respectively to a lesser pleasure or a greater pain. He used the terms pleasure and pain in the most comprehensive way, as including pleasure and pain of both mind and body; and esteemed the pleasures and pains of the mind as incomparably greater than those of the body. The highest pleasure, then, is peace of mind (*ἀταραξία*, *ἀπονία*), and this comes from *φρόνησις* or the ability to decide what line of conduct will best secure true happiness. Death, he says, is not to be feared, for "where we are, death is not; and where death is, we are not."

Epicurus. (Baumeister.)

The period at which Epicurus opened his school was peculiarly favourable. In place of the simplicity of the Socratic doctrine, nothing now remained but the subtlety and affectation of Stoicism, the unnatural severity of the Cynics, or the debasing doctrine of indulgence taught and practised by the followers of Aristippus. The luxurious refinement which now prevailed in Athens, while it rendered every rigid scheme of philosophy, as well as all grossness of manners, unpopular, inclined the younger citizens to listen to a preceptor who smoothed the stern and wrinkled brow of philosophy, and, under the notion of conducting his followers to enjoyment in the bower of tranquillity, led them unawares into the path of moderation and virtue. Hence the popularity of his school. It cannot be denied, however, that from the time when this philosopher appeared to the present day, an uninterrupted course of censure has fallen upon his memory; so that the name of his sect has almost become a proverbial expression for everything corrupt in principle and infamous in character. The charges brought against Epicurus are that he superseded all religious principles by dismissing the gods from the care of the world; that if he acknowledged their existence, it was only in conformity to popular prejudice, since, according to his system, nothing exists in nature but material atoms; that he showed great insolence and vanity in the disrespect with which he treated the memory of former philosophers and the characters and persons of his contemporaries; and that both he and his disciples were addicted to the grossest sensuality.

With respect to the first charge, it certainly admits of no refutation. The doctrine of Epicurus concerning nature militated directly against the agency of a Supreme Being in the formation and government of the world, and his misconceptions with respect to mechanical motion and the nature of divine happiness led him to divest the Deity of some of his primary attributes. It is not true, however, that he entirely denied the existence of superior powers. Cicero charges him with inconsistency in having written books concerning piety and the reverence due to the gods, and in maintaining that the gods ought to be worshipped, while he asserted that they had no concern in human affairs. That there was an inconsistency in this is obvious. But Epicurus professed that the universal prevalence of the ideas of gods was sufficient to prove that they existed; and, thinking it necessary to derive these ideas, like all other ideas, from sensations, he imagined that the gods were beings of human form and made known to men by the customary emanations. He believed that these gods were eternal and supremely happy, living in the intermundane spaces (*μετακόσμια*) in a state of quiet, and meddling not with the affairs of the world. He contended that they were to be worshipped on account of the excellence of their nature, and not because they could do men either good or harm (Cic. *N. D.* i. 41; Sen. *Ben.* iv. 19).

The Epicurean school was carried on, after Hermachus, by Polystratus and many others, concerning whom nothing is known; and the doctrines which Epicurus had taught underwent few modifications. When introduced among the Romans, these doctrines, though very much opposed at first, were yet adopted by many distinguished men, as Lucretius, Atticus, and Horace. Under the emperors, Pliny the Younger and Lucian of Samosata were noted Epicureans. See LUCRETIUS.

Our chief sources of information respecting the doctrines of Epicurus are the tenth book of Diogenes Laërtius and the poem of Lucretius, *De Rerum Natura*. Information is also furnished by the writings of Cicero, especially the *De Finibus* and the *De Natura Deorum;* by those of Seneca, and by the treatise of Plutarch, "Against Colotes." Epicurus, according to Diogenes Laërtius, was a more voluminous writer than any other philosopher, having written as many as 300 volumes, in all of which he is said to have studiously avoided making quotations. All that now remains of his works are the letters contained in the tenth book of Diogenes Laërtius and parts of two books of his treatise on Nature (*Περὶ Φύσεως*), which were discovered at Herculaneum. The last were published at Leipzig in 1818, being edited by Orelli; further fragments will be found in the sixth volume of the *Hercul. Voll. Collectio Altera*, of which the first part appeared at Naples in 1866. A critical edition of the first two letters was given by Schneider (Leipzig, 1813). See Lange's *Geschichte des Materialismus* (Iserlohn, 1866); Trezza, *Epicuro e l'Epicureismo* (Florence, 1877); Zeller, *Philosophy of the Stoics, Epicureans, and Skeptics* (Eng. trans. 1880); Wallace, *Epicureanism* (1880); monographs

by Gizycki (Halle, 1879) and Kreibig (Vienna, 1885); Susemihl, i. 87 foll., and the article PHILOSOPHIA.

Epicȳdes (Ἐπικύδης). A Carthaginian of Sicilian origin who served with his brother Hippocrates, under Hannibal, with much distinction. He was the leader of the Punic party in Syracuse after the murder of the tyrant Hieronymus, and defended that city against the Roman general Marcellus.

Epidamnus (Ἐπίδαμνος). See DYRRHACHIUM.

Epidauria (τὰ Ἐπιδαύρια). A festival at Athens in honour of Aesculapius (q. v.). See MYSTERIA.

Epidaurus (Ἐπίδαυρος). (1) A town in Argolis on the Saronic Gulf, forming, with its territory Epidauria, a district independent of Argos, and was not included in Argolis till the time of the Romans. It was the chief seat of the worship of Aesculapius, whose temple was situated about five miles from the town. On the inscriptions lately found there, see Gardner, *New Chapters in Greek History*, ch. xii. (1892). (2) Styled LIMERA, a town in Laconia, on the east coast, said to have been founded by Epidaurus in Argolis.

Epideipnis (ἐπιδειπνίς). A second course at dinner. See CENA.

Epidelium (Ἐπιδήλιον). A town on the southeastern coast of Laconia with a temple of Apollo which contained an image of the god, said to have been cast into the sea at Delos and to have drifted ashore at Epidelium. See Curtius, *Pelop.* ii. 298 (1852).

Epidĭcus (ἐπίδικος). An heiress. See EPICLERUS.

Epidĭcus. A play of Plautus (q. v.) written after B.C. 195, with a somewhat complex plot and rather dull. Editions by Jacob (Lübeck, 1835), Geppert (Berlin, 1865), and Gray (Cambridge, 1893).

Epidium. (1) One of the Ebudae Insulae, supposed to be the same with the modern Ila. (2) A promontory of Caledonia, corresponding to the southern extremity of the peninsula of Cantire.

Epidŏseis (ἐπιδόσεις). Voluntary contributions, either in money, arms, or ships, which were made by the Athenian citizens in order to meet the extraordinary demands of the State. When the expenses of the State were greater than its revenue, it was usual for the prytanes to summon an assembly of the people, and after explaining the necessities of the State, to call upon the citizens to contribute according to their means. Those who were willing to contribute then rose and mentioned what they would give, while those who were unwilling to give anything remained silent or retired privately from the assembly. The names of those who had promised to contribute, together with the amount of their contributions, were written on tablets, which were placed before the statues of the Eponymi, where they remained till paid.

These ἐπιδόσεις, or voluntary contributions, were frequently very large. Sometimes the more wealthy citizens voluntarily undertook a trierarchy, or the expenses of equipping a trireme (Demosth. *c. Mid.* p. 566, § 161). We read that Pasion furnished 1000 shields, together with five triremes, which he equipped at his own expense (Demosth. *c. Steph.* i. p. 1127, § 85). The liberality of Demosthenes himself was especially noteworthy; and his acts of munificence were recorded in the decree by which a crown was voted to him.

Epigamia (ἐπιγαμία). The right of contracting a valid marriage, with all its legal consequences. It was possessed only by citizens of the same State; aliens could acquire it only by special legal authorization—i. e. a decree of the popular assembly. At Athens even the *metoeci*, or resident aliens, were excluded from it. Cf. the article CONUBIUM.

Epigĕnes (Ἐπιγένης). (1) Of Sicyon, said to have been the oldest writer of tragedy, and to have preceded even Thespis. (2) An Athenian poet of the Middle Comedy who flourished about B.C. 380.

Epigŏni (Ἐπίγονοι, "descendants"). The sons of the Grecian heroes who were killed in the First Theban War. (See POLYNICES.) The War of the Epigoni is famous in ancient history. It was undertaken ten years after the first. The sons of those who had perished in the first war resolved to avenge the death of their fathers. The god, when consulted, promised them victory if led by Alcmaeon, the son of Amphiaraüs. Alcmaeon accordingly took the command. Another account, however, given by Pausanias (ix. 9, 2), makes Thersander, son of Polynices, to have been at the head of the expedition. The other leaders were Amphilochus, brother of Alcmaeon; Aegialeus, son of Adrastus; Diomedes, of Tydeus; Promachus, of Parthenopaeus; Sthenelus, of Capaneus; and Eurypylus, of Mecisteus. The Argives were assisted by the Messenians, Arcadians, Corinthians, and Megarians. The Thebans obtained aid from the neighbouring States. The invaders ravaged the villages about Thebes. A battle ensued, in which Laodamas, the son of Eteocles, slew Aegialeus, and fell himself by the spear of Alcmaeon. The Thebans then fled; and, by the advice of Tiresias, they secretly left their city, which was entered and plundered by the Argives, and Thersander was placed on the throne.

With the exception of the events of the Trojan War and the return of the Greeks, nothing was so closely connected with the *Iliad* and *Odyssey* as the War of the Argives against Thebes, since many of the principal heroes of Greece, particularly Diomedes and Sthenelus, were themselves among the conquerors of Thebes, and their fathers before them, a bolder and wilder race, had fought on the same spot, in a contest which, although unattended with victory, was still far from inglorious. Hence, also, reputed Homeric poems on the subject of this war were extant, which perhaps really bore a great affinity to the Homeric time and school. The second part of the *Thebaïs*, which related to the exploits of the Epigoni, was, according to Pausanias (ix. 9, 2), ascribed by some to Homer himself. The *Epigoni* was still commonly ascribed to Homer in the time of Herodotus (iv. 32). See HOMERUS.

Epigramma (ἐπίγραμμα). Properly an inscription, such as was often written upon a tomb, a votive offering, a present, a work of art, and the like, to describe its character. Inscriptions of this sort were from early times put into metrical form, and the writer generally tried to combine good sense and spirit in them. They were generally, though not always, written in the elegiac metre.

The greatest master of Greek epigram was Simonides of Ceos, the author of several of the sepulchral inscriptions on the warriors who fell in the Persian Wars. His lines are remarkable for repose, clearness, and force, both of thought and expression. Fictitious inscriptions were often written, contain-

ing brief criticisms on celebrated men—as poets, philosophers, artists—and their productions. The form of the epigram was also used to embody in concise and pointed language the clever ideas or the passing moods of the writer, often with a tinge of wit or satire. The occasional epigram was a very favourite form of composition with the Alexandrian poets, and remained so down to the latest times. Some writers, indeed, devoted themselves entirely to it. Many of the choicest gems of Greek literature are to be found in the epigrams. The epigrammatists used other metres besides the elegiac, especially the iambic. In later times more complex and almost lyrical measures were employed. The Greek Anthology has preserved some 4500 epigrams, of the greatest variety in contents, and from the hand of more than 300 poets. (See ANTHOLOGY.) Among these are found some of the most celebrated names of ancient and of later times. A great number of epigrams are also found in inscriptions.

Of all the Greek varieties of lyric poetry, the epigram was earliest welcomed at Rome. It lived on in an uninterrupted existence from Ennius till the latest times, being employed sometimes for inscriptions, sometimes for other and miscellaneous purposes. In the first application, the epigram was used after Ennius on sepulchral monuments, utensils, works of art, etc. In the first century B.C. epigrams were written by Pompilius, Q. Lutatius Catulus, Varro Atacinus, Licinius Calvus, and by others to whom erotic verses are ascribed. Many of the short poems of Catullus are truly epigrammatic, and in the second half of the first century A.D. Martial handled the epigram in various forms and with the power of a master. Augustus Caesar, Pedo, Cornificia, Sulpicia, and Gaetulius also wrote epigrams. Ausonius has several examples. We also have a collection of epigrams by Luxorius in the sixth century A.D. Many such poems are preserved in inscriptions, besides a great number in manuscript, which in modern times have been collected into a Latin Anthology. In its last form of development, the epigram figures largely in the writings of modern Latinists—the most successful of whom in this department were Bembo, Scaliger, Buchanan, More, Stroza, Sannazarius, Melanchthon, Porson, and Landor. Scaliger, in the third book of his *Poetics*, classifies the epigram according to its possession of *mel* (adulatory epigram), *fel* (vindictive epigram), *sal* (witty epigram), and *acetum*—with a fifth class combining two or more of these components. An excellent epigrammatic definition of the epigram is the following of unknown authorship:

> "Omne epigramma sit instar apis: sit aculeus illi;
> Sint sua mella; sit et corporis exigui."

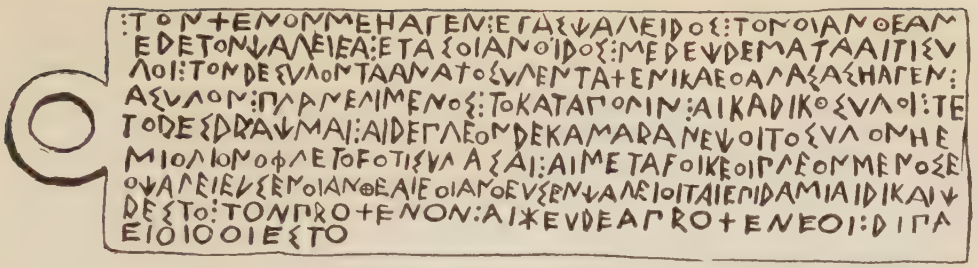
This has been cleverly paraphrased in English as follows:

> "The qualities rare in a bee that we meet,
> In an epigram never should fail:
> The body should always be little and sweet,
> And a sting should be left in its tail."

A French writer, Lebrun, has left the following epigrammatic comparison of the merits of Catullus and Martial:

> "Par ses traits fins Martial nous surprit,
> Mais la finesse a sa monotonie.
> De l'épigramme il n'avait que l'esprit;
> Catulle seul en eut tout le genie."

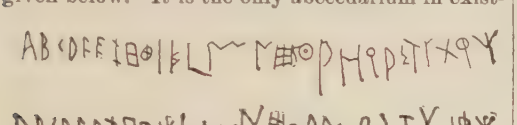
BIBLIOGRAPHY.—A collection of Greek epigrams of the earlier sort can be made from the works mentioned under EPIGRAPHY; and the various editions of the Anthologies should be consulted—e. g. that of Boissonade, Jacobs, and Dübner in Didot's *Bibliotheca Scriptorum Graecorum;* and the *Anthologia Latina* of Riese (Teubner series) and Bährens (1883). See also Corraeus, *De Toto Eo Poematis Genere Quod Epigramma Dicitur* (1590); Cottunius, *De Conficiendo Epigrammate* (1632); V. Gallus, *De Epigrammate* (1641); Vavassor, *De Epigrammate Liber* (1669); Heumann, *Anthologia Latina* (1721); Fayolle, *Dictionnaire d'Epigrammes* (1817); Booth, *Epigrams, Ancient and Modern* (1863); and Dodd, *Epigrammatists of Mediæval and Modern Times*, 2d ed. (1875), which last contains a bibliography of the subject. A number of metrical verses in English of the best Greek epigrams is published by Bell (London, 1880), and a very good selection, with introduction, Greek text, translation, and notes, is that of Mackail (London, 1892). See Butler, *Amaranth and Asphodel* (1881).



Epigrăpheis (*ἐπιγραφεῖς*). See EISPHORA.

Epigraphy. From *ἐπιγράφειν* = *inscribere.* A word conventionally used to describe the scientific study of inscriptions. In its widest sense it has reference to all inscriptions, including words engraved on rings, or stamped on coins, lamps, jars, vases, and other articles of use or ornament; but more strictly it relates to the historical inscriptions carved upon slabs of stone (i. e. lapidary inscriptions), or upon plates of bronze and other metal. Classical philology and archæology owe an inestimable debt to the study of the inscriptions that have been preserved to us from the Greek and Roman world, and to the inscriptions of these two great centres of civilization this short sketch must be confined. (For other epigraphic remains, see the articles ASSYRIA; BABYLONIA; CUNEIFORM INSCRIPTIONS; HIEROGLYPHICS; PERSIA. For inscriptions on coins, see the article NUMISMATICS.)

I. GREEK.—The inscriptions of ancient Greece are more valuable than those of Rome, for the twofold reason that they date much further back in point of time, and because, being usually carved on marble, they have more generally survived the ravages of time than the bronze plates employed by the Romans, which were either melted by various conflagrations that consumed the buildings where they were stored, or else were carried off by invading armies to be made over into coins. There are, however, some inscribed Greek tablets of bronze still surviving, as well as thin plates of lead marked with inscriptions. (See the *Archäolog. Zeitung* for 1877, p. 196; and id. for 1878, p. 71; Franz, *Elementa Epigr. Graecae*, p. 168; and Roberts, *Greek Epigraphy*, pp. 234–242.) One of the Greek bronze plates is represented on the next page. It contains part of a treaty between Oeanthea and Chaleion.

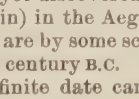


Immense numbers of inscriptions were set up in ancient times, in all public buildings, in temples and theatres, and by the side of the great roads. Delphi and Olympia abounded in them; while the Parthenon and Acropolis at Athens, the Heraeum at Samos, the Artemisium at Ephesus, and, in fact, all the important sanctuaries, were great storehouses of inscriptions recording laws, decrees, treaties, gifts, arbitrations, and other memorable events of political and religious life. In all, some 30,000 ancient Greek inscriptions are known to scholars.

A brief account of the Greek alphabet is given

Bronze Treaty Tablet found at Oeanthea. (Woodhouse Collection.)

under the title ALPHABET, to which reference may be made. The alphabet itself is found in inscriptions in the so-called "abecedaria," of which one of the most interesting is the "Formello Alphabet," found at Formello near Veii, in Italy, in 1882 by Prince Chigi, and of which a representation is given below. It is the only abecedarium in exist-



The Formello Alphabet.

ence which contains the archaic Greek forms of every one of the twenty-two Phœnician letters arranged precisely in the accepted Semitic order. (Cf. Roberts, *Greek Epigraphy*, p. 20.) It also enables us to determine the alphabetic position and the form of the Greek letter which represents the *san (shin)*—i. e. ⨦. (See Kirchhoff, *Studien zur Geschichte des griechischen Alphabets*, pp. 134 foll.). Other abecedaria are the "Alphabet of Caeré," on a black vase found in 1836 by Galassi at Cervetri (Kirchhoff, pp. 134 foll.); the "Alphabet of Colle," found painted on a tomb near Sienna in 1698; the "Cepolla Alphabet," found near Basta in Calabria by Luigi Cepolla in 1805 (Kirchhoff, p. 157); the "Corinthian Alphabet" (incomplete), on a piece of pottery from Corinth (Kirchhoff, p. 103); and the "Ionic Alphabet," from a fragment of a marble stelé found by Newton at Calymna (Roberts, p. 19).

The usual form for the Greek inscribed marbles was the *στήλη*, a slab from three to five feet high and from three to four inches in thickness, slightly tapering to the top, which was plain or ornamented with a slight moulding. Another form of marble was the *βωμός*, or altar, square or circular. There are also pillars (*κίονες*), sarcophagi, statue-bases, and even the walls of the *cellae* of temples (*C. I. G.* 2905). Letters cut on walls and *στῆλαι* were picked out in blue or red pigment.

The oldest Greek inscriptions yet discovered are from the island of Thera (Santorin) in the Aegean, which are mortuary records, and are by some scholars dated as far back as the tenth century B.C. The oldest, however, to which a definite date can be assigned are found cut on the knee of a colossal statue at Abu Simbel in Egypt by Greek mercenaries in the service of Psammetichus, king of Egypt, and hence dating from the end of the seventh or the beginning of the sixth century B.C. Next in order come the

Inscription from a Block of Stone found at Thera. Ἐπάγατος ἐποίει.

inscriptions upon the bases of the statues set along the Sacred Way leading to the Temple of Apollo at Branchidae near Miletus, and assigned to the sixth century B.C. An inscription found by Newton at Halicarnassus, and known as the "Lygdamis Inscription," is of the time of Herodotus (B.C. 453), and is important as exhibiting the Ionic alphabet in almost exactly the form in which it was legally adopted at Athens, fifty years later. A fac-simile of this is given by Roberts in his *Greek Epigraphy*, p. 175. (See, also, Newton and Pullan, *Historical Discoveries at Halicarnassus*, etc., pp. 23 foll.). A very interesting Greek inscription is that upon the trophy set up at Delphi by the Greeks to commemorate the Persian defeat at Plataea, and now in the Hippodrome at Constantinople, whither it was brought by Constantine. See COLUMNA.

Greek inscriptions may be conveniently grouped under the following heads: (1) Historical and Political (*ψηφίσματα*, *νόμοι*, treaties, records of awards and arbitrations between rival cities, letters from kings and other rulers, public accounts, lists of treasures, and laudatory inscriptions in honour of individuals); (2) Religious (rituals, laws relating to priests, calendars of sacrifices, rules of augury, etc.; prayers and imprecations, leases of sacred lands, oracles, etc.); (3) Private (dedications and honourary inscriptions, epitaphs, sepulchral inscriptions, boundary stones of mortgaged lands, inscriptions on statues, etc.). The finest collections of Greek inscribed marbles are those at Athens, London (British Museum), Paris (Louvre), Smyrna, Constantinople, and Oxford.

II. ROMAN.—The oldest Latin inscriptions do not date from an earlier period than the beginning of the sixth century B.C. The oldest of all is probably the so-called "Fibula Praenestina," a gold clasp found at Praenesté in 1886, with a short inscription written from right to left. Next in point of time comes the celebrated "Duenos Inscription" (q. v.), written (also from right to left) on three earthen pots, figured on p. 608, and called the "Vascula Dresseliana," from the archaeologist, Dr. Dressel.

Other Latin inscriptions of great historical and linguistic interest are those on the tombs of the Scipios, now in the Vatican Library, and other *tituli sepulcrales*, the Carmen Arvale (see FRATRES ARVALES), the Senatus Consultum de Bacchanalibus (see DIONYSIA, p. 521), and a number of *leges*, such as the Lex Acilia Repetundarum (*C. I. L.* 198); Lex Luci Lucerini on a stone found at Luceria (*C. I. L.* ix. 782), the Lex Luci Spoletini found at Spoletum in 1876 (Cortese, *Latini Sermonis Vetust. Exempla*, p. 11), the Lex Antonia Rubrica (*C. I. L.* 204), the Lex Salpensana and the

Lex Malacitana from Spain (*C. I. L.* ii. 1963, 1964), etc.

Vascula Dresseliana, showing the Duenos Inscription.

Roman inscriptions are, as a rule, of a much more formal character than the Greek, and are expressed in regular conventional formulae, with abbreviated designations of status for freemen, slaves, children, freedmen, and all the dignities and functions of official, military, and sacerdotal life. Formulaic, also, are the legal inscriptions of all kinds—the *sortes*, prayers, dedicatory sentences, and execrations—thus exemplifying the methodical and orderly character of the Roman mind. The most important of the epigraphic abbreviations are given in this Dictionary under the different letters of the alphabet. Informal inscriptions, especially the *graffiti* scratched upon the walls and elsewhere, are likewise numerous and valuable, and have a literature of their own. See GRAFFITI. The finest collections of Roman inscriptions are at Rome (Vatican, Capitoline Museum, etc.), Naples (Museo Nazionale), London (British Museum), Paris (Louvre), Vienna, and Munich.

Besides the Latin inscriptions proper, of which some 70,000 are now known, there are dialectic inscriptions in Oscan and Umbrian, and some 6000 in Etruscan. See ETRURIA; OSCI; TABULA BANTINA; TABULAE IGUVINAE; UMBRIA.

III. HISTORY OF EPIGRAPHY. — The ancients themselves fully recognized the historical value of inscriptions, so that both orators and historians continually cite them as evidence. (See Demosth. *De Falsa Legat.* 428; Aeschin. *In Ctes.* 75; Herod. iv. 88; v. 58; vii. 228; ix. 81; Thucyd. v. 18; and cf. Eurip. *Suppl.* 1202 foll.). Regular collections of Greek inscriptions were made by Philochorus (B.C. 300), Polemo (hence called στηλοκόπας), Aristodemus, and others. Cicero, Livy, Pliny the Elder, and Suetonius often cite important inscriptions. As soon as the revival of learning began after the downfall of the Roman Empire, the study of epigraphy commenced—first of the Latin remains by scholars like Poggio Bracciolini and Signorili in the fourteenth century, and then of both Greek and Latin by Cyriacus of Ancona, who copied great numbers of monumental inscriptions, in which he was followed by Marcanova, Felice Feliciano, Ferrarino, Marino Sanudo, and others in the fifteenth century. The first printed collections were published by Spreti (Ravenna, 1489), Peutinger (Augsburg, 1509), Huttich (Mayence, 1520), and Albertini (Rome, 1521). Early *corpora inscriptionum* are those of Apianus (Ingolstadt, 1534), Gruter (1603; re-edited by Graevius, 1707), Gudius (ed. by Hessel, 1731), Reinesius (1682), Fabretti (1699), Muratori (1739), Maffei (1749), and Donati (1765–75). Among these collections, however, were many inaccurately copied inscriptions and many actual forgeries and falsifications, so that only after critical study and acute investigation could they be used with safety. The sifting of the inscriptions by Maffei, Marini, and others with a view to the detection of falsehood and to scientific research, laid the foundations of critical epigraphy. In 1828, Orelli (q. v.) published two volumes of Roman inscriptions embodying the researches of Marini and others, and in the same year August Boeckh published the first volume of the *Corpus Inscriptionum Graecarum*, subsequently augmented by other volumes and by the labours of Franz and Kirchhoff. The publication of these works fixed the methods of epigraphy; and from this time on, numerous epigraphists have devoted themselves to the study of inscriptions and to the working up in monographs of the results obtained in their investigations. The great *Corpus Inscriptionum Latinarum* was projected as early as 1732 by Maffei, but was not actually begun until the work had been taken up by the Royal Academy of Sciences of Berlin. The first volume (*Inscriptiones Antiquissimae ad C. Caesaris Mortem*) appeared in 1863, containing also the *Fasti Consulares* and indices. Up to 1895, fifteen volumes had appeared under the editorship of Mommsen, Henzen, De Rossi, Hübner, Ritschl, Zangemeister, Wilmanns, Hirschfeld, Dessau, and others. The arrangement adopted is the geographical.

Of late, great attention to the study of inscriptions has been given by students of the dialects, especially the dialects of Greece, as the information which the epigraphic remains afford is much more reliable than that derived from literature with its conventional and frequently artificial language. See DIALECTS.

IV. BIBLIOGRAPHY.—Standard works on Greek epigraphy are the following: Franz, *Elementa Epigraphices Graecae* (1840); Keil, *Analecta Epigraphica* (1842); Reinach, *Traité d'Epigraphie Grecque* (Paris, 1885); Hicks, *Manual of Greek Historical Inscriptions* (Oxford, 1882); Roberts, *Introduction to Greek Epigraphy* (Cambridge, 1887). Important collections of Greek Inscriptions are the *Corpus Inscriptionum Graecarum*, 4 vols. (1828–1877); the *Corpus Inscriptionum Atticarum*, 3 vols. (1873–83); Lebas, *Voyage Archéologique en Grèce et en Asie Mineure*, 6 vols. (Paris, 1847); Keil, *Sylloge Inscriptionum Boeoticarum* (Leipzig, 1847); Kaibel, *Epigrammata Graeca ex Lapidibus Conlecta* (Berlin, 1878); Rangabé, *Antiquités Helléniques*, 2 vols. (Athens, 1842–55); Rose, *Inscriptiones Graecae Vetustessimae* (Cambridge, 1825); Roehl, *Imagines Inscriptionum Graec. Antiquissimarum* (Berlin, 1883); Hicks and Newton, *Collection of Anc. Gk. Inscript. in the British Museum*, 3 parts (Oxford, 1874–86); Cumanudes, Ἀττικῆς Ἐπιγραφαὶ Ἐπιτύμβιοι (Athens, 1871); Dittenberger, *Sylloge Inscriptionum Graecarum* (Leipzig, 1883); and with especial reference to the dialects, Cauer, *Delectus Inscriptionum Graecarum*, etc. (Leipzig, 1883); Collitz, *Sammlung der griechischen Dialekt-Inschriften*, 3 vols. (Göttingen, 1884–86); Larfeld, *Sylloge Inscriptionum Boeoticarum Popularem Dialectum Exhibentium* (Berlin, 1883); Roehl, *Inscript. Graec. Antiquiss. praeter Atticas in Attica Repert.* (Berlin, 1882); Hoffman, *Die griechischen Dialekte* (Göttingen, 1891). On

the language of the Greek inscriptions see especially Meisterhans, *Grammatik der attischen Inschriften* (Berlin, 1885); Meister, *Die griechischen Dialekte* (Göttingen, 1882–89); and the bibliography given in the article DIALECTS. Other valuable supplementary reading will be found in the following: Hinrichs, the article "Griechische Epigraphik" in I. Müller's *Handbuch;* Newton, *Essays on Art and Archaeology* (London, 1880); Newton and Pullan, *History of Discoveries at Halicarnassus*, etc., 2 vols. (London, 1862); the article by Egger, *Des Collections des Inscriptions Grecques*, in the *Journal des Savants* for 1871; and Westermann in Pauly's *Real-Encyclopädie*, s. v. "Inscriptions."

Standard works on Roman epigraphy are the following: Cagnat, *Cours d'Épigraphie Latine* (2d ed. Paris, 1890); Egbert, *Introd. to Study of Lat. Inscriptions* (N. Y. 1895); Bone, *Anleitung zum Lesen, Ergänzen, und Datiren römischer Inschriften* (Trèves, 1881); Blanchère, *Hist. de l'Épigraphie Romaine* (Paris, 1887); the article "Römische Epigraphik" in I. Müller's *Handbuch;* and that by E. Hübner in the *Encyclopaedia Britannica*, s. v. "Inscriptions," vol. xiii. pp. 124–133. Valuable collections of Latin inscriptions are the *Corpus Inscriptionum Latinarum*, 15 vols. (Berlin, 1863 foll.); Morcelli, *Lexicon Epigraphicum* (Padua, 1819); Zell, *Handbuch der römischen Epigraphik*, 2 vols. (Heidelberg, 1850–52); Ritschl, *Priscae Latinitatis Monumenta Epigraphica*, with 5 supplements (Berlin, 1862); Hübner, *Exempla Scripturae Epigraphicae Latinae* (Berlin, 1885); and for general and convenient use, the two following: Wilmanns, *Exempla Inscriptionum Latinarum*, 2 vols. (Berlin, 1873); and Dessau, *Inscriptiones Latinae Selectae*, vol. i. (Berlin, 1892). A good selection of Latin inscriptions, with an introduction and commentary, is that of Wordsworth, *Fragments and Specimens of Early Latin* (Oxford, 1874), containing also literary remains. Elementary is the work of F. D. Allen, *Remnants of Early Latin* (Boston, 1884). A short and convenient collection, showing the forms of the letters, is that of Cortese, *Latini Sermonis Vetustioris Exempla Selecta* (Turin, 1892). For very early and dialectic Latin, see Schneider, *Dialectorum Italicarum Aevi Vetustioris Exempla Selecta* (Leipzig, 1886); and for Etruscan, Oscan, and Umbrian, Mommsen, *Die Unteritalische Dialekte* (Leipzig, 1850); Fabretti, *Corpus Inscrip. Italicarum Antiquitoris Aevi*, and its supplements (Turin, 1867, 1872–77); and the bibliography given in the articles ETRURIA; OSCI; UMBRIA. Christian inscriptions are collected by De Rossi (see CATACUMBAE); by Le Blant, *Inscriptions Chrétiennes de la Gaule*, 2 vols. (Paris, 1857–65); and by Hübner, *Inscriptiones Britanniae Christianae* (Berlin, 1876), and id. *Inscript. Hispaniae Christ.* (Berlin, 1871). See, also, Le Blant, *L'Épigraphie Chrétienne en Gaule et dans l'Afrique* (Paris, 1890). General supplementary reading will be found in Curtius's *Studien* (Leipzig, 1868–78); in Hübner's *Grundriss zu Vorlesungen über die lateinische Grammatik* (2d ed. Berlin, 1880); and the *Dizionario Epigrafico di Antichità Romane* (Rome, 1886 foll.).

Epimelētae (*ἐπιμεληταί*, "overseers"). The name given at Athens to commissioners nominated as occasion might require for the superintendence of departments. Some of these commissioners were regularly elected every year—as e. g. the ten *epimeletae* of the wharves, who were responsible for the care of the ships of war and equipments stored in the docks; and the ten commissioners of the Emporium, whose duty it was to enforce the laws relative to duties and commerce. For the commissioners of the revenue, see TAMIAS.

Epimenĭdes (*Ἐπιμενίδης*). A Cretan, contemporary with Solon, and born perhaps in B.C. 659, at Phaestus, in the island of Crete, according to some accounts, or at Cnosus according to others. Many marvellous tales are related of him. It is said that, going by his father's order in search of a sheep, he laid himself down in a cave, where he fell asleep and slept for fifty years, on which legend Goethe has written a poem. He then made his appearance among his fellow-citizens with long hair and a flowing beard, and with a knowledge of medicine and natural history which then appeared more than human. Another story told of this Cretan was that he had the power of sending his soul out of his body and recalling it at pleasure; that he had familiar intercourse with the gods, and possessed the power of prophecy. The event of his life by which he is best known was his visit to Athens at the request of the inhabitants, in order to pave the way for the legislation of Solon by purifications and propitiatory sacrifices. These rites were intended, according to the spirit of the age, to allay the feuds and party dissensions which prevailed there; and, although what he enjoined was mostly of a religious nature (for instance, the sacrifice of a human victim, the consecration of a temple to the Eumenides, and of two altars to Hybris and Anaidea, the two evil powers which were exerting their influence on the Athenians), there can be little doubt that his object was political, and that Solon's constitution would hardly have been accepted had it not been recommended and sanctioned by some person who, like Epimenides, claimed from men little less than the veneration due to a superior being. The Athenians wished to reward Epimenides with wealth and public honours, but he refused to accept any remuneration, and demanded only a branch of the sacred olive-tree and a decree of perpetual friendship between Athens and his native city. Epimenides is said to have lived, after his return to Crete, to the age of 157 years. Other accounts give his age as nearly 230 years. Divine honours were paid him by the Cretans after his death.

Epimenides composed a theogony and other poems concerning religious mysteries. He wrote also a poem on the Argonautic Expedition, and other works, which are entirely lost. His treatise on oracles and responses, mentioned by St. Jerome, is said to have been the work from which St. Paul quotes in the epistle to Titus (i. 12). See Diog. Laërt. i. 109; Val. Max. viii. 13. See the monograph by Schultess, *De Epimenide Crete* (Vienna, 1877).

Epimētheus (*Ἐπιμηθεύς*). "Afterthought." Brother of Prometheus and husband of Pandora. See PANDORA; PROMETHEUS.

Epimēthis. A patronymic of Pyrrha, the daughter of Epimetheus (Ovid, *Met.* i. 390).

Epinikion (*ἐπινίκιον*). A prize hymn, such as the odes of Pindar (q. v.), sung by the chorus in honour of the victors at the great national games.

Epiphanēa (*Ἐπιφάνεια*). (1) A town of Cilicia Campestris, southeast of Anazarbus, and situated on the small river Carsus, near the range of Mount Amanus (Plin. *H. N.* v. 27). (2) A city of Syria, on

the Orontes, below Apamea. Its Oriental and true name was Hamath, and it was reckoned by the people of the East one of the most magnificent cities in the world, having been founded, as they imagined, by Hamath, one of the sons of Canaan. Allusion is frequently made to Hamath in the Old Testament. (Cf. Gen. x. 18; 2 Sam. viii. 9; 2 Kings, xlviii. 34.) Its name was changed to Epiphanea, in honour of Antiochus Epiphanes.

Epiphănes (Ἐπιφανής). A surname of Antiochus IV. and Antiochus XI., kings of Syria.

Epiphanius (Ἐπιφάνιος). A bishop of Salamis in Cyprus, in the fourth century. He was born of Jewish parents, near Eleutheropolis, in Palestine, about A.D. 320, and appears to have been educated in Egypt, where he imbibed the principles of the Gnostics. At length he left them, and, becoming an ascetic, returned to Palestine and adopted the discipline of St. Hilarion, the founder of monachism in that country. Epiphanius erected a monastery near the place of his birth, over which he presided till he was made bishop of Salamis in 367. Here he remained about thirty-six years, and composed most of his writings. In 391 he commenced a controversy with John, bishop of Jerusalem, relative to the Platonic doctrines of the learned and laborious Origen, against which he wrote and preached with implacable bitterness. John favoured Origen's views, but Epiphanius found in Theophilus, the violent bishop of Alexandria, a worthy coadjutor, who, in 399, convened a council and condemned all the works of Origen. Epiphanius himself then called a council in Cyprus, A.D. 401, and reiterated this condemnation. Afterwards, he embroiled himself with the empress Eudoxia; for on the occasion of her asking him to pray for the young Theodosius, who was dangerously ill, he replied that her son should live provided she would disavow the defenders of Origen. To this presumptuous message the empress indignantly answered that her son's life was not in the power of Epiphanius, whose prayers were unable to save that of his own archdeacon who had recently died. After thus vainly endeavouring to gratify his sectarian animosity, he resolved to return to Cyprus; but he died at sea on the passage, A.D. 403. The principal works of Epiphanius are: (1) Πανάριον, or a Treatise on Heresies—that is, peculiar sects (αἱρέσεις). This is the most important of his writings and treats of eighty sects, from the time of Adam to the latter part of the fourth century. (2) Ἀνακεφαλαίωσις, or an Epitome of the Panarion. (3) Ἀγκυρωτόν, or a Discourse on the Faith, explaining the doctrine of the Trinity, Resurrection, etc. (4) A treatise on the ancient weights, measures, and coins of the Jews. St. Jerome admires Epiphanius for his skill in the Hebrew, Syriac, Egyptian, Greek, and Latin languages, and styles him "Pentaglottus" (Πενταγλωττος), or the Five-tongued. His writings are of great value, as containing numerous citations from curious works which are no longer extant. See the monograph by Lipsius (Vienna, 1865).

Epipŏlae (Ἐπιπολαί). See SYRACUSAE.

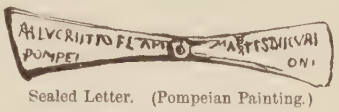
Epirredium. See REDA.

Epīrus (Ἤπειρος). A country to the west of Thessaly, lying along the Adriatic. The Greek term, which answers to the English word *mainland*, appears to have been applied at a very early period to that northwestern portion of Greece which is situated between the chain of Pindus and the Ionian Gulf and between the Ceraunian Mountains and the river Acheloüs — this name being probably used to distinguish it from the large, populous, and wealthy island of Corcyra, which lay opposite to the coast. It appears that, in very ancient times, Acarnania was also included in the term, and in that case the name must have been used in opposition to all the islands lying along the coast (Hom. *Od.* xiv. 100).

The inhabitants of Epirus were scarcely considered Hellenic. The population in early times had been Pelasgic. The oracle at Dodona was always called Pelasgic, and many names of places in Epirus were also borne by the Pelasgic cities of the opposite coast of Italy. But irruptions of Illyrians had barbarized the whole nation; and though Herodotus speaks of Thesprotia as a part of Hellas, he refers rather to its old condition, when it was a celebrated seat of the Pelasgians, than to its state at the time when he wrote his history. In their mode of cutting the hair, in their costume, and in their language, the Epirotes resembled the Macedonians, who were an Illyrian race. Theopompus, cited by Strabo, divided the inhabitants of Epirus into fourteen different tribes, of which the most renowned were the Chaonians, Thesprotians, and Molossians. The Molossians claimed descent from Molossus, son of Neoptolemus and Andromaché. Tradition reported that the son of Achilles, Neoptolemus or Pyrrhus, as he is also called, having crossed from Thessaly into Epirus on his return from the siege of Troy, was induced, by the advice of an oracle, to settle in the latter country, where, having subjugated a considerable extent of territory, he transmitted his newly formed kingdom to Molossus, his son by Andromaché, from whom his subjects derived the name of Molossi.

The history of Molossia is involved in great obscurity until the period of the Persian invasion, when the name of Admetus, king of the Molossi, occurs from the circumstance of his having generously afforded shelter to Themistocles when in exile and pursued by his enemies, although the influence of that celebrated statesman had previously been exerted against him in some negotiations which he had carried on at Athens (Thuc. i. 136). Admetus was succeeded by his son Tharybas or Tharymbas, who appears to have been a minor towards the beginning of the Peloponnesian War, when we find his subjects assisting the Ambraciots in their invasion of Acarnania. Tharybas is represented by Plutarch (*Pyrrh.*) as a wise and able monarch, and as encouraging science and literature. His successor is not known; but some years after, we hear of a prince called Alcetas, who was dethroned by his subjects but restored by Dionysius of Syracuse (Pausan. i. 11). Neoptolemus, his son, reigned but for a short time and left the crown to his brother Arybas, together with the care of his children. Alexander, the eldest of these, succeeded his uncle, and was the first sovereign of Epirus who raised the character and fame of that country among foreign nations by his talents and valour. His sister Olympias had been married to Philip of Macedon before his accession to the throne of Epirus, and the friendship thus cemented between the two monarchs was still further strengthened by the union of Alexander with Cleopatra, the daughter of Philip. It was during the celebration of their nuptials at Edessa

that the king of Macedon was assassinated. Alexander of Epirus seems to have been an ambitious prince, desirous of conquest and renown. There is good reason for believing that he united the Chaonians, Thesprotians, and other Epirotic clans, together with the Molossians, under his sway, as we find the title of king of Epirus first assumed by him (Diod. Sic. xvi. 72). Having been applied to by the Tarentines to aid them against the attacks of the Lucani and Bruttii, he eagerly seized this opportunity of adding to his fame and enlarging his dominions. He therefore crossed over into Italy with a considerable force, and, had he been properly seconded by the Tarentines and the other colonies of Magna Graecia, the barbarians, after being defeated in several engagements, must have been conquered. But Alexander, being left to his own resources and exertions, was at length surrounded by the enemy and slain (B.C. 326) near Pandosia in the Bruttian territory (Livy, viii. 24). On the death of Alexander the crown devolved on his cousin Aeacides, the son of Arybas, the former king, of whom little is known, except that, having raised an army to assist Olympias against Cassander, his soldiers mutinied and deposed him; not long after, however, he appears to have been reinstated. His brother Alcetas, who succeeded him, was engaged in a war with Cassander, which proved disastrous; for, being defeated, his dominions were overrun by the forces of his victorious enemy, and he himself was put to death by his rebellious subjects. The name of Pyrrhus, who now ascended the throne, gives to the history of Epirus an importance it never would otherwise have possessed. (See PYRRHUS.) Alexander, the eldest son of Pyrrhus, succeeded his father, whom he sought to emulate by attempting afresh the conquest of Macedon. On this occasion Antigonus Gonatas was again vanquished and driven from his dominions. But Demetrius, his son, having raised another army, attacked Alexander and presently compelled him to evacuate the Macedonian territory (Just. xxvi. 3). At the expiration of two other insignificant reigns, the royal line of the Aeacidae becoming extinct, the Epirots determined to adopt a republican form of government, which prevailed until the subjugation of Macedon by the Romans. Having been accused of favouring Perseus in the last Macedonian War, they became the objects of the bitterest vengeance of the Romans, who treated them with unusual severity. Aemilius Paullus destroyed seventy of their towns and sold 150,000 of the inhabitants into slavery. Epirus, having lost its independence, was then annexed as a province to the Roman Empire. See Merleker, *Darstellung des Landes und der Berwohner von Epeiros* (Königsberg, 1841); and Bowen, *Athos, Thessaly, and Epirus* (London, 1852).



Epīrus Nova. See ILLYRICUM.

Episcepsis (*ἐπίσκηψις*). See MARTYRIA.

Episcŏpi (*ἐπίσκοποι*). Inspectors or commissioners, who were sometimes sent by the Athenians to interfere in the affairs of subject States (*C. I. A.* i. 9, 10). The episcopi exercised civil authority, and perhaps judged on the spot small causes where Athenians were concerned. The episcopus in Aristophanes carries two ballot-boxes (*κάδω*, *Av.* 1032, 1053). From the same source we learn that these episcopi received a salary at the cost of the State to which they were sent, and that they were appointed by lot.

Epistătes (*ἐπιστάτης*). See BOULÉ.

Epistŏla (*ἐπιστολή*). A letter, written upon paper for transmission to an absent person, as distinguished from one written upon waxed tablets (Cic.; Caes.; Tac.; Mart. *Ep.* xiv. 11, *chartae epistolares.*) The annexed illustration represents a letter

Sealed Letter. (Pompeian Painting.)

folded and sealed, with its direction, as represented by a painting on the walls of a house at Pompeii, in which it is accompanied by various implements employed for writing, both on paper and wax. It is engraved in the *Mus. Borb.* xiv. tav. A and B, 1852, where the address upon it is thus deciphered: MARCO LUCRETIO FLAMINI MARTIS DECURIONI POMPEI.—"To Marcus Lucretius, Priest of Mars, Decurion, Pompeii." (See WRITING AND WRITING MATERIALS.) Letters usually had prefixed to them the name of the sender and the person addressed, and were not signed at the end. The following are some of the usual forms: CICERO VARRONI (Cicero to Varro); CICERO DOLABELLAE S. (Cicero to Dolabella, greeting); CICERO PLANCO S. D. (Cicero to Plancus gives greeting); CICERO IMP. PLANCO (Cicero, the commander, to Plancus); CICERO D. BRUTO S. P. D. (Cicero to Decimus Brutus gives a hearty greeting); CICERO TERENTIAE SUAE (Cicero to his Terentia). S. stands for *salutem;* S. D. *salutem dicit;* and S. P. D. for *salutem plurimam dicit.* Formulas of courtesy that often begin letters are the following: S. V. B. E. (*si vales, bene est*); S. V. B. E. E. V. (*si vales bene est; ego valeo*); S. V. E. Q. V. B. E. E. Q. V. (*si vos exercitusque valetis bene est; ego quoque valeo*), etc. Phrases of courtesy or affection at the end of a letter are the following: *Vale.—Cura ut valeas.—Da operam ut valeas.—Fac ut diligentissime te ipsum custodias.—Cura ut valeas et me, ut amas, ama.—Cura ut valeas et nos ames et tibi persuadeas te a me fraterne amari.—Vale et nos dilige.—Bene vale et me dilige.—Fac valeas meque ames.—Tu, ut instituisti, me diligas rogo, proprieque tuum esse tibi persuadeas.—Fac valeas meque mutuo diligas.—Etiam atque etiam vale.*

The date and place, if written at all, are given at the end of the letter. Thus: *Data pr. Kal. Mai. Brundisii.—Hoc ex Nicia*, etc.

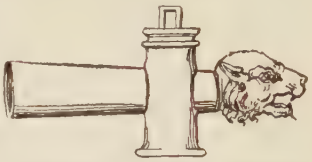
The epistle plays an important part in ancient as in modern literature, though in classical Greek literature the number of genuine letters is small. The collection attributed to Plato, though highly interesting and regarded by Grote as authentic, is rejected by recent scholarship; and so the letters ascribed to Demosthenes, to Aeschines, and to Xenophon. The nine that bear the name of Isocrates are universally accepted as his. (See ISOCRATES.) Three letters of Epicurus are preserved by Diogenes Laërtius. Specimens of the official epistle are to be seen in the oration of Demosthenes on the Crown. Much valuable information on the history of the times is gathered from the later Greek letters of Gregory Nanzianzenus, Basil, Chrysostom, and other ecclesiastical writers.

Letter writing was from an early period culti-

vated among the Romans, and both official and personal letters of eminent men soon began to be collected, such as the letters of the elder Cato to his son, and of Cornelia to C. Gracchus. At a later period, those of Caesar, Brutus, and especially of Cicero, were preserved. Most of the Roman letters remaining to us are not the genuine private correspondence of their authors, but were from the first written with an eye to publication, like the priggish and self-conscious epistles of the younger Pliny. The most valuable correspondence ever preserved is that of Cicero, whose letters to the number of nearly one thousand were published by his amanuensis, Tiro (q. v.). These are the familiar effusions of the orator, written with no view to publication, and are invaluable for the light they throw upon the personality of the writer and the history of his times. See CICERO.

Examples of letters in historical works are those in Antipater, Quadrigarius, and especially in Sallust. The epistolary form was also used by the jurists for their *responsa* on questions of law; by scholars for their learned discussions (e. g. Verrius Flaccus, Lactantius, etc.); by physicians for medical expositions (e. g. Marcellus Empiricus and Oribasius); and by the rhetoricians of the imperial age as a form of stylistic exercise. (See Teuffel, *Hist. of Rom. Lit.*, Eng. trans., i. pp. 73–76). Next to the letters of Cicero, those of Pliny the Younger are most read. Other important letter-writers are Seneca, Fronto, Symmachus, Sidonius, and still later Salvianus, Ruricius, Ennodius, Lactantius, Ambrose, Jerome, Augustine, and Cassiodorus. Specimens of Vergil's correspondence are given by Macrobius (i. 24, 11).

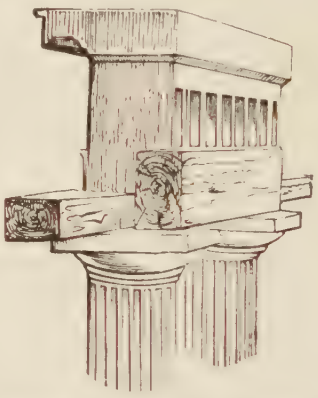
The poetical epistle was cultivated as early as B.C. 146 by Sp. Mummius, who, when in camp before Corinth, addressed satirical letters in verse to friends at Rome (Cic. *Ad Att.* xiii. 6, 4). Several of the satires of Lucilius were composed in the form of letters, and the poem of Catullus to Manlius (68 A) is in the epistolary form. The most successful in this department of literature were Horace in his two books of *Epistolae* and Ovid in the imaginary love-letters (*Heroides*) and in his own genuine lamentations from exile (*Tristia* and the *Epistolae ex Ponto*). Statius, Ausonius, and Claudianus are later examples of the poetical epistolographer.



Forged letters are frequently found in Latin literature. Instances are the *Epistulae Medicinales* professedly from Hippocrates to Maecenas, and the celebrated fourteen letters which form the alleged correspondence between Seneca and St. Paul, which were, however, accepted as genuine by St. Jerome (*De Vir. Illust.* 12), and by St. Augustine (*Epist.* 153). On these see Fleury, *St. Paul et Sénèque* (Paris, 1853); Lightfoot, *St. Paul's Epist. to the Philippians*, p. 260 (London, 1868); and Aubertin, *Sénèque et St. Paul* (Paris, 1869).

BIBLIOGRAPHY. — See Roberts, *Hist. of Letter Writing* (1843); Grote, *Plato and the other Companions of Socrates*, ii. pp. 220 foll.; Czwalina, *De Epistularum Actorumque, etc. Fide et Auctoritate* (Bonn, 1871); Nisard, *Notes sur les Lettres de Cicéron* (Paris, 1882); and Tyrrell's introduction to his edition of the Correspondence of Cicero (1893). The Greek epistolographers are collected by Hercher in his *Epistolographi Graeci* (Paris, 1873); and on the Latin rhetorical letter writers see Halm's *Rhetores Latini*, pp. 447 foll. and 589. On the epistle in fiction, see NOVELS AND ROMANCES.

Epistŏla. See CONSTITUTIONES.



Epistŏleus (*ἐπιστολεύς*). The vice-admiral of the Spartan fleet who took command in case of the disability of the admiral (*ναύαρχος*). See Xen. *Hellen.* i. 1, 23; Pollux, i. 96.

Epistomium (*ἐπιστόμιον*). The cock of a water-pipe, or of any vessel containing liquids to be drawn off in small quantities when required (Vitruv. ix. 8, 11). The illustration represents an original bronze water-cock found at Pompeii.

Epistomium of Bronze. (Pompeii.)

Epistylium (*ἐπιστύλιον*). The architrave, or lower member of an entablature, consisting of one or several beams (in the Parthenon, three), resting upon the capitals. Its function is to bind the columns of the peripteros into a whole, and to distribute the weight of the superstructure (Plut. *Pericl.* 13). The name is sometimes given to the whole entablature.

Epistylium. (Doric Portico at Pompeii.)

Epitaphium (*ἐπιτάφιον*) or **Epitaphius** (*ἐπιτάφιος λόγος*). A funeral oration. See FUNUS.

Epitaphs. See TITULUS.

Epithalamium (*τὸ ἐπιθαλάμιον μέλος*). A nuptial song. (See MATRIMONIUM.) In Greek, Sappho, Anacreon, Stesichorus, and Pindar composed poems of this kind, of which, however, only fragments remain. We have three epithalamia of Catullus, of which that on the marriage of Peleus and Thetis is one of the most splendid in all literature. In the imperial age, Statius, Ausonius, Claudianus, Paulinus of Nola, Sidonius Apollinaris, Dracontius, Ennodius, Luxorius, Venantius Fortunatus wrote poems of the same class that have survived. Those of Ausonius and Luxorius are Vergilian centos. (See CENTO.) A collection of Latin epithalamia may be found in Wernsdorf's *Poetae Latini Minores*, iv. pt. ii. 462.

Epitimia (*ἐπιτιμία*). The full possession of civic privileges, the opposite of *atimia* (q. v.)

Epitŏmé. The name given to several abridgments by various Roman authors. The most important are (1) An abridgment of Livy's history commonly called *Periochae* (*T. Livi Periochae Omnium Librorum*). (See LIVIUS.) (2) A short history

of the Roman emperors down to Theodosius I. and ascribed to Aurelius Victor (q. v.). (3) The *Epitome Iliadis*, a school-book of 1070 hexameters, which contains a summary of the story of the *Iliad*. This work, whose author was unknown, was much read during the Middle Ages, being sometimes styled Homerus and sometimes (by a curious error) Pindarus Thebanus. Bergk (*Philologus*, xiv. p. 184) conjectures that the writer was the Atticus mentioned by Persius (i. 50). The text will be found in Wernsdorf's *Poetae Lat. Minores*, iv. pp. 617–752; and has been edited by Weytingh (Leyden and Amsterdam, 1809) and Plessis (Paris, 1885). The poem is now ascribed to Silius Italicus (q. v.). See Verres, *De Silii Punicorum et Italici Iliadis Lat. Quaestiones Grammaticae et Metricae* (Münster, 1888). (4) The *Epitome Iuliani*, a collection of imperial *constitutiones*, made between A.D. 535 and 555.

Epitrierarchemătos Diké (*ἐπιτριηραρχήματος δίκη*). See Trierarchia.

Epitrŏpes Graphé (*ἐπιτροπῆς γραφή*). A suit brought against a guardian for neglect or abuse of his ward. See Epitropus; Kakoseos Diké.

Epitrŏpus (*ἐπίτροπος*). Literally, a person to whose charge anything is intrusted (Herod. iii. 63); but more specifically a term of Attic law denoting the guardian of orphan children. There were two kinds of *ἐπίτροποι*: (1) those appointed by the will of the deceased father, usually relatives of the children; and (2) in the absence of a will the next of kin, corresponding to the Roman *tutores legitimi*, the archon deciding who were best entitled to the charge, and giving them the authority to act as guardians (Poll. viii. 89; Lys. *De Aristoph. Bon.* § 9). If there were no relatives to undertake the office, the archon selected guardians from the whole body of the citizens. The legal number of guardians is not known. The duties of an *ἐπίτροπος* included the maintenance (*τροφή*), education (*παιδεία*), and protection of the ward, the assertion of his rights, the management of his property, and provision for the widow of the deceased if she remained in the house of her late husband. The guardianship expired when the ward reached his eighteenth year.

Epōdon (*ἐπῳδόν*) or **Epōdos** (*ἐπῳδός*). A name applied by grammarians to any poem in which a long and a short line are combined, especially an iambic trimeter and dimeter. The so-called *Epodes* of Horace were by him styled simply *Iambi* (*Epod.* xiv. 7). See Beck, *De Vera Epodon Horat. Indole* (Troppau, 1873); and the article Horatius.

Epōmis (*ἐπωμίς*). See Tunica.

Epŏna. From *epus* = *ecus* or *equus*. A Roman goddess presiding over horses. Paintings and statues of her were frequently placed in stables.

Eponia (*ἐπώνια*). See Telos.

Eponўmus (*ἐπώνυμος*). Properly the person after whom anything is named. This was in various Greek States the unofficial title of the magistrates after whom (in default of a generally received standard of chronology) the year was designated. In Athens this would be the first archon, in Sparta the first ephor, in Argos the priestess of Heré. When the *ephebi*, at Athens, were enrolled in the list of the citizens who could be called out for military service, the name of the first archon of the year was attached. And when the citizens of various ages were summoned to military service, a reference was made to the Archon Eponymus, under whom they had been originally enrolled. The ancient heroes, who gave their name to the ten tribes of Clisthenes, and the heroes worshipped by the demes, were also called *eponymi*. The statues of the former were in the market-place, and it was near them that official notices were put up. See Calendarium.

Epōpeus (*Ἐπωπεύς*). Son of Poseidon and Canacé, the daughter of Aeolus, brother of Aloeus. He migrated from Thessaly to Sicyon, where he became king. He was killed by Lycus for the sake of Antiopé, who, it was alleged, was by him mother of Zethus.

Epoptae (*ἐπόπται*). See Eleusinia.

Eporedia. The modern Ivrea, a town in Gallia Cisalpina, on the Duria, in the territory of the Salassi, colonized by the Romans, B.C. 100, to serve as a bulwark against the neighbouring Alpine tribes.

Epos (*ἔπος*). (1) Greek.—Many indications point to the fact that the oldest poetry of the Greeks was connected with the worship of the gods, and that religious poetry of a mystical kind was composed by the priests of the Thracians, a musical and poetical people, and diffused in old times through Northern Greece. The worship of the Muses was thus derived from the Thracians, who in later times had disappeared from Greece Proper; and accordingly the oldest bards whose names are known to the Greeks—Orpheus, Musaeus, Eumolpus, Thamyris—are supposed to have been Thracians also. The current ideas of the nature and action of the gods tended more and more to take the form of poetical myths respecting their birth, actions, and sufferings. Hence, these compositions, of which an idea may be derived from some of the so-called Homeric Hymns, gradually assumed an epic character. In course of time the epic writers threw off their connection with religion, and struck out on independent lines. Confining themselves no longer to the myths about the gods, they celebrated the heroic deeds both of mythical antiquity and of the immediate past. Thus, in the Homeric descriptions of the epic age, while the bards Phemius and Demodocus appear as favourites of the gods, to whom they are indebted for the gift of song, they are not attached to any particular worship. The subjects of their song are not only stories about the gods, such as the loves of Ares and Aphrodité, but the events of recent times, the conquest of Troy by means of the wooden horse, and the tragic return of the Achaeans from Troy. Singers like these, appearing at public festivals, and at the tables of princes, to entertain the guests with their lays, must have existed early in Greece Proper. It was, however, the Ionian Greeks of Asia Minor who first fully developed the capacities of epic poetry. By long practice, extending probably through centuries, a gradual progress was probably effected from short lays to long epic narratives; and at the same time a tradition delivered from master to scholar handed on and perfected the outer form of style and metre. Thus, about B.C. 900, epic poetry was brought to its highest perfection by the genius of Homer, the reputed author of the *Iliad* and *Odyssey*. After Homer it sank, never to rise again, from the height to which he had raised it. See Homerus.

It is true that in the following centuries a series of epics, more or less comprehensive, were composed by poets of the Ionic school in close imitation of the style and metre of Homer. But not one of them succeeded in coming even within measurable distance of their great master. The favourite topics of these writers were such fables as served either to introduce, or to extend and continue, the *Iliad* and *Odyssey*. They were called Cyclic Poets perhaps because the most important of their works were afterwards put together with the *Iliad* and *Odyssey* in an epic cycle, or circle of lays. The Cyprian poems (τὰ Κύπρια), of Stasinus of Salamis in Cyprus (B.C. 776), formed the introduction to the *Iliad*. These embraced the history of the period between the marriage of Peleus and the opening of the *Iliad*. At about the same time Arctinus of Miletus composed his *Aethiopis* in five books. This poem started from the conclusion of the *Iliad*, and described the death of Achilles, and of the Ethiopian prince Memnon, the contest for the arms of Achilles, and the suicide of Aias. The *Destruction of Ilium*, by the same author, was in two books. By way of supplement to the Homeric *Iliad*, Lesches of Mitylené, either about B.C. 708 or 664, wrote a *Little Iliad*, in four books. This embraced the contest for the arms of Achilles, the appearance of Neoptolemus and Philoctetes, and the capture of the city. The transition from the *Iliad* to the *Odyssey* was formed by the five books of Νόστοι (*The Return of the Heroes*), written by Agias of Troezen. The *Telegonia*, by Eugammon of Cyrené (about 570), continued the *Odyssey*. This was in two books, embracing the history of Odysseus from the burial of the suitors until his death at the hands of his son Telegonus. These poems and those of the other cyclics were, after Homer, the sources from which the later lyric and dramatic poets drew most of their information. But only fragments of them remain. See Cyclic Poets.

A new direction was given to epic poetry in Greece Proper by the didactic and genealogical poems of Hesiod of Ascra, about a hundred years after Homer. Hesiod was the founder of a school, the productions of which were often attributed to him as those of the Ionic school were to Homer. One of these disciples of Hesiod was Eumelus of Corinth (about B.C. 750), of the noble family of the Bacchiadae. But his poems, like those of the rest, are lost. See Hesiodus.

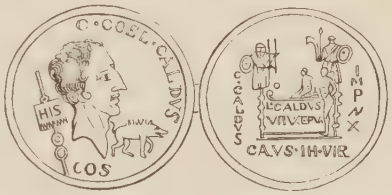
The most notable representatives of mythical epic poetry in the following centuries are Pisander of Camirus (about B.C. 640), and Panyasis of Halicarnassus (during the first half of the fifth century). In the second half of the fifth century Choerilus of Samos wrote a *Perseïs* on the Persian Wars, the first attempt in Greece at an historical epic. His younger contemporary, Antimachus of Colophon, also struck out a new line in his learned *Thebaïs*, the precursor and model of the later epic of Alexandria. The Alexandrians laid great stress on learning and artistic execution in detail, but usually confined themselves to poems of less magnitude. The chief representatives of the Alexandrian school are Callimachus (about B.C. 250), Rhianus, Euphorion, and Apollonius of Rhodes. The last made a futile attempt to return to the simplicity of Homer. His *Argonautica* is, with the exception of the Homeric poems, the only Greek epic which has survived from the ante-Christian era. In the 200 years between the fourth and sixth centuries A.D., the mythical epic is represented by Quintus Smyrnaeus, Nonnus, Colluthus, Tryphiodorus, Musaeus, and the apocryphal Orpheus. Nonnus, Colluthus, and Tryphiodorus were Egyptians. Nonnus and Musaeus, alone among these writers, have any claim to distinction. The talent of Nonnus is genuine, but undisciplined; Musaeus knows how to throw a charm into his treatment of a narrow subject. The whole series is closed by the *Iliaca* of Joannes Tzetzes, a learned but tasteless scholar of the twelfth century A.D. See Tzetzes.

As Homer was the master of the mythical, so Hesiod was the master of the didactic epic. After him this department of poetry was best represented by Xenophanes of Colophon, Parmenides of Elea, and Empedocles of Agrigentium, in the sixth and fifth centuries B.C. In the Alexandrian period, didactic poetry was much taken up, and employed upon the greatest possible variety of subjects. But none of its representatives succeeded in writing more than poetic prose, or in handling their intractable material with the mastery which Vergil shows in his Georgics. The period produced the astronomical epic of Aratus of Sicyon (about B.C. 275), and two medical poems by Nicander of Colophon (about 150). Under the Roman Empire more didactic poetry was produced by the Greek writers. Maximus and the so-called Manetho wrote on astrology. Dionysius Periegetes on geography, Oppian on angling, and an imitator of Oppian on hunting. The Alexandrian period also produced didactic poems in iambic senarii, as, e.g., several on geography bearing the names of Dicaearchus and Scymnus, which still survive.

(2) Roman. — The Romans possibly had songs of an epic character from the earliest times; but these were soon forgotten. They had, however, a certain influence on the later and comparatively artificial literature, for both Livius Andronicus in his translation of the *Odyssey*, and Naevius in his *Punic War*, wrote in the traditional Italian metre, the *versus Saturnius*. Naevius was, it is true, a national poet, and so was his successor Ennius, but the latter employed the Greek hexameter metre, instead of the rude Saturnian. To follow the example of Ennius, and celebrate the achievements of their countrymen in the form of the Greek epic, was the ambition of several poets before the fall of the Republic. A succession of poets, as Hostius, the tragedian Attius, and Furius were the authors of poetical annals. Here it is proper also to mention Cicero's epics on Marius and on his own consulship, besides the poem of Terentius Varro of Atax (Atacinus) on Caesar's war with the Sequani (*Bellum Sequanicum*). Latin epics on Greek mythical subjects seem to have been rare in the republican age. At least we know of only a few translations, as that of the *Iliad* by Mattius and Ninnius Crassus, and of the *Cypria* by Laevinus. Toward the end of the republican age it was a favourite form of literary activity to write in free imitation of the learned Alexandrians. Varro of Atax, for example, followed Apollonius of Rhodes in his *Argonautica;* others, like Helvius Cinna and the orator Licinius Calvus, preferred the shorter epics so much in favour with the Alexandrians. Only one example in this style is completely preserved, the quasi epithalamium (lxiv.) of Catullus. This is the only ex-

ample we possess of the narrative epic of the Republic.

But in the Augustan Age both kinds of epic, the mythic and the historical, are represented by a number of poets. Varius Rufus, Rabirius, Cornelius Severus, and Pedo Albinovanus treated contemporary history in the epic style; Domitius Marsus and Macer turned their attention to the mythology. The *Aeneid* of Vergil, the noblest monument of Roman epic poetry, combines both characters. Of all the epic productions of this age, the only ones which are preserved intact are the *Aeneid*, a panegyric on Messala, which found its way into the poems of Tibullus, and perhaps two poems, the *Culex* and *Ciris*, both often attributed to Vergil. See VERGILIUS.



In the first century A.D. we have several examples of the historical epic: the *Pharsalia* of Lucan, the *Punica* of Silius Italicus, a *Bellum Civile* in the satirical romance of Petronius, and an anonymous panegyric on Calpurnius Piso, who was executed for conspiracy under Nero, A.D. 65. The heroic style is represented by the *Argonautica* of Valerius Flaccus, and the *Thebaïs* and *Achilleïs* of Statius, to which we may add the metrical epitome of the *Iliad* by the so-called Pindarus Thebanus. The politico-historical poems of the succeeding centuries, by Publius Porfirius Optatianus in the fourth century, Claudianus, Merobaudes, Sidonius Apollinaris in the fifth, Priscian, Corippus, and Venantius Fortunatus in the sixth, are entirely panegyric in character, and intended to do homage to the emperor or men of influence. Of all these poets, Claudianus is the most important. He and Dracontius (towards the end of the fifth century) are among the last who take their subjects from mythology.

Didactic poetry, which suited the serious character of the Romans, was early represented at Rome. In this the Romans were in many ways superior to the Greeks. Appius Claudius Caecus and the elder Cato were authors of gnomic poetry. Ennius, the tragedian Attius, and several of his contemporaries wrote didactic pieces; the satires of Lucilius and Varro were also in part didactic. It was, however, not till the end of the republican period that the influence of Greek literature gave predominance to the Greek epic form. It was then adopted by Varro of Atax, by M. Cicero, and above all by Lucretius, whose philosophical poem *De Rerum Natura* is the only didactic poem of this period that has been preserved intact, as it is one of the most splendid monuments of Roman genius. In the Augustan Age many writers were active in this field. Valgius Rufus and Aemilius Macer followed closely in the steps of the Alexandrians. Grattius wrote a poem on hunting, a part of which still survives; Manilius, an astronomical poem which survives entire. But the *Georgics* of Vergil throw all similar work, Greek or Latin, into the shade. Ovid employs the epic metre in his *Metamorphoses* and *Halieutica*, the elegiac in his *Fasti*.

In the first century A.D. Germanicus translated Aratus. Columella wrote a poem on gardening; an unknown author (often called Lucilius), the *Aetna*. The third century produced the medical poem of Sammonicus Serenus, and that of Nemesianus on hunting. In the fourth we have Ausonius, much of whose work is didactic; Palladius on agriculture; an adaptation of Aratus and of Dionysius Periegetes by Avienus, with a description of the sea-coasts of the known world in iambics; in the fifth, besides some of Claudianus's pieces, a description by Rutilius Namatianus in elegiacs of his return home. The book of Dionysius Periegetes was adapted by Priscian in the sixth century. A collection of proverbs, bearing the name of Cato, belongs to the fourth century. In most of these compositions the metrical form is a mere set off; and in the school verses of the grammarians, as in those by Terentianus Maurus on metres, and in those by an anonymous author on rhetorical figures, and on weights and measures, there is no pretence of poetry at all.

See Lang, *Homer and the Epic* (London, 1893); Haube, *De Carminibus Epicis Saeculi Augusti* (Breslau, 1870); id. *Die Epen des silb. Zeitalters*, etc. (Fraustadt, 1886); and an article by Winckelmann in Jahn's *Archiv*, ii. 558. On the language of Roman epic poetry, see Köne, *Sprachgebrauch d. röm. Epiker* (Münster, 1840).

Epulōnes (Masters of the Feast). The office of *epulo* at Rome was created B.C. 196 to relieve the Pontifices. It was, from the first, open to plebeians, and could be held with the great offices of State. The first duty of the epulones was to provide the banquets (*epulum*) of the Capitoline deities. (See LECTISTERNIUM.) In later times they had also to provide for and superintend the public entertainment (*epulae*) of the people, when the Senate dined on the Capitol. Such entertainments

Epulo on Roman Coin.

were always provided at the games given by private individuals, or by the State, on occasions of religious festivals, dedications of temples, assumptions of office, triumphs, funerals, birthdays in the imperial household, and the like. The Collegium Epulonum consisted originally of three members (*tres viri epulones*) and afterwards of seven (*septem viri epulones*), a name which it retained even after Caesar had raised the number to ten. Its existence can be traced down to the end of the fourth century. In the illustration given above from a Roman denarius, an epulo is shown engaged in preparing the couch for the *epulum Iovis*.

Epŭlum. See EPULONES; LECTISTERNIUM.

Epytĭdes. A patronymic given to Periphas, the son of Epytus and the companion of Ascanius (Verg. *Aen.* v. 547).

Equarius. A horse-doctor (Val. Max. ix. 15, 2). The illustration from a Roman bas-relief discovered in southern France shows a veterinary surgeon bleeding a horse.

Equarius. (Rich.)

Equester (Ἵππιος). A title given to several deities, but especially to Poseidon and Neptune, who first created the horse, and in whose honour, therefore, horse-races were held (Pausan. v. 15, 4; Livy, i. 9).

Equestrian Ring. See Ius Anuli Aurei.

Equiria or **Equirria.** A festival established at Rome by Romulus in honour of Mars, when horse-races and games were exhibited in the Campus Martius. It took place on the 27th of February (Varr. *L. L.* v. 3; Ovid, *Fast.* ii. 859).

Equĭtes (horsemen or knights). The *equites* were originally a real division of the Roman army. At the beginning of the kingly period they were called Celeres, and their number is said to have been 300, chosen in equal parts from the three tribes of the Ramnes, Tities, and Luceres. (See Tribus.) A hundred formed a *centuria*, each *centuria* being named after the tribe from which it was taken. Thirty made a *turma*, and ten were under the command of a *decurio* (q. v.), while the whole corps was commanded by the *tribunus celerum*. During the course of the kingly period the body of equites was increased to sixteen *centuriae*, and the constitution of Servius Tullius finally raised it to eighteen. When the twelve new centuries were formed, consisting of the richest persons in the State, whose income exceeded that of the first class in the census, the corps of equites lost the exclusively patrician character which had hitherto distinguished it. At the same time its military importance was diminished, as it no longer formed the first rank, but took up a position on the wings of the phalanx. (See Exercitus.) The equites, however, retained both in the State and in the army their personal prestige. In the Comitia they voted first, and in *centuriae* of their own. They were the most distinguished troops in the army. No other soldiers were in a position to keep two horses and a groom apiece, a costly luxury, although they received an allowance for the purchase and keep of their horse. After the introduction of the pay system they received three times as much as the ordinary troops; on occasion of a triumph three times the ordinary share of booty; and at the foundation of a colony a much larger allotment than the ordinary colonist. The 1800 *equites equo publico*, or equites whose horses were purchased and kept by the State, were chosen every five years, at the census. The election was carried out in the republican period originally by the consuls, but in later times by the censors. After the general census was completed, the censors proceeded to review the equites (*recognitio*). They were arranged according to their tribes, and each of them, leading his horse by the hand, passed before the tribunal of the censors in the Forum. All who had served their time, and who were physically incapacitated, received their discharge. If an eques were judged unworthy of his position, he was dismissed with the words, "Sell your horse" (*Vende equum*). If there were nothing against him, he was passed on with the words *Traduc equum* ("Lead your horse past"). The vacancies were then filled up with suitable candidates, and the new list (*album equitum*) read aloud. In later times, the eques whose name was first read out was called *princeps iuventutis*. See Princeps.

During their time of service (between the ages of 17 and 46) the equites were bound to serve in a number of campaigns not exceeding ten. When their service expired, they passed into the first censorial class. The senators alone among the equites were, in earlier times, allowed to keep their *equus publicus*, their name on the roll, and their rights as equites unimpaired. But of this privilege the senators were deprived in the time of the Gracchi. The

Representation of the Ceremony of Transvectio on Roman Censorial Coins. (Spanheim.)

number of the *equites equo publico* remained the same, as no addition was made to the sum expended by the State on the horses. Young men of property sometimes served on their own horses (*equo privato*) without any share in the political privileges of the equites. After the Second Punic War the body of equites gradually lost its military position, and finally ceased to exist as a special troop. In the first century B.C. the members of the equestrian *centuriae* only served in the *cohors praetoria* of the general, or in the capacity of military tribunes and *praefecti* of cohorts.

The wealthy class, who were in possession of the large capital which enabled them to undertake the farming of the public revenues, and who consequently had the opportunity of enriching themselves still further, had long enjoyed a very influential position. In B.C. 123 the *lex iudiciaria* of Gaius Gracchus transferred to the possessors of the equestrian census (400,000 sestertii, or about $17,000) the right to sit on juries, which had previously belonged exclusively to members of the Senate. Thus an *ordo equester*, or third order, standing between the Senate and the people, was formed, which began to play an important part in politics. Its members were called equites even if they were not enrolled in the *centuriae equitum*. The contests between the Senate and the equites for the exclusive right to sit on the juries continued with varying fortunes until the end of the Republic. Augustus allowed the *ordo equester* to continue in existence as a class in possession of a certain income; but the old fiscal and judicial system came to an end, and the *ordo* accordingly lost all its former importance. On the other hand, the equites proper rose into a position of great consideration. They were divided into six *turmae*, headed by an imperial prince as *princeps iuventutis*. True, they had no further standing as a corporation; but the emperor employed them in a variety of confidential posts. The title *eques equo publico* was necessary for the attain-

ment of the office of military tribune, and for a number of the most important military posts. The power of conferring or withdrawing the title came at length to rest with the emperor alone. The review of the equites, which used to take place every five years, now became a mere ceremony, and was united by Augustus with the ancient annual parade (*transvectio*) of the 15th of July. The equites, in full uniform, rode through the Forum to the Capitol, past the Temple of Mars or Honos.

After the transference of the seat of government to Constantinople, the *turmae equitum* sank into the position of a city corporation, standing between the Senate and the guilds, and in possession of special privileges. The insignia of the equites were a gold ring and a narrow purple border on the tunic. (See CLAVUS ANGUSTUS; IUS ANULI AUREI; TUNICA.) At the *transvectio* they wore the *trabea*, a mantle adorned with purple stripes, and crowns of olive. After B.C. 67 the first fourteen rows in the theatre were assigned to them.

See Zumpt, *Ueber die römischen Ritter*, etc. (Berlin, 1840); Marquardt, *Historiae Equitum Romanorum* (Berlin, 1840); Mommsen, *Röm. Staatsrecht*, iii. 476–569; and the paragraph on the *cursus honorum* under HONORES.

Equuleus. See ECULEUS.

Equus Octŏber. See PALILIA.

Equus Tutĭcus. A town of Samnium, on the Appian Way, distant, according to the itineraries, twenty-two Roman miles from Cluvia, which is itself ten miles northeast of Beneventum. The term Tuticus is Oscan, equivalent to the Latin *magnus*. Much discussion has arisen among geographers as to the precise situation of this place. The branch of the Appian Way on which Equus Tuticus stood runs nearly parallel with that which Horace seems to have followed in his well-known journey to Brundisium. Horace, in speaking (according to the scholiasts) of Equus Tuticus, alludes to the unmanageable nature of the name in verse, *Mansuri oppidulo, quod versu dicere non est* (*Sat.* i. 5, 87). Modern scholars do not think Equus Tuticus to have been the town in question, but it was certainly on the road from Rome to Brundisium (Cic. *Ad Att.* vi. 1. 1), and no more likely place has been suggested as the one that Horace had in mind. See Palmer *ad loc.*

Erae (Ἐραί). A small but strong seaport town on the coast of Ionia north of Teos (Thuc. viii. 19).

Erăna (Ἔρανα). (1) A town on Mount Amanus, the chief seat of the Eleutherocilices in the time of Cicero (*Ad Fam.* xv. 4). (2) A town of Messenia.

Erănos (ἔρανος, Lat. *cena collaticia*). The Greek term for an organized club or society, for the purposes of feasting and amusement, whose members were called ἐρανισταί. Sometimes it would be formed in connection with the worship of particular deities. Sometimes, again, the object of an ἔρανος would be mutual assistance by advances of money. The government encouraged these clubs, because their corporate character made it easier to settle with expedition any legal proceedings arising out of their affairs. Trials of this kind, for refusal to pay subscriptions, or to repay loans, had to be settled within a month. See Becker-Göll, *Charikles*, ii. pp. 296 foll.

Erasīnus (Ἐρασῖνος). The chief river in Argolis, rising in Lake Stymphalus, and, after disappearing under the earth, flowing through the Lernaean Marsh into the Argolic Gulf.

Erasistrătus (Ἐρασίστρατος). A physician of Iulis, in the island of Ceos, and grandson of Aristotle by a daughter of this philosopher. After having frequented the schools of Chrysippus, Metrodorus, and Theophrastus, he passed some time at the court of Seleucus Nicator, where he gained great reputation by discovering the secret malady which preyed upon the young Antiochus, the son of the king, who was in love with his stepmother, Queen Stratonicé (Appian. *Bell. Syr.* 59). It was at Alexandria, however, that he principally practised. At last he refused altogether to visit the sick, and devoted himself entirely to the study of anatomy. The branches of this study which are indebted to him for new discoveries are, among others, the doctrine of the functions of the brain and that of the nervous system. He immortalized himself by the discovery of the *viae lacteae;* and he would seem to have come very near to that of the circulation of the blood. Comparative anatomy furnished him with the means of describing the brain much better than had ever been done before him. He also distinguished and gave names to the auricles of the heart (Galen, *De Dogm. Hipp. et Plat.* vii.; *De Usu Part.* viii.; *De Administr. Anat.* vii.; *An Sanguis*, etc.). A singular doctrine of Erasistratus is that of the πνεῦμα, or the spiritual substance which, according to him, fills the arteries, which we inhale in respiration, which from the lungs makes its way into the arteries, and then becomes the vital principle of the human system. As long as this spirit moves about in the arteries, and the blood in the veins, man enjoys health; but when, from some cause or other, the veins become contracted, the blood then spreads into the arteries and becomes the source of maladies; it produces fever when it enters into some noble part or into the great artery, and inflammations when it is found in the less noble parts or in the extremities of the arteries. Erasistratus rejected entirely blood-letting, as well as cathartics; he supplied their place with dieting, tepid bathing, vomiting, and exercise. In general, he was attached to simple remedies; he recognized what was subsequently termed *idiosyncrasy*, or the peculiar constitution of different individuals, which makes the same remedy act differently on different persons. A few fragments of the writings of Erasistratus have been preserved by Galen.

Erasmus, DESIDERIUS (the pseudo-classical form of GEERT GEERT'S), was born at Rotterdam, October 27, 1466 or 1467, of illegitimate birth. His father is the hero of Charles Reade's remarkable historical novel, *The Cloister and the Hearth.* Erasmus as a child studied at Gouda, Utrecht, and finally under Alexander Hegius at Deventer. When older he lived successively at Bois-le-Duc, the Augustinian College at Delft, and at the Collège Montaigu in Paris, of which latter residence he says in his *Colloquia*, "From it I carried away nothing but a body infected by disease and a plentiful supply of vermin." About 1487 he was ordained priest by the Bishop of Utrecht. Being in great need of money he took pupils, and with one of these, Lord Mountjoy, he visited England in 1497, spending some time at Oxford and making the acquaintance of such distinguished English-

men as Colet, Grocyn, Latimer, and Linacre, and afterwards of Warham and Sir Thomas More. From 1499 to 1506 he travelled extensively, visiting Paris, Orléans, St. Omer's, Louvain, and Brussels, where in 1504 he delivered a Latin oration before the Archduke Philip. In 1506 he again visited England, where he entered himself at Cambridge for the B.D. and D.D. degrees, the first of which he soon received. In the same year he travelled in Italy and received a papal dispensation allowing him to lay aside the priestly dress. In Venice he met the great scholars Mersurus, Alexander, Baptista Egnatius, and the others whose works were then issuing from the presses of Aldus. In Padua he became tutor to the natural son of James IV. of Scotland. Erasmus remained in Italy until 1509, received everywhere with marks of great distinction, having by this time won a reputation for brilliant scholarship, and in April of that year revisited England, where he became the guest of More at London, and by the influence of Bishop Fisher of Rochester was appointed Lady Margaret Professor of Divinity and Regius Reader of Greek in the University of Cambridge, at which seat of learning the study of Greek was then of recent introduction.

Erasmus had now, by his writings, his orations, and by the force of a most attractive personality, attained to a great reputation among the accomplished and learned men of Europe. Presents flowed in upon him, and from this time to the end of his life he lived in ease and opulence. Archbishop Warham sent him large sums of money and secured him a pension of a hundred crowns. A like pension was granted him by Lord Mountjoy. Offers of church preferment were made to him in many countries; the Duke of Bavaria offered him a chair in the new University of Ingolstadt with no duties attached; Louvain offered him a professorship with the degree of D.D.; the Austrian archduke Ferdinand promised him a pension of 400 florins if he would only take up his residence in Vienna; Pope Clement VII. sent him 200 florins; Pope Adrian VI. wished to give him a deanery; and King Francis I. joined with the Bishop of Bayeux in a vain effort to secure Erasmus for France. Presents of wine from his numerous admirers and of sweetmeats from the nuns of Cologne reached him continually.

In 1513 Erasmus left England, and being possessed of a restless disposition, aggravated by a nervous disorder, he travelled from place to place upon the Continent; and after several years of almost incessant journeying back and forth he made his home at Basle, to which he had first been attracted by the fame of its press and of the distinguished men whom he met there, among them Zwingli the reformer, Hans Holbein the artist, and the circle of admiring students who clustered about Erasmus, such as Beatus Rhenanus, his biographer, Sapidus, Oecolampadius, Beer, Myconius, and Glareanus.

In 1520 he settled permanently in Basle, and there became the general editor of Froben's press, which, during the eight years of Erasmus's association with it, took the lead of all the presses in Europe, both in the value of the works which issued from it and in the excellence of its typographical execution. In these works Erasmus had an important share as translator and editor, but his part can not be readily differentiated from those of his numerous associates. The prefaces and dedications were always of his composition. Besides the great labour of these duties he found time to write a large number of pamphlets, often polemic, and to carry on a correspondence that sometimes compelled him to write forty letters in a single day. "I receive daily," he says, "letters from remote parts, from kings, princes, prelates, and learned men, and even from persons of whose existence I was ignorant."

The religious disturbances in Switzerland, and the death of Froben, led him in 1529 to remove to Freiburg, where he resided for six years, returning in 1535 to Basle. The new pope, Paul III., nominated him to a deanery with an income of 1500 ducats and hinted at a cardinal's hat for him. An attack of dysentery, however, carried him off July 12, 1536, in his sixty-ninth year.

Erasmus was a man of a singularly refined and amiable character—witty, judicious, and of great erudition, coupled with a gift of literary expression rare even in so elegant a scholar. Alone among the learned men of his time he exhibits a "sweet reasonableness" and a freedom from bigotry, either theological or philological, that is perhaps his most striking characteristic. While criticising, often with inimitable wit and satire, the theological warriors of his own Church, he exhibits little sympathy with the Protestant champions. The coarseness and vulgarity of Luther's controversial writings were especially offensive to him; and he disliked the unfavourable influence of religious polemics upon the development of literature. He stands, in fact, as "the supreme type of cultivated common-sense applied to human affairs, and no man of letters has ever attained to anything approaching the influence wielded by Erasmus during his own century. . . . He owed his position to the wonderful range of his activity, to his astonishing productiveness, to the breadth and sanity of his views, and to the delightful qualities of wit, humour, and unfailing vivacity which distinguish all his work" (Hume Brown). As a classicist, he stands between the strict humanists of the Latin Renaissance on the one hand and the Graecizing scholars who follow him. As Pattison puts it, he is a mean between Politian and Joseph Scaliger. He was, in fact, rather a great man of letters than a great scholar. He knew little or nothing of the true principles of text criticism, he was not scrupulously accurate, and his Greek learning was very imperfect. Judged by a comparison with the classic models, his Latin even is at times almost barbarous. But this is only a narrow view. The Latinity of Erasmus had qualities above those of mere correctness and purity. It was with him a living and a spoken tongue, rich, plastic, natural, and full of virile force, and not like the Latin of Bembo and Sadoleto—a mere echo, a cold and lifeless imitation.

The personal appearance of Erasmus is thus described by his disciple, Beatus Rhenanus: "In stature not tall, but not noticeably short; in figure well built and graceful; of an extremely delicate constitution, sensitive to the slightest change of climate, food, or drink. . . . His complexion was fair; light blue eyes and yellowish hair. Though his voice was weak, his enunciation was distinct; the expression of his face was cheerful; his manner and conversation were polished, affable, and even charming."

Of his numerous works, the following are of especial importance to the classical student: the *Adagia* or *Adagiorum Chiliades*, a manual of the wit and wisdom of the ancient world with a finely executed commentary (1st ed. Paris, 1500; enlarged eds. 1515 and 1536); an edition of the Greek Testament with a new Latin version and notes, the text of which became the starting-point of modern exegetical science (Basle, 1516; later editions in 1519, 1522, 1527, 1535); *Ciceronianus*, a satire on the pedantic imitations of Cicero by the Italian school of Latinists; and the *Colloquia*, his most famous work, of which the first edition appeared in 1519 and was afterwards greatly enlarged. It consists of a series of familiar dialogues in Latin on a great variety of topics—social, religious, and political—and marked by wit, fancy, and a brilliant audacity of treatment.

The first complete edition of the works of Erasmus appeared in 9 vols. at Basle in 1540; the standard edition is that of Le Clerc in 10 vols. (Lyons, 1703–06). To the Basle edition is prefixed a memoir of Erasmus by Beatus Rhenanus, and his life has been written at length by Knight (Cambridge, 1726); Jortin, 2 vols. (London, 1748); Burigny (Paris, 1752); Müller (Hamburg, 1828); Stichart (Leipzig, 1870); Drummond, 2 vols. (London, 1873); Feugère (Paris, 1874); Pennington (London, 1875); and Froude (London, 1894). See also Nisard in his *Études sur la Renaissance* (Paris, 1855); Seebohm, *Oxford Reformers* (2d ed. London, 1869); Milman, *Essays* (London, 1870); and Pökel, *Philolog. Schriftstellerlexicon* (Leipzig, 1882).

Erăto (Ἐρατώ). One of the Muses, who presided over lyric, tender, and amorous poetry. She is said to have invented also hymns to the gods, and to have presided likewise over pantomimic dancing. She is represented as crowned with roses and myrtle, and holding a lyre in her hand. See MUSAE.

Erato

Eratosthĕnes (Ἐρατοσθένης). A distinguished contemporary of Archimedes, born at Cyrené, B.C. 276. He possessed a variety of talents seldom united in the same individual. His mathematical, astronomical, and geographical labours are those which have rescued his name from oblivion, though he was, besides, famous for his athletic prowess. The Alexandrian school of sciences, which flourished under the first Ptolemies, had already produced Timochares and Aristyllus; and Eratosthenes had not only the advantages arising from the instruments and observations of his predecessors, but the great Alexandrian library, which probably contained all the Phœnician, Chaldaic, Egyptian, and Greek learning of the time, was intrusted to his superintendence by the third Ptolemy (Euergetes), who had invited him to Alexandria.

The only work attributed to Eratosthenes which has come down to us entire is entitled Καταστερισμοί, and is merely a catalogue of the names of forty-four constellations, and the situations in each constellation of the principal stars, of which he enumerates nearly five hundred, but without one reference to astronomical measurement. We find Hipparchus quoted in it, and mention made of the motion of the pole, that of the polar star having been recognized by Pytheas. These circumstances, taken in conjunction with the vagueness of the descriptions, render its genuineness extremely doubtful.

If Eratosthenes be really the author of the Καταστερισμοί, it must have been composed merely as a *vade mecum*, for we find him engaged in astronomical researches far more exact and more worthy of his genius. By his observations he determined that the distance between the tropics, that is, twice the obliquity of the ecliptic, was $\frac{11}{83}$ of an entire circumference, or 47° 42′ 39″, which makes the obliquity to be 23° 51′ 19.5″, nearly the same as that supposed by Hipparchus and Ptolemy. As the means of observation were at that time very imperfect, the instruments divided only to intervals of 10′, and as corrections for the greater refraction at the winter solstice, for the diameter of the solar disc, etc., were then unknown, we must regard this conclusion as highly creditable to Eratosthenes. His next achievement was to measure the circumference of the earth. He knew that at Syené the sun was vertical at noon in the summer solstice; while at Alexandria, at the same moment, it was below the zenith by the fiftieth part of a circumference: the two places are nearly on the same meridian (error 2°). Neglecting the solar parallax, he concluded that the distance from Alexandria to Syené is the fiftieth part of the circumference of the earth; this distance he estimated at five thousand stadia, which gives two hundred and fifty thousand stadia for the circumference. Thus Eratosthenes has the merit of pointing out a method for finding the circumference of the earth. But his data were not sufficiently exact, nor had he the means of measuring the distance from Alexandria to Syené with sufficient precision.

Eratosthenes has been called a poet, and Scaliger, in his commentary on Manilius, gives some fragments of a poem attributed to him, entitled Ἑρμῆς, one of which is a description of the terrestrial zones. It is not improbable that these are authentic.

That Eratosthenes was an excellent geometrician we can not doubt, from his still extant solution of the problem of two mean proportionals, preserved by Theon, and a lost treatise quoted by Pappus, *De Locis ad Medietates*.

Eratosthenes appears to have been one of the first who attempted to form a system of geography. His work on this subject, entitled Γεωγραφικά (*Geographica*), was divided into three books. The first contained a history of geography, a critical notice of the authorities used by him, and the elements of physical geography. The second book treated of mathematical geography. The third contained the political or historical geography of the then known world. The whole work was accompanied with a map.

Eratosthenes also busied himself with chronology, and suggested the Julian calendar, in which every fourth year has 366 days. Some remarks on his Greek chronology will be found in Clinton's *Fasti Hellenici* (vol. i. pp. 3, 408); and on his list of Theban kings, in Rask's work on the ancient Egyptian chronology (Altona, 1830).

The properties of numbers attracted the attention of philosophers from the earliest period, and Eratosthenes also distinguished himself in this branch. He wrote a work on the duplication of the cube—Κύβου Διπλασιασμός—which we only know by a sketch that Eudoxus has given of it, in his treatise on the Sphere and Cylinder of Archimedes. Eratosthenes composed, also, another work in this department, entitled Κόσκινον, or "the Sieve," the object of which was to separate prime from composite numbers. Eratosthenes arrived at the age of eighty years, and then, becoming weary of life, died by voluntary starvation (B.C. 196). The best editions of the Καταστερισμοί are that of Schaubach, with notes by Heyne (Göttingen, 1795), and that of Matthiae, in his Aratus (Frankfurt, 1817). The fragments of Eratosthenes have been collected by Bernhardy in his work *Eratosthenica* (Berlin, 1822), and the poetical remains separately by Hiller (Leipzig, 1872). See, also, Berger, *Die geographischen Fragmente des Eratosthenes* (Leipzig, 1880).

Erbessus (Ἐρβησσός). A strongly fortified town of Sicily, northeast of Agrigentum, which the Romans made their principal place of arms in the siege of the last-mentioned city. It was soon after destroyed (Polyb. i. 18).

Erchĭa (Ἐρχεία). One of the demes of Attica, and belonging to the tribe Aegeïs. Its position has not been positively ascertained. This was the native demus of Xenophon and Isocrates. See Young, *Erchia: a Deme of Attica* (N. Y. 1891).

Ercta or **Ercté** (Εἰρκτή, Ἑρκτή). A remarkable isolated mountain on the northwestern coast of Sicily near Panormus. Its height is 1950 feet. Its chief celebrity was gained in the First Punic War, towards the close of which Hamilcar Barca (q. v.) shut himself with his army into this natural fortress, and maintained himself there against all the efforts of the Romans to dislodge him, for nearly three years. See Polyb. i. 56, 57; Diod. Sic. xxiii. 20.

Mount Ercta.

Erĕbus (Ἔρεβος). (1) A deity of the lower world, sprung from Chaos. From him and his sister Nyx (Night) came Aether and the Day (Hesiod, *Theog.* 123 foll.). (2) A dark and gloomy region in the lower world, where all is dreary and cheerless. According to the Homeric notion, Erebus lay between the earth and Hades, beneath the latter of which was Tartarus. It was therefore not an abode of the departed, but merely a passage from the upper to the lower world. Oriental scholars derive the name Erebus from the Hebrew *'ereb*, evening.

Erechthēïs (Ἐρεχθηΐς). The well of salt water in the Acropolis at Athens (Apollod. iii. 14. 1). See ERECHTHEUM.

Erechthēum (Ἐρέχθειον). The original sanctuary of the tutelary deities of Athens, Athenê Polias (the goddess of the city), Poseidon, and Erechtheus. It was situated on the Acropolis. The old temple, said to have been built by Erechtheus, was burned by the Persians in B.C. 480. The restoration was perhaps begun as far back as the time of Pericles, but, according to the testimony of an inscription preserved in the British Museum was still unfinished in 409. The new temple was, even in antiquity, admired as one of the most beautiful and perfect works of the Attic-Ionic style. It was sixty-five feet long and nearly thirty-six broad, and was divided into two main parts. Entering through the eastern portico of six Ionic pillars, one came into the *cella* of Athenê Polias, with an image of the goddess, and a lamp that was always kept burning. To the solid wall at the back was attached the Erechtheum proper. Here were three altars, one common to Poseidon and Erechtheus, the other to Hephaestus and the hero Butes. Connected with this, by three doors, was a small front chamber, with seven half-columns adorning the western wall, and three windows between them. This chamber was approached through a hall attached to the north side of the temple, adorned with seven Ionic columns in front, and one on each side. Under this was a cleft in the rock, said to have been made by the stroke of Poseidon's trident during his contest

Restoration of the Erechtheum from the Northeast. (Reber.)

with Athené for the possession of the Acropolis. Corresponding to this on the south side was a small hall, supported not by pillars, but by caryatides. This was called the Hall of Coré, and it probably contained the tomb of Cecrops. From it a step led down to a court, once walled round, in which were the Pandroseum (see PANDROSOS), the sacred olive-tree of Athené, and the altar of Zeus Herkeios. On the east side, in front of the temple of Athené Polias, stood the altar on which the great hecatomb was offered at the Panathenaea. See plan under ACROPOLIS.

Erechtheus (Ἐρεχθεύς). A mythical king of Athens. According to Homer (*Il.* ii. 547, etc.; *Odyss.* vii. 81), he was the son of Earth by Hephaestus, and was reared by Athené. Like that of Cecrops, half of his form was that of a snake—a sign that he was one of the aborigines. Athené put the child in a chest, which she gave to the daughters of Cecrops—Agraulos, Hersé, and Pandrosos—to take care of, forbidding them at the same time to open it (Hygin. *Poet. Astr.* ii. 13). The first two disobeyed, and in terror at the serpent-shaped child (or, according to another version, the snake that surrounded the child), they went mad, and threw themselves from the rocks of the Acropolis. Another account made the serpent kill them. Erechtheus drove out Amphictyon, and got possession of the kingdom. He then established the worship of Athené, and built to her, as goddess of the city (Πολιάς), a temple, named after him the Erechtheum. Here he was afterwards himself worshipped with Athené and Poseidon. He was also the founder of the Panathenaic festival. He was said to have invented the four-wheeled chariot, and to have been taken up to heaven for this by Zeus, and set in the sky as the constellation of the Charioteer. His daughters were Orithyia and Procris. (See BOREAS; CEPHALUS.) Originally identified with ERICHTHONIUS, he was in later times distinguished from him, and was regarded as his grandson, and as son of Pandion and Zeuxippé. His twin-brother was Butes, his sisters Procné and Philomela. The priestly office fell to Butes, while Erechtheus assumed the functions of royalty. By Praxithea, the daughter of Cephissus, he was father of the second Cecrops (see PANDION, 2), of Metion (see DAEDALUS), of Creüsa (see ION), as well as of Protogenia, Pandora, and Chthonia. When Athens was hard pressed by the Eleusinians under Eumolpus, the oracle promised him the victory if he would sacrifice one of his daughters. He chose the youngest, Chthonia; but Protogenia and Pandora, who had made a vow with their sister to die with her, voluntarily shared her fate. Erechtheus conquered his enemies and slew Eumolpus, but was afterwards destroyed by the trident of his enemy's father, Poseidon. The myth of Erechtheus has suggested the subject for Swinburne's tragedy *Erechtheus* (London, 1876).

Erechthīdes. A name given to the Athenians from their king Erechtheus (Ovid, *Met.* vii. 430).

Eressus or **Erĕsus** (on coins the name is always written Ἔρεσος). A city of Lesbos, situated on a hill at a distance of twenty-eight stadia from Cape Sigrium. It derives celebrity from having given birth to Theophrastus. Phanias, another disciple of the great Stagirite, was likewise a native of this place. According to Archestratus, quoted by Athenaeus, Eressus was famous for the excellence of its wheaten flour.

Eretria (Ἐρέτρια). (1) A town of the island of Euboea, situated on the coast of the Euripus southeast of Chalcis. It was said by some to have been founded by a colony from Triphylia in Peloponnesus; by others its origin was ascribed to a party of Athenians belonging to the deme of Eretria. The latter opinion is far more probable, as this city was doubtless of Ionic origin (Herod. viii. 46). We learn from Strabo that Eretria was formerly called Melaneïs and Arotria, and that at an early period it had attained to a considerable degree of prosperity and power. The Eretrians conquered the islands of Ceos, Teos, Tenos, and others; and in their festival of Artemis, which was celebrated with great splendour, three thousand soldiers on foot, with six hundred cavalry and sixty chariots, were often employed to attend the procession (cf. Livy, xxxv. 38). Eretria, at this period, was frequently engaged in war with Chalcis, and Thucydides reports (i. 15) that on one occasion most of the Grecian States took part in the contest. The assistance which Eretria then received from the Milesians induced that city to cooperate with the Athenians in sending a fleet and troops to the support of the Ionians, who had revolted from Persia at the instigation of Aristagoras (Herod. v. 99), by which measure it became exposed, in conjunction with Athens, to the vengeance of Darius. That monarch accordingly gave orders to his commanders, Datis and Artaphernes, to subdue both Eretria and Athens and bring the inhabitants captive before him. Eretria was taken after six days' siege, and the captive inhabitants brought to Asia. Darius treated the prisoners kindly, and settled them in the district of Cissia (Herod. vi. 119). Eretria recovered from the effects of this disaster and was rebuilt soon after. We find it mentioned by Thucydides, towards the close of his history (viii. 94), as revolting from Athens on the approach of a Spartan fleet under Hegesandridas, and mainly contributing to the success obtained by that commander. After the death of Alexander, this city surrendered to Ptolemy, a general in the service of Antigonus; and in the Macedonian War, to the combined fleets of the Romans, the Rhodians, and Attalus (Livy, xxxii. 16). It was subsequently declared free by order of the Roman Senate (Polyb. xviii. 28 foll.). This place, as we learn from Athenaeus, was noted for the excellence of its flour and bread. At one time it possessed a distinguished school of philosophy and dialectics. The ruins of Eretria are still to be observed close to a headland which lies opposite to the mouth of the Asopus in Boeotia. (2) A deme of Attica. (3) A town of Thessaly, near Pharsalus, and between that city and Pherae.

Erētum. A town of the Sabines, north of Nomentum and northeast of Fidenae, and at no great distance from the Tiber. Its name frequently occurs in the Roman historians. The antiquity of the place is attested by Vergil (vii. 711). It was subsequently the scene of many a contest between the Romans and Sabines, leagued with the Etruscans (Livy, iii. 29).

Ergastŭlum. A prison and place of correction attached to the farms and country-villas of the Romans, in which those of the slave *familia* who were kept in fetters (*compediti, nexi, vincti*) were

lodged and made to work in irons; whereas the rest, who were not chained, were provided with separate accommodation (*cellae, contubernia*) in other parts of the establishment (Columell. i. 6. 3; cf. 8. 16; Apul. *Apol.* p. 482; Brut. in Cic. *Fam.* xi. 13).

Erichthonius (Ἐρεχθόνιος). (1) Son of Dardanus (see DARDANUS) and Batea. He was the father of Tros. (2) The same as Erechtheus (q. v.).

Ericius. "A hedgehog" — i. e. a military engine full of sharp spikes, which was placed by the gate of the camp to prevent the approach of the enemy (Caes. *B. C.* iii. 67).

Ericussa (Ἐρικοῦσσα). One of the Lipari Islands, now Varcusa. See AEOLIAE INSULAE.

Eridănus (Ἠρίδανος). A river-god, on the banks of whose river amber was found (Hesiod, *Theog.* 338). In later times the Eridanus was supposed to be the same as the Padus (Po), because amber was found at its mouth. Hence the Electrides Insulae, or "Amber Islands," are placed at the mouth of the Po, and here Phaëthon was supposed to have fallen when struck by the lightning of Zeus.

Erigŏné (Ἠριγόνη). (1) The daughter of Icarius. Her father having been taught by Bacchus the culture of the grape, and having made wine, gave of it to some shepherds, who, thinking themselves poisoned by the draught, killed him. When they came to their senses, they buried him; and his daughter Erigoné, being guided to the spot by her father's faithful hound Maera, hanged herself through grief (Apollod. iii. 14. 7; Hyg. *Fab.* 130). Zeus translated the father and daughter, along with the faithful Maera, to the skies; Icarius became *Boötes*, and Erigoné, *Virgo;* while the hound was changed, according to Hyginus, into *Procyon;* but, according to the scholiast on Germanicus, into the *Canis Maior*, which is therefore styled by Ovid (*Fast.* iv. 939) *Canis Icarius.* (2) The daughter of Aegisthus and Clytaemnestra, and mother of Penthilus by Orestes (Pausan. ii. 18, 5).

Erinna (Ἤριννα). (1) A poetess, and the friend of Sappho. She flourished about the year B.C. 610. All that is known of her is contained in the following words of Eustathius (*ad Il.* ii. p. 327): "Erinna was born in Lesbos, or in Rhodes, or in Teos, or in Telos, the little island near Cnidus. She was a poetess, and wrote a poem called 'the Distaff' (Ἠλακάτη) in the Aeolic and Doric dialect; it consisted of 300 hexameter lines. She was the friend of Sappho, and died unmarried. It was thought that her verses rivalled those of Homer. She was only nineteen years of age when she died." Chained by her mother to the spinning-wheel, Erinna had as yet known the charm of existence in imagination alone. She probably expressed in her poem the restless and aspiring thoughts which crowded on her youthful mind as she pursued her monotonous work. We possess at the present day only four lines by Erinna; for though three epigrams ascribed to her are given by Schneidewin in his *Delectus Poësis Graecae Elegiacae* (Göttingen, 1839), two at least are not genuine. (2) A poetess mentioned by Eusebius under the year B.C. 354. This appears to be the same person who is spoken of by Pliny (*H. N.* xxxiv. § 8), as having celebrated Myro in her poems. No fragments of her poetry remain, and her very existence has been questioned.

Erinўes (Ἐρινύες). See EUMENIDES.

Eriphўlé (Ἐριφύλη). In Greek mythology, sister of Adrastus and wife of Amphiaraüs (q. v.). Bribed with a necklace by Polynices, she prevailed on her husband to take part in the war of the Seven against Thebes, in which he met his death. In revenge for this she was slain by her son Alcmaeon (q. v.). See SEVEN AGAINST THEBES.

Eris (Ἔρις). The Greek name for the goddess of Discord, sister of Ares. See PARIS; TROJAN WAR.

Ernesti. (1) JOHANN AUGUST. A distinguished philologist and theologian of the last century, born at Tennstädt, in Germany, August 4th, 1707. He studied at Pforta, Wittenberg, and Leipzig, and in 1731 became co-rector with Gesner of the Thomas School in Leipzig, succeeding Gesner as rector in 1734. In 1742 he was called to the University of Leipzig as Professor Extraordinarius of Classical Literature, and became Professor Ordinarius of Rhetoric in 1756. He died September 11th, 1781.

Ernesti and his colleague Gesner (q. v.) are regarded as the founders of the modern German school of ancient literature. By their breadth of view, sound discipline, and contagious enthusiasm, they stimulated their pupils to those labours that resulted in transferring to Germany the supremacy in letters long held by the universities of Holland.

Ernesti's principal works (besides a multitude of pamphlets, programmata, etc.) are the following: *Initia Doctrinae Solidioris* (1736); *Initia Rhetorica* (1730); editions of Xenophon's *Memorabilia* (1737); Suetonius (1748); Tacitus (1752); the *Clouds* of Aristophanes (1754); Homer (1759–64); Callimachus (1761); Polybius (1764); of the *Quaestura* of Corradus; the Greek lexicon of Hedericus; the *Bibliotheca Latina* of Fabricius (unfinished); also *Archaeologia Litteraria* (1768); and *Horatius Tursellinus de Particulis* (1769). His best work, however, is the edition of Cicero, in 5 vols. (1737–39), to which is added the valuable *Clavis Ciceroniana* (6th ed. Halle, 1831). His Latin orations, which won for him the name of "the German Cicero," are collected under the title *Opuscula Oratoria* (2d ed. 1767; suppl. vol. 1791). His philological treatises were published as *Opuscula Philologica et Critica* (1764; 2d ed. 1776). See Bursian, *Geschichte d. Class. Philol.* pp. 400–404 (Munich, 1883).

(2) JOHANN CHRISTIAN GOTTLIEB, a nephew of the preceding, was born at Arnstadt in 1756; and studied at Leyden, where he became Professor of Philosophy in 1782, and of Rhetoric in 1802. He died in the last-named year (June 5th). He edited the fables of Aesop in Greek (1781); Hesychius (1785); Suidas (1786); the *Punica* of Sil. Italicus (1791–92); and also put forth a *Lexicon Technologiae Graecorum Rhetoricae* (1795); a *Lexicon Technologiae Romanorum Rhetoricae* (1797); and *Cicero's Geist und Kunst* (1799–1802).

Eroantheia (τὰ ἠροάνθεια). A festival of women, celebrated in the Peloponnesus in the spring season (Phot. *Lex.* p. 95; Hesych. s. v.).

Erogatio. The technical term for the distribution of water from the aqueducts at Rome. See AQUAEDUCTUS.

Eros (Ἔρως). The god of love among the Greeks. His name does not occur in Homer; but in Hesiod (*Theog.* 120 foll.) he is the fairest of the deities, who subdues the hearts of both gods and men. He is born from Chaos at the same time as the Earth and Tartarus, and is the comrade of

Aphrodité from the moment of her birth. Hesiod conceives Eros not merely as the god of sensual love, but as a power which forms the world by inner union of the separated elements—an idea very prevalent in antiquity, especially among the philosophers. According to the later and commoner notion, Eros was the youngest of the gods, generally the son of Aphrodité by Ares or Hermes, always a child, thoughtless and capricious. He is as irresistible as fair, and has no pity even for his own mother. Zeus, the father of gods and men, arms him with golden wings, and with bow and unerring arrows, or burning torches. Anteros, the god of mutual love, is his brother, and his companions are Pothos and Himeros, the personifications of longing and desire, with Peitho (Persuasion), the Muses, and the Graces. In later times he is surrounded by a crowd of similar beings, Erotes or Loves. (For the later legend of Eros and Psyché, see PSYCHÉ.)

One of the chief and oldest seats of his worship was Thespiae in Boeotia. Here was his most ancient image, a rough, unhewn stone. His festival, the Erotia or Erotidia, continued till the time of the Roman Empire to be celebrated every fifth year with much ceremony, accompanied by gymnastic and musical contests. Besides this he received special honour and worship in the gymnasia, where his statue generally stood near those of

Eros. (Rome, Capitoline Museum.)

Hermes and Heracles. In the gymnasia, Eros was the personification of devoted friendship and love between youths and men; the friendship which proved itself active and helpful in battle and bold adventure. This was the reason why the Spartans and Cretans sacrificed to Eros before a battle, and the sacred band of youths at Thebes was dedicated to him; why a festival of freedom (Ἐλευθέρια) was held at Samos in his honour, as the god who bound men and youths together in the struggle for honour and freedom; and why at Athens he was worshipped as the liberator of the city, in memory of Harmodius and Aristogiton (q. v.).

In works of art Eros was usually represented as a beautiful boy, close upon the age of youth. In later times he also appears as a child with the attributes of a bow and arrows, or burning torches, and in a great variety of situations. The most celebrated statues of this god were by Lysippus, Scopas, and Praxiteles whose Eros at Thespiae was regarded as a masterpiece, and unsurpassable. The famous torso in the Vatican, in which the god wears a dreamy, lovelorn air, is popularly, but probably erroneously, traced to an original by Praxiteles. The Eros trying his bow, in the Capitoline Museum at Rome, is supposed to be the copy of a work by Lysippus (see illustration). The Roman god Amor or Cupido was a mere adaptation of the Greek Eros, and was never held in great esteem. ANTĔROS was the brother of Eros and punished those who did not requite the love of others (Ovid, *Met.* xiii. 750).

Erotia or **Erotidia** (Ἐρώτια or Ἐρωτίδια). The most solemn of all the festivals celebrated in the Boeotian town of Thespiae. It took place every fifth year, and in honour of Eros, the principal divinity of the Thespians. Respecting the particulars nothing is known, except that it was solemnized with contests in music and gymnastics (Plut. *Amat.* 1; Pausan. ix. 31, § 3; Athen. xiii. p. 561). At this festival married couples made up any quarrels they might have. The worship of Eros seems to have been early established at Thespiae, where the ancient symbolic representation of the god—a rude stone—was long looked upon with reverence (Pausan. ix. 27, § 1). See EROS.

Erotic Literature. See ELEGIA; NOVELS AND ROMANCES; PRIAPEIA.

Errhephoria or **Ersephoria** (ἐρρηφόρια or ἐρσηφόρια). See ARRHEPHORIA.

Ersé or **Hersé.** See CECROPS; ERECHTHEUS.

Erycīna (Ἐρυκίνη). A surname of Aphrodité, from Mount Eryx in Sicily, where she had a temple. The Erycinian Aphrodité appears to have been the same with the Phœnician Astarté, whose worship was brought over by the latter people, and a temple erected to her on Mount Eryx. In confirmation of this, we learn from Diodorus Siculus that the Carthaginians revered the Erycinian Aphrodité equally as much as did the natives themselves (Diod. Sic. iv. 83).

Erymanthian Boar. See HERACLES.

Erymanthus (Ἐρύμανθος). (1) A mountain-chain in the northwest angle of Arcadia, celebrated in fable as the haunt of the savage boar destroyed by Heracles (Apollod. ii. 5. 3; Pausan. viii. 24; Homer, *Od.* vi. 103). Apollonius places the Erymanthian monster in the wilds of Mount Lampea; but this mountain was that part of the chain where the river Erymanthus took its rise. (2) A river of Arcadia, descending from the mountain of the same name, and flowing near the town of Psophis. After receiving another small stream, called the Aroanius, it joins the Alpheus on the borders of Elis. The modern name of the Erymanthus is the Dogana.

Erysichthon (Ἐρυσίχθων). "Render of the earth." The son of the Thessalian king Triopas, who cut down trees in a grove sacred to Demeter, for which he was punished by the goddess with a fearful hunger, that caused him to devour his own

flesh (Ovid, *Met.* viii. 738; Callim. *Hymn. in Dem.* 34 foll.).

Erythīa (Ἐρύθεια). (1) One of the Hesperides (q. v.). (2) The daughter of Geryon (q. v.), who got her name from the island near the coast of Hispania, where her father lived (Hesiod, *Theog.* 290; Pausan. x. 17. 5).

Erythrae (Ἐρυθραί). One of the twelve cities of Ionia, situated near the coast opposite Chios (Herod. i. 142). Its founder was said to have been Erythrus, the son of Rhadamanthus, who established himself here with a body of Cretans, Carians, and Lycians. At a later period came Cnopus, son of Codrus, with an Ionian colony, whence the city is sometimes called Cnopopŏlis (Κνωποῦπολις). The city did not lie exactly on the coast, but some little distance inland, and had a harbour on the coast named Cissus (Livy, xxxvi. 43). Erythrae was famous as the residence of one of the Sibyls at an early period, and in the time of Alexander we find another making her appearance here, with similar claims to inspiration. See Sibylla.

Erythraeum Maré (ἡ ἐρυθρὰ θάλασσα). A name applied to the whole ocean by the Greeks, extending from the coast of Ethiopia to the island of Taprobana, when their geographical knowledge of India was in its infancy. They believed the name to be derived from that of Erythras, an ancient monarch who reigned along these coasts, and asserted that his grave was to be found in one of the adjacent islands (Curtius, viii. 9, 14). Afterwards, when the Greeks learned the existence of an Indian Ocean, the term was applied merely to the sea below Arabia, and to the Arabian and Persian Gulfs. In this latter sense Strabo uses the name. Herodotus follows the old acceptation of the word, according to the opinion prevalent in his age. The appellation was probably derived from Edom (Esau), whose descendants were called Idumaeans, and inhabited the northern parts of Arabia. They navigated upon the Red Sea and Persian Gulf, and also upon the Indian Ocean; and the Oriental name Edom signifying *red*, the sea of the Idumaeans was called the Red Sea and the Erythraean Sea (Ἐρυθρὰ θάλασσα), of which the Latin *Mare Rubrum* is a translation.

Eryx (Ἔρυξ). A son of Butes and Aphroditē, who, relying upon his strength, challenged all strangers to fight with him in the combat of the caestus. Heracles accepted his challenge after many had yielded to his superior dexterity, and Eryx was killed in the combat, and buried on the mountain where he had built a temple to Aphroditē (Verg. *Aen.* v. 402).

Eryx (Ἔρυξ). A mountain of Sicily, at the western extremity of the island, and near the city of Drepanum. It was fabled to have received its name from Eryx, who was buried there. On its summit stood a famous temple of Aphroditē Erycina, and on the western declivity was situated the town of Eryx, the approach to which from the plain was rocky and difficult. At the distance of thirty stadia stood the harbour of the same name (Polyb. i. 55; Diod. xxiv. 1; Cic. *in Ver.* ii. 8). The Phœnicians were most probably the founders of the place and also of the temple, and the Erycinian Aphroditē appears to be identified with the Astarté of the latter people. The native inhabitants in this quarter were called Elymi, and Eryx is said by some to have been their king. Vergil makes Aeneas to have founded the temple. The town was destroyed by the Carthaginians in the time of Pyrrhus, who a short time previous had taken it by storm, and the inhabitants were removed to Drepanum (Diod. xxii. 14, xxiii. 9). It soon, however, revived, owing to the celebrity of the adjacent temple. In the First Punic War it fell into the hands of the Romans, but was surprised by Barcas, the Carthaginian commander, and the inhabitants who escaped the slaughter were again removed to Drepanum (Diod. xxiv. 2). The place never recovered from this blow; the sanctity of the temple drew, indeed, new inhabitants around, but the city was never rebuilt. No traces of the temple remain at the present day.

Eschăra (ἐσχάρα). A hearth. See Focus.

Esquilīnus Mons. See Roma.

Essedarii. See Essedum.

Essedŏnes. A people of Sarmatia Asiatica, to the east of the Palus Maeotis.

Essĕdum, rarely **Esseda**, said to be a Keltic word. The name of a chariot used, especially in war, by the Britons, Gauls, and Belgae, perhaps also by the Germans (Verg. *Georg.* iii. 204; Serv. *ad loc.*).

According to the account given by Caesar (*B. G.* iv. 35) the method of using the essedum in the ancient British army was very similar to the practice of the Greeks in the heroic ages, as described in the article Currus. The principal difference seems to have been that the essedum was stronger and more solid than the δίφρος—that it was open before instead of behind; hence the driver was able to run along the pole (*de temone Britanno excidet*, Juv. iv. 125) and then to retreat with the greatest speed into the body of the car, which he drove with extraordinary swiftness and skill. From the extremity of the pole he threw his missiles, especially the *cateia* (Val. Flacc. *Argon.* vi. 83). It appears also that these cars were purposely made as noisy as possible, probably by the creaking and clanging of the wheels (Tac. *Agric.* 35; Claud. *Epigr.* 4); and that this was done in order to strike dismay into the enemy. The drivers of these chariots were called in Latin *essedarii* (Caes. *B. G.* iv. 24). Tacitus (*Agric.* 12) observes that the driver of the car ranked above his fighting companion, which was the reverse of the Greek usage.

The essedum was adopted for purposes of convenience and luxury among the Romans (Propert. ii. 1, 76; Cic. *Ad Att.* vi. 1; Ovid, *Am.* ii. 16, 49). Cicero (*Phil.* ii. 24, § 58) mentions the use of it by Antonius as a piece of effeminacy disgraceful to a tribune of the people; but in the time of Seneca it seems to have become common (*Fr.* 48, Hase). As used by the Romans the essedum had no seat for the driver; the traveller drove himself (Ovid, l. c.), and always, it would seem, with a pair of horses, whereas with the *cisium* the number varied. The essedum, like the *cisium*, appears to have been kept for hire at the post-houses or stations (Mart. x. 104). See Mansio.

Essui. A people in Gaul, west of the Sequana (Caes. *B. G.* v. 24).

Eteŏcles (Ἐτεοκλῆς). A son of Oedipus and Iocasta. After his father's flight it was agreed between him and his brother Polynices that they should both share the kingdom and reign alter-

nately, each a year. Eteocles, by right of seniority, first ascended the throne; but after the first year of his reign had expired he refused to give up the crown to his brother according to their mutual agreement. Polynices, resolving to punish so gross a violation of a solemn engagement, fled to the court of Adrastus, king of Argos, where he married Argia, the daughter of that monarch; and having prevailed upon Adrastus to espouse his cause, the latter undertook what was denominated the First Theban War, twenty-seven years, as is said, before the Trojan one. Adrastus marched against Thebes with an army, of which he took the command, having with him seven celebrated chiefs, Tydeus, Amphiaraus, Capaneus, Parthenopaeus, Hippomedon, Eteoclus, son of Iphis, and Polynices. The Thebans who espoused the cause of Eteocles were Melanippus and Ismarus, sons of Astacus, Polyphontes, Megareus, Lasthenes, and Hyperbius. All the Argive leaders, with the exception of Adrastus, fell before Thebes, Eteocles also being slain in single combat with Polynices. Ten years after the conclusion of this war arose that of the Epigoni, or the sons of the slain chieftains of Argos, who took up arms to avenge the death of their sires. (See EPIGONI.) Lists of the seven Argive commanders are given by Aeschylus in his *Seven against Thebes*, by Euripides in his *Phoenissae* and *Supplices;* and by Sophocles in his *Oedipus Coloneus*. They all agree, except that in the *Phoenissae* the name of Adrastus is substituted for that of Eteoclus. See SEVEN AGAINST THEBES.

Eteŏclus (Ἐτεόκλος). One of the seven chiefs of the army of Adrastus, in his expedition against Thebes. He was killed by Megareus, the son of Creon, under the walls of Thebes (Apollod. iii. 6). See SEVEN AGAINST THEBES.

Etesiae (Ἐτησίαι ἄνεμοι, Herod. vi. 140). The Etesian Winds, derived from ἔτος, "year," signified any periodical winds, but more particularly the northerly winds which blew in the Aegean for forty days from the rising of the dog-star.

Etruria or **Tuscia** (Τυρρηνία, Τυρσηία). A country of Italy once inhabited by the people known as the Etruscans (Tusci). It lay west of the river Tiber and the Apennines, extending to the sea, and including the valley of the Arno. When authentic history begins, the Etruscans, in addition to this territory, held also the valley of the Padus (Etruria Circumpadana) and a further strip south of the Tiber (Etruria Campaniana). From the former territory they were crowded southward by the Gauls (see CELTAE), and from the latter the Romans subsequently drove them. Etruria Proper was a confederation of twelve States or cities (*duodecim populi Etruriae*), of which no complete list has reached us, though it is fairly certain that the following towns were eleven of the twelve: Veii, Caeré, Tarquinii, Clusium, Cortona, Perusia, Volsinii, Vulci, Vetulonia, Volaterrae, and Arretium. The twelfth was in all probability either Falerii, Populonia, or Rusellae. Of the northern league, the following were important towns: Felsina (Bononia), Mantua, Ravenna, Chiavenna, and Hatria or Hadria, which gives its name to the Hadriaticum Mare. In the south, Capua and Nola were rich and powerful cities. Like Etruria Proper, the northern league was one of twelve States.

ETHNOLOGY.—The earliest traditions to which we now have access make the Etrurians a Lydian people (Herod. i. 94, 166, 171). But this theory, which was carefully considered by Dionysius of Halicarnassus in his work on the origins of Rome, appears to rest upon no convincing evidence. Dionysius notes that it is not mentioned by Xanthus, the historian of Lydia, and sums up the results of his own investigations by saying that "the Etruscans do not resemble any other people either in language or in manners." This conclusion is interesting, for Dionysius had given much thought and time to the consideration of the question, and is said to have written a work on the Etruscans in twenty books, during the reign of Augustus, when there was a sort of Etrurian revival, in which everything Etruscan was the fashion. The identification of the Etruscans with the Lydians was very likely due to a confusion of the Lydian Τορρηβοί with the name Τυρσηνοί or Τυρρηνοί, applied to the Etruscans by the Greeks. (Cf. Hesiod, *Theog.* 1015; Ovid, *Met.* iii. 577 foll.; Plin. *H. N.* iii. 19; Tac. *Ann.* iv. 24; and see Mommsen, *Hist. of Rome*, bk. i. ch. ix.) The confusion was easier because of the maritime prowess of both peoples and their piratical practices (Herod. vi. 22; Strab. 219).

Modern investigators have not been deterred by the ill success of Dionysius from attempting to solve the problem of the ethnological affinities of the Etruscans; but no definite and generally accepted conclusions have yet been reached. For purposes of investigation there have been collected some 6000 or more Etruscan inscriptions, the characters resembling Pelasgian or early Greek. There are also vast collections of their pottery,

Map of Ancient Etruria.

bronzes, jewels, and other works of Tuscan art. Fifteen bilingual inscriptions give some further aid on the side of the language, but less than one might suppose, for they consist only of proper names. The longest inscription yet discovered is that found at Perugia in 1822, consisting of forty-six lines, in red, upon two sides of a block of stone (the "Cippus Perusinus"). These records are in the main mortuary records taken from tombs, walls, or the labels and seals of mortuary niches, or still oftener painted upon urns or cut into sarcophagi. They usually give the name, parentage, age, and rank of the deceased, with a list of the offices that he held. The most noted investigations of the origins and affinities of the Etruscans have been those of K. O. Müller, whose dissertation on the subject in two volumes (Breslau, 1828; 2d ed. Stuttgart, 1877) received a prize from the Academy of Sciences at Berlin, and Wilhelm Corssen (q. v.), who also published two elaborate volumes (Leipzig, 1874–75). Later works are those of Deecke and Pauli.

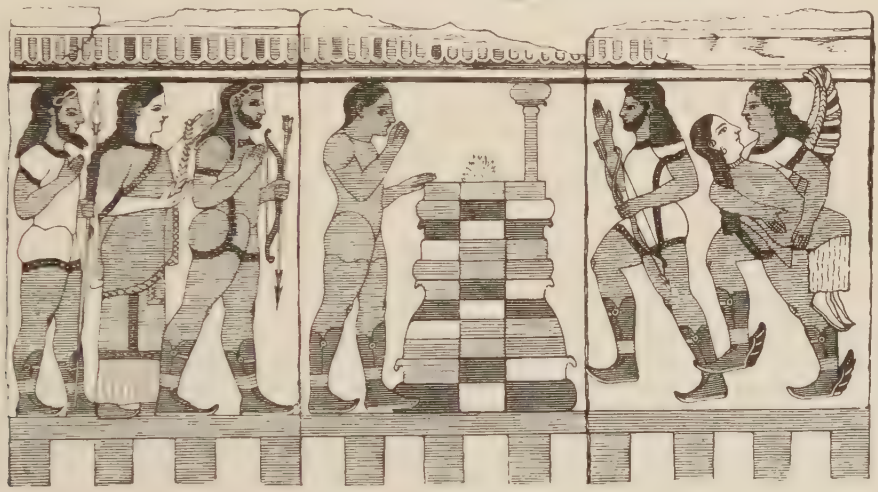
By these scholars some progress has been made towards a knowledge of the peculiarities of the Etruscan language. Besides proper names, some 200 other words have been deciphered, among them a number of numerals, including the first six digits, the common words denoting relationships, and several verbal forms. As a matter of general interest, the following list of Etruscan words may be given from Pauli:

clan.....son.	thu.....five.
puia.....wife.	huth.....six.
sekh.....daughter.	suthinese.....urn-niches.
lautni.....a freedman.	tular.....pillar (*cippus*).
cvil (cver).....gift, dedication.	amce.....fuit.
mach.....one.	ma.....est.
ci.....two.	ture.....dat.
zal.....three.	turce.....dedit.
sa.....four.	arce.....habuit.

Relationship is expressed by separate words (as above), or (more commonly) by suffixes: thus, *Aulesa*, "wife of Aulé," *Theprisa*, "wife of Thepri," etc. Other linguistic facts that have been satisfactorily established regarding the Etruscan tongue are these: the existence of gender, the use of enclitics, the genitive singular in *-s*, the dative in *-si* or *-thi*, the absence of distinction between the nominative and accusative in nouns, and the formation of a plural in *-r* or *-l*.

The Egyptian monuments speak of a people called Tursha as taking part with the Sardinians, Teucri, and other people from the coasts of "the North" in an invasion of Egypt about B.C. 1200; but the Tursha can not be definitely identified with the Tyrrhenians any more than can the Tyrrhenians with the Etruscans. Support is given to the Lydian hypothesis by the discovery made in 1886 by two French scholars, who found in the island of Lemnos a sepulchral monument with two Etruscan inscriptions, though of a dialectic character. Now, Thucydides states that Lemnos was inhabited by Tyrrheni, so that in the finding of these inscriptions Pauli sees evidence of the identity of the two peoples. See Bréal in the *Bulletin de Correspondance Hellénique*, vol. x. (1886); and Pauli, *Eine vorgriechische Inschrift von Lemnos* (Leipzig, 1886).

An interesting discovery was made in 1891 by Prof. Krall of Vienna. About 1850, a mummy was deposited in the Museum of Agram by an Austrian traveller who had brought it from Egypt. When unrolled, it was found that the linen cloths in which it had been wrapped were covered with written characters. These, when examined in 1867 by Brugsch Pasha, were pronounced by him to be Ethiopic. In 1877 Sir Richard Burton explained them as Nabathean. It remained for Prof. Krall to prove that the characters are Etruscan, and that the words which they embody are found in the existing inscriptions of Etruria. They form, in fact, a book, of which the text originally consisted of twelve columns. More than two hundred lines are intact, including the last paragraph of the book. The mummy around which the linen bands were wrapped is that of a woman, and the gilding on the face and shoulders proves it to belong to the Greek or Roman period. Now, as Etruscan was still spoken and read in the first century A.D., it is easy to see how an Etruscan book could have found its way to Egypt, when both Etruria and Egypt were parts of the same Empire. The few words of the book that had been identified in 1893 make it probable that it is one of the semi-religious, semi-magical works for which the Etruscans were celebrated. With the material for study and comparison afforded by the continuous text of this book, the problem of the Etruscan language seems likely to be brought at least measurably near to a satisfactory solution. The transcription and photographs of the text, with an account of Prof. Krall's discovery, were published by the Imperial Academy of Vienna in 1892 (*Die Etruskischen Mumienbinden des Agramer National-Museums*). See, also, an article by Prof. Sayce in the *Fortnightly Review* for February, 1893.



Until lately philologists were in the main divided into two great camps on the question of the racial and linguistic affinities of the Etruscans—one set of scholars holding to the theory of a Semitic origin and the other to that of an Aryan. (See INDO-EUROPEAN LANGUAGES.) But the actual failure of Dr. Corssen to establish the Aryan hypothesis has to some extent simplified the problem, and the controversy is now carried on over the Semitic theory and the Ugro-Altaic, this last having been very ingeniously, though not convincingly, set forth by Dr. Isaac Taylor in his *Etruscan Researches* (London, 1874). There are many coincidences that make the Semitic hypothesis seem plausible. There are Semitic peculiarities traceable in the language—e. g. the reduplication of consonants, the omission of short vowels, and the retrograde writing. The religion of the Etruscans was a species of mysticism like that of the Semites of Carthage; their ruling class was a priesthood and their theology a system of casuistry, as with the Jews; while their rites were gloomy and horrible, like those of the Phœnicians. Again, their art possesses the peculiar rigidity, the conventionality, and the lack of expression that mark the art and architecture of the Asiatic Semites. Finally, their physical characteristics were Semitic in that the Etruscans depicted themselves upon their monuments as short, thickset, with large heads and clumsy limbs (cf. Verg. *Georg.* ii. 193), and the aquiline nose that is one of the most noticeable peculiarities of the Semitic peoples. But while these coincidences are striking, they are not conclusive, and perhaps the most reasonable view is that of Müller, who regards the Etruscans as an Asiatic non-Aryan people intermingled with Aryan elements derived from the tribes which they gradually conquered and subdued. Their earliest

home in Italy was on the Padus, and as late as Livy's time the people of the Rhaetian Alps spoke a dialect of Etruscan (Livy, v. 33; Plin. *H. N.* iii. 20; Justin. xx. 5; and Oberziner, *I Reti* [1883]). The theory of a blending of two races, or rather of the grafting of an Aryan branch upon a non-Aryan stock, would account for the two main features that present themselves in the Etruscan problem — the fact that, in the main, the Etruscans have nothing in common with their neighbours of Italy, and the additional fact that their language does seem to show some slight traces of Aryan influence — about as much, for instance, as that of the British Kelts left upon the dialect of their Teutonic conquerors. This hypothesis is at least reasonable, unless we are willing to accept the conclusion of the scholars who disparagingly regard the Etruscan people and the Etruscan language as *sui generis*, representing a race and a speech that have become extinct.

Conestabile and others hold that the Etrurian people contained two distinct elements—the one native and servile, the other foreign and occupying the relation of lordship. Caeré and Cortona are said to have been Pelasgic cities before they were possessed by the Etruscans; and certain inscriptions once classed as Etruscan are now ascribed to the more ancient Pelasgi (q. v.). Livy states that the dialect of the Etrurians who inhabited the towns differed from that of the Etrurians of the country districts. Again, as Dr. Taylor points out, the rapid destruction of the Etrurian power in Campania and in the valley of the Padus makes it probable that it was a dominion of conquest rather than of colonization, and that the *Rasena*, or Etruscans proper, were a ruling aristocracy, of high culture and great ability, but few in number. All this is, in the main, corroborative of Müller's view.

GOVERNMENT AND CIVILIZATION.—The Etrurian government was a federal league of the twelve cities already mentioned, each ruled by magistrates annually elected from a class of priestly nobles of hereditary rank. These magistrates bore the titles Lauchmé (Lucumo), Purtsvana (Porsena), and Marunuch, roughly corresponding to the Roman officers of Consul, Imperator, and Dictator. The official insignia afterwards used in Rome — the purple robe, the praetexta, the lictors and fasces, the *sella curulis*, and the *apparitores*—were derived from Etruria. The representatives of the twelve towns met at the temple of Voltumna at a place not now known (cf. Livy, iv. 23). Books of laws existed in accordance with which the internal affairs of the State were managed (*Libri Disciplinae*), as well as the religious rites and the division of the people. (See Festus, s. v. *Rituales*).

That the civilization of the Etruscans was a highly developed one is shown by the little that we know of their social laws as well as by the evidences of their wealth, luxury, and power. The position of women was a high one; the wife was the social equal of the husband, as is shown by the sepulchral honours paid her, and by the pictures of domestic life pourtrayed on the sarcophagi and the vases. For a long time the Etruscans ranked as one of the three great naval powers of the Mediterranean. They are known, also, to have been familiar with the sciences, to have been skilled in mining, metallurgy, astronomy, and medicine, while their knowledge of engineering was conspicuous in the massive walls of their cities, built of huge blocks, perfectly fitted without cement, and in their roads, tunnels, and chambered tombs.

Etruscans. (Painting from Caeré.)

In art and art-manufactures, the Etruscans stand very high. Their jewellery, which is in patterns formed by soldering on minute grains of gold, excites admiration, while their bronze-work, coinage, and mirrors are of very fine workmanship. Vast numbers of painted vases, found chiefly in tombs, possess both an historical and an artistic value. See FICTILE; VAS.

The religion of the Etruscans played a most important part in their lives, since they were proverbially devoted to the exercises of their faith, and we have, in fact, already noted that their very form of government was largely a system of sacerdotalism. Hence Livy describes the nation as *gens ante omnes alias dedita religionibus* (v. 1; see also i. 56 and v. 15); the early Fathers of the Christian Church denounced Etruria as *genetrix et mater superstitionis;* and Dionysius even went so

Etruscan Canal in the Valley of the Marta. (Reber.)

far as to derive the name *Tuscus* from *θυοσκόος* = *thurifer*. Their sepulchral monuments show them to have entertained a belief in a future life; while Varro, Cicero, and Martianus Capella all speak of the important part which divination played in their daily life—their affairs of State, even, being regulated by haruspices and augurs. The deities of Greece and Rome appear in their mythology [e. g. Ani (Ianus), Maris (Mars), Nethuns (Neptunus), Uni (Iuno), Artumes (Artemis), Velch (Vulcanus)], besides whom there are a number of native gods, such as Fufluns, Tinia, Turms, Thesan, answering roughly to Bacchus, Iupiter, Mercury, and Aurora. The Sun and Moon figure as Usil and Lala. Other gods, some of whom are occasionally mentioned by the Roman writers, are Manius and Mania, king and queen of the lower world, Nortia (Fortuna), into the door of whose temple at Volsinii nails (*clavi annales*) were driven to mark the successive years, Summanus, the god of night, Vertumnus, the god of Autumn, and the Novensiles, a collective name of all the gods who hurled thunderbolts.

History.—Varro records a tradition that the Etruscan State was founded in the year B.C. 1044, and the Roman legends represent the Etruscans as a powerful and wealthy people at the time when Rome was founded. Later, but still during the early years of Rome, Etruria figures in history as a great naval power, allied with Carthage against the Greeks, and having kings of its own race dominant over the Romans, as the Roman historians themselves admit in recording the legend of the migration of the Tarquins from Tarquinii to Rome, and the sway of the Tarquinian dynasty. An Etruscan cemetery has been discovered on the Esquiline at Rome; the Caelian Hill bears the name of an Etruscan chief, Caeles Vibenna, while one of the oldest quarters of the city near the Palatine bore the name Vicus Tuscus. (See Mommsen, i. 4, p. 80; id. 9, p. 174 of the American ed.; cf. also Varr. *L. L.* v. 46). That the period of Etruscan domination at Rome was one of much prosperity to the city is seen by the stories that have been transmitted to us of the magnificence of the Tarquins, and more forcibly by the vastness of the engineering works constructed at that time, such as the Cloaca Maxima, the Capitoline temple, and the Servian Wall. See Cloaca.

Even after the expulsion of the kings from Rome, Etruria was still the greatest military power in Italy, and for a century the young Republic of Rome taxed all its energies in resisting the single Tuscan State of Veii, whose people in B.C. 476 actually succeeded in capturing the Ianiculum. During the period from B.C. 540 to 474, the Etruscans divided with the Greeks and Carthaginians the control of the Mediterranean, expelling the Greek colonists from Corsica (B.C. 538), an island which they still held in 453. In B.C. 525 they attacked the Greeks in Cumae, but in 474, Hiero of Syracuse, in a great naval battle fought off the Campanian coast, broke their naval power, and won a victory which is celebrated by Pindar in an extant ode (*Pyth.* i. 72). In 414, however, a contingent of their Etruscan ships was sent to aid the Athenians in their ill-fated expedition against Sicily. From this time the power of Etruria rapidly declined. In Campania, the Greeks of Cumae, aided by the Samnites, routed the Etruscan forces, and the Samnites carried Capua by storm; while in the north of Italy the Gauls swept down from the Alps, and, after overwhelming city after city, crossed the Apennines and made their way into the heart of Etruria. The rich Etruscan city of Melpum fell in B.C. 396, and not many years later, attacked by the Romans on the south, the

Remains of the Servian Wall upon the Aventine, Rome.

southern province submitted to the Latin arms (B.C. 351). In 311, the Romans crossed the boundary formed by the Ciminian Forest, in spite of several successive defeats sustained by them at the hands of the Etruscans, and won a decisive victory in the year 283 at the Vadimonian Lake. Tarquinii almost immediately fell; and in 280 Volaterrae, the great northern fortress of the Etruscans, having succumbed, the long struggle ended with the complete triumph of the Roman arms.

Though conquered, the Etruscan cities appear to have been treated with mildness and consideration, and to have sustained towards Rome the position of allies rather than subjects. In the Second Punic War they furnished supplies to the Roman fleet, and later they were actually admitted to the Roman franchise (B.C. 89). Some of the greatest names in the later history of the Roman State are the names of men of Etruscan lineage. Pompeius Magnus (Pompu), Maecenas, and the family of Caecina were among these; and under the emperors many other distinguished men show in their lineage kinship with the noble families of Etruria. In fact, as stated above, during the Augustan age an Etruscan fad generally prevailed at Rome, like our Anglomania of to-day or the Gallomania of 1856–70; and Etruscan ancestry was a thing to be proud of.

The debt of Rome to her Etruscan neighbours has been variously regarded. In the Latin language, apart from a comparatively few terms of religion, augury, and warfare, there are no real traces of Etrurian influence. To the Romans, the Etruscans were always an alien race (Cic. *N. D.* ii. 4; Plaut. *Curc.* 150), with whom, indeed, they traded and fought, and whose divination they employed; yet they never owned kinship with them, but rather let them hold the same relation towards Rome as did the Carthaginians, with whom the Latins also fought and traded. Yet the sway of the Etruscan kings at Rome did add much to the Roman ceremonial and the usages of Roman life. To Etruria are due the insignia of office, the fasces, the curule chair; and to the same source Rome owed the circus, the gladiatorial shows, the races, the triumph, the early monetary system, the rudiments of military science, the knowledge of augury, the *tibicines*, the *lituus*, and the art of building substantial houses, aqueducts, and sewers.

Etymologĭcum Magnum. The oldest Greek lexicon in existence, dating probably from the tenth century A.D., and by an unknown author. It professes to give the roots of the words contained in it. The proposed etymologies are often mere guesses, but the work is historically valuable as embodying a great number of traditions and notices of the meanings of unusual words. There are modern editions by Schäfer (Leipzig, 1816), Sturz (*Etymologicum Gudianum*) (Leipzig, 1818), and Gaisford (Oxford, 1849). See LEXICON.

Etymology. See PHILOLOGY.

Euandros (*Εὔανδρος*). See EVANDER.

Euboea (*Εὔβοια*). Now Negropont; the largest island of the Aegaean Sea, lying along the coasts of Attica, Boeotia, and the southern part of Thessaly, from which countries it is separated by the Euboean Sea, called the Euripus in its narrowest part. Its early name was MACRIS. Euboea is about ninety miles in length; its extreme breadth is thirty miles, but in the narrowest part it is only four miles across. Throughout the length of the island runs a lofty range of mountains, which rise in one part as high as 7266 feet above the sea. It contains, nevertheless, many fertile plains, and was celebrated in antiquity for the excellence of its pasturage and corn-fields. According to the ancients it was once united to Boeotia, from which it was separated by an earthquake. In Homer (*Il.* ii. 536) the inhabitants are called Abantes, and are represented as taking part in the expedition against Troy. In the northern part of Euboea dwelt the Histiaei, from whom that part of the island was called Histiaea; below these were the Ellopii, who gave the name of Ellopia to the district, extending as far as Aegae and Cerinthus; and in the south were the Dryopes. The centre of the island was inhabited chiefly by Ionians. It was in this part of Euboea that the Athenians planted the colonies of Chalcis and Eretria, which were the two most important cities in the island. After the Persian Wars Euboea became subject to the Athenians, who attached much importance to its possession; and consequently Pericles made great exertions to subdue it, when it revolted in B.C. 445. Under the Romans Euboea formed part of the province of Achaea. See Bursian, *Topogr. von Euboia* (1859).

Euboĭcus, "belonging to Euboea." An epithet applied to Cumae, because that city was built by a colony from Chalcis, a town of Euboea (Ovid, *Fast.* iv. 257; Verg. *Aen.* vi. 2, ix. 710).

Eubulĭdes (*Εὐβουλίδης*). A native of Miletus and successor of Euclid in the Megaric school. He was a strong opponent of Aristotle, and seized every opportunity of censuring his writings and calumniating his character. He introduced new subtleties into the art of disputation, several of which, though often mentioned as proof of great ingenuity, deserve only to be remembered as examples of egregious trifling. Of these sophistical modes of reasoning, called by Aristotle "Eristic syllogisms," a few examples may suffice. (1) *The Lying.* If, when you speak the truth, you say, you lie, you lie: but you say you lie when you speak the truth; therefore, in speaking the truth, you lie. (2) *The Occult.* Do you know your father? Yes. Do you know this man who is veiled? No. Then you do not know your father, for it is your father who is veiled. (3) *Electra.* Electra, the daughter of Agamemnon, knew her brother and

did not know him; she knew Orestes to be her brother, but she did not know that person to be her brother who was conversing with her. (4) *Sorites.* Is one grain a heap? No. Two grains? No. Three grains? No. Go on, adding one by one; and if one grain be not a heap, it will be impossible to say what number of grains make a heap. (5) *The Horned.* You have what you have not lost: you have not lost horns; therefore you have horns. In such high repute were these quibbles that Chrysippus wrote six books on the first of them; and Philetas of Cos died of consumption which he contracted in the close study which he bestowed upon them (Diog. Laërt. i. 111).

Eubūlus (Εὔβουλος). (1) A formidable opponent of Demosthenes at Athens. (2) A comic poet of Athens, born in the deme of Atarnea. He exhibited about B.C. 375. Eubulus stood on the debatable ground between the Old and Middle Comedy; and to judge from the fragments in Athenaeus, who quotes more than fifty of his comedies by name, he must have written plays of both sorts. He composed, in all, 104 comedies. The remains will be found in Meineke's *Fragmenta Com. Graec.* i. pp. 355–367 and iii. pp. 203–272.

Eucheir (Εὔχειρ). (1) A painter related, as was said, to Daedalus, and who, according to Theophrastus (*ap.* Pliny, *H. N.* vii. 56), introduced painting into Greece. The name, in truth, however, is merely a figurative one for a skilful artist generally (εὔχειρ, "skilful," "dexterous"). (2) A modeller, styled also EUCHĪRUS (Pausan. vi. 4. 2), and one of the most ancient. He and Eugrammus are said to have accompanied Demaratus in his flight from Corinth to Etruria. Here again both names are figurative. (3) An Athenian sculptor. He made a statue of Hermes, which was placed at Phenea (Pausan. viii. 14. 7). Pliny ranks him among those artists who excelled in forming brazen statues of combatants at the public games, armed men, huntsmen, etc.

Eucleia (εὔκλεια). A festival celebrated at Corinth in honour of Artemis. It is mentioned only by Xenophon (*Hell.* iv. 4, § 2), and no particulars are known about it.

Euclīdes (Εὐκλείδης). (1) A native of Megara, founder of the Megaric, or Eristic sect. Endowed by nature with a subtle and penetrating genius, he early applied himself to the study of philosophy. The writings of Parmenides first taught him the art of disputation. Hearing of the fame of Socrates, Euclid determined to attend upon his instructions, and for this purpose removed from Megara to Athens. Here he long remained a constant hearer and zealous disciple of the moral philosopher; and when, in consequence of the enmity which subsisted between the Athenians and Megareans, a decree was passed by the former that any inhabitant of Megara who should be seen in Athens should forfeit his life, he frequently came to Athens by night, from the distance of about twenty miles, concealed in a long female cloak and veil, to visit his master (Aul. Gell. vii. 10). Not finding his propensity to disputation sufficiently gratified in the tranquil method of philosophizing adopted by Socrates, he frequently engaged in the business and the disputes of the civil courts. Socrates, who despised forensic contests, expressed some dissatisfaction with his pupil for indulging a fondness for controversy (Diog. Laërt. ii. 30). This circumstance probably proved the occasion of a separation between Euclid and his master; for we find him, after this time, at the head of a school in Megara (Diog. Laërt. iii. 6), in which his chief employment was to teach the art of disputation. Debates were conducted with so much vehemence among his pupils that Timon said of Euclid that he had carried the madness of contention from Athens to Megara. That he was, however, capable of commanding his temper appears from his reply to his brother, who, in a quarrel, had said, "Let me perish if I be not revenged on you." "And let *me* perish," returned Euclid, "if I do not subdue your resentment by forbearance and make you love me as much as ever."

In argument Euclid was averse to the analogical method of reasoning, and judged that legitimate argument consists in deducing fair conclusions from acknowledged premises. He held that there is one supreme good, which he called by the different names of Intelligence, Providence, God; and that evil, considered as an opposite principle to the sovereign good, has no existence. The supreme good, according to Cicero, he defined to be that which is always the same. In this doctrine, in which he followed the subtlety of Parmenides rather than the simplicity of Socrates, he seems to have considered good abstractly as residing in the Deity, and to have maintained that all things which exist are good by their participation of the first good, and, consequently, that there is, in the nature of things, no real evil. It is said that when Euclid was asked his opinion concerning the gods, he replied, "I know nothing more of them than this: that they hate inquisitive persons."

(2) A celebrated mathematician of Alexandria, considered by some to have been a native of that city, though the more received opinion makes the place of his birth to have been unknown. He flourished B.C. 280, in the reign of Ptolemy Lagus, and was professor of mathematics in the capital of Egypt. His scholars were numerous, and among them was Ptolemy himself. It is related that the monarch having inquired of Euclid if there was not some mode of learning mathematics less barbarous and requiring less attention than the ordinary one, Euclid, though otherwise of an affable disposition, dryly answered that there was "no royal road to geometry" (μὴ εἶναι βασιλικην ἄτραπον πρὸς γεωμετρίαν). Euclid was the first person who established a mathematical school at Alexandria, and it existed and maintained its reputation till the Mohammedan conquest of Egypt. Many of the fundamental principles of the pure mathematics had been discovered by Thales, Pythagoras, and other predecessors of Euclid; but to him is due the merit of having given a systematic form to the science, especially to that part of it which relates to geometry. He likewise studied the cognate sciences of Astronomy and Optics; and, according to Proclus, he was the author of "Elements" (Στοιχεῖα), "Data" (Δεδομένα), "An Introduction to Harmony" (Εἰσαγωγὴ Ἁρμονική), "Phaenomena" (Φαινόμενα), "Optics" (Ὀπτικά), "Catoptrics" (Κατοπτρικά), "On the Division of the Scale" (Κατομὴ Κανόνος), and other works now lost. His most valuable work, "The Elements of Geometry," in thirteen books, with two additional books by Hypsicles, has been repeatedly published —the first edition at Venice (1482) in a Latin trans-

lation from the Arabic. The first Greek text appeared at Basle in 1533. The edition of Peyrard is among the best. It appeared at Paris in 1814–16–18, in 3 vols. This edition is accompanied with a double translation—one in Latin and the other in French. M. Peyrard consulted a manuscript of the latter part of the ninth century, which had belonged to the Vatican library, and was at that time in the French capital. By the aid of this he was enabled to fill various *lacunae*, and to re-establish various passages which had been altered in all the other manuscripts and in all the editions anterior to his own. The best recent edition is that of Heiberg, 5 vols. (1883–88). The only English edition of all the works ascribed to Euclid is that of Gregory (Oxford, 1703). See Dodgson, *Euclid and his Modern Rivals* (1879); Allman, *Greek Geometry from Thales to Euclid* (1889); and Ball, *Short Hist. of Mathematics*, pp. 48–57 (1888).

Euctēmon (Εὐκτήμων). (1) A Greek astronomer. (See Meton.) (2) A rhetorician mentioned by the elder Seneca, who has preserved some quotations from his works (*Controv.* iii. 19, 20; iv. 25; v. 30, 34).

Eudēmus (Εὔδημος). A native of Rhodes and noted as a peripatetic philosopher and disciple of Aristotle, many of whose works he edited. One of these bears the name of Eudemus (Ἠθικὰ Εὐδήμεια), in seven books, probably a recension of all Aristotle's ethical lectures arranged by Eudemus. See Gell. xiii. 5, and the article Aristoteles.

Eudocia (Εὐδοκία). (1) A Roman empress, wife to Theodosius the Younger. Her original name was Athenaïs, and she was the daughter of Leontius, an Athenian philosopher; but on her marriage she embraced Christianity, and received the baptismal name of Eudocia. She was a woman of beauty and talent. She versified several books of the Old Testament, and wrote several paraphrases on some of the Jewish prophets; but became suspected by her husband of conjugal infidelity, and, being degraded, she was allowed to seek a refuge in the Holy Land. Here she devoted herself to religious studies, but the jealousy of her suspicious husband still pursued her; and having learned that two priests, whom she had chosen as the companions of her exile, were accustomed to pay her frequent visits and were loaded by her with presents, Theodosius sent Saturninus, one of the officers of his court, to Jerusalem, who put to death the two priests without even the formality of a trial. Irritated at this new insult, Eudocia caused Saturninus to be slain—a deed more likely to darken than avenge her innocence. The emperor contented himself with depriving her of all the badges of her rank, and reducing her to the conditions of a private individual. She lived twenty years after this event, in the bitterest penitence, and died at the age of sixty-seven years, in A.D. 460.

The principal work ascribed by some to Eudocia is *Homerocentra* (Ὁμηρόκεντρα), or a life of the Saviour, in 2443 hexameters, formed from verses and hemistichs selected from the poems of Homer. (See Cento.) Others, however, make Pelagius, surnamed Patricius, who lived in the fifth century, its author. Eudocia left, also, a poem on the martyrdom of Cyprian. The best edition of the *Homerocentra* is that of Teucher (Leipzig, 1798). (2) The Younger, daughter of the preceding and of Theodosius II., married Valentinian III. After the assassination of her husband by Petronius Maximus, she was obliged to marry the usurper. Eudocia, out of indignation and revenge, called in Genseric, king of the Vandals, who came to Italy, plundered Rome, and carried Eudocia with him to Africa. Some years afterwards she was sent back to Constantinople, where she died, A.D. 462. (3) The widow of Constantine Ducas, married to Romanus Diogenes, an officer of distinction, A.D. 1068, and associated him with her upon the throne. Three years after, Michael, her son, by means of a revolt, was proclaimed emperor, and caused his mother to be shut up in a convent, where she spent the rest of her life. She left a treatise on the genealogies of the gods and heroes, which displays an extensive acquaintance with the subject. It is printed in Villoison's *Anecdota Graeca* (Venice, 1781).

Eudoxus (Εὔδοξος). A celebrated astronomer and geometrician of Cnidus, who flourished B.C. 366. He studied at Athens and in Egypt, but probably spent some of his time at his native place, where he had an observatory. He is said to have been the first who taught in Greece the motions of the planets. His works are lost (Sen. *Quaest. Nat.* vii. 3; Vitruv. ix. 9; Plin. *H. N.* ii. 47).

Euergētae (Εὐεργέται). A people of Upper Asia, whose true name was Ariaspae. The Greeks called them Euergetae, or benefactors, translating the Persian appellation which was added to their name. This title they are said to have received in return for succour afforded to the army of Cyrus, when it was suffering, in these regions, from cold and hunger (Curt. vii. 3).

Euergētes (Εὐεργέτης). A surname, signifying benefactor, given to Ptolemy III. and IV. of Egypt, as also to some kings of Syria, Pontus, etc.

Eugamon (Εὐγάμων) or **Eugammon**. One of the Cyclic poets, a native of Cyrené, who flourished about B.C. 568. He wrote a continuation of the *Odyssey*, in two books, with the title *Telegonia* (Τηλεγονία), and giving an account of the events from the fight with the suitors to the death of Odysseus. The substance of the poem is preserved in the *Chrestomathia* of Proclus. See Cyclic Poets.

Euganei. A people who formerly inhabited Venetia, on the Adriatic Sea, and were driven towards the Alps and the Lacus Benacus by the Heneti or Veneti (Livy, i. 1).

Eugenius (Εὐγένιος). (1) A general who opposed Diocletian in A.D. 290, but was slain the very same day at the gates of Antioch, while attempting to make himself master of that city. (2) A usurper in the reign of Theodosius the Great, of Gallic extraction, A.D. 392. He was defeated, taken prisoner, and put to death, after having held power for two years (Zosim. iv. 54 foll.).

Eugubine Tables. See Tabulae Iguvinae.

Euhemĕrus (Εὐήμερος). A native of Messena, as is generally supposed, though perhaps of Messana. Being sent on a voyage of discovery by Cassander, king of Macedon, about B.C. 316, he came, as he himself asserted, to an island called Panchaea, in the capital of which, Panara, he found a temple of the Triphylian Zeus, where stood a column inscribed with a register of the births and deaths of many of the gods. Among these he specified Uranus, his sons Pan and Cronos, and his daughters Rhea and Demeter; as also Zeus, Heré, and Poseidon.

who were the offspring of Cronos. Accordingly, the design of Euhemerus was to show, by investigating their actions and recording the places of their births and burials, that the mythological deities were mere mortal men, raised to the rank of gods on account of the benefits which they had conferred upon mankind. Ennius translated this celebrated work of Euhemerus, which was entitled Ἱερὰ Ἀναγραφή. The translation, as well as the original work, excepting some fragments, is lost; but many particulars concerning Euhemerus and the object of his history are mentioned in a fragment of Diodorus Siculus, preserved by Eusebius. Some quotations have also been saved by St. Augustine, and others have been made by Lactantius in his treatise *De Falsa Religione* (i. 11). This work was undoubtedly a covert attack on the established religion of the Greeks.

Euius (Εὔιος). A surname of Bacchus, given him, according to the poets, by Zeus, whom he was aiding in the contest with the giants. Zeus was so delighted with his valour that he called out to him, Εὖ νῖε, "Well done, O son!" Others suppose it to have originated from a cry of the Bacchantes, Εὐοῖ. Cf. Lachm. on Lucret. v. 743.

Eulaeus (Εὔλαιος, O. T. Ulai). A river in Susiana, rising in Great Media, passing east of Susa, and falling into the head of the Persian Gulf.

Eumaeus (Εὔμαιος). The faithful swineherd of Odysseus, who gave his master a friendly welcome on his return home in the guise of a beggar, and aided him in the slaughter of the suitors (*Odyss.* xv. 402, etc.). See Odysseus.

Eumēlus (Εὔμηλος). (1) A son of Admetus, king of Pherae in Thessaly, by Alcestis, daughter of Pelias, and who married Iphthimé, the sister of Penelopé. He went to the Trojan War, and had the fleetest horses in the Grecian army. He distinguished himself in the funeral games of Patroclus (*Il.* ii. 714, 763 foll.). (2) Son of Amphilytus and one of the Corinthian line termed Bacchiadae. He was the author of a history of Corinth in heroic verse (Pausan. ii. 1). Eumelus joined Archias when the latter went to found Syracuse.

Eumĕnes (Εὐμένης). (1) Of Cardia, served as private secretary to Philip and Alexander; and on the death of the latter (B.C. 323) obtained the government of Cappadocia, Paphlagonia, and Pontus. Eumenes allied himself with Perdiccas, and carried on war for him in Asia Minor against Antipater and Craterus. On the death of Perdiccas in Egypt, Antigonus employed the whole force of the Macedonian army to crush Eumenes. Notwithstanding the numerical inferiority of his forces, Eumenes maintained his ground against his enemies for some years, till he was surrendered by the soldiery to Antigonus, by whom he was put to death, 316. He was a great general and statesman, and had he been a native Macedonian would probably have occupied a more important position among the successors of Alexander. (2) I., king of Pergamum, who reigned B.C. 263–241, and was the successor of his uncle Philetaerus. (3) II., king of Pergamum, who reigned B.C. 197–159, and was the son and successor of Attalus I. He inherited from his predecessor the friendship and alliance of the Romans, which he took the utmost pains to cultivate. Pergamum became under his rule a great and flourishing city, in which he founded that celebrated library that rose to be a rival even to that of Alexandria. See Pergamum.

Eumenīa (Εὐμένεια). A city of Phrygia, north of Peltae, which probably derived its name from Eumenes, king of Pergamus. Steph. Byz. s. v. Εὐμένεια.

Eumenĭdes (Εὐμενίδες), also called Erinyes (Ἐρινύες), and by the Romans Furiae or Dirae. Originally a personification of curses pronounced upon a guilty criminal. The name Erinys, which is the more ancient one, was derived by the Greeks from the verb ἐρίνω or ἐρεννάω, "I hunt down," or "persecute," or from the Arcadian word ἐρινύω, "I am angry"; so that the Erinyes were either the angry goddesses, or the goddesses who hunt or search for the criminal. The name Eumenides, which signifies "the well-meaning," or "soothed goddesses," is a mere euphemism, because people dreaded to call these fearful goddesses by their real name; and it was said to have been first given them after the acquittal of Orestes by the court of the Areopagus, when the anger of the Erinyes had become soothed. It was by a similar euphemism that at Athens the Erinyes were called σεμναὶ θεαί, or the Revered Goddesses.

In the sense of "curse" or "curses," the word Erinys or Erinyes is often used in the Homeric poems, and Aeschylus calls the Eumenides Ἀραί, that is, curses. According to the Homeric notion, the Erinyes, whom the poet conceives as distinct beings, are reckoned among those who inhabit Erebus, where they rest until some curse pronounced upon a criminal calls them to life and activity. The crimes which they punish are disobedience towards parents, violation of the respect due to old age, perjury, murder, violation of the laws of hospitality, and improper conduct towards suppliants. The notion which is the foundation of the belief in the Eumenides seems to be that a parent's curse takes from him upon whom it is pronounced all peace of mind, destroys the happiness of his family, and prevents his being blessed with children. As the Eumenides not only punished crimes after death, but during life on earth, they were regarded also as goddesses of fate, who, together with Zeus and the Moerae or Parcae, led such men as were doomed to suffer into misery and misfortunes. In the same capacity they also prevented man from obtaining too much knowledge of the future. Homer does not mention any particular names for the Erinyes, nor does he seem to know of any definite number. Hesiod, who is likewise silent upon these points, calls the Erinyes the daughters of Gaea, who conceived them in the drops of blood that fell upon her from the body of Uranus. Epimenides called them the daughters of Cronos and Euonymé, and sisters of the Moerae; Aeschylus calls them the daughters of Night; and Sophocles, of Scotos (Darkness) and Gaea. In the Greek tragedians, with whom (e. g. in the *Eumenides* of Aeschylus) the number of these goddesses is not limited to a few, no particular name of any one Erinys is yet mentioned, but they appear in the same capacity, and as the avengers of the same crimes, as before. They are sometimes identified with the Poenae, though their sphere of action is wider than that of the Poenae. From their hunting down and persecuting the accursed criminal, Aeschylus calls them κύνες or κυνηγέτιδες. No prayer, no sacrifice, and no tears can move them, or pro-

tect the object of their persecution; and when they fear lest the criminal should escape them, they call in the assistance of Diké, with whom they are closely connected, the maintenance of strict justice being their only object. The Erinyes were more ancient divinities than the Olympian gods, and were therefore not under the rule of Zeus, though they honoured and esteemed him; and they dwelt in the deep darkness of Tartarus, dreaded by gods and men. Their appearance is described by Aeschylus as Gorgo-like, their bodies covered with black, serpents twined in their hair, and blood dripping from their eyes; Euripides and other later poets describe them as winged beings. The appearance they have in Aeschylus was more or less retained by the poets of later times; but they gradually assumed the character of goddesses who punished crimes after death, and seldom appeared on earth. On the stage, however, and in works of art, their fearful appearance was greatly softened down, for they were represented as maidens of a grave and solemn mien, in the richly adorned attire of huntresses, with a band of serpents around their heads, and serpents or torches in their hands. With later writers, though not always, the number of Eumenides is limited to three, and their names are TISIPHÓNÉ, ALECTO, and MEGAERA. At Athens there were statues of only two. The sacrifices which were offered to them consisted of black sheep and *νηφάλια*—i. e. a drink of honey mixed with water. Among the objects sacred to them we hear of white turtle-doves and the narcissus. They were worshipped at Athens, where they had a sanctuary and a grotto near the Areopagus; their statues, however, had nothing formidable, and a festival, Eumenidia, was there celebrated in their honour. Another sanctuary, with a grove which no one was allowed to enter, existed at Colonus. Under the name of *Μανίαι*, they were worshipped at Megalopolis.

Eumenides. (From a Painted Vase.)

Eumenĭdes (*Εὐμενίδες*). A play of Aeschylus (q. v.), the third of the great Orestean trilogy. It represents Orestes pursued by the Furies to Athens, where he is tried by the Areopagus for the murder of his mother. Clytaemnestra, and acquitted by the casting vote of Athené, so that in his person the family curse comes to an end. For a critical discussion of the play see K. O. Müller's *Eumenides*, Eng. trans. (Cambridge, 1835). Separate editions, with English verse translation and notes by Drake (London, 1853); and Paley (London, 1880). See also Rose, *Greek Dramas*, vol. ii. (London, 1872); and on the story of the play, the articles ORESTES; PELOPIDAE.

Eumenidīa (*Εὐμενίδεια*). A festival in honour of the Eumenides. It was observed once a year with sacrifices and libations. At Athens none but free-born citizens were allowed to participate in the solemnity, and of these none but such as were of known virtue and integrity. See EUMENIDES.

Eumenius. A Roman rhetorician of Augustodunum (Autun) in Gaul who flourished about A.D. 290. Four orations of his are preserved—one on the restoration of the school at Autun by Constantius Chlorus, delivered in A.D. 296 or 297, and three panegyrics. Text by Bährens (Leipzig, 1874). See Seeck in Jahn's *Jahrbücher*, cxxxvii. 713; Kilian, *Der Panegyrist Eumenius* (Münnerstadt, 1869); Sachs, *De Quattuor Panegyricis*, etc. (Halle, 1885); and the article PANEGYRICUS.

Eumolpĭdae (*Εὐμολπίδαι*). The most distinguished and venerable among the priestly families in Attica, believed to be the descendants of the Thracian bard Eumolpus, the introducer of the Eleusinian mysteries into Attica (Diod. Sic. i. 29; Apollod. iii. 15, § 4.) The *ἱεροφάντης* was always a member of the family of the Eumolpidae, as Eumolpus himself was believed to have been the first hierophant (Hesych. s. v. *Εὐμολπίδαι*; Tac. *Hist.* iv. 83). For the judicial powers of the Eumolpidae, see the article ELEUSINIA, p. 582.

Eumolpus (*Εὔμολπος*). In Greek mythology, the son of Poseidon and Chioné, the daughter of Boreas and Orithyia. After his birth he was thrown by his mother into the sea, but his father rescued him and brought him to Aethiopia, to his daughter Benthesicymé. When he was grown up, Eudius, the husband of Benthesicymé, gave him one of his daughters in marriage, but he desired the other as well, and was accordingly banished, and came with his son Ismarus or Immaradus to the Thracian king Tegyrius in Boeotia. As successor to this king he marched to the assistance of his friends the Eleusinians against the Athenian Erechtheus, but was slain with his son. (See ERECHTHEUS.) According to another story, Immaradus and Erechtheus both fell, and the contending parties agreed that the Eleusinians should submit to the Athenians, but should retain the exclusive superintendence of the mysteries of Eleusis, of which Eumolpus was accounted the founder (Thucyd. ii. 15; Isocrat. *Panath.* 78). He was also spoken of as a writer of consecrational hymns, and as having discovered the art of cultivating the vines and trees in general. The Eumolpidae, his descendants, were the hereditary priests of the Eleusinian ritual. See ELEUSINIA.

Eunapius (*Εὐνάπιος*). A Greek rhetorician, born at Sardis in A.D. 347. In 405 he wrote biographies of twenty-three older and contemporary philosophers and sophists. In spite of its bad style and its superficiality, this book is our chief authority for the history of the Neo-Platonism of that age. There is an edition by Boissonade (Amst. 1822). We have also several fragments of his continuation of the chronicle of Hereunius Dexippus. This continuation, in fourteen books, covered the period from A.D. 268 to 404, and was much used by Zosimus. See DEXIPPUS.

Eunēus (*Εὔνηος*). A son of Iason and Hypsipylé. See HYPSIPYLÉ; IASON.

Eunomia (*Εὐνομία*). See HORAE.

Eunomius (*Εὐνόμιος*). The leader of an extreme sect of Arians (Eunomians) in the fourth

century A.D. He was born at Dacora in Cappadocia, and was well known as the pupil and associate of Aëtius (q. v.) at Alexandria. By the support of Eudoxius, he became Bishop of Cyzicus (A.D. 360), but soon after resigned the episcopal office to become the leader of a party. The confession of faith which in 383 he sent to Theodosius the Great was rejected and he spent a number of years as an exile in Mauretania, Illyricum, Moesia, and elsewhere, until at last he was permitted to return to his native place to spend the remainder of his life. He died at Dacora about the year 394. Most of his works have been lost, owing to the fact that their destruction was ordered by various imperial edicts. We still possess, however, his Exposition of Faith and his Ἀπολογητικός, written in defence of his doctrines.

The teachings of Eunomius were by his followers set even above the Scriptures. They represent an extreme type of Arianism, in denying not only the equality of the Son with the Father, but even any similarity (ὁμοιότης). See Klose, *Geschichte und Lehre des Eunomius* (Kiel, 1833).

Eunūchus (εὐνοῦχος). A eunuch. See SERVUS.

Eunūchus. A play of Terence based upon the Εὐνοῦχος of Menander and the Κόλαξ of the same writer. It is one of the liveliest of the Terentian comedies, and obtained an exceptional success during the poet's lifetime. It was first produced in B.C. 161, the same year as the *Phormio*. The *Eunuchus* has been imitated in modern times in the *Bellamira* of Sir Charles Sedley, in *Le Muet* of Brueys, and in *L'Eunuque* of Fontaine. It is edited (with the *Andria*) by Papillon (London, 1877).

Eunus (Εὔνους). A Sicilian juggler and slave, a native of Apamea in Syria. He was the leader of the Sicilian slaves in the Servile War (B.C. 134–132) (Livy, *Epit.* xlv.). He was defeated by the consul P. Rupilius, and died in prison at Morgantia (Florus, iii. 20; Plut. *Sull.* 36).

Eupalium (Εὐπάλιον) or **Eupolium** (Εὐπόλιον). A town of the Locri Ozolae, north of Naupactus.

Eupatorium or **Eupatoria** (Εὐπατόριον or Εὐπατορία). (1) A town of Pontus, at the confluence of the Lycus and Iris. It was begun by Mithridates under the name Eupatoria, and received from Pompey, who finished it, the title of Magnopolis. (2) A town in the northwestern part of the Tauric Chersonesus, on the Sinus Carcinites. It was founded by one of the generals of Mithridates.

Eupatrĭdae (Εὐπατρίδαι). The members of the ancient noble families of Attica. After the abolition of royal power they found themselves in exclusive possession of political rights, and distinguished from the Γεωμόροι or agriculturists, and the Δημιουργοί or mechanics. The constitution of Solon deprived them of this privilege. But their landed property and the priestly dignities which they had possessed of old assured them a certain influence for a considerable time. See SOLONIAN CONSTITUTION.

Euphaes (Εὐφάης). A prince who succeeded Androcles on the throne of Messenia, and in his reign the first Messenian war began. He died B.C. 730 (Pausan. iv. 5, 6).

Euphemism and **Antiphrăsis.** See PHILOLOGY.

Euphēmus (Εὔφημος). Son of Poseidon and Europa, daughter of Tityus, husband of Laonomé, the sister of Heracles. His father conferred on him the gift of moving so swiftly over the sea that his feet remained dry. He was originally one of the Minyae of Panopeus in Phocis, but afterwards settled on the promontory of Taenarum in Laconia, and took part in the Calydonian hunt and the expedition of the Argonauts. When the Argonauts came to the lake of Triton, Triton gave Eumolpus a clod of earth, and Medea prophesied that if he threw this into the entrance of the lower world at Taenarum, his descendants of the tenth generation would be masters of Libya. The clod, however, was lost in the island of Thera, and his descendants were compelled to hold possession of this island, from which at length, in the seventeenth generation, Battus came forth and founded Cyrené in Libya. See Apollon. Rhod. ii. 562; Hygin. *Fab.* 14; Herod. iv. 150.

Euphorbus (Εὔφορβος). A Trojan, son of Panthoïs, renowned for his valour. He wounded Patroclus, and was killed by Menelaüs (*Il.* xvii. 60). Pausanias relates (ii. 17) that in the temple of Heré, near Mycenae, a votive shield was shown, said to be that of Euphorbus, suspended there by Menelaüs. Pythagoras, who maintained the transmigration of souls, declared that, in the time of the Trojan War, his soul had animated the body of Euphorbus; and as a proof of the truth of his assertion, he is said to have gone into the temple where the shield was hanging, and to have recognized and taken it down (Hor. *Carm.* i. 28. 11).

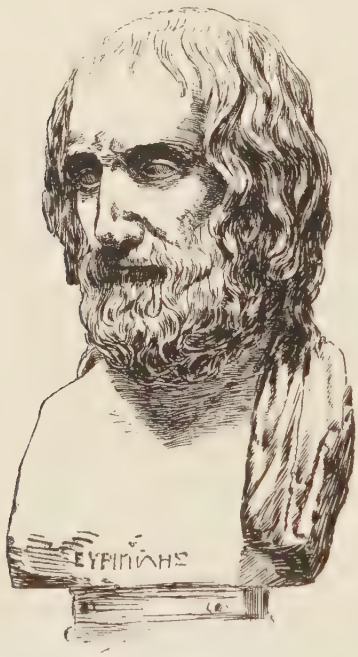
Euphorion (Εὐφορίων). (1) A tragic poet of Athens, son of Aeschylus. He conquered four times with posthumous tragedies of his father's composition, and also wrote several dramas himself. One of his victories is commemorated in the argument to the *Medea* of Euripides, where we are told that Euphorion was first, Sophocles second, and Euripides third with the *Medea*, B.C. 431. (2) An epic and epigrammatic poet, born at Chalcis in Euboea, B.C. 276, and who became librarian to Antiochus the Great. He wrote various poems, entitled *Hesiod*, *Alexander*, *Arius*, *Apollodorus*, etc. His *Mopsopia* or *Miscellanies* (Μοψοπία ἢ ἄτακτα) was a collection, in five books, of fables and histories relative to Attica, a very learned work, but rivalling in obscurity the *Cassandra* of Lycophron. The fifth book bore the title of *Chiliad* (Χιλιάς), either because it consisted of a thousand verses, or because it contained the ancient oracles that referred to a period of a thousand years. Perhaps, however, each of the five books contained a thousand verses, for the passage of Suidas respecting this writer is somewhat obscure and defective, and Eudocia, in the "Garden of Violets," speaks of a fifth Chiliad, entitled Περὶ Χρησμῶν, "Of Oracles." Quintilian recommends the reading of this poet, and Vergil is said to have esteemed his productions very highly. A passage in the tenth eclogue (v. 50 foll.) and a remark made by Servius (*Ad Eclog.* vi. 72) have led Heyne to suppose that C. Cornelius Gallus, the friend of Vergil, had translated Euphorion into Latin verse. This poet was one of the favourite authors of the emperor Tiberius, one of those whom he imitated, and whose busts he placed in his library. The fragments of Euphorion were collected and published by Meineke in his work *De Euphorionis Chalc. Vita et Scriptis* (1823), and in his *Analecta Alexandrina* (Berlin, 1843). See also Kock, *Frag. Com. Graec.* (1880). The amours of Eupho-

rion with Nicia or Nicaea, the wife of King Alexandria of Euboea, are often alluded to in the poems of the Greek Anthology. See Brunck, *Anal.* vol. ii. pp. 3, 43.

Euphrānor (Εὐφράνωρ). A distinguished statuary and painter. He was a native of Corinth, but practised his art at Athens about B.C. 336 (Quint. xii. 10. 6; Plin. *H. N.* xxxv. 8). Of one of his works, a beautiful sitting Paris, we have probably a copy in the Museo Pio-Clementino. His best paintings were preserved in a porch in the Ceramicus.

Euphrātes (Εὐφράτης). (1) A native of Oreus in Euboea and a disciple of Plato. He quitted Athens for the court of Perdiccas, king of Macedonia, with whom he became a favourite. After the death of this monarch he returned to his country, and headed a party against Philip, the successor of Perdiccas and father of Alexander. Being shut up, however, within the walls of Oreus, he put an end to his own life. According to some, he was killed by order of Parmenio. (2) A Stoic philosopher and native of Alexandria, who flourished in the second century. He was a friend of the philosopher Apollonius of Tyana, who introduced him to Vespasian. Pliny the Younger (*Epist.* i. 10) speaks highly of his character. When he found his strength worn out by disease and old age, he voluntarily put a period to his life by drinking hemlock, having first, for some unknown reason, obtained permission from the emperor Hadrian.

Euphrātes (Εὐφράτης). One of the largest and best-known rivers of Asia. The Euphrates rises near Arzé, the modern Erzeroum. Its source is among mountains, which Strabo makes to be a part of the most northern branch of Taurus. At first it is a very inconsiderable stream, and flows to the west, until, encountering the mountains of Cappadocia, it turns to the south, and, after flowing a short distance, receives its southern arm, a large river coming from the east and rising in the southern declivity of the range of Mount Ararat. This southern arm of the Euphrates is the Arsanias, according to Mannert, and is the river which the 10,000 crossed in their retreat (*Anab.* iv. 5), and of which mention is made by Pliny in reference to the campaigns of Corbulo. The Euphrates, by this accession of waters, becoming a very large stream, descends rapidly in a bending course, nearly west-southwest to the vicinity of Samosata. The range of Amanus here preventing its farther progress in this direction, it turns off to the southeast, a course which it next pursues, with some variation, until it reaches Circesium. To the south of this place it enters the immense plains of Sennar, but is forced to run again to the southeast and approach the Tigris. The union of these rivers finally takes place near Coma. The river formed by their junction is called Shat-al-Arab, or River of Arabia. It has three principal mouths, besides a small outlet. The whole length of the Euphrates, including the Shat-al-Arab, is 1700 miles. Its name is the Greek form of the original appellation Phrat, which signifies fruitful or fertilizing. The Oriental name is sometimes also written Perath, as in Gen. ii. 14, 15, 18, and Josh. i. 4. The Persian form is *Ufratu;* Syriac, *Ephrat;* Arabic, *Furat.* On the condition and topography of the Euphrates, see Ainsworth, *The Euphrates Expedition* (1888).



Euphrosȳné (Εὐφροσύνη). One of the Charites or Graces. See CHARITES.

Eupŏlis (Εὔπολις). A writer of the Old Comedy, who was born at Athens about the year B.C. 446. He was therefore a contemporary of Aristophanes, who, in all probability, was born a year or two after. Eupolis is supposed to have exhibited plays for the first time in B.C. 429. In B.C. 425 he was third with his Νουμηνίαι, when Cratinus was second and Aristophanes first. In B.C. 421 he brought out his Μαρικᾶς and his Κόλακες, and his Αὐτόλυκος and Ἀστρατευτοί the following year (Schol. on Aristoph. *Nub.* 552, 592; Schol. on Aristoph. *Pac.* 803). The titles of more than twenty of his comedies have been collected. A few fragments remain. Eupolis was a bold and severe satirist on the vices of his day and city. Persius (i. 124) terms him *iratus* (cf. Hor. *Sat.* i. 4. 1 foll.). In the Μαρικᾶς he attacked Hyperbolus (Aristoph. *Nub.* 551); in the Αὐτόλυκος he ridiculed the handsome pancratiast of that name; in the Ἀστράτευτοι he lashed the useless and cowardly citizens of Athens, and denounced Melanthus as an epicure. In the Βάπται he inveighed against the effeminacy of his countrymen. In his Λακεδαίμονες he assailed Cimon, accusing him, among other charges, of an unpatriotic bias towards everything Spartan. (See Plut. *Cim.* 16, who says that this play had a great influence on the public feeling.) Aristophanes seems to have been on bad terms with Eupolis, whom he charges with having pillaged the materials for his Μαρικᾶς from the Ἱππῆς (*Nubes*, 551 foll.), and with making scurrilous jokes on his premature baldness (Schol. *Ad Nub.* 532). Eupolis appears to have been a warm admirer of Pericles as a statesman and a man, as it was reasonable that such a comedian should be, if it be true that he owed his unrestrained license of speech to the patronage of that celebrated statesman. His death was generally ascribed to the vengeance of Alcibiades, whom he had lampooned, probably in the Βάπται (Cic. *Ad Att.* vi. 1). By his orders, according to the common account, Eupolis was thrown overboard during the passage of the Athenian armament to Sicily (B.C. 415). Cicero, however, calls this story a popular error; since Eratosthenes, the Alexandrian librarian, had shown that several comedies were composed by Eupolis some time after the date assigned to this pseudo-assassination. His tomb, too, according to Pausanias, was erected on the banks of the Asopus by the Sicyonians, which makes it most probable that this was the place of his death. The fragments of Eupolis will be found in Meineke's *Fragmenta Com. Graec.* i. pp. 104–146; and ii. pp. 426–579 (Berlin, 1839–47); and are separately edited by Runkel (Leipzig, 1829). A Latin translation of them will be found in Bothe, *Frag. Com. Graec.* (Paris, 1855).

Eupompus (Εὔπομπος). A Greek painter, a native of Sicyon, who flourished about B.C. 400. He was the founder of the Sicyonian school of painting, which laid great emphasis on professional knowledge (Plin. *H. N.* xxxv. 75).

Euripĭdes (Εὐριπίδης). (1) A celebrated Athenian tragic poet, son of Mnesarchus and Clito. He was born B.C. 480, in Salamis, on the very day of the Grecian victory near that island. His mother, Clito, had been sent over to Salamis, with the other Athenian women, when Attica was given up to the invading army of Xerxes; and the name of the

poet, which is formed like a patronymic from the Euripus, the scene of the first successful resistance to the Persian navy, shows that the minds of his parents were full of the stirring events of that momentous crisis. Aristophanes repeatedly imputes meanness of extraction, by the mother's side, to Euripides (*Thesmoph.* 386, 455; *Acharn.* 478; *Equit.* 17; *Ranae*, 840). He asserts that she was an herb-seller; and, according to Aulus Gellius (xv. 20), Theophrastus confirms the comedian's insinuations. Whatever one or both of his parents might originally have been, the costly education which the young Euripides received implies a certain degree of wealth and consequence as then at least possessed by his family. The pupil of Anaxagoras, Protagoras, and Prodicus (an instructor famous for the extravagant terms which he demanded for his lessons), could not have been the son of persons at that time very mean or poor. It is most probable, therefore, that his father was a man of

Euripides. (Naples Museum.)

property, and made a *mésalliance*. In early life we are told that his father made Euripides direct his attention chiefly to gymnastic exercises, and that, in his seventeenth year, he was crowned in the Eleusinian and Thesean contests (Aul. Gell. xv. 20). Even at this early age he is said to have attempted dramatic composition. He seems also to have cultivated a natural taste for painting, and some of his pictures were long afterwards preserved at Megara. At length, quitting the gymnasium, he applied himself to philosophy and literature. Under the celebrated rhetorician Prodicus, one of the instructors of Pericles, he acquired that oratorical skill for which his dramas are so remarkably distinguished. Quintilian, in comparing Sophocles with Euripides, strongly recommends the latter to the young pleader as an excellent model. Cicero, too, was a great admirer of Euripides. From Anaxagoras, Euripides imbibed those philosophical notions which are occasionally brought forward in his works, and for which reference may be made to the monograph of Parmentier, *Euripide et Anaxagore* (Paris, 1893). Here, too, Pericles was his fellow-disciple. With Socrates, who had studied under the same master, Euripides was on terms of the closest intimacy, and from him he derived those maxims so frequently interwoven into his dramas that Socrates was suspected of largely assisting the tragedian in their composition.

Euripides began his public career as a dramatic writer in B.C. 455, the twenty-fifth year of his age. On this occasion he was the third with a play called the *Pleiades*. In B.C. 441, he won the prize. In B.C. 431, he was third with the *Medea*, the *Philoctetes*, the *Dictys*, and the *Theristae*, a satyric drama. His competitors were Euphorion and Sophocles. He was first with the *Hippolytus*, B.C. 428, the year of his master's (Anaxagoras's) death; second, B.C. 415, with the *Alexander* (or *Paris*), the *Palamedes*, the *Troades*, and the *Sisyphus*, a satyric drama. It was in this contest that Xenocles was first (Aelian. *V. H.* ii. 8). Two years after this the Athenians sustained the total loss of their armament before Syracuse. In his narration of this disaster, Plutarch gives an anecdote (*Nicias*) which, if true, bears a splendid testimony to the high reputation which Euripides then enjoyed. Those among the captives, he tells us, who could repeat any portion of that poet's works were treated with kindness, and even set at liberty. The same author also informs us that Euripides honoured the soldiers who had fallen in that siege with a funeral poem, two lines of which he has preserved. The *Andromeda* was exhibited B.C. 412; the *Orestes*, B.C. 408.

Soon after this time the poet retired into Magnesia, and from thence into Macedonia, to the court of Archelaüs. As in the case of Aeschylus, the motives for this self-exile are obscure and uncertain. We know, indeed, that Athens was by no means the most favourable residence for distinguished literary merit. Report, too, pronounced Euripides unhappy in his own family. His first wife, Melito, he divorced for adultery; and in his second, Choerilé, he was not more fortunate. To the poet's unhappiness in his matrimonial connections Aristophanes refers in his *Ranae* (1045 foll.). Envy and enmity among his fellow-citizens, infidelity and domestic vexations at home, would prove powerful inducements to the poet to accept the invitations of Archelaüs. Perhaps, too, a prosecution in which he became involved, on a charge of impiety, grounded upon a line in the Hippolytus (Aristot. *Rhet.* iii. 15), might have had some share in producing this determination to quit Athens; nor ought we to omit that, in all likelihood, his political sentiments may have exposed him to continual danger. In Macedonia he is said to have written a play in honour of Archelaüs, and to have inscribed it with his patron's name, who was so much pleased with the manners and ability of his guest as to appoint him one of his ministers. He composed in this same country also some other dramatic pieces, in one of which (the *Bacchae*) he seems to have been inspired by the wild scenery of the land to which he had come. No further particulars are recorded of Euripides, except a few apocryphal anecdotes and apophthegms. His death is said to have been, like that of Aeschylus, of an extraordinary kind. Either from chance or

malice the aged dramatist was exposed, according to the common account, to the attack of some ferocious hounds, and was by them so dreadfully mangled as to expire soon afterwards, in his seventy-fifth year. This story, however, is clearly a fabrication, for Aristophanes, in the *Ranae*, would certainly have alluded to the manner of his death had there been anything remarkable in it. He died B.C. 406 (Clinton, *Fast. Hellen.* i. 81). The Athenians entreated Archelaüs to send the body to the poet's native city for interment. The request was refused, and, with every demonstration of grief and respect, Euripides was buried at Pella. A cenotaph, however, was erected to his memory at Athens.

We have some cutting sayings of Sophocles concerning Euripides, although the former was so void of all the jealousy of an artist that he mourned over the death of his rival; and, in a piece which he shortly after brought upon the stage, did not allow his actors the ornament of a garland. The jeering attacks of Aristophanes are well known, but have not always been properly estimated and understood. Aristotle, too, brings forward many important causes for blame; and when he calls Euripides "the most tragic of poets" (*Poet.* xiii. 10), he by no means ascribes to him the greatest perfection in the tragic art generally; but he alludes, by this phrase, to the effect which is produced by his dramatic catastrophes. In Euripides we no longer find the essence of ancient tragedy pure and unmixed; its characteristic features are already partly effaced. These consisted principally in the idea of destiny which reigns in them, in ideal representation, and the importance of the chorus. The idea of destiny had, indeed, come down to him from his predecessors as his inheritance, and a belief in it is inculcated by him, according to the custom of the tragedians; but still, in Euripides, destiny is seldom considered as the invisible spirit of all poetry, the fundamental thought of the tragic world. On the other hand, he derived it from the regions of infinity, and, in his writings, inevitable necessity often degenerates into the caprice of chance. Hence he can no longer direct it to its proper aim—namely, that of elevating, by its contrast, the moral free-will of man. Very few of his dramas depend on a constant combat against the dictates of destiny, or an equally heroic subjection to them. His men, in general, suffer, because they must, and not because they are willing. The contrasted subordination of idea, loftiness of character and passion, which in Sophocles, as well as in the graphic art of the Greeks, we find observed in this order, are in him exactly reversed. In his plays passion is the most powerful; his secondary care is for character; and if these endeavours leave him sufficient room, he seeks now and then to bring in greatness and dignity, but more frequently amiability. Euripides has, according to the doctrine of Aristotle (*Poet.* xv. 7, xxvi. 31), frequently represented his personages as bad without any necessity—for example, Menelaüs in the *Orestes*. More especially, it is by no means his object to represent the race of heroes as pre-eminent above the present race by their mighty stature, but he rather takes pains to fill up the chasm between his contemporaries and the olden time, and reveal the gods and heroes of the other side in their undress. This is what Sophocles meant when he said that he himself represented men as they should be, Euripides as they were. It seems to be a design of Euripides always to remind his spectators, "See, these beings were men; they had just such weaknesses, and acted from exactly the same motives as yourselves, and as the meanest among you does." In other words, Euripides is the first of the realists among the Greeks.

In his dramas the chorus is generally an unessential ornament, its songs are often altogether episodical, without reference to the action. The ancient comic writers enjoyed the privilege of sometimes making the chorus address the audience in their own name, this being called a Parabasis. Although it by no means belongs to tragedy, yet Euripides, according to the testimony of Iulius Pollux, often employed it, and so far forgot himself in it that in the *Danaïdes* he made the chorus, consisting of women, use grammatical forms which belonged to the masculine gender alone. In the music of the accompaniments he adopted all the innovations of which Timotheus (q. v.) was the author, and selected those measures which are most suitable to the sensuous nature of his poetry. He acted in a similar way as regarded prosody; the construction of his verses is rather florid, and approaches irregularity. He strives after effect in a degree which can not be conceded even to a dramatic poet. Thus, for example, he seldom lets any opportunity escape of having his personages seized with sudden and groundless terror; his old men always complain of the infirmities of old age, and are particularly given to mount, with tottering knees, the ascent from the orchestra to the stage, which frequently represented the declivity of a mountain, while they lament their wretchedness. His object throughout is emotion, for the sake of which he not only offends against ancient decorum, but sacrifices the symmetry of his plays. He likes to reduce his heroes to a state of beggary; makes them suffer hunger and want; and brings them on the stage with all the external signs of indigence, covered with rags, as Aristophanes so humourously throws in his teeth in the *Acharnians* (410–448).

Euripides, as already stated, had studied philosophy, and prided himself upon his familiarity with philosophical doctrine. Hence, as contrasted with his two dramatic predecessors, Aeschylus and Sophocles, his rationalistic method of treatment seemed to his audiences startling and almost impious. His allegorical interpretations must often have had a flavour of sacrilege about them, and the whole spirit and temper of his plays were an embodiment of the "higher criticism" of the day. The Athenians were prone to identify the sentiments of his characters with those of the author himself. It is related of him that he made Bellerophon come on the stage with a panegyric on riches, in which he preferred them before every domestic joy; and said, at last, "If Aphrodité (who had the epithet of 'golden') shone like gold, she would indeed deserve the love of men" (Sen. *Epist.* 115). The audience, enraged at this, raised a great tumult, and were proceeding to stone the orator as well as the poet. Euripides, on this, rushed forward and exclaimed, "Wait patiently till the end; he will fare accordingly." Thus, also, he is said to have excused himself against the accusation that his Ixion spoke too abominably and blasphemously, by replying that, in return, he had not concluded the piece without making him revolve on the wheel. He has also great command of that soph-

istry of the passions which gives things only one appearance. The following verse (*Hippol.* 608) is notorious for its expression of what casuists call mental reservation:

"My tongue took an oath, but my mind is unsworn."

In the connection in which this verse is spoken, it may indeed be justified, as far as regards the reason for which Aristophanes ridicules it in so many ways; but still the formula is pernicious on account of the turn which may be given it. Another sentiment of Euripides (*Phoeniss.* 534), "It is worth while committing injustice for the sake of empire; in other things it is proper to be just," was continually in the mouth of Caesar, in order to make a wrong application of it (Suet. *Iul.* 30). Seductive enticements to the enjoyment of sensual love were another article of accusation against Euripides among the ancients. Thus, for example, Hecuba, in order to incite Agamemnon to punish Polymnestor, reminds him of the joys Cassandra had afforded him; who, having been taken in war, was his slave, according to the law of the heroic ages: she is willing to purchase revenge for a murdered son by consenting to and ratifying the degradation of a daughter who is still alive. This poet was the first to take for the principal subject of a drama the wild passion of a Medea or the unnatural love of a Phaedra, as, otherwise, it may be easily understood, from the manners of the ancients, why love, which among them was far less ennobled by delicate feelings, played merely a subordinate part in their earlier tragedies. Notwithstanding the importance imparted to female characters, he brings out a multitude of sayings concerning the weaknesses of the female sex and the superiority of men, as well as a great deal drawn from his own experience in domestic relations. A cutting saying, as well as an epigram, of Sophocles have been handed down to us by Athenaeus, in which he explains the pretended hatred of Euripides for women by supposing that he had the opportunity of learning their frailty through his own unhallowed desires.

That independent freedom in the method of treating the story, which was one of the privileges of the tragic art, frequently, in Euripides, became caprice. It is well known that the fables of Hyginus, which differ so much from the relations of other writers, are partly extracted from his plays. As he often overturned what had hitherto been well known and generally received, he was obliged to use prologues, in which he announces the situation of affairs according to his acceptation, and makes known the course of events. (Compare the amusing scene in Aristophanes, *Ranae*, 1177 foll., and Porson's explanation of the employment of such prologues by Euripides, *Praelect. in Eurip.* p. 8 foll.). These prologues make the beginnings of the plays of Euripides monotonous, and produce the appearance of deficiency of art.

The style of Euripides is, on the whole, not sufficiently compressed, and it has neither the dignity and energy of Aeschylus nor the chaste grace of Sophocles. In his expressions he frequently aims at the extraordinary and strange, and, on the other hand, loses himself in commonplace. For these reasons, as well as on account of his almost ludicrous delineation of many characteristic peculiarities (such as the clumsy deportment of Pentheus in a female garb, when befooled by Bacchus [*Bacchae*, 782 foll.], or the greediness of Heracles [*Alcestis*, 764 foll.], and his boisterous demands on the hospitality of Admetus), Euripides was a forerunner of the New Comedy. Menander, in fact, expressed admiration for him, and declared himself to be his scholar; and there is a fragment of Philemon, full of extravagant admiration of him. "If the dead," he says, or makes one of his personages say, "really possessed sensation, as some suppose, I would hang myself in order to see Euripides."

Of the 120 dramas which Euripides is said to have composed, we have remaining in their complete form only eighteen tragedies and one satyric piece. The following are the titles and subjects: (1) Ἑκάβη, *Hecuba*. The sacrifice of Polyxena, whom the Greeks immolate to the shade of Achilles, and the vengeance which Hecuba, doubly unfortunate in having been reduced to captivity and deprived of her children, takes upon Polymnestor, the murderer of her son Polydorus, form the subject of this tragedy. The scene is laid in the Grecian camp in the Thracian Chersonesus. The shade of Polydorus, whose body remains without the rites of sepulture, has the prologue assigned it. Ennius and L. Attius, and in modern times Erasmus, have translated this play into Latin verse. (2) Ὀρέστης, *Orestes*. The scene of this play is laid at Argos, the seventh day after the murder of Clytaemnestra. It is on this day that the people, in full assembly, are to sit in judgment upon Orestes and Electra. The only hope of the accused is in Menelaüs, who has just arrived; but this chief, who secretly aims at the succession, stirs up the people in private to pronounce sentence of condemnation against the parricides. The sentence is accordingly pronounced, but the execution of it is left to the culprits themselves. They meditate taking vengeance by slaying Helen; but this princess is saved by the intervention of Apollo, who brings about a double marriage by uniting Orestes with Hermioné, the daughter of Helen, and Electra with Pylades. Some commentators think that they recognize the portrait of Socrates in that of the simple and virtuous citizen who, in the assembly of the people, undertakes the defence of Orestes. This play is ascribed by some to Euripides the Younger, nephew of the former. (3) Φοινίσσαι, *Phoenissae*. The subject of this piece is the death of Eteocles and Polynices. . The chorus is composed of young Phœnician women, sent, according to the custom established by Agenor, to the city of Thebes, in order to be consecrated to the service of the temple at Delphi. The prologue is assigned to Iocasta. The subject of the *Phoenissae* is that also of the *Thebaïs* of Seneca. Statius has likewise imitated it in his epic poem. (4) Μήδεια, *Medea*. The vengeance taken by Medea on the ungrateful Iason, to whom she has sacrificed all, and who, on his arrival at Corinth, abandons her for a royal bride, forms the subject of this tragedy. What constitutes the principal charm of the play is the simplicity and clearness of the action, and the force and natural cast of the characters. The exposition of the plot is made in a monologue by the nurse: the chorus is composed of Corinthian women. It is asserted that Euripides gave to the world two editions of this tragedy, and that, in the first, the children of Medea were put to death by the Corinthians, while in the second, which has come down to us, it is their mother herself who slays them. According to this hypothesis, the

1378th verse and those immediately following, in which Medea says that she will impose on Corinth, contemptuously styled by her the land of Sisyphus, an expiatory festival for this crime, have been retained by mistake in the revision in which they should have disappeared. Medea has no expiation to demand of the Corinthians, if they are not guilty of the murder of her sons. Aelian informs us (*V. H.* v. 21) that the Corinthians prevailed upon Euripides to alter the tradition in question. According to others, they purchased this compliance for the sum of five talents. (5) Ἱππόλυτος στεφανοφόρος, *Hippolytus Coronifer*, "Hippolytus Crowned." The subject of this tragedy is the same with that which Racine has taken for the basis of his *Phèdre*, a subject eminently tragical. It presents to our view a weak woman, the victim of the resentment of Aphrodité, who has inspired her with a criminal passion. An object of horror to him whom she loves, and not daring to reveal her own shame, she dies, after having compelled Theseus, by her misrepresentations, to become the destroyer of his own son. The title of this tragedy is probably derived from the crown which Hippolytus offers to Artemis. Euripides at first gave it the name of Ἱππόλυτος καλυπτόμενος. He afterwards retouched it, and, changing the catastrophe and the title, reproduced it in the year that Pericles died. It gained the prize over the pieces of Iophon and Ion, which had competed with it in the contest. It is sometimes cited under the title of the *Phaedra*, and the celebrated chef-d'œuvre of Racine is an imitation of it, as is also the tragedy of Seneca. (6) Ἄλκηστις, *Alcestis*. The subject of this tragedy is moral and affecting. It is a wife who dies for the sake of prolonging her husband's existence. Its object is to show that conjugal affection and an observance of the rites of hospitality are not suffered to go without their reward. Heracles, whom Admetus had kindly received while unfortunate, having learned that Alcestis, the wife of the monarch, had consummated her mournful sacrifice, seeks her in the shades, and restores her to her husband. The play, by reason of its happy ending, is hardly to be considered a tragedy, but more of a tragi-comedy. The story of Alcestis has inspired a number of fine poems in English literature, notably *Balaustion's Adventure*, by Robert Browning. Others who have treated the same theme are William Morris, W. S. Landor, Palgrave, Mrs. Hemans, and W. M. W. Call. (7) Ἀνδρομάχη, *Andromaché*. The death of the son of Achilles, whom Orestes slays, after having carried off from him Hermioné, forms the subject of the piece. The scene is laid in Thetidium, a city of Thessaly, near Pharsalus. Some have asserted that the aim of Euripides in writing this tragedy was to render odious the law of the Athenians which permitted bigamy. (8) Ἱκέτιδες, *Supplices*, "The Suppliants." The scene of this tragedy is laid in front of the temple of Demeter at Eleusis, whither the Argive women, whose husbands have perished before Thebes, have followed their king Adrastus, in the hope of persuading Theseus to take up arms in their behalf, and obtain the rites of sepulture for their dead, whose bodies were withheld by the Thebans. Theseus yields to their request and promises his assistance. In exhibiting this play in the fourteenth year of the Peloponnesian War, Euripides wished, it is said, to detach the Argives from the Spartan cause. His attempt, however, failed, and the treaty was signed by which Mantinea was sacrificed to the ambition of Lacedaemon. (9) Ἰφιγένεια ἡ ἐν Αὐλίδι, *Iphigenia in Aulide*, "Iphigenia at Aulis." The subject of this tragedy is the intended sacrifice of Iphigenia, and her rescue by Artemis, who substitutes another victim. It is the only one of the plays of Euripides that has no prologue, for it is well known that the *Rhesus*, which also lacks it, had one formerly. (10) Ἰφιγένεια ἡ ἐν Ταύροις, *Iphigenia in Tauris*, "Iphigenia among the Tauri." The daughter of Agamemnon, rescued by Artemis from the knife of the sacrificer, and transported to Tauris, there serves the goddess as a priestess in her temple. Orestes has been cast on the inhospitable shores of this country, along with his friend Pylades, and by the laws of the Tauri they must be sacrificed to Artemis. Recognized by his sister at the fatal moment, Orestes conducts her back to their common country. A monologue by Iphigenia occupies the place of a prologue and exposition. The scene where Iphigenia and her brother became known to each other is of a deep and touching interest, and has been imitated by Guimond de la Touche and Goethe. (11) Τρῳάδες, *Troades*, "The Trojan women." The action of this piece is prior to that of the *Hecuba*. The scene is laid in the Grecian camp, under the walls of Troy, which has fallen into the hands of the foe. A body of female captives have been distributed by lot among the victors. Agamemnon has reserved Cassandra for himself; Polyxena has been immolated to the manes of Achilles; Andromaché has fallen to Neoptolemus, Hecuba to Odysseus. The object of the poet is to show us in Hecuba a mother bowed down by misfortune. The Greeks destroy Astyanax, and his mangled body is brought in to the mother of Hector, his own parent being by this time carried away in the train of Neoptolemus. Ilium is then given as a prey to the flames. This succession of horrors passes in mournful review before the eyes of the spectator; yet there is no unity of action to constitute a subject for the piece, and consequently the play has no dénouement. Poseidon appears in the prologue. Seneca and M. de Chateaubrun have imitated this tragedy. (12) Βάκχαι, *Bacchae*, "The female Bacchanalians," sometimes quoted as the *Pentheus*, for Euripides seldom names his plays after the chorus. The arrival of Bacchus at Thebes and the death of Pentheus, who is torn in pieces by his mother and sister form the subject of this drama, in which Bacchus opens the scene and makes himself known to the spectators. The *Bacchae* is regarded by Jebb as "in its own kind, by far the most splendid work of Euripides that we possess." It is a succession of rich paintings, of tragic situations, of brilliant verses, unique among existing Greek plays in picturesque splendour. The spectacle which this tragedy presented must have been at once imposing and well calculated to keep alive curiosity. Some have held that the play is a recantation by the poet of his former irreligious sentiments; but on this see Tyrrell in the introduction to his edition of the *Bacchae* (1892). It is related that the *Bacchae* was performed before Orodes and his court, when the actor sustaining the part of Agavé gave a hideous reality to the action by holding up the bloody head of the Roman general Crassus, just slain in battle by the Parthian warriors of the king (Mommsen, *Hist. of Rome*, iv. p. 436). (13) Ἡρακλεῖδαι, *Heraclidae*. The descendants of Heracles, persecuted by Eu-

rystheus, flee for refuge to Athens, and implore the protection of that city. The Athenians lend aid, and Eurystheus becomes the victim of the vengeance he was about bringing upon them. Iolaüs, an old companion of Heracles, explains the subject to the spectators. The poet manages to impart an air of great interest to the piece. (14) Ἑλένη, *Helena.* The scene is laid in Egypt, where Menelaüs, after the destruction of Troy, finds Helen, who had been detained there by Proteus, king of that country, when Paris wished to convey her to Ilium. The action passes at the isle of Pharos, where Theoclymenus, the son and successor of Proteus, keeps Helen in custody with the view of espousing her. She employs a stratagem in order to escape from his power. The dénouement of this piece resembles that of the *Iphigenia in Tauris.* (15) Ἴων, *Ion.* Ion, son of Apollo and Creüsa, daughter of Erechtheus, king of Athens, has been brought up among the priests at Delphi. The design of Apollo is to make him pass for the son of Xuthus, who has married Creüsa. The interest of the play consists in the double danger which Creüsa and Ion run, the former of being slain by Ion and the latter of perishing by the poison prepared for him by a mother who is ignorant of his being her son. The play, however, is somewhat complicated, and has need of a long exposition, which is assigned to Hermes. The scene is laid at the entrance of Apollo's temple in Delphi, a place expressly chosen in order to give to the spectacle an air of pomp and solemnity. A religious tone, full of gravity and softness, pervades the whole piece. There is much resemblance between this tragedy and the *Athalie* of Racine. (16) Ἡρακλῆς μαινόμενος, *Hercules furens.* After having killed, in his frenzy, his wife and children, Heracles proceeds to submit himself to certain expiatory ceremonies, and to seek repose at Athens. Amphitryon appears in the prologue: the scene is laid at Thebes. (17) Ἠλέκτρα, *Electra.* The subject of this play has been treated also by Aeschylus and Sophocles, but by each in his peculiar way. Euripides transfers the scene from the palace of Aegisthus to the country near Argos: the exposition of the play is made by a cultivator, to whom Electra has been compelled to give her hand, but who has taken no advantage of this, but has respected in her the daughter of a royal line. (18) Ῥῆσος, *Rhesus.* A subject derived from the tenth book of the *Iliad.* Some able critics have tried to prove that this piece was never written by Euripides. — Φαέθων, *Phaëthon.* Of this play we have about eighty verses remaining. Clymené, the mother of Phaëthon, is the wife of Merops, king of the Ethiopians, and Phaëthon passes for the son of this prince. The young man, having conceived some doubts respecting his origin, addresses himself to the Sun. The catastrophe, which cost him his life, is well known. In the tragedy of Euripides, the body of her son is brought to Clymené, at the very moment when Merops is occupied with the task of procuring for him a bride.—Δανάη, *Danaë.* Of this play we have the commencement alone, unless the sixty-five verses, which commonly pass for a part of the prologue, are to be considered as the production of some imitator,

A production deserving especial mention is the satyric drama entitled *Cyclops* (Κύκλωψ). The story is drawn from the *Odyssey.* The subject is Odysseus depriving Polyphemus of his eye, after having intoxicated him with wine. In order to connect with the story a chorus of satyrs, the poet supposes that Silenus, and his sons, the satyrs, in seeking over every sea for Bacchus, whom pirates have carried away, have been shipwrecked on the coast of Sicily, where they have fallen into the hands of Polyphemus. The Cyclops has made slaves of them, and has compelled them to tend his sheep. Odysseus, having been cast on the same coast, and having been, in like manner, made captive by Polyphemus, finds in these satyrs a willing band of accomplices. They league with him against their master, but their excessive cowardice renders them very useless auxiliaries. They profit, however, by his victory, and embark with him. See CYCLOPS; SATYRIC DRAMA.

Of the numerous incomplete remains of Euripides that have reached us, some notice must be taken. In 1890, papyri discovered by Mr. Petrie at Tel Gurob in Egypt were found to contain fragments of a lost play of Euripides—the *Antiopé.* These fragments are reproduced and edited by Mahaffy in *The Flinders Petrie Papyri* (Dublin, 1891).

The ancient writers cite also a poem of Euripides, Ἐπικήδειον, "Funeral Hymn," on the death of Nicias and Demosthenes, as well as of the other Athenians who perished in the disastrous expedition against Syracuse. We possess also two epigrams of Euripides, each consisting of four verses, one of which has been preserved in the Anthology and the other in Athenaeus. There have, besides, come down to us five letters, ascribed to Euripides, and written with admirable purity and simplicity of style. There are also many fragments from the lost plays of Euripides scattered among the writings of antiquity. Of these fragments Nauck collected 1117, some, however, being of doubtful authenticity. The best known of the lost plays are the *Andromeda, Bellerophon, Cresphontes, Erechtheus, Oedipus,* and *Telephus.*

The popularity of Euripides was very great in antiquity, as in modern times, as is shown by the number of ancient scholars who wrote commentaries on his works — among them being Dicaearchus, Callimachus, Aristophanes of Byzantium, Callistratus, and especially Didymus. An inscription at Tegea shows that his plays were represented as late as the second century B.C., winning victories at Athens, Delphi, and Dodona (*Bulletin de Correspondance Hellénique,* January-April, 1893). At Rome, Euripides was translated and adapted by Ennius and by Pacuvius. In the fourth century A.D. a curious cento, the Χριστὸς Πάσχων (*Christus Patiens*), of 2610 verses, was made from the plays of Euripides. (See CENTO.) Later, Dante, who mentions neither Aeschylus nor Sophocles, praises Euripides; and from the sixteenth century to the present time he has been a popular favourite, giving inspiration to many imitators in French, English, and German.

BIBLIOGRAPHY. — Few classical authors are so fully represented by MSS. as is Euripides. Nearly every European library of importance and of any age contains at least one, though no single MS. contains all the plays. The three plays oftenest found are the *Hecuba, Orestes,* and *Phoenissae,* owing to the fact that these three were much read in the schools under the Eastern Empire. The nine plays, *Hecuba, Orestes, Phoenissae, Hippolytus, Medea, Alcestis, Andromaché, Troades,* and *Rhesus,* are

known in two "families"—one represented by the Codices Vaticanus, Hauniensis, Parisinus, and two Marciani Veneti, and the second (an inferior family) by later MSS. of the thirteenth and fourteenth centuries. The MSS. of the first family mentioned are the oldest that we have, but are not earlier than the twelfth century. The great majority of the copies are very poor. The only MSS. containing all the nine plays mentioned above are the Codex Vaticanus and the Codex Hauniensis; but of the former some pages are missing, while of the latter the text is in places so corrupt as to be of little use. The remaining ten plays are found in only two MSS.—the Palatinus (in the Vatican) and Florentinus II.—both of the fourteenth century. Three plays (the *Helena*, *Hercules Furens*, and *Electra*) are found only in the Codex Florentinus II. A palimpsest of the fifth or sixth century contains a part of the *Phaëthon*, and of this play an interesting "reconstruction" made by Goethe will be found in vol. xxxiii. pp. 22–43 of the 1840 edition of his works. The extant scholia on Euripides are from the nine select plays only. The best complete edition of the scholia is that of W. Dindorf, in four vols. (1863).

The *editio princeps* of Euripides is that of J. Lascaris (Florence, 1496), but contains only the *Medea*, *Hippolytus*, *Alcestis*, and *Andromaché*. The Aldine edition by Musurus (Venice, 1503) contains all the plays except the *Electra*, which was first published by P. Victorius (1545). The first edition of any critical value is that by Valckenaer in his *Phoenissae* (1755), and in his *Diatribe in Euripidis Perditorum Dramatum Reliquias* (1767), attacking the authenticity of the *Rhesus*. The best criticism of the text has been done by Porson (1797), Elmsley (1813), G. Hermann (1838), Badham (1851), and Nauck (1885). Recent complete editions are those of W. Dindorf (in his *Poetae Scenici*, 5th ed. 1870), Kirchhoff (1867), and Paley (2d ed. 1872), with commentary. Of separate plays, the following editions deserve special mention: of the *Bacchae* by R. Y. Tyrrell (1892), by Paley (1877), and by Sandys (1880); of the *Alcestis* by Earle (1894), Jerram, (1884); of the *Hecuba* by Paley (1877); of the *Hercules Furens* by Hutchinson and Gray (1878), and by Paley (1883); of the *Troades* by Tyrrell (1882); of the *Hippolytus* by Arnold after Witzschel (1853), Mahaffy and Bury (1881), and by Berthold (1880); of the *Medea* by Verrall (1881); of the *Orestes* by Paley (1879); of the *Andromaché* by Pflugk and Klotz, with Latin notes (1858); of the *Phoenissae* by Paley (1879); of the *Ion* by Badham (1879), Verrall (1890); of the *Iphigenia in Aulide* by Pflugk and Klotz (1860); of the *Iphigenia in Tauris* by Jerram (1884) and England (1886); of the *Heraclidae* by Beck (1881); and of the *Helena* by Jerram (1881). Prose translation by Coleridge (London, 1885). See Mahaffy, *Introduction to the Study of Euripides* (London, 1879).

(2) A nephew of the preceding (Suid. s. v.; Böckh, *De Trag. Graec.* xiv. and xviii.), commonly styled Euripides Junior. He was a dramatic poet, like his uncle, and exhibited, besides his own compositions, several plays of the latter, then dead; one of these gained the prize. Böckh and others suspect that he reproduced the *Iphigenia in Aulis*, and perhaps the *Palamedes*. To this Euripides is ascribed, by Suidas, an edition of Homer.

Eurīpus (Εὔριπος). (1) Any part of the sea where the ebb and flow of the tide were remarkably violent, is the name especially of the narrow strait which separates Euboea from Boeotia. At Chalcis there was a bridge over the Euripus uniting Euboea with the mainland. (2) See AMPHITHEATRUM.

Eurōpa (Εὐρώπη). A daughter of Agenor (called by some Phoenix), king of Phœnicia. Zeus, becoming enamoured of her, according to the old legend, changed himself into a beautiful white bull, and approached her, "breathing saffron from his mouth," as she was gathering flowers with her companions in a mead near the seashore. Europa, delighted with the tameness and beauty of the animal, caressed him, crowned him with flowers, and at length ventured to mount on his back. The disguised god immediately made off with his burden, plunged into the sea, and swam with Europa to the island of Crete, landing not far from Gortyna. Here he resumed his own form, and beneath a plane-tree soothed and caressed the trembling maiden. The offspring of their union were Minos, Rhadamanthus, and Sarpedon. Asterius, king of Crete, subsequently married Europa, and reared her sons (Apollod. iii. 1; Hes. and Bacchyl. *ap. Schol. ad Il.* xii. 292; Ovid, *Met.* ii. 833 foll.; *Fast.* v. 605).

Eurōpa (Εὐρώπη). One of the three main divisions of the ancient world. With the northern parts of it the ancients were very slightly acquainted — viz., what are now Prussia, Sweden, Denmark, Norway, and Russia. They applied to this quarter the general name of Scandinavia, and thought it consisted of a number of islands. From the Portuguese Cape to the Ural Mountains, the length of modern Europe may be reckoned at about 3300 miles, and from Cape Nord to Cape Matapan, about 2350.

The etymologies given for the name Europa are numerous: (1) from the maiden Europa (q. v.); (2) from Eurus, the southeast wind; (3) from εὐρύς and ὤψ, applied to the continent as distinguished from the islands, and hence = "Broad Land," an explanation favoured by Hermann; and (4) from the Semitic *erebh*, "darkness," i. e. "the land of the setting sun," or "land of the West."

As regards the progress of geographical discovery, it may be remarked that the earliest notices of Europe are in the writings of the Greeks, who inhabited the southeastern corner of the continent. From this country the geographical knowledge of Europe extended by degrees to the west and north. Homer was acquainted with the countries round the Aegean Sea. He had also a fairly accurate general notion respecting those which lie on the south coast of the Black Sea; but what he says about the countries west of Greece, on the shores of the Mediterranean, is a mixture of fable and truth, in which the fabulous part prevails. It would seem that, in his age, these seas were not yet visited by his countrymen, and that he obtained his knowledge from the Phœnicians, who had probably for some time sailed to these regions, but who, according to the common policy of trading nations, spread abroad false accounts of these unknown countries, in order to deter other nations from following their track, and participating in the advantages of this distant commerce. It is probable, also, that the Phœnicians long excluded the Greeks from the navigation of the Mediterranean; for when the latter began to form settlements beyond their native country, they first

occupied the shores of the Aegean, and afterwards those of the Black Sea. As the European shores of this last-mentioned sea were not very well adapted for agriculture, their early settlements were mostly on the Asiatic coasts, and, consequently, little addition was made by these colonies to the geographical knowledge of Europe. But the navigation of the Phœnicians was checked in the middle of the sixth century before Christ, apparently because of their subjugation by the Persians. About this time, also, the Greeks began to form settlements in the southern parts of Italy and on the island of Sicily, and to navigate the Mediterranean Sea to its full extent. Accordingly, we find that in the time of Herodotus (B.C. 450) not only the countries on each side of the Mediterranean, and the northern shores of the Black Sea, were known to the Greeks, but that, following the track of the Phœnicians, they ventured to pass the Pillars of Hercules, and to sail as far as the Cassiterides, or Tin Islands, by which name the Scilly Isles and a part of Cornwall must be understood. It is even reported that some of their navigators sailed through the English Channel and entered the North Sea, and perhaps even the Baltic. (See Antichan, *Les Grands Voyages de Découvertes des Anciens* [Paris, 1891]). Thus a considerable part of the coasts of Europe was discovered, while the interior remained almost unknown. When the Romans began their conquests, this deficiency was partly supplied. The conquest of Italy was followed by that of Spain and the southern parts of Gaul, and, not long afterwards, Sicily, Greece, and Macedonia were added. Caesar conquered Gaul and the countries west of the Rhine, together with the districts lying between the different arms by which that river enters the sea. His two expeditions into Britain made known also, in some measure, the nature of that island and the character of its inhabitants. (See BRITANNIA.) Thus, in the course of little more than two hundred years, the interior of all those countries was explored, the shores of which had been previously known. In the meantime, nothing was added to the knowledge of the coasts, the Greeks having lost their spirit of discovery by sea, and the Romans not being inclined to naval enterprise. After the establishment of imperial power at Rome, the conquests of the Romans went on at a much slower rate, and the boundaries of the Empire soon became stationary. This circumstance must be attributed chiefly to the nature of the countries which were contiguous to those boundaries. The regions north of the Danube are mostly plains, and at that time were inhabited only by wandering tribes, who could not be subjected to a regular government. Such, at least, are the countries extending between the Carpathian Mountains and the Black Sea, and therefore the conquest of Dacia by Trajan was of short continuance and speedily abandoned. The countries between the Alps and the Danube were soon added to the Empire; but as the nations who inhabited the tracts north of that river had not given up a nomadic life, they were enabled to elude the Roman yoke. (See GERMANIA.) The most important addition to the Empire and to geographical knowledge was the conquest of Britain during the first century after Christ, to which, in the following century, the south of Scotland was added. Nothing seems to have been gained afterwards. The geography of Ptolemy contains a considerable number of names of nations, places, and rivers in those countries which were not subjected to the Romans. Probably they were obtained from natives and from Roman traders who had ventured to penetrate beyond the boundaries of the Empire. But these brief notices are very vague, and in most cases it is very difficult to determine what places and persons are indicated. See GEOGRAPHIA.

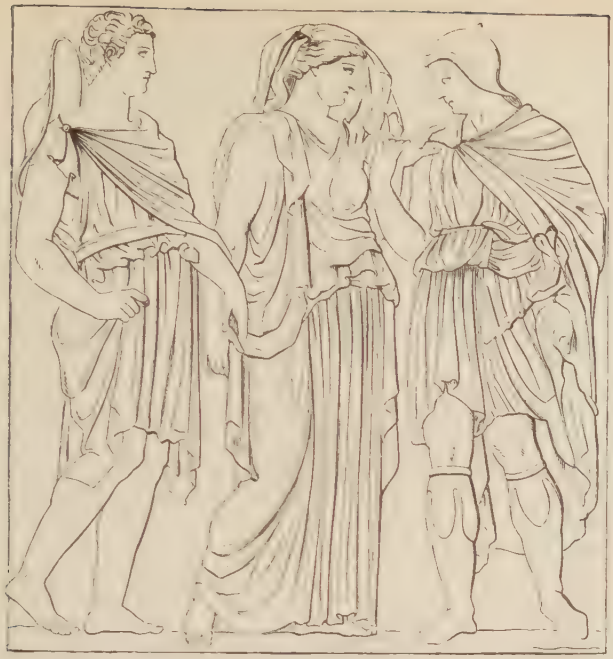
Eurōpus (Εὐρωπός). See RHAGAE; TITARESIUS.

Eurōtas (Εὐρώτας). The chief river in Laconia, on which Sparta stood, rises in Mount Boreum, in Arcadia, and flows into the Laconian Gulf (Thuc. ii. 139).

Eurus (Εὖρος). The east wind, properly the east-southeast (Hom. *Il.* ii. 145).

Euryălus (Εὐρύαλος). (1) One of the Argonauts and also of the Epigoni (q. v.). (2) A Trojan, son of Opheltius, and one of the followers of Aeneas. Vergil has immortalized the inseparable friendship between him and Nisus. See NISUS.

Eurybătes (Εὐρυβάτης). The herald of Odysseus, whom he followed to Troy (Hom. *Il.* i. 319, etc.).



Eurybătus (Εὐρύβατος). An Ephesian, whom Croesus sent with a large sum of money to the Peloponnesus to hire mercenaries for him in his war with Cyrus. He, however, deserted to Cyrus, and betrayed the whole matter to him. In consequence of this treachery his name passed into a proverb among the Greeks (Aesch. *in Ctes.* 43).

Eurybia (Εὐρυβία). Daughter of Pontus and Gaea, and mother of Astraeus, Pallas, and Perses (Hesiod. *Theog.* 375).

Eurybiădes (Εὐρυβιάδης). A Spartan, commander of the combined Grecian fleet at the battles of Artemisium and Salamis. Although Sparta sent only ten ships, he was appointed to this office, by the desire of the allies, who refused to obey an Athenian (Herod. viii. 3). See THEMISTOCLES.

Euryclēa (Εὐρύκλεια). The daughter of Ops, and purchased by Laërtes of Ithaca. She reared Telemachus, and when Odysseus returned home, recognized him in his beggar's disguise by a scar (*Odyss.* xix. 385, etc.). See ODYSSEUS.

Eurydĭcé (Εὐρυδίκη). (1) The wife of Orpheus, who, while fleeing before Aristaeus, was bitten by a serpent in the grass and died of the wound. Her disconsolate husband determined to descend to the lower world, to endeavour to procure her restoration to life. Pluto and Persephoné listened to his prayer; and Eurydicé was allowed to return, on the express condition that Orpheus should not look back upon her till they had arrived in the regions of day. Fearing that she might not be following him, the anxious husband looked back and thereby lost her. (See ORPHEUS.) (2) The wife of Amyntas, king of Macedonia (Justin, vii. 4, 5). She had, by her husband Alexander, Perdiccas and Philip, and one daughter called Euryoné, who was married to Ptolemy Alorites. A criminal infatuation for her daughter's husband, to whom she offered her hand and the kingdom, made her conspire against Amyntas, who must have fallen a victim to her infidelity, had not Euryoné discovered it. Amyntas forgave her. Alexander ascended the throne after his father's death, and perished by the ambition

Hermes, Eurydicé, and Orpheus. (Villa Albani.)

of his mother. Perdiccas, who succeeded him, shared his fate; but Philip, who was the next in succession, secured himself against all attempts from his mother, and ascended the throne with peace and universal satisfaction. Eurydicé fled to Iphicrates, the Athenian general, for protection. The manner of her death is unknown. (3) A daughter of Antipater, and the wife of Ptolemy I. of Egypt, by whom she had several children. After the death of Alexander the Great she proceeded to Alexandria for the purpose of rejoining her husband, and brought with her Berenicé, her niece, who proved the source of all her misfortunes; for Berenicé inspired Ptolemy with so strong a passion that he took her as his second wife, and allowed himself to be controlled by her influence (Plut. *Pyrr.* 4). Eurydicé and her children retired to the court of Seleucus, king of Syria. One of her daughters subsequently married Agathocles, son of Lysimachus; and another, Demetrius Poliorcetes. Ptolemy Ceraunus, the eldest of her sons, seized upon the kingdom of Macedonia. Eurydicé followed him to that country, and contributed to conciliate the minds of the Macedonians towards him, through the respect which they entertained for the memory of her father Antipater. Ptolemy Ceraunus having been slain, B.C. 280, in a battle against the Gauls, Macedonia was delivered up to the ravages of these barbarians, and Eurydicé fled for protection to the city of Cassandrea. In order to attach the inhabitants more strongly to her interests, she gave them their freedom; and they, through gratitude, established a festival called after her, Eurydicea. The rest of her history is not known. (4) A daughter of Amyntas and Cynané. Her previous name was Adea, afterwards changed to Eurydicé. She married Arrhidaeus, the half-brother of Alexander, and for some time, through the aid of Cassander, defended Macedonia against Polysperchon and Olympias. Having been forsaken, at length, by her own troops, she fell into the hands of Olympias, together with her husband. Both were put to death by that queen (Justin, xiv. 5).

Eurylŏchus (Εὐρύλοχος). A companion of Odysseus, and the only one that escaped from the house of Circé when his friends were metamorphosed into swine (Hom. *Od.* x. 203, xi. 23, etc.).

Euryměd̆on (Εὐρυμέδων). Son of Thucles, an Athenian general in the Peloponnesian War (Thuc. iii. 80, 81, 85).

Euryměd̆on (Εὐρυμέδων). A small river in Pamphylia, celebrated for the victory which Cimon gained over the Persians on its banks (B.C. 469).

Euryměnae (Εὐρυμεναί). A town of Magnesia in Thessaly, east of Ossa (Livy, xxxix. 25).

Eurў̆mus (Εὐρυμός). Father of the seer Telemus, who is hence called Eurymides (*Odyss.* ix. 509).

Eurynŏmé (Εὐρυνόμη). Daughter of Oceanus, and mother of Leucothoë (Apollod. i. 2. 2). By Zeus she became the mother of the Charites or of Aropus (Hes. *Theog.* 908). Eurynomé is also a surname of Artemis at Phigalea in Arcadia, where she was represented as a mermaid.

Eurў̆phon (Εὐρυφῶν). A Cnidian physician, a contemporary of Hippocrates, but probably older in years, since he is deemed the author of the Cnidian aphorisms (Κνίδιαι Γνῶμαι) which are quoted by Hippocrates.

Eurў̆pon (Εὐρυπῶν), otherwise called **Eurytion** (Εὐρυτίων). Grandson of Procles. He was the third king of that house at Sparta, and thenceforward gave it the name of Eurypontidae.

Eurypў̆lus (Εὐρύπυλος). (1) Son of Euaemon, and leader of a body of troops before Troy. (2) Son of Poseidon and Astypalaea, king of Cos, killed by Heracles. (3) Son of Poseidon and Astypalaea, king of the Meropes of Cos. He was slain by Heracles, who had been driven on to the coast on his return from Troy. The struggle was a hard one, but Heracles was assisted by Zeus. The daughter of Eurypylus, Chalciopé, became mother of Thessalus by Heracles. (4) Son of Telephus and Astyoché. Astyoché, bribed by her brother Priam with the present of a golden vine, persuaded Eurypylus to bring the last succour to the Trojans shortly before the fall of the city. After performing deeds of bravery, he fell by the hand of Neoptolemus. (5) Son of Euaemon, king of Ormenium in Thessaly, one of the suitors of Helen. He was among the bravest of the Greek heroes who fought before Troy, and of his own accord offered to engage Hector in single combat. In the later story he appears in connection with the worship of Dionysus. At the division of the Trojan spoil he received an image of Dionysus, made by Hephaestus and presented to Dardanus. This had been kept in a chest as a Palladium. When Eurypylus opened the chest and beheld the image he fell into a madness. The Delphic oracle promised that he should be healed if he dedicated the image in a spot where men offered barbaric sacrifices. According-

ly he dedicated it at Aroë in Achaea, where an offering of the finest youth and fairest virgin was made annually to Artemis. The bloody act was abolished, and the milder service of Dionysus introduced in its place.

Eurysăces (*Εὐρυσάκης*). The son of the Telamonian Aias and Tecmessa. An Athenian tradition made him and his brother Philaeus to have given up to Athens the island of Salamis in return for the rights of Athenian citizenship (Pausan. i. 35, § 2).

Eurysthĕnes (*Εὐρυσθένης*). A son of Aristodemus, who reigned conjointly with his twin-brother Procles at Sparta. It was not known which of the two was born first; the mother, who wished to see both her sons raised on the throne, refused to declare it; and they were both appointed kings of Sparta by order of the oracle of Delphi, B.C. 1102. After the death of the two brothers, the Lacedaemonians, who knew not to what family the right of seniority and succession belonged, permitted two kings to sit on the throne, one of each family. The descendants of Eurysthenes were called Eurysthenidae, and those of Procles, Proclidae. It was inconsistent with the laws of Sparta for two kings of the same family to ascend the throne together, yet that law was sometimes violated by oppression and tyranny. Eurysthenes had a son called Agis, who succeeded him. His descendants were called Agidae. There sat on the throne of Sparta thirty-one kings of the family of Eurysthenes, and only twenty-four of the Proclidae. The former were the more illustrious (Herod. iv. 147, vi. 52; Pausan. iii. 1).

Eurystheus (*Εὐρυσθεύς*). Son of Sthenelus and Nicippé. (See PERSEUS.) He was king of Mycenae, and through the cunning of Heré got power over Heracles, and imposed upon him the celebrated twelve labours. In pursuing the children of Heracles, and attempting to bring about by force their expulsion from Attica, he was defeated and slain in his flight by Hyllus. See HYLLUS.

Eurÿtis. A patronymic of Iolé, daughter of Eurytus (Ovid, *Met.* ix. 395).

Eurÿtus (*Εὔρυτος*). A skilled archer who was king of Oechalia, and father of Iolé. See HERACLES, p. 792.

Eusebius (*Εὐσέβιος*). (1) PAMPHĬLI. One of the most distinguished of the earlier Christian writers, the friend of Constantine, born in Palestine, probably at Caesarea, about A.D. 264. He pursued his studies at Antioch, and is believed to have received holy orders from Agapius, bishop of Caesarea. After having been ordained presbyter, he set up a school in his native city, and formed an intimate acquaintance with Pamphilus, bishop of Caesarea, who suffered martyrdom under Galerius, A.D. 309, and in memory of whose friendship he added to his name the term *Pamphili*—i. e. (the friend) of Pamphilus. After the martyrdom of his friend he removed to Tyre, and thence to Egypt, where he himself was imprisoned. On his return from Egypt, he succeeded Agapius in the see of Caesarea, A.D. 315. In common with many other bishops of Palestine, he at first espoused the cause of Arius; but at the Council of Nice, in 325, where the emperor Constantine assigned to Eusebius the office of opening the session of the assembly, the opinions of the heresiarch were condemned. He is said, however, to have raised some objections to the words "consubstantial with the Father," as applied to the Son in the Nicene creed. His intimacy with his namesake Eusebius, bishop of Nicomedia, who openly espoused the cause of Arius, led him also to favour the same, and to use his influence with the emperor for the purpose of reinstating Arius in the Church, in defiance of the opposition of Athanasius. The party to which he attached himself were called Eusebians, from their leader Eusebius of Nicomedia, and they seem to have acted in a great degree through hostility towards Athanasius and his supporters, as they did not, as yet, openly advocate the objectionable tenets of Arius, who had himself apparently submitted to the decrees of the Council of Nice. Eusebius was deputed by the Council of Tyre to defend before Constantine the judgment which it had passed against Athanasius. The part which he took in this controversy caused him to be stigmatized as an Arian, though it appears that he fully admitted the divinity of Christ. He was, however, unwilling to believe him *συναΐδιος* or "co-eternal" with the Father. He was much in favour with Constantine, with whom he maintained a correspondence. He died soon after his imperial patron, in 339 or 340.

Eusebius was one of the most learned men of his time. He had read all sorts of Greek authors, whether philosophers, historians, or divines, of Egypt, Phœnicia, Asia, Europe, and Africa. All his studies were directed towards the religion which he professed, and if he cultivated chronology, it was with the view of establishing on a solid basis the confidence to which the historical books of the Old Testament present a claim. He exhibited the fruits of his researches in a Chronicle, or Universal History (*Παντοδαπὴ Ἱστορία*), divided into two books. In the first of these, to which he gave the name of "Chronography" (*Χρονογραφία*), he relates the origin and the history of all nations and empires, from the creation of the world down to A.D. 325. In this first portion of the work, Eusebius introduced extracts from various historical writers whose productions are now lost, such as Alexander Polyhistor, Berosus, Amydenus, Manetho, etc. The second part, entitled "Chronical Canon" (*Χρονικὸς Κανών*), consisted of synchronistic tables, giving, by periods of ten years each, the names of sovereigns, and the principal events which had taken place, from the call of Abraham (B.C. 2017). In compiling this part of his labours Eusebius availed himself of the Chronography of Sextus Iulius Africanus, which he inserted almost entire in his Canon, completing it by the aid of Manetho, Iosephus, and other historians. This he continued also to his own times. We possess a Latin translation of this chronicle, made by St. Jerome; it is not, however, a simple version, since this father continued the dates down to the year 378, and made several changes also in the first part of the work. The Greek text itself is lost; and though Georgius Syncellus has inserted many fragments of it in his Chronicle, and Eusebius himself has done the same in his *Praeparatio Evangelica*, the remembrance of this original text was so far lost, that doubts began to be entertained whether that of the first book had ever existed, some critics being persuaded that Eusebius had written no other chronological work besides his *Canon*. Joseph Scaliger, however, undertook to

reconstruct the first book of the work, by uniting all the fragments scattered throughout the writings of the various authors to whom allusion has been made. The whole subject has at length been cleared up in later times, and all uncertainty on this point has been put completely to rest since 1792, when an Armenian of Constantinople, named Georgius Iohannis, discovered an Armenian translation of the entire work. The first book of the Chronicle of Eusebius, with which we are made acquainted through the medium of this translation, is preceded by a preface, in which the author gives an account of the plan and difficulty of his undertaking. It is divided into forty-eight chapters, of which the first twenty-two embrace the chronology of the Chaldaeans, Assyrians, Medes, Lydians, Persians, Hebrews, and Egyptians, comprehending under the latter head the dynasty of the Ptolemies. The remaining chapters, from the twenty-third to the forty-eighth, are devoted to the chronology of the Greeks and Romans, down to the time of Iulius Caesar.

Eusebius was also the author of an Ecclesiastical History (Ἐκκλησιαστικὴ Ἱστορία), in ten books, from the origin of Christianity down to A.D. 324, a year which immediately preceded the triumph of the Catholic church over Arianism. This history was translated into Latin by Rufinus, a priest of Aquilea, in the fourth century, who made, however, retrenchments as well as additions, and added a supplement in two books, which extends to the death of Theodosius the Great.

The other works of Eusebius which have relation to the department of ecclesiastical history are the following: (1) Περὶ τῶν ἐν Παλαιστίνῃ Μαρτυρησάντων, "Of those who suffered martyrdom in Palestine." The period referred to is the persecution of Dioclesian and Maximin, from 303 to 309. (2) Λόγος Τριακονταετηρικός, "Thirty-year Discourse," i. e. an eloge on Constantine, pronounced in the thirtieth year of his reign, A.D. 335. (3) Περὶ τοῦ κατὰ Θεὸν Βίου τοῦ Μακαρίου Κωνσταντίνου τοῦ Βασιλέως. A life of Constantine, in four books. (4) Τῶν Ἀρχαίων Μαρτύρων Συναγωγή, "A Collection of Ancient Martyrs." This work is lost, but many fragments have been preserved by the legendary writers of subsequent ages. (5) A life of Pamphilus, of which there remains a solitary fragment. (6) Περὶ τῶν κατὰ Διαφόρους Καιροὺς ἐν Διαφόροις Πόλεσιν Ἀθλησάντων Ἁγίων Μαρτύρων, "Of the holy martyrs that have contended for the faith at various times and in various places." Another work of Eusebius forms the principal one of his theological writings. This is his (7) Εὐαγγελικῆς Ἀποδείξεως Προπαρασκευή, or *Praeparatio Evangelica*. This work, though its subject is one entirely sacred in its nature, yet contains a great number of valuable notices respecting the mythology of the pagan nations, and the philosophy of the Greeks in particular. We find in it, also, numerous passages taken from more than four hundred profane writers, and in this list are many whose productions are now lost. The *Praeparatio Evangelica* is addressed to Theodotus, bishop of Laodicea, and is divided into fifteen books. To prepare his readers for a demonstration of evangelical truths by reasons purely philosophical, and, by collecting together a mass of citations drawn from profane authors, to show how far superior Christianity is to all the systems of the pagan world—such is the object of Eusebius in the work under consideration. In the first six books he proves the futility of the heathen doctrines; the nine following ones develop the motives which have induced the followers of Christianity to prefer to them the Jewish system of theology as contained in the Old Testament. One must not omit another work of Eusebius, entitled (8) Περὶ τῶν Τοπικῶν Ὀνομάτων ἐν τῇ Θείᾳ Γραφῇ, "Of the places mentioned in the sacred writings." It was in two books. The second book, which treats of Palestine, has alone reached us; we have it in Greek, and also in a Latin version by St. Jerome. Still another work of Eusebius, (9) Θεοφάνεια, in four books, was discovered in 1839 by Tattam in an Italian monastery. Editions of the work on chronology are that of Scaliger (Leyden, 1659), and that of Mai and Zohrab (Milan, 1818). The best editions of the Ecclesiastical History are that of H. Stephens (Paris, 1544), reprinted with the Latin version of Christophorson, at Geneva, 1612; that of Heinichen (Leipzig, 1827); Burton (Oxford, 1838; reprinted with an introduction by W. Bright, 1872); and that of Migne in the *Patrologia Graeco-Latina*, vols. xix.–xxiv. (1857–66). The life of Constantine accompanies the first of these. The last edition of the entire work of Eusebius is that of Dindorf, in 4 vols. (Leipzig, 1867–71), unfinished. There is a translation of Eusebius in Clark's *Theological Library*. See Schaff, *Church History* (ii. 872–9). (2) A native of Emesa, surnamed Pittăcus, slain in 554 by order of the emperor Gallus, and to whom Ammianus Marcellinus (xiv. 7) gives the title of *concitatus orator*. (3) A native of Myndus, in Caria, a contemporary of the preceding. Eunapius makes mention of him in the life of Maximus; and, according to Wyttenbach, he is the same with a third Eusebius, of whom Stobaeus has left us two fragments.

Eustathius (Εὐστάθιος). (1) An archbishop of Thessalonica, who flourished in the twelfth century under the emperors Manuel, Alexius, and Andronicus Comnenus. He is celebrated for his erudition as a grammarian, and is especially known as a commentator on Homer and Dionysius the geographer. It is evident, however, that in the former of these commentaries (Παρεκβολαί) he is largely indebted to the *Deipnosophistae* of Athenaeus. The commentary of Eustathius was united to the edition of Homer which appeared at Rome (1542–50) in 3 vols., and was reprinted at Basle (1560), also in 3 vols. The best edition is the Leipzig one of 1825–30, 6 vols., by G. Stallbaum; for that of Politus, undertaken in 1730, with a Latin version, was never finished. The three volumes of it which appeared at Florence (1730–35) extend only to the end of the fifth book of the *Iliad*. Müller and Baumgarten-Crusius have performed a valuable service for the student, in publishing extracts from Eustathius along with the text of the *Iliad* and *Odyssey*. The commentary on Dionysius is less valuable, from the scanty nature, most probably, of the materials employed. A commentary on Pindar is lost, with the exception of the *Prooemium*, which has been edited by Schneidewin (Göttingen, 1837). Some letters of the archbishop are to be found in the public libraries of Europe, of which a part was edited by Tafel in 1832. Eustathius died about the year 1194. (2) A native of Egypt, called by some Eumathius, and styled in one manuscript Πρωτονοβιλίσσιμος καὶ μέγας χαρτοφύλαξ, "Protonobilissimus and great archivist." He was the author of a romance, en-

titled, Τὸ καθ' Ὑσμίνην καὶ Ὑσμινίαν Δρᾶμα, "Hysminé and Hysminias." It is a lifeless performance. The work has been twice published—first at Paris (1618), with the version, and under the care, of Gaulmin, and again by Teucher (Leipzig, 1792). This last contains merely the text and the version of Gaulmin, without either preface or notes. (3) An ancient jurist, called EUSTATHIUS ROMĀNUS, who wrote a work called Ὑπόμνημα and another (Περὶ Ὑποβόλου). The so-called *Practica* is not his.

Eustratius (Εὐστράτιος). A late commentator on Aristotle. He lived about the beginning of the twelfth century, as metropolitan of Nicaea under the emperor Alexis Comnenus. Two of his works are now extant in a fragmentary condition—(1) a commentary on the second book of the *Analytica;* and (2) a commentary on the *Ethica Nicomachea*—this last being in part the work of other scholars. In the Middle Ages these commentaries were much read in the Latin version of Robert of Lincoln.

Eustȳlos (εὔστυλος). See TEMPLUM.

Euterpé (Εὐτέρπη). One of the Muses. She presided over music, and is generally represented as holding two flutes. To her was ascribed by the poets the invention of the tragic chorus. The name means "the well-delighting one," from εὖ, "well," and τέρπω, "to delight." See MUSAE.

Euterpé, the Muse of Lyric Poetry. (From a statue in the Vatican.)

Euthycrătes (Εὐθυκράτης). A sculptor of Sicyon, son and pupil of Lysippus, flourished about B.C. 300. He was peculiarly happy in the proportions of his statues. Those of Heracles and Alexander were in general esteem, and particularly one of Medea, which was borne on a chariot by four horses (Plin. *H. N.* xxxiv. 8).

Euthydēmus (Εὐθύδημος). A sophist of Chios, who, with his brother Dionysodorus, migrated to Thurii in Italy. He gives its name to one of the dialogues of Plato, in which the philosophical pretensions of Euthydemus and his brother are ridiculed.

Euthȳna (εὔθυνα) and (in late Greek only) **Euthȳné** (εὐθυνη). A settlement of account. At Athens all officials were bound to give an account of their administration at the end of their term of office. This account was rendered to the λογισταί, assisted by ten εὔθυνοι, or special auditors. (See LOGISTAE.) Within a period of thirty days after the term of office had come to an end, these functionaries issued, to all whom it might concern, a public notice to lay before them any complaints they might have to make against the retiring officials. In case such complaints were made, the matter was brought to an issue by legal procedure. No official was allowed to leave the country, or take any measure affecting his property, or take another office, before his account was given. See the law cited in Andoc. x. 39; Boeckh, *Public Econ.* i. pp. 254 foll.

Eutocius (Εὐτόκιος). A native of Ascalon of about A.D. 560. He is known for his commentaries on Apollonius of Perga, the geometrician, and Archimedes, four of which have been preserved.

Eutrapĕlus (Εὐτράπελος). "Ready-witted." The nickname of a Roman knight, PUBLIUS VOLUMNIUS, who was the boon companion of Antony in his debauches. His mistress, Cytheris, called after him Volumnia, was given by him to Antony (Cic. *Ad Att.* xv. 8. 1; Hor. *Epist.* i. 18. 31).

Eutrēsis (Εὔτρησις). A small town in Boeotia between Thespiae and Plataea with a temple and oracle of Apollo, who had therein the name Eutresites. It was said to have once been the home of Zethus and Amphion (Hom. *Il.* ii. 502).

Eutropius. (1) A Latin historian of the fourth century. He bore arms under Julian in his expedition against the Parthians, as he himself informs us (x. 16), and is thought to have risen to senatorial rank. Suidas makes him of Italian origin, while some modern writers, on the other hand, advance the hypothesis that he was a native of Gaul, and was perhaps identical with the Eutropius to whom some of the letters of Symmachus are addressed. The manuscripts give him the title of Vir Cl., which may stand for either Vir Clarissimus or Vir Consularis, but which in either sense indicates an advancement to some of the highest offices in the State. He wrote several works, of which the only one remaining is an abridgment of Roman history (*Breviarium ab Urbe Condita*), in ten books. It is a brief and dry outline, without either elegance or ornament, yet containing certain facts which are nowhere else mentioned. The work commences with the foundation of the city, and is carried on to the death of Jovian, A.D. 364. At the close of this work Eutropius announces his intention of continuing the narrative in a more elevated style, inasmuch as he will have to treat of great personages still living. It does not appear that he ever carried this plan into execution. The best editions are those of Grosse (Halle, 1813), Hartel (Berlin, 1872), and of Droysen (Berlin, 1878). There is a lexicon to Eutropius by Eichert (Breslau, 1850). On his style see Sorn, *Die Sprachgebrauch des Eutropius*, pt. i. (Halle in Austria, 1888), pt. ii. (Laibach, 1889). The *Breviarium* was translated into Greek by one Paeanius, whose version is still in great part extant, and is edited in Droysen's edition of Eutropius. See Duncker, *De Paeanio Eutropii Interprete* (Greiffenberg, 1880). See, also, HISTORIA MISCELLA. (2) A eunuch and minister of the emperor Arcadius, who rose by infamous practices from the lowest condition to the highest pitch of opulence and power. He was probably a native of Asia, was made chamberlain to the emperor in the year A.D. 395, and, after the fall of Rufinus, succeeded that minister in the confidence of his master, and rose to unlimited authority. He was even created consul, a disgrace to Rome never before equalled. An insult offered to the empress was the cause of his overthrow; and he was sent into perpetual exile at Cyprus. He was soon afterwards, however, brought back on another charge; and after being condemned, was beheaded in 399 (Zosim. v. 10, 18, etc.).

Eutychĭdes (Εὐτυχίδης). A sculptor of Sicyon, a pupil of Lysippus. He flourished in B.C. 300.

Euxīnus Pontus. See PONTUS EUXINUS.

Evadné (Εὐάδνη). A daughter of Iphis or Iphicles of Argos, who slighted the addresses of Apollo, and married Capaneus (q. v.), one of the seven chiefs who went against Thebes. When her husband had been struck with thunder by Zeus for his blasphemies and impiety, and his ashes had been separated from those of the rest of the Argives, she threw herself on his burning pile and perished in the flames (Verg. *Aen.* vi. 447; Stat. *Theb.* xii. 800).

Evagŏras (Εὐαγόρας). King of Salamis, in Cyprus, from about B.C. 410 to 374. He was assisted by the Athenians in his wars against the Persians (Xen. *Hell.* ii. 1, § 29). There is extant an oration of Isocrates in praise of Evagoras and addressed to his son Nicocles, who succeeded him.

Evander (Εὔανδρος, "the good man"). A figure in Latin mythology. He was said to be the son of Hermes and an Arcadian nymph (Pausan. viii. 43, § 2; Plut. *Quaest. Rom.* 53). Sixty years before the Trojan War he led a Pelasgian colony to Latium from Pallantium in Arcadia, and founded a city, Pallantium, near the Tiber, on the hill which was afterwards named after it the Palatine. Further it was said that he taught the rude inhabitants of the country writing, music, and other arts; and introduced from Arcadia the worship of certain gods, in particular of Pan, whom the Italians called Faunus, with the festival of the Lupercalia (q. v.), which was held in his honour. Evander was worshipped at Rome among the heroes of the country (see INDIGETES), and had an altar on the Aventine Hill. But the whole story is evidently an invention of Greek scholars, who derived the Lupercalia from the Arcadian Lycaea. The name Εὔανδρος is perhaps a translation of the Italian Faunus, while Carmenta, his mother, is an ancient Italian goddess; but on this, see Nettleship, *Lectures and Essays*, pp. 50 foll.

Pallas, the son of Evander, is in like manner a creation of the poets. In Vergil he marches, at the command of his father, to assist Aeneas, and falls in single combat with Turnus. (See Verg. *Aen.* viii. 575.) Evander had also two daughters, Romé and Dyna.

Evarchus (Εὔαρχος). A river of Asia Minor, flowing into the Euxine, to the southeast of Sinopé. It formed the ancient boundary between Paphlagonia and Cappadocia.

Eventus. See BONUS EVENTUS.

Evēnus (Εὔηνος). (1) A river of Aetolia, rising in Mount Oeta, and flowing into the sea, 120 stadia west of Antirrhium. It derived its name from Evenus, the father of Marpessa, who was carried off by Idas, the son of Aphareus; and Evenus, being unable to overtake the latter, threw himself into the river, which was henceforth called after him. (2) A river of Mysia, falling into the Sinus Elaïticus near Pitané.

Everriculum. A fishing-net which, as appears from the annexed illustration, did not differ from our own. See Varr. *R. R.* iii. 17. 7.

Everriculum. (Fresco in the Palace of Titus, Rome.)

Evictio. In Roman law *evincere* means generally to deprive a person of a thing or right, of which he is in the enjoyment, by legal process; but the commonest case of *evictio* is that of the contract of sale. (See EMPTIO ET VENDITIO.) The vendor not being bound to make the purchaser owner of the thing sold (*Dig.* xix. 1. 11. 2), things were often bought and sold which did not belong to the vendor; and as the latter could give no better title than he had himself, the purchaser was liable to be deprived of the *res vendita* (i. e. "evicted") by the lawful owner. Originally there seems to have been no obligation on the vendor to compensate on such eviction, except in sales by mancipation, when the vendor was bound to return double the price to the purchaser, in such an event (Paul. *Sent.* rec. 2. 17. 3); but in ordinary sales it seems to have become usual for the purchaser to stipulate from the vendor for a penal sum of twice the amount of the purchase-money (*stipulatio duplae*), if deprived of the property by any one with a better title. Eventually it became a general rule of law that if the purchaser was "evicted" by legal process, the vendor must indemnify him (*Dig.* xxi. 2. 1).

Evius. See DIONYSUS; EUIUS.

Evocāti (those who are summoned or called out). The term applied in the Roman army to soldiers who had served their time and obtained their dismissal, but who, upon the general summoning them by name, returned to the service on condition of receiving certain privileges. These were, exemption from all service except in battle, a rank and pay equal to those of the centurions, and prospect of advancement. The enlistment of *evocati* was especially common in the civil wars. Sometimes they were distributed in the legion, sometimes they formed a special and select troop, divided into *centuriae*. We sometimes find them, in isolated instances, under the early Empire. On the difference between them and the *veterani*, see VETERANI. They are represented on sepulchral monuments with the vine-rod (*vitis*) in one hand, a sword on the left side (*parazonium*), and a roll of paper, indicating, perhaps, their carte of discharge, in the other; as shown by the above illustration, from a sepulchral marble, which also bears the inscription AUR . IULIANUS . EVOK. See Cic. *Fam.* iii. 6; Caes. *B. G.* vii. 65; *B. C.* i. 17.

Evocatus. (Rich.)

Evocatio (calling out). The term for the solemn summons given to the tutelary gods of a besieged city to leave it, and to migrate to Rome. (See Macrob. *Sat.* iii. 9.) The Romans always vowed, at the same time, to build them a temple at Rome. An example of a deity "evoked" in this way was Iuno Regina, who was originally worshipped at Veii, but afterwards had a temple in Rome on the Aventine.

Exagia or **Hexagia** (ἐξάγια). See PONDERA.

Exagōgé (ἐξαγωγή). An ejectment to test the right to property. See EXOULES DIKÉ.

Exagōges Graphé (ἐξαγωγῆς γραφή). An action which, it is claimed, might be instituted against one who, acting as κύριος of an Athenian woman, married her to a foreigner in a foreign land (*Att. Process*, ed. Lipsius, p. 443 foll.). Our information concerning this suit is very scanty.

Exairesĕos Dikē (*ἐξαιρέσεως δίκη*, also *ἀφαιρέσεως δίκη*). An action brought at Athens to recover damages for the attempt to deprive the plaintiff of his slave; not when the defendant claimed property in the slave, but when he asserted him to be a freeman. As the condition of slavery at Athens incapacitated a man from taking any legal step in his own person, if a reputed slave wished to recover his rights as a freeman, he could only do it by the assistance of one who was himself a freeman, and who was said *ἐξαιρεῖσθαι* or *ἀφαιρεῖσθαι αὐτὸν εἰς ἐλευθερίαν* (Lys. *c. Pancl.* § 10), *in libertatem vindicare.*

Exāmen. See LIBRA.

Exampaeus (Ἐξαμπαῖος). A fountain which, according to Herodotus (iv. 52), flows into the Hypanis, where the river is four days' journey from the sea, and renders bitter its waters that before were sweet.

Exauctoratio. See EXERCITUS; MISSIO.

Exauguratio. The act of taking away from a place or thing the sacred character which it had received by *inauguratio, consecratio,* or *dedicatio.* That such an act was performed by the augurs, and never without consulting the pleasure of the gods by *augurium,* is implied in the name itself (Liv. i. 55; Dionys. Hal. *Antiq. Rom.* iii. p. 162). Temples, chapels, and other consecrated places, as well as priests, were considered as belonging to the gods. No consecrated place whatever could be employed for any profane purpose, or dedicated to any other divinity than that to which it originally belonged, without being previously exaugurated; and priests could not give up their sacred functions, nor could a vestal virgin, after the expiration of her thirty years of service, enter into matrimony, without first undergoing the process of exauguratio (Gellius, vi. (vii.) 7. 4).

Exceptio. See ACTIO.

Excubiae. See CASTRA.

Excubitōres. A word which properly means watchmen or sentinels of any kind (Caes. *B. G.* vii. 69), but is more particularly given to the soldiers of the cohort who guarded the palace of the Roman emperor (Suet. *Ner.* 8; *Oth.* 6). Their commanding officer was called *tribunus excubitor* (Suet. *Claud.* 42). When the emperor went to an entertainment at the house of another person, the excubitores appear to have accompanied him, and to have kept guard as in his own palace (Suet. *Oth.* 4).

Excubitorium. A watch-house, station-house, or barracks for Roman soldiers or police (P. Vict. *Sub Reg. Urb. Rom.* ad fin.), as to which see the articles CASTRA; EXCUBITORES; VIGILES. A very interesting excubitorium — that of the seventh battalion of city police — was discovered at Rome in 1868, near the church of S. Crisogono. It was originally a private house, rented for the use of a body of police, and so occupied for many years. The archaeological and historical interest of this building lies in the fact that the policemen, when off duty, had amused themselves by writing on the walls, thus leaving us a very vivid picture of the daily routine of an ancient policeman's life, and also of his sentiments, expressed in language that is always direct and plain, and frequently profane. See the essay by Henzen in the *Annali dell' Instituto* for 1869; Prof. Lanciani's *Ancient Rome in the Light of Recent Discoveries,* ch. viii. (Boston, 1888); Nocella, *Le Inscrizione nell' Escubitorio della VII^ma^ Coorte de' Vigili* (Rome, 1887); Middleton, *Remains of Ancient Rome,* ii. pp. 257–260 (London, 1892); and the article GRAFFITI.

Execution. See BONORUM EMPTIO.

Exĕdra (*ἐξέδρα*). An alcove, or semi-circular extension of the colonnade in a Greek gymnasium. It was furnished with seats on which the philosophers usually sat to talk with their disciples (Cic. *N. D.* i. 6). In private houses the *exedra* was a room intended for conversation, fitted with a bench running around the wall. See GYMNASIUM.

Exegētes (*ἐξηγητής*). An expounder, interpreter, is used both in an ordinary and an official sense. A local guide or *cicerone* is so styled (Pausan. i. 41, § 2); Aeschines, ridiculing Demosthenes for his conduct on the embassy, calls him the *ἐξηγητής* of the absurd stories with which he regaled his colleagues (Aesch. *De Fals. Leg.* § 40). More usually, however, the word was applied to any interpreter of laws, whether sacred or secular, but especially the former (*Etym. Mag.* s. v.), as the Eupatridae (q. v.). Among the Eupatrids, again, the Eumolpidae (q. v.) were *ἐξηγηταί* of a special class of sacred laws, those, namely, relating to the Eleusinian mysteries; these laws were unwritten, and of immemorial antiquity ([Lys.] *c. Andoc.* § 10). But with regard to the written and civil laws of Athens in democratic times, the notion of several grammarians that there was a class of *ἐξηγηταί* or expounders of them, answering to the Roman jurisconsults, is untenable, and indeed no longer held; the silence of the orators is sufficient proof that no such persons existed (Ruhnken on Timaeus, *Lex. Plat.* s. v.). In Athenian courts, both the dicasts and the presiding judges acted without the guidance of trained lawyers, and required the laws which they administered to be intelligible to plain men. At the same time, the conservatism of ancient religion involved a frequent appeal to experts in purely ceremonial matters. Thus, the guilt of a homicide and the punishment of it were to be determined by the law-courts; but if the homicide were proved accidental or justifiable, the ceremonial expiation, the reconciliation with the relatives of the deceased, and the disposal of the corpse remained as the province of *ἐξηγηταί.*

In an official sense, the exegetae were a board of three persons, to whom application might be made in matters relating to sacred law; they were all to be Eupatrids, and one of them necessarily a member of the family of the Eumolpidae. The mode of their appointment is not known; and the question whether they took cognizance of all appeals from private persons like those mentioned above, or only of public matters, is open to some doubt. They attended in the assembly of the people, and interpreted the *διοσημίαι,* or signs from heaven; they had thus the power of stopping the business in hand, corresponding to the *obnuntiatio* of the Roman augurs. But we may be sure that the democratic Athenians would not allow an absolute or irresponsible veto to these or any other officials; their action, like that of an Epistates who refused to put the question to the vote, was no doubt liable to impeachment; in practice it is probable that only a shower or other unmistakable phenomenon was allowed to break up the meeting, so that their duty would be purely a

formal one (Poll. viii. 124, 188; *Etym. Mag.* s. v.; Ruhnken on Timaeus; Müller on Aesch. *Eumen.* pp. 162 foll.; Schömann, *Antiq.* i. 429, E. T.; Gilbert, *Staatsalterth.* i. 360).

Exercĭtus (στρατός, στράτευμα). A body of men organized and armed for the defence of the State; an army.

I. Greek. The most military people among the Greeks were the Spartans, whose whole life was spent in the practice of martial exercises, so that even the meals shared in common by all free Spartan citizens (συσσιτία) were arranged with reference to military service. (See Syssitia.) With them the duty of actual service began with the twentieth year, and did not end until their capacity for that service ceased to exist. After their sixtieth year, however, all Spartan soldiers were exempt from foreign duty. In the Lacedaemonian army, the heavy-armed troops (ὁπλῖται) were originally all citizens, but as early as the Persian Wars, the perioechi served side by side with the native Spartans, though in separate divisions (λόχοι). The Helots who accompanied the troops served as attendants (ὑπασπισταί) to the hoplites, and as light-armed troops in battle. (See Helotae; Hypaspistae.) A picked body of men (ἱππεῖς) was formed from among the hoplites, and served as a special body-guard to the kings. They were 300 in number, and were all active, powerful young men under thirty years of age, selected and commanded by three officers, known as ἱππαγρέται. The ἱππεῖς, as the name implies, must have been originally horsemen, but were no longer so in the time of the Persian Wars (Herod. viii. 124). A corps of light infantry was formed in the district of Sciritis, and was hence called Sciritae, the especial duty assigned to them being the outpost service of the camp, reconnoitring on the march, and in battle the support of the left wing. From the end of the fifth century B.C., the Spartan army was divided into six *morae* (μόραι), each commanded by a πολέμαρχος (Xen. *Lac.* 11. 4). As the number of Spartan citizens decreased, these ultimately composed merely the *cadre* of the *mora*, which were brought up to their full complement by the addition of perioechi; though the officers were always Spartans, as were the members of the royal staff. Each *mora* was divided into four (or five) companies (λόχοι). The cavalry played only an unimportant part in the Spartan army. (See Hippeis.) In time of war the ephors (see Ephori) commanded the veteran troops. In early times the kings divided the supreme command between them, but after B.C. 512, only one commanded, unless more than one general was needed from the circumstances of the case. The Spartans maintained a fleet in which Helots served as marines and oarsmen. In cases of great necessity these were sometimes transferred to the army to serve as hoplites, in which case they received their freedom, and were then known as νεοδαμώδεις. The fleet was commanded by ναύαρχοι, or admirals.

At Athens every freeborn man was liable to military service, the only exceptions being the holders of public offices, and, in early times, the very lowest class of citizens. Every youth on reaching his eighteenth year (ἔφηβος) served for ten years, most frequently on the frontier, during which time his military education was completed, though he was then liable to serve at any time up to his sixtieth year. In time of war the Assembly fixed the number of men required for duty: in extreme cases a *levée en masse* (πανστρατιά) was resorted to. Ten generals (στρατηγοί) were elected by the people annually, and it was their duty to levy the troops and organize them in such a way that the men of each tribe (φυλή) were commanded by the same officer (φύλαρχοι). These phylarchs, as well as the taxiarchs (ταξίαρχοι), or captains of companies, were elected by the people. This levy served as hoplites, while the men of the lowest class (θῆτες) were sometimes used as light-armed troops (πελτάσται), and sometimes with the fleet. As the age of military service extended from the eighteenth to the sixtieth year, there were thus forty-two classes of age, and every man was mustered in a list (κατάλογος) under the name of the Archon Eponymus under whom he first reached the military age (Schömann, *Antiq. Greece*, Eng. trans. p. 423; but cf. Aristotle, *Polit. Ath.* § 53, with Kenyon's note). The men of the first two classes who served on the frontier were called περίπολοι. After the twentieth year they could be sent on foreign service. The army contained ten battalions (τάξεις), sometimes called φυλαί, of which the subdivisions were called λόχοι. The troops were sometimes equipped with the aid of the resident aliens (μέτοικοι) of Attica, and in earlier times by the contingents contributed by the allies. From the time of Pericles on, the cavalry received pay amounting to some four obols, or about $0.12 a day, with an allowance for the horseman's attendant. On the cavalry, see Hippeis.

Early Greek Soldier. (Stelé of Aristion.)

In most of the other Greek States the hoplites, consisting of wealthy citizens, formed the main strength of the army, and generally helped to turn the scale in engagements in which the light-armed troops and the cavalry played a subordinate part. They fought in the φάλαγξ (q. v.), in closely serried lines eight deep. The flower of the troops were stationed on the right wing as the post of honour, to advance to meet the foe amid the singing of the paean. When at a distance of about 200 yards, at the signal of a trumpet, they raised the battle-cry (ἀλαλά) and charged either at a run or at quick step. It was only the Spartans who slowly advanced at an even pace and to the sound of flutes. A request for permission to bury the dead was the formal admission of defeat. The enduring token of victory was a trophy composed of the armour captured from the defeated side. It was usual to join battle on ground which was suitable for the phalanx. The Peloponnesian War was the means of introducing many innovations, including the

formation of a regular force of light infantry, called πελτασταί (q. v.). Still more decisive in the transformation of the general system of Greek warfare was the famous retreat of the Ten Thousand, the first important mercenary army among the Greeks which tried to make the phalanx of hoplites suit the ground better, and to utilize at the same time the light infantry, or peltasts, and the γυμνῆτες (spearmen, bowmen, and slingers). Iphicrates, the first distinguished general of mercenary troops, introduced a lighter equipment by substituting a small πέλτη for the heavy shield, adopting a longer sword and spear, lighter shoes, and a linen corslet.

In the course of the fourth century B.C. the army composed of civilians gave way more and more to the mercenary army, which, by its intimate knowledge of the use of its weapons, gained an immense advantage in actual war. An important novelty was the oblique battle-order, the discovery of Epaminondas (q. v.). In this the great mass and strength of the hoplites was drawn up in considerable depth on one of the two wings, without any expansion of the front. The hoplites could thus make a vigorous attack on the centre of the enemy's wing, while the true centre and the other wing of the assailants were held in reserve, with a view to advancing later to crush the enemy.

The Macedonian method of warfare, invented by King Philip II. and his son Alexander the Great, was based upon the Greek military organization adapted to Macedonian requirements. For this purpose, that organization was duly developed, and the different parts of the army, the infantry and cavalry, light and heavy-armed troops, military levies, allies and mercenary troops, were blended together into a far freer and more effective system than the Greeks ever attained in their art of war. In point of numbers the strongest component part of the Macedonian army, as elsewhere, was the heavy and light infantry. The former consisted of the πεζέταιροι, a body of Macedonians of free but not noble origin, corresponding to the Greek hoplites, though not so heavily armed. Like the hoplites, they fought in a phalanx, but this was generally deeper than theirs, being eight and afterwards sixteen men deep. They formed six τάξεις, corresponding to the number of the districts of Macedonia, each of which was represented by one τάξις. (See further under PHALANX.) The ὑπασπισταί were the equivalent of the Hellenic peltasts, and were a standing corps of 3000 men. Besides these there were strong contingents of other kinds of light infantry, especially spearmen and archers. While in the Greek armies the number of the cavalry had always been small, they formed nearly one-sixth of the whole army which Alexander took with him on his Asiatic expedition, and consisted of an equal number of light and heavy cavalry. (See further under HIPPEIS.) The central point in the great battles of Alexander was the phalanx; on the right of this were placed the ὑπασπισταί, the heavy and light Macedonian cavalry, the spearmen, and archers; on the left, the Thracian peltasts, the Hellenic contingent of cavalry, with the Thessalian cavalry, and light troops, horsemen, and archers. The two wings were reckoned from the centre of the phalanx, the right being usually reserved for the attack, and led by the king. The light troops began the attack, which was supported by the heavy Macedonian cavalry, followed by the ὑπασπισταί. The heavy infantry came up in detachments to keep the line unbroken, and formed an oblique battle-array. Thus the main attack was made by the heavy cavalry, and no longer, as with the other Greeks, by the phalanx. On the contrary, the phalanx formed the solid centre of the whole army —a centre which it was impossible for the enemy to break, and which was itself irresistible in attack. Under the successors of Alexander, the phalanx was, however, regarded as strengthening the whole army and lengthening the formation, rather than as a factor of offensive operations. The battle was decided by the wings, which were composed of cavalry—one wing being destined for the attack while the other remained on the defensive. The light infantry and the elephants which were now brought into use were brought to bear as occasion demanded, but were chiefly used in masking the preparatory movements of the attacking wing, very much, in fact, as cavalry is used in the modern German tactics.

During the third century B.C., the cavalry declined in importance and hence in numbers, while the heavy-armed infantry, with the formidable σάρισσα, twenty-four feet long, became more and more effective. The phalanx was now used in attacking, and its onset usually decided the battle. In that century, mercenary armies became very common, and at last Greek military science yielded to that of the Romans mainly because the tactics of the phalanx were ill-suited to a hand-to-hand engagement. See LOCHUS; MORA; PHALANX.

II. ROMAN.—Down to the year B.C. 104, when the people, alarmed by the advance of the formidable Cimbri, kept C. Marius in the consulate for five years in disregard of the Constitution, the Roman army had been nothing more than a militia of citizens, the body of the free burgesses in arms, as established by Servius Tullius. (See COMITIA CENTURIATA.) The whole population was divided into five classes. The first class was divided between cavalry (*equites*) and infantry (*pedites*), and all five classes into *iuniores* and *seniores*, the former being employed for active service in the field, and the latter for the defence of the city. Every citizen from his seventeenth to his forty-fifth or fiftieth year was liable to service unless he belonged to the lowest class (*proletarii*), or had already served in twenty campaigns on foot or in ten campaigns as a cavalryman. The military levy was by tribes, and was made in a general assembly of citizens at the Capitol or on the Campus Martius, an equal number of men being taken from each tribe. (See DILECTUS.) The regular levy was 8500 *seniores* and 17,000 *iuniores*, a total of 25,500 men. These were formed into four legions of 4250 or 4500 men each, and a body of 1800 cavalry. The rest of the recruits formed a reserve to supply the losses sustained by the legions. There were generally two consular armies, each of two legions, besides contingents of the allies of equal infantry and double cavalry strength, as the native Roman cavalry was inferior, and preferred always to fight dismounted. A legion was made up as follows: 1200 *velites* (light-armed skirmishers, also called *accensi*, *rorarii*, and *ferentarii*), 1200 *hastati*, 1200 *principes*, 600 *triarii*, and 300 *equites*. The *hastati*, *principes*, and *triarii* were each divided into ten *manipuli*, or companies, and an equal number of *velites* were attached to each. The *hastati* and *principes* formed respectively the first and second

line, and were armed with spears (*hastae*); the *triarii* were the reserve, and carried the *pilum*, a short and very heavy spear, which they hurled into the ranks of the enemy immediately before closing with them in a hand-to-hand struggle with the sword (*gladius*).

Roman Soldiers. (Column of Trajan.)

Each *manipulus* was commanded by a centurion (*centurio*), having a second centurion for his lieutenant. The first centurion of the first *manipulus* of the *triarii*, who was known as *primus pilus*, in the absence of a superior officer, took command of the whole legion. The chief command of the legion was held in turn by the six military tribunes (*tribuni militum*), each of whom commanded for two months at a time; but after the first civil wars, a single officer (*legatus*) permanently directed each legion, having the military tribunes as his staff.

The protracted wars with Pyrrhus and Carthage led to the first important change in the constitution of the army. From this time, the practice of giving the soldiers regular pay was established, and paved the way for the establishment of a regular army, which took place, as noted above, in the consulship of Marius, from which time the enlisted man was a professional soldier, serving continuously in the army for twenty years. The legion now consisted of 6000 troops, divided into ten cohorts of 600 men each, uniformly armed with the *pilum*. The place of the *velites* was supplied by foreign mercenaries, bowmen (*sagittarii*) from Crete, javelin-men (*iaculatores*) from Mauretania, and slingers (*funditores*) from the Baleares. The cavalry was also chiefly foreign, with a few Roman *equites* in special posts of honour. The general had a body-guard (*praetoriani*) of some 5000 men, with high pay and special privileges. At this time the silver eagle was adopted as the standard (see SIGNUM; VEXILLUM), and was carried by the first century of the first cohort. There were also auxiliary troops of varying number divided into *cohortes*, and consisting of both infantry and cavalry.

Under Caesar the legion consisted nominally of about 5000 men, though actually of less. According to Rüstow it was divided into ten cohorts of 300 or 360 men each; each cohort into three maniples of 100 to 120 men each; and each maniple into two centuries of 50 to 60 men each. In battle the ten cohorts were regularly drawn up as in the following figure, which represents the *acies triplex* of Caesar:

The cavalry, divided into *turmae*, or squadrons, and commanded by a *decurio*, was usually stationed on both wings; but at Pharsalus on only one; while at Bibracté it was held in the rear. The defensive order of battle was the hollow square (*orbis*), which corresponds with the formation on the march called *agmen quadratum*. The general term for the army on the march is *agmen;* in battle order, *acies*. When the signal for the march was given, the *extraordinarii* (q. v.) with the allies of the right wing moved first, then the legions, and last the allies of the left wing with part of the cavalry who were said *claudere agmen* or *cogere agmen*. An army marching in close order was called *agmen iustum* or *agmen pilatum*. The van is *primum agmen;* the centre, *medium agmen;* the rear, *extremum* or *novissimum agmen*. The formation called *agmen quadratum*, shown below, was adopted when a sudden attack was expected. The baggage was then placed within the lines.

The commander-in-chief was called *dux* or *imperator;* the commanders of the legions, *legati;* the staff of the legions were the *tribuni militum;* the orderlies and aides, *contubernales* or *comites praetori;* the paymaster and quartermaster-general, *quaestor*. In case there were not sufficient legates, the quaestor also commanded the legion.

Under Augustus the completion of the Roman standing army was carried out, and twenty-five

Agmen Quadratum. (Antonine Column.)

legions were maintained throughout the Empire, besides the Praetorian Guard. Under Trajan there were thirty legions; under Septimius Severus, thirty-three. At this time the name *legatus* was changed to *praefectus*, the first cohort was doubled in strength (*cohors milliaria*), and the minimum strength of the legion was fixed at 6100 infantry and 726 cavalry. See LEGIO.

Under the Republic and the early Empire, the military drill was very severe, comprising running, jumping, wrestling, swimming (both naked and in full armour), besides drill, the use of intrenching tools, and long marches at the rate of four miles per hour, with a load of from 35 to 60 lbs. This was required not only from recruits but from veterans as well. The equipment of the soldier was very heavy. The wagons transported the general baggage (*impedimenta*) and the tents; yet each soldier, besides his shield, helmet, breastplate, *pilum*, and sword, was obliged to carry corn for seventeen days, stakes for the palisade of the camp, and intrenching tools (Veget. i. 19).

In the time of Polybius the regular pay of a soldier of the legion was about $0.07 per diem (⅛ of a *denarius*), that of a centurion, $0.14; and that of a cavalryman, $0.20. Caesar fixed the pay of a soldier at 225 *denarii* (about $45) per annum. Under Domitian it was raised to 300 denarii ($60). Out of this the soldier paid for his clothes and accoutrements (Tac. *Ann.* i. 17). The only superior officer's pay that is known is that of the *tribunus legionis*, in the third century A.D., when it was 25,000 sesterces ($1000). On the pay and other service conditions of the Praetorian Guard, see PRAETORIANI.

The regular food of the Roman soldier was wheat made into a kind of porridge (*puls*) or bread (*panis*), and occasionally meat and vegetables (*legumina*). Vinegar was allowed the soldiers for the drink called *posca* (q. v.). Provisions were also often gathered by foraging, in which case they naturally depended on the soldier's luck. For the rewards of military service, see the articles CORONA; OVATIO; TRIUMPHUS.

Military punishments were of various sorts, comprising (*a*) whipping (*castigatio*); (*b*) a fine (*pecuniaria multa*); (*c*) loss of rank (*militiae mutatio*); (*d*) drumming out of camp (*ignominiosa missio*; cf. the pseud. Caes. *Bell. Afr.* 54, 4); (*e*) the substitution of barley for wheat in their rations; (*f*) decimation (see DECIMATIO); (*g*) death, which could be inflicted only by the consul under the Republic, and by the emperor or *legatus* under the Empire.

On his honourable discharge (*honesta missio*), the soldier received either land or a present of money, ranging from 3000 denarii ($600) to 5000 denarii ($1000). A discharge for physical disability or sickness was called *causaria missio*.

BIBLIOGRAPHY.—An extensive bibliography on the Greek army will be found in the article "Die griechischen Kriegsalterthümer" in Iwan Müller's *Handbuch der klassischen Alterthumswissenschaft*, iv. pp. 226–231 (1887). Good special works are Rüstow and Köchly, *Geschichte des griechischen Kriegswesens* (1852); Köpke, *Kriegswesen der Griechen in heroischen Zeitalter*; and Droysen, *Untersuchungen über Alexander des Grossens Heerwesen und Kriegsführung* (1885).

On the military organization of Rome, a vast bibliography is collected by Schiller in Iwan Müller's *Handbuch*, vol. ii. The following works will be found useful: Lange, *Historia Mutationum Rei Militaris Romanorum* (1846); Rüstow, *Heerwesen und Kriegsführung Cäsars*, 2d ed. (1862); Judson, *Caesar's Army* (1888); Lindenschmidt, *Die Tracht und Bewaffnung des römischen Heeres während der Kaiserzeit* (1882); Von Göler, *Cäsars gallischer Krieg* (1880); Hartung, *Römische Auxiliartruppen* (1870–75); and Bouché-Leclercq, *Institutions Romaines*, pt. iv. (1884).

On the arms, equipment, etc., of the soldiers, see ARMA; CALIGA; CLIPEUS; FUNDA; GALEA; GLADIUS; HASTA; LORICA; OCREA; PILUM; SCUTUM. On the different branches of the service, see EQUITES; FUNDITORES; IACULATORES; MERCENARII; PRAETORIANI; SAGITTARII; VELITES. On the system of encampment, see CASTRA. On the functions of the general, see IMPERATOR.

Exetastae (ἐξεταστaί). Special commissioners sent out by the Athenian people to investigate any matters that might claim attention. Thus we find mention of exetastae being appointed to ascertain whether there were as many mercenaries as the generals reported. It appears to have been no uncommon plan for the commanders, like the French officials of the Second Empire, who received pay for troops, to report a greater number than they possessed, in order to receive the pay themselves; in which case they were said "to draw pay for empty places in the mercenary force" (Aesch. *c. Ctes.* § 146). The commissioners, however, who were sent to make inquiries into the matter, often allowed themselves to be bribed (Aesch. *c. Timarch.* § 113; *De F. L.* § 177).

Another kind of exetastae is shown by inscriptions to have existed at Athens for a short time in the early part of the third century B.C. They were auditors of accounts, and are mentioned as checking the expenses of psephismata (i. e. of recording them) and of the erection of statues (*C. I. A.* i. 297, 298, 300). In this sense of auditors of public accounts the name occurred in some other Greek States.

Exhēres. See HERES.

Exhibendum, Actio ad. A praetorian action *in personam* (*Inst.* iv. 6, 31), usually of a preliminary character, by which a plaintiff who was unable to pursue his right by legal process without the production of a thing, could enforce such production upon any person who was able to make it (*Dig.* x. 4, 2); and it was immaterial whether that person was owner, or had civil or merely natural possession, of the thing in question (*Dig.* ib. 3, 15), or had fraudulently parted with the possession of it (*Dig.* ib. 5, 2); but it was essential that the plaintiff should have a pecuniary or proprietary interest in the production, or else the action would not lie (*Dig.* ib. 13).

Exilium. See EXSILIUM.

Exiteria or **Epexodia** (ἐξιτήρια, ἐπεξόδια). Sacrifices offered by generals before they set out on an expedition (Xen. *Anab.* vi. 5, § 2). The principal object was to discover from the accompanying signs the favourable or unfavourable issue of the undertaking on which they were about to enter.

Exodia (ἐξόδια, from ἐξ and ὁδός). Amusing interludes in verse, inserted by the Romans in other plays, but chiefly in the Atellanae (Livy, vii. 2). It is difficult to ascertain the real character of the exodia; but from the words of Livy we must infer that, although distinct from the Atellanae, they were closely connected with them, and never

performed alone. Hence Juvenal speaks of the *exodium Atellanae* (*Sat.* vi. 71), and Suetonius (*Tib.* 45) *exodium Atellanicum*. They were, like the Atellanae themselves, played by young and well-born Romans, and not by the professional actors. The exodia have generally been considered as short comedies or farces which were performed after the Atellanae—an opinion founded upon the vague and incorrect statement of the Scholiast on Juvenal (*Sat.* iii. 174). But the words of Livy, *exodia conserta fabellis*, seem rather to indicate interludes, which, however, must not be understood as if they had been played between the acts of the Atellanae, which would suggest a false idea of the Atellanae themselves; but as several Atellanae were performed on the same day, it is probable that the exodia were played between them. This supposition is also supported by the etymology of the word itself, which signifies something ἐξ ὁδοῦ, *extra viam*, or something not belonging to the main subject, and thus is synonymous with ἐπεισόδιον. The play, as well as its name of exodium, seems to have been introduced among the Romans from Italian Greece; but after its introduction it appears to have become very popular among the Romans, and continued to be played down to a very late period (Suet. *Domit.* 10).

Exōmis (ἐξωμίς). (1) A particular kind of Greek tunic, afterwards adopted by the Romans, without sleeves, very short (*substricta*), and entirely open down the right side, so that, when put on, the right shoulder (ὦμος), as well as the arm and breast, were left exposed (Aul. Gell. vii. 12. 1). Hence, the person wearing it was styled *expapillatus*. It was the usual dress of persons employed in active and laborious occupations, such as slaves, rustics, artisans, and huntsmen; hence, in works of art, it is frequently worn by Vulcan, Charon, Daedalus, and Amazons, all of whom pursued a life of toil or industry. (2) The same name was given to the *pallium* (q. v.), when worn so as to present the same appearance (Poll. vii. 48).

Exomis. (Rich.)

Exostra (ἐξώστρα). (1) One of the many machines used in the theatres of the ancients. Its introduction was ascribed to Aeschylus. In order to represent a scene in an interior, a movable chamber corresponding to the size of any of the three doors was devised, which was wheeled out (ἐκκύκλημα) or pushed out (ἐξώστρα) (Poll. iv. 128; Schol. *ad* Aristoph. *Acharn.* 375). Donaldson thinks the ἐξώστρα was used to exhibit the interior of an upper chamber; this would find support in the late meaning of the word, "balcony." A special use of both machines was to exhibit to the eyes of the spectators the results or consequences of such acts, as murder or suicide, as could not be permitted to take place in the *proscenium*, and were therefore described as having occurred behind the *scena*. See Donaldson, *Theatre of the Greeks*, ed. 7, p. 238 foll.; C. O. Müller, *Eumen.* p. 103, *Kleine Schriften*, i. p. 524; and Alb. Müller, *Bühnenalterth.* pp. 142–148, where there is a full discussion of the passages where the contrivance is mentioned.

(2) The name *exostra* was also applied to a peculiar kind of bridge, which was thrown from a tower of the besiegers upon the walls of a besieged town, and across which the assailants marched to attack those of the besieged who were stationed on the ramparts to defend the town (Polyb. ii. 6, 8).

Exoules Diké (ἐξούλης δίκη). An action under the Attic law, for ejectment, resorted to by a plaintiff when his title to the property in question was so much better than the defendant's as to be indisputable. Thus a son or other male descendant (also a son adopted during the testator's lifetime) might enter (see Embateia), and become possessed of the estate immediately after the owner's death (Isae. *Pyrrh.* § 61). Such an heir made a formal entry upon the land, and thereby became "seised" or possessed of it; then the adverse claimant came and turned him off (Demosth. *c. Leoch.* p. 1090, § 32). This proceeding took place quietly and in the presence of witnesses (Isae. *Pyrrh.* § 22); and then the heir might bring against him an action for ejectment.

These proceedings by entry, ouster, etc., were a relic of ancient times, when, before regular processes were invented, parties adopted a ruder method and took the law into their own hands. There was then an actual ouster, accompanied often with violence and breach of the peace, for which the person in the wrong was not only responsible to the party injured, but was also punishable as a public offender. Afterwards, in the course of civilization, violent remedies became useless and were discontinued; yet the ceremony of ejection was still kept up as a form of law, being deemed by lawyers a necessary foundation of the subsequent legal process. Thus at Rome, in the earlier times, one party used to summon the other by the words *ex iure te manum consertum voco*, to go with him to the land in dispute, and (in the presence of the praetor and others) turn him out by force. Afterwards this was changed into the symbolical act of breaking a clod of earth upon the land, by which the person who broke intimated that he claimed a right to deal with the land as he pleased.

Expedīti. A name given to light-armed troops as opposed to *impediti;* or to any "flying column" organized for rapid marching. See Exercitus.

Exploratōres. Scouts. See Exercitus.

Exsequiae. See Funus.

Exsilium (φυγή). (1) Greek. Among the Greeks, exile was the legal punishment for homicide (see Ephetae), and for sundry other offences, such as wounding with intent to kill, the murder of a non-citizen for impiety (ἀσέβεια); and was often voluntary on the part of those who wished to avoid some other form of punishment. It was also, at times, a political measure, adopted especially in times of civil disturbance, and might carry with it ἀτιμία and loss of property, except in the case of ostracism. (See Ostracismus.)

(2) Roman. Among the Romans there was, originally, no such thing as a direct expulsion from the city (Cic. *Pro Caec.* 34); but a man might be cut off from fire and water, the symbol of civic communion, which of course practically forced him to leave the country. This *interdictio aquae et ignis* was originally inflicted by the Comitia Centuriata, and later by the permanent judicial commissions appointed to try certain serious offences, as, for instance, treason, arson, and

poisoning. In case of the capital charge the accused was always free to anticipate an unfavourable verdict, or the *interdictio aquae et ignis*, by withdrawing into voluntary exile; for exile was originally conceived not as a punishment, but as a means of escaping punishment (Cic. *Pro Dom.* 34), and we hear of the *ius exsulandi* (cf. Schwegler, *Römische Geschichte*, i. p. 438). Voluntary exile, as being a confession of guilt, was regularly confirmed by a plebiscitum; and when the exile was recalled, the decree was also annulled by legislative act. *Interdictio* seems to have been primarily regarded as clearing the State from any guilt that might have been incurred in the eyes of the gods by letting the criminal go unpunished. The exsilium involved in the lesser *deminutio capitis* (q. v.), or loss of citizenship, if the banished person became citizen of another State; or if the people declared the banishment to be deserved; or if the *interdictio aquae et ignis* was pronounced after he had gone into exile. It was only in very serious cases that a man's property was also confiscated. Real banishment was first inflicted under the Empire. See DEPORTATIO; INTERDICTIO; RELEGATIO.

Exsuperantius, IULIUS. A Roman historian of the fourth or fifth century A.D., who wrote a monograph *De Marii, Lepidi, ac Sertorii Bellis Civilibus*, preserved in a MS. of Sallust at Paris and dating from the eleventh century. The treatise is largely drawn from the *Iugurtha* and *Historiae*, and contains a number of absurd historical errors, such as confounding the elder with the younger Marius. It was last edited by Bursian (Zürich, 1868).

Extispex (*ἡπατοσκόπος, σπλαγχνοσκόπος*). A diviner who professed to interpret the will of the

Extispex. (Villa Borghese.)

gods, and to predict the future, by inspecting the entrails of victims slain at the altar (Cic. *Div.* ii. 18). See AUGUR; DIVINATIO; HARUSPEX.

Extraordinarii (*ἐπιλέκτοι*). Picked soldiers set about the person of the consul in the Roman army (Polyb. vi. 28). From them a special bodyguard, known as the *ablecti*, were taken. The extraordinarii consisted of about a third of the cavalry and a fifth of the infantry of the allies—i. e. for a legion of 4500 men, there were but 1040 extraordinarii. (See EXERCITUS.) The number of the *ablecti* is not known.

F

F, as a symbol.

F = fabri, faciunt (fecit, fecerunt, faciundum, factus), fastus, feliciter, feriae, fidelis, filius (the most frequent), fines, flamen, Flavius, Fortuna, functus.

F·C = faciendum curavit.

F·C·P = fulgur conditum publice.

F·D·F = filiae dulcissimae fecerunt.

F·D·S = fecerunt de suo.

F·D·S·S·C = faciundum de senatus sententia curaverunt.

F·F = felix fidelis, filius fecit, fiscus frumentarius Flavia felix (firma, fidelis), sc. legio.

F·K·F = filio karissimo fecit.

F·I = fieri iussit.

F·M·F = filio mater fecit, filius matri fecit.

F·P = filio prissimo, filio posuit, flamen perpetuus, Fortuna Praenestina, frumentum publicum, funus publicum.

F·P·M·F = filii patri merenti fecerunt.

F·P·P = frater pius posuit.

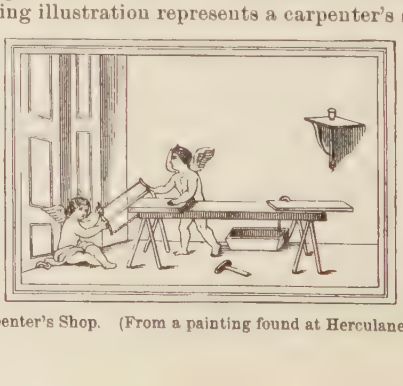
F·S = filio suo, fecit sibi, Fortunae sacrum.

F·S·ET·S·L·L·P·Q·E = fecit sibi et suis libertis libertatus posterisque eorum.

F·S·S = fiunt supra scripti (ae, a).

F·V·L = familia villae Lucullanae.

F·V·P = filiae vivus posuit.



Fabăris or **Farfărus**. A small river in Italy, in the Sabine territory, between Reaté and Cures.

Fabatarium. A vessel in which a kind of bean soup (*puls fabacea*, Macrob. i. 12 med.) was probably served (Lamprid. *Heliog.* 20).

Fabātus, CALPURNIUS. The grandfather of Calpurnia, wife of Pliny the Younger, who addressed to him a number of letters. In A.D. 64 he was accused of complicity in the adultery and magic of Lepida, wife of C. Cassius, but escaped by an appeal to Nero (Tac. *Ann.* xvi. 8).

Fabātus, L. ROSCIUS. A lieutenant of Caesar, who went over to Pompey in the Civil Wars, and was killed at the battle of Mutina (B.C. 43).

Faber (*τέκτων*). The name given indiscriminately to any artisan or mechanic who works in hard materials, such as wood, stone, metal, etc., in contradistinction to one who moulds or models in soft substances, like wax or clay, who received the appellation of *plastes*. It is, consequently, accompanied in most cases by a descriptive epithet which determines the calling of the workman alluded to; as *faber tignarius*, a carpenter; *faber ferrarius*, a blacksmith; *faber aeris* or *aerarius*, *marmoris*, *eboris*, a worker in bronze, marble, and ivory; and so on. The Greek term has not quite so extensive a meaning as the Latin one, being rarely applied to a worker in metal, who was expressly called *χαλκεύς* or *σιδηρεύς*, though some passages occur where it is so used. The accompanying illustration represents a carpenter's shop,

Carpenter's Shop. (From a painting found at Herculaneum.)

from a painting found at Herculaneum, in which the workmen are represented under the form of genii, according to the conventional treatment of the ancient schools, for subjects of this nature, in which scenes of ordinary life are depicted. The fabri attached to the army were under the command of a special officer (*praefectus fabrorum*) (Caes. *B. C.* i. 24).

Fabia. A vestal virgin, sister to Terentia, Cicero's wife. She was accused of criminal intercourse with Catiline, and brought to trial in consequence, but was defended by Cicero and acquitted.

Fabia Gens. A numerous and powerful patrician house of ancient Rome, which became subdivided into several families or branches, distinguished by their respective cognomina, such as Fabii Maximi, Fabii Ambusti, Fabii Vibulani, etc. Pliny (*H. N.* xviii. § 3) says that the name of this house arose from the circumstance of its founders having excelled in the culture of the bean (*faba*), the early Romans having been remarkable for their attachment to agricultural pursuits. The Fabii are said, by the ordinary authorities, to have been of Sabine origin, and to have settled on the Quirinal from the time of the earliest Roman kings. After the expulsion of the Tarquinii, the Fabian, as one of the older houses, exercised considerable influence in the Senate. Caeso Fabius, being quaestor with L. Valerius, impeached Spurius Cassius in B.C. 486, and had him executed. It has been noted as a remarkable fact, that, for seven consecutive years from that time, one of the two annual consulships was filled by three brothers Fabii in rotation. One of the three brothers, Q. Fabius Vibulanus, fell in battle against the Veientes in the year B.C. 479. In the following year, under the consulship of Caeso Fabius and Titus Virginius, the whole house of the Fabii proposed to leave Rome, and settle on the borders of the territory of Veii, in order to take the war against the Veientes entirely into their own hands. After performing solemn sacrifices, they left Rome in a body, mustering three hundred and six patricians, besides their families, clients, and freedmen, and encamped on the banks of the Cremera in sight of Veii. There they fortified themselves, and maintained for nearly two years a harassing warfare against the Veientes and other people of Etruria. At last, in one of their predatory incursions (B.C. 477), they fell into an ambuscade, and, fighting desperately, were all exterminated (Livy, ii. 48 foll.). Dionysius of Halicarnassus (ix. 19) gives also another account of this disaster, which he considers less credible. According to this latter form of the legend, the three hundred and six Fabii set off for Rome, in order to offer up a sacrifice in the chapel of their house. As they went to perform a pious ceremony, they proceeded without arms or warlike array. The Etrurians, however, knowing their road, placed troops in ambush, and, falling on the Fabii, cut them to pieces. It is said that one only of the Fabii escaped this massacre, having been left quite young at Rome (Livy, ii. 50; Dion. Hal. ix. 22). His name was Q. Fabius Vibulanus, and he became the ancestor of all the subsequent Fabii. He was repeatedly consul, and was afterwards one of the Decemviri with Appius Claudius for two consecutive years, in which office he disgraced himself by his connivance at the oppressions of his colleague, which caused the fall of the decemvirate. See DECEMVIRI; FABII.

Fabius. (1) M. AMBUSTUS, consul in B.C. 360, and again several times after. He fought against the Hernici and the Tarquinians, and left several sons. (2) Q. MAXIMUS RULLIANUS, son of the preceding, attacked and defeated the Samnites, B.C. 324, in the absence and against the orders of his commanding officer, the Dictator Papirius, who would have brought him to punishment for disobedience, but was prevented by the intercession of the soldiers and the people. This Fabius was five times consul, and dictator twice. He triumphed over the Samnites, Marsi, Gauls, and Etrurians. His son, Q. Fabius Gurges, was thrice consul, and was grandfather of Q. Fabius Maximus Verrucosus, one of the most celebrated generals of Rome. (3) Q. MAXĬMUS VERRUCŌSUS, the celebrated opponent of Hannibal. He is said to have been called Verrucosus from a wart on his lip, *verruca* being the Latin name for "a wart." In his first consulship he triumphed over the Ligurians. After the victory of Hannibal at Lake Trasimenus (B.C. 217), he was named prodictator by the unanimous voice of the people, and was intrusted with the preservation of the Republic. The system which he adopted to check the advance of Hannibal is well known. By a succession of skilful movements, marches, and countermarches, always choosing good defensive positions, he harassed his antagonist, who could never draw him into places favourable for his attack, while Fabius watched every opportunity of availing himself of any error or neglect on the part of the Carthaginians. This mode of warfare, which was new to the Romans, acquired for Fabius the name of CUNCTĀTOR or "delayer," and was censured by the young, the rash, and the ignorant; but it was probably the means of saving Rome from ruin. Minucius, who shared with Fabius the command of the army, having imprudently engaged Hannibal, was saved from total destruction by the timely assistance of the dictator. In the following year, however, B.C. 216, Fabius being recalled to Rome, the command of the army was intrusted to the consul Terentius Varro, who rushed imprudently to battle, and the defeat at Cannae made manifest the wisdom of the dictator's previous caution. Fabius was chosen consul the next year, and was again employed in keeping Hannibal in check. In B.C. 210, being consul for the fifth time, he retook Tarentum by stratagem, after which he narrowly escaped being caught himself in a snare by Hannibal near Metapontum (Livy, xxvii. 15 foll.). When, some years after, the question was discussed in the Senate, of sending Scipio with an army into Africa, Fabius opposed it, saying that Italy ought first to be rid of Hannibal. Fabius died some time after at a very advanced age.

(4) His son, called likewise QUINTUS FABIUS MAXĬMUS, who had also been consul, died before him. (5) His grandson QUINTUS FABIUS MAXĬMUS SERVILIĀNUS, being proconsul, fought against Viriathus in Spain, and concluded with him an honourable peace (Livy, *Epit.* 54). He was afterwards consul repeatedly, and also censor. He wrote annals, which are quoted by Macrobius (*Sat.* i. 16). (6) His brother by adoption, QUINTUS FABIUS MAXĬMUS AEMILIĀNUS, the son of Aemilius Paulus (Livy, xlv. 41), was consul B.C. 144, and was the father of Fabius, called (7) ALLOBROGĬCUS, who subdued not

only the Allobroges, but also the people of southern Gaul, which he reduced to a Roman province, called from that time Provincia. QUINTUS FABIUS MAXIMUS, a grandson of Fabius Maximus Servilianus, served in Spain under Iulius Caesar, and was made consul B.C. 44. Two of his sons or nephews were consuls in succession under Augustus. There was also a Fabius consul under Tiberius. Panvinius and others have reckoned that during a period of about five centuries, from the time of the first Fabius who is mentioned as consul to the reign of Tiberius, forty-eight consulships, seven dictatorships, eight censorships, seven augurships, besides the offices of master of the horse and military tribune with consular power, were filled by individuals of the Fabian house. It could also boast of thirteen triumphs and two ovations. (4) PICTOR, born about B.C. 254, the first Roman who wrote an historical account of his country in Greek. This historian, called by Livy *scriptorum antiquissimus*, appears to have been ill qualified for the labour he had undertaken, either in point of judgment, fidelity, or research; and to his carelessness, more than even to the loss of monuments, may be attributed much of the uncertainty which to this day hangs over the early ages of Roman history. Fabius lived in the time of the Second Punic War. His family received its cognomen from Gaius Fabius, who, having resided in Etruria and there acquired some knowledge of the fine arts, painted with figures the temple of Salus, in the year B.C. 303. The historian was grandson of the painter. He served in the Second Punic War, and was present at the battle of Trasimenus. After the defeat at Cannae he was sent by the Senate to inquire from the oracle at Delphi what would be the issue of the war, and to learn by what supplications the wrath of the gods might be appeased. His annals commenced with the age of Aeneas, and brought down the relation of Roman affairs to the author's own time—that is, to the end of the Second Punic War. We are informed by Dionysius of Halicarnassus that, for the great proportion of the events which preceded his own age, Fabius Pictor had no better authority than tradition. He probably thought that if he had confined himself to what was certain in those early times, his history would have become dry, insipid, and incomplete. This may have induced him to adopt the myths which the Greek historians had invented concerning the origin of Rome, and to insert whatever he found in family traditions, however contradictory or uncertain. Dionysius has also given many examples of Pictor's improbable narratives, his inconsistencies, his negligence in investigating the truth of what he relates as facts, and his inaccuracy in chronology. In particular, as we are told by Plutarch in his life of Romulus, Fabius followed an obscure Greek author, Diocles, in his account of the foundation of Rome, and from this source have flowed all the stories concerning Mars, the Vestal, the Wolf, Romulus and Remus, etc. Polybius, who flourished shortly after those times, and was at pains to inform himself accurately concerning all the events of the Second Punic War, apologizes on one occasion for quoting Fabius as an authority. Livy quotes him eight times. The fragments are given by H. Peter in his *Hist. Relliquiae*, i. 5, 109. See also Schwegler, *Römische Geschichte*, i. 412; Mommsen, *Römische Forschungen*, ii. 279; H. Nissen in the *Rheinisches Museum*, xxii. 565; Harless, *De Fabiis et Aufidiis Rerum Rom. Scriptoribus* (Bonn, 1853); C. Peter, *Zur Kritik d. Quellen d. ält. röm. Geschichte* (Halle, 1879); Heydenreich, *Fabius Pictor und Livius* (Freiburg, 1878); and the article LIVIUS.

Fables. See NOVELS AND ROMANCES.

Fabrateria. The modern Falvaterra; a Volscian town in Latium, on the right bank of the Trerus, subsequently colonized by the Romans.

Fabretti, RAFFAELE. A distinguished Italian archaeologist, born at Urbino in Umbria in 1618. He studied law at Cagli and in his native city, where he took the doctor's degree at the age of eighteen. He soon after attracted the notice of Cardinal Lorenzo Imperiali, by whose influence he was employed in important political negotiations in Spain, where he acted as treasurer and later as auditor to the Papal legation at Madrid, remaining there for thirteen years. Returning to Rome, he became a judge, and then an auditor of legation at Urbino. Having always had a strong predilection for antiquarian studies, he now, by the invitation of Cardinal Carpegna, found an opportunity of prosecuting them at his leisure. Taking up his residence in Rome, he began the archaeological investigations that have made his name memorable, by a most minute study of the topography and ruins of the Campagna, spending day after day in solitary expeditions on his horse Marco Polo, of which he has written pleasantly as being an animal with a keen scent for buried monuments.

In 1680, Fabretti published his first important work, entitled *De Aquis et Aquae Ductibus Veteris Romae*—a treatise which cleared up many obscure points in the topography of Latium, and which is printed in the *Thesaurus* of Graevius (iv. 1677). Other treatises of his are that *De Columna Traiani Syntagma* (Rome, 1683); and the *Inscriptionum Antiquarum Explicatio* (Rome, 1699). The former contains an explanation also of the famous Iliac Table, a bas-relief now in the Capitol, and representing scenes in the Trojan War. Both these works throw much light on Roman archaeology, and are especially important for their recognition of the comparative method of studying epigraphic remains. Fabretti became involved in a controversy with Gronovius (q. v.) regarding the interpretation by the former of a passage in Livy, and the two scholars assailed each other in the abusive vocabulary of contemporary scholarship, Fabretti styling Gronovius *Grunnovius* or "grunter," and Gronovius retorting by calling Fabretti *faber rusticus*.

Fabretti died in January, 1700, having been for a number of years keeper of the archives of the Castello S. Angelo, under Innocent XII.—an office of great responsibility.

Fabri. The mechanics, carpenters, smiths, etc., in the Roman army. After the end of the republican age they formed an independent corps in every army, and were employed especially in the restoration of bridges, siege and defence works, artillery, etc. They were under the command of the *praefectus fabrûm*, or chief engineer, who was chosen by the general-in-chief, and was immediately responsible to him.

Fabrĭca, sc. *officina*. A general name for the workshop of a mechanic, especially of a carpenter (Lucret. iv. 513) or cabinet-maker.

Fabricius. (1) Gaius, surnamed Luscinus. A Roman, consul for the first time in the year B.C. 283, when he triumphed over the Boii and Etrurians. After the defeat of the Romans, under the consul Laevinus, by Pyrrhus (B.C. 281), Fabricius was sent by the Senate as legate to the king, to treat for the ransom of the prisoners, or, according to others, to propose terms of peace. Pyrrhus is said to have endeavoured to bribe him by large offers, which Fabricius, poor as he was, rejected with scorn, to the great admiration of the king. Fabricius being again consul, B.C. 279, was sent against Pyrrhus, who was then encamped near Tarentum. The physician of the king is said to have come secretly to the Roman camp, and to have promised Fabricius to poison his master for a bribe. The consul, indignant at this, had him put in fetters and sent back to Pyrrhus, on whom this instance of Roman integrity made a strong impression. Pyrrhus soon after sailed for Sicily, whither he was called by the Syracusans, then hard pressed by the Carthaginians. Fabricius, having defeated the Samnites, Lucanians, and Bruttii, who had joined Pyrrhus against Rome, triumphed over these nations. Pyrrhus, afterwards returning to Italy, was finally defeated and driven away by M'. Curius Dentatus, B.C. 276. Two years after, Fabricius being consul for the third time, with Claudius Cinna for his colleague, ambassadors came from King Ptolemy of Egypt to contract an alliance with Rome. Several instances are related of the extreme frugality and simplicity which marked the manners of Fabricius. When censor, he dismissed from the Senate P. Cornelius Rufinus, who had been twice consul, and had also held the dictatorship, because he had in his possession ten pounds' weight of silver plate. Fabricius died poor, and the Senate was obliged to make provision for his daughters (Plut. *Pyrrh.*), and in order to show the greatest possible respect for his memory he was interred within the Pomoerium, though the law forbade such burials. (2) Lucius. A *curator viarum*, B.C. 62, who built the Pons Fabricius between the city and the Insula Tiberina (q. v.).

Fabricius, Ioannes Albertus (Johann Albert Faber). A celebrated bibliographer, born at Leipzig, November 11, 1668. He studied at Leipzig and Quedlinburg, taking the degrees in philosophy, and afterwards pursuing medicine and theology. At Quedlinburg, two books that he found in the library of Samuel Schmidt (Barthuiss's *Adversaria* and Morhoff's *Polyhistor*) gave him the suggestions that led to the preparation of his two great works, the *Bibliotheca Latina* and the still more important *Bibliotheca Graeca*. The first appeared at Hamburg in 1697, and was revised and emended by Ernesti in three volumes (Leipzig, 1773). Its secondary title explains its scope: *Notitia Auctorum Veterum Latinorum Quorumcumque Scripta ad Nos Venerunt.* The divisions adopted in this compilation are, (1) The writers preceding the age of Tiberius; (2) The writers from Tiberius to the Antonines; (3) The writers from the Antonines to the decay of the language; (4) The fragments from old authors, with chapters on the early Christian literature. The *Bibliotheca Graeca* is further styled *Notitia Scriptorum Veterum Graecorum Quorumcumque Monumenta Integra aut Fragmenta Edita Extant, tum Plerorumque e Manuscript. ac Deperditis.* This work, which has been styled *maximus antiquae eruditionis thesaurus,* is in fourteen quarto volumes, appearing at Hamburg at intervals from 1705 to 1728, and subsequently revised by Harles (Hamburg, 1790). Its divisions are marked off by Homer, Plato, Christ, Constantine, and by the capture of Constantinople in 1453, with a sixth section devoted to canon law, medicine, and jurisprudence. Besides these two great compilations, Fabricius, who was a most voluminous writer, put forth 126 other works, some of them, however, being books that he edited only, and none of them of any especial interest to the classical student.

Fabricius held at different times the posts of librarian and Professor of Rhetoric and Ethics (1699), and Rector of the School of St. John at Hamburg. He declined chairs at Greifswald (1701) and Wittenberg. He died at Hamburg, April 30, 1736. The details of his life are given by his son-in-law, Reimar, in his work *De Vita et Scriptis J. A. Fabricii Commentarius* (Hamburg, 1757).

Fabrilia. Mechanics' tools of every description (Hor. *Epist.* ii. 1. 116).

Fabŭla Milesia. See Novels and Romances.

Fabŭla Palliāta, Togāta, etc. See Comoedia.

Fabŭla Rhinthonĭca. See Rhinthon.

Fabŭlae Perottiānae. See Phaedrus.

Facciolati, Jacopo. A famous Italian lexicographer and stylist, born at Toriggia in 1682. He studied at Padua, and in the university of that city was made Professor of Logic and Regent of the Schools, continuing this connection for forty-five years. After putting forth several new editions of existing books, such as the *Thesaurus Ciceronianus* of Nizolius, and the polyglot vocabulary in seven languages of Calepino, he began his magnificent work, the *Totius Latinitatis Lexicon*, the first volume of which appeared at Padua in 1771. Of this splendid production it has been said that the whole body of Latinity, if lost, might be restored from this great lexicon. It is, in fact, the source of all the Latin lexicons now in use, and is an imperishable monument to the learning, industry, and judgment of its chief author. In its preparation, Facciolati was ably assisted by his pupil, Egidio Forcellini (q. v.), who had also aided in the Calepine vocabulary, and to whom is said to be due the suggestion of the new lexicon itself. The fourth and last volume appeared in 1771, after the death of both the editors. Subsequent editions are the English one in two vols. (London, 1826), and that of De Vit (1858–87). Facciolati was a writer of extremely elegant Latin, and a number of his letters have been published. His reputation in his own lifetime was very great, so that he received most flattering offers from the other universities of Europe, all of which he declined. He died at Padua in 1769. His life has been written by Ferrari (1799) and Gennari (1818). See the article Lexicon.

Facetiae. See Jests.

Factiōnes Aurigārum. See Circus, p. 356.

Factor. The player who threw the ball on receiving it from the *dator* in the game of ball spoken of as *datatim ludere*. See Pila.

Factorium. An oil-press, so called from the *factor*, who pressed the olives (Cat. *R. R.* 64, 1; 66, 1). The name *factum* was given to the oil pressed out at one making (Varr. *R. R.* i. 24, 3).

Faelis (αἴλουρος or ἀέλουρος, "wag-tail"). The

cat, an animal domesticated by the Egyptians as early as the thirteenth century B.C., and by them regarded as a sacred animal, so that it was a capital offence to kill one (Diod. Sic. i. 83). The cat typified to them the lunar goddess Pasht, and was frequently embalmed and sent to Bubastis for burial. (See BUBASTIS.) The early Greeks and Romans do not appear to have domesticated the cat as we have done, but instead employed a species of weasel (γαλῆ, *mustela*), or the white-breasted marten (*faelis foina*). See Hehn, *Kulturpflanzen und Hausthiere* (last ed. rev. by Schrader, 1894); and Houghton's *Natural History of the Ancients*, pp. 40–50. Cats first appear in literature as house animals about the fourth century A.D., but even as late as the Middle Ages they were comparatively rare and costly.

Ancient Egyptian Cats. (Painting from the Monuments.)

Faesŭlae. The modern Fiesole; a city of Etruria, situated on a hill three miles northeast of Florence. It was the headquarters of Catiline's army (Cic. *Cat.* iii. 6).

Fala or Phala. (1) A wooden structure, of considerable height, used in sieges, from which missiles were thrown (Fest. p. 88, 12; Ennius *ap.* Non. p. 114, 7). (2) Phalae are mentioned by Juvenal (vi. 590) with the *columnae delphinorum* in the circus. Hence they are supposed by some writers to be columns on the *spina* of the circus, supporting the *ova*, as similar columns supported the dolphins. (See CIRCUS.) But Servius (*ad* Verg. *Aen.* ix. 705) says they were towers on which fights took place, erected between the *euripus* and the *metae;* and they were probably movable towers used in the sham fights of the circus.

Falacrīné or Falacrīnum. A Sabine town between Asculum and Reaté. It was the birthplace of the emperor Vespasian.

Falarĭca. (1) A peculiar kind of spear intended to be discharged as a missile from the hand, and employed in warfare as well as the chase (Verg. *Aen.* ix. 705; Livy, xxxiv. 14; Grat. *Cyneg.* 342). It is described as a missile of the largest dimensions (Non. s. v.), with an immense iron head and strong wooden shaft, weighted near the top by a circular mass of lead (Isidor. *Orig.* xviii. 7, 8), exactly as represented by the annexed figure, from an ancient monument published by Alstorp (*De Hastis Veterum*, p. 158).

Falarica.

Another specimen of very similar character is exhibited on a sepulchral marble discovered at Aquileia, published by Bertoli. (2) A missile invented by the people of Saguntum, similar in many respects to the preceding, but of a still more formidable description (Livy, xxi. 8). It was chiefly employed in sieges, and discharged with prodigious violence, by the assistance of machinery (Lucan, vi. 198), from a lofty wooden tower.

Falconia, PROBA. See PROBA.

Falcŭla. See FALX.

Faleria. A town of Picenum, southwest of Firmum, now Falleroni (Pliny, *H. N.* iii. 13).

Falerii or **Falerium.** A town in Etruria, situated on a height near Mount Soracté, originally a Pelasgic town, but afterwards one of the twelve Etruscan cities. Its inhabitants were called Falisci, and were regarded by many as of the same race as the Aequi, whence we find them often called Aequi Falisci. After a long struggle with Rome, the Faliscans revolted again at the close of the First Punic War (B.C. 241), when the Romans destroyed their city. A new town was built on the plain. The white cows of Falerii were valued at Rome for sacrifices. There still remain ruins of a theatre, forum, *piscina*, gate, etc., of Roman construction, and a number of tombs.

Gate of Falerii.

Falernus Ager. A district in the north of Campania, extending from the Massic hills to the river Vulturnus. It produced some of the finest wine in Italy, which was reckoned only second to the wine of Setia. See VINUM.

Falisci. See DIALECTS: FALERII.

Faliscus. See GRATTIUS.

Falsarius. See FALSUM.

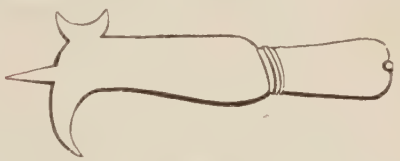
Falsum. The crime of falsum is not defined by Roman legal writers, but it consisted of acts of fraud which were injurious to *fides publica*, such as forgery, counterfeiting money, and perverting the course of justice by fraud and perjury. The oldest legislative provisions at Rome against any acts of this description are those of the Twelve Tables, to the effect that a person who gave false testimony should be thrown from the Tarpeian

Rock (Gell. xxi. 53), and that a judge who took a bribe should be liable to capital punishment (Gell. xxi. 7); but there were trials for false testimony before the enactment of the Twelve Tables (Livy, iii. 24, 25, 29; iv. 21). The next legislation in falsum, so far as is known, was contained in one of the Leges Corneliae passed in the time of the dictator Sulla, which was divided, according to Cicero, into two heads, the Lex Testamentaria and the Lex Numaria (*Verr.* ii. 1, 42), with reference to the two species of the crime the statute was directed against. Paulus, who gives its provisions, entitles it Lex Cornelia Testamentaria; it is also known by the more general title Lex Cornelia de Falsis.

The Lex Cornelia appears to have included only two specific kinds of falsum: (1) forgery and suppression of wills, and (2) adulteration of the coinage.

An offence against either branch of this law was a *crimen publicum*, and was under the cognizance of a standing *quaestio*. The punishment of falsum under the law (at least when Paulus wrote) was *deportatio in insulam* (see DEPORTATIO) for the "honestiores," and the mines, crucifixion, or other degrading punishment for the "humiliores." In place of *deportatio in insulam* the punishment, according to the statute itself, was probably the old form of banishment, known as *ignis et aquae interdictio* (q. v.). The property of a convicted person was confiscated.

The penalty of the Lex Cornelia was extended by piecemeal legislation to cases not comprised in the lex, but all of a similar kind. This supplementary law is sometimes referred in legal treatises to the Lex Cornelia, as if it had been an original part of that law. The instrument fabricated or falsified might be either public or private, as e. g. a rescript or edict of the emperor, an account book, or an instrument of sale.



Persons guilty of falsifying documents are called *falsarii*. As a precaution against such persons, it was enacted in the time of Nero that *tabulae* or written contracts should be pierced with holes and a triple thread passed through the holes, in addition to the signature (Suet. *Ner.* c. 17; Paul. v. 25, 6). In the time of Nero it was also provided that the first two parts (*cerae*) of a will should have only the testator's signature, and the remaining one those of the witnesses. Likewise, in order to prevent fraud, it was enacted under the emperor Claudius that a person who was employed by a testator to write a will should be liable to the penalty of the Lex Cornelia if he inscribed a legacy to himself, although he did so at the dictation of the testator (Cod. ix. 23, 3; Suetonius, *Ner.* 17, attributes this law to Nero). The Lex de Falsis was further extended to fraudulent assumptions of names and rank, and to false pretences, as in the case of a contract to sell a thing to a person, when the vendor had already contracted to sell the same thing to some one else. The *crimen falsi* was also made to include perjury, the corruption of judges, and other kindred offences. By a senatusconsultum in the fourteenth year of Tiberius, the penalties of the law were extended to those who for money undertook to maintain causes, or to procure testimony; and by a senatusconsultum passed somewhat earlier, conspiracies for the ruin of innocent persons were comprised within the limits of the law.

According to Paulus (v. 25, 1), the refusal to accept in payment genuine coin stamped with the head of the princeps was on the same footing as the adulteration of the coinage, though in this case the element of fraud seems wanting. The use of false measures and weights was punished as falsum. It appears from numerous passages in the Roman writers that the crime of falsum in its different forms was very common, and especially in the case of wills. See Rein, *Das Criminalrecht der Römer*, p. 774, etc.

Faltonia, PROBA. See PROBA.

Falx, dim. **Falcŭla** (*ἅρπη*, *δρέπανον*, dim. *δρεπάνιον*). A sickle; a scythe; a pruning-knife or pruning-hook; a bill; a falchion; a halbert.

As *culter* denoted a knife with one straight edge, "falx" signified any similar instrument, the single edge of which was curved (*δρέπανον εὐκαμπές; γαμψὰς δρεπάνας; curvae falces; curvamine falcis ahenae; adunca falce*). By additional epithets the various uses of the falx were indicated, and its corresponding varieties in form and size. Thus the sickle, because it was used by reapers, was called *falx messoria;* the scythe, which was employed in mowing hay, was called *falx foenaria;* the pruning-knife and the bill, on account of their use in dressing vines, as well as in hedging and in cutting off the shoots and branches of trees, were distinguished by the appellation of *falx putatoria, vinitoria, arboraria,* or *silvatica,* or by the diminutive *falcula.*

Falx.

The illustration is taken from a MS. of Columella, and explains his description of the various parts of the *falx vinitoria.* (See CULTER.) After the removal of a branch by the pruning-hook, it was often smoothed, as in modern gardening, by the chisel. (See DOLABRA.) The edge of the falx was often toothed or serrated (*ἅρπην καρχαρόδοντα; denticulata*). The indispensable process of sharpening these instruments (*ἅρπην χαρασσέμεναι, ἅρπην εὐκαμπῆ νεοθηγέα*) was effected by whetstones, which the Romans obtained from Crete and other distant places, with the addition of oil or water, which the mower (*foenisex*) carried in a horn upon his thigh.

Numerous as were the uses to which the falx was applied in agriculture and horticulture, its employment in battle was almost equally varied, though not so frequent. The Geloni were noted for its use. It was the weapon with which Zeus wounded Typhon; with which Heracles slew the Lernaean Hydra; and with which Hermes cut off the head of Argus (*falcato ense; harpen Cyllenida*). Perseus, having received the same weapon from Hermes, or, according to other authorities, from Hephaestus, used it to decapitate Medusa and to slay the sea-monster. Hence, it may be concluded that the falchion was a weapon of the most remote antiquity; that it was girt like a dagger upon the waist; that it was held in the hand by a short hilt; and that, as it was, in fact, a dagger or sharp-pointed

blade, with a proper falx projecting from one side, it was thrust into the flesh up to this lateral curvature.

The weapon which has just been described, when attached to the end of a pole, would assume the form and be applicable to all the purposes of the mediæval halberd. Such must have been the *asseres falcati* used by the Romans at the siege of Ambracia. Sometimes the iron head was so large as to be fastened, instead of the ram's head, to a wooden beam, and worked by men under a *testudo* (q. v.).

Lastly, the Assyrians, the Persians, the Medes, and the Syrians in Asia, and the Gauls and Britons in Europe (see COVINUS), made themselves formidable on the field of battle by the use of chariots with scythes fixed at right angles (*εἰς πλάγιον*) to the axle and turned downward, or inserted parallel to the axle into the felly of the wheel, so as to revolve, when the chariot was put in motion, with more than thrice the velocity of the chariot itself; and sometimes also projecting from the extremities of the axle. See CURRUS.

Familia. The Latin name for a household community, consisting of the master of the house (*pater familias*), his wife (*mater familias*), his sons and unmarried daughters (*filii* and *filiae familias*), the wives, sons, and unmarried daughters of the sons, and the slaves. All the other members of the family were subject to the authority of the *pater familias*. (For the power of the husband over his wife, see MANUS.) In virtue of his paternal authority (*patria potestas*), the *pater familias* had absolute authority over his children. He might, if he liked, expose them, sell them, or kill them. These rights, as manners were gradually softened, were more and more rarely enforced; but they legally came to an end only when the father died, lost his citizenship, or of his own will freed his son from his authority. (See EMANCIPATIO.) They could, however, be transferred to another person if the son were adopted, or the daughter married. A son, if of full age, was not in any way interfered with by the *patria potestas* in the exercise of his civil rights. But in the exercise of his legal rights as an individual, he was dependent always on his father. He could, for instance, own no property; but all that he acquired was, in the eye of the law, at the exclusive disposal of his father. The *pater familias* alone had the right of making dispositions of the family property by mortgage, sale, or will. See McLennan, *The Patriarchal Theory* (1885).

Family Names. See NOMEN.

Famōsi Libelli. See LIBELLUS.

Fanatĭci. See FANUM.

Fannia. A Minturnian woman who entertained Marius when he came to Minturnae in his flight (B.C. 88), because though formerly he had pronounced her guilty of adultery, he had compelled her husband Tatinius to restore her dowry (Val. Max. viii. 2, § 3).

Fannius Caepio. A Roman who conspired with Murena against Augustus (B.C. 22), and was put to death.

Fannius Quadrātus. See QUADRATUS.

Fannius Strabo, C. A son-in-law of C. Laelius Sapiens (q. v.), introduced by Cicero as a speaker in his *De Republica* and his *Laelius* (*De Amicitia*).

Fanum. Any locality consecrated by the pontiffs — a word derived by the ancients from *fari*, because the *pontifices in sacrando fati sunt finem* (Varr. *L. L.* vi. 54; Fest. pp. 88, 93). It was a consecrated spot, whether a building was erected upon it or not. The consecrated places in the Forum, where the couches of the gods were placed in the *lectisternium* (q. v.), were also called fana, in reference to which the phrase *fana sistere* was used (Fest. p. 351). Even a tree struck by lightning was deemed a *fanum* (Fest. p. 92). Everything not consecrated—that is, not a fanum—was considered *profanum;* and a *res fanatica* might, in accordance with the pontifical law, be again made into a *res profana* by certain ceremonies (Macrob. *Sat.* iii. 3, 4).

Fanatici, properly speaking persons belonging to a fanum, were more specifically priests of the goddess of Comana in Cappadocia, whose worship was introduced into Rome under the name of Bellona. They performed the worship with wild and frantic rites, whence the word *fanaticus* obtained its secondary meaning, and has passed into modern languages. They were also called *Bellonarii* (Acro *ad* Hor. *Sat.* ii. 3, 223). In celebrating the festival of the goddess they marched through the city in dark clothes, with wild cries, blowing trumpets, beating cymbals and drums, and in the temple inflicting wounds upon themselves, the blood from which they poured out as an offering to the goddess (Tibull. i. 6, 43 foll.; Hor. *Sat.* ii. 3, 223; Juv. vi. 511; Mart. xi. 84, 3, xii. 57, 11; Lucan, i. 565; Lamprid. *Commod.* 9). *Fanatici* was also the name given to the priests of Isis (*C. I. L.* vi. n. 2234) and Cybelé (Juv. ii. 122; Prudent. *Perist.* x. 1061).

Fanum Fortūnae. The modern Fano; a town in Umbria at the mouth of the Metaurus, with a celebrated temple of Fortuna, whence the town derived its name.

Farce. See COMOEDIA; RHINTHON; SATIRA.

Farfărus. See FABARIS.

Farmers of Public Taxes. See PUBLICANI; TELONAE.

Farming. See AGRICULTURA.

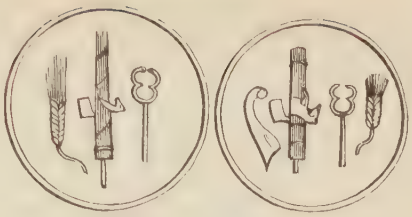
Farnese Bull. A remarkable monolithic group of statuary by the Rhodian sculptors Apollonius and Tauriscus, representing the sons of Antiopé binding Dircé to a wild bull. (For the story see ANTIOPÉ; DIRCÉ.) This group was found at Rome in the Thermae of Caracalla in a badly mutilated condition, and was restored under the supervision of Michael Angelo and, later, by the Milanese sculptor Bianchi. The boldness and life of the group originally carved from a single block of marble are unrivalled by any similar work. It is represented in the illustration on page 86. The parts restored are the head of the bull, the whole of Antiopé (except the feet), the upper parts of Dircé, and all of Zetheus and Amphion except one torso and one leg. The group is now in the Museo Nazionale at Naples.

Farnese Hercules. A colossal statue executed by Glycon of Athens, and representing Hercules clothed in a lion's skin and resting on his huge club, while in his right hand he holds the three golden apples of the Hesperides. The statue, which is now in the Museo Nazionale at Naples, was found at Rome in the Thermae of Caracalla in 1540. It then lacked the legs and the left hand, which were

restored by Della Porta after a model in terra cotta by Michael Angelo. Twenty years later the original legs were found in a well three miles from the place whence the statue itself was taken. The work is evidently of a comparatively late period, and shows a tendency to exaggeration in the overstrained effort to express muscular strength, which led Thackeray to characterize it as a "clumsy, caricatured porter." It is reproduced in the illustration on page 793.

Farreum. See MATRIMONIUM.

Fas. See FASTI; IUS.



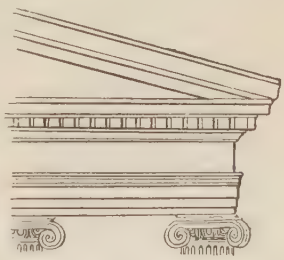
Fasces. The Latin name for a bundle of rods, tied together by a red strap, and enclosing an axe, with its head outside. The fasces were originally the emblem of the king's absolute authority over life and limb, and as such passed over to the high magistrates of the Republic. In the city, however, the latter had to remove the axe and to lower the rods in the presence of the popular assembly as the sovereign power. The lowering of the fasces was also the form in which the lower officials saluted the higher. The king was preceded by lictors bearing twelve fasces, and so were the consuls and proconsuls. The proconsuls, however, were, since the time of Augustus, only allowed this number if they had actually been consuls previously. The dictator had twenty-four fasces, as representing the two consuls, and his *magister equitum* had six. Six was also the number allotted to the proconsuls and propraetors outside the city, and in the imperial age to those proconsuls who had provinces in virtue of their having held the praetorship. The praetors of the city had two, the imperial legates administering particular provinces had five fasces. One was allotted to the *flamen Dialis* and (from or after B.C. 42) to the Vestal Virgins. Fasces crowned with bay were, in the republican age, the *insignia* of an officer who was saluted as Imperator. During the imperial age, this title was conferred on the emperor at his accession, and soon confined exclusively to him. The emperor was accordingly preceded by twelve *fasces laureati*. The lictors held their fasces over the left shoulder; but at funerals, the fasces of a deceased magistrate, and his arms, were carried reversed behind the bier.

Lictor with Fasces. (From a bas-relief in the Museum of Verona.)

The fasces appear to have been in later times made of birch (*betulla*, Pliny, *H. N.* xvi. § 75), but earlier of the twigs of the elm (Plaut. *Asin.* ii. 3, 74; iii. 2, 29). They are said to have been derived from Vetulonia, a city of Etruria (Sil. Ital. viii. 485; cf. Livy, i. 8); but for this there is no real authority (cf. Schwegler, *Röm. Gesch.* i. 278, 581, 671).

The next illustration, taken from the consular coins of C. Norbanus, contains, in addition to the fasces, the one a *spica* and *caduceus*, and the other a *prora*, *caduceus*, and *spica*.

Fasces on Consular Coins.



Fascia, dim. **Fasciŏla** (*ταινία*, *ἀπόδεσμος*). Any long, narrow strip of cloth employed as a bandage. (1) A band worn round the head as an ensign of royalty (Suet. *Iul.* 79). (2) A band worn by women round the chest for the improvement of the figure (Terent. *Eun.* ii. 3, 23; Propert. v. 9, 49; Ovid, *A. A.* iii. 276, 622). See STROPHIUM. (3) A band worn round the legs and shins, a kind of stocking; hence called *fasciae crurales* (*Dig.* xxxiv. 2, 25) and *tibiales* (Suet. *Aug.* 82). That such bandages also covered the feet is clear from the epithet of *fasciae pedules* (*Dig.* xxxiv. 2, 26). Cicero reproached Clodius with effeminate habits for wearing purple fasciae upon his feet, and the *calantica*, a woman's ornament, upon his head (*De Har. Resp.* 21, § 44; *Fragm. Or. in Clod. et Cur.*; cf. Non. p. 537). Afterwards *fasciae crurales* became common even with the male sex (Hor. *Sat.* ii. 3, 255; Val. Max. vi. 2, § 7). White fasciae, worn by men (Val. Max. l. c.), were a sign of extraordinary refinement in dress; the mode of cleaning them was by rubbing them with a white, tenacious earth, resembling our pipe-clay (Cic. *Ad Att.* ii. 3). (4) The sacking of the bed on which the mattress rested (Mart. v. 62, xiv. 159). (5) Fasciae were also the swaddling-clothes in which infants were wrapped (Plaut. *Truc.* v. 13). (6) In architecture, any long, flat surface of wood, stone, or marble, such as the band which divides the architrave from the frieze in the Doric order, and the surfaces into which the architrave itself is divided in the Ionic and Corinthian orders (Vitruv. iii. 5, 10). See EPISTYLIUM.

Fascia Worn by Women. (Rich.)

Fascia, Swaddling-clothes. (Pompeian Painting.)

Fascia. (From the Temple of Bacchus at Teos.)

Fascĭnum. Enchantment by the evil eye, words, or cries, exercised on persons (especially children), animals, and things, as, for instance, on a piece of ground. The word was also applied to the counter-charm, by which it was supposed that the enchantment could be averted, or even turned against the enchanter. Amulets of various kinds were employed as counter-charms. They were supposed either to procure the protection of a particular deity, or to send the enchanter mad by means of terrible, ridiculous, or obscene objects. The name

fascinum was thus specially applied to the *phallus* (q. v.), or effigy of the male organ of generation, which was the favourite counter-charm of the Romans. An image of this fascinum was contained in the bulla worn as an amulet by children, and was also put under the chariot of a general at his triumph, as a protection against envy. See AMULETUM; and MALUS OCULUS in Appendix.

Fascĭnus. An early Latin divinity identical with Mutunus or Tutunus (q. v.). He was worshipped as the author of sorcery and evil spirits, and his symbol was the *fascinum*. See AMULETUM; FASCINUM; PHALLUS; PRIAPUS.

Fasēlus (*φάσηλος*). A light boat or skiff, made of wicker-work, papyrus, or even of baked earth (*fictilis*, Juv. xv. 127), and said to have received its name from the *faselus* or kidney-bean, because of a resemblance in shape. It was of various sizes, and used with or without sails (Cic. *Ad Att.* i. 13; Serv. *ad* Verg. *Georg.* iv. 289).

Fasti, sc. *dies*. Properly speaking, the Roman court-days, on which the praetor was allowed to give his judgments in the solemn formula *Do Dico Addico*, and generally to act in his judicial capacity. The name was further applied to the days on which it was lawful (*fas*) to summon the assembly and the Senate (*dies comitiales*); for these days might be used as court-days in case the assembly did not meet; while on *dies fasti* proper no meeting of the *comitia* could take place. The opposite of *dies fasti* were the *dies nefasti*, or days on which on account of purifications, holidays, *feriae*, and on other religious grounds, the courts could not sit, nor the Comitia assemble. (See FERIAE.) The *dies religiosi* were also counted as *nefasti*. Besides the 38–45 *dies fasti* proper, the 188–194 *dies comitiales*, the 48–50 *dies nefasti*, and 53–59 *dies religiosi*, there were 8 *dies intercisi*, which were *nefasti* in the morning and evening because of certain sacrifices which took place then, but fasti for the remaining hours. There were also 3 *dies fissi* (split days), which were *nefasti* until the conclusion of a particular proceeding—e. g. the removal of the sweepings from the Temple of Vesta on June 15th, but *fasti* afterwards.

The division of days into *fasti* and *profesti*, or holidays and workdays, only affected private life, though many *dies nefasti*, as *feriae*, would be identical with *dies fasti*.

The list of the *dies fasti* was of immense importance as affecting legal proceedings, and indeed all public life. For a long time it was in the hands of the *pontifices*, and was thus only accessible to the patricians; but at last (B.C. 304) Gnaeus Flavius published it and made it generally accessible. This list, called simply *Fasti*, was the origin of the Roman calendar, which bore the same name. In this calendar the days of the year are divided into weeks of eight days each, indicated by the letters A to H. Each day has marks indicating its number in the month, its legal significance (F = *fastus*, N = *nefastus*, C = *comitialis*, EN = *intercisus*). The festivals, sacrifices, and games occurring on it are also added, as well as notices of historical occurrences, the rising and setting of the stars, and other matters. No trace remains of any calendar previous to Caesar; but several calendars composed after Caesar's reform have been preserved. Ovid's *Fasti* is a poetical explanation of the Roman festivals of the first six months. We have also many fragments of calendars, painted or engraved on stone, belonging to Rome and other Italian cities; for it was common to put up calendars of this kind in public places, temples, and private houses. There are two complete calendars in existence—one an official list written by Furius Dionysius Philocalus in A.D. 354, the other a Christian version of the official calendar, made by Polemius Silvius in A.D. 448. See CALENDARIUM; DIES.

The word fasti was further applied to the annual lists of the triumphs, high officials, consuls, dictators, censors, and priests. These lists were originally, like the other fasti, made out by the *pontifices*. Some fragments of them have survived, among which may be mentioned the Fasti Capitolini, so called from the Roman Capitol, where they are now preserved. They were originally, in B.C. 36–30, engraved on the marble wall of the Regia, or official residence of the Pontifex Maximus, and afterwards continued first to B.C. 12, and afterwards to A.D. 13.

Fasti Hellenĭci and **Fasti Romāni**. See CLINTON, HENRY FYNES.

Fastigium (*ἀετός*, *ἀέτωμα*). Literally, a slope; in architecture, a pediment. The triangle which surmounts each end of a rectangular building, and which, in fact, represents the gable end of the roof. (See ANTAE.) It is composed of the cornice of the entablature which forms its base, the two converging cornices at the sides, and the *tympanum* or flat surface enclosed by them, so called from its resemblance to a three-cornered tambourine (Vitruv. iii. 3, iv. 6; Cic. *de Orat.* iii. 46, § 180; Livy, xl. 2). This flat surface was generally ornamented with sculpture; originally, in the early temples of Zeus, with a simple eagle as a symbol of the god, an instance of which is afforded by the coin represented in the above illustration (Beger, *Spicil. Antiq.* p. 6), whence the Greek name *ἀετός*, which was at first applied to the *tympanum* and afterwards to the whole pediment, and in after-times with elaborate sculptures in high relief. See ANTEFIXA; TEMPLUM.

Fastigium. (From a coin.)

The dwelling-houses of the Romans might have sloping roofs, but ornamental gables were not allowed; hence, when the word is applied to them, it is not in its strictly technical sense, but designates the roof simply, and is to be understood of one which rises to a ridge as distinguished from a flat one (Cic. *ad. Q. Fr.* iii. 1, 4, § 14; Verg. *Aen.* viii. 491). Among other divine honours, the Romans decreed to Caesar the liberty of erecting a fastigium to his house (Plut. *Caes.* 81; see ACROTERIUM)—that is, a portico and pediment towards the street like that of a temple. See DOMUS.

Fatum. See FORTUNA; MOERAE; NEMESIS; TYCHÉ.

Fatuus, Fatua. See FAUNUS, FAUNA.

Fauces. See DOMUS.

Fauna, Faula, or Fatua. A goddess of the Latins. According to the old Roman legends, by which all the Italian deities were originally mortals, she

was the daughter of Picus, and the sister and wife of Faunus. One account makes her to have never left her bower, or let herself be seen of men; and to have been deified for this reason, becoming identical with the Bona Dea, and no man being allowed to enter her temple (Macrob. i. 12). According to another tradition, she was not only remarkable for her modesty, but also for her extensive and varied knowledge. Having, however, on one occasion, made free with the contents of a jar of wine, she was beaten to death by her husband with myrtle-twigs. Repenting, however, soon after of the deed, he bestowed on her divine honours. Hence, in the celebration of her sacred rites, myrtle-boughs were carefully excluded; nor was any wine allowed to be brought, under that name, into her temple; but it was called "honey," and the vessel containing it also was termed *mellarium*, "honey-jar" (cf. Macrob. i. 12). Fauna is said to have given oracles from her temple after death, which circumstance, according to some, affords an etymology for the name Fatua or Fatuella, which was often borne by her (from *fari*, "to declare"). There can be little doubt that Fauna is identical not only with the Bona Dea, but with Terra, Tellus, and Ops—in other words, with the Earth personified (Macrob. l. c.). See FAUNUS.

Faunalia. Festivals at Rome in honour of Faunus. They were celebrated on the 13th of February, or the Ides of the month. On this same day occurred the slaughter of the Fabii (Ovid, *Fast.* ii. 193 foll.). There was another festival of the same name, which was celebrated on the Nones of December (Hor. *Carm.* iii. 18).

Faunus or **Fatuus.** "The well-wisher" (from *favere*), or perhaps "the speaker" (from *fari*). (On the etymology of the word see Nettleship, *Lectures and Essays*, pp. 50–54). One of the oldest and most popular Roman deities, who was identified with the Greek Pan on account of the similarity of their attributes. (See PAN.) As a good spirit of the forest, plains, and fields, he gave fruitfulness to the cattle, and was hence called Inuus. With all this he was also a god of prophecy, called by the name of Fatuus, with oracles in the sacred groves of Tibur, around the well Albunea, and on the Aventine. The responses were said to have been given in Saturnian verse. (Cf. Varro, *L. L.* vii. 36.) Faunus revealed the future in dreams and strange voices, communicated to his votaries while sleeping in his precincts upon the fleeces of sacrificed lambs. A goddess of like attributes, called Fauna and Fatua, was associated in his worship. She was regarded sometimes as his wife, sometimes as his sister. (See BONA DEA.) Just as Pan was accompanied by the Πανίσκοι, or little Pans, so the existence of many Fauni was assumed besides the chief Faunus. They were imagined as merry, capricious beings, and in particular as mischievous goblins who caused nightmares. In fable Faunus appears as an old king of Latium, son of Picus, and grandson of Saturnus, father of Latinus by the nymph Marica. After his death he is raised to the position of a tutelary deity of the land, for his many services to agriculture and cattle-breeding. Two festivals, called Faunalia, were celebrated in his honour—one on the 13th of February, in the temple on the island in the Tiber, the other on the 5th of December, when the peasants brought him rustic offerings and amused themselves with dancing.

Faunus. (Gori, *Gem. Ant. Flor.* vol. i. pl. 94.)

Fausta. (1) CORNELIA, daughter of Sulla, and married to Milo, the partisan of Cicero. She disgraced herself by a criminal affair with the historian Sallust (Hor. *Sat.* i. 2, 41; Schol. Cruq. *et* Acr. *ad loc.*). (2) FLAVIA, the daughter of Maximian, and wife of Constantine the Great. When her father wished her to join him in a plot for assassinating her husband, she disclosed the whole affair to the latter. After exercising the most complete ascendency over the mind of her husband, she was eventually put to death by him, on his discovering the falsity of a charge which she had made against Crispus, the son of Constantine by a previous marriage (Eutrop. x. 2, 4; Victor. *Epit.* 40, 41). See CONSTANTINUS.

Faustīna. (1) ANNIA GALERIA, daughter of Annius Verus, prefect of Rome. She married Antoninus Pius before his adoption by Hadrian, and died in the third year of her husband's reign, thirty-six years of age (A.D. 141). She was notorious for her licentiousness, yet her husband appeared blind to her frailties, and after her death even accorded unto her divine honours. Her effigy appears on a large number of medals (Dio Cass. xvii. 30; Capitol. *Anton. P.* 3). (2) ANNIA, or the Younger, daughter of the preceding, married her cousin Marcus Aurelius, and died A.D. 176, in a village of Cappadocia, at the foot of Mount Taurus, on her husband's return from Syria. She is represented by Dio Cassius and Capitolinus as even more profligate in her conduct than her mother; and yet Marcus, in his *Meditations* (i. 17), extols her obedience, simplicity, and affection. Her daughter Lucilla married

Faustina as Mater Castrorum.

Lucius Verus, whom Marcus Aurelius associated with him in the Empire, and her son Commodus succeeded his father as emperor (Capitol. *M. Aurel.* 6, 19, 26).

Faustĭtas. A goddess among the Romans, supposed to preside over cattle and the productions of the seasons generally. Faustitas is probably equivalent to the *Felicitas Temporum* of the Roman medals (Hor. *Carm.* iv. 5, 18).

Faustŭlus. The name of the shepherd who, in the old Roman legend, found Romulus and Remus being suckled by the she-wolf, and who took both the children to his home and brought them up. See Romulus.

Faventia. Now Faenza; a town in Gallia Cisalpina, on the river Anemo and the Via Aemilia. It was celebrated for its manufacture of linens (Pliny, *H. N.* xix. 1).

Favonius. See Zephyrus.

Favonius, Marcus. An imitator of Cato Uticensis, whose character and conduct he copied so closely as to receive the nickname of "Cato's ape." He seems to have had some ability as an orator, but no specimens of his speeches have descended to us. He was put to death by Octavianus after the battle of Philippi in B.C. 42. See Val. Max. vi. 2, § 7; Plut. *Cat. Min.* 32, 46; id. *Pomp.* 60, 67; id. *Brut.* 12, 34; id. *Caes.* 41.

Favorīnus (*Φαβωρῖνος*). A native of Arelaté in Gaul, who lived at Rome during the reigns of Trajan and Hadrian, and enjoyed a high degree of consideration. He is said to have been born an hermaphrodite or a eunuch, yet was once charged with adultery by a Roman of rank; so that he afterwards used to boast of three things—that being a eunuch, he had been accused of adultery; that though a Gaul, he both wrote and spoke Greek; and that though he had given offence to the emperor, he still lived. He wrote numerous works, but no part of them has reached us except a few fragments in Stobaeus. Aulus Gellius, however, has preserved for us some of his dissertations in a Latin dress (*Noct. Att.* xii. 1; xiv. 1, 2; xvii. 10). Gellius, in fact, regarded him with great admiration, and in his *Noctes Atticae* plays Boswell in a mild way to Favorinus's Johnson. Favorinus loved to write on topics out of the common path, and more or less whimsical; he composed, for example, a eulogy on Thersites, another on quartan fever, etc. Having had the misfortune to offend the emperor Hadrian, his statues, which the Athenians had raised to him, were thrown down by that same people. He bequeathed his library and mansion at Rome to Herodes Atticus. Favorinus was a friend of Plutarch, who dedicated a work to him. For further particulars relating to this individual, consult Philostratus (*Vit. Sophist.* i. 8, 1), and Lucian (*Eunuch.* 7; *Demon.* 12 foll.), and Prof. Nettleship's paper on Aulus Gellius in his *Lectures and Essays*, etc. (1885).

Fax (*φανός*). A torch. The descriptions of poets and mythologists, and the works of ancient art, represent the torch as carried by Diana, Ceres, Bellona, Hymen, Phosphorus, by women in bacchanalian processions, and, in an inverted position, by Sleep and Death. In ancient marbles the torch appears to be formed of wooden staves or twigs, either bound by a rope drawn round them in a spiral form, or surrounded by circular bands at equal distances. The inside of the torch may be supposed to have been filled with flax, tow, or other vegetable fibres, the whole being abundantly impregnated with pitch, rosin, wax, oil, and other inflammable substances. As the principal use of torches was to give light to those who went abroad after sunset, the portion of the Roman day immediately succeeding sunset was called *fax* or *prima fax* (Gell. iii. 2, § 11; Macrob. *Sat.* i. 3, § 8). The torch was one of the necessary accompaniments and symbols of marriage. See Matrimonium.

Fax. (Column of Antoninus.)

Feast Days. See Dies; Feriae.

Feather-beds. See Lectus.

Febris. The goddess, or rather the averter, of fever (Val. Max. ii. 5, 6; Cic. *N. D.* iii. 25). She had three sanctuaries at Rome.

Februalia. A feast at Rome of purification and atonement, in the month of February; it continued for twelve days. The month of February, which, together with January, was added by Numa to the ten months constituting the year of Romulus, derived its name from this general expiatory festival, the people being then purified (*februati*) from the sins of the whole year (Ovid, *Fast.* ii. 19).

February. See Calendarium.

Februum. See Lupercalia.

Februus. An ancient Italian divinity, to whom the month of February was sacred. The name is connected with *februare* (to purify). See Februalia.

Feciāles. See Fetiales.

Felicĭtas. The personification of good fortune among the Romans. She was worshipped in various sanctuaries in Rome, her attributes being the cornucopia and the herald's staff. See Faustitas.

Felis. See Faelis.

Felix, Antonius. Procurator of Judaea, in the reigns of Claudius and Nero. He induced Drusilla, wife of Azizus, king of Emesa, to leave her husband; and she was still living with Felix in A.D. 60, when St. Paul preached before him "of righteousness, temperance, and judgment to come." He was recalled in A.D. 62.

Felix, Minucius. See Minucius Felix.

Felsĭna. The ancient capital of Northern Etruria, afterwards known as Bononia (Bologna), a name given to it by the Romans after they had conquered the Boii (B.C. 191), the Boii having taken the place from the Etruscans (Livy, xxxiii. 37, etc.). Here Octavianus, Antony, and Lepidus arranged the terms of the Second Triumvirate (Suet. *Aug.* 96). See Burton, *Etruscan Bologna* (1876). Under the Empire the city was sometimes the chosen residence of the emperors. In the Middle Ages it became a place of great importance.

Feminalia. A garment worn in winter by Augustus Caesar, who was very susceptible to cold (Suet. *Aug.* 82). Casaubon supposes them to have been bands or fillets (see Fascia) wound about the thighs; they are more probably to be identified with the *bracae*, and may be best translated "drawers." These are mentioned under the name *περιμηρίδια* as worn by the Roman horsemen (Arrian, *Tact.* p. 14, ed. Blancard).

Fenestella. A scholarly Roman historian, who lived in the time of Augustus. The elder Pliny places his death in the reign of Tiberius. Fenestella wrote an historical work entitled *Annales*, from which Asconius Pedianus has derived many materials in his commentaries on Cicero's Orations. Of this work only fragments remain. Another production, *De Sacerdotiis et Magistratibus Romanorum*, is sometimes attributed to him, but incorrectly, since it is from the pen of Fiocchi (Floccus), a native of Florence, and was written at the commencement of the fourteenth century. Fenestella was seventy years old at the time of his death. The fragments of Fenestella's *Annales* are collected by H. Peter, *Hist. Frag.* 272. See the treatises by Mercklin, *De Fenestella Historico et Poeta* (Dorpat, 1844), and Poeth, *De Fenestella Historiarum Scriptore*, etc. (Bonn, 1849).

Fenestra. (1) A window. (See DOMUS, pp. 540, 551.) (2) A loophole in a tower from which arrows

Windows in the House of the Tragic Poet. (Pompeii.)

and other missiles were discharged (Caes. *B. C.* ii. 9). (3) A hole pierced in the lobe of the ear for holding ornaments (Juv. i. 104). See INAURIS.

Fenni. A savage people, reckoned by Tacitus (*Germ.* 46) as distinct from the natives of Germania. They probably dwelt in the eastern part of what is now Prussia, and were the same as the modern Finns. Ptolemy calls them *Φίννοι*.

Fenus (*τόκος*). Interest on money. (1) GREEK. In Greece the rate of interest on invested capital was not restricted by law, but was left entirely to arrangement between the parties concerned (Lys. *c. Theomn.* i. 18). The average rate, compared with that usually given at the present day, was very high, far higher than the rent either of houses or land. This is partly explained by the proportionately greater scarcity of ready money, and by the fact that it was difficult to accumulate a large amount of capital.

In the time of Demosthenes, 12 per cent. was regarded as a rather low rate of interest, and higher rates, up to 18 per cent., were quite common. In bottomry (*τὸ ναυτικὸν δάνεισμα*) the ordinary rate of interest at Athens was 20 per cent. In the event of failure in the payment of interest due, compound interest was charged. In the computation of interest two different methods were employed. It was usual to specify either the sum to be paid by the month on every mina (equal in intrinsic value of silver to about $16.50), or the fraction of the principal which was annually paid as interest. Capital therefore was said to be invested at a drachma, if for every mina (100 drachmae) there was paid interest at the rate of one drachma —i. e. 1 per cent. monthly, and consequently 12 per cent. per annum. Or again, if 12½ per cent. yearly interest was to be paid, the capital was said to be invested at "one eighth." In most cases the interest appears to have been paid monthly, and on the last day of the month; but payment by the year was not unknown. In bottomry the interest was according to the terms of the contract.

(2) ROMAN. At Rome, as at Athens, the rate of interest was originally unrestricted, and it was not until after hard struggles that, by the laws of the Twelve Tables, a regular yearly rate of interest at one twelfth of the capital, or 8⅓ per cent., was established. But this and subsequent legal limitations were all the less effectual for putting down usury, because they were valid in the case of Roman citizens only, and not in that of foreigners. Usury was accordingly practised under the name of foreigners up to the end of the second century B.C., when the laws against it were extended so as to include aliens. Through intercourse with Asia and Greece, a change in the payment of interest was gradually introduced, which in the first half of the first century B.C. was generally adopted. Capital was no longer lent by the year, but by the month, and monthly interest was paid on the first day of each month; notice of intention to call in the loan was given on the Ides (the 13th or 15th day of the month), and reimbursement took place on the first day (Kalends) of the following month. The regular rate of interest with this reckoning was 1 per cent. monthly, or 12 per cent. per annum. The accumulation of large fortunes in Rome at the end of the Republic considerably lessened the rate of interest on safe investments. The chief field for usury was then the provinces, whose inhabitants were compelled by the exorbitant imposts to be continually raising loans at any price. The custom, long permitted, of adding the year's unpaid interest to the principal was first forbidden by the later Roman law. Justinian permanently fixed the rate of interest in ordinary investments at 6 per cent., in commercial enterprises at 8 per cent., and in bottomry, in which it had previously been unlimited on account of the risk incurred by the stock on long voyages, at 12 per cent.

Feralia. The last day of the Roman festival called the Parentalia. See MANES; PARENTALIA.

Fercŭlum (from *fero*). A term applied to any kind of tray or platform used for carrying anything. Thus it is used to signify the tray or frame

Roman soldiers carrying on a *ferculum* the Golden Candlestick. (Arch of Titus.)

on which several dishes were brought in at once at dinner (Petron. 35); and hence *fercula* came to mean the number of courses at dinner, and even the dishes themselves (Suet. *Aug.* 74; Serv. *ad* Verg. *Aen.* i. 637; Juv. i. 94, with Mayor's note, and the article CENA, p. 313).

The ferculum was also used for carrying the images of the gods in the procession of the circus (Suet. *Iul.* 76), the ashes of the dead in a funeral (Suet. *Calig.* 15), and the spoils in a triumph (Suet. *Iul.* 37; Livy, i. 10); in all which cases it appears to have been carried on the shoulders or in the hands of men. This is shown in the illustration from the Arch of Titus, where Roman soldiers are carrying on a ferculum the Golden Candlestick. The most illustrious captives were sometimes placed on a ferculum in a triumph, in order that they might be better seen (Sen. *Herc. Oet.* 110).

Ferentarii. See EXERCITUS, p. 650.

Ferentīnum. (1) A town of Etruria, south of Volsinii, birthplace of the emperor Otho. (2) An ancient town of the Hernici in Latium, southwest of Anagnia, colonized by the Romans in the Second Punic War.

Ferentum. See FORENTUM.

Feretrius. A surname of Iupiter, derived from *ferire*, "to strike"; for persons who took an oath called upon Iupiter to strike them if they swore falsely as they struck the victim which they sacrificed. Others derived it from *ferre*, because people dedicated (*ferebant*) to him the *spolia opima*. See Fest. s. h. v.; Livy, i. 10; Propert. iv. 10, 46.

Feretrum (*φέρετρον*). A bier. See FUNUS.

Feriae. Holidays at Rome, dedicated to the worship of some deity. A distinction was drawn between *feriae privatae*, or holidays observed by *gentes*, families, and individuals, and *feriae publicae*, or public holidays. Public holidays were either fixed or movable, or occasional. The fixed holidays (*feriae stativae*) were forty-five in number, and were celebrated every year on a definite day and registered accordingly in the calendar. The movable holidays (*feriae conceptivae*) were also annual, but were held on changing days, and had therefore to be announced beforehand by the consuls, or in their absence by the praetor. The occasional holidays (*imperativae*) were commanded on special occasions by the authorities with the consent of the pontifices. Such were, for instance, the *supplicationes*, a solemn service to the gods to celebrate a victory or the like. One of the principal movable festivals was the FERIAE LATĪNAE. This was originally a celebration by the Latin race held on the Alban Mount in honour of Iupiter Latiaris. It was subsequently transformed by Tarquinius Superbus into a festival of the Latin League. Its most notable ceremony consisted in the sacrifice of white bulls, a portion of whose flesh was distributed to each of the cities of the League represented at the sacrifice. If any city did not receive its portion, or if any other point in the ceremonial was omitted, the whole sacrifice had to be repeated. Originally it lasted one day, but afterwards was extended to four. It was then celebrated in part on the Alban Mount by the Roman consuls, in presence of all the magistrates; and in part on the Roman Capitol, a race being included in the performance. It was announced by the consuls immediately after their assumption of office, nor did they leave Rome for their provinces until they had celebrated it. The date therefore depended on that of the assumption of office by the higher magistrates.

The FERIAE SEMENTĪVAE or SEMENTĪNA DIES, were kept at Rome in the time of the sowing of the fields, for the purpose of praying to Tellus and Ceres for a good crop. It was fixed by the pontifices, and lasted for only one day (Varr. *L. L.* vi. 26).

The FERIAE VINDEMIĀLES (Aug. 22–Oct. 15) were the vintage festival.

The FERIAE AESTĪVAE or FERIAE MESSIS (June 24–Aug. 1) were the "summer vacation" when fashionable Romans went out of town (Gell. ix. 15).

FERIAE PRAECIDANEAE were probably only days of preparation for the regular feriae (Gell. iv. 6).

Feriae Latīnae. See FERIAE.

Feronia. An old Italian goddess, of Sabine origin, but also much worshipped in Etruria. She seems originally to have been regarded in the same light as Flora, Libera, and Venus. The Greeks called her a goddess of flowers; on coins she is represented as a girl in the bloom of youth, with flowers in her hair. She was also worshipped as the goddess of emancipation from slavery. She had a very celebrated shrine at the foot of Mount Soracté in Etruria, where the whole neighbourhood used to bring her rich votive offerings and the firstfruits of the field. The annual festivals served as fairs, such was the crowd of people who flocked to them. The mythical king Herulus or Erulus of Praenesté was regarded as her son. He had three lives, and had to be slain three times by Evander in consequence (Verg. *Aen.* viii. 564).

Ferrum. Iron. See METALLUM.

Fescennīna, sc. *carmina*. One of the earliest kinds of Italian poetry, which consisted of rude and jocose verses, or rather dialogues in extempore verses (Livy, vii. 2), in which the merry country folks assailed and ridiculed one another (Hor. *Epist.* ii. 1, 145). This amusement seems originally to have been peculiar to country people, but it was also introduced into the towns of Italy and at Rome, where it is found mentioned as one of those in which young people indulged at weddings (Serv. *ad Aen.* vii. 695; Seneca, *Controv.* 21, *Med.* 113; Plin. *H. N.* xv. 22). There are rather feeble specimens of these in the four poems by Claudian *De Nuptiis Honorii Augusti et Mariae*. The Fescennina were one of the popular amusements at various festivals, and on many other occasions, but especially after the harvest was over.

After their introduction into the towns they seem to have lost much of their original rustic character, and perhaps were modified by the influence of Greek refinement (see Verg. *Georg.* ii. 385, etc.; Tibull. ii. 1, 55; Catull. lxi. 127); they remained, however, in so far the same as to be at all times irregular and mostly extempore doggerel verses, usually in the Saturnian metre, though the specimens which are preserved are in trochaics, and the cretic is called *pes Fescenninus* by Diomedes, p. 479 (Keil). Sometimes, however, *versus Fescennini* were also written as satires upon persons (Macrob. *Sat.* ii. 4, 21). That these railleries had no malicious character, and were not intended to hurt or injure, may be inferred from the circumstance that one person often called upon another to answer and retort in a similar strain. The

Fescennina are asserted by Festus (s. h. v.) to have been introduced among the Romans from Etruria, and to have derived their name from Fescennia, a town of that country. But, in the first place, Fescennia was not an Etruscan, but a Faliscan town, and, in the second, this kind of amusement was at all times so popular in Italy that it can scarcely be considered as peculiar to any particular place. The derivation of a name of this kind from that of some particular place was formerly a favourite custom, as may be seen in the derivation of *caerimonia* from Caerē. Festus gives an alternative derivation from *fascinum*, either because they were thought to be a protection against sorcerers and witches, or because fascinum (*phallus*), the symbol of fertility, had in early times, or in rural districts, been connected with the amusements of the fescennina. This etymology is far more probable. Teuffel (*Rom. Lit.* § 5) attempts to combine the two, suggesting that fescennia may have derived its name from *fascinum*. Nettleship (*Journ. Phil.* xi. 190) plausibly assumes a substantive *fescennus*, "a charmer," from *fas*, "saying"; hence *fescennini* would be "the verses used by charmers." See Müller, *Die Etrusker*, ii. 296; Zell, *Ferienschriften*, ii. 121; Broman, *De Versibus Fescenninis* (Upsala, 1852); Corssen, *Origines Poësis*, etc., 124; Rossbach, *Die römische Ehe* (1853); Nettleship, *Lectures and Essays*, pp. 60 foll. (Oxford, 1885); and the articles MATRIMONIUM; SATURA.

Fescennium or **Fescennia**. A town of the Falisci in Etruria, and consequently, like Falerii, of Pelasgic origin. (See FALERII). From this town the Romans are said to have derived the Fescennina carmina (q. v.).

Festi Dies. See DIES; FERIAE.

Festivals. See DIES; FERIAE.

Festūca. Properly any stem, stalk, or straw of grain, or blade of grass (Varr. *L. L.* v. 31, § 38). In two passages it is generally explained as a synonym of the praetor's rod (*vindicta*) laid upon the slave's head in *manumissio* (Plaut. *Mil. Glor.* iv. 1, 15; Pers. v. 175). But Conington on the latter passage has pointed out that the ordinary use of *festuca* would suit these two places equally well; so that, after all, the traditional rendering may be a mistake. Plutarch says that one of the lictors threw stubble (*κάρφος*) on the manumitted slave (*De Ser. Num. Vind.* p. 550 B); and the words *lictor iactat* seem to imply something of this kind rather than touching with a staff. Possibly both ceremonies accompanied the act of manumission, the praetor applying the *vindicta* with his own hand, the lictor throwing the stubble. See MANUMISSIO.

Festus. (1) SEXTUS POMPĒIUS. A grammarian, supposed to have lived before the third century A.D. He made an abridgment, in alphabetical order, of the large work of Verrius Flaccus (q. v.), on the signification of words (*De Verborum Significatu*)—a rich storehouse of most important information on Roman antiquities and early Latin. This abridgment has been divided by editors into twenty books, each of which contains a letter. Festus has passed over in silence those words which Verrius had declared obsolete, and he intended, it would seem, to have treated of them in a separate work. Sometimes he does not coincide in the opinions of Verrius (e. g. on *monstrum*), and on these occasions he gives his own views of the subject matter. The abridgment of Festus is one of the most useful books that we possess; it has experienced, however, in some respects, an unhappy fate. It existed entire down to the eighth century, when one Paul Warnefrid (commonly quoted as Paulus Diaconus) conceived the idea of making a small and meagre extract from it. This compilation, dedicated to Charlemagne, henceforward supplanted the original work in the libraries of the day, and the latter was so far lost to modern times that but a single manuscript copy (Codex Farnesinus, now in Naples) of it was found, and this an imperfect one, commencing with the letter M. It was brought from Illyria, and was first copied as a whole by Politian in 1485. The first edition of the epitome of Paulus was printed by Zarotus (Milan, 1471). Paulus and Festus were printed together at Milan (1510), and at Venice by Aldus Manutius (1513). More valuable is the edition by Agostino (Venice, 1559–60), with its collation of the Farnese MS. The edition of Joseph Scaliger (1565) contains many acute emendations, as does that of Fulvius Ursinus (Rome, 1581). The best editions are those of Dacier (Paris, 1681); Egger (Paris, 1838); K. O. Müller (Leipzig, 1839; 2d ed. 1880); Thewrewk de Ponor (Pesth, 1891). See the excellent paper on Verrius Flaccus by Nettleship, *Lectures and Essays* (Oxford, 1885); also Hoffmann, *De Festi 'De Verborum Significatu' Quaestiones* (Königsberg, 1886); Bugge, *Altlatein bei Festus u. Paulus* in the *Neue Jahrb. für Philol. u. Pädagogik*, 105. 91; and the article LEXICON. (2) PORCIUS, governor of Iudaea after Felix, whom the Jews solicited to condemn St. Paul or to order him up to Jerusalem. The apostle's appeal to Caesar (the emperor Nero) frustrated the intentions of both Festus and the Jews (*Acts*, xxv. 1 foll.). (3) RUFIUS, or RUFUS. The author of an abridgment of Roman history (*Breviarium Rerum Gestarum Populi Romani*) based upon Eutropius and Florus, and written about A.D. 369. It is dedicated to the emperor Valens. Editions are those by Forster (Vienna, 1874), and Wagener (Prague, 1886). See also Jacobi, *De Festi Breviarii Fontibus* (Bonn, 1874), and Mommsen, *C.I.L.* vi. 537.

Fetiāles. A collegium (Livy, xxxvi. 3) of Roman priests who acted as the guardians of the public faith. It was their province, when any dispute arose with a foreign State, to demand satisfaction, to determine the circumstances under which hostilities might be commenced, to perform the various rites attendant on the solemn declaration of war, and to preside at the formal ratification of peace. These functions are briefly but comprehensively defined by Varro (*L. L.* v. 86, ed. Müller), to which may be added the old law quoted by Cicero (*De Leg.* ii. 9, 21): FOEDERVM, PACIS, BELLI, INDVTIARVM ORATORES FETIALES IVDICESQVE SVNTO (IVS NOSCVNTO, *Madvig*); BELLA DISCEPTANTO. Dionysius (ii. 72) and Livy (i. 32) detail at considerable length the ceremonies observed by the Romans in the earlier ages, when they felt themselves aggrieved by a neighbouring people. It appears that when an injury had been sustained, four fetiales (Varr. *ap.* Non.) were deputed to seek redress, who again elected one of their number to act as their representative. This individual was styled the *pater patratus populi Romani*. They were dressed in the garb of priests, and a wreath of sacred herbs gathered within the enclosure of the

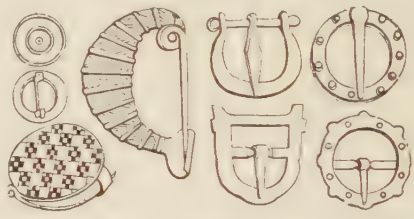
Capitoline Hill (*verbenae, sagmina*), was borne before them by one of their number, who was hence called Verbenarius (Pliny, *H. N.* xxii. § 5). Thus equipped, at least two of their number proceeded to the confines of the offending tribe, where they halted and the Pater Patratus addressed a prayer to Iupiter, calling the god to witness, with heavy imprecations, that his complaints were well founded and his demands reasonable. He then crossed the border, and the same form was repeated in nearly the same words to the first native of the soil whom he might chance to meet; again a third time to the sentinel or any citizen whom he encountered at the gate of the chief town; and a fourth time to the magistrates in the Forum in presence of the people. If a satisfactory answer was not returned within thirty days, after publicly delivering a solemn renunciation—in which the gods celestial, terrestrial, and infernal were invoked—of what might be expected to follow, he returned to Rome, and, accompanied by the rest of the fetiales, made a report of his mission to the Senate. If the people (Livy, x. 45), as well as the Senate, decided for war, the Pater Patratus again set forth to the border of the hostile territory, and launched a spear tipped with iron, or charred at the extremity and smeared with blood (emblematic doubtless of fire and slaughter) across the boundary, pronouncing at the same time a solemn declaration of war. The demand for redress and the proclamation of hostilities were alike termed *clarigatio*, which word the Romans in later times explained by *clare repetere* (Pliny, l. c.; Serv. *ad* Verg. *Aen.* ix. 53, x. 14; cf. Livy, viii. 14, 5). When the Romans had to carry on wars beyond the sea, this proceeding was inconvenient. Hence a characteristic device was adopted. They transferred a piece of land in the Circus Flaminius to a prisoner taken from the enemy, and set up on this before the Temple of Bellona a column, which was accounted as standing on hostile territory (Serv. l. c.).

Fetialis. (Rich.)

Several of the formulae employed on these occasions have been preserved by Livy (i. 24, 32) and Aulus Gellius (xvi. 4), forming a portion of the Ius Fetiale by which the college was regulated. The services of the fetiales were considered absolutely essential in concluding a treaty (Livy, ix. 5); and we read that at the termination of the Second Punic War fetiales were sent over to Africa, who carried with them their own *verbenae* and their own flint stones for smiting the victim. Here also the chief was termed Pater Patratus (Livy, xxx. 43).

The institution of these priests was ascribed by tradition, in common with other matters connected with religion, to Numa (Dionys. ii. 71); and although Livy (i. 32) speaks as if he attributed their introduction to Ancus Martius, yet in an earlier chapter (i. 24) he supposes them to have existed in the reign of Hostilius. Little mention is made of the fetiales after the time of the Second Punic War, though the *collegium* is known to have existed as late as the second century A.D.

The number of the fetiales cannot be ascertained with certainty, but Varro quoted by Nonius (xii. 43) states that it amounted to twenty; of whom Niebuhr supposes ten were elected from the Ramnes and ten from the Titienses. They were originally selected from the most noble families; their office lasted for life (Dionys. ii. 72); and it seems probable that vacancies were filled up by the college (*coöptatione*) until the passing of the Lex Domitia, when in common with most other priests they would be nominated in the Comitia Tributa. This, however, is nowhere expressly stated.



The etymology of *fetialis* is uncertain. Varro (*L. L.* v. 86) would connect it with *fidus* and *foedus;* Festus with *ferio* or *facio;* but it is more probably connected with *fateri* and the Oscan *fatium*, so that *fetiales* would = *oratores*, "speakers." The spelling *feciales* is incorrect.

The explanation given by Livy (i. 24) of the origin of the title Pater Patratus is satisfactory: *Pater Patratus ad jusjurandum patrandum, id est, sanciendum fit foedus.*

Fever, Goddess of. See Febris.

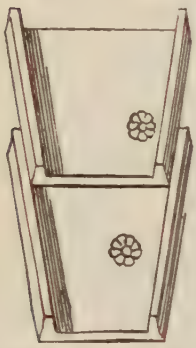
Fibrēnus. A small stream of Latium, running into the Liris, and forming before its junction a small island. This island belonged to Cicero, and was his birthplace.

Fibŭla (*περόνη*). A clasp for fastening garments, resembling our brooches or safety-pins

Fibulae. (British Museum.)

(Livy, xxvii. 19). It consisted of a hoop and a needle, sometimes elastic, sometimes fixed by a joint. Some fibulae were in the shape of buckles.

Fibŭla Praenestīna. See Praenestine Brooch.

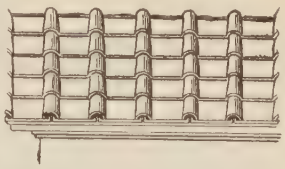


Fictĭlĕ (*πλαστική, κέραμον*). A word applied to anything made of earth or clay; pottery. In Greek the special word for moulding in soft materials, *πλάσσω*, with its derivatives *πλάσμα, πλάστης, πλαστική*, was gradually applied only to clay, in which sense the words *plastes* and *plastice* passed into Latin. Then, as clay played an important part in the preparation of works in bronze, the use of these words was extended to metal, and still further to statuary in stone and marble. The Latin equivalent of *πλάσσω* is *fingo*, which originally was applied only to the moulding of soft stuffs, but later was used for statuary of all kinds as opposed to *pingo;* in this extended sense we have also *fictor* and *figmentum*, but the usual application of *fictor* is confined to modelling in clay, just as *fictor, figlinus, figulus* refer only to work in clay. The original term for clay is *κέραμος*, whence the forms *κεραμεύς, κεραμεύω*, etc., applied not merely to the potter, but broadly to any worker in clay. From *πηλός* (applied to the clay of the bricklayer, and also to that of the potter) we have *πηλουργός, πηλοπλάθος*, corresponding to

Brick Forms. (Rich.)

the poetical use of *lutum*; whereas, however, *argilla* = modelling clay, ἄργιλος = clay without reference to its plastic uses, γῆ κεραμίς = *terra* or *creta figularis*; hence also *ars cretaria*.

The simplest, and at the same time one of the oldest, branches of the primeval art of working in clay is the manufacture of bricks (*lateres*, πλίνθοι) and tiles (*tegulae*, κέραμοι), the invention of which (at Athens) was ascribed by the Greeks to the mythical personages Euryalus and Hyperbius (Plin. *H. N.* vii. 194), and to Talus, the nephew of Daedalus. So far as bricks were used at all, their use was generally confined to private buildings; and Greeks and Romans for ages employed only unbaked or sun-dried bricks. Bricks baked in the kiln came into use at a later date. The first to employ them extensively were the Romans, probably at the period when the population of the city rendered it necessary to build houses of several stories, which demanded a more solid material. In imperial times such bricks were the common material for private and public buildings. The walls were built of them, and then overlaid with stucco or marble. Building with baked bricks extended from Rome into Greece, and, generally speaking, wherever the Romans carried their arms they introduced their exceptional aptitude for making excellent bricks. Bricks which presented flat surfaces, to be used for walls or pavements, were made of the most varied dimensions, but were for the most part thinner than ours. Besides these, there were also rounded bricks for building dwarf columns, and for the construction of circular walls. For the Assyrian and Babylonian bricks, see the articles Assyria; Babylonia; Cuneiform.



Tegulae of Baked Clay with maker's stamp. (Rich.)

All that we know of the Greek method of brick-making is that the earthy clay (πῆλος) was carved out with trowels (ἀμαί) and laid in mould; it was moistened with water and kneaded with the feet, but it is uncertain whether the bricks were modelled by hand or pressed into a mould. The Romans were careful in the selection of clay; they rejected sandy or stony clay, both on account of the weight and liability to damp; a whitish clay was preferred (*terra albida, cretosa*), or else a reddish clay (*rubrica*), or the softer kind of sandy loam (*sabulo masculus*). The special times for brick-making were spring or autumn; after baking it was usual to leave the bricks for some time to dry. Vitruvius recommends the use of those which are two years old and thoroughly dry; and quotes a law of Utica, ordaining that bricks for walls must be five years old. The clay was carefully purified, damped, and mixed with chopped straw; it was then either formed by the hand or pressed in a mould, and set to dry in the sun. In some parts of Spain and Asia Minor bricks are said to have been made so light that they would not sink in water.

The usual size of bricks in Greece was 5 palms square (πεντάδωρα) for public, and 4 palms square (τετράδωρα) for private buildings; in Rome the size usually adopted was the γένος Λύδιον, 1½ Roman foot long by 1 foot broad (*sesquipedales*). Palladius recommends bricks of 2 Roman feet long (*bipedales*) by 1 foot broad and 4 inches high. In later times there seems to have been no definite rule as to size.

For roofs, flat tiles were chiefly used, which were provided with a raised rim on both of their longer sides, and were so formed that the upper fitted into the lower. Concave tiles also were used (*imbrex*, καλυπτήρ) of the form of a half-cylinder, which covered the adjoining edges of the flat tiles. The lowest row was commonly finished off with ornamental moulding. From the same material as bricks were also made pipes for conveying water for sewers, and for warm air; the section in the first two cases was round, in the last square. See Balneae; Hypocaustum.

Tiled Roof. (Portico of Octavia, Rome.)

Pottery in its proper sense, the manufacture of utensils, is very old. The potter's wheel was known even before Homer's time (*Il.* xviii. 600), and was probably derived by the Greeks from Egypt. (See Aegyptus, p. 26.) Corinth and Athens, where the neighbouring promontory of Colias furnished an inexhaustible supply of fine potter's clay, were, in fact, the headquarters of the manufacture of Greek pottery. Next came Aegina, Samos, Lacedaemon, and other places in Greece itself, which always remained the principal seat of this manufacture, especially in the form of vases of painted clay. These were exported in large numbers to the countries on the Mediterranean and Black Seas. The high estimation in which Greek, and especially Attic, pottery was held is proved by the numerous vases which have been discovered in tombs, chiefly in Italy. Moreover, they represent almost every period. The excellence of the workmanship lies in the material, which is very fine, and prepared with the utmost care; also in the execution and in the baking. Its thinness as well as the hardness of its sides, even in vessels of large dimensions, astonishes experts in such matters. The shapes are mostly produced by the potter's wheel, but also by hand in the case of vessels too large to be conveniently placed on the wheel; for example, the largest wine-jars. The prehistoric pottery from Mycenae, the Troad, and other Hellenic sites, was also made by hand. Whereas small vessels were made of a single piece, in the case of large ones, the body, han-

Clay Quarry. (From a tablet at Berlin.)

Tile Stamp. (Birch.)

dles, feet, and neck were fashioned separately, and then united. They were first dried in the sun, then twice baked, before and after the painting. The colours are no less admirable than the workmanship. The clay shows a beautiful bright reddish yellow, which is produced by the addition of colouring matter, and is also further intensified by a thin coating of glaze. The black colour, which often verges upon green and is of a brilliant lustre, is then applied. Either (1) the design stands out black against the bright background, or (2) the figures appear in red on a black ground, the former being the earlier method. Other colours, especially white or dark-red, were applied after the black glaze had been burned into the clay by the second baking, and served as a less lasting adornment. In later times yellow, green, blue, brown, and gold were also used.

Archaic Vase with Owl Head and Characteristics of a Woman. (Schliemann, *Troja.*)

In the case of vases with black figures, the vase was first turned on the wheel, and, in order to give it a surface of deeper red, clay finely ground and mixed with water to the consistency of cream, technically known as "slip," was applied by a brush or otherwise while it was still revolving. The outline of the design was next roughly sketched, either with a point or in light-red ochre with a brush. The vase was then dried in the sun, and again put on the wheel, and the glaze, finely powdered and mixed with water, was applied to it with a brush as it revolved. The vase was then, in some cases, fired for the first time in the kiln in order to provide a smooth, almost non-absorbent surface for the use of the painter. The painter then put on the black-enamel figures and ornaments with a brush. After the firing of the enamel, the details were drawn in by incised lines, cutting through the enamel down to the clay body of the vase.

Archaic Greek Vases. (Birch.)

In vases with red figures, instead of the figures being painted in black, the ground was covered with black enamel and the figures left, showing the glazed red "slip" which covers the whole vase. This method produced a great artistic advance in the beauty of the figures, the details and inner lines of which could be executed with freedom and ease by brush-marked lines, instead of by the laborious process of cutting incised lines through the very hard black enamel.

Lastly, the form deserves great praise. The vases of the best period present the most tasteful elegance of form, that is at once fine and strong, and the most delicate proportion of the various parts to each other and to the whole, without interfering with their practical utility. It was not until the times when taste had begun to degenerate that the fashion was introduced of giving to clay ware, by means of moulds, all kinds of grotesque forms of men and beasts, and of furnishing them with plastic, as well as painted, ornamentation.

Corinthian Vase. (Height, 8¼ inches; greatest diameter, 11¼ inches. Vulci.)

The technique of ancient pottery is illustrated by the following figures. The first represents a potter seated in front of an oven, from which he takes with a stick a small vase which has been newly glazed, while two other vessels are standing to dry on an oven, the door of which is closed. The remaining figures, from a tablet at Berlin, explain themselves.

Greek Potter at Work. (Edwards.)

Among the votive tablets in the Louvre there are two from Corinth. The first of these represents an early Greek type of kiln, which is domed over, and has a space for the fuel on one side and a door in the side of the upper chamber, through which the pottery could be put in and withdrawn. The second shows a potter applying painted bands while the vessel revolves on the wheel.

The ovens (*κάμινοι, fornaces*) for baking vases seem to have differed very little from those of the present day. The remains of such ovens, dating from a late Roman period, have been found in Germany, France, England, and Italy. The most perfect, perhaps, was that found in 1881, at the little Roman colonia situated between the villages of

Potter at Work. (Berlin tablet.)

Heddernheim and Praunheim near Frankfort; it has now been destroyed by the owner of the property on which it was found, but an excellent set of plans were drawn up before its destruction, by Donner, and published in the *Annali dell' Inst.* 1882 (Tav. U 3–6).

The following illustrations are from paintings on a number of *πίνακες*, or small clay tablets, found at Penteskaphia near Corinth in 1879, and now in the Museum at Berlin. They date from the sixth century B.C.

In the preceding cut, the potter is seated beside his wheel, which he turns with one hand, while with the other he applies ornament either with

Exterior of Furnace. (Berlin tablet.)

a brush or stick; if the ornament was engraved alone, this would have to be done while the clay was still moist; if painted, the vase would be first dried in the air.

The Romans, with whom, as early as the time of the second king, Numa, a guild (*collegium*) of potters existed, neither had vessels of painted clay amongst their household goods, nor did they employ it for the ornamentation of their graves. In earlier times at least, they used only coarse and entirely unornamented ware. They imported artistically executed vases from their neighbours, the Etruscans. In the last hundred years of the Republic, as well as in the first hundred years after Christ, the chief place for the manufacture of the red crockery generally used in households was Arretium (Pliny, *H. N.* xxxv. 160; Mart. i. 54, 6, xiv. 98; Dennis, *Etruria*, ii. 335). The ware of this place was distinguished by a coral-red colour, and was generally furnished with glaze and delicate reliefs; in fact, ornamentation in relief was widely employed in later Roman pottery. Very much valued was the domestic ware, called *vasa Samia*, which was an imitation of the earlier pottery brought from the island of Samos. It was formed of fine, red-coloured clay, baked very hard, of thin make, and very delicate workmanship. It was glazed and generally adorned with reliefs, and served especially for the table use of respectable people who could not afford silver.

Interior of Furnace. (Berlin tablet.)

While this fine ware was made by hand, the manufacture of ordinary pottery, as well as of bricks and pipes, especially under the Empire, formed an important industry among capitalists,

Drinking-bowl and Dish of Clay. (Pompeii.)

who, on finding good clay on their estates, built potteries and tile-works, and either worked them on their own account through slaves, or had them carried on by lessees. The emperor himself, after the time of Tiberius, and the members of the imperial family, especially the women, pursued a similar trade, as is shown by the trade-mark which, according to Roman custom, was borne by clay manufactures.

The production of large statues of clay, apart from the purpose of modelling, belongs amongst the Greeks to the early times. It continued much longer amongst the Italians, especially amongst the Etruscans, who furnished the temples at Rome with clay images of the gods before the victorious campaigns in the East brought marble and bronze productions of Greek art to Rome. On the other hand, throughout the whole of antiquity, the manufacture of small clay figures of very various kinds, for the decoration of dwellings and graves, and for playthings for children, etc., was most extensively practised. They were generally made in moulds, and after baking were decorated with a coating of colour. The excellence which Greek art attained in this department, as in others, is shown by the "figurines" discovered at Tanagra in and after 1874. Very important, too, was the manufacture of clay reliefs, partly with figured repre-

Etruscan Sarcophagus of Terra-Cotta from Caeré. (Louvre.)

sentation and partly with arabesque patterns, for the embellishment of columns, windows, cornices, and also of tombstones and sarcophagi.

The reader is referred for further details and illustrations to the article VAS, and to the following works: Krause, *Angeiologie* (1854); Blümner, *Technologie und Terminologie*, etc., vol. ii.; Birch, *History of Ancient Pottery* (2d ed. 1873); Jacquemart, *History of the Ceramic Art* (Eng. trans. 1873); Kekulé, *Thonfiguren aus Tanagra* (1878); Jännicke, *Grundriss der Keramik* (1879); Henzen, *Catalogue des Figurines Antiques de Terre Cuite du Musée du Louvre* (1883); Kekulé, *Die Antiken Terracotten* (1880); id. *Die Terracotten von Sicilien* (1884); Dumont and Chaplain, *Céramiques* (1888); Pottier, *Les Statuettes de Terre Cuites dans l'Antiquité* (1890); and Robert, *La Céramique* (1892).

Fiction. See NOVELS AND ROMANCES.

Ficulea or **Ficulnea.** An ancient town of the Sabines, east of Fidenae (Livy, i. 38).

Fideiussor. A surety. See INTERCESSIO.

Fidēnae. Sometimes FIDĒNA (Castel Giubileo), an ancient town in the land of the Sabines, five miles northeast of Rome, situated on a steep hill between the Tiber and the Anio. It is said to have been conquered and colonized by Romulus; but it was probably colonized by the Etruscan Veii, with which city it is found in close alliance. It frequently revolted, and was as frequently taken by the Romans. Its last revolt was in B.C. 438, and in the following year it was destroyed by the Romans, but was afterwards rebuilt.

Fidentia. A town in Cisalpine Gaul, on the Via Aemilia, between Parma and Placentia. Here Sulla's generals defeated Carbo, B.C. 82.

Fidepromissor. See INTERCESSIO.

Fides. The string of a lyre or harp. See LYRA.

Fides. The Roman personification of honour in the keeping of word or oath. As Fides Publica, or Honour of the People, this goddess had a temple on the Capitol, founded by King Numa, to which the Flamines Dialis, Martialis, and Quirinalis rode in a covered chariot on the first of October. At the sacrifice they had their right hands wrapped up to the fingers with white bands. The meaning of the covered chariot was that honour could not be too carefully protected; of the covered right hand, that the right hand, the seat of honour, should be kept pure and holy. The goddess was represented with outstretched right hand and a white veil. Her attributes were ears of corn and fruits, joined hands, and a turtle-dove.

Fidicŭla, or plural **Fidicŭlae.** An instrument of torture, consisting of a number of strings (Suet. *Tib.* 62, *Calig.* 33). Like the *eculeus* and the modern rack, it stretched the limbs until the joints were dislocated (Marquardt, *Privatl.* 180). See CRUX; ECULEUS; TORMENTUM.

Fidius. See SANCUS.

Fiducia. If a person transferred his property to another on condition that it should be restored to him, this contract was called *fiducia*, and the person to whom the property was so transferred was said *fiduciam accipere*. A man might transfer his property to another for the sake of greater security in time of danger, or for other sufficient reason. The contract of fiducia or pactum fiduciae also existed in the case of pignus, and in the case of mancipation. (See EMANCIPATIO.) The *hereditas* itself might be an object of fiducia. The trustee was bound to discharge his trust by restoring the thing; if he did not, he was liable to an *actio fiduciae* or *fiduciaria*, which was an *actio bonae fidei*. If the trustee was condemned in the action, the consequence was *infamia*.

Fiduciaria Actio. See FIDUCIA.

Fife. See TIBIA.

Figlīna Ars. See FICTILÉ.

Figŭlus. See FICTILÉ.

Figŭlus, P. NIGIDIUS. A Pythagorean philosopher of high reputation, who flourished about sixty years B.C. He was so celebrated on account of his knowledge that Gellius does not hesitate to pronounce him, next to Varro, the most learned of the Romans. Mathematical and physical investigations appear to have occupied a large share of his attention; and such was his fame as an astrologer that it was generally believed, in later times at least, that he had predicted in the most unam-

biguous terms the future greatness of Octavianus on hearing the announcement of his birth. In the Eusebian Chronicle he is styled "Pythagoricus et Magus." He, moreover, possessed considerable influence in political affairs during the last struggles of the Republic; was one of the senators selected by Cicero to take down the depositions and examinations of the witnesses who gave evidence with regard to Catiline's conspiracy, B.C. 63; was praetor in B.C. 59; took an active part in the civil war on the side of Pompey; was compelled in consequence by Caesar to live abroad, and died in exile B.C. 44. A letter of consolation addressed to him by Cicero (*Ad Fam.* iv. 13) is extant.

Aulus Gellius, who entertained the strongest admiration for the talents and acquirements of Figulus, says that his works were little studied, and were of no practical value, in consequence of the subtlety and obscurity by which they were characterized; but the quotations adduced by him (xix. 14) as specimens scarcely bear out the charge, when we consider the nature of the subject. The names of the following pieces have been preserved: *De Sphaera Barbarica et Graecanica*, *De Animalibus*, *De Extis*, *De Auguriis*, *De Ventis*, and *Commentarii Grammatici* in at least twenty-four books. The fragments which have survived have been carefully collected and illustrated by Rutgersius in his *Variae Lectiones*, iii. 16 (Leyden, 1618). See Hertz, *De Nigidii Studiis atque Operibus* (Berlin, 1845); Klein, *De Vita Nigidii* (Bonn, 1861); Breysig, *De Nigidii Figuli Fragmentis* (Berlin, 1854); and Röhrig, *De Nigid. Figulo* (Coburg, 1887).

Figūris, Carmen de. See Carmen.

Filelfo, Francesco. See Philelphus.

Filiusfamilias. See Familia.

Fimbria, C. Flavius. (1) A jurist and an orator, consul B.C. 104 (Cic. *pro Planc.* 5; 21; *Brut.* 34; 45). (2) Son of the preceding, and one of the most violent partisans of Marius and Cinna during the civil war with Sulla. In B.C. 86 he was sent into Asia as legate of Valerius Flaccus, whom he induced the soldiers to put to death. He then carried on war against Mithridates; but in 84 he was attacked by Sulla, and being deserted by his troops, put an end to his life (Livy, *Epit.* 32).

Fimbriae (*θύσανοι*; in grammarians also *κροσσοί*). Tassels; a fringe. When the weaver had finished any garment on the loom (see Tela), the thrums, i.e. the extremities of the threads of the warp, hung in a row at the bottom. In this state they were frequently left, being considered ornamental. Often also, to prevent them from ravelling, and to give a still more artificial and ornamental appearance, they were separated into bundles, each of which was twisted, and tied in one or more knots. The thrums were thus, by a very simple process, transformed into a row of tassels. The linen shirts found in Egyptian tombs sometimes show this ornament along their lower edge, and illustrate, in a very interesting manner, the description of these garments by Herodotus (ii. 81). Among the Greeks and Romans fringes were seldom worn except by women (Pollux, vii. 64). We find, however, a long-sleeved tunic with *fimbriae* at the wrists, worn by Iulius Caesar (Suet. *Iul.* 45; cf. Clavus Latus). Of the manner of displaying them the best idea may be formed by an inspection of the annexed illustration, taken from a small bronze, representing a Roman lady who wears an inner and an outer tunic, the latter being fringed, and over these a large shawl or pallium.

Fimbriae. (From an ancient bronze.)

Among barbarous nations the upper garment was often worn with a fringe by men.

Finance. See Aerarium; Fiscus; Moneta; Portorium; Publicani; Telonae.

Finitōres. See Agrimensores.

Fire, God of. See Hephaestus; Vulcanus.

Fire-Brigade. See Vigiles.

Fire-Engines. See Sipho.

Firmiānus Symphosius, Caelius. The author of a collection of a hundred riddles, each consisting of three hexameters, intended for use during the Saturnalia. The diction and prosody are correct, though the work is probably as late as the fifth century A.D. The title of the book is *Aenigmata*. The text is to be found in Wernsdorf's *Poetae Latini Minores*, vol. vi., and there is a commentary in the edition by Heumann (Hanover, 1722). See Paul, *De Symposii Aenigmatis* (Berlin, 1854); and the translation into French by Corpet (Paris, 1868).

Firmĭcus Maternus. (1) Iulius. A Sicilian, the author of an astrological work in eight books (*Matheseos Libri*), finished A.D. 354. It is a complete system and defence of astrology, conceived in the Neo-Platonic spirit, and hostile to Christianity. It contains the earliest known mention of alchemy (iii. 15). The work is monotonous in diction, and hazy in its reasoning. The *editio princeps* appeared at Venice in 1499. A critical edition by K. Sittl was in 1892 announced as in preparation. See M. Bonner in the *Revue de Philologie*, viii. 187; and Dombart in the *Jahrb. für Philol.* 125, 590. (2) A Christian writer of about the same period as the preceding, who wrote *De Errore Profanarum Religionum* in 346 or 347 A.D. Nothing is known of the personality of the author, whose diction is rhetorical but plebeian. Good editions are those of Bursian (Leipzig, 1856) and Halm (with Minucius) (Vienna, 1867).

Firmum. A town in Picenum, three miles from the coast, where there was a strongly fortified harbour (Castellum Firmanum). (Mela, ii. 4.)

Firmus or **Firmius.** One of those ephemeral Roman emperors known in history by the name of tyrants, because they were usurpers of power under legitimate sovereigns. He was born in Seleucia in Syria, and owned extensive possessions in Egypt. Urged on by the impetuosity and love of change peculiar to the Egyptian Greeks, he seized upon Alexandria, and assumed the title of Augustus, one of his objects being to aid the cause of Zenobia (q. v.) who had already been conquered by Aurelian, but whose power was still not completely overthrown. Aurelian marched against Firmus with his usual rapidity, defeated him, took him prisoner, and inflicted on him the punishment of the cross (A.D. 273). Firmus is described as having been of extraordinary stature and strength of body. His aspect was so forbidding that he obtained in derision the surname of Cyclops. His life was written by Vopiscus.

Fiscāles. See GLADIATORES.

Fiscellus. That part of the chain of the Apennines which separates the Sabines from Picenum (Plin. *H. N.* vi. 12). Mount Fiscellus was reported by Varro to be the only spot in Italy in which wild goats were to be found (Varro, *R. R.* ii. 1).

Fiscus. The emperor's private purse, as distinguished from the public treasury (*aerarium*). It was instituted by Augustus, and was under the exclusive control of the emperor. The chief sources from which it was replenished were the entire revenues of the imperial provinces, the produce of unclaimed estates, and of confiscations. The main items of fiscal expenditure were the army, the fleet, and war material, the salaries of officials, the provision of corn for Rome, postal communication, and the public buildings. For the officials who administered the fiscus, see PROCURATOR; see also AERARIUM.

Fissi Dies. See DIES, p. 512.

Fish. See DIAETETICA; VICTUS.

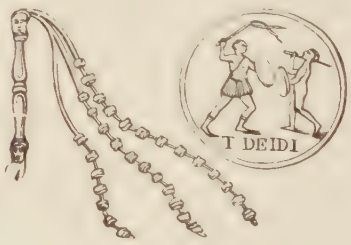
Fistūca. An instrument used for ramming down pavements and threshing-floors and the foundations of buildings (Cato, *R. R.* 18, 28), and also for driving piles (Caes. *B. G.* iv. 17).

Fistŭla. Properly a reed, a Pan's-pipe (*σύριγξ*); then a water-pipe (*σωλήν*), usually made of lead, but in the villa of Antoninus Pius of pure silver (cf. Stat. *Silv.* i. 5, 48).

Flabellum (*ῥιπίς, ῥιπίδιον*). A fan (Terent. *Eun.* iii. 5, 50). The fans of the Greek and Roman ladies were made with the leaves of the lotus plant, of peacock's feathers (Prop. ii. 24, 11), or some expensive material, painted in brilliant colours (Mart. iii. 82). They were not constructed to open and shut, like ours, but were stiff, and had a long handle, the most convenient form for the manner in which they were used—viz., for one person to fan another, a slave always being employed for the purpose, known as *flabelliger* (Plaut. *Trin.* ii. 129). The left-hand figure in the illustration represents a fan of lotus leaf, from a Pompeian painting; the right-hand one, of peacock's feathers, from a painting discovered at Stabia. See Uzanne, *Les Ornements de la Femme* (Paris, 1892).

Flabella.

Flaccus, A. PERSIUS. See PERSIUS.



Flaccus, FULVIUS. The name of two distinguished families in the Fulvia and Valeria gentes. Many of the members of both families held the highest offices in the State; but the best known are: (1) M. FULVIUS FLACCUS, the friend of the Gracchi, consul in B.C. 125, and one of the triumvirs for carrying into execution the agrarian law of Tib. Gracchus. He was slain, together with C. Gracchus, in B.C. 121. (See GRACCHUS.) (2) L. VALERIUS FLACCUS, consul in B.C. 100 with Marius, when he took an active part in putting down the insurrection of Saturninus. In B.C. 86 he was chosen consul in place of Marius, but was put to death by his soldiers at the instigation of Fimbria. (3) CALPURNIUS, a rhetorician of the time of the emperor Hadrian. He is the author of fifty-one *declamationes*, usually printed with those of Quintilian. (See QUINTILIANUS.) (4) C. VALERIUS FLACCUS, a native of Padua, who lived in the time of Vespasian, and wrote the *Argonautica*, an unfinished heroic poem, in eight books, on the Argonautic expedition, which is extant, and of which the best editions are those of Wagner (Göttingen, 1805), Thilo (Halle, 1863), Schenkl (Berlin, 1871), and Bährens (Leipzig, 1875). The poem is a free imitation of Apollonius Rhodius, and is in style animated, rhetorical, and rich. (5) GRANIUS. See PAPIRIUS.

Flaccus, M. VERRIUS. See VERRIUS FLACCUS.

Flaccus, Q. HORATIUS. See HORATIUS.

Flaccus, SICŬLUS. A professional *agrimensor* of the time of Nero, the author of a treatise *De Condicionibus Agrorum*, part of which has been preserved. See AGRIMENSORES.

Flagrum, dim. **Flagellum** (*μάστιξ*). A "cat" or scourge, made with a great number of knotted and twisted tails, like the numerous feelers of the polypus, which are consequently designated by the same name (Ovid, *Met.* iv. 367). It was chiefly employed for the punishment of slaves (Juv. vi. 478; Hor. *Sat.* i. 2, 41), but also as a driving whip, in threshing grain, for self-punishment by the priests of Cybelé, and in the contests of gladiators, as in the illustration below. It is characterized

Flagellum.
